DATA FROM THE U.S. DEPARTMENT OF LABOR, THE MANPOWER
REPORT OF THE PRESIDENT, AND THE U.S. DEPARTMENT OF COMMERCE
DESCRIBE WOMEN WORKERS. IN 1966, THERE WERE 27.8 MILLION
AMERICAN WOMEN WORKERS, AN INCREASE OF 4.2 MILLION SINCE
1960. OF ALL WORKERS, 36 PERCENT WERE WOMEN. NEARLY HALF OF
ALL WOMEN 18 TO 64 YEARS OF AGE WERE WORKERS, AND THE MEDIAN
AGE WAS 41. THREE OF FIVE WERE MARRIED AND LIVING WITH THEIR
HUSBANDS. LABOR FORCE PARTICIPATION WAS HIGHEST AMONG
DIVORCED WOMEN, 71 PERCENT, AND LOWEST AMONG WIDOWS, 28
PERCENT. OF THE 9.9 MILLION WOMEN WORKERS WHO HAD CHILDREN
UNDER 18, THOSE WITH SCHOOL AGE CHILDREN ONLY, 47 PERCENT,
WERE THE LARGEST GROUP. MEDIAN YEARS OF SCHOOL COMPLETED BY
WOMEN WORKERS 18 YEARS OF AGE AND OVER IN THE LABOR FORCE AND
IN THE POPULATION WERE 12.3 AND 12.1 RESPECTIVELY. ABOUT 8.5
MILLION WOMEN WERE EMPLOYED IN CLERICAL AND 3.5 MILLION IN
PROFESSIONAL AND TECHNICAL JOBS. MORE THAN TWO OF FIVE OF ALL
EMPLOYED WERE IN SERVICE INDUSTRIES. ABOUT THREE OF FOUR OF
THE TOTAL WERE EMPLOYED FULL TIME. PROFESSIONAL AND TECHNICAL
WORKERS RECEIVED A MEDIAN ANNUAL SALARY OF \$5,574, BUT THE
MEDIAN WAGE OR SALARY INCOME FOR ALL FULL-TIME WOMEN WORKERS
IN 1965 WAS \$3,823. THIS WAS 60 PERCENT OF THE MEDIAN FOR
FULL-TIME MEN WORKERS. (FP)

BACKGROUND FACTS ON WOMEN WORKERS IN THE UNITED STATES

Number

There were 27.8 million women workers in the United States in 1966.^{1/} (Table 1) This was an increase of 1.2 million since 1965 and of 4.2 million since 1960. Thirty-nine percent of women 14 years of age and over were in the civilian labor force in 1966; women were 36 percent of all workers.

About 1.4 million, or 4.9 percent, of the women in the civilian labor force were unemployed in 1966. (Table 2) The unemployment rate among girls 14 to 19 years of age was 13.0 percent; among women 20 years of age and over, 3.8 percent. These rates were lower than in 1965 when they were 14.3 and 4.5 percent, respectively.

Age

The median (half above, half below) age of women workers in April 1966 was 41 years. (Table 3) Almost 3 out of 5 women in the labor force in 1966 were 35 years of age or over, and almost 2 out of 5 were 45 years of age or over.

Nearly half (47 percent) of all women 18 to 64 years of age were workers in 1966. Highest labor force participation (52 percent) was among women 18 to 24 and 45 to 54 years of age. In contrast, only 1 out of 10 women 65 years of age and over and about 2 out of 10 girls 14 to 17 years of age were in the labor force.

Marital and Family Status

Of the 26.8 million women workers in March 1966, nearly 3 out of 5 were married and living with their husbands. (Table 4) Twenty-three percent were single, 9 percent were widowed, 6 percent were divorced, and 6 percent were married but not living with their husbands.

Labor force participation was highest among divorced women (71 percent) and lowest among widows (28 percent). More than 1 out of 3 married women living with their husbands were workers.

