ABSTRACT

The purpose of this study was to determine to what extent colleges recognize college-level achievement acquired in nontraditional ways, their purposes for such recognition, the mechanisms they use, and the manner in which they handle course exemption and credit. The results were based on responses to a survey from a representative group of 141 institutions in the South. Some of the principal findings were: (1) two-thirds of all institutions, including practically all public 4-year colleges, grant advanced standing through course exemptions. Approximately one freshman in nine received such exemption in fall 1970; (2) public colleges tend to consider acceleration a more important rationale for granting exemption than enrichment, whereas private colleges hold the opposite view. In both types of institutions about one-half of the freshmen receiving course exemption also received credit toward graduation; (3) departmental examinations, Advanced Placement examinations, and USAFI courses are the mechanisms accepted for advanced standing by the largest number of institutions; and (4) although acceptance of each mechanism has increased at the institutional level since 1968, the proportion of freshmen involved has remained relatively constant.

College Board Examinations Board, December 1970

The College Entrance Examination Board is a non-profit membership organization that provides secondary and postsecondary students and teachers with college preparation. The membership is composed of individuals, schools, school systems, and education associations. Representatives of the members serve the committees that consider the Board's programs and participate in the development of its policies and activities.

Center of the Board may be obtained from the Southern Regional Office, College Entrance Examination Board, 1750 Peachtree Parkway, N.E., Suite 200, Atlanta, Georgia 30329.

Higher Education Surveys is an activity of the College Entrance Examination Board. Its purpose is to provide member institutions with a convenient means of gathering pertinent information about important current problems in college admissions. The survey described in this report was executed by the Southern Committee for Higher Education Surveys No. 3 with the staff support of Richard Ferrin and Warren Willingham of the College Board's Access Research Office in Palo Alto, California, and Stephen Ivens and Robert Stoltz of the College Board's Southern Regional Office in Atlanta, Georgia. The Southern Committee is responsible for defining the topic and for the specific questions included in this survey. The College Board staff is responsible for gathering the data and reporting the results. Since a primary objective of this project is to make known the results obtained from the committee's questionnaire as rapidly as practical, this staff report is a factual accounting without interpretation or evaluation. The staff and committee are grateful to the many respondents who made this rapid survey possible by returning questionnaires within a few days.

Abstract

This survey was concerned with the extent to which colleges recognize college-level achievement acquired in nontraditional ways, their purposes for such recognition, the mechanisms they use, and the manner in which they handle course exemption and credit.

Results were based on responses from a representative group of 141 institutions in the South. Principal findings were:

1. Two-thirds of all institutions, including practically all public 4-year colleges, grant advanced standing through course exemptions. Approximately one freshman in nine received such exemption in Fall, 1970.
2. Typically, public colleges consider acceleration a more important rationale for granting exemption than enrichment, whereas private colleges hold the opposite view. Nevertheless, in both types of institutions about one-half of those freshmen receiving course exemption also received credit toward graduation.
3. Departmental examinations, Advanced Placement examinations, and USAFI courses are the mechanisms accepted for advanced standing by the largest number of institutions.
4. Although acceptance of each mechanism has increased at the institutional level since 1968, the proportion of freshmen involved has remained relatively constant.
5. Institutions do not typically inform students upon acceptance for admission of the amount of advanced standing or credit they will receive. In fact, a good many defer such decisions until successful completion of subsequent coursework.
6. About one-half the public 4-year colleges and one-fourth the public 2-year and private colleges have developed college-credit summer and dual enrollment programs for high school students.

Introduction

Ever since Thomas Jefferson established the University of Virginia in 1825 and began tinkering with traditional education structure and curriculum (Rudolph, 1965), attempts to increase the flexibility of higher education in the United States have flourished. Some have been successful, others abortive. One long-standing attempt, augmented recently by the emphasis on expansion of educational opportunity, has centered on the concept that what a person knows is more important than how he came to know it. To this end examinations have been developed, independent-study degree programs have been established, guides to the evaluation of college-level achievement from noncollegiate sources have been created, and external degree programs have been proposed. Institutions naturally vary in their acceptance of these and other forms of validation of academic accomplishment, each desiring sovereignty in its distribution of two critical commodities--course exemption and college credit.

