IDENTIFIERS \*California State Colleges

ABSTRACT

This report contains data from the sixth annual survey of ethnic group employment in the California State Colleges. For the first time, colleges were asked to report the number of male and female incumbents of positions included in the survey, which covered the 1969-70 academic year. The survey includes employees who serve half-time or more in clerical, trade and craft, technical and sub-professional, custodial, professional, administrative, instructional faculty, supervisory and protective service positions. Salary ranges were grouped into 4 broad brackets. The five designated ethnic groups were Negro, Oriental, other non-white, Mexican-American, and other Caucasian. In addition to tables presenting the data, the report includes: a narrative summary of "highlights"; a digest comparing 1970 information with that in previous reports; a description of unique problems and special programs related to recruitment, employment and training of ethnic minorities; and general conclusions. TO: State College Presidents

FROM: Glenn S. Dumke, Chancellor 

SUBJECT: 1970 California State College Employment Survey  
of Members of Various Ethnic Groups

I am pleased to submit to you the 1970 Survey of Employment in the California State Colleges.

The information contained in this report is based on data obtained from the annual employment survey conducted by the Chancellor's Office. The purpose of the survey is to determine the extent of the progress being made in making operable the Board of Trustees policy of guaranteeing equal opportunity for all employees, regardless of race, color, creed, national origin or sex.

Of particular interest are the reports from colleges that are putting forth extra effort and displaying real initiative and creativity in responding to the still critical problem of an imbalance in ethnic minority employment. The data concerning women, discussed to a limited degree in this report and set out more fully in FSA 71-11, Report on Employment Status of Women, will be even more comprehensively treated in succeeding reports.

The encouraging progress reflected in this, our sixth annual report, clearly demonstrates the direct relationship between affirmative action and positive results. It is expected that our seventh annual report will show similar effort and results in those areas where employment problems remain acute.

## ETHNIC GROUP EMPLOYMENT SURVEY 1970

### I. Introduction

In the summer of 1970 the State Colleges provided information (in response to FSA 70-48) on ethnic group employment during 1969-70. An analysis of these data is contained in this report, the sixth since the inception of this survey program. These surveys are an essential part of the Chancellor's efforts to encourage the recruitment, employment, and upgrading of a greater number of members of minority ethnic groups.

In addition, and for the first time, the colleges were requested to report the number of male and the number of female incumbents of the positions included in the survey. The purpose of this was to provide specific information regarding the number of employment opportunities afforded women in the State Colleges.

We are, this year, beginning to profit from our previous years' diligence in maintaining complete and consistently reported data in that we are now in a position to detect trends, pinpoint areas of strengths and weaknesses and, thereupon, to develop realistic goals and programs for continued improvement.

The reporting techniques were identical with those used previously. The colleges were requested to include in their data only those employees who serve half-time or more. All college positions were coded by general type of occupation (clerical, trades and crafts, technical and sub-professional, laborers and custodial, professional, administrative, instructional faculty, supervisory, and protective services). The salary ranges were coded and grouped into four broad brackets. The same five ethnic groups as used in the past were designated (Negro, Oriental, other Non-White, Mexican-American and Others: Caucasian).

The total employee population included in this survey is 23,513. Of this total, 2,952 (12.6%) are members of minority ethnic groups and 8,445 (36%) are women.\* The data regarding this population have been compiled and presented numerically by geographic areas, occupation, salary range, and ethnic origin. This report also contains: (1) a narrative summary of "highlights" from the data; (2) a digest comparing the information contained in this 1970 report with that in previous reports; (3) a description of unique problems and special programs relating to recruitment, employment and training of ethnic minorities; and (4) general conclusions.

\*These figures, based on half-time or more employment only, constitute the reference basis for all analyses in this report.

## II. Highlights of 1970 Survey

### A. Geographic Location

The total employee population is 23,513 of which 2,952, or 12.6%, are ethnic minorities,\* and 8,445 or 36% female. Broken down by major geographic areas, the distribution of the total employee population using these same sub-classifications appears as follows:

Area	Total Population		Ethnic		Female	
	Number	Percent of Total	Number	Percent of Total	Number	Percent of Total
Greater Los Angeles	8,938	38%	1,336	5.7%	3,431	14.6%
San Francisco Bay Area	4,985	21%	745	3.2%	1,868	8.0%
Central Valley	4,273	18%	471	2.0%	1,412	6.0%
Other	5,317	23%	400	1.7%	1,734	7.4%
Total	23,513	100%	2,952	12.6%	8,445	36.0%

An equally interesting and important analysis of these same figures results from showing how the ethnic population (ethnic by area to total ethnic) and the female population (female by area to total female) are distributed on a percentage basis:

	Ethnic to Total Ethnic		Female to Total Female	
	Number	Percent of Total	Number	Percent of Total
Greater Los Angeles	1,336	45.3%	3,431	40.6%
San Francisco Bay Area	745	25.1%	1,868	22.1%
Central Valley	471	16.0%	1,412	16.8%
Other	400	13.6%	1,734	20.5%
Total	2,952	100.0%	8,445	100.0%

Continuing efforts are being made to determine the degree to which extra diligence with regard to ethnic employment can help to overcome the obvious additional barriers imposed by the comparative sparseness of minorities residing in some of these areas. (See Attachment 1)

### B. Occupations

The occupational information (Attachments 2, 3, 4) lends itself to at least four significant comparisons: the percent ethnic representation of the total employment by major occupational

\*The word "ethnic" as used throughout this report refers to minority groups other than women and in contradistinction to Caucasians.

categories (Attachments 2 and 3) and the percentage which each occupational category represents of the total ethnic employed; the percentage of minorities as contrasted with Caucasians in each of these categories (Attachments 2 and 3); the percentage male and female to the total (Attachment 4) and by ethnic group within these categories; and supervisory representation by male and female and by ethnic population (Attachment 2).

1. Percent ethnic of total and of total ethnic

Faculty:

There are 11,800 instructional faculty employed half-time or more. Of this number, 1,054 individuals are members of minority ethnic groups. This represents 9% of the total instructional faculty and 36% of the total ethnic employment.

Combined Instructional, Professional and Administrative:

The number of minorities on the instructional faculty combined with the number of professional and administrative employees is 1,168. This represents 8.7% of the total employment (13,368) in these combined categories and approximately 40% of the total ethnic employment.

All Others Combined, minus Labor and Custodial:

There is a total of 7,932 individuals in the combined clerical, technical and sub-professional, trades and crafts, and protective services categories. There are 960 minority individuals in these combined groups representing 12% of the total employed in these categories and 33% of the total ethnic employment.

Labor and Custodial:

The labor and custodial group is composed of 2,213 individuals, of which 824 or 37% are ethnic minorities. This represents 28% of the total ethnic employment.

Tabularly summarized, the occupational distribution percentages appear as follows:

Occupational Group	Total	Percent Ethnic of Total	Total Ethnic	Percent of Total Ethnic
Instructional	11,800	9 %	1,054	36%
Inst., Prof. Adm.	13,368	8.7%	1,168	40%
All others less Labor & Custodial (Clerical, Trades & Crafts, Tech. & Sub-Prof., Protective)	7,932	12 %	960	33%
Labor & Custodial	2,213	37 %	824	28%

2. Percent Ethnic – Percent Caucasian within occupational groups – 1970

The percent ethnic minorities as contrasted with the percent Caucasians of the total employment within each occupational group can best be represented with a rank-order occupational table:

Occup. Group	Percent Ethnic of Total	Percent Caucasian of Total
Labor & Custodial	37%	63%
Protective	13%	87%
Clerical	13%	87%
Technical & Sub-Professional	10%	90%
Faculty	9%	91%
Trades & Crafts	8%	92%
Professional & Administrative	7%	93%

(See Attachment 3)

3. Supervisory:

There are 1,901 individuals reported in supervisory positions, of which 8.4% or 160 individuals are representative of ethnic groups. (Attachment 2)

4. Male – Female, to total and by ethnic group:

Two of the occupational groups have 75% of all the employees, i.e., 50% are in faculty positions and 25% in clerical positions. The remaining 25% of the total employee population are in the other five occupational groups, i.e., 2.2% trades and crafts; 5.9% professional and administrative; 9.4% laborer and custodial; and .8% protective services. (Attachment 4)

Of the 11,800 instructional faculty, 81% (9,505) are males and 19% (2,295) are females. Of the 1,054 minority faculty, 78.7% (830) are males and 21.3% (220) are females.

The clerical group is predominantly female, with 4,933 out of 5,820 or 84.8%. Of the 752 clericals in ethnic classifications, 575 or 76.5% are female.

The trades and crafts, laborer and custodial, and protective services are predominantly male. They are respectively: 99.6% male (95.2% ethnic male), 92% male (90.3% ethnic male); and 98.6% male (96.3% ethnic male).

The technical and sub-professionals are 67% male (67.6% ethnic male); and the professional and administrative group are 63.5% male (64% ethnic male).

C. **Salaries**

Of the total employee population, 3.2% earn less than \$5,000; 32% earn \$5,000-7,499 per year; 19% earn \$7,500-9,999 per year. The number in these three brackets (all less than \$10,000 per year) is 54.3% of the total employee population. The balance, 45.7%, are in the \$10,000 or higher

bracket. Attachment 5 provides the number in each salary range used in the survey. In the highest of the four salary ranges, i.e., \$10,000 or more, 81.6% (8,782) are males and the balance 18.4% (1,982) are females; 7.6% of the total in this range are minorities, of which 80% are males and 20% are females; 92.4% are Caucasian, of which 81.7% are males and 18.3% are females.

Of the total Caucasian employee population (20,561), 48.4% (9,947 individuals) earn \$10,000 or more per year, and of the total minority population (2,952), 27.7% (817 individuals) earn \$10,000 or more.

### III. Digest of Comparative Data: 1970 to Previous Reports

With regard to the number of ethnic minorities employed, the percentage increase this year over last year (49% increase in minorities; 9.8% increase in Caucasians) and 1970 over 1965 (279.4% increase in minorities; 81.3% increase in Caucasians) is significant. (Attachments 6 and 7)

The importance of these figures must be viewed, however, in context of the percentage minorities have constituted, and continue to constitute, of the total employment population. In the 1965 report when the first survey of this kind was conducted in the colleges, there were 12,117 employees reported in the total population, of which 778 or 6.4% were members of minority ethnic groups. In 1970, the total population was 23,513 with 2,952 or 12.6% representing members of minority ethnic groups.

Attachment 8 provides comparative data concerning the number of instructional faculty for each successive year beginning with the first report and the percentage of minorities in relation to the total for each year. In 1965 there were 6,418 faculty members reported, of which 266, or 3.5%, were minorities. Subsequently, the number and percentage of minority group employees in relation to the total faculty increased each year to 1,054 in 1970, or 9%.

Significant changes were made during the past three years by the minorities in various occupational groupings as illustrated in Attachment 9. The number of minorities earning \$10,000 or more, increased from 3.2% in 1968, to 7.6% in 1970. Of those earning \$10,000 or more in 1968, 3.2% were minorities and 96.8% were Caucasian. By 1970, this had changed to 7.6% minorities and 92.4% Caucasian.

The number of employees reported by each of the colleges, by ethnic group and by male and female, is tabulated on Attachment 10. Thirteen of the colleges reported more than 10% of their total employee population as members of minority ethnic groups. They are as follows:

	College	Percentage Ethnic to Total
Percentage of	Dominguez Hills	24.8%
	Los Angeles	21.5%
	San Bernardino	16.0%
	Fullerton	15.7%
	San Francisco	15.6%
	Bakersfield	15.5%
	Fresno	15.4%
	Hayward	15.1%
	San Jose	14.4%
	Sacramento	13.7%
	San Fernando	13.5%
	Chancellor's Office	13.0%
	Cal Poly-KV	11.8%
	Percentage of minorities, in relation to total employee population in all colleges	12.6%

Attachment 11 provides the number and percentage of minority employees in relation to total by college for each year 1965 through 1970. Most colleges showed some increase in the percentage of minorities in relation to total employee population since 1969. In comparing 1970 to 1969, the colleges reporting increases of more than 3% in their minority to total ratios are:

College	Increase 1970 over 1969
Bakersfield	11.5%
Cal Poly-KV	6.7%
Hayward	5.6%
Fresno	4.7%
Fullerton	4.6%
Sacramento	4.3%
San Fernando	4.2%
Los Angeles	4.0%
Stanislaus	4.0%
San Bernardino	3.5%
San Diego	3.5%
<b>TOTAL INCREASE – ALL COLLEGES</b>	<b>3.0%</b>

In every instance except two, the colleges have shown gradual improvement successively each year during the six-year period. The Fullerton, Los Angeles, San Francisco, San Fernando and San Bernardino campuses have consistently reported the highest percentage (approximately 10% or higher) of minorities to total over this period.

These figures indicate that the ability to make acceptable or even significant gains in minority employment need not remain the exclusive province of the larger schools or those in close proximity to major metropolitan areas.

A composite tabulation of the number of employees in 1970 by ethnic groups, by male and female within each ethnic group, by geographic location, occupation, and salary range, may be seen in Attachment 12.

## IV. Recruitment, Employment, and Training Efforts

### A. Recruitment and Employment

Several of the colleges have made intensive efforts to search out and employ members of minority groups for all types of positions. Some have reported encountering difficult pre-employment barriers such as: the non-availability of minority applicants due to the sparse ethnic composition of the community; lack of interest on the part of minority applicants in applying at the college; the non-availability of qualified minority applicants as revealed through applicants' inability to meet minimum entry level standards of the college and to pass clerical tests; and fear of tests on the part of many minority applicants. Post-employment problems are reportedly related to the failure by some minorities to maintain traditional standards of performance after employment, difficulties encountered when disciplinary action is required, and the need for more extensive training.

Some of the colleges have attempted to enlarge upon their personal contacts and have utilized the services of various recruiting and community social agencies, e.g., Human Resources Development Offices, Mexican-American Opportunity Foundation, Neighborhood Service Center, Mission Rebels In Action (a Latin-American organization in San Francisco similar to NAACP), Economic Opportunity Council, Work Incentive Program, Partners for Progress, Santa Ana Community Action Council, League of United Latin American Citizens, Japanese-American Citizens League, National Association for the Advancement of Colored People, and the Urban League.

Other reported methods of broadening the recruiting base have included: placing job vacancy advertisements in local minority newspapers and professional journals; corresponding with schools and educationally-related institutions; and listing employment opportunities with such organizations as Pacoima Skill Center, Joint Venture in San Fernando and Pacoima, and State Department of Rehabilitation.

### B. Training

Several of the colleges have expressed interest in organizing and developing special training programs to assist those who seem to have potential ability and skills but who have borderline test results or otherwise cannot meet initial specifications. A major problem encountered by all of the colleges is the lack of funds needed: to support the training programs; to provide the necessary personnel to conduct the programs and analyze the results; and to establish trainee positions in departments where no fully qualified individuals could be placed on a temporary basis.

Several experimental programs were undertaken at two of the colleges, e.g., Cal-Poly, KV, and Cal-Poly, SLO. One college contracted with a federally funded agency to employ, over a 16-week period, a number of under-experienced and under-educated candidates within certain fields. The agency paid one-half the salary and the college the other half during the training period, at the end of which the employees were evaluated and a determination was made regarding whether or not these candidates should be retained as regular employees or terminated. Under the program, for example, two girls who could not meet minimum college standards as demonstrated on pre-employment clerical tests, but who were deemed to have potential ability, were appointed to clerical positions and completed a 16-week training period. During this period they were tutored voluntarily by senior students at the college for four hours each day in such subjects as

mathematics, English, typing and reading (via a reading laboratory for comprehension); and received four hours of on-the-job training. At the conclusion of the 16-week training period, the clerical tests were given again and the results indicated sufficient improvement to qualify the individuals for retention as regular employees.

Another experiment has been a faculty developed clerical test designed especially for Mexican-American applicants. The language of the test is related to the Mexican-American culture and the barrio. It is intended that this test will assist in overcoming the language barrier factors in testing. The use and study of the results of this test are still in the early experimental stage and no final conclusions have yet been drawn.

Still another experiment was undertaken in Spring 1970 when a Black Culture Seminar was conducted by a black faculty member. The purpose was to expose department heads, and all others who would be interviewing prospective minority applicants, in the cultural background of blacks. Five one-hour sessions were given. The material presented included cultural development of Ghana, Africa in the Fifteenth Century to the present day and some open discussion aimed at "breaking down the prejudice barrier." It was felt that while this program seemed to have only minimal success, plans would be made to present more seminars in the future, addressed to ". . . the many more people who need to be reeducated."

Cal-Poly, San Luis Obispo, has undertaken an experiment which permits the hiring of an applicant at the Junior Clerk level whose general clerical test score is slightly below passing, but whose past experience, education, work references and interviews with Personnel Office staff and department heads seem to warrant a trial period of employment. After a six-month training period, the applicant is required to take the general clerical test again and if the results are successful, she qualifies for a regular position. If she fails the test the supervisor may recommend continuation at the junior level. The initial results of this experiment have been successful.

San Francisco State College has developed a clerical training program in which ten disadvantaged persons are trained for eight weeks and then placed on jobs either with the college or in the private sector. A new group is then brought in for the next eight-week period. The college paid the cost of administering the first demonstration and the Stone Foundation underwrote the program for several more cycles. Primary costs are salaries for a teacher, a coordinator and a part-time researcher.

A contract has now been signed with the City of San Francisco under which welfare recipients are being trained and placed through the program. The program is being run at no cost whatever to the state and is receiving enthusiastic response from the community. Approximately 75 persons have completed the program. A follow-up study of 40 of them showed that 3 have left the area; 5 are not available because of childbirth; and the remaining 32 are still employed, with average earnings of \$400 per month.

The college is now doing an analysis for the Welfare Department to determine what the net savings have been to the city, and the city has indicated a willingness to go forward with the program on a year-to-year basis.

## V. Conclusions

While the current report provides convincing evidence that a large number of women are employed in more than routine and menial type of positions in the State Colleges, this aspect of career employment in the State Colleges will now be amenable to more intensive study and attention as trends become more apparent from the accumulating data.

From the findings of the 1970 survey and comparisons with the five previous reports, the conclusion can be drawn that the California State Colleges clearly recognize the importance, desirability and necessity of providing employment opportunities to an increasing number of members of minority ethnic groups. Evidence that the colleges generally are dedicated to the continuation of progress in this area may be gained from their record of steady improvement each year. Their interest in meeting the challenge of widening career opportunities for minorities is demonstrated by their efforts in developing and adopting experimental programs and using whatever sources of recruitment that are available to attract an increasing number of applicants.

It appears to be a fact that much of the gain is due to special efforts made by some of the colleges, while others have supplied little or no evidence of particular concern in these areas. Commendable as many of the gains are, nothing short of a posture of total diligence will be sufficient to get the job done. The California State Colleges' record of 12.6% minority employment is to be favorably compared to the records of other state agencies. Viewed against a total minority population in the State of California of approximately 21%,\* and viewed also against the salary and occupational distortions that still remain, it becomes apparent that the goal of maintaining a representative and equitably balanced employment record remains a destination to be arrived at rather than a platform already achieved.

\*Based on 1960 U.S. Census figures. 1970 totals have not been released and we assume that ethnic minorities now constitute an even greater percent of the total population.
