The Association for Institutional Research coñacted a survey of all institutions of higher education in the $\quad$. S. and canada in order to assess the number, size. and financial support of institutional research offices. Data were requested for the $1969-70$ academic year. This report is based on the responses of 1,444 institutions that returned the questionnaire. of these. 1,107 or 77 percent did not have an operating institutional research (If) office and 337 or 23 percent did. Information is presented on (1) the number of IR offices by size, type, and control of institution: offices scheduled to open during $1970-71$ by type and control of institution: (3) state or other central institutional research agencies by type, control, and enrollment size; (4) financial support for IR by type, control, and encollwent size of institution: (5) sources of financial support for IR: (6) wage and salary expenditures for IR: (7) full-time equivalent staff in IR offices: and (8) other areas of expenditures such as computer time, other electronic data processing expense, publication of reports and other documents. and equipment and furaiture. The questionnaire and accompanying letter are ceproduced in appendix $I$, while appendix II gives a complete breakdown of the responses by type and control of the institution and by enrollment size. (AF)

## FORWARD

Institutional Research in institutions of higher education has become widespread in large part through the desire of administrators and faculty to know more about their own institations. Similarly, the importance and proliferation of institutional research offices has generated a need to now more about the institutional research function itself. In response to this need, the Executive Comattee of the Association for Institutional Research conducted a survey of all institutions of higher education in the United States and Canada. Its purpose was to assess the muber, size and financial support of institational research offices.

Also, the reader should be aware that the Association for Institutional Research is an international individual membership orgwaization composed of mmerous indiriduels whose titles and institational affiliations often do not reveal any obvious involvement with the field of anstitutional research. THus, there are undoubtedly many more individuals in higher education who are interested in the activities and products of institational research than would be apparent from the results of the study which follows.

This brief study can only be a beginning toward the goal of describing with greater accuracy the natare of the institi ional research function at institations of higher learming.
Sidney Suslow
President, 1970-1971

## ITTRODUCTION

#### Abstract

Presented herein sre the results of a survej undertaicen by the Executive Comizttee of the Association for Institutional Research and carried out by the office of Ins ithtional Sesearch at the University of Califomia, Berikeley. Duming the fall tem of 1970, some 3,000 questionnaires were sent to the presidents of all two and four-year coileges and all universities in the United States and Canadn. The questionaire and accumpanving letter are =eproduced in full as Appendix I of this report. Respondents were assured of complete anomyity with regard to their replies, which was achieved by having all returns chameled through the San Francisco office of Touche, Ross and Company, Certified Pablic Accountants. There postmariks and other possible identification were removed prior to the questionairss' being forwarisd to Berkeley for processing. The total rumber of questiomaires returned was just inder jog of thcre sent. There wez no atiempt to $2^{2}+\sin$ additiona: =esponses thentazh the use oi fcllow-up correspo ience.

The questionaire addressed itself initially to obtaining a rasic profile of each institution and then, if the institution did in fact have an Office whose primary responsibility was instita"ional research, went on to ask about sources and amomts of sppport for this activity, amounts expended in various categories of expense, miner of FIE sterf members and the percent of the institution's operating $E$ odget which the rotal institurtional research expenditure represented. All data requested were for the 1969-1970 academic year, which would have been the most recent complete year at the time the questiomaire went out.

## THE NUNBER OF INSTITUTIONAL RESEARCH OFFICES

As Table 2 shows, $23 \%$ of the institations which returned questionnaires reported having offices or units whose primary responsibility is in the area of institutional research. Table 2 also seens to indicate that this proportion varies widely with control, type of institation, and enrollment size. For example, public institations are twice as likely to have $I R$ offices as private institations, and universities are more than twice as likely to have IR offices than either four or two-year colleges. However, further analysis reveals that these differences are very largely a function of enrollment size with type of institation and control of institation playing only a small part.

This is clearly shown in Table 3. Enrollment size was factored out of the data by normalizing each of the sub-groups to the enrollment distribution of the overall sample. This allows true comparison on the basis of either control or type alone. The column entitled "Adjusted Score" shows that the entire difference between the proportion of universities reporting $I R$ offices compared to the proportion of four-year colleges reporting IR offices can be attributed solely to the larger average enrollment size of universities and not to any factor associated with type of institution per se. Even two-year colleges fall only marginally below the population mean when viewed in terms of the adjusted score. Similarly, the difference between public and private institutions is reduced substantially with the influence of enrollment size removed. Instead of a public institution figure of $31 \%$ and a private institution figure of $15 \%$ (a net difference of 16 percentage points), the adjusted scores are 25 and 19 , respectively. This difference is still significant, of course, but is actually less than one might expect. Initially, $I R$ offices existed primarily at piblic

## TABLE 3

The Effect of Normalizing Type and Control of Inztitution for Enrollment Size on the Propansity to Have an Institutional Research Office

| Type \& Control <br> of Institution | No. of <br> Institutions <br> In Sample | No. Re- <br> porting <br> IR Office | of of Total <br> Reporting <br> IR Office | Adjusted <br> Scorei*) |

| Universities | 258 | 131 | $51 \%$ | 25 |
| Four-Year Colleges | 595 | 115 | 198 | 25 |
| Two-Year Colleges | 541 | 89 | $16 \%$ | 21 |
| Total Sample | 1444 | 337 | 238 | 23 |
| Public Institutions | 744 | 253 | 318 | 25 |
| Private Institutions | 691 | 101 | $15 \%$ | 19 |
| Total Sample | 1444 | 357 | 238 | 23 |

(*) Enrollment size was factored out by normalizing the subpopulations to the enrollment distribution of the overall sample. Any enrollment size distribution could have been used, but using the overall distribution yields a total adjusted score which does not differ from the raw percent figure for the total sample.
institutions, having grown out of the need to supply budgetary and planning data to state gevernments. Thus, to find private institations only 6 noints below public insititutions (with the effect of enrollment size removed) in the proportion reporting IR offices indicates that this historic disparity is apparently decreasing through time.

Returning to the subject of enrollment size, the reader can best assess the importance of this factor as an indicator of an institution's propensity to have an IR office by looking at the row labelled "All Institutions" in Table 2. Among institutions with fewer than 1,000 full time enrollments, only $7 \%$ had IR offices, but each jncrement in size yields a higher percent figlure until virtually $100 \%$ of those institations with enrollments of 20,000 and above reported having such a wit. Noreover, the range of percents by enrollment category is almost equally broad and equally regular for each

 the four smal? colleges who reported havine IS offices are new instintintions whose smeanizetional stmacture was estabiishec in anticipation of future srowith.

In any case, In çeariy seems to have formd a pemanent place for itself as a recognized organizational specialty. Francis Rounke and Glem Erooks in their book The Managerial Revolution in Figher Education (Baltimore: The Johns Hopkins Press, 1965) report a mumber of findings concerning the growth of If and the various ways in winch such offices operate. Unfortinately little of their data is directly comparable to the results of the current survey, primarily because of a marked jifference in sarmpling technique.

The Rourke and Brooks survey was restricted to four-year institations in the United States, ars the population consisted of all state institutiors but only a small sample ( $\mathrm{N}=72$ ) of commonity colleges and private institutions. Moreover, in asking about the IR function, their guestionnaire was phrased such that institations which had an individual staff member performing IF work but no formal IR office could not be differentiated from instintutions which did have formal IR offices. The effect of each of these factors is to oppose the other: the restricted universe from which the sample derives almost certainily excluded a mumber of institutions with IR offices, but the confusion of individuals with offices overstates the apparent number of offices found among the institutions sampled. A measure of the effect of this latter factor is the significantly higher percent of (four-year)
institutions reporting If offices in the Rourixe and Brooks data than in the A.I.R. data, $45 \%$ compared to $29 \%$ Also. unless one assumes that ali institutions with IR offices which were included in either the Rourke and Brooks universe or the A.I.R. universe actually returned their questionnaires, the fact that the earlier survey enjoyed an $80 \%$ response compared to a $50 \%$ response for the current effort would act to increase the count of IR offices reported in the earlier year.

It is, of course, possible that these three factors simply cancel one another, in which case the data from the two surveys are sufficiently comparable to give the reader a rough idea of the rate at which IR offices have been established in recent years. In this hope, and with due respect sor the preceding caveats, a few comparisons with the Rourke and Brooks data are offered.

Their earliest figure, for the academic year 1954-55, showed only 15 IR offices nationally, with a full one-third of those having been establisined. just that year. By $1964-65$ this figure had grown to 115,21 of them newly established. These figures compare to an estimated coumt of $220^{(*)}$ offices reported at four-year institations in the current survey. No count of newly established offices exists for 1969-70, however, because the A.I.R. questionnaire did not request information on this point. But the data do show a sustained growth in the mmber of IR offices at a rate equivalent to $20 \%$ per year over the period 1955 to 1969 , although the rate during the 1964 to 1969 period has slowed to approximately $15 \%$ per year.

An additional finding reported by Rourike and Brooks, and one that

[^1]corroborates the results of the present survey, is the importance of enrollmen: size in stimulating the development of IR offices. Their data showed that 72, of institutions with more than 20,000 students have such offices compared to $20 \%$ of institutions witil fewer than 2,000 students enrolled. These percent figures are not directly comparable to the A.I.R. data because of differences in grouping, but they do serve to illustrate the principle involved.

## OFFICES SCHEDULED TO OPEN DURTNG 1970-71

Although, as mentioned above, the questionnaire did not address itself to the matter of newly established IR Offices or te plans for the establishment of such offices, 27 institutions frow the large rroup who had no office during 1969-70 indicated that they were actively planning to initiate IR offices during 1970-71. Since these responses were volunteered in the form of written coments, they probably account for only a portion of the actual muber of offices which were scheduled to begin operation during the current year, but this rmber still represents an $3 \%$ increase in the total munber of offices reported for 1909-70. This would indicate that IR continues to be in an active growth phase, although there is reason to thinis that the rate of growth may have dropped somewhat from the recent $15 \%$ per anmun cited above. With most segments of higher education facing difficult budgetary situations in recent years, fumds to establish new offices and units are not readily available. Thus, many institutions, especially the smaller private institutions which have limited resources even in the best of times, have been forced to defer any 工ormal move into IR activity until the future. Nonetheless, these institutions represent the natural field for the growth of IR as a profession, both because nearly all larger institations already

#### Abstract

have IR offices and aiso because IR offices have proven thein utility at

 institutions where they have been established.TABTE 4

(*) Counts reported in this table represent tallies of cevtain comments voluntarily supplied by respondents to amplify their responses to questionnaire item 2.

For example, it is interesting to note that over $75 \%$ of the institionions which were planning to establis. IR offices had enrollments of less than 5,000 students, and that there were nearly equal mubers of public and private institutions. Also, there was a balanced representation of universities,

Four-year co:jeses, and two-year coleses. See Tabie 4 fon a romplete ineaicom $0:$ :hese či instinutions by tipe, control, and enroinmen: uize.

## 

In preparins the data on Sinancial support，it was assuned that nost readers woild be assoniated in some way with an instituticn of higher ecu－ cation and that they would want to be able to identify the responses of institutions similar to their own in tems of ype，controi，and enrollment size．For inis reascr，ali tables dealing with aggregate support Eigures were organized in terns of these three variables，even though this led to very suall or even zero entries in many cells．Also，the reader should keep in mind that this and all subsequent sections of tize report are based on the responses of only those institutions which reported having an in office $(\mathrm{N}=337)$ ．

Table 6 shows total support for IR activity sumurized by mode of con－ trol ar－コ enッ－こうment size．Tables 7,8 ，and 9 show analogous fisures for universities，four－year colleges，and two－year colleges，respectively．As can be seen from the average support Sisures，enroilment size is once again the critical factor，although mode of control is quite important as well． Public instititions spenc siferificantly more money on IP than do private institations，and this is particularly true amons four－year colleges． Interestingly，however，private universities，while less likely to have If offices than pabiic universities，support them somewhat better where they do exist．

The tables thenselves are detailed and explicit，end they render un－ necessary an extenced treatment of the firdings on financial support here in the text．Bit one characterisuic of these financial support data de－ finiteiy bears mention．Within enroilment size catagories，there is con－ siderable dispersion of responses aroind the mean，and this is true for each of the subpopulations represented in Tables 7 through 3 ．Thus，

[^2]$-24$ ．
there exists no clear norm upon which the reader can focus. Ercept in the very largest and very smallest enmoliment categories, there are a significant mum er of responses at each of the levels of total support. This is partially true because the classification intervals used in these tables are broader at the higher levels of support, which artificially increases the muber of responses in those cells compared to cells with smailer intervals. Nonetheless, it is also true tinat IR offices are funded at levels which vary widely from institation to institution, and these variations are not explained by differences in type, mode of control, or enrollment size.