The purpose of this survey is to provide current information on the extent to which institutions recognize the knowledge a student has acquired in nontraditional ways, their purposes for such recognition, the mechanisms they use, and the manner in which they handle exemption and credit. This survey was undertaken in the South because of current interest in the topic among educational leaders in that region. Whereas the results may well suggest national conditions, they obviously cannot be generalized automatically to other regions.

Information concerning exemption practices should be useful to the educational community for at least two reasons. First, little attention has been given to this type of assessment, either nationally or regionally. Most of the material that does exist

is either an essay, a polemic, or a description of specific programs (Flaughner, et al, 1967). Notable exceptions include Hedrick's (1960) study of credit-by-examination practices among Midwestern colleges and Dyer and Valley's (1962) analysis of off-campus educational patterns and their acceptance by collegiate institutions. Other studies have provided valuable information on the extent to which particular programs are being used¹ (Peterson, 1965-66; Casserly, 1968-69; American Council on Education, 1969; College Entrance Examination Board, 1970), but data on how and why different types of institutions use various programs or mechanisms remain scant.

Second, numerous proposals for reforming the structure and timing of higher education have come to the fore in recent months. Since several are directly related to the issue of college credit, the data presented in this report should help put these suggestions in perspective and contribute to their construction and evaluation. Examples of such proposals follow:

1. The New York Commissioner of Education, Ewald T. Nyquist, announced in September that within the next two years his state would establish a program to award external undergraduate degrees (Chronicle of Higher Education, 1970). Other states (for example, Florida) are considering similar moves.
2. Alan Pifer, President of the Carnegie Corporation of New York, suggested in a speech at the College Board's annual

1. Indicative of the increased interest in credit by examination is the growth of two College Board programs. Advanced Placement began in 1955 with 1,200 examinees, but by 1969-70 the figure had increased to over 55,000. The College-Level Examination Program, established only five years ago, gave examinations to about 30,000 students in 1969-70, a jump of approximately 300% since its inception.

meeting in October that institutions like Britain's new Open University be established in this country. Open University is exclusively an external degree institution that uses mailed syllabi, radio courses, local tutorials, and institutional examinations (Pifer, 1970).

3. The Carnegie Commission on Higher Education recommended in November that the amount of time required for the bachelor's degree be reduced, opportunities and incentives for lifelong learning be increased, and "alternative avenues by which students can earn degrees or complete a major portion of their work for a degree" be expanded (Carnegie Commission on Higher Education, 1970).
4. Many leaders within the educational and political communities have espoused the idea that at least some students should engage in apprentice or service activities between high school and college, several of them suggesting that some college credit might be earned through such activities (Brewster, 1970; Gardner, 1970; Carnegie Commission on Higher Education, 1970).

This survey was developed to provide answers to questions such as: How widespread is the practice of granting advanced standing? What proportion of all first-time freshmen are involved? What programs or mechanisms are most widely used? Do institutions tend to grant credit toward graduation or simply course exemption? What developments in credit practices do colleges anticipate over the next few years? Do transfer students tend to lose advanced credit awarded by another institution? To what extent are institutions participating in college-level programs for high school students? Answers to such questions are particularly important at this time as financial pressures, student mobility, demands for accountability, and concern for relevant curriculums all increase.

Procedure

One important objective of Higher Education Surveys is to make results available quickly, thereby eliminating much of the usual time lag between collecting data and reporting findings. Consequently, the survey procedures and the questionnaire itself were designed to facilitate both rapid responses from the colleges and rapid analysis. A single-page questionnaire was used, and it was intended that answers to practically all questions would be quantifiable (see questionnaire on page 41).

Another objective of Higher Education Surveys is to bring together a group of educational leaders to assist in the conduct of the study and to develop the questionnaire. The Southern committee (see list of members at the front of this report) met on October 15 to discuss problems related to recognition of college-level achievement and to identify particular issues deserving study and applicable to rapid survey techniques. The issues identified centered on the reasons for awarding course exemption, the extent to which exemption practices now exist, the validation mechanisms used, the amount of credit² awarded, and the conditions under which exemption/credit is granted. On November 12 the committee gathered to select and edit the specific items included in the questionnaire.

