INTRODUCTION

The educable mentally retarded youth is one who, because of retarded intellectual development, cannot find success in the usual educational programs designed for persons his age but can, if provided opportunities and training consistent with his needs, look forward to a useful, productive, rewarding adult life.

His limitations in intelligence, earlier frustrations in school situations and difficulties with abstract reasoning make it unprofitable for him to consider academic achievement as his main goal. His curriculum should be designed to develop his assets to deal with any additional handicapping conditions and to overcome the insecurities and difficulties in adjustment that he may have acquired if his prior education and training has been unrealistic.

At the secondary level, the pupil enters the Special Education-Vocational Rehabilitation Cooperative Program, becoming a client of the Division of Vocational Rehabilitation.

This program, a cooperative working arrangement between the Division of Vocational Rehabilitation and the Division of Instruction (both being in the State Department of Education) has been designed to help bridge the gap between special education and employment.

The Cooperative Vocational Rehabilitation - Special Education Plan in each school is based on an approved special education program for educable physically or mentally handicapped pupils. The cooperative unit must be comprised entirely of secondary school age youths and located in a secondary school setting with one or more special education classes on the elementary school level as "feeders" for the cooperative unit.

The services of the Cooperative Vocational Rehabilitation - Special Education Program include:

- (1) systematic diagnosis and evaluation of personality traits of pupil-clients as related to successful work performance
- (2) personal and social adjustment training necessary for successful job preparation, employment, and independent living
- (3) assessment of occupational potential and evaluation of vocational aptitudes of individual clients
- (4) the purchase of specialized diagnosis and evaluation needed and unavailable through the school (These may include medical, psychological and evaluation center services.)
- (5) provision at secondary school level of a kind of pre-vocational and adjustment training laboratory in which special education staff pool their efforts in preparing the pupil-client for successful employment

- (6) extension of the special education program to job try-outs, on-the-job training, part-time employment or a full-time job within the framework of the school setting and vocational rehabilitation
- (7) vocational planning and training in specific areas of employment
- (8) selective job placement and supervision

All inquiries concerning special education classes should be directed to the Supervisor of Special Education, State Department of Education, P. O. Box 771, Jackson, Mississippi 39205.

GENERAL GOAL

To help the client become personally, socially, emotionally, spiritually, and economically adequate for a life of independence

SPECIFIC OBJECTIVES FOR CLIENT

- to practice to become more proficient in fundamental skills and tool subjects
- to develop his abilities, potentialities and aptitudes
- to develop a sense of responsibility to the community through constructive experience
- to develop social skills and attitudes that will enable him to live and work satisfactorily with others
- to acquire good habits of personal health and hygiene
- to learn proper employer - employe relationships
- to learn duties and qualities of a good worker
- to apply knowledge in practical life and work situation
- to cultivate good moral, spiritual, mental and emotional health
- to learn ways of using leisure time properly
- to express and develop aesthetic ideas and attitudes which will be reflected in the personality of the individual
- to acquire good work habits
- to become more adept in the art of communication
- to form and cultivate a desire for self-improvement
- to build self-confidence by providing activities in which he can experience success and build frustration tolerance
- to equip himself to the best of his ability for vocational or occupational competence so that he may engage in employment

VOCATIONAL EVALUATION AND TRAINING

The vocational and educational aspects of the Cooperative Program are thoroughly interwoven; however, for the purpose of discussing the curriculum, this guide has sections on various subject-matter areas. The reader will understand that vocational implications are dealt with in each division of the curriculum and that subject matter areas are correlated as they are being taught.

The special education teacher at the secondary level working in the Cooperative Program is called an adjustment counselor. Supervising his or her work for Rehabilitation is a special counselor assigned by the Division of Vocational Rehabilitation to work with clients and adjustment counselors in several Special Education - Vocational Rehabilitation units.

The adjustment counselor and special counselor, having the same goal for the habilitation of the client, work together in planning and providing services and training within and outside the school-based facility.

The following outline gives a general picture of the program from the point of view of the special counselor. It is to be understood that the adjustment counselor is continuously working with him, and that the two will be spending time planning together and planning with clients and their families.

The discussions following this chapter will deal with subject matter areas, with the understanding that the special counselor is making contributions here as well as in the areas that have a more immediate application to work. He helps to develop good work habits, to present job information and to do some evaluation through cooperating with the clients and adjustment counselor in all phases of the curriculum.

Some of the materials and equipment which the Division of Vocational Rehabilitation can supply might be used for teaching "academic" subjects, but these subjects are presented in relation to their uses in helping clients to live independent and rewarding lives.

The Vocational Rehabilitation outline follows:
