IDENTIFIERS Laboratory School Library, *Nonbook Materials

ABSTRACT

In devising a satisfactory solution to the problem of organizing and cataloging nonbook materials, the Laboratory School Library kept two goals in mind: (1) to keep the call numbers and catalog card-forms as simply as possible, and (2) to keep the number of catalog cards to a minimum. A full description of the original plan was published in 1954 (out of print). This publication is a supplement to the earlier manual which brings the policy statement up to date. Its main purpose is to aid students in library practice at the Laboratory School. It outlines the main features of the system, indicates types of media not originally included, and illustrates, through sample cards, solutions to cataloging problems encountered since 1954. Suggestions for further simplifications in cataloging suitable for public schools are also given. The main topics covered include: (1) basic aims of the plan of organization, (2) devices used to achieve the aims, (3) sample call numbers, (4) description of the organization of the various types of nonbook materials, (5) temporary-slip forms for circulation and acquisition, (6) adapted and simplified catalog-card form, (7) basic card-form variations, (8) shelf card, (9) sample shelf-list and catalog cards, and (10) addenda. PREFACE

The Laboratory School Library became the central station for all school-owned teaching materials, including audio-visual materials and equipment, in 1945. Before that time the library collection had consisted of books almost exclusively.

Little had been written then on ways of organizing and cataloging nonbook materials, particularly on simplified ways suitable for schools. The term filmstrip was still two words, nonbook was hyphenated, and the names phonodisc and phonotape had not been invented. Not even the Library of Congress had issued any guide lines on cataloging these materials.

After a careful study of what had been written at that time about special library materials and music librarianship, we began formulating our own system, which has served us well.

One of the first problems that confronted us, and for which we found no published solution at the time, was how to catalog and index study units consisting of diverse media which cannot be stored together conveniently; for example, books with accompanying motion pictures and filmstrips, disc records with accompanying filmstrips, filmstrips with accompanying teaching guides and sample products. We devised a satisfactory answer to this problem by using a system of call numbers and catalog notes. It has been gratifying to see how well this system lends itself even to the most bizarre combinations.

It has been our goal (1) to keep the call numbers and the catalog card-forms as simple as possible and (2) to keep the number of catalog cards to a minimum. However, the cataloging of phonograph records and four-track monophonic tapes is rarely a simple matter.

The original plan, after two years of use, was described briefly in the article, "Now, Just One Place to Look," Library Journal, Vol. 73, pp. 1233-1236, September 15, 1948. A fuller description with sample cards was published as a Laboratory School Library manual under the title Non-Book Library Materials in 1954. It is now out of date and out of print.

This booklet serves as a supplement to our earlier manual, Non-Book Library Materials, bringing our policy statement up to date. One of its main uses will be as an aid to students in library practice at the Laboratory School. In outline form it recounts the main features of the system. It indicates additional types of media not included originally, and it illustrates through sample cards solutions to cataloging problems encountered since 1954. Also it includes suggestions for further simplifications in cataloging suitable for public schools.

CONTENTS

PREFACE

MAIN TOPICS

- I. The basic aims of the plan of organization
- II. Devices used to achieve the aims
- III. Sample call numbers
- IV. A description of the organization of the various types of nonbook materials
- V. Temporary-slip forms used in circulation and acquisition
- VI. A catalog-card form adapted and simplified from that used in the Laboratory School Library
- VII. Variations in the basic card-form to accommodate various types of materials -- as now used in the Laboratory School Library
- VIII. The shelf card
- IX. Sample cards from the Laboratory School shelf list and catalog
 - A. Motion pictures, including motion picture loops
 - B. Slides with a printed commentary
 - C. Stereograms with a printed commentary
 - D. A filmstrip with a script and bottled samples
 - E. Books with accompanying materials
 - F. Tapes, including tapes in cassettes and tapes on cards
 - G. Disc records
 - H. Added entries for well-known authors and composers
 - I. An exception to the rule for main entry under title
 - J. Analytic entries made short and specific
 - K. A combination method used for some large sets
- X. Addenda
 - A. Some other types of special materials cataloged since 1965, sample cards included
 1. Three-dimensional teaching aids
 2. Kits of printed, programmed materials
 3. Art slides
 - B. Some policy changes
 - C. A short list of useful tools and references

**THE ORGANIZATION OF NONBOOK MATERIALS IN THE LABORATORY SCHOOL LIBRARY
NORTH TEXAS STATE UNIVERSITY**

An Outline

By Virginia Clarke, Librarian

I. The basic aims of the plan of organization

A. To make it possible for the library user:

1. To find all kinds of materials on a particular subject, both books and nonbook materials, listed together in the general catalog under one list of subject headings.
2. To find, with a minimum of searching, all the parts of an audio-visual unit, such as a filmstrip and its accompanying sound record and teaching guide, and at the same time to conserve storage space.

B. To adapt the library circulation system already in use to include audio-visual aids and yet keep the system as simple and convenient as possible.

II. Devices used to achieve these aims:

A. One circulation-slip form used for both books and nonbook materials: a white card for books, a yellow card for nonbook materials.

B. All materials identified by short call numbers that can be copied in the "box" on the circulation slip.

1. Use of Cutter-Sanborn numbers instead of full subject headings in the call numbers for vertical file materials, overhead transparencies, and large study prints.

2. Many materials filed by accession numbers.

C. One catalog in one alphabetic arrangement using one subject heading list.

D. One catalog-card form adapted for all types of audio-visual materials. This form makes it possible to show on one entry the location of all the various parts of an audio-visual unit by use of:

1. Notes.

2. Short call numbers in the margin of the card for each item in the unit.

E. Uniform statistical records for books and nonbook materials.

III. Sample call numbers that suggest the system of identification and arrangement used in the Laboratory School Library.

FS	Filmstrip
82	Accession number
E	Elementary school level
MP	Motion picture
14	Accession number
J	Junior high school level
SZ	Slide (S), large size (Z)
124	Accession number
StY	Stereogram (St), medium size (Y)
98	Accession number
DX	Disc record (D), small size (X)
236	Accession number
TY	Tape (T), medium size (Y)
72	Accession number
P	Professional information for teachers and librarians.
Poster	Large poster
641	Dewey subject number for <u>Food</u>
f	"Folio" sized poster, i.e. very large poster.
Poster	
614.8	Dewey number for <u>Safety</u>
Map	Large map
100e	Place number for <u>World</u> (from Boggs and Lewis tables ¹) plus
1946/2	letter symbol for <u>Economic maps</u> , the date represented by the map, plus the number "2" to represent the second economic map of the world acquired by the library for the year 1946.
VF	Vertical file materials
S12	Cutter-Sanborn symbol for subject: <u>Safety</u> ²
285	Accession number (used only for those items that accompany cataloged materials, such as filmstrips, records, etc.)
OT	Transparencies and "masters" for the overhead projector
A71	Cutter-Sanborn symbol for subject: <u>Arithmetic</u> ²
285	Accession number (used only for those items that accompany cataloged materials)

¹Published in Classification and Cataloging of Maps and Atlases by Samuel W. Boggs and Dorothy Cornwell Lewis, Special Libraries Association, 1945.

²The Cutter and the Cutter-Sanborn alphabetic-order numbers, though used most extensively for author names, lend themselves to use also for subject headings or for any other words, names, or phrases to be filed or listed alphabetically. For libraries using full subject headings on vertical file materials, the following call number is suggested for printed materials to accompany audio-visual aids:

VF	Vertical file materials
Manuals	Manuals, commentaries, teaching guides, etc. to accompany AV aids
342	Accession number

III. Sample call numbers, continued.

Large	Large flat picture, chart, map or folder up to 14"x18"
VF	Vertical file
N28	Cutter-Sanborn symbol for subject: <u>Nature study</u>
Picture	Very large mounted picture, ¹ larger than 14"x18"
F64	Cutter-Sanborn symbol for subject: <u>Flowers</u>
LM	Language Master tape mounted on a card
1206	Accession number
MPL	Motion picture loop
326	Accession number
TC	Tape in cassette
97	Accession number
3DX	Object or three-dimensional representation, ² small size ⁴
29	Accession number
KX	Kit (boxed, programmed, printed material, ³) small size ⁴
84	Accession number for the kit as a whole

¹These large mounted pictures are filed flat in flat shallow drawers. Standard map and chart cases are being used at present.

²The "3D" category includes realia, samples, specimens, models, replicas, dolls and toys, exhibits, globes, planetariums, three-dimensional art objects such as sculpture, models and constructions, pottery, jewelry, fabrics, baskets, wood and wax carvings, etc.

³The "K" or Kit category has not been found necessary nor desirable in this library for multi-media units, though it is conceivable that something might be acquired in the future that would require this treatment. Thus far, each medium has been stored with its kind regardless of the multi-media combinations, which are indicated on the catalog cards.

⁴The size symbols W, X, Y, and Z have been used for both the "3D" category and the "K" category, and they represent the volume of storage space required. The symbol W represents the size of an object or kit requiring storage space up to that of a 6" cube (36 cubic inches) or requiring 8" shelving 6" apart. X represents space up to a 12" cube or 12" shelves 12" apart. Y represents space up to a 24" cube or 24" shelving 24" apart. Z represents space larger than that of Y.

6

III. Sample call numbers, continued.

In call numbers for sets of nonbook materials, the oblique mark has been used in numbers like 67/8, 89/91, 102/7, 305/16 to indicate the continuous consecutive accession numbers respectively: 67 to 68, 89 to 91, 102 to 107, 305 to 316. The oblique mark separates the first complete number from the varying digits of the last number. See the examples below. Note that in the call number for a map on the preceding page, the oblique mark is used with a different meaning. The number (2, 3, or 4) following an oblique mark after the date in the call number for a map indicates the second, third, or fourth map acquired that represents the given place at the given date.

Continuous accession numbers in a set are indicated in the call number thus:

FS	Manners make a difference.	Eye Gate House, c1951.
1239/47	<u>9 filmstrips.</u>	Color.
J	Contents: -1. Why have good manners. -2. Table manners. -3. Good manners when visiting. -4. Good	

A duplicate is indicated by a second accession number placed under the first. For example:

FS	We visit Holland.	Eye Gate House, c1951.
1292	<u>Filmstrip.</u>	25 frames. Color. (Some
1293	European neighbors)	
J		

Duplicate sets are indicated thus:

FS	Patriotic visits.	Curriculum Films, c1950.
1309/13	<u>5 filmstrips.</u>	Color.
1314/8		
E	Contents: -1. Visiting Mount Vernon. -2. Visiting the Statue of Liberty. -3. Visiting our army. -4. Visiting our navy. -5. Visiting the United Nations School.	

IV. A description of the organization of the various types of nonbook materials

A. Vertical file (legal size, 10"x15", and large size, 15"x18")

1. Arranged by subject in alphabetical sequence
2. Call number
 - a. VF - for vertical file (preceded by the word, "Large," for the oversize file)
 - b. Cutter-Sanborn number in lieu of the subject heading
 - c. Accession number if the item accompanies an audio-visual aid
3. Stored vertically in legal or oversize filing cabinets

B. Transparencies and "masters" for the overhead projector

1. Arranged by subject in alphabetical sequence in a file separate from the information file, i. e., separate from the vertical file materials designated by the symbol "VF", which is open to students. The transparency file is reserved for faculty.
2. Call number
 - a. OT - for overhead-projector transparencies and "masters"
 - b. Cutter-Sanborn number in lieu of the subject heading
 - c. Accession number if the item accompanies cataloged materials
3. Stored vertically in a cabinet with oversize drawers that are deep enough to accommodate the mounts and file guide, at least 12" deep, inside measurement. The 15"x15" size is now being used.

C. Posters

1. Small posters placed in the vertical file with other materials on the same subject
2. Large posters
 - a. Arranged by size and subject
 - b. Call number
 - (1) "f" for "folio" - used on oversized or very large posters
 - (2) The word "Poster"
 - (3) Dewey classification number for subject
 - (4) Date, if important
 - (5) Copy number if more than one
 - c. Call number, ownership mark, and date of processing placed on the front upper left-hand corner of the poster
 - d. Filed flat in shallow drawers of two sizes for large and very large posters

D. Maps

1. Small maps placed in the vertical file with other materials on the same subject
2. Large maps
 - a. Arranged by size, area, type or subject, and date
 - b. Call number
 - (1) "f" for "folio" - used on oversized or very large maps
 - (2) The word "Map"
 - (3) Classification number (Boggs & Lewis) representing the area
 - (4) One or more letter symbols representing the type and/or subject
 - (5) Date of the situation portrayed by the map

IV. D. Maps, continued.

- (6) Number 2,3, etc. to indicate the second, third, etc. map
- c. Call number, mark of ownership, and date of processing placed on the front upper left-hand corner of the map
- d. Filed flat in shallow drawers of two sizes for large and very large maps

E. Uncataloged photographs and other pictures

- 1. Small and medium-sized pictures placed in the vertical file with other materials on the same subject
- 2. Large mounted pictures (larger than 14"x18")
 - a. Arranged by subject
 - b. Call number
 - (1) The word "Picture"
 - (2) Cutter-Sanborn number in lieu of the subject heading
 - (3) Copy number if more than one
 - c. Call number, ownership mark, and date of processing placed in the upper left-hand corner of the mount on the back or on the front, usually on the back to keep from detracting from the picture.
 - d. Filed flat in shallow drawers

F. Cataloged photographic materials, discs, tapes, kits, and three-dimensional materials. See the explanatory note on the following page.

- 1. Each type of material is stored separately
- 2. Arranged by size (if there is more than one size) and subarranged by accession numbers. A separate accession-shelf-list is kept for each type of material.
- 3. Call numbers
 - a. Type symbol
 - (1) FS - filmstrip
 - (2) MP - motion picture
 - (3) MPL - motion picture loop
 - (4) S - slide
 - (5) St - stereogram
 - (6) D - disc record
 - (7) T - audio tape
 - (8) TC - audio tape in cassette
 - (9) LM - Language Master tape on card
 - (10) 3D - three-dimensional object or representation
 - (11) K - kit (used now only for boxed, programmed, printed materials)
 - b. Size symbol (for slides, stereograms, discs, tapes, kits, and three-dimensional objects)

(1) W - very small	(3) Y - medium
(2) X - small	(4) Z - large
 - c. Accession number
 - d. Grade level (disregarded in arrangement)
 - (1) E - elementary
 - (2) J - junior high school
 - (3) Absence of a grade symbol indicates senior high school or adult level.
 - (4) P - professional materials for teachers and librarians
- 4. Each type of material is stored in shelves or drawers of suitable size.

IV. A description of the organization, continued

A Note Regarding Classification

The question is sometimes asked, "Should nonbook materials be classified like books?" also "Should nonbook materials be shelved with the books on the same subject?"

It is necessary to have a subject approach to all school library materials but not necessarily two subject approaches, i. e. by both subject arrangement and by subject catalog, as we have become accustomed in the handling of books.

It will be noted that in these Laboratory School policies there is a subject arrangement of the uncataloged materials, whereas those cataloged are arranged by accession number. The subject catalog is a far more flexible and efficient tool than shelving by subject, because one item can be placed physically in only one spot in a classified arrangement regardless of how many unrelated subjects it may cover. With effective subject cataloging, the simple accession-numerical arrangement becomes feasible.

The national trend seems to be toward using serial numbers (accession numbers) in the call numbers for identification and location of nonbook materials as evidenced by the following excerpts from Standards for Cataloging, Coding, and Scheduling Educational Media, published by the Department of Audio-Visual Instruction, NEA, 1968, pp. 21-22: "A numbering system which uniquely identifies each item and labels its place in storage is recommended for storage and retrieval purposes within any instructional materials center. The prime purpose of such an identification numbering system is to uniquely identify a unique item. . .the standard format used by the Machine Readable Cataloging Project is recommended . . . This Identification Number may become vital to any computer-based information retrieval or material scheduling network because it sequentially and uniquely identifies medium, storage area, date and accession number of each item, as well as the specific copy."

It was decided at an early date at the Laboratory School to use the accession number in the call numbers of cataloged nonbook materials to make identification easy and immediate. Also it was decided to store each medium separately for economy in storage space and for efficiency in inventory and maintenance of the collection. The saving in storage space alone would seem to justify this decision. The catalog has served well as a searching and finding tool. A duplicate of the shelf list for each medium is made available to pupils and teachers to answer the question, "What do you have on records?" etc.