For example, there are institutions with enrollments of 5,000 to 9,999 students which allceate as little as $\$ .65$ per student to IR winile other institutions of equal size allocate in excess of $\$ 12.00$ per student for the same purpose. Obviously, these differences merely reflect more important differences in the overall availability of funds to the institation, the role of the IR office, and the ability of the IR director to compete for an increased share of the funds that are available. In any case, the average support figures should be used with caution. It is interesting to note that the average support for IR activity during 1969-70 was $\$ 42,150$ and that universities were $40 \%$ above the mean while two and four-year colleges were $30 \%$ below. However, this kind of analysis invites one to cverlook the fact that many two-year colleges fund their IR offices inore generously than do universities or four-year colleges of the same enrollment size.

Table 10 is an interesting supplement to the above discussion. It shows The anount of suppor, for IR at institutions of various types and sizes expres...: as a percent of the total operating budget for the institation. The figures are, $\therefore=$ course, very small, with the average keing less than

TABLE 10

one-half of one percent $(0.42 \%)$. But of particilar note is that the percent figures vary with type of institution and enrollment size in a way which is inverse to the actual dollar support for IR as raported in Tables 6-9.

Thas, two-year colleges, who as a group had the lowest average level of support for IR, devoted by far the largest share of their overall budgets to this purpose compared to other types of institations. That is, twoyear colleges spent $0.83 \%$ of their budgets on IR compared to $0.37 \%$ for four year colleges and $0.21 \%$ for universities. Similarls, the larger tion enrollment size of an institation the smaller the share of its resources it tended to ievote to IR. 30 , not only is it remarikable to fing. two-year colleges willing to spead more on IR than some wiversities, it is doubly remarkable in that they must make a relatively greater financial commitment
in order to have such an office at all. What seems to be taking place is that there is a certain minimum efficacious size for an IR cffice and to fund even this basic unit requires more of the resources of a small college or university than of a large one.

## SOURCES OF FINANCIAL SUPPORT

Tables 11 and 12 show quite clearly tinat two sources of funds account for nearly all financial support for IR in the United States and Cariada. Moreover, one of these, regularly budgeted institutional funcis, itself

TABLE 11

Percent of Total Support for Institational Research Activity Derived from Regularly Budgeted Institutional Funds

| Totai | 131 | 115 | 89 | 2 | 337 |
| Average Percent(2) | 93\% | 86\% | 90\% | 100\% | 90\% |

(1) Percent figures in Tables II, 12,13 , and 14 were grouped such that they may be easily compared from table to table. The group intervals are either identical, or where one table is more detailed than another, aggregation of the detail will produce figures directly comparable to those shown elsewhere at higher levels of sumarization. Bold type entries in the row headings indicate the upper and lower bounds of comparable Eroupings.
(2)

Based on the rumber of actual responses to this item (i.e. the total less the rumber of non-responses).
accounted for an average of $90 \%$ of $a l l$ IR support. By type of institation (which is used here as a rough expression of enrollment size as well as to describe the scope of tie academic program), there was almost no variation from the sample mean. The range wes only 7 percentage points, with wiversity IR offices deriving the higin of $93 \%$ of their support from regularly budgeted institutional funds and offices at four-year colleges deriving the low of $86 \%$. Moreover, the overall distribution was tightly clustered around the mean. Some $88 \%$ of the offices received at least three fourths of their support from this one source (see Table 11).

The second major source of sinancial support for IR was through grants and contracts with govermental or other outside agencies (see Table 12). Fewer than $20 \%$ of the institutions in the sample had outside support, out this source of funding was definitely of greater importance to two and four-year colleges than to universities. More of the former institations hed outside funding ( $20 \%$ compared to 128 ), and this funding represented a iarger average share of their budgets ( $9 \%$ compared to $3 \%$ ). In fact, if an IR office had outside surport, it tended to be a significant factor in the total funding. Fie average percent contributed by outside agencies to offices that receiveci 3t ieast some outside support was over $40 \%$.

Owerall, however, the average IR office received $7 \%$ of its support from outside sources and $90 \%$ from regilarly budgeted instiontional sources. This left $3 \%$ to come from supplementary budgei allocations, recharge income, and miscellaneous sources. Of these, the least jmportant bit perhaps most inter asting wias recharge income. Only 10 offices bad income from recharges for services rendered, although one unversity listed this as having provided $100 \%$ of its IF support.