Several of the questions necessitated responses in terms of each of seven mechanisms. Brief descriptions of each follow:

AP - Advanced Placement Program (CEEB)

Provides course descriptions and consultant assistance to help high schools establish college-level courses.

2. When the term "credit" is used in this report it will generally refer only to that which is earned in some manner other than regular classwork.

Largely on the basis of the content of these courses, it develops and administers examinations in 11 subject-matter areas and encourages colleges to grant credit for satisfactory performance on these examinations.

CLEP - College-Level Examination Program (CEEB)

A national program of examinations to evaluate the academic achievement of people who have reached a college level of education outside the classroom. Includes General Examinations in five basic liberal arts areas and Subject Examinations in 28 widely taught undergraduate courses.

ACT - Student Assessment Program (ACT)

Designed to measure academic potential in four areas and also to obtain a profile of interests and activities through objective tests and a student information blank.

Ach - Achievement Tests (CEEB)

Objective tests that measure level of accomplishment at the secondary school level in 15 subject fields.

Exam - Departmental Examinations

Subject-matter examinations developed and administered by departments at individual institutions.

USAFI - United States Armed Forces Institute

Provides correspondence and group study courses in a wide range of subject areas to active duty personnel in all branches of the military service.

ACE - Guide to the Evaluation of Educational Experiences in The Armed Forces (compiled and published by ACE)

A volume that analyzes, summarizes, and lists credit recommendations for service school courses at the post-secondary level. Most recent edition published in 1968.

This survey was based on a representative sample of Southern

institutions. As Table I indicates, the sample was drawn in such a way that balance with respect to control, selectivity, and size could be achieved. Religious and special purpose institutions were sampled separately. The former are not necessarily those with a formal religious affiliation, but are rather those which place heavy emphasis on religious practice or which train for religious work; the latter specialize in fields such as music or art.

Approximately one-third of all Southern institutions were surveyed, and sampling proportions were set so that sufficient returns would be available for analysis of three basic groups of colleges: private, public 4-year, and public 2-year. This breakdown required oversampling among public 4-year institutions (including universities), but final results were adjusted so that all institutions were weighted properly.

Since predominantly black colleges have played such a prominent role in Southern higher education and since such institutions constitute about one-fifth of all institutions in this region, the committee felt it important to analyze certain responses in terms of the racial composition of the student body. To accomplish this, institutions were simply separated into two groups: predominantly black and others. The former were operationally defined as those colleges in which black students account for at least 90 percent of the total enrollment this year. It should be remembered, however, that practically all predominantly black colleges in the South are 95 percent black or more. In this sample only one institution traditionally regarded as predominantly black enrolled between 50 and 90 percent blacks.

Questionnaires were mailed on November 16 to either directors of admissions or registrars (unless the presidents had earlier designated someone else as the appropriate respondent). By

December 2 usable replies had been obtained from 86 percent of the 164 institutions in the sample (see list of Survey Respondents on page 39 and also the analysis of sample returns in Table 1).

Results

Extent of course exemption

Two-thirds of the Southern institutions in this sample award advanced standing through course exemption. Those awarding advanced standing include almost all the public 4-year colleges, two-thirds of the private colleges, and one-half of the public 2-year colleges. They also include 71 percent of the predominantly white institutions and 36 percent of the predominantly black (Table 2).

A much lower proportion of freshmen in public 2-year colleges receive course exemption than in private or public 4-year institutions. This is particularly interesting when one considers that public 2-year colleges typically have students with a wide range of academic talent and a diversity of education backgrounds.

According to Table 3 about one-half of the freshmen receiving advanced standing through course exemption receive credit toward graduation as well. Those receiving credit typically are granted more advanced standing (in terms of quarter hours received) than those granted exemption without credit.

Purposes for course exemption

Colleges and universities, like people, often perform the same activity, but they may have quite different reasons for doing so. Both public and private institutions consider the recognition of applicants' talents and abilities to be the most important rationale for course exemption, but they disagree on the effect such recognition should have on students' programs (Table 4).

Public colleges consider acceleration to be more important than enrichment, whereas private colleges regard enrichment as more important. Not many institutions, public or private, indicated that either aiding in recruitment or reducing overall institutional costs was a particularly important reasons for granting credit.

Whereas policy rationales may tend to be somewhat theoretical and idealistic, influences behind policy are likely to be more practical. In this survey respondents were asked to indicate those influences which they considered "very important" in the development of their course exemption policies over the past five years. Public 2-year and private colleges both placed student concerns at the top of the list, whereas public 4-year colleges felt that developments within high schools were most important (Table 5). As with rationales, financial considerations have evidently had little influence at any type of college.

Types of mechanisms

Seven mechanisms through which students may earn advanced standing in college were briefly described on pages 6 and 7. These mechanisms have been used in varying degrees and by different types of institutions throughout the South.

Departmental examinations are the most widely used of the seven mechanisms; 50 percent of the institutions indicate current usage (Table 6). Second is Advanced Placement (39 percent), followed by USAFI courses (35 percent). Departmental exams and USAFI courses are the only mechanisms used by a large number of black institutions. Most institutions that grant course exemption are also willing to grant graduation credit with each mechanism they use (Table 7).

No public 2-year college in the sample indicated usage of any mechanism prior to 1960 (Table 8), although one must remember

that more than three-fourths of such institutions have come into existence since that date. A few public 4-year and private institutions granted exemption before 1960, but the use of national examinations is largely a phenomenon of this decade.

Looking into the near future, very few institutions indicated they expect to begin using new mechanisms--with the exception of CLEP. Nearly one-fourth of those institutions not now using CLEP anticipate such usage within two years (Tables 8 and 9). This expectation holds for each of the three institutional types, although the percentage was highest in the case of public 4-year colleges.

In any discussion of the recognition of college-level achievement, one of the most critical questions centers on the extent to which students have actually been granted advanced standing. Table 10 documents the fact that even in institutions using a particular mechanism, less than 15 percent of the freshmen received exemption in Fall, 1970. In most cases the figure is close to 5 percent. Also, although there has been an increase in the acceptance of each mechanism among institutions within the past two years, the proportion of freshmen affected by each mechanism has remained relatively constant.

By comparing Tables 10 and 11 it is evident that for four of the seven mechanisms most freshmen receiving exemption also receive credit. In two others, departmental exams and Advanced Placement, slightly more than one-half receive both. The College Board Achievement Tests, on the other hand, appear to be used almost exclusively for advanced standing without credit.

Now for a closer look at what the findings reveal about each mechanism:

AP - Ten years ago 4 percent of all institutions in the region used the Advanced Placement Program; currently 39 percent

do, making it the most widely used national examination for exemption/credit. It is used by two-thirds of the public 4-year institutions, nearly one-half of the private colleges, but only 8 percent of the public 2-year colleges. Of this last group, however, 11 percent indicated they expect to begin using AP within two years. Most of the institutions using AP award both exemption and credit, and two-thirds of the freshmen receiving advanced standing in both 1968 and 1970 were granted course credit as well as exemption. In private institutions using AP, a much larger proportion of freshmen are involved than is true in public colleges.

CLEP - Although less than one-fourth of all Southern institutions presently use CLEP, two indicators suggest that it is the fastest growing of the seven mechanisms. First, more institutions started using it in the past two years than any other mechanism. Second, 17 percent of all institutions indicated they expect to begin using CLEP within the next two years, a figure more than twice that given for any other mechanism. If these expectations are realized, over one-half of all public 4-year colleges and nearly 40 percent of public 2-year and private institutions will be using CLEP by Fall, 1972. Despite its growth at the institutional level, less than 1 percent of the freshmen on these campuses received any advanced standing through CLEP in either 1968 or 1970.

ACT - ACT's Student Assessment Program is used as an admissions tool by many institutions in the South. The Data from this survey indicate that it is also used to determine course exemption by 11 percent of Southern

institutions. Typically, students earn credit as well. In public 2-year colleges using ACT for placement an average of 15 percent of all freshmen receive advanced standing in some field.

Ach - The College Board Achievement Tests, like ACT, are used for placement by a small number of institutions (18 percent). Most of the colleges within this group began using the tests between 1960 and 1968. They are used almost exclusively to grant exemption without credit. Some of the data suggest that their use as a placement mechanism may be diminishing. It is the only mechanism for which a lower proportion of freshmen received exemption in 1970 than in 1968. Also, no public colleges indicated an expectation to begin using Achievement Tests for placement in the next two years.

Exam - Departmental examinations are used for placement in one-half of all institutions, including 70 percent of all public 4-year colleges. This is also one of two mechanisms used extensively by black institutions. Most of the public institutions using departmental exams grant both exemption and credit; among private colleges using this mechanism, two out of five grant exemption only. Departmental examinations have been in use as an exemption mechanism longer than any of the other six, particularly in public 4-year colleges. In these institutions over one-half of those currently using them began usage prior to 1960. This mechanism is not only used by more institutions than the others, but it also affects more freshmen than all other mechanisms combined. Few institutions indicated they expect to begin using this mechanism within the next two years.

USAFI - Courses taken through USAFI are accepted by one-third of all institutions. In practically every case credit as well as exemption is awarded. This is the only external mechanism used extensively by black institutions, and it is also the only one used equally by black and white institutions. Although institutions have increasingly accepted use of the mechanism since USAFI's inception in 1941, very few freshmen actually receive exemption through USAFI courses. Another interesting fact is that although more public 4-year colleges employ the mechanism than the other institutional types, not one such institution began usage within the past two years nor do any anticipate beginning usage within the next two years.

ACE - Approximately one institution in five grants exemption based upon recommendations in the Guide to the Evaluation of Educational Experiences in the Armed Services. Like USAFI, credit as well as exemption is almost always awarded. Traditionally, public 4-year colleges have been the institutions most receptive to the Guide, but in the past two years 10 percent of all private colleges have adopted it as a placement mechanism. Although more institutions of all types use USAFI courses than use the Guide, a much larger proportion of the freshmen at institutions recognizing the Guide receive advanced standing than do those at institutions recognizing USAFI. According to Table 9 very few colleges expect to begin using the Guide within the next two years.

Several institutions also indicated they used other mechanisms. Most are examinations developed by and for a specific college, but a few are national programs, such as the Scholastic Aptitude Test,

the Differential Aptitude Test, and the Modern Language Aptitude Test.

In addition to the aforementioned mechanisms focused specifically on college enrollees, a large number of institutions have developed programs whereby they bring high school students on campus to participate in college-level courses. Two such activities are summer programs and dual enrollment programs. One or both are operated by nearly one-half of all public 4-year colleges and about one-fourth of all public 2-year and private colleges (Table 12). In summer programs students either join in regular classes or meet in special institutes. In the summer of 1970 an average of 24 students were involved on each Southern campus with such a program.

Dual enrollment programs include two types of high school students: those taking some courses at the college and some at their own high school, and those taking all their academic work at the college. In the latter case the student's high school will typically grant him full credit toward graduation for whatever time he spends at the college. Participating colleges enrolled an average of 16 students in some form of dual enrollment this fall.

Conditions on usage

Institutions do not typically inform students upon acceptance for admission of the amount of advanced standing or credit they will receive. Those applicants requesting validation of their military educational experiences through either USAFI or the ACE Guide have the best chance of getting an early decision (Table 13).

Approximately one-fourth of those institutions that grant credit based on CLEP, ACT, or departmental exams indicated that such credit is contingent upon successful completion of subsequent

coursework taken at that institution (Table 14). This is especially true for CLEP in private institutions and ACT and departmental exams in public ones.

Most institutions do not record any grade for credit earned through any of the seven mechanisms (Table 15). In those that do, the grade is generally dependent upon the individual case and is generally computed into the student's grade-point average. A few public 4-year colleges automatically award "A" when they accept an AP score and "C" when they accept military courses through either USAFI or the Guide. The mechanisms through which students are most likely to receive grades are USAFI courses, departmental exams, and College Board Achievement Tests. Students are least likely to receive grades through CLEP.

When students transfer from one institution to another, there is often the question of what will happen to the credits already earned. One interest of this survey was to find out how receiving institutions treated those credits a student had been awarded through one of the seven mechanisms. Although there was some variation from mechanism to mechanism, approximately one-half of the institutions indicated they would accept the credits automatically toward graduation (Table 16). About one in four indicated they would accept the credits with various qualifications. Only one in five stated they would not accept the credits toward graduation. Considering all mechanisms, private colleges are more likely to accept credits automatically than are public institutions. The mechanism most likely to be accepted automatically is AP.

Anticipated developments

The majority of respondents indicated that not only will their institution's policies for granting exemption/credit expand over

the next few years, but also that the degree of usage students make of various mechanisms will increase. Several respondents noted that they expect to give credit in some areas in which they are now granting only course exemption. Although he did not identify the model, one individual commented that "We shall be changing to a new academic model next year which will permit far greater opportunities for students to receive exemption/credit." Another saw expanded exemption/credit policies as a vehicle to move his institution toward greater individualization of student programs.

Although no one indicated they thought their policies would be cut back, one respondent stated: "Rather great changes have occurred within the last two years. No further changes are considered now. We will need time to fully understand the implications of the changes already made." A great many echoed the sentiment of another with respect to the next few years: "The major change will be increased use of the mechanism by students and faculty."

Table 1. The total population of Southern colleges and the constitution of the original sample and actual respondents

Table 4. Percentage of those institutions granting course exemption that rate various rationales for such practices "very important"--by institutional type

Rationales	Type of institution			
	Private	Public 4-year	Public 2-year	All institutions
Enrich student program	44%	41%	26%	39%
Accelerate student program	36	51	53	44
Create curricular flexibility	26	31	32	28
Expand educational opportunity	38	44	42	41
Aid in recruitment	26	28	26	26
Improve educational continuity from high school to college	23	31	37	28
Recognize applicants' talents and abilities	44	74	63	56
Reduce overall cost of higher education	15	10	16	14

Table 5. Percentage of those institutions granting course exemption that rate various influences in the establishment or expansion of exemption/credit policies "very important"--by institutional type

Influences	Type of institution				All institutions
	Private	Public 4-year	Public 2-year		
Adult community interest	10%	5%	21%	12%	
Faculty attitudes	31	41	16	30	
Student concerns	49	36	68	50	
Financial considerations	15	5	5	10	
Developments within high schools	15	51	11	23	
Competition from other institutions	26	15	16	21	

Table 6. Percentage of institutions using various mechanisms to grant course exemption (with or without credit)--by institutional type and racial composition

Type of institution	Mechanisms*						
	AP	CLEP	ACT	Ach	Exam	USAFI	ACE
Private	47%	22%	12%	23%	45%	40%	24%

Higher Education Surveys

DIRECTIONS: Two terms used in this questionnaire need explicit definition. **COURSE EXEMPTION** means waiving a particular course in light of a student's past experiences; **CREDIT** means not only waiving the course but also granting credit that may be applied toward graduation. Please answer each question if at all possible. Give your best estimate and, if you wish, explain any answer in the "Comments" space on the back. Call 415-328-6150 collect to clarify any question. Please return by November 24.

Students obtain college course exemption/credit through various mechanisms, such as:		AP	CLEP	ACT	Ach	Exam	USAFI	ACE	Other*
AP	— CEEB's Advanced Placement Program	()	()	()	()	()	()	()	()
CLEP	— CEEB's College-Level Examination Program	()	()	()	()	()	()	()	()
ACT	— American College Testing Program	()	()	()	()	()	()	()	()
Ach	— CEEB's Achievement Tests	()	()	()	()	()	()	()	()
Exam	— Departmental examinations	()	()	()	()	()	()	()	()
USAFI	— U. S. Armed Forces Institute courses	()	()	()	()	()	()	()	()
ACE	— ACE's Guide to the Evaluation of Educ. Experiences in the Armed Forces	()	()	()	()	()	()	()	()

1 Please answer the following items for each mechanism as it pertains to your institution:

	AP	CLEP	ACT	Ach	Exam	USAFI	ACE	Other*																																		
a. Currently used to grant course exemption but no credit [Check if yes]	()	()	()	()	()	()	()	()																																		
b. Currently used to grant credit that may be applied toward graduation [Check if yes]	()	()	()	()	()	()	()	()																																		
c. Estimate number of years you have used each program	()	()	()	()	()	()	()	()																																		
d. Not using now but expect to within 2 yrs. [Check if yes]	()	()	()	()	()	()	()	()																																		
e. Give a rough estimate of the number of first-time freshmen who received course exemption/credit under each program: [If none, mark 0]	<table border="1"> <thead> <tr> <th>Exemption only:</th> <th>Fall, 1968</th> <th>Fall, 1970</th> </tr> </thead> <tbody> <tr> <td></td> </tr> <tr> <td>Credit:</td> <td></td> </tr> </tbody> </table>									Exemption only:	Fall, 1968	Fall, 1970												Credit:																		
Exemption only:	Fall, 1968	Fall, 1970	Fall, 1968	Fall, 1970	Fall, 1968	Fall, 1970	Fall, 1968	Fall, 1970	Fall, 1968	Fall, 1970																																
Credit:																																										

f. When are freshmen applicants usually informed of exemption/credit decisions? [Check one]

Upon acceptance	()	()	()	()	()	()	()	()	()
Upon signifying intent to enroll	()	()	()	()	()	()	()	()	()
Upon registration	()	()	()	()	()	()	()	()	()
After completing advanced course	()	()	()	()	()	()	()	()	()
After appraisal of general course work	()	()	()	()	()	()	()	()	()

g. How is credit generally recorded? [Check one]

Computed into GPA, with grade of "A"	()	()	()	()	()	()	()	()	()
with grade of "B"	()	()	()	()	()	()	()	()	()
with grade of "C"	()	()	()	()	()	()	()	()	()
with grade dependent on individual case	()	()	()	()	()	()	()	()	()
Grade given, but not computed into GPA	()	()	()	()	()	()	()	()	()
No grade given	()	()	()	()	()	()	()	()	()

h. How do you generally treat the credit hours a transfer student was granted by his former institution under each program? [Check one]

Accept automatically toward graduation	()	()	()	()	()	()	()	()	()
Accept with qualifications	()	()	()	()	()	()	()	()	()
Do not accept toward graduation	()	()	()	()	()	()	()	()	()

* Answer each item for one specific mechanism your institution may use. [Give name of mechanism in "Comments" space]

<p>3 Estimate the total number of Fall, 1970 first-time freshmen who received exemption/credit under mechanisms included in Question 1:</p> <p>Exemption only _____</p> <p>Credit only _____</p> <p>Both _____</p>	<p>6 In your judgment how much importance does your institution attach to each of the following rationales for granting exemption/credit?</p> <p>Rate each: 1 - very important 2 - important 3 - not so important</p> <ul style="list-style-type: none"> Enrich student program () Accelerate student program () Create curricular flexibility () Expand educational opportunity .. () Aid in recruitment () Improve educational continuity from high school to college () Recognize applicants' talents and abilities () Reduce overall cost of higher education () 	<p>8 How do you anticipate the exemption/credit policies of your institution will change over the next 5 years?</p>	<p>COMMENTS: Use this space to explain any answer</p>
<p>4 Estimate the average number of hours received by those Fall, 1970 first-time freshmen granted exemption/credit: [Circle whether semester or quarter hours]</p> <p>Exemption _____ sem/qr</p> <p>Credit _____ sem/qr</p>	<p>7 In your judgment how important have the following factors been in influencing your institution to establish or expand its exemption/credit policies within the past five years?</p> <p>Rate each: 1 - very important 2 - important 3 - not so important</p> <ul style="list-style-type: none"> Adult community interest () Faculty attitudes () Student concerns () Financial considerations () Developments within high schools . () Competition from other institutions () 	<p>Name _____</p> <p>Institution _____</p>	<p>Use prepaid envelope provided — Return to:</p> <p style="text-align: center;">College Entrance Examination Board Suite 200, 17 Executive Park Drive, N.E. Atlanta, Georgia 30329</p>
<p>5 Estimate the number of current high school students your institution enrolled for college credit in:</p> <p>Fall, 1970 dual enrollment programs ()</p> <p>1970 Summer programs ()</p>
