Identifiers-*Wisconsin State University Stevens Poini
As a first step in "improving and builcing up" the graduate program at the Wisconsin State University ai Stevens Point, a study o. graduate students was initiated in 1967. It examined the interrelationships of their graduate majors, undergraduate majors and colleges, high school deciles and class size, age, sex, level taught, geographic location, year of matriculation, and M.A.T. scores. Athough mosi of the study was concerned with the 774 students who, were active in July, 1969 . data are included on students enrolled from the program's beginning in July 1960. It was found that most degrees ( 52 of 90) had been awarded in either English or elementary education, and of those currently enrolled, most ( 464 of 774) had received their undergraduate degrees at Stevens Point. It was evident that the graduate program had greatly expanded in recent years. Most students limit their studies to summers, however, and this helps to account for the large number currently enrolled and the smali number of degrees awarded. Extensive use is made of tables and figures to present this data, and trends are noted. No specific recommendations are made. (DS)

## Purpose

The study of graduate student characteristics was requested in 1967 by Dr . Gordon Haferbecker, then Acting President of WSU-Stevens Point. Its purpose was intended to be the first step in improving and building up the graduate program. It was thought that a thorough study of our graduate student characteristics was needed, with an eye toward trends as related to purposes. It was concluded that there was need for not only a summary of significant characteristics but also their relation to each other and also to outside predictors.

It has taken considerable time to obtain the computer capacity and personnel to conduct this analysis. For this reason, original data for 1967 were discarded and the present study represents characteristics of the most recent available student body.

## Sampling

The group studied includes all individuals considered to be in the graduate program at WSU-Stevens Point in July, 1969. The population studied, then, includes 774 people who were classified as active students in the graduate program.

In order to determine trends there has been some attempt to obtain longitudinal data beginning with the summer of 1960 when the graduate program at Stevens Point was initiated.

Table 1
Graduate Students Active July, 1969
Number and Per Cent of Students, and Year of Matriculation at WSU-Stevens Point

|  | Number | 2 | 1 | 5 | 19 | 31 | 57 | 148 | 154 | 182 | 175 | 774 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\therefore$ | Per Cent | 0.3 | 0.1 | 0.6 | 2.5 | 4.0 | 7.4 | 19.1 | 19.9 | 23.5 | 22.6 | 100.0 |

The above table shows the per cent of active graduate students for each matriculation year. The matriculation year is the year in which the student applied for and was admitted to the graduate program. It can be seen that 85 per cent of the active students were admitted in 1966 or later. This indicates that a large number of the graduate students entering prior to 1966 have either graduated or have become inactive in the graduate program.

Table 2
Graduate Students Active July 1969
Sex and Year of Matriculation at WSU-Stevens Point

| Sex | Matriculation Year |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 60 | 61 | 62 | 63 | 64 | 65 | 66 | 67 | 68 | 69 | Totals |
| Male | 0 | 1 | 2 | 9 | 13 | 26 | 57 | 62 | 71 | 62 | 303 |
| Female | 2 | 0 | 3 | 10 | 18 | 31 | 91 | 92 | 111 | 113 | 471 |
| Totals | 2 | 1 | 5 | 19 | 31 | 57 | 148 | 154 | 182 | 175 | 774 |

In recent years, the ratio of female and male graduate students has been two females to every male. Prior to 1966 the ratio was closer to one male to every female. What has caused this increase in the ratio of females over males will be answered in the remainder of this study. One prediction might be the demand for advanced degrees in the field of elementary education.

Table 3
Graduate Students Active July 1969
Per Cent Distribution by Sex and Year of Matriculation at WSU-Sterens Point

| Per Cent | Matriculation Year |  |  |  |  |  |  |  |  |  |  |

Sex, Number Active, Per Cent Active, and Year of Matriculation at WSU-Stevens Point

| Sex | 60 | Matriculation Year |  |  |  |  |  |  |  |  | Total | Number <br> Active | Per Cen Active |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 61 | 62 | 63 | 64 | 65 | 66 | 67 | 68 | 69 |  |  |  |
| Male | 19 | 26 | 27 | 61 | 53 | 47 | 72 | 66 | 73 | 65 | 509 | 303 | 59.5 |
| Female | 36 | 32 | 28 | 43 | 58 | 62 | 103 | 104 | 116 | 124 | 706 | 471 | 66.7 |
| Total | 55 | 58 | 55 | 104 | 111 | 109 | 179 | 170 | 189 | 189 | 1215 | 774 | 63.7 |
| Number. Active | 2 | 1 | 5 | 19 | 31 | 57 | 148 | 154 | 182 | 175 | $77^{4}$ |  |  |
| Per Cent Active | 3.6 | 1.7 | 9.1 | 18.3 | 27.9 | 52.3 | 84.6 | 90.6 | 96.3 | 92.6 | 63.7 |  |  |

Table 2 shows how many male and female active gra ${ }_{l}$,ated students had matriculated each year. Table 3 shows what per cent of each year's to'al were men and what per cent were women. The 303 men consiitute 39.1 per cent. The remaining 60.9 per cent are women. This in contrast to the undergraduate student body, of which about 62 per cent are $m \in n$, on the average. Table 3 reveals that for recent years the percentage of women is increasing. In fact 64.6 per cent of active students who matriculated in 1969 were women.

From Table 4 it can be seen that 509 men and 706 women have matriculated since the inception of the proaram in 1960. Of these 1215 entrants, 59.5 per cent of the men and 66.7 per cent of the women are still actives, inclucing 2 of the orizinal 55 graduate students who matriculated in 1960.

When the graduate program was first approved, it provided for two summers of work at Stevens Point and two summers at the University of Wisconsin Madisor Campus. After 1962 the MST degree was offerer at Stevens Foint, and the first graduates received Master's Degrees in 1964. These facts may $k_{2}$ elp to explain why the proportion of entrants remaining in the program increased noticeably from 1963 on. The 774 active graduate students constitute $6 \%$. $\hat{1}$ per cent of all those who matriculated at Stevens Doint since the graduate progr.m was instituted. The hignest per cent of retention in the program is for those who enteied in 1968 , since 96.3 per cent of these students are still active.

## Age at Time of Matriculation

Table 5 gives the active s-aduate students ${ }^{1}$ ages at time of matriculation by year of matriculation at WSU-Stevens Poini. The mode by age is 23 , where there are 80 graduate students. The next highest frequency by age is 24 , followed by 25,26 , 27, and 22. This shows that most of the graduate students are seeking the Master's degree soon after receiving the bachelor's degree. One would expect this because of the ever-jncreasing demand for further education. There are 416 graduate students in the 21-30 age interval, 168 in the 31-40 interval, 126 in the $41-50$ age interval, and 58 in the 51-60 age interval. Four students are more than 61 years old, while three are age 21. In the $38-51$ age intervals, the number of graduate studerts is approximately constant.

Fig. 1. Graduate Students Active July 1969. Age at time of matriculation and number of graduate students.

The average age by year of matriculation ranges from 44.2 in the year 1962 to 31.5 in the year 1967. Irspection of the totals of Table 5 reveais a trend to younger ase - a fact to be expected, since the table refers only to active students.

Figure 1 is a graphic representation of Table 5.

Table 6
Graduate Students Active July 1969
Size of High School Graduating Class, Per Cent of Total by High School Graduating Class Size, and Year of Matriculation at WSU-Stevens Point

Table 6 shows size and peiv cent each size of high school graduating class of graduate siudents at WSU-Stevens Point. The years 1966-69 are the best indicators here because of the larger number of students. Although high school class size is known for orly 82.3 per cent of the students, it is clear that the great majority came from classes of 200 students or fewer, with the 1-50 category leading.

Taole 7
Graduate Students Active July 1969
Percentage Distribution of Size of High School Graduating Class by Year of Mairisulation at WSU-stevens Point

| Per Cent of <br> Class Size | Matriculation Year |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: |
| $1-50$ | 0.0 | 61 | 62 | 63 | 64 | 65 | 66 | 67 | 68 | 69 |  |
| $51-100$ | 50.0 | 0.0 | 20.0 | 26.3 | 12.9 | 8.8 | 16.2 | 20.8 | 15.4 | 17.1 |  |
| $101-200$ | 50.0 | 0.0 | 20.0 | 15.8 | 22.7 | 22.7 | 23.0 | 17.5 | 21.4 | 22.3 |  |
| $201-300$ | 0.0 | 0.0 | 40.0 | 10.5 | 12.9 | 12.3 | 5.4 | 13.0 | 7.7 | 11.4 |  |
| $301-500$ | 0.0 | 0.0 | 0.0 | 10.5 | 9.7 | 10.6 | 7.4 | 5.3 | 9.9 | 9.7 |  |
| $501-1000$ | 0.0 | 0.0 | 0.0 | 0.0 | 6.4 | 1.8 | 3.4 | 2.6 | 1.6 | 2.3 |  |
| $1001-$ over | 0.0 | 0.0 | 0.0 | 5.3 | 3.2 | 8.8 | 3.4 | 0.6 | 0.5 | 0.0 |  |
| Unkrown | 0.0 | 100.0 | 20.0 | 26.3 | 6.4 | 19.3 | 20.3 | 14.9 | 24.7 | 10.9 |  |
| Totals | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |  |

Table 7 shows per cent distribution by year of matriculation of high school class size, with the "urknown" category included in the totals. Particularly noticeable here is the fact that we are getting comparatively few graduates of large high schools.

As shown in Table 8, the largest number of active graduate students, by level taught, are the 206 secondary high schcol teachers, who constitute 26.6 per cent of the 774 active graduate students. The most dramatic increase in number appears to be those teaching kindergarien, since 37 kindergarten teachers had matriculated by mid-1969.

Table 8
Graduate Students Active July 1969

Tables 9 and 10 also refer to levels taught, with several categories combined. Table 9 shows the number of matricular.ts at each teaching level, and size of high school graduating class for each. Table 10 shows per cent distributions for each class size category. Perusal of these tables reveals that 42.8 per cent of all active graduate students teach at the junior or senior high school level. While the high school teachers come from all class sizes, they constitute nearly two-thirds of $a l l$ who graduated in a high school class of 1,000 or over. In contrast, comparatively few kindergarten-primary teachers came from large high schools.

Table 11 shows that the largest percentage of the graduate students graduated from high school after 1955. Between 1956 and 1960 , 25.2 per cent of the known graduates had graduated from high school and between 1961 ard 1965, 23.5 per cent graduated from high school.

Table 12 gives the number of years of teaching experience at time of matriculation, by year of entrance to the graduate program. The range in years of experience was 1 to 38 years, with a mean of approximately 5 years for the 660 students whose teaching experience is known. However, the majority of students had 5 or fewer years of teaching experience when they entered graduate work.

Table 13 enumerates the number who had previously obtained each type of bachelor's degree by year of matriculation to graduate work at Stevens Point. The shows that 77.0 per cent had received the Bachelor of Science degree, and 11.6 per cent had received the Bachelor of Arts degree. Three students who previously had a master's degree are omitted from the table.

Table 1'4 gives the undergraduate first major for active graduate students by year of matriculation at WSU-Stevens Point, The leading major is elementary education, which has 205 graduate students, or 37.1 per cent. The next highest major is English with 89, followed by History with 87, Home Economics with 55, Music with 53, and Intermediate and Upper Education with 45. Also the following majors have 10 or more graduate students: Speech Pathology-36, Biology-31, Primary Education-27, Social Science-27, Mathematics-17, and Speech-10. The above majors have a total of 682 graduat.e students or 88.1 per cent of the $77 \%$ graduate students.

| Totals | 2 | 1 | 5 | 19 | 31 | 57 | 148 | 154 | 182 | 175 | 774 |

Table 15 shows the undergraduate second major by year of matriculation at WSU-Stevens Point for active graduate students, A total of 688 , or 88.9 per cent of the $77{ }^{4}$ graduate students have no secend major. The leading second major was social seience, that of 17 graduate students. Other dominant second majors were English-7, General Science-7, His-tory-7, and Political Science-5.

The following tables are to be distinguished from those just presented because they represent majors of all graduate students who matriculated at WSU-Stevens Point, not just active students.

Table 16 gives the undergraduate first major by year of matriculation a亡 WSUStevens Point for all graduate students who entered. Again the leading major is elementery education with 316 graducte students, as compared to 205 active students. Following is a list of dominant majors, compared to number of active majors.

| Major | All | Active |
| :--- | :---: | :---: |
| Elementary Education | 316 | 205 |
| English | 144 | 89 |
| History | 128 | 87 |
| Music | 89 | 53 |
| Home Economics | 84 | 55 |
| Intermediate and Upper Elementary | 80 | 45 |
| Primary Education | 56 | 27 |
| Biology | 50 | 31 |
| Social Science | 39 | 27 |
| Speeck Pathology and Audiology | 37 | 36 |
| Mathematics | 28 | 17 |

The above majors for all graduate students total 1051, or 86.5 per cent of the total number of the 1215 graduate students.

Since active students represent 63.7 per cent of all matriculants, it is interesting to note that active majors in Intermodiate and Upper Elementary Education and in Primary Education fall far below this proportion of total entrants, on the other hand, 36 of the 37 matriculants in Speech Pathology are active. (Speech Pathology is a new program.)

Summary: In 1968; 73 men and 116 women matriculated in graduate study at Stevens Point. Significantly, 25 men were History majors and 10 were Biology majors. Most of the women majored in Elementary or Primary Education, Home Economics, or English.

| Totals | 65 | 124 | 189 |

Summary: So far in 1969, 65 men and 124 women have matriculated as graduate students. The women outnumber men by almost 2 to 1 ratio. The Biology, History, and Social Science majors are mostly men, while women made up all or most of the majors in Elementary and Primary Education, Home Economics, and Speech Pathology.

## Geographic Iocation by Courity and Sta:e

The following table indicates the geographic distribution of origin of the graduate students, represented by location of the high schools from which they graduated.

| Origin | INumber | Per Cent <br> of Total |
| :--- | :---: | :---: |
| Wisconsin Graduate Studentis | 619 | 82.8 |
| Out-of-State Graduate Students | 123 | 16.4 |
| Foreign Graduate Stučents | 6 | 0.8 |
| Total | 748 | 100.0 |

From the table it can be seen that the majority of the graduate students came from Wisconsin.

Figure 2 gives the geographic origins of the Wisconsin graduate students by county. From this map it can be seen that more students (70) came from Marathon county than from any other. Next highest are Portage and Wood counties with 62 students each. Other counties from which 20 or more students came include: Shawano30, Waupaca-30, Lincoln-27, Milwaukee-25, Clark-22, and Taylor-20.

The origins of graduate students who came from out of the state are shown in Table 27. Listed are 20 states, District of Columbia, and five foreign countries. The four states from which most out-of-state students came are states bordering Wisconsin: Illinois-34, Minnesota-27, Michigan-18, and Iowa-12.

Fig. 2 Home County of Graduate Students Active July 1969. 619 Students.

| Arkansas | 1 | Missouri | 4 |
| California | 1 | Montana | 1 |
| D. C. | 1 | Nebraska | 3 |
| Illinois | 34 | New Jersey | 1 |
| Indiana | 2 | New Mexico | 1 |
| Iowa | 12 | New York | 2 |
| Maryland | 1 | North Dakota | 5 |
| Massachusetts | 2 | Pennsyivania | 4 |
| Michigan | 18 | South Dakota | 1 |
|  |  | Texas | 1 |
|  | Foreign Country | Number |  |
|  | Canada | 1 |  |
|  | Dutch Guiana | 1 |  |
|  | Japan | 2 |  |
|  | Kenya | 1 |  |
|  | Spain | 1 |  |

Of the 774 active graduate siudents, 656 were employed at a location that was recorded in the reccrds of the Graduate Dean at the time of most recent commanication. The great majority are teaching in Wisconsin, as shown by the following table.

|  | Number | Per Cent |
| :--- | :---: | :---: |
| Wisconsin Graduate Students | 608 | 92.7 |
| Out-of-State Graduate Students | 48 | 7.3 |
| Total | 656 | 100.0 |

Figure 3 shows the geographic location by county of place of employment of all active graduate students who are employed in Wisconsin. Perusal of this map reveals that close proximity to Stevens Point is a significant factor in their distribution. Counties where the greatest number are employed include: Portage-99, Marathon-95, Wood-86, Waupaca-38, Shawano-33, Clarik-30, Lincoln-26, and Outagamie-21.

Graduate students employed outside of Wisconsin are enumerated by state in Table 28. These people are employed in 17 states and one foreign country. By far the greatest number (15) are employed in Illinois, while several are employed in each of the states of Minnesota, California, and Michigan.

Summary: About 60 per cent of the students in the graduate program received their undergraduate degrees from Wisconsin State University at Stevens Point, Of the graduate students, about 71 per cent completed their undergraduate studies at one of the nine state universities. Some 68 students, or 8.8 per cent received the Bachelor's degree outside Wisconsin. The University of Wisconsin Kadison campus was the source of 40 graduate students - more than any other institution except WSU-Stevens Point.

## Evidences of Student Quality

Inevitably we must examine available credentials of those who aspire to do graduate work, since one basic qualification of the graduate student is superior achievement. One measure of quality is high school percentile or decile rank. Decile rank distributions, known for 479 of the 774 active graduate students, are given in Table 30. A glance at this table reveals that the greatest frequency is found for the 90-99 decile. The table also shows that 87.4 per cent of all graduate students whose rank is known had ranked in the upper kalf of the high school class. Figure 4 is a graphic representation of Table 30.

Table 30
Graduate Students Active July 1969
High School Decile, and Number and Percentages by Decile

| High School <br> Decile | Number | Per Cent of <br> Known Total |
| :--- | :---: | :---: |
| $1-9$ | 1 | .2 |
| $10-19$ | 9 | 1.9 |
| $20-29$ | 15 | 3.1 |

| $80-89$ | 107 | 22.4 |
| $90-99$ | 137 | 28.6 |
| Unknown | 295 | 100.0 |
| Total | 727 |  |

Fig. 4. Graduate Students Aotive July 1969. High sohool decile, number of graduates by decile, and per cent of graduates by decile.

Then high school decile is distributed by sex of graduate students, as shown in Table 31 , the women are found to have ranked considerably higher than men on the average. The overall average percentile rank is 74.0 . For men it is 65.8 and for women 81.6. Men outnumbered women in each of the lowest six deciles, while women outnumbered men in the top four deciles. Unknown, however, are the ranks of 71 men and 224 women. Figures 5 and 6 show the rank distributions of men and women graphically.

Fis. 5. Male Graduate Students Active July 1969. Number and percentage by High Sohool decile.

Fig. 6. Female Gruduate Students Active July 1969. Number anc̀ percentage by High School decile.

Tabie 32 shows the distribution of active graduate students by jear of matricuIation and high school decile rank. The mean rank has reduced in size for matricular.s of the past two years. This -ight be explained by the selective process which has through the years removed some lower rank students from the active list.

Table 32

Table 33 shows the distribution of active graduate stiudents by high schcol decile and high school graduating class size. We have very few students who are graduates of large high schools. However, the largest averaged rank, 81.4 was that for the $1000 \div$ category. The next highest averaged ranix was that for the 1-50 and 201-300 categories: 77.9.

When high school percentile rank is related to first wajor, a variety of averaged percentile ranks results, largeiy because of the swall number of cases per major. The distribution of majors and averages ranks for known cases, together with the number of known cases is given in Table 34. Where ten or more cases are listed, the averaged ranks by major are: Home Economics-85.0, Elementary Education-79.2, English-79.0, Music (all 46 Misic majors)-77.4, Primary Education-74.5, Intermediate and Upper Elementry Education-71.1, History-66.8, Biology-65.9, Speech Pathology-65.9, and Social Science-65.8. We may also observe that eight Mathematics majors had an averaged rank of 88.4.

A second measure of graduate student quality is the undergraduate grade point ratio. These ratios are known for all but 15 active graduate students. Their distribution is given in Table 35. The distribution, also shown in graphic form in Figure 7, is somewhat positively skewed, with the 2.90-2.99 category as the mode. The grade point ratio for men is 2.75; for women it is 2.93, as -inown in Table 36. For all students the grade print ratio is 2.87 .

The grade point distributions by sex are shown in Figure 8 and 9, Where the grade point distribution for women is approximately normai, that for men is skewen positively.

In the comparison of grade point ratios by marital status (Table 37) single persons on the average ranked higher than married persons, 2.93 to 2.84. However, the marital status at the time of matriculation was not known for 139 students. This may be explained by the fact that a larger proportion of women than men were single, and women have higher grade point ratios ihan men.

One of the questions frequently asked concerning various measures of student quality is, how do they relate to each other? This question is answered quite well in Table 38. The overall correlation of GPR and high school percentile rank, computed from the table, is .362 . As shown in the table, there are no high grade poirt ratios where the high school rank is low. However, some students who ranked near the top of the high school class had quite mediccre undergraduate academic records. The four students whose GPR was 3.70 or higher all came irom the top high school decile. Also, students from the top decile had an averaged GPR of 3.03.

A third measure of student quality is the scores of graduate students on the Miller Analogies Test. This test has been given to students admi.tted to the graduate program, usually within the first, year of study. Scores are available for 127 active graduate students, so the data are limited. Table 40 shows how these scores relate to grade point ratio intervals. The great majority of Miller Analogies scores fall between 30 arid 59, with none below 20 or above 90. The average Miller Analogies Test score is 46.83.

The following table gives quartile norms for Miller Analogies test scores of graduate students pursuing various studies.

Table 39
General Norms of Graduate Students: Miller Lnalogies Test

|  | $Q_{1}$ | $Q_{2}$ | $Q_{3}$ |
| :--- | :--- | :--- | :--- |
|  | 43 | 55 | 65 |
| Business Administration | 32 | 43 | 55 |

| WSU_Stevens Point MST Candidates |  |  |  |

-51-

It can be seen from Table 39 that the 127 students whose Miller Analogies scores are avaílaie compare favorably with Education doctoral candidates as a group.

The correlation between Miller Analogies test scores with undergraduate grade point ratio intervals is . 210 , based or 127 cases. This is a small but significant correlation.

Table 41 shows the same 127 Miller Analogies test scores related to high school decile rank. The resulting correlation of .188 , computed from Table 41 data, is age.in small but significant.

Undergraduate gride point Are:juencies are shown for each matriculation year in Table 42. The grade point frequencies having the largest number of cases (of active graduate students) are those between 2.80 and 2.99. The grade point ratios by year of matriculation are quite similar, indicating that according to this measure, the student quality is quite consistert from year to year. The grade point ratios renge from 2.83 in 1964 to 3.00 for 1962.

Uridergraduate grade point frequencies are related to high school class size in Table 43. The ratios for various high school class size are remarkably consistent, range from 2.82 for class size $301-500$ to 2.91 for class size over 1,000 .

Table 44 relates undergraduate grade point ratios to level taught, where some level categorias have been combirad. Again the ratios show very little spread. Substitute teachers had averaged grade points of 2.80 , while those in school administration had a grade point ratio of 2.91.

This study concerns 774 graduate studer's who were active students at WSU-Stevens Point in July 1969. This group represents 63.7 per cent of all $\dot{1} 215$ graduate students who have matriculated at WSU-Stevens Point since the inception of the graduate program in the sumer of 1960. Sources of cata for this report ave largely the file records of the Graduate Dean.

The number of matriculant per year has increased from 55 in 1960 to 189 in 1968. The 1959 matriculants totalled 189 by July, continuing the gradual increase in number of students entering per year. By the end of the sumner session in August, 1969, 90 students had been awarded Master's degrees at Stevens Point, 27 at the end of the 1969 summer session. A. few others received degrees at the University of Wisconsin under a cooperative plan that was in operation until 1962.

Table 45 shows the number of graduates by year and major field of study. Two special fields, Reading (MST) and Speech Pathology (MS) account for a number of the 1969 graduates. As expected, Elementary Education is the leading major for gracuates.

* MST majors, uniless otherwise designated.

Women con-titute 60.9 per cent of active students. Although women outnumber men nearly 2 to 1 among the 1960 entrajts, the proportion who were men steadily increased, until by 1963 men outnumbered women entrants. Since that time the proportion of matriculants who are womer has steadily increased.

Although marital status for quite a few students is not known , single graduate students are apparently in the majority both for men and women.

Age at time of matriculation ranged from 21 years to 66 years, with an average near 35 years. The trend appears to be toward matriculation at an earlier age. Teaching experience at the time of matriculation ranged from 1 co 38 years. Most teachers now enter the master's program with fewer than five years of teaching experience.

About 42.8 per cent of the graduate students are teaching at high school or junior high schocl level, and about 36 per cent at the elementary or kindergarten level. The others are in special categories or have no designated teaching level.

The great majority of active graduate students came from suall high schools, a fact winich has become increasingly noticeable in recent years. Most of the kindergarten-primary teachers came from smaller high schools, and most of those who came from large high schools are high school teachers.

Undergraduate first majors found to be most numerous in addition to kindergarten and elementary majors, are: English, History, Home Economics, Music, Speech Pathology, and Biology. Speech Pathology is the most rapidly growing program.

Approximately 82.8 per cent of the active graduate students graduated from a Wisconsin high schooi, most of them from high schools in the centrai part of the state。 Most out-of-state students came from states boraering Wisconsin. For the 656 active students whose place of employment is known, 92.7 per $\mathrm{c}=\mathrm{nt}$ are employed in Wisconsin, and 48 are employed outside Wisconsin.

About 60 per cent of the active graduate students received the bachelor's degree at WSU-Stevens Point, and 71 per cent received the degree in the WSU system. Only 8.8 per cent received the bachelors degree outside Wisconsin.

For those whose academic quality before matriculation is known, the quality was high on the average. The averaged high school peicentile rank is 74.0 , with romen averaging higher than men. Seven-eighths of these students had finished in the upper half of the high school class. The quality was not clearly related to high school class size, tut there appeared to be significant differences according to undergraduate major. The Miller Analogies test scores, available for a fraction of the active students, compared favorably on national norms with Education doctoral candidates. The undergraduate grade point ratio distri’ution ranges from 2.15 to 3.99 , with an overall mean of 2.87 for all students for whom data are obtaineri.

There are small but significant correlations among the three measure of student quality. Student gualities varies only slightly from year to year.

By the end of the 1969 summer session, 90 Master's degrees had been conferred at WSU-Stevens Point. When we consider the fact that 383 persons had been admitted to the graduate study by the end of 1964 , and that only a few completed their work at the University of Wisconsin unuer the cooperative plan, it is clear that only a fraction of those who had entered graduate work by 1964 had completed the work within the desired five year perioc. Those who enter the graduate program need to be enco'raged to move ahead with their studies and to fulfill requirements promptily.

Student quality is quite good. The great majority of those admitted to graduate study had already proved themselves as students. A few students with mediocre undergraduate academic records have been admitted after proving their ability to do satisfactory graduate work. Apparently, those who had grade point ratios below the minimum for probation status at WSU-Stevens Point have transferred after doing satisfactory graduate work elsewhere. A longitudinal study should be conducted later on to determine what proportion of the graduate students admitted on probation are able to complete work for the Master's degree.

The graduate program is expanding steadily in number of admissicns. If it is successful, the number of degrees granted should also increase steadily.