In March 1966, 9.9 million women workers had children under 18 years of age. (Table 5) Almost 6.1 million had children 6 to 17 years of age (none under 6), 1.7 million had children 3 to 5 years of age (none under 3), and 2.1 million had children under 3 years of age. Labor force participation was highest among mothers with school-age children only (47 percent) and lowest among mothers with children under 3 years of age (23 percent).

^{1/} All figures relate to annual averages unless otherwise indicated.

Educational Attainment

Women in the labor force in March 1966 had slightly more education than did all women in the population. (Table 6) The median years of school completed by women 18 years of age and over in the labor force and in the population were 12.3 years and 12.1 years, respectively.

Less than 1 out of 10 women in the labor force had fewer than 8 years of schooling, more than 6 out of 10 had graduated from high school, and 1 out of 10 had 4 years or more of college.

The median years of school completed by women employed as professional and technical workers was 16 years. (Table 7) Among women nonfarm managers, officials, and proprietors, clerical workers, sales workers, and craftsmen and foremen, the medians were more than 12 years. Educational attainment of women workers was lowest among operatives (10.4 years) and private-household workers (8.9 years).

Occupations

About 8.5 million women were employed in clerical jobs in 1966. (Table 8) Of these, more than 3 million were working as stenographers, typists, and secretaries. The next two largest major occupational groups among employed women were operatives and service workers (except private-household). Nearly 4.1 million were employed in each of these two occupational classifications. Another 3.5 million were professional and technical workers. Of these, more than 1.4 million were teachers (except college), and 900,000 were medical and other health workers. In contrast, less than 300,000 were craftsmen and foremen, and about 100,000 were nonfarm laborers.

Women predominated among teachers (except college), clerical workers, private-household workers, and waitresses and cooks. They were only a small percentage of the craftsmen and foremen, nonfarm laborers, and farmers and farm managers.

Industries

Of the 25.6 million women employed in March 1966, 10.9 million were in service industries. (Table 9) They accounted for more than 2 out of 5 of all women workers. Numerically the service industries were followed by manufacturing (5.2 million) and retail trade (4.6 million). Women's employment in the remaining industries totaled 4.9 million.

In March 1966 the proportion women were of all workers was highest in personal services (76 percent) and professional and related services (61 percent), and lowest in mining (4 percent) and construction (5 percent).

The industries in which 250,000 or more women were employed in October 1966 are shown in table 10. Among these industries, women were more than half of all employees in banking, apparel and related products

manufacturing, general merchandise stores, eating and drinking places, apparel and accessories stores, medical and other health services, personal services, and telephone communication.

Full-Time and Part-Time Job Status

About 3 out of 4 women workers were on full-time schedules in 1966, as compared with 9 out of 10 men workers. (Table 11) Most of the women who worked part time did so voluntarily.

Work Experience

Nearly half of all women 14 years of age and over in the population worked at some time in 1965. (Table 12) They numbered 33.8 million. However, only 39 percent of these worked full time year round. By marital status, the proportions who had work experience were 55 percent among single women, 46 percent among married women (husband present), and 45 percent among women who were divorced, widowed, or separated. But the latter group were the most likely to work full time year round--half of them did so in 1965.

Wage or Salary Income

The median wage or salary income of year-round full-time women workers in 1965 was \$3,823. (Table 13) This was only 60 percent of the median wage or salary income of year-round full-time men workers (\$6,375). About 40 percent of all women with wage or salary income were year-round full-time workers.

Of the women with wage or salary income in 1965, 62 percent received less than \$3,000. This compares with only 30 percent of the men. At the upper end of the scale, only 4 percent of the women but 30 percent of the men had annual wage or salary incomes of \$7,000 or more.

Among women working year round full time in 1965, the highest median wage or salary income was received by professional and technical workers (\$5,574), followed by nonfarm managers, officials, and proprietors (\$4,516) and clerical workers (\$4,237). (Table 14) The lowest paid were private-household workers (\$1,193).

Table 1.--Employment Status of Women, 1966 and 1965