With all its beautiful simplicity, there is one admitted disadvantage in having only the specific subject analysis that the usual subject catalog provides: there is no synthesis, no grouping of related topics. To overcome this, the cataloger may need occasionally to assign both specific and broad headings to an item. See Section X, A, 3, c, of this outline (Art slides - Sample cards) for examples.

V. Temporary-slip forms used in circulation and acquisition

Call Number	Author or Composer
Title:	
Signature:	
Phone No.	
Date Due:	
Grade:	
Perm. Student No.	
LABORATORY SCHOOL LIBRARY	

Left: The call-slip form used for the circulation of both books and nonbook materials. The form is printed on white card stock for books and on yellow card stock for nonbook materials. The same slip serves both as a circulation card and as a fine slip in a simple one-card circulation system.

LABORATORY SCHOOL LIBRARY	
Nonbook Materials Added	
Date _____

Shelf cards added	
Catalog cards added	

Right: The additions-record form used in the acquisitions process for nonbook materials. This is for a temporary record made on the date when something of a non-book nature is added to the collection. Cumulated statistics are transferred to the permanent inventory record at the end of each month. A similar form is used for books.

VI. A catalog-card form adapted and simplified from that used in the Laboratory School Library.

Call number	Title. Manufacturer, date [if known] Description: kind, size, running time, etc.
Price	Brief annotation giving something of the contents, performers, authors, composers, etc. With:
Call number	Title of the accompanying material. (Brief description of the accompanying material)
SUBJECT	
(Shelf card)	

The same general card-form may be used for all types of audio-visual materials. A form similar to the one above has been used successfully in the Laboratory School for listing filmstrips, motion pictures, slides, stereograms, phonograph records, and tapes.

Most school libraries will need at least two cards for each cataloged nonbook item. A shelf card and a subject card will usually suffice, and it would not be advisable to attempt more than this minimum of cataloging unless the school librarian is assisted by adequate clerical staff.

If adequate clerical staff is available and if there is a well-developed music or art curriculum in the school, additional entries would be considered for: (1) titles and variant titles; (2) authors, composers, artists, and photographers; (3) performers; (4) artistic and literary forms of composition; (5) mediums of performance, e.g. the kind of musical instrument used; (6) series; (7) sponsors, producers, and directors. In any case, the number of cards made for any one item should be limited to those actually needed. Note the tracings on sample cards in section IX of the outline.

In a school system where copies of the same items will be purchased regularly for a number of schools, it would be advisable to consider centralized cataloging and processing and some type of local card reproduction, for example, the Xerox process.

VI. A catalog-card form adapted, continued.

A. Sample shelf cards.

FS A Pictorial Guide to Hamlet. Young America.
121 Filmstrip. 64 frames. (Shakespeare
Series)

\$3.00

Stills from Laurence Olivier's motion
picture version of Shakespeare's Hamlet.

With:

VF Shakespeare Series. (A teacher's guide to
Manuals accompany the series of 8 filmstrips)
223

PLAYS

An accession-shelf-list entry for a filmstrip with an
accompanying teacher's guide

VF Shakespeare Series. (A teacher's guide to
Manuals accompany the series of 8 filmstrips:
223 FS-121 through FS-128)

An accession-shelf-list entry for the teacher's guide

Printed commentaries, teacher's guides, and other flimsy items that accompany many audio-visual materials cannot be filed easily with the filmstrips and other audio-visual aids they accompany. It is more convenient to file them in a separate file or under a separate heading, such as Manuals, in the general information file (vertical file). This group of printed materials may have its own series of accession numbers and its separate "shelf" list to facilitate location and taking inventory. One such file may take care of commentaries, teaching guides, and other accompanying printed materials for all types of visual aids.

It may be noted that standard English capitalization has been used in titles on these cards. This will be an aid to student typists and will be consistent with the rules students are learning in English classes.

VI. A. Sample shelf cards, continued.

DZ My Country 'Tis of Thee. World Broadcasting
22 System.
 Speech record. 33 1/3 r.p.m. 16".
 1 side.

Written and spoken by Vincent Pelletier.

With:

FS My Country 'Tis of Thee. (Filmstrip synchro-
99 nized to accompany the above transcription)

UNITED STATES

The call number includes the accession number. The shelf list can easily serve as the accession record also. Above is an accession-shelf-list card for a disc record illustrated by a filmstrip -- often called a sound filmstrip. Below is the accession-shelf-list card for the accompanying filmstrip.

FS My Country 'Tis of Thee. (Filmstrip synchro-
99 nized to accompany disc record DZ-22)

VI. A catalog-card form adapted, continued

B. Sample subject cards

Subject cards are based on the shelf card for the main item of an audio-visual set and not on the shelf card for the accompanying materials. A subject card represents the whole set.

PLAYS

FS A Pictorial Guide to Hamlet. Young America.
121 Filmstrip. 64 frames. (Shakespeare
Series)

 Stills from Laurence Olivier's motion
 picture version of Shakespeare's Hamlet.

VII. Variations in the basic card-form to accommodate various types of materials -- as now used in the Laboratory School Library

A. Form for cataloging filmstrips.

Call number	Title. Manufacturer, date [if known], <u>Filmstrip.</u> Number of frames. Color. (Series note)
	Production note [if needed], Contents or brief annotation [if needed], Library has also
Call number	Title of accompanying material. (Brief description of the accompanying material)

○

In the production note are given the names of important authors, editors, composers, artists, photographers, performers, conductors, directors, sponsors, producers, and all other useful information regarding the making of the audio-visual item if the information is not already given above on the catalog card. The names are given in the note as they appear on the material itself, on the labels, or on the accompanying printed materials. Established forms of well-known personal names are used for added entries. With each name in the production note is a title or other indication of the capacity in which the person or company serves, as Thomas Gray, author; Alfred Stieglitz, photographer; Bette Davis, actress; Metro-Goldwin Mayer, producer; Nat Wolff, production director.

B. Form for cataloging motion pictures. See also Section IX, A, for sample cards for motion picture loops.

Call number	Title. Manufacturer, date [if known], <u>Motion picture.</u> Number of reels [if more than one], Running time. Sound. Color. (Series note)
	Production note [if needed], Contents or brief annotation [if needed], Library has also
Call number	Title of the accompanying material. (Brief description of the accompanying material)

○

VII. Variations, continued.

C. Form for cataloging projection slides.

Call number	Title. Manufacturer; serial number. <u>Projection slide.</u> Size. Color. (Series note)
	Production note [if needed], Contents or brief annotation [if needed], Library has also
Call number	Title of accompanying material. (Brief description of accompanying material)

○

D. Form for cataloging stereograms

Call number	Title. Manufacturer; serial number. <u>Stereogram.</u> Number of reels, strips, etc. [if more than one] Size. Color. (Series note)
	Production note [if needed], Contents or brief annotation [if needed], Library has also
Call number	Title of accompanying material. (Brief description of accompanying material)

○

VII. Variations, continued

E. Form for cataloging disc records

Call number	Title. Manufacturer; set and record numbers* <u>Speech record</u> or <u>Music record</u> . Speed. Groove type [if it is unusual for the speed, Diameter. Number of sides. Stereo. (Series note)
	Production note [if needed, Contents [if needed, Library has also
Call number	Title of the accompanying material. (Brief description of the accompanying material)

○

*Set and record numbers appear on the shelf card only.

F. Form for cataloging sound recordings on tape. See also Section IX, F, 6 & 7 of this outline for sample cards for audio tapes in cassettes and on cards.

Call number	Title. Manufacturer or recorder; serial number; date [if known, <u>Speech record</u> or <u>Music record</u> . Tape. Run- ning time. Speed. Number of tracks, mono or stereo, side number, upper or lower head [if more than one-track monophonic, (Series note)
	Production note [if needed, Contents, brief annotation, or other titles on the same tape. Library has also
Call number	Title of the accompanying material (Brief description of the accompanying material)

○

A long entry may be continued on the reverse side of the shelf card or on an extension card in the catalog.

VIII. The shelf card.

In the Laboratory School routines, the shelf card is the first card made, and it is the unit card on which the catalog cards are based. Student typists can follow it in making the catalog cards. On the shelf card, the price is given in the margin several spaces below the first call numbers, and the tracing is added after the notes on the front of the card or on the reverse side. The price, the tracing, and the manufacturer's serial numbers are not repeated on the catalog cards. The shelf list serves as the accession record also. The accession number is part of the call number.

FS 2432	The adventures of Huckleberry Finn. Popular Science Publishing Company; c1967; 5006. <u>Filmstrip</u> . 41 frames. Color. (Secondary literature)
\$4.40	Samuel Langhorne Clemens, author. Library has also
VF L77	Teaching guide. (For the filmstrip above)
1228	I. Clemens, Samuel Langhorne. II. Series.
(Shelf card for the filmstrip)	

(Shelf card for the guide)

VF L77 1228	Teaching guide. (For the filmstrip: FS-2432)
-------------------	--

A shelf card is made not only for the main item in an audio-visual set or unit but also for each kind of accompanying material. This is done to facilitate taking inventory. In rare instances, mixed types of materials are packaged together. In this case, one shelf card will suffice for the package. See the examples in the outline under IX, E, 5 and 6.

In most cases, one set of catalog cards is made for an entire audio-visual set, and it is based on the shelf card for the main item, e.g. the shelf card for the filmstrip represented above.

When several compositions, literary or musical, are recorded on one disc or one tape, they may be cataloged separately even though there is never more than one shelf card for any one physical item. See the outline under F, 5 and G, 1.

VIII. The shelf card, continued.

One shelf card may stand for a series of items if they are of the same type, under the same title, and accessioned in sequence, e.g. the set of 5 motion pictures represented under IX, E, 3. The accession number 13/7 represents 13 through 17.

IX. Sample cards from the Laboratory School library shelf list and catalog

A. Motion pictures.

MP The aged land. International Film Bureau, 1963.
26 Motion picture. 25 min. Sound. Color.

\$225.00 Life in modern Greece as seen against its
 setting of ancient ruins; photographed, directed,
 and edited by Harry Atwood; written by Roberta
 Baska; spoken by Steve Heller.

IX. E. Books, continued

5. A book packaged with disc records

Sometimes books are shelved with the disc records. This method is satisfactory when a book is a secondary part of an audio-visual unit, when the book is not expected to circulate except with the records, and when it comes packaged with the records in a slip case or album box of convenient shape and size. The book is accessioned as a book, but it bears the same call number as the record, with which it is packaged and shelved, plus its own accession number for identification.

\$35.00
set

Word-picture program; Set I: Nouns: Everyday things. Bell & Howell Company; c1966; E-35; B & H Part no. 111021.
Speech record. 200 Language-Master tapes-on-cards.

Each card in this set contains both the printed word and an accompanying picture together with the oral taped pronunciation. Each of the words in this set is also used in a phrase and a sentence in the Language Stimulation Program.

See verso

1. RECORDS (SPEECH) - ENGLISH DICTION
2. VOCABULARY - PROGRAMMED INSTRUCTION
3. ENGLISH - PRONUNCIATION - PROGRAMMED INSTRUCTION I. Title: Nouns: Everyday things.

IX. G. Disc records.

1. A disc record with filmstrips and synchronizing texts.

These cards represent a sound recording of four separate stories on one disc. The problem is similar to the one where four separate programs are recorded on one tape, and a card-form similar to the one used for the tape in the previous example is used here. Each title is cataloged separately.

DY Millions of cats. Weston Woods, PBP-101.
674 Speech record. 33 1/3 rpm. 12" Side 1,
E band 1.

\$25.00 Wanda Gág, author and illustrator of the book
set On the same disc:
Side 1, band 2: Mike Mulligan and his steam-
shovel.
Side 2, band 1: Make way for ducklings.
Side 2, band 2: Hercules.

See verso.

(Shelf card for the record)

(Reverse side of the shelf card for the record)

Library has also
FS (Four filmstrips illustrating the four books
1129/32 represented on the disc record)
E

VF (Four filmstrip texts designed to synchronize
L77 the filmstrips with the disc record)
884-7

E I. Millions of cats. II. Mike Mulligan and his
steamshovel. III. Make way for ducklings.
IV. Hercules. See title cards in the catalog
for other tracings.

IX. G. 1. Disc record with filmstrips and texts, continued

The main catalog card for one of the stories recorded on the Weston Woods disc record. Each story is cataloged separately even though there is only one shelf card for the disc as a whole.

DY Millions of cats. Weston Woods.
674 Speech record. 33 1/3 rpm. 12" Side
E 1, band 1.

Wanda Gág, author and illustrator of the book.

Library has also

FS Millions of cats. (Wand Gág's illustrations
1129 on film)

VF Filmstrip text for Millions of cats. (De-
L77 signed as an aid in synchronizing the disc
884 and filmstrip)

See verso.

1. CATS - STORIES I. Gág, Wanda.

IX. G. 1. Disc record with filmstrips and texts, continued

The shelf card for one of the filmstrips accompanying the record represented on the previous page.

FS 1129 E	Millions of cats. Weston Woods Studios. <u>Filmstrip.</u> 44 frames. From the book of the same name written and illustrated by Wanda Gág. Library has also
DY 674	Millions of cats. (A disc record synchronized with the above filmstrip)
VF L77 884	Filmstrip text for Millions of cats. (Designed as an aid in synchronizing the disc and filmstrip)

The shelf card for one of the texts accompanying the record represented on the previous page.

VF L77 884	Filmstrip text for Millions of cats, by Wanda Gág. (Designed as an aid in synchronizing the sound filmstrip consisting of the disc: DY-674 and the filmstrip: FS-1129)
------------------	--

IX. G. Disc records, continued

2. An alternative card-form for cataloging the same Weston Woods disc record. This form follows music library policy more closely in the method of showing the contents. The contents of the complete record would appear on each catalog entry, and an extension card would be required for each catalog entry. Each title would be cataloged separately.

DY 674 E	Millions of cats. Weston Woods, PBP-101A. (Reverse side: PBP-101B) <u>Speech record.</u> 33 1/3 rpm. 12" 1/2 side.
\$25.00 set	Wanda Gág, author and illustrator of the book. Same side: -Burton. Mike Mulligan and his steamshovel. Reverse side: -(a) McCloskey. Make way for ducklings. -(b) Gramatky. Hercules.

1. CATS - STORIES I. Gág, Wanda.	

IX. Sample cards, continued

H. Added entries for well-known authors and composers.

Added entries are made for authors, composers, and performers if they are well known. The name of the author or composer is followed by the established, standard form of the title, i.e. the conventional title, if the title of the item cataloged varies from the original or standard form. Also when stories are recorded from well-known collections, the collection title follows the author's name.

apprentice. (b) Smetana. The Moldau. -2. (a)
Saint-Saens. Danse Macabre. (b) Liadoff. Kiki-
mora. (c) Weber. Invitation to the dance.

IX. Sample cards, continued

I. An exception to the rule for main entry under title.

Though the basic rule is to make the main catalog entry under title for all nonbook materials, exception may be made when a number of different compositions are recorded on one long-playing record without an "album" title. In that case the main entry can be made under any unifying element that permits the record to be cataloged as a whole. Often such a record is by one composer, by one performer, by one performing group, by one author, or by one production company, such as Walt Disney Productions.

DY Respighi, Ottorino.

X. Addenda

A. Some other types of special materials cataloged since 1965, sample cards included

1. Three-dimensional teaching aids

The symbol, 3D, is used for real objects and three-dimensional representations including realia, samples, specimens, models, replicas, dolls and toys, exhibits, globes, planetariums; also art objects such as sculpture, models, constructions, wood and wax carvings, pottery, jewelry, baskets, fabrics, etc.

Used with the 3D symbol are the size symbols: W, X, Y, and Z. W represents storage volume requirement up to a 6" cube or 8" shelving 6" apart.

X represents storage volume requirement up to a 12" cube or 12" shelving 12" apart.

Y represents storage volume requirement up to a 24" cube or 24" shelving 24" apart.

Z represents storage volume requirement larger than Y.

One series of accession numbers is used for all types of three-dimensional objects. They are shelved by size and subarranged by accession numbers regardless of type. The type is brought out clearly in the physical description on the catalog card. Each separate part of a set or composite model is given a separate accession number.

a. Card form.

Call number	Title. Manufacturer; serial number; date, if known, <u>Type of object.</u> Size. Color.

TION

(Reverse side of the shelf card)

X. A. 2. Kits of printed, programmed materials.

The kit category has been used in this library for boxed, printed, programmed materials. It has not been found necessary nor desirable to use the kit category for multi-media units, though it is conceivable that something might be acquired in the future that would require this treatment. Thus far, each medium has been stored with its kind regardless of the multi-media combinations, which are, of course, brought out in cataloging.

In the call number, the kit symbol, K, is followed by a symbol for size: W, X, Y, or Z, representing the same storage volume requirements assigned to the letters for three-dimensional objects. See the preceding section in this outline: X, A, 1.

A separate series of accession numbers is used for kits, which are accessioned as a whole, one number to the kit.

(Reverse side of the shelf card)

X. A. 3. Art slides

When the art teacher at the Laboratory School and teachers of the University Department of Art were consulted regarding practical ways to analyze and index collections of slides and other art collections, they stressed the usefulness of knowing the form, medium, nationality, and general time period represented by a work of art, in addition to knowing the name of the artist, the title, the subject and often the visual elements, the image content of the work.

The time or historical period headings, all of which are stated so that they begin with the word, ART, can serve another useful purpose in bringing all art slides and some other art materials together in the catalog. As pointed out in the note at the end of Section IV of this outline, materials arranged by accession numbers often need entries under broad as well as specific headings. See the list of historic art periods that follows in this outline.

The visual theme, the image content, is a needed but usually neglected field in the analysis and cataloging of works of art. The Laboratory School Library has made a primary start in this field.

Though there is not yet a published authority list of headings for cataloging the visual elements of art, the librarian can study the terminology used in chapter headings and indexes of books about art, particularly those that deal with composition and formal elements of art. As a start for the beginner, Bernard Karpel, Librarian of the Museum of Modern Art, New York, has suggested the following:

Arnheim, Rudolf. Art and Visual Perception; A Psychology of the Creative Eye. Berkeley and Los Angeles, University of California Press, 1954.

Barr, Alfred H., Jr. Fantastic Art, Dada and Surrealism. New York, Museum of Modern Art, 1936. (Arno Press reprint, New York, 1967)

Bettmann, Otto L., editor. Bettmann Portable Archive . . . Illustrations Culled from Files of The Bettmann Archive, Topically Arranged and Cross-Referenced to Serve as an Idea Stimulator and Image Finder. New York, Picture House Press, 1966.

Denver Art Museum Quarterly.

Besides the main entry under title, entries are made for the following as needed:

- (1) Artist, e.g.:
Michelangelo Buonarroti
- (2) Variant titles, e.g.:
The Blue Boy
- (3) Institutional sponsor, publisher, or corporate "author," e.g.:
North Texas State University. Art Department.
- (4) Series, e.g.:
Metropolitan Museum's seminars in art
- (5) Artistic form and nationality or culture, e.g.:
SCULPTURE, ITALIAN
- (6) General time period in art history represented, e.g.:
ART, RENAISSANCE
ART, 20TH CENTURY
- (7) Visual or symbolic theme, image content, or visual devices e.g.:
COURAGE
ENERGY
ALLOVER PATTERN
GEOMETRIC STYLE
FORESHORTENING
- (8) Subject, e.g.:
NEFERTITI, QUEEN OF EGYPT

c. Sample cards, for slides commercially produced, continued.

The following cards represent a book with an accompanying set of twenty colored slides, which came originally in slots attached to the back cover of the book. For safer handling and storage, the slides were removed from the book, bound between glass with metal binders and placed with the rest of the slide collection. Catalog cards for the set are based on the shelf card for the book with no cards in the catalog for the slides alone.

709 Werner, Alfred.

- d. A simplified list of headings representing general time periods in the history of art (used for art slides, filmstrips, motion pictures, and all other cataloged art visuals)

ART, ANCIENT (500,000 B.C. to the 5th Century A.D.)

ART, MEDIEVAL (2nd to 15th Centuries A.D.)

ART, RENAISSANCE (13th to 16th Centuries A.D.) See also the more specific headings:

ART, BYZANTINE

ART, ROMANESQUE

ART, GOTHIC

ART, BAROQUE AND ROCOCO (17th and 18th Centuries A.D.)

ART, 19th CENTURY

ART, 20th CENTURY

- e. Some other broad geographic and cultural headings are used if the above headings are not regarded adequate, e.g.:

ART plus the adjective for continents, countries, cultures, as well as time periods in Western culture. Also:

ART, ORIENTAL

ART, PRIMITIVE, see also:

ART, AFRICAN

ART, OCEANIC

ART, PRE-COLUMBIAN

CAVE DRAWINGS

CHILDREN AS ARTISTS

FOLK ART

- f. Suitable headings for the forms and types of art are taken from the Sears List if possible, e.g.:

ARCHITECTURE

DRAWINGS

PAINTINGS

Prints, see

AQUATINTS

COLOR PRINTS

ENGRAVINGS

ETCHINGS

LINOLEUM BLOCK PRINTS

f. Headings for forms and types, continued

Though the Sears List is very irregular in its application to art work, it was decided to use it as a point of beginning, because in this library one of the basic guide lines for the organization of the nonbook materials was having one integrated, comprehensive, dictionary catalog, using one subject heading authority list for all types of media. But new headings have been and will continue to be added to the list as needed.

B. Some policy changes since the first edition, 1953.

1. Changes in regard to the vertical file.

Scripts, teaching guides, and other limp printed materials designed to accompany audio-visual aids had been filed in the vertical file with other materials on the same subject for a long period of time. These accompanying materials were distinguished from the others by an accession number added to the usual call number for the subject. See Topics III and IV of the outline. They were filed at the back of the folders for the various subjects, subarranged by accession number to make locating them easier.

Though this system had worked well for nearly twenty years while our library service was mainly to students, teachers, and student teachers in our own school, it began to break down in 1964-1965 when great numbers of student teachers working in all parts of the city and the region began to make extensive use of our files. It became impossible to keep the accessioned materials sorted in the folders, and therefore, it became increasingly difficult to locate the scripts and guides quickly when they were needed. For this reason, the accessioned materials were transferred from the "public" file to a separate file closed to the public.

This change in no way restricted the use of the materials since they could be located easily through the catalog. It merely meant that the user would ask the librarian or library assistant to locate the materials for him instead of trying to find them for himself.

2. Changes in regard to filmstrip sets or series.

Sets, or series, of filmstrips are cataloged as a whole unless:

The set is incomplete.

The library already has one filmstrip from the set.

There are duplicates of some but not all of the filmstrips in the set.

No series or set titles appears on the filmstrips themselves.

The set is very large and has individual teaching guides or scripts for each filmstrip. For such a set it is often possible to catalog the filmstrips individually for a limited number of entries and at the same time to catalog them collectively for other entries. See the example in IX, K, of this outline.

X. B. Some policy changes, continued

2. Changes in regard to filmstrip sets or series, continued

Title analytics are made for filmstrips in sets cataloged as a whole. Also subject analytics are made when needed.

A contents note is given for sets cataloged as a whole. If the contents note is long and makes an extension card necessary, it may be omitted on analytic cards.

3. Changes in regard to sound recordings.

In cataloging disc records, we now use matrix numbers instead of printed numbers if the printed numbers are not unique for each physical side.

The number of disc sides given in the physical description is interpreted to mean the physical sides regardless of whether they repeat with audible and inaudible signals. Examples:

Speech record. 33 1/3 rpm. 12" 4 sides;
side 1 of each disc audible signals, side 2
inaudible.

Speech record. 33 1/3 rpm. 12" 2 sides
that are identical except for the audible or
inaudible signals.

More extensive use of the performer entry as the main entry. Many long-play records tend to resemble concerts, presenting many and varied compositions by many composers but performed by a single performer or group, and cataloging is simplified by making the main entry a performer entry when there is no over-all label title or cover title.

Analytics for "serious" musical compositions are entered under the name of the composer followed by the conventional title. Analytics for popular and semi-classical music and hymns are entered under their popular titles, which are usually better known than the composers.

When several compositions are recorded on a single record or record album or a single tape and when these compositions (or programs) are cataloged separately -- tracings that apply to the record or tape as a whole will be found on the shelf card; tracings that apply to individual compositions or programs will be found on the main catalog entry for the particular item. A reference at the end of the tracing on the shelf card calls attention to other tracings on the main catalog cards.

X. B. Some policy changes, continued**3. Changes in regard to sound recordings, continued**

Sometimes it is more convenient and practical to shelve printed matter with the record it is designed to accompany. A book-accession number is assigned to the printed pamphlet or book if it is not permanently attached to the record-cover. Its call number consists of the record call number plus the book accession number. A call number on the printed matter identifies it if it should become separated from the records.

Panorama sets consisting of a book, a record, and two papermounted strips of 16 mm slides are shelved with the records, marked with a record call number. The record and slides are stored in the book's cover-pockets.

Music recorded on tape and speech recorded on tape are handled much in the same way as music and speech records on discs. The same policies hold for conventional titles and main entries. Tape recordings continued to be entered along with disc recordings in the files for RECORDS (MUSIC) and RECORDS (SPEECH), and a separate list is made also under TAPES though these entries are not indicated in the outline.

The first two tapes ordered for the pre-recorded tape collection were single one-track tapes, one program to the tape, for use with our older recorder.

Since the purchase of the Voice-of-Music 4-track recorder, all tapes have been ordered pre-recorded on four tracks, one program per track, with ADCB trackage arrangement, that is: (A) first side, upper head; (D) second side, upper head; (C) first side, lower head; (B) second side, lower head. This is a convenient arrangement for playing the programs in sequence without having to rewind the tape.

For multi-program tapes, one shelf entry is made for each tape; also one entry is made in the TAPES file; usually one entry is made also in the RECORDS file. Each program is cataloged separately for other entries, except where all programs on a tape can be represented by the same heading. An exception is made for the series entry. A separate series entry is made for each program even if all the programs on the tape are from the same series. This is especially useful in order work.

Entries are rarely made for producers. One exception is Texas School of the Air and Tapes since this is a main source of free copies. A listing under this producer and distributor is a convenient aid in order work. It helps make evident the gaps to be filled, and it helps prevent duplication.

X. B. Some policy changes, continued

3. Changes in regard to sound recordings, continued

Series entries are made if it seems that they will be useful. A reference may be made from well-known producers to the series entries for their productions.

Analytics are made for most musical compositions and for poems; also they are made for excerpts and versions of books.

For long recordings of music which have as their main purpose mood or rhythm or background musical atmosphere, analytics are not made for the various compositions. They are indicated, however, in contents notes at least on the main catalog card, i. e. the title entry, with a reference on all other catalog cards to the main card. Entries are made for the type of music or the kind of rhythm and sometimes for well-known performers and composers.