(1) Percent figures in fables 11, 12, 13, and 14 were grouped such that they may be easily compared from table to table. The group intervals are either identical, or where one table is more detailed than another, aggregation of the detail will produce figures directly comparable to those shown elsewhere at higher levels of sumarization. Bold type entries in the row headings indicate the upper and lower bounds of comparable groupings.
(2) In this calculation, non-responses were treated as zero entries so that these percents would be additive to those shown in Table 11 .

## WAGE AND SATAFY EXPE NITURES

It is normal, particularly in adminstrati.ve and research work, for wage and salasy payments to be ${ }^{2}$ ? a largest single category of expense. As Table $=3$ shows, Ir offices rot only conform to this mule, bat on the average devote over $70 \%$ of their avainable resources to paying therr employees. fnc, as with mich of the expenditure data, there were only minor variations from this mean pereent amore the three types of institutions. Over $95 \%$ of an institutions in the sampie spent more then $55 \pi$ of the in resorroes on reira and se?aries, and $a$ full $25 \%$ of the respondents spent $\%$ or more of their

Funds for this Furpose.

| Average Percent | $76 \%$ | 67\% | 685 | 88\% | 715 |

Persent figures in Tables 1I, 12, 13 , and 14 were grouped suct that they may be easily compared from table to table. The greup intervels are either identical, or where one table is more detailed than another, aggregetion of the detail will produce figures directly comparable to those shown elsewinere at higher levels of sumarization. Bold type entries in the row headings indicate the upper and lower bounds of comparable groupings.

Tables 14 and 15 break the wage and salary figures into couponent parts. As can be seen, well over half the salary money is spent on so-called professional salaries, which include research persomel as well as the director of the office or mit. Of course for many small ofsices, the director hinseIf comprises the entire research staff in addition to adrinisterring the operation of the wit. Table 14 deals exnlusively with the responses conceming professional salaries. Here again the data shors relatively little dispersion around the mean and sreat consistency among the types of institutions.

Table 75 is a sumary table, which incorporites the average percents from Tabie 14 , and shows these as a line item along with average percents

## FULL TRE EQUIVALENT STAFF

Staffing figures, which are displayed in Table 16, parallel the distribution of salary figures by type of employee, although there are sreater differences among the types of institutions. That is, all institations in the sample seemed to devote their resources to wages and se-aries to mach the same extent, and the proportiunal distribution among types of empleyees was also quite similar. Ewever, previous data have shown that uriversities spend, on the average, twice as mach on In as co either four or two-year colleges, and it is this that explains the total full time equivalent staff figure of 4.3 for universities compared to 1.7 and 2.1 for the other types of institutions, respectively.

It is also interesting to find the average two-year college with a staff figure higher tinan tiat for the average four-year college. The ertire
iverage :hmber of Fill me Fqualent Ingtitutional Fesearch

| Type of zupojee | Spe of Instituticn |  |  |  |

difference of 0.4 FTE scins in clemicel start, whick very likely bespeaies differences in tie type of woik these offices monmily undertaice. finso likely is iket averege salary jeveis at two-year colleges are silgtiy lower that at four-jear colleges, emblins the fomer to emloy more peopie on Sewer coliams.

In any case, the trpical IP office is not a large operation. It employs fewer than three full-tine equivalent staff on a total bueget of Fouchiy st0.000. Seventy percent, of 528,000 , goes toward wage and salary payments, leaving $\$ 12,000$, or Sl,w suppites, and all the other $\dot{\text { anem necessary to keep the unft functionins. }}$ Soreover, a substantial proportion of the offices in the sample, perhsps as high as 45\%, get alcng with fewer than 1.0 professional staff and a .5 FIE clerical staff presumably consisting of a secretary who is shared with some utiser office or departwent,

## OTFER PREAS OF EXPENDIIURE

In addition to ile salary data discussed above, respondents were asked to indicate what percent of their total resources they spent in five other areas of expenditure. These were cumputer time, other electronic data proceseing expense, publication of moports on other documents, equip$r$ ant and fumiture, and an omibus iategory cailed "Cther Expense". Also. with regard to computer time, those $I R$ ofirices which wene not required to pay for time were asked to supply an estimate of the number of hours of subsidized time they used.

Intemal checking of the salary responses indicated that they were consistent, logical, and coulc be manipulated arithmetically without distorting the result. This was rot the case with the non-salary expense figures. A muber of responses had to be discarded or were left blank, and those figures which were provides seemed to be consistently low. That is, the average inctitution accounted for less than $90 \%$ of its expenditures when all percent figures were sumed. Apparently many respondents were less conscientious about the accuracy of their data towerd the end of the questionaire, especially in view of the fact that a substantial amount of accounting analysis would have been necessary in order to break the expenses into the categories shown.

There were several ways in which the data could have been adjusted to compensate for the conditzon just noted, but it was felt these would probably cause more distortion than they woaid remedy. Thus, the only adjustment that was made was to aribitrarily increase the category labelled "Other Expenses" slach that each colum in Table 17 would add to $100 \%$. All other entrios in Table 17 are true averages of data actually supplied on the questionnaires. Even without the adjustment, however, "Other Expenses" was equal to "Clerical Staff" as the sec:ri iangest experse category.

TABLE 17
Average Percent of Total Expenditure for Institational Research Devoted to Non-Salary Items by Type of Institution and Type of Expense

| Type of Expense | Iype of Institation |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Universities | $\begin{aligned} & \text { Four-Year } \\ & \text { Colleges } \end{aligned}$ | $\begin{aligned} & \text { Two-Year } \\ & \text { Colleges } \end{aligned}$ | All Types |
| Computer Time | 2\% | 1\% | -- (1) | 18 |
| Other FDP Expense | 1\% | 1\% |  | ${ }_{2 \%}$ |
| Publications | 2\% | 2\% | 28 | $2 \%$ |
| Equipment (2) | 2\% | 2\% | 28\% | 238 |
| Other Expenses | 17\% | 27\% |  | 298 |
| Subtotal | 24\% | 33\% | 32\% | 29\% |
| Salary Expense | 76\% | 67\% | 68\% | 71\% |
| Total | 100\% | 100\% | 100\% | 100\% |

(1) True value not zero, but too small to be recorded as a whole percent.
(2) Fercents in this row were arbitrarily increased in order to balance each of the colums to 100\%. Institations tyr: cally accounted for less than $90 \%$ of their expenditures, so this adjustment was in some cases quite sribstantial. There is reason to believe that the salary data are complete and accurate, but the other figures were apparently based on rough estimates. It was felt that adjusting the so-cailed "Other 5xpense" category would least distort the relative, balance among the categories shown. Figures actually supplied on the questionnaires would have read $14 \%, 10 \%, 10 \%$, and $12 \%$ from left to right.

Only a few dozen respondents bothered to indicate in the spaces provided any deteil on what comprised their so-called "Other Expenses". Most frequently mentioned were travel, telephone charges, postage, supplies, repairs, special studies, and remberships, in approximately that order of importance. Also mentioned were consultant fees, which for one institution amounted to $23 \%$ of the budget. It seems obvious now that the questiomaire should have provided a check list or other convenient means of eliciting more specific information on these expenditures. To have over $20 \%$ (see Table 17) of the total money expended fall into a completely unstructured category like "Other Expenses" hampers the analysis to an mfortunate degree. On the other hand, the categories which were provided represent very specialized areas of expense and are of greater intrinsic interest than a
detailea irackdown of the more or less routine business of keeping an office supplied with postage stamps, mineorraph paper and the like.

Table 17 provides data on tree areas of empenditure which help to describe the way in which IR offices occupy a middle ground between traditional research and administratiro units. It is somewhat sumprising, for example, to find that "Compliter Time" and "Other EDP Expense" represent a combined total of only $2 \%$ of IR budgets on the average. Even at universities with their larger emrollments and relatively larger IR offices, this figure was only 3\%. But at the same time, the direct cost of producing publications was also $2 \%$ of the total expense. In a research-oriented field dealing with such things as enrollment statistics, survey results, and cost studies, one would expect to find more emphasis on computer usage. Yet it is also true that few purely administrative units produce formal publications to the extent of $2 \%$ of their overall budgets.

One reason for the seemingly minimal use of compater time is the existence of substantial amounts of subsidized time available to many IR offices. As noted above, data on the amount of such time were requested, and these data strongly suggest that subsidized time was the primary source of computing capacity for IR offices in general. The zverage institution in the sample usec just under 20 hours of subsidized compliter time, and even at a very conservative valuation of $\$ 50$ per hour this is equivalent to an additional $\$ 1,00 C$ of support and would increase the proportional expenditure for computer time from $1 \%$ to $3 \%$. Moreover, if the true value of this time is greater than $\$ 50$ per hour, as it probably is, the combined figure for all data processing including computer time might amount to as mich as $5 \%$ on more of the total. This would be more in line with what a research unit might spend, but it is questionable whether research units would have as easy access to subsidized time as administrative units.

Thc rapid spreai of IR Gifices which occurred during the decade of the 1960's was concurrent with the equally rapid spread of electronic computing equipment amons institutions of higher education. Giver this fact plus the quantitative nature of many IR problems, it was to $b \geqslant$ expected that IR offices rould be regular users of such equipnent. But ishies 15, 16, and 17 taken together show that IR offices are not, on the average, heavily involved with the design and maintenance of complex information systems.

Systems analysts and procrammers, despite their relatively high pay rates, account for a combined total of only $3 \%$ of the $I R$ budsets and in number comprise only $7 \%$ of the full-time equivalent staff. Even at universities, although $5 \%$ of IR budgets go to systems and programming personnel, these employees still represent the same 7 \& of total staff.

In sum, the distribution of expenditres for both salary and non-salary items shows that IR offices are oriented toward anelysís anci special projects rather than toward the routine production of basic data or the actoal operation of administrative data processing facilities. Research and clerical salaries plus the cost of postage, telephone service, and supplies account for $87 \%$ of IR expenditures, and this, in a very broad sense, defines the role which IR has assumed on campuses in the United States and Canada.

## SUMMARE

1. Of the institutions in the sampie group, $23 \%$ had IR offices operating on their campuses as of the fall 1559 term.
2. The propensity of an ins tion to have an IR office was a direct function of its enrollment sice, al though prblic institutions were more likely to have such offices then private institations.
3. The number of IR offices appears to have grown at a rate of roughly $15 \%$ per year in recont years.
4. If institutions which were actively plamoing to initiate IR offices during 1970-71 are combined with those served by state or other central IR agencies and this figure is added to the mumber of institutions which already have IR offices of their own, just under one-third ( $32 \%$ ) of all institutions in the United States and Canada are cumrently served by an IR facility of some kind.
5. Average levels of financial support for $I R$ offices varied widely wi+1. enrollment size. Overall, however, the average figure for institations in the sample group was $\$ 42,150$ per year.
6. The primary sources of financial support for IR offices were regularly budgeted institutional funds and grants or contracts with oiltside agencies. The former accounted for $90 \%$ of IR support funds.
7. For the rample group as a whole, $71 \%$ of the total expenditures went for wase and salary payments with roughly another $20 \%$ devoted to office supplies, travel, communications, and miscellaneous-
8. The average IR office had a staff of 2.8 fitll-time equivalent employees who fell primarily into the professional research and clerical categories.
9. A figure based on an estimated value for subsidized computer time combined with dollar amornts indicated for paid computer time and other data processing expense shows that the average IR office spent $3 \%-5 \%$ of its resources on data processing and computing.

## APPENDIX I

THE ASSOCIATION FOR INSITTUIIONAL RESEARCH

October 12, 1970

## To The President:

The Association for Institutional Research is a non-profit organization of academic and administrative professional members of institutions and agencies of higher ectucation. Its purpose is to advance research leading to improved understanding, planning and operation of such institutions. Toward that end, the Association is currently conducting a survey to determine the level of financial support for the institutional research function at colleses and universities in the United States and Canada. Many institutions have recently initiated or are in the process of initiating offices of institutional research, and it is our hope that the results of this survey will be of benefit to them and to all others who are concerned with improving the educational process through research and plaming.

If your institution has an office or bureau organized for institational research or if there exists an ad hoc activity which performs this function. will you please arrange to have the attached questionnaire completed and returned in the envelope provided. If no such activity is recognized at your institution, we still ask that you provide answers to questions 1 and 2 and retwrn the questionnaire to be included in our count.

It is our intention to publish a brief report based on the findings of the survey, although the anomymity of ind:-idual institutions will be carefully preserved. To insure this, all returns are routed directly to the public accounting firm of Touche Ross \& Company in San Francisco where the envelopes will be opened and diacarded and an initial tally of the results will be made. I would very mach appreciate having your reply by November 30 , 1970. Copies of the results can be obtained by writing to me at the address shown below. Thank you for your assistance.

Sidney Susiow
President

Office of Institational Research
Room 210 Euilding $T-8$
University of Califfornia
Berkeley, Ca. 94720

APPENDIX I (contimed)
SURVEY OF FINANCIAL SUPPORT FOR INSTITUTIONAL RESEARCH

Your responses to the following questions will enable the Association for Institational Research to answe $q$ questions directed to it concerning the growth of institutional research as an organizational specialty in higher education. Where precise information is not available, estimates may be substituted, but we would appreciate your making an effort to answer all questions. Dollar amounts may be rounded to the nearest tiousand and percents to the nearest whole mumer.

1. Institutional Protile

Please answer items A, B, and C below by marking tive box near the entry which describes your institution.
A) Control of Institution
$\square_{\text {Public }} \quad \square_{\text {Private }}$
B) Type of Institution
$\square$ University $\quad \square$ Four-Year College $\quad \square_{\text {Two-Year College }}$
C) Average regular term emrolinent during the 1969-70 year.

| Full-Time Students | Part-Time Stadents |
| :---: | :---: |
| $\square$ Fewer than 1,000 | Fewer than 2,000 |
| ] 1,000 to 4,999 | ],000 to 4,999 |
| 5,000 to 9,999 | 5,000 to 9,009 |
| 10,000 to 19,999 | 10,000 to 19,999 |
| 20,000 to 29,999 | 20,000 to 29,999 |
| 30,000 or more | ]30,000 or more |

2. The Institutional Research Function

Does your institution have an office or witi whose primary responsibility is in the area of institutional research?
$\square$ No $\square$ Nos state or other central agency which

If your answer to question 2 was other than Yes, your questiomaire is now complete. Flease return it in the enclosed envelope.

## APPENDIX I (contimued)

3. Financial Support for Institutional Research in 1969-70
A) What was the total doller amount allocated to institutional research from regular institutional funds at the beginning of the $1969-70$ fiscal year?
$\$$ $\qquad$
3) If additional allocations of regular institational funds were made duming the fiscal year, please indicate the total amount of such additional allocations. s

C) What was the total reveme camed by institutional research through recharges for services rendered to other organizational units in your institution?

D) What was the total amount received from grants and/or contracts with outside agencies?
$\$$ $\qquad$
E) What was the total amount received from sources other than those shown above?
$s$ If this is a significant proportion of the total support, please specify these other sources:

Total Support
$\$$
(sum of items A-E above)
$\qquad$
4. Expenditures for Instititional Research Activity During 1969-70

What was the total doliar amount expended for institutional research at your institution? *
*If your office is not required to pay directly for computing time put O\% in iteme 5Bi and 5Bii and include no computing costs in item \#4.
5. Percent Distribution of Expenditures

Based on the total expenditare figure indicated in response to question
4, please show the percent expended in each of the following areas:
A. Salaries $\quad \%$ of Total No. of FTE-IR
i) Professional Research Staff

IR Expend. Staff Positions
ii) Systems Analysts
iii) Programmers and Equipment Operators $\qquad$
iv) Clerical and Clerical Supervision
v) Other
(please specify)

## APPENDIX I (contimed)

B) Electronic Data Processing*

* If your office is not required to pay diracrly for conputing tine put $0 \%$ in items $58 i$ and $53 i i$ and incIuce no computing costs in item \#4. K of Total IR Expend.
i) Comprater time $\qquad$
ii) All other EDP expenditures
(If office was not required to pay
for computer time, please indicate the muber of hours of computing used in 1969-70. $\qquad$ )
C) Direct cost of procucins publications:
i.e., printing, binding, etc.
D) Equipment and Sumiture
E) AII other expenses

If these represent a significant proportion
of your total expenditures, please specify
thu important items:
$\qquad$
Total Expenditwres
100\%
6. If possible, can you indicate the percent of your institution's overall operating expense (total expenditures exclusive of capital outlay) which the figure shown in item \#4 represents.

Inank you for your cooperation. Please retarn this questiomaire in the enclosed envelope to:

[^0]:    （＊）A publication entitled Advanced Stetistics of Ecucation（ottrwa：Domition Bureau of Statistics，1970）reports a comprehengive count of 117 colleges and umiversities operating in Canada as of 2969－70．This，mess the distribition of Canacian institutions it terms of type，control，and encollment size AEsfers racicai＝y from the distribution of U．S．institio tions，inclusion of Camadian deta based or these 117 institations would not materiaily effect the overall distrioution because of the vastiy greater miber（2，55I）of U．S．ingtitutions for ithich data are showt．

[^1]:    (*) Ihis figire represents the total of 357 offices reported less the 89 offices at two-year colleges and less an estimated 28 offices at four-year institations in Canada.

[^2]:
