ABSTRACT

This report presents the technical details of the sample design used for the day care survey conducted by Westat Research, Inc. under subcontract to Westinghouse Learning Corporation. It follows the recommendations of the preliminary report on sampling design (available as ED 051 880) submitted on August 15, 1970. That report presented the merits and weaknesses of alternatives along with reasons for selection of the recommended design. This final report describes the manner in which the actual design was carried out. These appendixes include: sample design, field procedure, response and validation, training manual, questionnaires, coding and editing instructions, school superintendents' questionnaire, and contingency tables. I. Introduction

This report presents the technical details of the sample design used for the Day Care Survey conducted by Westat Research, Inc. under subcontract to Westinghouse Learning Corporation.

It follows the recommendations of the preliminary report on sampling design submitted on August 15, 1970. That report presented the merits and weaknesses of alternatives along with reasons for selection of the recommended design. This final report describes the manner in which the actual design was carried out.

II. Basic structure of the design

The basic design is patterned after the one used by the Current Population Survey of the Bureau of the Census. In this design, the roughly 3,100 counties of the conterminous United States are grouped into about 1,900 primary sampling units (PSUs), of which about one-eighth are metro units and seven-eighths nonmetro units. Except for New England, the PSU boundaries coincide with county boundaries. In parts of New England the PSUs are defined as collections of towns, but the towns are the principal units of local government and all of the towns taken together comprise a mutually exclusive and exhaustive coverage of the geographic area.

The fact that PSUs are single counties or groups of counties (except for New England) is important to this study because many day care centers and day care homes are licensed by the county. Thus, the county is a natural geographic unit for obtaining lists of facilities to be sampled or covered comprehensively.

In the case of standard metropolitan statistical areas (SMSAs), PSUs are the entire SMSA. In large population centers, such as New York, the consolidated metropolitan area (CMA) is used. The CMA is actually an aggregation of two or more SMSAs. Large SMSAs and CMAs were subdivided, as discussed below. In nonmetro areas, each PSU consists of a

single county or a collection of contiguous counties compact enough in area so that a sample spread throughout it can be canvassed efficiently without undue travel cost. A conscious attempt was made to make the PSUs as heterogeneous as possible. A typical PSU, for example, contains both urban and rural residents, all economic levels, and diverse occupations and industries.

The Bureau of the Census has regrouped the PSUs into varying numbers of strata, attempting to make the PSUs in each stratum as homogeneous as possible. Westat organized the PSUs into 52 strata, after updating the SMSA boundaries to include the 1967 definitions of the Bureau of the Budget. The basic design, with one PSU per stratum, yields a survey design requiring surveys in 52 communities, where "community" may be a county, a collection of counties, an SMSA (or CMA) or a part of an SMSA (or CMA).

The choice of 52 PSUs requires some justification. Frequently, about 100 PSUs or more are used and, on relatively rare occasions, about 25 are used. The choice of about 50 was governed by the following arguments:

1. The original plans for the field work called for about 400 interviews with users, 1,750 interviews with nonusers, and 100 interviews with community leaders.* For three potential numbers of strata (with one PSU per stratum) the average workloads are as follows:

<u>Interview type</u>	<u>25 PSUs</u>	<u>50 PSUs</u>	<u>100 PSUs</u>
Operator	16	8	4
Users	30	15	8
Nonusers	75	38	19
Community leaders	4	2	1

*Plans were subsequently modified to exclude interviews with community leaders and to increase interviews with other respondents. The actual numbers of interviews will be presented in the final report.

The workload per PSU for the 50-strata design is about the maximum which can be accomplished in the 3 1/2 month interview period by one interviewer. Clearly, the 100-strata design would require training about twice as many interviewers and would entail substantial increases in supervision and sample drawing (see below). On the other hand, the 25-strata sample would require almost as many interviewers, but would have savings in training, supervision and sample drawing. There is a modest increase in costs from 25 to 50 strata which, in our judgment, is more than offset by increases in precision due to the smaller number of units included in the sample per PSU in the sample and also from greater depth of stratification. However, there is a "step-function" increase in costs from 50 to 100 strata which, we feel, the increase in precision will not justify. For this reason, a design with about 50 strata was chosen and the actual number of strata was 52.

2. The 52 PSUs in which interviews were conducted could have been assigned to 26 strata in pairs, but we chose to assign one to each of the 52 strata.* The former procedure would cost essentially the same as the latter, and would make it possible to obtain a more precise estimate of the sampling error. However, substantial real loss in precision might occur due to the coarser stratification of the population. Strata were collapsed into approximately comparable pairs (or triplets) for the estimation of the variance. The procedure provides real gains in precision although it results in overestimates of the sampling error. In our judgment, the real gain in precision due to using 52 strata is more important to the objectives of the study than the loss in precision of estimates of the sampling error.

The method for identifying counties (or New England towns) to be included in the sample is stochastically equivalent to the following procedures:

1. New York, Los Angeles, Chicago, Philadelphia, Detroit,

*Note that certainty PSUs encompass the entire stratum.

Boston and Pittsburgh were selected with certainty. That is, the CMA or SMSA of which they are a part was included in the sample with probability 1.0000. Each of these 7 metropolitan areas was considered an entire stratum.

2. Each of the other 45 strata contained two or more PSUs (counties, groups of counties or SMSAs), of which one PSU was drawn with probability proportional to 1960 population.

3. Strata containing PSUs with small populations were treated as follows:

a. Census PSUs with less than 20,000 population in 1960 were combined with adjacent PSUs where it was feasible to form contiguous areas which, although geographically large compared to usual sample PSUs, could still be covered by a single interviewer to obtain operator interviews.

b. Census PSUs of less than 20,000 population which could not conveniently be clustered with adjacent PSUs in the same stratum were dropped from the universe and their weight reallocated to remaining PSUs in the stratum. An estimated 1.6 percent of the total conterminous U.S. population was treated in this manner.

c. One PSU, of those remaining, was drawn into the sample with probability proportional to size.

This procedure produced a probability sample of all identifiable* day care centers except for those located in the 1.6 percent of the population that was excluded. The procedure, in fact, imputes to the omitted day care centers characteristics like those in the other counties in the same primary stratum. The PSUs were enlarged and the remaining small PSUs were excluded in order to avoid an increase in variance that occurs when very small PSUs are selected which do not contain enough sampling units (centers) to retain the self weighting characteristics of the design. It is then necessary to assign higher weights to the available units and this

*See listing procedure, subsequently.

procedure may add materially to the sampling error. The procedure is described in greater detail later.

4. Multiple-county PSUs in some cases were subsampled to reduce the workload on interviewers and on those drawing the sample of areas for household interviewing. For example, the New York CMA contained 14.8 millions of population in 1960 and covered 17 boroughs and counties. Of these, Kings was selected with certainty and six others were selected with probability proportional to 1960 population to produce the sample identified in Table 2. 1.

5. In subsampling SMSAs (or CMAs) maps of poverty areas produced by the Bureau of the Census were used. Those counties containing large urban poverty concentrations (as observable from the maps) were subsampled with higher probability of selection (generally) than those without such concentration. This procedure in no way biases the results, but insures better coverage of the poverty areas in the conterminous United States.

6. The above steps produced the sample of counties for interviews with day care operators and users of those facilities. Some further subsampling was done to obtain the sample of counties in which area probability samples of households were drawn. That sample, with its associated probabilities of selection, is also shown in Table 2. 1.

The counties included in the operator sample include about 31 percent of the 1960 population of the conterminous United States.

III. Allocation of the sample within counties

A. General statement of the procedure.

The various phases of the operator and block samples were allocated to sample units within counties so as to achieve, as nearly as feasible, a self weighting sample within classes of the population. (See Section D below.) It was recognized that within each weight class the final sample of responses would not be perfectly self weighting because of nonresponse and the occasional requirement in the operator sample to sample more units than are available in a given county. Also in certain PSUs the proportion of operators taken into the sample was cut in half or doubled to increase the efficiency of the design. However, the self-weighting principle was chosen as a goal in order to equalize workloads and to achieve efficiency in the design to the extent that it could be adhered to.

For a constant overall sampling fraction, and with oversimplified notation, let

n = overall sample desired (say, 400 day care operators)

N = estimated number in population (say, 20,000)

P_{hi} = probability of selection of the i^{th} selected county in h^{th} stratum

f_{hi} = sampling fraction in the i^{th} selected county in the h^{th} stratum

$$= \frac{n}{NP_{hi}}$$

Then, for self representing counties (in large SMSAs or CMAs)

$P_{hi} = 1$ (selected with certainty)

$f_{hi} = n/N = (1/50, \text{ as above})$

That is, one would select one-fiftieth of the facilities in self-representing counties in large SMSAs. For another county suppose $P_{hi} = 1/40$. That

is, the selected PSU, drawn with probability proportional to size, contains

one-fortieth of the total population in the stratum. Then, for that PSU:

$$f_{hi} = \frac{n}{NP_{hi}} = \frac{400 (40)}{20,000} = 4/5, \text{ and one would take } 4/5 \text{ of the}$$

facilities identified in the PSU.

In the above hypothetical case, about 90 interviews would be accomplished in the combined certainty PSUs and the remaining 310 would be distributed evenly over the remaining 45 PSUs, calling for an average of seven or eight in each. In actual practice, larger samples had to be drawn to account for refusals and other factors. This is, of course, only an illustration of the allocation principle involved. Actual allocation is presented in more detail below.

B. Selection of the sample of centers and homes.

Lists of names and addresses of day care centers and homes were obtained for each of the sample counties from the following sources:

1. Licensing authorities (county, municipal and state).
2. Telephone directories.
3. Principal church organizations.
4. Community action agencies.
5. Departments of Welfare or Social Service.
6. Other known sources of compiled lists.

In some cases it was possible to obtain in advance of field work essentially complete lists of day care centers, somewhat less complete lists of group day care homes and sketchy lists of family day care homes. It is safe to assume that in other cases all components of the listings were sketchy. An essential part of the field work consisted of the construction of workable lists. These were augmented by the block samples as described subsequently.

For list construction purposes it was decided to classify day care as follows:*

1. Family day care: 1 to 6 children, inclusive, who are not members of the operator's family.
2. Group day care: 7 to 12 children.
3. Day care centers: 13 or more children.

In all cases, at least one child must be cared for on a regular basis for seven hours or more per day to qualify as day care. The definitions depart somewhat from those in Federal Interagency Day Care Requirements but are sufficient for list construction purposes. The survey was designed to provide estimates of the number in various classifications.

On the basis of lists to be prepared prior to beginning the field work, the sampling rates were set so as to produce an expected 300 interviews with day care centers and group day care homes. Interviews with family day care homes were obtained from the general population sample as described in Section D. The lists of day care centers and homes were edited to remove, to the extent possible, such homes prior to sample selection.

When a sampling rate was determined for a specified county, it was applied to the edited list for that county. Other facilities identified in the field when the general population survey was conducted were included in the sample as well. Their probability of inclusion is determined by the probability of inclusion of the blocks within which they fell.

C. Selection of the sample of users of identified day care centers.

Users are defined as those persons exercising parental responsibility over children in day care. For simplicity, we refer to them as "parents", or "users". Having identified a sample of day care centers and group homes

*Subsequently, it was decided to drop the "group day care home" as a designation and to interview all but family day care homes with the same questionnaire.

(above), rules were established for selection of parents who use the sampled facilities.

Some problems of gaining the cooperation of operators in providing lists of users were anticipated, so several alternative procedures were designed. In all cases, the procedures called for preparing or identifying a list of names, assigning a serial number to each and selecting k names (k dependent on enrollment) according to a table of random selections provided in the instructional materials. These instructions are documented in the final report. The four procedures, in the order of preference are as follows:

1. Operator has a list or card file of "mothers" and will permit interviewer to use it. Draw a random sample of names by using the table of random selections.
2. Operator has a list or card file of children and will permit interviewer to use it. Same procedure as above.*
3. Operator has list, but refuses to provide it to interviewer.
 - a. Operator was asked to draw the sample herself by the above rules.
 - b. Upon refusal, she was asked to send home prepared letters to parents seeking cooperation and the sample was drawn from those who expressed willingness to be interviewed.

The samples were drawn so as to produce a sample list of about one out of 15 families using the day care centers. The actual numbers drawn are shown in Table 2.2.

*This procedure increases the probability of inclusion of a mother with more than one child in the center. It was decided to adjust for this selection bias in the computation rather than to unduly complicate instructions to interviewers.

D. Selection of the general population sample

The general population sample contains both users and nonusers, but the identification of the respondent is affected by his place of residence rather than the enrollment of his children in organized day care. Within the selected counties, small geographic units (such as city blocks) were selected with known probability. The households in such areas were then sampled permitting extrapolation to national estimates.

We have seen, above, how the county was selected with known probability. We now consider how the county was subdivided into identifiable sample segments that were selected with known probabilities.

The basis for such subdivision is the maps prepared by the Bureau of the Census for the 1970 Census. There are three such series of maps.

1. County maps (usually prepared from county highway maps). These maps show Census enumeration districts (EDs) and tract boundaries of counties which have been tracted. (All counties in SMSAs have been tracted and parts of some other counties.) Some county maps show a "county tie-in-line", inside of which geographic detail is shown on the metropolitan map series (see below).

2. Metropolitan map series (essentially covering the urbanized area of SMSAs). Tracts are shown. In addition EDs are shown within tracts throughout those SMSAs where the Census was not taken by mail and in some of the outlying areas covered by metropolitan maps in the other SMSAs. In most areas, block numbers are given, coded in such a manner that they can be aggregated into "block groups", essentially equivalent to EDs. Towns and small cities outside the county tie-in-line (if any) appear on maps of "places".

3. Place maps (usually base maps of various local planning agencies). These maps give street and block details within EDs.

Prior to release by the Bureau of the Census of small geography identification (the MEDLIST), the above series of maps is the only usable source of data for small geography identification. Therefore, the county and metropolitan series maps were obtained for the counties and SMSAs in the sample and the necessary place maps were obtained as they were identified in the sampling process.

Units of area to be covered by an interviewer were drawn in two stages. The first stage selected EDs outside the county tie-in-line and tracts inside. EDs contain, on the average, about 800 persons and tracts contain about 4000. When the sample of tracts or EDs was selected, a sample of blocks was drawn within the selected EDs or tracts. In unblocked EDs, the ED was subdivided by streets, roads, railroads, and rivers to form pieces of geography that could be recognized by the interviewer. These pieces are also called "blocks" for simplicity.

Inside the tie-in-line, we obtained comprehensive lists of tracts as well as lists of those tracts in central cities tentatively identified as poverty areas by the Bureau of the Census. The latter were sampled most heavily, but the nonpoverty tracts were sampled more heavily than areas outside of the tie-in-lines (above). Some notation will be useful in explaining the sample allocation.

- Let P_{hij} = probability of drawing the j^{th} county in the i^{th} PSU, h^{th} stratum.
- M_{hijk} = number of tracts (or EDs) in sample weight group k within the j^{th} county. ($k = 1$ for poverty tracts inside central cities, $k = 2$ for nonpoverty tracts inside central cities, $k = 3$ for urbanized areas outside of central cities and $k = 4$ for EDs outside tie-in-lines and for counties not in SMSAs.
- m_{hijk} = number of tracts (or EDs) selected in the sample weight group k (within hij).

- N_{hijk} = number of blocks in weight group k (within hij).
 \bar{N}_{hijk} = average number of blocks per tract (or ED) in weight group k
 Q_{hijk} = estimated number of households in weight group k within hij).
 Q_{hijk}^I = Q_{hijk}/M_{hijk} = average households per tract (ED).
 Q_{hijk}^{II} = Q_{hijk}/N_{hijk} = average households per block
 a_k = expected eligibility rate.

Then $12/a_k \bar{Q}_{hijk}$ is a first approximation to the desired subsampling fraction from the selected tracts (EDs) within weight group of county hij.

We then set

$$f_k = P_{hij} \frac{m_{hijk}}{M_{hijk}} \frac{12/a_k}{\bar{Q}_{hijk}}$$

using the values for this selected county, all of which are now known except m_{hijk} . Then

$$m_{hijk} = \frac{f_k M_{hijk} \bar{Q}_{hijk} a_k}{12 P_{hij}}$$

Although it is not necessary, it was convenient (and perhaps a closer approximation to optimum allocation) to use the nearest integral value (greater than zero) for m_{hijk} , so we rounded it to this integral value.

This gave us the m_{hijk} to use in selecting the sample of tracts (EDs) within area hij, i. e.,

$$\frac{1}{k'_{hijk}} = \frac{m_{hijk}}{M_{hijk}} \text{ as indicated above, using the rounded value of } m_{hijk}.$$

We then substituted this value in the overall sampling fraction to obtain the final value for k''_{hijk} , the block subsampling fraction. Then,

$$f_k = P_{hij} \frac{1}{k'_{hijk}} \frac{1}{k''_{hijk}}$$

or

$$k''_{hijk} = \frac{P_{hij}}{f_k k'_{hijk}}$$

We now applied the block subsampling fraction to the sampled tracts.*

Blocks were selected with equal probability and, once selected, were canvassed completely. It was important therefore to define blocks that are not too large so that very large numbers of responses would not be obtained from any one block. In order to accomplish this objective in blocked areas, i. e., in tracts in which block numbers have been assigned, the following procedures were implemented.

1. The blocks within the tract were identified and the number of block groups determined.
2. One block group was selected with probability proportional to number of blocks as initially defined. (Block groups with less than five

*The following adjustment in sampling was made for certain counties for types of area $k = 3$ and $k = 4$:

1. If the initially computed value of m_{hijk} for a county was less than 10 then one-fifth of such county-type areas were subsampled for retention in the final sample. Consequently P_{hijk} for each of these was divided by five, and the remaining factors recomputed.
2. If the initially computed value of m_{hijk} was equal to or greater than 0.10 and less than 0.30, then one-third of such county type areas were subsampled for retention in the final sample. Consequently, P_{hijk} for each of these was divided by three, and the remaining factors recomputed.
3. County-types dropped from the sample by this procedure were crossed off the worksheets. For those retained in the sample, the original P_{hijk} was crossed out, a new value recorded, and the remaining computations redone, as originally, but with the new value for P_{hijk} .

blocks were merged with others so that the final block groups to be sampled contained five or more blocks.

Let P_{BG} = the probability of selecting the particular block group that was selected.

Then $P_{BG} = \frac{\text{number of initial blocks in this block group}}{\text{number of initial blocks in the entire census tract}}$

3. The selected block group was cruised by the interviewer to determine any blocks which had in excess of 200 estimated housing units.

4. The interviewer identified portions of such large blocks such as apartment buildings, floors of apartment buildings (or wings), each of which contained no more than 100 housing units. These were treated as blocks in the subsampling process.

Let M'_{hijk} be the number of blocks selected in the block group, after any such subdivision of blocks was accomplished. We obtained a subsampling fraction for the selected block group as follows:

We have $\frac{1}{k''_{hijk}}$ as the desired subsampling fraction for the census

tract. We sampled a block group (sometimes enlarged so that the block group contained five or more blocks, or alternatively, the entire tract in case there were not enough block groups to meet this condition) with a probability equal to P_{BG} .

Then

$$\frac{1}{k'''_{hijk}} = \frac{1}{k''_{hijk} P_{BG}}$$

or

$$k'''_{hijk} = k''_{hijk} \cdot P_{BG}$$

and we included in the sample one in k'''_{hijk} of the M'_{hijk} blocks in the selected block group. We carried k'''_{hijk} to two decimal places. The procedure for selecting the blocks was to choose a three or four digit random number between one and k'''_{hijk} , and successively to add k'''_{hijk} to it, recording each result. Then each such result was rounded to the next higher

number, to determine the selected blocks. The process is illustrated in the following table, which represents a portion of the worksheet used.

Random number and successive sums of k''_{hijk}	Selection number (i. e., serial number of blocks to be selected)
1.47	2
7.78	8
14.09	15

In unblocked tracts inside the tie-in-line one ED was selected with equal probability. It was subdivided into pseudo blocks which were cruised and treated as above. In this case $P_{BG} = 1/(\text{number of EDs in the tract})$

EDs outside the tie-in-lines were treated as above except, of course, there was no subsampling of block groups or EDs. When the base maps appeared to show sufficient "culture" of a recent enough date the cruising step was omitted.

In noncertainty PSUs, strata were collapsed into groups in pairs or triples with similar characteristics, to provide a means of estimating sampling error.

Following are estimates for the total U. S. used in establishing the standard sampling fractions:

Category of population	(Q_k) Estimated total housing units (millions)	(A_k) Estimated eligibility rate (percent)	$(A_k Q_k)$ Estimated total households eligible (millions)	Desired sample	Standard sampling fractions f_k
Central cities					
Foverty areas	5.0	16	0.80	600	0.00075
Nonpoverty areas	13.0	10	1.30	600	0.00045
SMSA outside					
central cities	20.0	7	1.40	400	0.00030
Other	23.0	12	2.76	800	0.00030
	<u>61.0</u>	<u>10</u>	<u>6.26</u>	<u>2,400</u>	

An example of the sample allocation for the Washington, D. C., SMSA is shown in Table 3.1.

Column (h) of Table 3.1 shows the number of tracts (or EDs) chosen in each area category within the PSU, and Column (j) shows the fraction of blocks selected. Only whole blocks were selected, after application of the rules to select block groups or EDs within selected tracts and after application of the procedures to avoid extremely large blocks. Thus, if there were 15 "blocks" in the selected ED in Prince George's County outside the area covered by the Metro Map Series the selection was made as follows:

1. The 15 "blocks" were numbered and listed.
2. The sampling rate of 0.0175 was converted to a sampling interval by taking its reciprocal, i.e., $1/0.0175 = 57.14$.
3. A random number between 0 and 5,714 was chosen. If it was equal to or less than 1,500, the first two digits minus one identified the block to be chosen. A greater number caused no block to be chosen and hence no representation of this area category in the Washington SMSA PSU.

When a block was identified, it was canvassed completely, and the interviewer was required to produce an address listing for the block which could be used to check the accuracy of her canvass.

The interviewer screened all households for eligibility (discussed elsewhere) and obtained interviews with those determined to be eligible. Also, during the canvass, she identified all homes which care for children of others for compensation and obtained interviews from them according to rules provided to her.

IV. Estimates and variances

Let $x_{hijk\ell}$ be an observation on the ℓ^{th} sample unit (household, user, or operator) in the k^{th} class of area segment in the j^{th} county of the i^{th} PSU from the k^{th} stratum. For example, $s_{hijk\ell}$ might equal one for

* EDs

E Estimated because of lack of 1970 Census data

the attribute "has an educational program" and zero otherwise, or x_{hijkl} might be the income of user. Each x_{hijkl} receives a weight from the sample design and from the adjustment for nonresponse. Denote the weight by w_{hijk} . An estimate of the overall population characteristic is given by

$$\hat{X} = \sum_{h, i, j, k, \ell} w_{hijk} x_{hijkl}$$

An overall ratio estimate may be introduced for the household sample estimates as follows:

Let \hat{Y} = estimate of total households in the United States from the sample results as indicated immediately above,

$$\text{i. e., } \hat{Y} = \sum_{h, i, j, k, \ell} w_{hijk} y_{hijkl}$$

and Y = total number of households in the United States from 1970 Census. Then the ratio estimate of an overall population characteristic is

$$X' = \frac{Y}{\hat{Y}} \hat{X}$$

For purposes of estimating variances, the noncertainty PSUs were classified into groups of two or more. This procedure resulted in construction of 28 collapsed strata subdivided into components as shown in Table 4.1. Then, using the same procedure as above estimates will be made separately for each subgroup (59 all together grouped into 28 collapsed strata, see Table 4.1). These estimates are as follows:

$$x'_{h'g} = \sum_{i, j, \dots} w_{hijk} x_{hijkl}$$

Then, the covariance between the characteristics x and y is estimated by

$$\text{cov } \hat{X}\hat{Y} = \sum_{h'} \sum_g \frac{N_{h'}}{N_{h'} - 1} \left(x'_{h'g} - \frac{A_{h'g}}{A_{h'}} x'_{h'} \right) \left(y'_{h'g} - \frac{A_{h'g}}{A_{h'}} y'_{h'} \right)$$

where N is the total number of collapsed strata (28), and $N_{h'}$ is the number of strata in the h' th collapsed stratum ($h' = 1, \dots, 28$ $g = 1, \dots, N_{h'}$)

$A_{h'g}$ is the 1960 population in the collapsed stratum and $x'_{h'} = \sum_g x'_{h'g}$.

Table 4.1 Regrouping of strata for estimation of sampling errors

Collapsed stratum h'	Subgroup (stratum number)		
	g = 1	g = 2	g = 3
1	1 odd	1 even	
2	2 odd	2 even	
3	3 odd	3 even

24	39	45	
25	41	43	
26	42	44	
27	48	51	
28	50	49	

The estimated coefficient of variation of the ratio of Y to X is

$$CV(\hat{Y}/\hat{X}) = \sqrt{\frac{\text{var } \hat{X}}{\hat{X}^2} + \frac{\text{var } \hat{Y}}{\hat{Y}^2} - 2 \frac{\text{cov } \hat{X} \hat{Y}}{\hat{X} \hat{Y}}}$$

where $\text{var } \hat{X}$ is found from the covariance formula by replacing y by x and the reverse for $\text{var } \hat{Y}$. The estimated coefficient of variation of \hat{X} is

$$CV(\hat{X}) = \sqrt{\text{var } \hat{X} / \hat{X}^2}$$

V. The special sample of school districts

As indicated on page 2 of this report the original plans to interview community leaders were abandoned. Instead, it was decided to do a mail survey of school districts in order to get information on the availability of

- a) Day care for pre-school children
- b) Before and/or after school care for school age children

The sample of school districts was drawn from "Education Directory. Public School Systems 1969-70", published by the National Center for Educational Statistics. All of the school districts with an enrollment of 300 or more pupils were included in the sample if they were located in one of the counties selected for the Day Care Sample. Where the Day Care Sample included only parts of a county (for example, PSU 7 Middlesex County) the school district sample included all of the school districts in the whole county, since it would have been impossible to sort out the school districts in the sampled part of the county only.

A total of 1,400 school districts are included in the sample. The pupil population for these districts is given as 11,669,662. The numbers of districts, schools and pupils are shown for each PSU in Table 5.1.

Table 5.1 Sample of school districts for special mail survey

VI. Nonresponse and other adjustments

In general, weights were adjusted for nonresponse by dividing by the response rate, that is the ratio of weighted completed interviews to weighted total interviews attempted. For some of the samples, separate response rate adjustments were made for SMSAs and nonSMSA strata. Nonresponse adjustments (i. e., factors to be multiplied by the basic sampling weights) are as follows:

Sample of day care centers

SMSA	1.155
NonSMSA	1.044

Sample of households (including the "captured" sample of day care homes)

SMSA	1.309
NonSMSA	1.196
Special sample of school districts	1.108

Comparison of projected number of housing units with number of housing units reported by the Bureau of the Census* revealed an undercount by the survey. A further adjustment of weights for the household (and day care home) portions of the survey corrected for such undercoverage. The undercoverage adjustments are as follows:

SMSAs	1.027
NonSMSA areas	1.389

The details of the adjustments are shown in the main text in Section 4.2.

*Data from the current Population Survey

APPENDIX B

FIELD PROCEDURES

B. 1. Introduction

Westat's central office personnel conducted briefing and training sessions for the field staff in three cities (Chicago, Dallas and Washington, D. C.). After training, the field staff executed most of the field work with the central office conducting the supervision and coordination of procedures. The field work is listed below, and a description of these operations follows.

- Listing of Day Care Centers
- Sampling of centers and first personal contact with those selected*
- Screening of centers (Day Care Center Sample Screening Form)
- Interviewing of operators (Day Care Center Survey Operator Questionnaire, Long Form)
- Identifying users (User of Day Care Centers Calling Form)
- Interviewing of users (Parent Questionnaire)
- Selecting the area sample*
- Area cruising (Area Cruising Description Form)
- Subsampling of block groups and EDs*
- Area sample screening (Door-to-Door Call Record Forms) and (Screening Questionnaire)
- Interviewing for area sample (Day Care Center Survey Operator Questionnaire,) Long Form or Short Form or (Parent Questionnaire)
- Mail survey and following mailing to school officials. (Public School Day Care Programs)*

* Tasks performed by Westat personnel at the central office

B. 2. Survey of centers

Westat made telephone calls to obtain information about the availability of lists of day care facilities (centers and homes) and also to obtain cooperation of the agencies. These calls were made to county and/or state Community Action Agencies* (OEO); welfare or social service agencies, and local child day care councils in the selected PSU's or counties. As a follow up, we mailed letters to those agencies and individuals contacted explaining the purpose of the study and soliciting their cooperation.

B. 2. 1. Listing of centers

Westat's field staff obtained lists of names and addresses of day care facilities (centers and homes) from one or more of the following sources in the selected sample of counties:

- a. Licensing authorities (county, municipal or state)
- b. Telephone directories (yellow pages)
- c. Community Action Agencies
- d. Principal church organizations
- e. Other known sources of compiled lists, e. g., child day care councils, family and child services, child care associations

Field representatives also requested lists of day care facilities whose licenses were pending or those who were applying for licenses. We made no attempt to identify or obtain lists of unlicensed facilities, although some lists obtained by our field staff contained a few facilities identified as unlicensed. Of the 289 centers surveyed, 28 were unlicensed.

The amount of under-reporting of day care facilities is unknown. Many state, municipal and county agencies reported their lists

were incomplete due to a lack of staff, funds or other reasons. In addition, the licensing of day care facilities in some counties and states is voluntary. The main purposes of this study are served without reference to the amounts of under-reporting.

B.2.2. Classification of centers

For list construction purposes the day care facilities were classified as follows:

- B.2.2.1. Day care center - 13 or more children.
- B.2.2.2. Group day care home - 7 to 12 children.
- B.2.2.3. Family day care home - 1 to 6 children, inclusive, at least one of whom is not a member of the operator's family.

It was found that the group day care homes made up a very small proportion of the universe and hence it would be too costly to sample as a separate stratum. The stratum was combined with that of the centers prior to drawing the sample.

The central office compiled, by county, the universes of day care centers to be sampled from listings received from the above sources. In most cases, the lists received from the licensing authority (typically in most counties, the Department of Welfare or Social Services) were established as "master lists". All other listings of day care centers and facilities, including those from the yellow pages, were cross-checked against the master lists. Duplicates, identified either by name of the center and/or address, were eliminated.

The following identifiable day care facilities were defined as ineligible and were eliminated from the final compilations:

- a. Facilities with programs of less than 7 hours per day.
- b. Programs for the mentally retarded or handicapped.
- c. Foster homes
- d. Day care facilities located on military reservations.
- e. Montessori schools.
- f. Facilities located outside of areas (county or city) selected in the sample.

Lists received for a particular county were cross-checked and those duplicated and defined as ineligible were eliminated. The remaining centers were then added to that county's master list and tabulated. We included on the master lists centers for which we lacked information on capacity or hours of operation. A number was given to each center within each county. The numbers were recorded for sampling purposes.

B.2.3 Sampling of centers

The actual sampling of centers was done at our central office. The sampling procedure applied, along with modifications, is described in detail in Appendix A of this report. Each field representative received a list of centers for screening.

Letters from OEO were mailed to directors of the selected centers soliciting their cooperation. Copies of the OEO letter were also furnished to Westat's field representatives to be used in the event an operator or director had not received the mailed letter.

B.2.4. Screening

Many of the lists of day care facilities received from the field were incomplete as to the hours of operation. Therefore, centers or homes selected in the sampling process were screened to determine whether or not at least 7 hours' care per day was provided for any of the enrolled children.

The field staff was instructed to telephone, or personally contact, each center selected, recording the results on the Day Care Center Sample Screening Form. If the facility provided 7 hours or more of day care for at least one of the enrolled children the field representative was to make an appointment to interview the operator. The screening interview was terminated if the operator refused to be interviewed or if the facility did not provide 7 hours per day of day care.

B.2.5. Interviewing

The field staff used the Day Care Center Survey Operator Questionnaire (long form) to interview the operators of eligible day care facilities. They used an abbreviated form of this instrument if there were less than seven full-day enrollees. Copies of both the long and short form of the Operator Questionnaire and the instructions for their use are included in Appendix E of this report.

Field staff interviews were verified by telephoning the operators of centers to make sure they had been interviewed and that answers were correctly recorded. These telephone calls were made by central office personnel as a spot check rather than 100 percent verification.

B.3. Survey of listed users (parents) of day care centers

B.3.1. Definition of listed users

For purposes of this study we have defined users of organized day care as those persons responsible for making the children's day care arrangements. A description of the sampling procedure used to select a sample of users is given in Appendix A of this report.

B.3.2. Identification of listed users

Users of day care facilities were identified in two ways:

- a. From records or lists of children's or parents' names maintained by the operators of eligible day care facilities and
- b. from our area probability sample of non-users.

The tabulation of users given in Section 3 of the summary report is restricted to the sample of parents selected from the lists provided by the center operators. A small number of users of organized day care were identified in the area sample, but no attempt was made to identify the centers involved. The area sample user questionnaires were tabulated with all other area parent questionnaires as set forth in Section 4 of the summary report.

The field staff was instructed to solicit from the operator of each center a list of either the names of enrolled children or the names of mothers of enrolled children. A random sample procedure, based on the enrollment size of the facility or the number of mothers, was used by the interviewer to select or identify a sample of mothers or users to be interviewed. The random procedure was carefully explained and reviewed during the training sessions. It was again outlined in the instructions to the field staff. A copy of the form "Sampling Listed Users of Day Care Centers", used in the field for the task is included with other questionnaire forms in Appendix E of this report.

Procedures for interviewing users from the area probability sample will be discussed later.

B. 3. 3. Interviewing of listed users

The field representatives contacted the users by telephone to set up appointments for completing interviews. The Parent Questionnaire was used for these interviews. A copy of the Parent Questionnaire and the instructions to the interviewer for its use are included in Appendix E of this report. Each representative listed the names of users which he obtained from the operators on the "Users of Day Care Centers Calling Form", which they returned to the central office after appointments with users were completed.

B.4. Area sample

B.4.1. Description

The sample design may be described briefly as a stratified area probability sample of the 48 conterminous states and the District of Columbia. Westat patterned the basic design after the current Population Survey of the Bureau of Census. (See Appendix A for details.)

B.4.2. Selection of areas

The selection of areas - tracts or census enumeration districts (EDs) - was done at our central office. (The procedure used is described in the "Sample Design" in Appendix A of this report.) Census maps identifying the selected tracts (block groups) or EDs were mailed to the field staff in each of the PSUs along with instructions for the cruising of areas.

B.4.3. Area cruising

The field representatives were instructed to cruise around each block and observe the number and type of dwelling units. If a particular block or enumeration district contained more than 200 dwelling units, the representative was to produce a sketch map of the area, identifying the clusters of dwelling units in such a way that the block could be subdivided prior to subsampling. Representatives recorded the addresses, number of units, and the number of floors of all large apartment complexes in a single block. Also blocks containing only office buildings, warehouses, industrial complexes, business establishments, college facilities and areas containing parklands, farmlands or military reservations were identified and recorded. A cruising report form was used to record the characteristics of each block. Following the cruising the report forms were mailed in to Westat for subsampling.

If the interviewer, after cruising, reported that a given block contained more than 200 dwelling units, the particular block was divided into pseudo-blocks containing no more than 200 dwelling units. In cases where a block contained a large apartment complex, pseudo-blocks were created by subdividing the apartment building. For instance, taking the first five floors as pseudo-block A and the sixth to tenth floor as pseudo-block B, the rest of the block would form a third pseudo-block. For the purpose of selecting blocks for canvassing, a pseudo-block was treated the same as any other block.

B.4.4 Subsampling of block groups and EDs

The procedure used for subsampling block groups and EDs was the following: Within each tract a list of all blocks was made. A random number was picked between one and the total number of blocks within the tract. The block group into which this block fell was then selected. (A block group consists of all blocks with the same beginning digit, as shown in the example below.)

<u>Tract No. 5</u>		
Block Group 100	Block Group 200	Block Group 300
101	201	301
102	202	302
103	203	303
104	204	304
105	205	305
	206	306
		307

The method for selecting which block group would be canvassed follows:

Total number of blocks = 18

Random number between 1 and 18 = 6

The sixth block is 201

Thus, in this example the block group selected for cruising is block group 200.

If a block group contained less than five blocks it was combined with the preceding block group in order to form a block group of at least five blocks. If the first block group contained less than five blocks, it was combined with the last block group

B. 4. 4. 1. Rural EDs - Blocks were identified and then drawn on maps. Depending on the number of blocks identified and on the sampling interval in the particular ED, the field staff was instructed either to cruise the identified blocks in the ED or to canvass the entire ED.

B. 4. 4. 2. Urban EDs - Blocks and block groups were identified in the same way as in tracts. The entire ED was considered as a block group and the selection of blocks to be canvassed was made in accordance with the same principles as in the case of tracts. (See Appendix A on sampling.)

B. 4. 5. Screening and interviewing of area residents

B. 4. 5. 1. Block assignments

Once blocks were identified, our field director mailed a list of the selected blocks to the field staff with instructions for canvassing.

The central office prepared maps of the areas selected into the sample and sent them to the interviewers in each PSU. These maps specified the blocks to be canvassed and contained sufficient

detail to permit the interviewer to clearly identify the boundaries. The interviewers were instructed to prepare a listing of all dwelling units that were located within the specified boundaries. These lists were prepared on the Door-to-Door Call Record Forms provided. (See copy included in Appendix E.)

When the interviewer completed the listing of dwelling units she attempted to contact the residents of each unit. If she was unsuccessful on the first attempt she was to complete two callbacks. Specifications required that the second and third attempts be in the evening or on the weekend to include persons who are normally not home during the daytime.

The interviewer provided the following information on the Door-to-Door Call Record Form:

- a. the date the call was made for the 1st, 2nd and 3rd attempts
- b. the time of day these calls were made
- c. the result of each attempt, e. g. , not at home, not eligible, etc.

To check the accuracy and completeness of the Door-to-Door Calling Forms we checked the lists compiled by our interviewers against the Polk Directory of addresses. In large cities which are not covered by the directory we engaged additional local personnel who were not acquainted with the survey and had them list all the addresses in specified blocks.

B.4.5.2. Screening procedures and questionnaire selection

The interviewer asked to speak to the lady of the household at each dwelling unit and attempted to complete the Screening Questionnaire.

The Screening Questionnaire was designed to categorize the respondents so that the interviewer could select the correct questionnaire for further interviewing. The following questionnaires were used if the respondents met each of the indicated specifications:

- Day Care Center Survey Operator Questionnaire (long form)
 - a. A member of the household cared for children on a regularly scheduled basis.
 - b. Child care was provided at least 2 days per week and at least 7 hours per day.
 - c. Parents of the children paid for this care.
 - d. A second person from outside the household helped with the care of the children most of the time they were there.

- Day Care Center Survey Operator Questionnaire (short form: for Family Day Care Homes)
 - a. A member of the household cared for children on a regularly scheduled basis
 - b. Child care was provided at least 2 days per week and at least seven hours per day.
 - c. Parents of the children paid for this care

- Area Parent Questionnaire
 - a. There were children living in the household who were 9 years of age or younger.
 - b. Total family income (before taxes) was less than \$8,000 a year.
 - c. Day care was not provided in the household for children from outside the home.

B.4.5.3 Terminating with screening interview

The interview terminated with the screening interview for those persons who did not have children 9 years of age or younger and did not take care of other children in their home. It also

terminated for respondents who had children 9 years of age or younger, but whose family income last year exceeded \$8,000. Samples of the Screening, Operator and Parent Questionnaires are included in Appendix E of this report.

If a household had an eligible respondent on the basis of their response to income, etc., data was obtained on all children in the household through the age of 13 years.

Selected screening forms where the respondent was reported as ineligible were verified by telephone to check the accuracy of the interviewer.

B. 5 Mail questionnaire to school superintendents

A mail survey questionnaire was designed for completion by public school district superintendents. The purpose of this questionnaire was to obtain data on day care activities for both preschool and school age children.

The questionnaire and a letter from OEO explaining the purpose of the survey and requesting cooperation was mailed to 1,400 public school district superintendents. Every school district with more than 300 students, in the counties or PSUs used in the survey of day care facilities, was included.

There were two mailings; a followup request to nonrespondents was sent out 17 days after the original mailing. A letter from OEO requesting cooperation was included with each, and an additional letter from Westat was enclosed with the second.

The response and tabulation of the data received is given in Appendix G and Section 6 of this report.

APPENDIX C
RESPONSE AND VALIDATION

C.1 Response rates

C.1.1 Introduction

Ninety percent of the operators of eligible day care centers and 71 percent of the users selected from them were interviewed. Screening questionnaires were completed in 74 percent of the dwelling units identified in the area sample.

The day care study breaks down into four components for discussion of responses or tabulations of responses. Sample size, response rates, and a detailed breakdown of responses by PSU for each of the following components will be discussed separately.

- a. Day care center sample in which operators of eligible centers were interviewed.
- b. User sample drawn from lists provided by the operators of eligible centers.
- c. Area probability sample identifying both users and nonusers of day care facilities and family day care homes.
- d. Mail survey of school district superintendents.

The sampling weights and necessary adjustments used for each of the above samples are discussed in Appendix A, "Sample Design".

Responses for the school superintendent survey are presented in Appendix G.

C.1.2 Day care center sample

Of the 551 centers selected for screening, 64 percent were found eligible and 36 percent were found ineligible. Centers were eligible

if they provided 7 hours or more of day care for at least one of the enrolled children. Ninety percent of the operators of eligible centers were interviewed, while 10 percent refused to cooperate or be interviewed.

After compiling a master list of centers (method used to compile this list is discussed in Appendix B, "Field Procedures") and screening the centers to determine which were eligible, 350 centers were contacted for interviewing. The directors of the centers received a letter from OEO discussing the purposes of the survey before they were contacted by field staff. Directors who refused to be interviewed were telephoned from the central office to solicit their cooperation and reiterate the importance of the study. If the director refused again, the field staff was instructed to terminate attempts to interview. The responses for all PSUs for the center sample are totaled below:

Number of centers from master list	6,276
Total centers selected for screening	551
Responses to screening	551
Centers found ineligible (36 percent)	201
Number of eligible centers (64 percent)	350
Refusals (10 percent)	34
Interviews completed (90 percent)	316

Individual PSU and county responses are tabulated in Table C.1.

There were 27 interviews completed with operators who had a full day enrollment of less than seven children. These were later transferred to the family day care home questionnaires and tabulated with that group. Thirty-four users who had been selected from these centers and interviewed were deleted from the parent user file before tabulation.

* Includes 27 center responses that were transferred to the family day care home responses and tabulated with these responses.

C. 1. 3 Response rates for users identified by day care center operator

Seventy-one percent of the users selected from eligible centers were interviewed. Responses from the user sample yielded the following totals

Number of users selected from eligible centers	859
Less: Bad addresses, not home, or telephone disconnected or out of order (25 percent)	<u>211</u>
Number of users contacted for interviewing	648
Less: Refusals (8 percent)	<u>71</u>
Interviews completed (71 percent)	577

Of the 859 users identified, 25 percent (211) were either listed at bad addresses, not at home after three callbacks, or the user telephone was reported out of order. Bad addresses were checked with the operators, and the names and addresses of parents were cross-checked using local telephone directories. The field staff reported that in many of these cases the addresses obtained from the operators were incorrect due to the incomplete records kept by some centers and the failure of parents to notify the center when changing addresses. This 25 percent also includes 34 completed interviews which were withdrawn because they represented 27 operator questionnaires which were converted from long to short forms and no longer required user interviews.

Most of the operators (91 percent) cooperated with the field staff by providing lists of their users. As anticipated, a few operators refused to provide information on their users. Several alternate procedures were designed to cope with this problem. The procedures are outlined in the Final Report on Sample Design (Appendix A, Section IIIC) and also in the Field Procedures (Appendix B).

Of the 316 operators of day care facilities interviewed, 289 cooperated in providing the field staff with a list of users that could be sampled. Twelve operators refused to provide a list of users or send home prepared

letters seeking cooperation of parents. Fifteen operators agreed to mail or send home letters to parents and the user sample was drawn from those responding to the letters. However, the extent to which the 15 operators cooperated is difficult to determine since we have no way of knowing how many letters were actually mailed or sent home to parents. Of the 577 user interviews completed 28 (4.6 percent) were obtained from parents who responded to the letters. The field staff was instructed to make two follow-up calls (1 to 2 weeks apart) to operators concerning nonresponse to the letters. Two weeks after the second call (4 to 5 weeks after original contact with operators) attempts to obtain a sample of users through the letters sent or mailed to parents were terminated.

** This total includes 34 completed interviews which were not tabulated because the centers from which they were drawn were transferred to the family day care home tabulations.

C.1.4 Area probability sample

Seventy-four percent of the dwelling units in blocks selected for canvassing produced completed interviews.

The basic design for the study called for surveys in 52 PSUs. There were 131 counties identified in the selected PSUs. Within the identified counties, 1,116 blocks were selected for canvassing. Canvassing of the selected blocks identified 21,528 dwelling units (DUs) or households. Of these households, six percent were vacant, 21 percent were refusals or not at home and 74 percent (15,824) produced complete screenings. Of the 15,824 households producing complete screenings 11 percent resulted in interviews with eligible parents and 107 (one percent) resulted in interviews with operators of family day care homes. Eighty-eight percent of the complete screenings were ineligible, having either no children 9 years of age or younger, or having a total family income of \$8,000 or more.

The methods used for selecting PSUs, counties and the allocation of the sample within counties are discussed in detail in the Final Report on Sample Design (Appendix A of this report). The following data summarize sample size and the response rates for the area probability sample. Individual PSU and county results are shown in Tables C.3 and C.4.

Number of PSUs	52
Number of counties identified	131
Number of tracts selected	238
Central cities - poverty areas	52
Nonpoverty areas	84
SMSA outside central cities	20
Other (EDs)	82
Number of blocks in tracts and EDs	9,290
Total blocks selected for canvassing	1,116
DUs in blocks selected for canvassing	21,528

Completed screenings (74 percent *)	15,824
Parent interviews completed (11 percent)	1,812
Family day care home interviews completed (one percent)	107
Ineligible: no children nine years or younger (71 percent)	11,186
Income \$8,000 or more (17 percent)	2,724
Refusals or not at home (21 percent*)	4,426
Vacancies (six percent*)	1,278

The use of Bureau of Census maps (prepared for the 1970 Census) presented field problems in identifying a few areas. Some maps were simply outdated while others were indistinct as to boundaries. In such cases, the field staff was instructed to seek assistance from local authorities (police, fire or highway). The information was reported to the central office and the area to be canvassed was defined.

In some areas, notably New York City, Los Angeles, San Antonio and Houston, language problems presented a barrier for the field staff. Ethnic interviewers or translators were employed to assist the regular field staff in the interviewing of those respondents who did not speak English.

Two methods were employed to give interviewers security in inner city areas. Where possible ethnic interviewers were used and the interviewers worked in pairs with each canvassing one-half of a given block. Interviewer escorts were hired in some areas of Little Rock, Texarkana, Arkansas, San Diego, Chicago, Detroit, St. Louis, Bronx, New York, Columbus, Ohio and Dallas.

A few interviewers had difficulty making the necessary three callbacks to very isolated areas such as Indian reservations. Weather and difficult access were also factors which a few interviewers had to overcome.

*Figures add to 101 percent because of rounding.

* Figure adjusted to 1,812. The following adjustments were made in:
 PSU 8 - One questionnaire was found ineligible because there were no children 9 years old or younger living in the household.
 PSU's 9, 11, 25 - One questionnaire in each PSU arrived after tabulations were completed.
 PSU's 13, 30 - One eligible questionnaire in each not included in above table but included in final tabulation.
 PSU 31 - identification number of one questionnaire incorrectly coded for PSU 31; code should have been PSU 34.
 PSU 36 - Two eligible questionnaires not included in above table but included in final tabulations.
 PSU 37 - One questionnaire found ineligible because of family income of \$8,000 or more.

(3) Excluding the problem PSUs footnoted above the percentage with three attempted calls is 93.3 percent.

C.2 Validation procedures

C.2.1 Validation of day care centers

When the Day Care Center Operator Questionnaires (long form) began to come back from the field, it was noticed that some questions were answered incorrectly. Answers were not consistent from one question to the next. For example, the two totals, one for boy-girl breakdown and one for the ethnic breakdown, should be equal. In another case, if the operator indicated that the center was nonprofit and received welfare money, then a dollar amount should also have been listed in the financial section next to federal, state or local funds.

Westat personnel spent several days telephoning the day care centers to resolve these inconsistencies. The caller was able to determine whether or not the interview had been conducted, and whether instructions had been followed, as well as clearing up some improperly recorded responses. Calls were made to centers in 38 of the 52 PSUs. Every one of the 94 centers contacted had been interviewed. This number represents 33 percent of the total questionnaires received from the field.

Validation breakdown follows on the next page.

C. 2. 2 Validation of area sample blocks

Two types of validation were used in checking the listing of addresses in the area sample blocks.

The first was the use of Polk directory listing of addresses for major cities. The interviewers' Door-to-Door Call Record Forms were compared to the Polk Directory listings street by street and any discrepancies in the addresses reported by the interviewer were noted. It was not possible in all cases to make a one-to-one correspondence by address because of (1) the age of the directory and (2) the inability to determine exactly where certain streets intersect or terminate. If the comparison pointed up major discrepancies, the interviewer, or her supervisor, was sent back into the area to verify the original listing.

For the second method of validation, Westat recruited agents to list addresses in selected blocks of the day care area sample. These agents were in no way connected with the field interviewers for this study. These agents were sent a set of instructions and some address listing forms. When they had listed every street address and apartment number, the listing forms were returned to Westat. After Westat received these forms, they were compared to the yellow Door-to-Door Call Record Forms for the particular blocks that had been returned by our field interviewers.

If there were discrepancies in these two lists the original field interviewer was asked to go back and correct his mistakes. In all, 27 blocks needed to be rechecked out of a total of 86 blocks that had been validated in this manner.

PSU 1 - N. Y. City	-	1 block
PSU 3 - Chicago	-	2 blocks
PSU 13 - Houston	-	7 blocks
PSU 20 - Omaha	-	1 block
PSU 30 - Wilmington	-	14 blocks
PSU 32 - San Angelo	-	1 block
PSU 35 - Memphis	-	1 block

Two major field problems were discovered through the validation activities. In one case the interviewer had canvassed the wrong block and had missed two sections of a large and complicated area. In another PSU a major discrepancy was found in the listing prepared by the interviewer. Westat personnel from the home office were sent to the field to correct or redo the work in these areas.

Area sample validation included one further procedure. Random telephone calls were made from the central office to respondents who were ineligible (as determined by the Screening Questionnaire) for interviewing with the Parent Questionnaire. The calls were made to verify that the respondent was interviewed (screened) and was in fact ineligible.

Table C. 6, showing the area sample validation figures, follows on the next page.

Table C. 6 Area sample validation

PROCEDURE

Go around area and on form provided list all Dwelling Units, that is, houses and apartments.

In an apartment house, list each apartment number. Do not list stores, factories, garages, etc., but do list living quarters above stores, etc.

List Dwelling Units only on the side of the street which forms the inside boundary of the area to be listed, not across the street.

All Dwelling Units are to be listed by house number, apartment number if applicable, and street name.

Use a separate sheet for each block number.

ACCURACY IS OF THE GREATEST IMPORTANCE!!!!!!

WESTAT TRAINING INSTRUCTORS:

Chicago - J. Daley, D. Scott, S. Goodman, V. Achtermann
Dallas - J. Daley, D. Scott, S. Goodman, V. Achtermann
Washington, D.C. - J. Daley, D. Scott, S. Goodman, D. Krug

II. INTRODUCTIONS

- A. Westat staff conducting training sessions.
- B. Field staff (interviewers)

III. TRAINING SCHEDULE REVIEW

A. Time and Place

1. All training sessions will be held in the room promptly at times stated on the training schedule.
2. Coffee will be served during breaks in the training schedule.
3. Lunch will be provided on the second training day at 1 p. m. in the room.

B. Hotel Accommodations

The hotel will bill your room charge (2 nights only) directly to Westat. All other expenses, such as phone calls, meals, room service, etc. are considered as personal expenses and must be paid by you when checking out.

IV. DAY CARE INTRODUCTORY REMARKS

A. GENERAL

Westat Research, Inc. in conjunction with Westinghouse Learning Corporation is conducting this survey and analysis of existing Day Care Programs and Facilities for the U. S. Office of Economic Opportunity. The goal of the project is to provide current and reliable national reference data for use by program planners in areas where day care services for children are a significant component. The scope of the work will be accomplished in three phases:

1. Information abstracting and community studies
2. Survey design and field operations
3. Description of existing services and assessment of national needs.

Westat and Westinghouse Learning Corporation have established a fully integrated staff to carry out this work.

B. BACKGROUND AND OBJECTIVES

This survey project is one of a series of interrelated studies for the U. S. Office of Economic Opportunity. These studies are being made to provide current and reliable national reference data in areas of day care services for children and of closely related early childhood development topics. OEO is actively cooperating with the U. S. Department of Health, Education, and Welfare and the U. S. Department of Labor on these studies. The particular objective of this survey is to provide data that will be useful to those who are engaged at the federal, state and local levels in the design and pilot testing of new program concepts.

C. PURPOSE OF THE STUDY

1. Compile a reference compendium of current data on the characteristics and activities of federally assisted day services, on differing state licensing practices, and on exemplary state and local programs.
2. Provide a current observational picture of the local-level delivery of federal day care programs, the availability of proprietary day care services, the participation of social and voluntary organizations in the day care field, employer-sponsored programs, welfare-oriented services, and the general outlines of the local universe of need for day care in relation to local economic and labor market conditions.
3. Characterize the key elements of existing day care practice nationally in the terms of program services, staffing, facilities, costs, clientele, and other variables.
4. Determine the extent of unmet needs for day care services.
5. Construct analytic models of the market processes in relation to the assessment of national need for day care expansion.

The data collection instruments (questionnaires) will reflect the objectives of the study. These will be reviewed in detail later in the training session.

V. DAY CARE HISTORY

Day care for young children in the United States today is an institution lagging far behind the social change that has brought about the need for it. Day Care service today is chaotic, unorganized, and largely unregulated and unlicensed. It is dispensed in haphazard ways that range from excellent to shockingly poor. Yet, it is indispensable to a growing number of people in present day America--the force of working women of childbearing age. The problem of arranging for the care of young children while the mother works

is not a problem to the poverty communities alone, as one may first speculate. The working middleclass mother may find it just as difficult if not more so to work out satisfactory solutions to her child care problems.

Day Care began in an institutionalized way during the 19th century when women began to enter the formal work force. Nurseries, as they were often called then, were thought of as charitable services for poor and neglected children. Only poor women were forced into working while "normal" women stayed at home and cared for their children and themselves.

The first day care center in America was established in 1854 in New York City for children of working mothers who could provide no other care for them. The main purpose of this first day care center was to provide "purely custodial" services. These early day care center mothers were largely penniless, helpless immigrant mothers, often separated from their husbands, who had to solely support themselves and their children.

Simultaneously, the kindergarten and nursery school movement got under way for middleclass and affluent children--to provide an experience to the children of "normal" families, that is, families with mothers at home. In time, however, the two trends (the charitable care of "neglected" children and the early childhood education of normally cared for children) merged and began to fulfill a new purpose, that of providing daytime care for children whose mothers had gone to work. This trend was enormously accelerated during World War II as was to be expected. But, the women have not returned to their homes. The number of working mothers continues to grow--sevenfold since 1940, more than twofold since 1950. Greater growth is expected in the future.

Working mothers represent all socioeconomic levels and the family with a working mother is becoming the norm rather than the exception. With the change in women's socioeconomic role, there has also been a blurring of the nature of programs for children. It is now difficult to tell whether a given program is a day care program in the traditional "do good" sense or if it is a nursery school or some other kind of educational endeavor.

One of the more shocking findings of recent investigations is that the majority of all the children of working mothers have no formal supervision at all during their mothers' absence. They are the well known "latch-key" children of poor neighborhoods who have no one at home to supervise them after school and who play in the streets with their house keys on chains around their necks.

Ad hoc day care arrangements abound. Largely impossible to assess in any accurate way, they range from fine care by loving and responsible relatives, friends, and neighbors to neglect, indifference, and even cruelty.

Other countries have faced the problem of day care for children of working mothers and have set up more formalized solutions than has the United States. Noteworthy in this respect are Japan, the Soviet Union, and the Scandinavian countries. Their experience must certainly be studied and taken into account in any effort to assess and remedy the day care situation in the United States.

VI. PURPOSE OF SURVEY

A. WESTINGHOUSE LEARNING CORPORATION TASKS

Westinghouse Learning Corporation has primary responsibility for the initial phases of the Day Care Study. First, they are conducting a literature search to bring together information concerning existing federal programs relating to Day Care Services, examining state and local licensing regulations, studying various administering and regulating policies, and reviewing studies that have already been conducted in the area of Day Care.

Secondly, WLC is conducting several community in-depth surveys. Case studies are being developed in these communities that will reflect the day care resources available and factors that relate to the demand of day care services.

These two initial phases, the literature search and the community surveys, have been underway for several weeks. The information and findings are being relayed to Westat to aid in developing the questionnaires and survey materials that we will be using.

B. WESTAT TASKS

Westat's primary responsibility to the Day Care Study is composed of six distinct tasks. Because of the nature and design of the overall study, it will be necessary, in most cases, that we complete each task in turn before moving on to the next task. This means our field operations will be pretty much a "stop-and-go" type operation. The total elapsed time for our field operations, from beginning to end, is estimated to run approximately three months. Our six tasks involve both interviewing and non-interviewing operations. Since we will be involved with several tasks spread over the next several weeks and since we must adhere to a "stop-and-go" operation it will be of the utmost importance to keep our communication channels open.

In outline form, our six tasks are:

1. Compile a listing of Day Care Centers in your assigned counties.
2. Conduct personal interviews with a sample of these Day Care Center Operators.
3. Obtain a sample of day care users from the Day Care Centers interviewed.
4. Cruise block groups in an Area Sample.
5. Conduct personal interviews with the selected sample of Day Care Users (resulting from Task 3).
6. Screen and conduct personal interviews in the area sample with (a) eligible mothers and (b) Family Day Care Homes.

These six tasks constitute our field responsibilities. Again, 100% cooperation and communication will be a must to successfully complete each and every task.

During the next couple of training days we will cover each task in detail and will provide you with as much background information as we can. Our questionnaires will gather information on day care center enrollments, age groups, racial mix, enrollee turnover, fee structures, staffing, programs offered, equipment and materials used, cost of operating a center, perception of problems and needs, community support, etc.

Our interviews with day care users and non-users will gather information on family demographics, day care arrangements presently being used, arrangements planned for the future, satisfaction of present day care arrangements, etc.

The overall sample design being used for the Day Care Study is basically a population area sample. We will be conducting our survey in 52 PSUs (primary sampling units), each PSU consisting of a group of counties. Within each PSU we will be compiling a list of Day Care Centers that will be subsampled to provide a list of specified Center Operators to interview. This sampling procedure will be referred to as the Center Sample. This Center Sample will also be used to provide us with the list of known day care users to interview.

A second component of the sample design, we will be referring to, is the Area Sample. Within our 52 PSU's we will be selecting small areas (block groups). These block groups will be cruised, as described later, to uncover any unusual housing situations. Then we will select a random sample of block groups to be screened door to door, for household interviews. This Area Sample will be used as the source to obtain interviews with (a) parent users and non-users of day care services and (b) Family Day Care Homes (small, informal arrangements).

VII. FIELD TASKS

A. COMPILATION OF CENTER LISTING

1. Listing

As you know "listing" is the process of systematically recording the address (or description or location) of all units within a specified area. The units in this survey are:

- a. Day Care Centers - 13 or more children
- b. Group Day Care Homes - 7 to 12 children
- c. Family Day Care Homes - 1 to 6 children, at least one of whom is not a member of the operator's (respondent's) family.

NOTE: QUALIFICATION: In all cases, at least one child must be cared for a. at least two (2) days a week, b. for seven (7) hours or more per day, c. for compensation, to qualify as day care.

2. Sources of Day Care Lists

Lists of Day Care Facilities and names, operators, addresses, (street, city, state and zip code) and telephone numbers (including area code) are to be obtained for each of the sample counties from the following sources:

- a. County, Municipal & State Licensing Authorities,
e.g., County, City, State Welfare Agencies,
Health and Education Departments, Zoning
Commissions.
- b. Telephone Directories - (Yellow pages)
 - (1) Pages containing listings of nurseries, centers, homes or other day care listings may be torn directly from telephone directories and identified according to county locations.

- (2) Such listings may be recorded on the Center Listing Sheet (in cases where only a few exist) and/or mailed to Westat as is.
- c. Principal Church Organizations, e.g.,
National Councils of Churches,
National Councils of Christians & Jews
Use Center Listing Sheet for recording
when necessary
- d. Community Action Agencies (CAA or CAP)
e.g., City or County Economic Opportunity
Councils, Head Start Programs, Model
Cities Programs.
- e. Other Known Sources, e.g.,
Child Day Care Councils of America, Family
and Child Services.

NOTE: (1) ALL LISTS ARE TO BE RECORDED CLEARLY AND LEGIBLY AND IDENTIFIED AS TO:

- a. County and State
- b. Name, address and phone number of interviewer
- (2) CONTENTS OF LIST - the list should contain the name of the facility, the name of the and address
- a. Capacity or size
- b. Hours of operation
- c. Affiliation
- d. Identification as to private or public, licensed or unlicensed
- e. Those that are applying for licensing

(3) Center Listing Sheets - use the Center Listing Sheets in cases where agencies have not compiled their own list for circulation but may have their file on 3 x 5 cards.

(4) DUPLICATE LISTS

- a. One copy retained by the interviewer, in case the original should become lost in the mail
- b. The original mailed to: D. Scott, Westat Research, Inc.

3. Prior Contact by Westat Research, Inc.

- a. In most cases Westat personnel has made telephone contact with county and state agencies and individuals requesting their cooperation and assistance in conducting the survey and interviews. In most instances, you will find them interested in Day Care research, enthusiastic, and cooperative.
- b. Letters to the above have also been mailed. (Copies of both the list of contacts made and letters mailed are provided for you.)
- c. Press Release by Westat, a copy of which is also provided.
- d. Although many lists of day care facilities have been received by our office as a result of prior contact, some are incomplete and require follow-up work on your part.

In all instances you should contact the local CAP Agencies and solicit their cooperation.

NOTE: Should TROUBLE develop or you are not successful in obtaining lists or cooperation notify our office.

4. Procedure to be Used in Contacting Agencies, Organizations and Individuals for Lists of Day Care Facilities
 - a. Contact the individual or agency who has list by telephone.
 - b. Identify yourself and Westat.
 - c. State the purpose of your call.
 - d. Make an appointment to visit their office.
 - e. Keep your appointment, explain the purpose of the study and the use to be made of the list and request a copy.

5. Schedule for Listing of Day Care Facilities
 - a. Listing of facilities in your assigned counties should BEGIN: Date... _____.
 - b. This task should be completed and mailed to Westat's office within... _____.

B. DAY CARE OPERATOR QUESTIONNAIRE

After the Day Care Center compilation is completed and the listings are sent to Westat, there will be a short delay. Westat will sample the complete listings for your assigned counties and will select approximately 8 centers to be interviewed.

A letter will be sent to these selected centers on OEO letterhead advising them of the study, how they were selected, the importance of their cooperation, and that they will be contacted by phone for an interview appointment by a field interviewer in their area.

You will be provided with a telephone screening form to determine which facilities offer day care i. e. , 7 hours or more

per day for at least one child. You will try to arrange an appointment with the operators in those facilities and that qualify as offering day care.

We will now go over the Day Care Survey - Operator Questionnaire, Interviewer Instructions and Screening Form.

C. SAMPLING LISTED USERS OF DAY CARE CENTERS

In addition to interviewing the Operators of Day Care Centers we will also interview a sample of mothers who have children in the centers. After you have completed an interview with the operator using the DAY CARE CENTER SURVEY--OPERATOR QUESTIONNAIRE, you are to obtain a random sample of users of the center. It is important that we obtain a random sample of these mothers.

IMPORTANT: In all cases, be sure to point out to the operator that we do need a random sample. Explain to the operator that we want to interview mothers to find out more about the various day care arrangements they are presently using, whether the mother is working or plans to work in the future and some general questions about the family household (number of children, ages, etc.) If the operator is interested, show her the questionnaire we will be using when interviewing these mothers and assure the operator we are not making a check or inspection of her center's services.

SITUATION #1 -- CENTER OPERATOR HAS A LIST OR CARD FILE OF "MOTHERS"

If both a printed list and a card file of mothers' names and addresses is available, we would suggest using the list since it will be a little quicker.

STEP 1. Determine the total number of mothers

STEP 2. Refer to the Table of Random Numbers to determine the sample size and random numbers to select. This step will tell you how

many mothers' names we need to select and also which ones to select. The arrangement of the list or card file is not important. It need not be in alphabetical order. What is important, is that all mothers' names be present regardless of whether their children attend full or part day.

EXAMPLE--There are a total of 34 mothers with children enrolled in the center. Locate number 34 in Column I of the table. Then, reading across, you will find a 3 in Column II. This 3 is the desired sample size and tells you how many names we need to select from the total list of mothers. Continuing across to Column III you will find several random numbers. We will be using these numbers to tell us which mothers to select. Our sample size is 3 so take the first three random numbers listed (22, 32, 26). Go to your list or card file of mothers and select the 22nd, 32nd and 26th name.

STEP 3. After you have selected these three names, ask the operator whether these mothers have any pre-school children in the center.

If the answer is "Yes", you have the names and addresses of the 3 mothers in your sample to interview.

If the answer is "No", that one of the mothers has no school child in the center, go back to the table and select the next random number shown. In our example of 34 mothers, the next random number is the 25th mother. This mother will now replace the one who had no pre-school children, go back and select the next random number, which would be the 15th mother. Continue this procedure until you have selected the desired sample size of 3 mothers all with pre-school children in the center. Should you exhaust the supply of random numbers shown on the table for enrollment size of 34, stop and just interview the mothers you have selected with pre-school children. In some cases you may end up with only 1, or possibly 2, mothers to interview. It is also possible to end up with no mothers to interview because none of them have pre-school children attending the center.

STEP 4. Contact the mothers who have been selected by phone and arrange for an interview. You will need to wait, however, until we get the mother questionnaires to you, which should be available in approximately two weeks.

If any of the selected mothers refuse to be interviewed, just interview those who agree. Do not attempt to go back to the center and substitute any new mothers to make up for the refusals.

SITUATION #2 -- CENTER OPERATOR HAS A LIST OR CARD FILE OF "CHILDREN" NAMES

This situation is identical to Situation #1, except here the list or card file is composed of the childrens' names and not their mothers' names.

The first two steps are the same. Determine the total number of children enrolled from either the list or the card file. Refer to the Table of Random Numbers to determine how many names are to be selected and which names to select.

EXAMPLE--There are 12 children enrolled in the center. The table tells us to select 2 names and these are to be the 4th and 6th names.

Since we are working from a list of children, we next need to make sure that these two children do not have the same mother. So, first ask the operator if the 4th and 6th children are from the same family. If they are not, we use both. If they should be from the same family, eliminate one of the names and select the next random number which would be the 7th name. Again, ask if this child is from the same family as either the 4th or 6th child. Continue this procedure until you have selected two children from different families.

As soon as you have selected two children from different families, you next need to determine whether both children are pre-school children. If they are, you have the names of two children and you are to interview their mothers. Should one of the children not be a pre-schooler,

you will need to select another number (in our example the 9th child) and determine that this child is not from the same family and also that he or she is a pre-schooler. Should you run out of random numbers before you have found two children with different mothers and both pre-schoolers, just stop and arrange an interview with the one who did meet the requirements. It is possible to exhaust all random numbers for enrollment size of 12 and end up with no one eligible.

SITUATION #3 -- CENTER OPERATOR HAS LIST OR CARD FILE OF "MOTHERS" OR "CHILDREN" BUT REFUSES TO LET YOU SAMPLE FROM THEM

In this situation the center has a list or card file of mothers or children but the operator refuses to let you look at the list or card file to select the sample names.

Ask the operator if she would be willing to identify only those mothers who would be selected by random procedures and give you just their names and addresses. Reassure the operator that we are not interested in the entire list, only a few names selected at random.

If the operator agrees to do the selection, follow the same sampling procedure discussed in Situation #1 or #2 and tell her which names to select using the Table of Random Numbers. She will need to tell you the total enrollment or you can get this information from the completed questionnaire.

SITUATION #4 -- CENTER OPERATOR REFUSES TO LET YOU USE LIST OR CARD FILE AND ALSO REFUSES TO DRAW SAMPLE HERSELF

We hope we are not faced with this situation but, if it does happen, we will attempt the following procedure.

Ask the operator if she would permit us to send a letter home with the children (See Letter to Parents, attached) and from the letters returned we will select the names to be interviewed. If the operator agrees this procedure follow the steps below.

STEP 1. Leave the letters with the Day Care Operator so they can be sent home with the children. The letters should be completed by the parents and returned to the center.

STEP 2. Contact the operator a week later to sample the returned letters.

STEP 3. Place the returned letters in alphabetical arrangement.

STEP 4. Count the number of returned letters. This count will now be used as the enrollment size. Find this number in Column I of the table. In Column II you will find the sample size required and in Column III the random numbers to select. Assume 6 letters are returned. The 2nd and the 1st letters would be in our sample (see attachment).

STEP 5. Again, we must ask the operator if the 2nd and 1st parents have pre-schoolers in the center. For example, if the 1st name does not, select the 5th name. If the 5th does not have pre-schoolers we would stop since we have exhausted our supply of random numbers and only contact the 2nd name for an interview.

D. AREA SAMPLE CRUISING INSTRUCTIONS

This task will involve your keen observation and the use of an auto. We are designating several areas in each PSU to be cruised. These areas, in most cases a cluster of a few blocks, have been selected as part of our national probability area sample. Extensive statistical planning went into the selection of these sample areas. The survey results that you later obtain from respondents in these areas can be projected to represent national totals. Projection to national totals will be possible only if interviewers follow the specified selection procedures.

The interviewer's responsibilities in this phase of the study are:

1. Correctly identify the boundaries of areas (block groups or enumeration districts (E.D.s)) enclosed within the yellow or heavy dark lines on the maps.

2. In determining the boundaries of block groups it is important to remember that such boundaries usually are streets. One side of the street is included in the block group (see example A of sketch map). The other side is excluded because it belongs to another block group and is outside of the sample area (see example B, sketch map). The same applies to boundaries between individual blocks inside block groups to be cruised. Example C (368 is on one side of Hudson St.) will belong to block number 301, while example D 9367 is on the opposite side of Hudson St.) is in block number 302.

If the boundary between block groups, E. D. s or blocks is other than streets (rivers, railroad lines, etc.) the same principles apply. One side will be inside of the block group and the other outside.

3. Cruise only the numbered block areas (or E. D. s in some cases) and identify as follows:
 - a. Blocks containing less than 200 dwelling units -- identify as "OK." The actual count of dwelling units is not needed.
 - b. Blocks containing more than 200 dwelling units -- describe to us (using a sketch of the block) all apartment houses and the number of units and floors contained in each. Record the addresses of such apartment complexes.
 - c. If a block is all parkland, farmland, warehouses, a military reservation, an industrial complex, or a college dormitory area, office buildings or business places, record as such.

- d. Record other unusual features of blocks.

NOTE: Use Area Cruising Description Form for recording.

Example: Attached is a sketch of a block group in Buffalo, N. Y. that will be cruised. Also attached is a completed Area Cruising Description Form for this block group in Buffalo. It is used for purposes of instruction only. Following is an example of what we may find:

1. Numbered block groups within the yellow or heavy, dark lines are 301, 302, 303, 304, 305, 306, and 307. Areas (block groups or E. D. s) outside of the boundaries of the above numbered blocks are:

- a. not to be cruised
- b. not to be included in sample

2. In cruising blocks, let's say that block number 301 is all single units with less than 200 dwelling units. Record as "OK." If a block contains more than 200 dwelling units describe it.

3. Block number 302 contains two large apartment complexes: one with 150 dwelling units ten stories high, one complex with 220 dwelling units 20 stories high. The remainder of the dwelling units on the block are single family dwelling units. (See Area Cruising Description Form on how to record this information on block 302.)

4. Block number 303 contains all apartment complexes and a parking lot.

5. Blocks 304 and 305 are parkland.

6. Block 306 contains all office buildings.

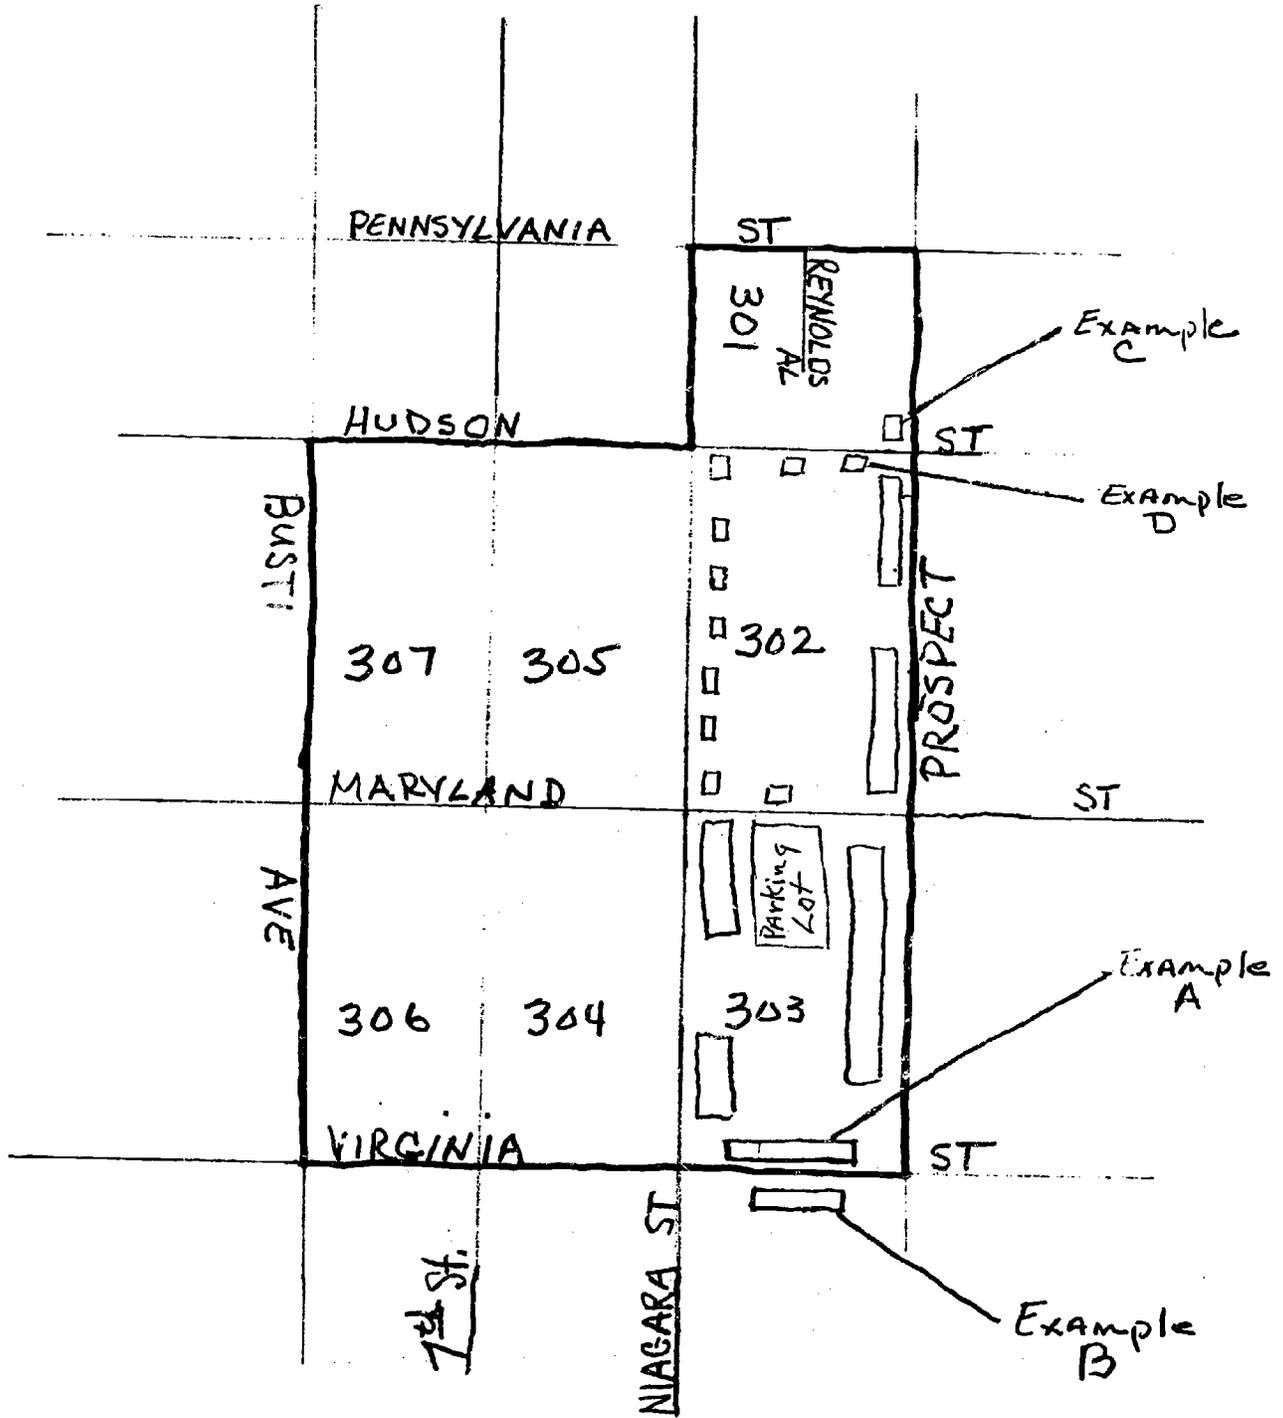

7. Block 307 is a warehouse area.

If you are unable to determine the boundaries of the block groups or have any questions regarding the above procedures please call:

D. Scott or Sue Goodman, Westat Research, Inc.
301-652-9246
After September 26 call 301-881-5310.

 Tract No. 71.01 ED No. _____
 Block Group 300

Interviewer: Attached is a map sketch of blocks to be cruised.
Record your observations below for each block.

Block #	Description of Block
301	OK all single units - less than 200 units
302	2222 Prospect St. 10 stories, 150 units 2226 Prospect St 20 stories, 220 units
302	Block contain approx 379 dwelling units
303	330 Prospect St. 9 stories, 360 units 214 Virginia St. 12 stories, 144 units 3331 Niagara St. 12 stories, 120 units
303	3334 Niagara St. 9 stories, 108 units, Parking Lot
304	Park
305	Park
306	All office bldgs. No dwelling units
307	Warehouse Area. No dwelling units

E. PARENT QUESTIONNAIRE - LISTED USERS OF DAY CARE QUESTIONNAIRE

The parent interviews will be conducted with the users that we obtained from our Center Sampling Procedure (Section VII - C). In each PSU there will be approximately 15 interviews.

Phone each parent who was selected by your sampling procedure to set up an appointment for interview. Pre-tests indicate the interview will take about 20 minutes.

We will now go over the Parent Questionnaire, Interview Instructions and Screening Form.

F. PARENT QUESTIONNAIRE - AREA SAMPLE CASES

We are now talking about our Area Sample. These are the block groups which you have cruised and reported to us any unusual housing situations. Westat will take your cruising report forms and will select a sample of blocks to be completely screened.

When we notify you of the specific blocks that will make up the final Area Sample you can begin your house-to-house screening. Keep in mind that in these area samples we may encounter several situations. We will be finding parents who have no children, parents who have children, parents who are using day care, parents who are not; parents who are working, parents who are not; parents who may care for other children in their home; also, we may come across Day Care Centers.

Let us turn now to the Parent Questionnaire which is the same questionnaire we just used for the listed Center Users. We will review the screening form to determine which households will be eligible.

Keep in mind, that in our area sample you will need to keep an accurate record of each household screened, the result of your calls, etc. The Call Record Form will be used for this record keeping.

G. FAMILY DAY CARE HOME QUESTIONNAIRE

This questionnaire can be thought of as a type of Operator Questionnaire. It is intended to be used for the small, informal day care arrangements that are found in family households.

The Screening Form to be used is the same form we used for the Parent Questionnaires in the area sample. The initial screening at each household will lead you to the proper questionnaire to use.

Let us review the Screening Form again and see what requirements must be met in order to find a household eligible for the Family Day Care Home Questionnaire.

H. ANCILLARY QUESTIONNAIRE

The Ancillary Questionnaire has not yet been developed for the Day Care Study. All we can say at this time is that it will be the last task to be performed and will most likely be conducted with only a couple of people. Perhaps with local CAP agencies, employment offices, school administrators, etc. So, we will not be able to examine the questionnaire at this time.

We will keep you advised of the status of the Ancillary Questionnaire and when it is developed we will transmit instructions to you via letter or phone.

VIII. MOCK INTERVIEWS

We have now covered all of the questionnaires that will be used for the Day Care Study. We will devote the next several hours to mock interviews and give each of you a chance to administer a section of the questionnaires.

QUESTIONNAIRES

1. DAY CARE OPERATOR QUESTIONNAIRE
2. PARENT QUESTIONNAIRE
 - a) Listed Users of Day Care Centers
 - b) Area Sample Cases
3. FAMILY DAY CARE HOME QUESTIONNAIRE

IX. REVIEW OF TASKS AND FIELD SCHEDULING

<u>Estimated Beginning Field Date</u>	<u>Task Description</u>
Immediately	Task 1 - Compile List of Day Care Centers
Sept. 15	Task 2 - Interview Day Care Center Operators
Sept. 15	Task 3 - Select Sample of Users from Center Operators
Sept. 20	Task 4 - Area Sample Cruising
Oct. 1	Task 5 - Interview Selected Sample of Users
Oct. 10	Task 6 - Area Sample Screening and Interviewing

X. ADMINISTRATIVE PROCEDURES

A. WESTAT ADDRESS

- Before September 26, 1970 - Westat Research, Inc.
7979 Old Georgetown Road
Bethesda, Maryland 20014
Telephone (301) 652-9246
- After September 26, 1970 - Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852
Telephone (301) 881-5310

B. WESTAT SUPERVISORS

- Jim Daley - Project Director
- Dunlap Scott - Assistant Project Director
- Doris Krug - Assistant Project Director
- Sue Goodman - Assistant Project Director
- Marley Brounstein - Field Director

C. COMMUNICATIONS

1. All field interviewers are to report weekly to Westat by phone. You will be assigned a certain day to report. The

purpose of this weekly call is to report your current status and to cover field problems. Emergency problems will be handled as they come up — let us know immediately.

Your immediate Westat Supervisor will be Dunlap Scott and in the event of his absence, your next contacts should be with Sue Goodman or Doris Krug, in that order. These supervisors will be ready to answer your technical questions on the Day Care Study.

2. Questions concerning rates, pay checks, supplies and materials, should be directed to Marley Brounstein.
3. Phone calls should be made station-to-station.

D. FORMS AND RECORDS

1. Day Care Center Compilation Listing Forms -- send original to Mr. Scott. Keep a duplicate for your records.
2. Cruising Maps -- send original with cruising notes to Mr. Scott. Keep a duplicate for your records.
3. All Questionnaires, Call Record Forms, Screeners -- send to Mr. Scott.
4. Time and Expense Sheets -- send to Marley Brounstein. Be sure to double-check for accuracy before mailing — errors will result in a delay of payment! Submit your time and expenses weekly.

E. MAILING PROCEDURE

All materials mailed to Westat should be sent first class mail. Use special delivery only when directed.

Be sure mailing envelopes and packages are securely packed and sealed.

Keep a diary record of each item you mail to us and what the package contained.

Westat Research, Inc.

Westat Research, Inc.
7979 Old Georgetown Road
Bethesda, Maryland 20014
Telephone 301-652-9246

The U.S. Office of Economic Opportunity, Washington, D.C., 20506, has issued a contract to Westat Research, Inc. to perform a national survey and analysis of child day care facilities (centers, group homes, and family homes), users and non-users of such facilities, and other ancillary sources. The following county/counties in _____ were selected in our sampling procedure:

One of the primary purposes of the survey and analysis is to characterize the ongoing day care practice nationally in terms of program services, staffing, facilities, costs, clientele, and other variables. This task includes on-site surveys of existing day care centers and homes and interviews of families with regard to present use of day care services in relation to unmet needs for additional day care offerings.

Centers and homes will be sample selected from a county listing (a copy of which was requested via telephone to be mailed to our office) to be compiled and completed by Westat's field staff during the week of September 1, 1970. Users of day care facilities will be sample selected from a listing provided by operators. Non-users of facilities will be identified through an area probability sample within the selected counties.

Any assistance your office can provide Westat's field staff who will be responsible for compiling the list of child day care centers, group homes, and family homes, is appreciated.

Thank you for your cooperation in this important study.

Sincerely,

Dunlap Scott, Jr.

E-1 Assistant Project Director

Telephone 301-881-5310

October 12, 1970

Dear Interviewer:

Enclosed you will find the materials you will need for the interviewing of Day Care Center Operators. These materials are:

1. Screening Forms and Instructions for their use
2. Day Care Center Operator Questionnaires plus Instruction booklet
3. Procedure for obtaining a sample of mothers using Day Care Centers, plus Instructions, including random number tables plus Instructions for their use
4. Letter to users of day care centers to be sent when complete list of users is not available (see instructions with item 3 above)
5. Copy of a letter from the Office of Economic Opportunity to the Directors of the Center selected to be screened. The bulk of these letters was mailed October 12, 1970.

Your first task is to fill in the Screening forms according to the accompanying instructions. As soon as you have finished the screening of all Centers listed on your Screening form return the completed Screening form to Westat. If any Centers were found to be ineligible be certain to indicate the reason for exclusion in the "Remarks" column.

As you contact the centers in the process of screening them you can schedule appointments with the operators of those centers that are eligible. However, it is important that you complete the screening as quickly as possible and return the Screening form to Westat before you become involved in the actual interviewing.

You will notice that the questionnaire for interviewing parents who have children in the Centers is not included in this package. We have experienced some delays in the time preparation of this questionnaire but it will be in your hands soon.

Please read carefully the enclosed procedures for "Sampling Listed Users of Day Care Centers". Since you do not yet have the Parent questionnaire, if you reach a point where you are receiving letters from users indicating a willingness to be interviewed, you should call these people on the telephone, thank them for their cooperation and tell them that you will be in

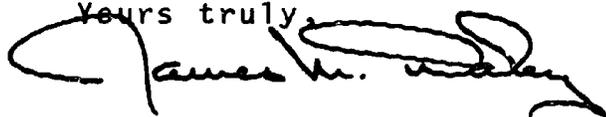

touch with them again within about 10 days to make a firm appointment for an interview.

You will also notice that the enrollment size on the random number table goes only to 130. Should you need to use the random number table for a center with an enrollment of more than 130, please contact Mr. Schueller at Westat for the appropriate selection of random numbers. Also, call Westat if you need additional copies of the letter to parents.

If you have any other question regarding the enclosed material please call Westat.

Yours truly,

James M. Daley
Project Director

JMD:pt
Enclosures

Instruction for "Day Care Center
Sample Screening Form"

1.) The attached form lists the names and addresses of the day care facilities in your area, which were selected for screening and, if eligible, for subsequent interview.

2.) If we did not provide you with the telephone number of the facility, look it up in the local telephone directory and record it in the space provided in the first column.

3.) Enter the date of successful telephone contact in the second column.

4.) When contact is made start out as follows:

Hello _____. My name is _____ of Westat Research, Inc. in Bethesda, Maryland. We are conducting a survey of Day Care Centers for the U.S. Office of Economic Opportunity.

Have you received a letter from OEO which explains the purpose of this survey?

5.) If the answer is "Yes" ask whether any of the enrolled children attend for at least 7 hours. If the answer is "No" read the letter over the telephone and follow up with the same question.

6.) If some children do attend for 7 hours or more, put a check mark in the "Does Provide" column. If no children attend for 7 hours or more, put a check mark in the "Does Not Provide" column.

7.) If seven hour care is provided for any children make an appointment to interview the operator. If seven hour care is not provided for any children thank the operator for her time and cooperation and discontinue interviewing.

8.) It is essential that you carry out the above screening procedure for all names and addresses listed on the screening form.

9.) If an operator refuses to be interviewed indicate this fact in the "Remarks" column of the screening form.

10.) After the screening form is completed for all listed centers it is to be returned to Westat Research Inc.

E.2 Pre-testing of instruments for day care survey

E.2.1 Day Care Center Survey Operator Questionnaire (long form)

The final form of the Day Care Operator Questionnaire evolved from four versions of this instrument.

The first version contained questions in six categories - enrollment, facilities and activities, staff, fees and income, parents, and attitudes. This version was pre-tested in six day care centers in Houston, Texas.

Following this pre-test a second version was drafted. In this version, the financial section was considerably expanded and the questionnaire was changed to ask only about full time enrollees except where specifically noted. This version was pre-tested using listed centers in Montgomery County, Maryland. Thirteen centers were contacted by phone. Nine centers agreed to be interviewed to pre-test this version of the questionnaire. Three of the centers interviewed were small centers and did not have good financial records although they all tried to estimate the information needed. Two of the remaining centers had reasonable financial data. In the last center, the owner was not present and the operator did not have access to the financial records.

At each of the six centers an attempt was made to obtain the names of the parents of children enrolled and their telephone numbers so that a list of center users could be compiled for sampling and interviewing. Of the six centers interviewed only one offered a list of all enrollees; two centers offered to give us three names each; and three centers felt that this was an invasion of their privacy, and would not divulge any names. Subsequently, a procedure was devised whereby the interviewer would ask for the complete list, but if she met with resistance she requested that the

operator select randomly the desired number of respondents (with assistance from the interviewer in determining who should be selected). If this were also unacceptable, a request was made that the operator send a letter to all parents requesting permission to be interviewed.

Following this pre-test, another draft of the questionnaire was developed that included a check list of the types of equipment and materials available for children's use at the center. The section on medical services was also expanded at this point. This version of the questionnaire was pre-tested at a Head Start Center in Greenwood, South Carolina and also at four centers in the Arlington/Alexandria, Virginia area. Following this, the questionnaire was revised to clarify certain questions and considerably reduced in size. This version was submitted to the Office of Economic Opportunity (OEO) on August 14, 1970.

The questionnaire was reviewed by Westinghouse Learning Corporation's Project Director in light of the experience gained during the community studies. Again it was reduced in complexity and in length. Some of the data requested in the earlier versions would have proved to be difficult to collect and possibly misleading to interpret. This reduction was reviewed with the contract manager and the questionnaire was resubmitted to OEO on September 24, 1970.

It was estimated that the final version would require between one and one and one-half hours to complete.

E. 2. 2 Screening Questionnaire

A separate instrument called the Screening Questionnaire was devised midway through revisions in the Parent Questionnaire. In this questionnaire, we determined if the household was in fact a Family Day Care Home or a Group Home. If so, we selected the appropriate questionnaire. If it was not, we determined:

1. If there were children in the household 9 years or younger, and
2. If the income was less than \$8,000.

If both of these criteria were met we determined if the respondent was the appropriate person in the household to talk to and if so selected the Parent Questionnaire.

E. 2. 3 Parent Questionnaire

This questionnaire was intended for use with persons whose names were obtained through day care centers (i. e., actual users of day care centers) and other mothers whom we encountered in our area probability sample.

The format of the original form of the questionnaire drew heavily from the instrument that had been used to interview parents in the Ruderman study.¹ The first version was pre-tested with three mothers in Houston and then a number of modifications were made to clear up problems that became obvious at that time. The second version was pre-tested six times in Washington, D. C. and the results indicated that the questionnaire was difficult for the interviewers to use.

At this point, a completely new version of the questionnaire was written which used a much simpler format. Rather than a separate set of questions for each possible day care arrangement (the format used by Ruderman), a day care chart was devised on which the arrangements for a particular child could be recorded along with a few pieces of information about each arrangement.

The Screening Questionnaire and the new version of the Parent Questionnaire were pre-tested six times in low-income areas of Washington, D. C. and Arlington, Virginia. It was also reviewed by the interviewers at the interviewee training sessions. It represented a marked improvement in the direction of simplicity. However, problems were still encountered when mothers had several children and a number of

¹Ruderman, F.A. Child Care and Working Mothers, Child Welfare League of America, Inc., 1968.

"piecemeal" arrangements for each, particularly if the mother worked irregular hours so that different arrangements were used depending on whether she was working the day shift or the night shift.

Therefore, a last revision was made, again in the direction of simplicity. In the final version, a working mother was questioned only about the arrangements she used on the last day she worked.

The final version of the questionnaire was pre-tested six times in low income neighborhoods in Fairfax County, Virginia. Our best estimate of the time required was 20 to 30 minutes for a working mother and 10 to 15 minutes for a nonworking mother. The few remaining problems seemed to be the difficulty people had in telling us their annual family income and the problem of describing payments for day care where they were not based on a per child per unit time base. With respect to the former problem, we chose the rules used by the Census Bureau to define what should be included in family income and who should be included in the family. There were still some cases where the respondent could not or would not give us accurate information on this, but we minimized these incidents.

With respect to the second problem, we asked the interviewers to record the details of any pay arrangements that were not easily broken down into a "per child per hour, day or week" amount. We left space on the day care chart for them to report this. The Central Office then handled the problem of converting these figures to "child hour" amounts.

E. 2. 4 Day Care Center Survey Operator Questionnaire (short form: for family day care homes)

The short form of the Day Care Center Survey Operator Questionnaire was used when the interviewer uncovered a family day care home in the course of canvassing a sampled area. This questionnaire was used only when there was no paid full-time additional outside help. In other cases the long form was used.

The first version of the questionnaire was pre-tested twice in the Washington, D. C. area. Subsequently, a number of changes were agreed upon by Westat, WLC and OEO, and a second version was pre-tested four times in low income areas of Fairfax County, Virginia. This questionnaire took about 30 to 35 minutes to administer.

The major problem in using it was the concern of the respondents (particularly in certain locales) that, in spite of our protestations to the contrary, we were in fact representatives of a licensing agency. Where we could not alleviate this concern, the individuals either refused to talk to us or denied that they were caring for children. With the proper identification showing the interviewer's affiliation with Westat and the letter on OEO letterhead soliciting cooperation from operators, our interviewers were able to keep such refusals to a minimum by establishing good rapport with the respondent in the early part of the interview.

OFFICE OF ECONOMIC
OPPORTUNITY

EXECUTIVE OFFICE OF THE PRESIDENT
WASHINGTON, D.C. 20506

OCT 1970

Under contract with the Office of Economic Opportunity, Westinghouse Learning Corporation and Westat Research Incorporated are conducting a national survey of day care for children. The purpose of this survey is to find out about the availability of day care services nationwide, the extent of the need for day care, and the factors which must be considered in developing plans for any significant expansion of day care nationally.

This survey is not an evaluation. No judgments as to the quality or desirability of various kinds of day care will be made on the basis of these survey visits to child care centers. We are simply trying to describe typical local day care services and facilities as they exist today.

Your day care center has been selected through a random sampling process as a representative facility of its size. An interviewer will be contacting you in the next few days for an appointment. The interview should take about an hour of your time, and the appointment will be arranged to fit your schedule and convenience.

The interviewer will be asking questions regarding your facility's:
1) present enrollment, 2) staff, professional and supporting, 3) program, 4) fee structure, 5) expenses, and 6) problems.

We earnestly solicit your cooperation in this effort. The survey, which is the first to be conducted on a national cross-sectional basis in the day care field, will provide badly-needed information for both national and regional policy makers and planning bodies. All information obtained will be treated as confidential. Individual center questionnaires will be coded for processing in such a way that no specific identification of individual facilities will be revealed in the published data.

We thank you for taking time to respond to our questions.

Sincerely,

Wray Smith

INTERVIEWER
INSTRUCTIONS

Day Care Center Survey
Operator Questionnaire

FALL 1970

Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852

180 INC

INTRODUCTION

Please record all answers clearly and legibly.

Record an answer for all questions, particularly where there are several categories, each calling for a "Yes" or "No" answer. Do not leave any blanks.

If an answer is secured from a source other than the respondent, indicate who supplied the answer. This may apply especially in the "Fees and Operating Costs" section.

Be sure to assure the respondent that all answers will be treated as confidential and that no individual respondent or Center (Home) will be identified in any of the reports growing out of this project.

INTERVIEWER INSTRUCTIONS

Question No. (Operator's Questionnaire)

- 1b. If operator has living quarters at the Center or if it is a home we are interested in finding out how long the Center (Home) has been operating at this address, not how long the owner has been living there.
- 2c. If Center (Home) is open for less than 12 months, indicate the number of months and also the actual period, i.e., 6 months, January - June.
3. In order to qualify for "full-day" or "combination", some children must actually be at the Center (Home) for 7 hours or more per day. A Center (Home) which has children attending in two shifts, for instance 8 AM - 12 NOON, and from 1 PM - 5 PM would have to be marked as "part-day" unless some of the children attend for 7 hours or more.
4. How many children are actually enrolled to attend the Center, as of the date of the interview?
7. Although 100 children may be enrolled, the daily attendance may only be 80. Use an appropriate example like this to explain the question to the respondent.

9. Be sure that the operator of the Center (Home) interprets "applicants" to mean "children" not parents. Thus, a mother applying for enrollment of her 3 children counts as 3 and not 1.
- 11b. Note that the answer to the preceding question (11a) may be "Yes" but that no such children are actually enrolled in the Center (Home) at this time. In such a case be sure to put a "zero" in answer to 11b.
14. If the Center (Home) is owned and operated by the licensee (s) circle 7 (Private Company).
- 18c. If the answer to 18a indicates that the Center (Home) uses or has access to more than one play area try to get the square footage for each one. This information might be on the application for license.
19. It is recognized that operators in some cases, might have difficulty in estimating replacement costs. In such cases try to urge the operator to do his best in making such an estimate. If these estimates seem to you, in some cases, to be way out of line, try to discuss these items patiently with the operator and possibly get him to revise his figures.
23. If a service is available through the center and it is paid in part by both the parent and by an outside source, put a check in both boxes.
- 24a. Mark "Yes" only for those meals actually furnished by the Center (Home). Do not count for instances bag lunches brought by the children from home.
- 28b. Be sure to record all staff members of Center (Home) including non-professionals. In the column under present salary indicate the period the salary is for (per week, month, year). Put a "V" in this column for all volunteer staff members.

Under RACE use the following designations:

- W White
- N Negro
- S Spanish-American (Puerto Rican, Mexican, Cuban, etc.)
- OA Oriental-American
- AI American Indian
- O Other (specify)

Two parent household does not necessarily actually mean "biological" parents, nor does it necessarily mean "married". What we are actually interested in is whether there are two adults in the household (one male and one female).

- 34b. Stress the fact that we are asking for family income. It is recognized that this may be a difficult question for the operator to answer but we are interested in an estimate. It is also possible that information on this point is contained in the Center's (Home's) files. If the operator refuses to give this information claiming that it is confidential, please note that fact on the questionnaire, and proceed.

Section VI Fees and Operating Costs

Questions 38 and 47

First attempt to get a written statement (Profit or Loss statement or source of fund statement) of income and expenditures. If you cannot get a copy to take with you copy the figures down on the back of the questionnaire page. If the operator refuses to give you financial data, do not press the point and just note such a refusal on the questionnaire.

In some cases the operator may say that such data is only available at another place (such as a company headquarters). In such a case try to get this information from the indicated source if it is located in the same city. If it is not, note address and location on questionnaire.

In all cases where you report any figures be sure to indicate on the questionnaire the source of the figures.

Questions 40 - 43

First, attempt to get a copy of the written fee schedule to take with you. If you cannot get a copy, then try to fill in the figures on the table in the questionnaire, keeping in mind applicable skip instructions.

In some centers, the fee schedule, based on income and number of persons in the family, applies only to the first enrolled child of that family. For additional children from that family some kind of adjustment is made. In other words, the fee is based on income, family size, and number of enrolled children from a family. If this is the case, please describe the adjustment on the questionnaire on the back of page 16.

49. Try to list the two most important problems facing the operator.

SPECIAL NOTE:

It is possible that some of the centers you contact will have very small enrollments. Should you encounter a center with less than 7 full-day children (including the operator's own children under 14 years of age) use the regular, long-form of the Operator Questionnaire with the following changes:

1. Omit these items: Q. 12a, 12b, 14, 16, 19, 23, 24b, 26b, 28c, 29, 30, 31, 32, 33, 50, 51.
2. In Questions 28a and b: If there are no employees, list only the operator.
3. In Questions 34 (a, b, and c): Instead of percentages, ask for numbers.

4. Omit Questions 37a to 47 c, except Q. 41 and follow this up with: Are there any adjustments you are making in the fee if more than one child from the same family is attending your center on a full day basis?

Yes _____

No _____

If "Yes", explain:

Record the answers to this question on the back of the page facing Question 41.

REMEMBER: The above changes apply only when the full-day enrollment is less than 7 children including the Operator's own children under 14.

OFFICE OF ECONOMIC OPPORTUNITY

WASHINGTON, D. C.

DAY CARE CENTER SURVEY
OPERATOR QUESTIONNAIRE

(Long Form: FOR DAY CARE CENTERS)

NAME OF CENTER: _____

ADDRESS: _____

CITY: _____ STATE: _____ ZIP: _____

TELEPHONE NUMBER: _____
(AREA CODE) (NUMBER)

NAME AND TITLE OF RESPONDENT:

Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland

INTERVIEWER NAME: _____

DATE OF INTERVIEW: _____ TIME: _____

I - GENERAL INFORMATION

1a. How long has your Center (Home) been in operation?

_____ Years
or _____ Months

1b. How long at this address?

_____ Years
or _____ Months

2a. How many days per week is your Center (Home) open?

2b. What hours of the day are you open?

From _____ To _____

2c. How many months per year is your Center (Home) open?

3. How would you characterize your day care center's (home's) schedule?

- Children come for full day (7 hours or more) only . . . 1
- Children come for part day (less than 7 hours) only . . . 2
- Combination. 3
- Other (Specify) _____ 9

4. What is your enrollment today?

Full Day _____

Part Day _____

II - ENROLLMENT

5. Could you tell me the enrollment in your Center (Home) by the age of the children? Please separate children by full-day and part-day enrollment.

<u>Age of Children</u>	<u>Number of Children</u>	
	<u>Full-Day</u>	<u>Part-Day</u>
Under 2	_____	_____
2	_____	_____
3	_____	_____
4	_____	_____
5	_____	_____
6	_____	_____
7 or over	_____	_____

INTERVIEWER: THE TOTAL OF FULL-DAY AND PART-DAY CHILDREN SHOULD CORRESPOND TO THE TOTAL ENROLLMENT ENTERED IN QUESTION 4.

INTERVIEWER READ TO RESPONDENT

SINCE THIS QUESTIONNAIRE IS DESIGNED TO OBTAIN INFORMATION ON CHILDREN ENROLLED FULL-DAY (7 HRS. OR MORE), PLEASE KEEP IN MIND THAT THE NEXT FEW QUESTIONS REFER ONLY TO THE _____ CHILDREN ENROLLED FULL-DAY. (number)

- 6a. How many of your full-day enrollees are: boys? _____
girls? _____

- 6b. Of your full-day enrollees, how many are in each of the following ethnic groups:
- | | <u>Number of Children</u> |
|-----------------------|---------------------------|
| White | _____ |
| Negro | _____ |
| Spanish-American | _____ |
| Oriental American | _____ |
| American Indian | _____ |
| Other (Specify _____) | _____ |

7. Of your full-day enrollment, what is your attendance today? _____
8. In your Center (Home), how many children are enrolled to attend full-day:
- | <u>Days per Week</u> | <u>Number of Children</u> |
|-------------------------|---------------------------|
| 4 days per week or less | _____ |
| 5 days per week | _____ |
| 6 days per week | _____ |
| 7 days per week | _____ |

9. How many applicants for full-day care are presently on your waiting list? _____

No list maintained.... '2

10. What is the average length of time any one child remains enrolled in your Center (Home) on a full-day basis?

- For the school year. 1
- Six months or less 2
- Seven months to twelve months. . 3
- One year to two years 4
- More than 2 years 5

11a. Do you accept any physically handicapped and/or mentally retarded children?

- Yes. . . 1
- No . . . 2 (SKIP TO Q.12a)

11b. IF YES, How many such children do you have enrolled now?

Full-day _____
Part-day _____

III - FACILITIES AND ACTIVITIES

12a. Is this center a proprietary (profit-making) organization?

Yes . . 1 (SKIP TO 13a)

No . . . 2

12b. IF NO: Where does the money to operate this center come from?

(INTERVIEWER: CIRCLE ALL THAT APPLY)

	<u>Yes</u>	<u>No</u>
Parent fees	1	2
Community Action Agency	1	2
Welfare Department.	1	2
Community organization (such as United Fund or any other local charity or service organization).	1	2
Church.	1	2
Other (specify) _____	1	2

13a. Do you get help or support (volunteer services, equipment, staff, food, etc.) from any other sources?

Yes . . 1

No . . . 2 (SKIP TO 14)

13b. IF YES: Who gives this help?

	<u>Yes</u>	<u>No</u>
Community organization.	1	2
Church.	1	2
Community Action Agency	1	2
Individuals	1	2
Welfare Department.	1	2
Private company	1	2
School or university.	1	2
Hospital.	1	2
Other (specify) _____	1	2

14. What agency or organization is directly responsible for operating this center or who do you report to?

United Fund	1
Community organization (such as citizens committee or association).	2
Community Action Agency	3
Church.	4
School or university.	5
Welfare Department.	6
Private Company	7
No one.	8
Other (Specify) _____	9

15a. Are the facilities

- Owned by you? 1 (SKIP to Q.15c)
- Rented? 2
- Donated or provided free to you? . . 3
- Other (specify) _____ 9

15b. IF OTHER THAN OWNED, Ask:

From whom are the facilities rented or donated?

- A hospital. 1
- A church. 2
- A school or university. 3
- A private company 4
- A federal, state, or local government agency 5
- What agencies? _____
- A private individual. 6
- A private service organization. . . . 7
- Other (specify) _____ 9

15c. What year was this building built?

Don't know

16. Is your facility housed in a building used exclusively for day care or related activities (e.g., nursery school, parent education, etc.)?

- Yes . . . 1
- No . . . 2

17. Which of the following does your Center (Home) have?

	<u>Yes</u>	<u>No</u>
Fire alarm system - electrically operated	1	2
Fire alarm system - manually operated	1	2
Fire extinguisher(s).	1	2
Kitchen	1	2
Washbasins.	1	2
Number child sized _____		
Number adult sized _____		
Running water	1	2
Flush toilet facilities	1	2
Number child sized _____		
Number adult sized _____		
Administrative office	1	2
Classrooms.	1	2
How many classrooms? _____		
Child sized tables and chairs	1	2
Telephone	1	2
Isolation space for sick children	1	2

18a. Does your Center (Home) use an outdoor play area?

	<u>Yes</u>	<u>No</u>
Belongs to Center (Home)	1	2
Private playground not belonging to Center (Home)	1	2
Public playground	1	2
Other (specify) _____	1	2

IF ALL NO: Skip to Q.19

18b. IF YES: Please tell me whether this play area is furnished with equipment for:

	<u>Yes</u>	<u>No</u>
Pushing	1	2
Climbing	1	2
Pulling	1	2
Riding	1	2
Swinging	1	2
Other (specify) _____	1	2

18c. What is the square footage of the outside play area?

20. Do you have a written schedule of children's activities?

Yes 1
No 2

INTERVIEWER: IF YES, OBTAIN A COPY AND ATTACH TO THE QUESTIONNAIRE.

21. What kind of records do you keep on the children?

	<u>Yes</u>	<u>No</u>
Background information (application form). . .	1	2
Medical records.	1	2
Attendance records	1	2
Developmental measures	1	2

22a. Does your Center (Home) require the full-day enrollees to have a physical examination before being admitted?

Yes 1
No 2

22b. Do you have an arrangement for emergency services from a:

	<u>Yes</u>	<u>No</u>
Hospital/Clinic. . .	1	2
Physician.	1	2
Nurse.	1	2

23. Are any of the following services offered by or through your center (home)?

	SERVICE AVAILABLE					Other (Ex: Volunteer)
	Not Available	Cost Included in fee	Extra Charge to Parents	Paid for by Outside Source (State, Federal, Local, or Private Source)		
A. PHYSICAL EXAMINATION						
B. DENTAL EXAMINATION						
C. VISION SCREENING TEST						
D. SPEECH TEST						
E. HEARING TEST						
F. PSYCHOLOGICAL TESTING						
G. SOCIAL WORK						

INTERVIEWER: DETERMINE IF THE SERVICE IS AVAILABLE AND WHO PAYS FOR IT AND PUT A CHECK IN THE APPROPRIATE BOX.

24a. Which of the following meals do you serve to the full-day enrollees?

	<u>Yes</u>	<u>No</u>
Breakfast	1	2
Lunch	1	2
Dinner	1	2
Morning Snack	1	2
Afternoon Snack	1	2

24b. Where are these meals prepared?

	<u>Yes</u>	<u>No</u>
Center(Home) kitchen	1	2
Public School kitchen	1	2
Caterer	1	2
Other (Specify) _____	1	2

25a. Do you provide care for children who are also enrolled in school?

	<u>No. of children</u>
Yes, before school only	_____
Yes, after school only	_____
Yes, both before and after school	_____
No	_____ <input type="checkbox"/> (SKIP TO Q.26a)

25b. IF YES: Do you have a program for these children who are enrolled before and/or after school?

	<u>Yes</u>	<u>No</u>
Educational	1	2
Recreational	1	2
Remedial (Tutoring)	1	2
Other (specify) _____	1	2

26a. Which of the following meals do you serve to children who are enrolled before and/or after school?

	<u>Yes</u>	<u>No</u>
Breakfast	1	2
Lunch	1	2
Dinner	1	2
Morning Snack	1	2
Afternoon Snack	1	2

26b. Where are these meals prepared

	<u>Yes</u>	<u>No</u>
(Home) kitchen	1	2
Public school kitchen	1	2
Caterer	1	2
Other (specify) _____	1	2

27. Do you allow children to attend your Center (Home) when they have colds or other minor illnesses?

	<u>Yes</u>	<u>No</u>
	1	2

29. How many of your teachers are certified by the State:

	<u>Number of Teachers</u>
<u>Total State Certified</u>	_____
Certified in nursery/kindergarten	_____
Certified in early childhood development	_____
Certified in elementary education	_____
Other (Specify) _____	_____
_____	_____

30. In what way do you get new staff at your Center (Home) ?

	<u>Yes</u>	<u>No</u>
Recruit them	1	2
Referred by Public agency	1	2
Apply on their own	1	2
Friends and associates	1	2
Other (Specify) _____	1	2

31. Have you experienced difficulty in hiring staff?

- Quite a bit . . . 1
- Some 2
- Very little . . . 3
- None at all . . . 4 (SKIP TO Q.33)

32. If you have experienced difficulty in hiring staff, which of these reasons has been a problem?

	<u>Serious Problem</u>	<u>Minor Problem</u>	<u>No Problem</u>
A. Applicants not qualified	1	2	3
B. Low salary	1	2	3
C. Working hours	1	2	3
D. Location of Center (Home)	1	2	3
E. Other (specify) _____			
_____	1	2	3

33. INTERVIEWER: WHERE NON-ENGLISH SPEAKING CHILDREN ARE PRESENT, ASK:

How many of your staff use a foreign language when working with non-English speaking children?

(number)

V. PARENTS

34. For the following questions, I would appreciate your giving me your best estimates. Please give us the following information on the families of the children currently enrolled on a full-day basis.

<u>a. Parent's Marital Status:</u>	<u>% of Total Full-day Enrollment</u>
Two parent household	_____
One parent household	_____
Female head of household only	_____
Male head of household only	_____
Other (Specify) _____	_____
_____	_____
Don't know	_____
TOTAL =	100%

<u>b. Family Income (before taxes):</u>	
Under \$2000	_____
\$2000-\$3999	_____
\$4000-\$5999	_____
\$6000-\$7999	_____
\$8000-\$9999	_____
\$10,000 or more	_____
Don't know	_____
TOTAL =	100%

<u>c. Employment Status of Mother:</u>	
Full-time	_____
Part-time	_____
Not working	_____
Don't know	_____
TOTAL =	100%

35a. Do members of your staff have individual conferences with parents?

Yes . . . 1
No . . . 2

35b. What is the purpose of these conferences?

36. Do parents regularly participate in:

	<u>Yes</u>	<u>No</u>
Caring for children at the Center (Home) . . .	1	2
Policy making/running of Center (Home) . . .	1	2
Fund raising	1	2
Repairing or making equipment	1	2
Other (Specify) _____	1	2

VI - FEES AND OPERATING COSTS

INTERVIEWER: EXPLAIN THE USE TO BE MADE OF THE FINANCIAL DATA AND THE CONFIDENTIAL TREATMENT TO BE GIVEN EACH RESPONDENT'S QUESTIONNAIRE.

37a. What are the total annual gross receipts of your Center (Home) ? \$ _____

37b. To which annual period does this gross receipt figure apply?
From _____ 19__ to _____ 19__

38. How much of your Center's (Home's) total annual gross receipts is received from the sources listed below:

Parent Fees	\$ _____
Federal government sources	
Department of Labor _____	
O E O (CAP) _____	
H E W _____	
Other Federal _____	
State government sources	_____
Local government sources	_____
Community Organizations (e.g. UGF)	_____
Individual Contributions	_____
Other (Specify) _____	_____

TOTAL	\$ _____

INTERVIEWER: THIS TOTAL SHOULD EQUAL THE ONE GIVEN IN Q.37A. IF IT DOES NOT, QUESTION THE RESPONDENT FURTHER. IT IS PREFERABLE TO TAKE THESE FIGURES DIRECTLY FROM THE CENTER'S PROFIT AND LOSS, OR SOURCE OF FUND STATEMENTS IF THEY ARE AVAILABLE.

INTERVIEWER: INQUIRE ABOUT THE CENTER'S FEE SCHEDULE FOR FULL-DAY ENROLLEES AND OBTAIN A COPY IF ONE IS AVAILABLE.

39. Is the basic weekly fee for full-day attendance of your Center (Home) the same for each child?
Yes . . . 1 (SKIP TO Q.41)
No . . . 2

40. Does this basic weekly fee depend, in some cases on:

	<u>Yes</u>	<u>No</u>
A) Family income and/or size	1	2
B) Number of attendees from same family	1	2

INTERVIEWER:

IF YES TO A) SKIP TO Q.42

IF YES TO B) SKIP TO Q.43

IF YES TO BOTH A) AND B) ASK BOTH Q.42 AND Q.43.

41. What is the basic weekly fee for a child attending your Center (Home) on a full-day basis?

- \$ 00 - \$ 4.99. 1
- 5.00 - 9.99. 2
- 10.00 - 14.99. 3
- 15.00 - 19.99. 4
- 20.00 - 24.99. 5
- 25.00 - 29.99. 6
- 30.00 - 34.99. 7
- 35.00 - 39.99. 8
- 40.00 - 44.99. 9
- 45.00 or more (specify). 0

INTERVIEWER: IF WEEKLY FEE IS FOR OTHER THAN 5 DAY WEEK, SPECIFY THE NUMBER OF DAYS THE FEE REPORTED INCLUDES, _____ DAYS

INTERVIEWER: SKIP TO Q.44.

42. Please complete the following table giving the basic weekly fee charged for a child attending your Center (Home) on a full-day basis, for each indicated family size and for each family income class used by the Center (Home) in determining fees.

INTERVIEWER: IF FAMILY SIZE IS NOT A FACTOR IN DETERMINING FEES, USE ONLY THE FIRST COLUMN, IF FEES ARE OTHER THAN WEEKLY RATES PLEASE INDICATE THE PERIOD USED.

ANNUAL FAMILY INCOME	FAMILY SIZE NOT RELEVANT	NUMBER OF CHILDREN IN FAMILY					
		1	2	3	4	5	6

INTERVIEWER: AFTER COMPLETING THE SCHEDULE OF FEES ABOVE SKIP TO Q.44, IF NO TO Q.40B, OTHERWISE ASK Q.43.

43. What is the weekly fee for a child attending your Center (Home) on a full-day basis when there are 2 or more children from the same family?

	Fee for first child	Fee for second child	Fee for third child
\$ 00 - 4.99	1	1	1
5.00 - 9.99	2	2	2
10.00 - 14.99	3	3	3
15.00 - 19.99	4	4	4
20.00 - 24.99	5	5	5
25.00 - 29.99	6	6	6
30.00 - 34.99	7	7	7
35.00 - 39.99	8	8	8
40.00 - 44.99	9	9	9
45.00 or more (specify).	0 \$ _____	0 \$ _____	0 \$ _____

INTERVIEWER: IF WEEKLY FEE IS FOR OTHER THAN 5 DAY WEEK, SPECIFY THE NUMBER OF DAYS THE FEE REPORTED INCLUDES, _____ DAYS.

44. Are there any other adjustments made in the fee schedule you have given me? (e.g., for infants, church membership, handicaps, or special problem cases, etc.)

Yes . . . 1

No . . . 2

IF YES, Explain...

45. Does your Center (Home) charge anything extra for furnishing any of the following?

	Yes	No	
Food	1	2	\$ _____ per _____
Transportation	1	2	\$ _____ per _____
Medical	1	2	\$ _____ per _____
Insurance	1	2	\$ _____ per _____
Field trips	1	2	\$ _____ per _____
Other (specify)	1	2	\$ _____ per _____

INTERVIEWER: OBTAIN THESE EXTRA CHARGES FOR THE CHILD RECEIVING ROUND TRIP, TRANSPORTATION SERVICE, AND ALL MEALS NORMALLY PROVIDED BY THE CENTER, ETC.

46. For the children currently enrolled full-day, please tell me the percentage of children whose fees are paid by the following sources:

	Percentage of Children
Child's parents only	_____
Public Assistance (Agencies) only	_____
A combination of the above two sources	_____
Other (specify) _____	_____

47a. Do you have an annual budget or a profit or loss statement which would provide a breakdown of the costs of operating your center?

Yes 1
No 2

47b. IF YES, May I have a copy of last year's budget or profit or loss statement?

Yes 1
No 2

47c. IF NO, Can you tell me the total annual cost of operating your Center (Home)? Please give me the total annual cost for the same period for which you reported receipts.

\$ _____

VII GENERAL

48a. Do you see a need in your community for more day care facilities?

	<u>Yes</u>	<u>No</u>	<u>Don't Know</u>
A. For working mothers	1	2	3
B. For other mothers	1	2	3
C. Other (Specify) _____			

_____ 1 2 3
IF ALL "NO": SKIP TO Q. 49

48b. What type of day care programs are needed?

	<u>Yes</u>	<u>No</u>	<u>Don't Know</u>
A. Full-day	1	2	3
B. Part-day	1	2	3
C. After school facilities (i.e., group work, recreation programs)	1	2	3

49. What problems do you face in operating your Center (Home)?

- 1) _____
2) _____

50. Is your Center (Home) licensed to operate in this community?

Yes . . .1 IF YES, for how many children? _____
No . . .2 IF NO, are you in the process
of being licensed?

Yes 1
No 2

51a. What is the total square footage of space in your center?

INTERVIEWER: Please indicate the source of square footage figure given.

52. Do you get any assistance from state, county, or local agencies, such as help with program planning, menu suggestions, equipment lists, consultation about individual children?

Yes 1
No 2

THANK RESPONDENTS FOR THEIR COOPERATION AND
TERMINATE INTERVIEW. OBTAIN COPIES OF THE
APPLICATION FORM AND FEE SCHEDULE IF POSSIBLE.

INTERVIEWER:

AFTER YOU HAVE CONDUCTED THE INTERVIEW WITH THE CENTER (HOME) OPERATOR, RECORD HERE SOME OF YOUR OBSERVATIONS.

1) What type of building does the Center (Home) occupy?

- | | |
|-------------------------------------|---|
| Residence, single dwelling unit | 1 |
| Residence, duplex or town house | 2 |
| Apartment building | 3 |
| Building built for day care | 4 |
| Church | 5 |
| Community center (settlement house) | 6 |
| Store-front | 7 |
| Public housing | 8 |
| School | 9 |
| Other (Specify) _____ | 0 |
- _____

2) What type of neighborhood?

- | | |
|--|---|
| Residential neighborhood of predominantly single-family homes | 1 |
| Residential neighborhood of predominantly apartment buildings | 2 |
| Non-residential section of predominantly institutional buildings | 3 |
| Non-residential section--commercial or industrial | 4 |
| Rural Area | 5 |
| Other (Specify) _____ | 6 |
- _____

3) What is the condition of the facility?

- Internal _____
- _____
- External _____
- _____

RECORD HERE OR ON THE BACK OF THIS PAGE ANY OTHER OBSERVATIONS OR IMPRESSION WHICH YOU CONSIDER PERTINENT.

205

-19-1205

In addition to interviewing the Operators of Day Care Centers we will also interview a sample of mothers who have children in the centers. After you have completed an interview with the operator using the DAY CARE CENTER SURVEY--OPERATOR QUESTIONNAIRE, you are to proceed to obtain a random sample of mother users of the center. It is extremely important that we do everything possible to obtain a random sample of these mothers.

IMPORTANT: In all cases, be sure to point out to the operator that we do need a random sample. Explain to the operator that we want to interview mothers to find out more about the various day care arrangements they are presently using, whether the mother is working or plans to work in the future and some general questions about the family household (number of children, ages, etc.) If the operator is interested, show her the questionnaire we will be using when interviewing these mothers and assure the operator we are not making a check or inspection of her center's services. Mention to the operator that the results of the mother interviews will also be a part of the overall report that will be sent to the center.

SITUATION #1 -- CENTER OPERATOR HAS A LIST OR CARD FILE OF "MOTHERS"

If both a printed list and a card file of mothers' names and addresses is available, we would suggest using the list since it will be a little quicker.

STEP 1. Determine the total number of mothers

STEP 2. Refer to the Table of Random Numbers to determine the sample size and random numbers to select. This step will tell you how many mothers' names we need to select and also which ones to select. The arrangement of the list or card file is not important. It need not be in alphabetical order. What is important, is that all mothers' names be present regardless of whether their children attend full or part day.

EXAMPLE--There are a total of 34 mothers with children enrolled in the center. Locate number 34 in Column I of the table. Then, reading across, you will find a 3 in Column II. This 3 is the desired sample size and tells you how many names we need to select from the total list of mothers. Continuing across to Column III you will find several random numbers. We will be using these numbers to tell us which mothers to select. Our sample size is 3 so take the first three random numbers listed (22,32,26). Go to your list or card file of mothers and select the 22nd, 32nd and 26th name.

STEP 3. After you have selected these three names, ask the operator whether these mothers have any pre-school children in the center.

If the answer is "Yes", you have the names and addresses of the 3 mothers in your sample to interview.

If the answer is "No", that one of the mothers has no pre-school child in the center, go back to the table and select the next random number shown. In our example of 34 mothers, the next random number is the 25th mother. This mother will now replace the one who had no pre-school children in the center. If the 25th mother has no pre-school children, go back and select the next random number, which would be the 15th mother. Continue this procedure until you have selected the desired sample size of 3 mothers all with pre-school children in the center. Should you exhaust the supply of random numbers shown on the table for enrollment size of 34, stop and just interview the mothers you have selected with pre-school children. In some cases you may end up with only 1 or possibly 2 mothers to interview. It is also possible to end up with no mothers to interview because none of them have pre-school children attending the center.

STEP 4. Contact the mothers who have been selected by phone and arrange for an interview. You will need to wait, however, until we get the mother questionnaires to you, which should be available in approximately two weeks.

If any of the selected mothers refuse to be interviewed, just interview those who agree. Do not attempt to go back to the center and substitute any new mothers to make up for the refusals.

SITUATION #2 -- CENTER OPERATOR HAS A LIST OR CARD FILE OF
"CHILDREN" NAMES

This situation is identical to Situation #1, except here the list or card file is composed of the childrens' names and not their mothers' names.

The first two steps are the same. Determine the total number of children enrolled from either the list or the card file. Refer to the Table of Random Numbers to determine how many names are to be selected and which names to select.

EXAMPLE--There are 12 children enrolled in the center. The table tells us to select 2 names and these are to be the 4th and 6th names.

Since we are working from a list of children, we next need to make sure that these two children do not have the same mother. So, first ask the operator if the 4th and 6th children are from the same family. If they are not, we use them. If they should be from the same family, eliminate one of the names and select the next random number which would be the 7th name. Again, ask if this child is from the same family as either the 4th or 6th child, whichever one you retained. Continue this procedure until you have selected two children from different families.

As soon as you have selected two children from different families, you next need to determine whether both children are pre-school children. If they are, you have the names of two children and you are to interview their mothers. Should one of the children not be a pre-schooler, you will need to select another number (in our example the 9th child) and determine that this child is not from the same family and also that he or she is a pre-schooler. Should you run out of random numbers before you have found two children with different mothers and both pre-schoolers, just stop

and arrange an interview with the one who did meet the requirements. It is possible to exhaust all random numbers for enrollment size of 12 and end up with no one eligible.

SITUATION #3 -- CENTER OPERATOR HAS LIST OR CARD FILE OF "MOTHERS" OR "CHILDREN" BUT REFUSES TO LET YOU SAMPLE FROM THEM

In this situation the center has a list or card file of mothers or children but the operator refuses to let you look at the list or card file to select the sample names.

Ask the operator if she would be willing to identify only those mothers who would be selected by random procedures and give you just their names and addresses. Reassure the operator that we are not interested in the entire list, only a few names selected at random.

If the operator agrees to do the selection, follow the same sampling procedure discussed in Situation #1 or #2 and tell her which names to select using the Table of Random Numbers. She will need to tell you the total enrollment or you can get this information from the completed questionnaire.

SITUATION #4 -- CENTER OPERATOR REFUSES TO LET YOU USE LIST OR CARD FILE AND ALSO REFUSES TO DRAW SAMPLE HERSELF

We hope we are not faced with this situation but if it does happen, we will attempt the following procedure.

Ask the operator if she would permit us to send a letter home with the children (See Letter to Parents, Attached) and from the letters returned we will select the names to be interviewed. If the operator agrees to this procedure follow the steps below.

STEP 1. Contact Westat if your supply of Parent Letters is exhausted.

STEP 2. Take the letters to the Day Care Operator so they can be sent home with the children. The letters should be returned to the center from the parents.

STEP 3. Contact the operator a week later to look over the returned letters.

STEP 4. Place the returned letters in alphabetical arrangement.

STEP 5. Count the number of returned letters. This count will now be used as the enrollment size. Find this number in Column I of the table. In Column II you will find the sample size required and in Column III the random numbers to select. (Assume 6 letters are returned. The 2nd and the 1st letters would be in our sample.)

STEP 6. Again, we must ask the operator if the 2nd and 1st names have pre-schoolers in the center. For example, if the 1st name does not, select the 5th name. If the 5th does not have pre-schoolers we would stop since we have exhausted our supply of random numbers and would only contact the 2nd name for an interview.

Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852
(301) 881-5310

October 15, 1970

Dear Interviewer:

Enclosed you will find some USERS OF DAY CARE CENTERS CALLING FORMS. These forms are to be used to list the names and addresses of parents you select at random from the Day Care Centers you visit.

Please use a separate form for each Day Care Center that you go to.

If you have to send parent letters because the operator won't give out the names, record the names and addresses of parents that you select at random from the group of returned letters.

If the operator refuses to give you names or to let you send letters, indicate this refusal on the Calling Form for that Center.

If you have any questions or problems, let us know.

Sincerely,

Susan Goodman

SUSAN GOODMAN
Assistant Project Director

Rockville, Maryland 20852
Telephone 301-881-5310

Fall 1970

Dear Parent:

The Office of Economic Opportunity is taking a national survey to find out what problems mothers have in finding satisfactory day care for their children. They are also interested in finding out if there is a need for more day care facilities in various parts of the country.

Westat Research, Inc. is conducting a part of this survey. As part of our project, we need to talk to parents who have children enrolled in day care centers. The results of this survey with parents throughout the United States will be used by those who are responsible for planning and improving day care services for children.

Your opinions on day care would be very valuable to us if you could give us a few minutes of your time to talk about this subject. It would probably take less than half an hour.

Would you please fill in your name and address below and a time that would be convenient for you? Then return this with your child to the day care center. One of our field staff will get in touch with you to set a definite date and time when we can come to talk to you.

Thank you very much.

Sincerely yours,

James M. Daley
Project Director

Name _____

Address _____

Phone No. _____

Day of Week you would like to be interviewed

Time of Day _____

INSTRUCTIONS TO INTERVIEWERSUSERS OF DAY CARE CENTERS CALLING FORM

1. Take forms with you to Center and enter selected names as they are chosen at random.
2. Call parent. Be sure you are speaking to the person who is responsible for making the children's day care arrangements. In most cases, this is the mother or female head-of-household. For example, Johnny Smith is enrolled at ABC Nursery, so ask to speak with Mrs. Smith.
SAY: Hello. My name is _____ of Westat Research, Inc. The Office of Economic Opportunity is taking a national survey to find out what problems mothers have in finding satisfactory day care for their children. We are interested in talking to mothers who have children enrolled in day care centers. We have already talked with the Director of _____ where your child is enrolled. Your opinions would be very valuable to us. If you could give us a few minutes of your time to talk about this subject.
3. If the parent indicates a willingness to talk with you, set up a date and time convenient for you to get together. Record this on the form in the space provided.
4. If the parent indicates he does not wish to talk with you, ask her/him if they might change their mind if they received a letter from Mr. James M. Daley, the Project Director. If the answer is then "Yes", mail them a copy of the parent letter we have sent you and give them your return address. If they still refuse to cooperate, thank the parent and discontinue.

November 11, 1970

Dear Interviewer:

Most of the interviews of Day Care Center Operators have now been concluded and we are anxious to get some indication from you as to the result of the effort of getting names and addresses of Center Users (Mothers). We would also like to know how successful you have been in setting up actual appointments with users, if you have made any.

Please fill in the attached form and return it to Westat immediately. Fill in the form even if you have not yet concluded interviews with all eligible Day Care Center Operators on your list. Just report on the ones you have interviewed.

You have previously received the "Users of Day Care Centers Calling Form" on which to record names and addresses of users. The attached User Selection Report Form does not ask for names and addresses of users, but only the total number per Center.

For planning purposes it is important that you fill out the attached form and send it to us by return mail.

Thank you for your cooperation.

Sincerely,

James M. Daley
Project Director

Enclosure

JMD:ink

November 5, 1970

Dear Interviewer:

Enclosed you will find the materials you need to complete the Day Care survey. The deadline for finishing the interviewing is DECEMBER 18, 1970. If you estimate that it is not possible for you to complete your assignment by this date, please contact Westat immediately.

This package contains:

1. List of Blocks to be canvassed - white
2. Door-to-Door Call Record Forms - yellow
3. Screening Sheets (for respondents in block areas who have children or take care of children) - white - printed on both sides
4. Operator Questionnaire (Short Form: For Family Day Care Homes) and Instructions - green
5. Parent Questionnaires (to be used for mothers whose names you received at the day care centers and mothers who have children 9 years of age or younger living at home) - blue
6. Instructions for Screening Questionnaire and Parent Questionnaire
7. Income Level Card (to be used when administering the Operator Questionnaire (Short Form: For Family Day Care Homes) - Q. 21 - and the Parent Questionnaire - Q. 10)

Here are the steps you should follow in completing the canvassing of your areas:

I APPOINTMENTS WITH USERS

a. You may now call the parents whose names you received on your visits to Day Care Centers. Describe the general purpose of the study to them and ask if they would be willing to talk to you about day care. (See Instructions for Users of Day Care Centers Calling Form, which was sent to you October 16.)

b. When you call on these users follow the Instructions and use the Parent Questionnaire (both blue). Please read the instructions and the questionnaire very carefully before you call on anyone. Changes have been made since the training sessions.

II USE OF CALL RECORD FORM (Yellow)

a. Take the list of blocks we have sent you for each map area you cruised. By looking at your copy of each map ascertain those blocks that you must canvass door-to-door. The blocks were chosen by random statistical selection. It is possible that we also have selected some blocks for which you reported "No Dwelling Units" in your cruising report. The reason for their inclusion is that the cruising report was based on a cursory inspection. Now, however, you are required to canvass each block thoroughly and make sure that there are in fact no dwelling units.

You must canvass each address within every block listed. Please check every building for possible dwelling units - do not skip anything. For example, a block may look empty but a guard may live in a railroad yard or a family may live in the back half of a store.

b. As you begin canvassing a block, start at a corner intersection. Walk around the block and be sure you include all streets within your assigned blocks and only those sides of the street that are inside the block boundaries.

c. Some of the following examples may help you in finding where to look for dwelling units and whether to interview, or not.

1. A large department store possibly covering a whole block. You may assume that there are no dwelling units. Only record the address.
2. Small stores with a second story above the storefront. You will have to find out whether there are living quarters above the store. If so screen, and possibly interview.

3. A church. Find out whether or not the minister and his family, or anyone else has living quarters there. If yes, use screening questionnaire. Also check to see whether or not the church runs a day care facility, for instance, in the basement. If yes, record this on call record form but you need not interview.
4. A house with a sign in front "Tiny Tots Day Care Center." Go in and inquire whether or not the operator or someone else resides there. If it is a residence in addition to being a day care center, proceed with screening and depending on criteria outlined in instructions and screening questionnaire, use the long or short form of operator questionnaire. If no one lives there just record on call record form that this is a day care center, but not a residence.
5. A house or apartment, not specifically identified as a day care facility. If it is not a residence just record the fact on the call record sheet. If it is a residence use screening form and determine through Q. 6 and 7 of the screening form, which questionnaire to use.

d. Use your Door-to-Door Call Record Form (yellow) and list each address. For multiple unit buildings list apartment numbers in addition to the address. As you leave the address/apartment after you have completed screening and interviewing, record the date, time, and result (code given at bottom of form). Use a separate line for each dwelling unit.

If no one is home on the first try, you must make two additional attempts to find someone at home. If you try during the morning and no one is home, please make your second visit in the evening or on the weekend. Please record each visit. Indicate in the last column on the form any pertinent remarks you may have concerning the dwelling unit or people living there.

III PROCEDURE WHEN SOMEONE ANSWERS DOOR

1. When someone answers your knock, ask to speak to the lady of the house. If she is not in ask what time she will return and make your second call on that dwelling unit then.

2. Proceed with introductory remarks (see instructions for Screening Questionnaire) and start asking the screening questions.

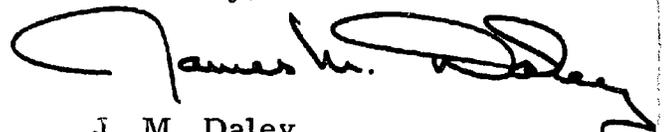

Be sure to follow the instructions on the Screening Questionnaire and the accompanying instruction booklet.

IV QUESTIONNAIRES

As has been stated above, BE SURE TO BE THOROUGHLY FAMILIAR with all questionnaires and accompanying instructions, before you go out canvassing. All forms have been changed to some extent since the training session. Be especially careful in entering the identification number from the Screening Questionnaire onto the Questionnaire you use for the interview.

Thank you for patiently waiting for these materials. Remember the due date is DECEMBER 18, 1970, so if you find that you cannot complete the task by this time let us know immediately. Do not wait until you have completed your full assignment. Mail questionnaires and screening forms to Westat Research, Inc., after you have finished a block or a group of blocks.

Sincerely,

J. M. Daley
Project Director

Memorandum

IDENTIFICATION:

TO: FIELD STAFF EVERYWHERE

DATE: November 9, 1970

FROM: MARLEY C. BROUNSTEIN,
FIELD DIRECTOR

mb

SUBJECT: Study No. 0824 - DAY CARE

This is the last lap of the DAY CARE STUDY. It has been difficult and there have been problems, we know. You can be sure that we sincerely appreciate all your efforts and cooperation.

Many hours of preparation have been expended to organize the data gathering smoothly and coherently for effective analysis. Without your help this would be impossible.

For this last phase of the study, we cannot stress too strongly the importance of your following instructions to the letter, and to be sure that you understand and ask each question properly so that we may continue to gather exact and useful information. Errors are costly and time consuming. We can afford neither the cost nor the time.

Full and correct completion of these questionnaires is critical. **PLEASE** **STUDY THE INSTRUCTIONS AND FORMS CAREFULLY.** Be thoroughly familiar with all the materials. If there is anything you don't understand, please call Mr. D. Scott for clarification BEFORE proceeding with your assignments, to avoid costly call-backs. If for any reason there might be a delay in completing your assignment as scheduled, please notify us at once. If we are aware of your problems, we are better equipped to handle them.

Again, our thanks and appreciation for your continuing cooperation.

GOOD LUCK!

INTERVIEWER INSTRUCTIONS

Screening Questionnaire

and

Parent Questionnaire

**(For Listed Users of Day Care Centers
and Area Sample Interviews)**

Fall 1970

**Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852**

I. INSTFUCTION FOR SCREENING QUESTIONNAIRE

Area Sample Interviews (Household Survey)

You should begin each interview by asking to speak to the lady of the household. Please identify yourself and your affiliation with Westat immediately by saying the following:

Good morning/(afternoon, evening). My name is _____. I'm representing Westat Research, Inc., which is conducting a nationwide study of day care for the Office of Economic Opportunity. The purpose of this study is to determine the present day care arrangements made by mothers for the care of their children, while they are working and the national need for additional day care facilities for children.

This area was selected as part of the national sample for this study and we are going from door to door attempting to interview everyone. I'd very much appreciate a few minutes of your time.

The screening questionnaire should be used to begin each area sample interview. The address and other information should be filled in at the top of the screening questionnaire. The sample area asked for on the top line is the tract number or enumeration district number given on the area maps.

You will note that each screening questionnaire bears a 5 digit identification number. If the screening results in an interview (Family Day Care Home or Parent Questionnaire), enter the identification number from the Screening Questionnaire into the space provided on the appropriate questionnaire form.

Center Sample Interviews (names of users obtained from centers in our sample)

In interviews with center users, you should ask Questions 1 and 2 of the screening questionnaire and then go directly to the Parent Questionnaire.

Fill in the page inside the front cover of the Parent Questionnaire and then begin with Question 1 of the Parent Questionnaire.

Specific Instructions for Screening Questionnaire

Question

- 1 Be sure to include all children in household at this time that are 9 or younger regardless of their relationship to respondent.
- 2 Please note that while Q. 1 asked about children 9 years of age or younger, here you are asking about all children 13 years of age or younger.
Where respondent is not the parent or guardian of a child in the household, determine who is responsible for the day-to-day care of the child. We want to know who would be responsible for making day care arrangements for this child, if such arrangements were to be made.
- 3-6 Questions 3-6 are used to determine if this household is either a Family Day Care Home or a Group Home.
- 7 Having established that a household is either a Family Day Care Home or a Group Home, Question 7 is used to determine whether to use the long form or the short form of the Operator Questionnaire.
- 8 This question is used to determine if the respondent qualifies for an interview with the Parent Questionnaire. We are not to include in our Area Sample cases any households with an annual family income of \$8, 000 or more.

Family Income includes wages and salaries, pensions, dividends, interest, rent, net income from farms and businesses and any other money income received by members of the respondent's family.

The family includes all persons in the household that are related to the respondent by blood, marriage, or adoption.
- 9 This question should be asked only in those cases where, because of income or no children 9 years or younger, the interview will terminate with the Screening Questionnaire.

II. INSTRUCTIONS FOR PARENT QUESTIONNAIRE

General

One of the problems in using this questionnaire for Area Sample Cases (especially in low-income neighborhoods) will be deciding who should be interviewed in an "extended-family household" (for example, a home spanning several generations or where more than one mother's children live in one household).

If the initial respondent (the individual who is identified as the "lady of the household") has children of her own 9 years or younger or is responsible for the day-to-day care of children 9 years or younger, she should be interviewed with the Parent Questionnaire.

If the initial respondent is neither the parent nor the person responsible for the day-to-day care of any of the children, you should follow the Special Instructions for Extended Family Households below.

Note that you may encounter a household where there is a single-parent father and no woman who clearly acts as a substitute mother. In this case, the father should be interviewed. We have not written elaborate separate instructions for this case. The interview should be conducted just as it would with a single mother.

Special Instructions for Extended Family Households

When the initial respondent has children 9 years or younger, she should be interviewed even though not all the children in the household are hers.

When initial respondent has no children of her own 9 years or younger, it is necessary to determine if she is responsible for the day-to-day care of any of the children in the household in the absence of their real mother. If so, the interview should be continued with this respondent. If not, we want to interview the person responsible for the day-to-day care of the children.

In some cases, there may be two women (other than the initial respondent) living in the household both of whom have child care responsibilities. For example, the initial respondent may be the mother of two daughters who both have children and everybody lives with Grandma. Where possible, we would arrange to interview the mother with the most children 9 years of age or younger. In many cases, we will have to settle for the one with whom an interview can be most conveniently arranged.

At any rate, we always want to interview someone who would be responsible for making day care arrangements if such arrangements were to be made. We want to interview her (or him) about all the children 13 years of age and younger for whom she is responsible.

If you decide that the initial respondent is not the person you should interview please begin a new screening questionnaire and fill in Questions 1 and 2 again, showing the relationship of the actual respondent to each child in the household in Table A.

Specific Instructions for Filling in Day Care Charts

For any mother who works, goes to school, or is in training, a day care chart should be filled in for each of her own children 13 years of age or younger and for each child 13 years of age or younger for whom she is responsible for their day-to-day care.

Begin by asking Question 5. In addition to asking where the child was during the mother's absence, be sure to probe concerning the exact day care arrangement which was used.

General comments concerning the Day Care Chart follow:

1. You should keep Table A of the Screening Questionnaire handy while filling in the Day Care Charts.
2. Begin by filling in the child number, the age, and sex from Table A.
3. In Column I, using Table B at the bottom of the chart, enter the number for each arrangement used on the last day the respondent was at work (school/training).

FOR ANY CHILD CARED FOR BY AN OLDER SIBLING, ENTER THE AGE OF THAT SIBLING IN PARENTHESIS IN COLUMN I.

4. In Column II, enter the actual hours the child was in the arrangement as, for example, "9 AM - 3 PM" or the respondent was out of the house on the day in question. By the same token, if the respondent did not leave the house until 3:30 or 4:00 PM, do not show any time for when the child was in school. Account for only those hours the respondent was gone.
5. Column II should be filled in for all arrangements. If the respondent does not pay for an arrangement, enter a zero (0) after the dollar sign (\$).

In Column III, it is very important that you tell us what the dollar amount is based on -- an hour, a day, a week, a month, etc. If a mother pays a lump sum for the care of several children, she may not be able to give you a "per child" amount. Please describe such pay arrangements in the Comments Section (lower right-hand corner) or on questionnaire.

6. In Column IV, please be sure you word the question just as we have it, so that the answer is a clear choice of one of our three categories. If the third category is used ("Not very well satisfied"), ask "Why?" and fill in Column V. Do NOT fill Column V for any arrangement for which the respondent is "Very well" or "Pretty well" satisfied.
7. In the Comments Section, in addition to recording a description of pay arrangements which cannot be described in Column III, please record the name and address of any formal before-and-after school program being used. The Comments Section should also be used to note arrangements described in the "Special Problems" Section below and for any other explanatory notes you feel are necessary.

Any lengthy comments should be entered on the back of the questionnaire.

Special Problems Concerning Day Care Charts

1. No Regular Arrangements -- You may encounter a respondent who has no regular arrangement for her children but just makes whatever arrangements she can from day to day. She should be questioned about the arrangements she used the last day she went to work or school.
2. Reciprocal Babysitting -- You may encounter cases where a part-time working mother cares for someone else's children who in turn watches her children while she works. You should record such cases accordingly, specifying who watches her children and how satisfied she is, etc. Then, in the Comments Section, note that this is a reciprocal arrangement.
3. Child Takes Care of Self vs. Care by Older Sibling -- In cases where more than one child is left at home to watch themselves, it may be difficult to decide whether you should code this in Column I as 3 (child cares for self) for each of the children or 4b (child cared for by sibling) for all but the oldest child. In deciding whether to code 3 or 4b, take your cue from the way the mother describes the situation. If she says she leaves them all at home alone, code them all as 3 (child watches himself).

If she says she leaves Joey with Nancy, code Joey as 4b (child cared for by older sibling) even though Nancy is only 5 or 6 years old herself and code Nancy as 3 (child watches herself).

Question

- 9 If the respondent answers in such a way that the response is not easily codeable do not try to force it into one or more of the listed categories but rather write out the response as given.

Non-working Mothers

- NW2 If the respondent brings up the question of cost tell her to disregard it for the answer to this question.
- NW11 If the non-working mother clearly indicates in answer to Q. NW1 and NW10 that she is not interested in working, do not ask Q. NW11 and simply circle answer category 5.

SCREENING QUESTIONNAIRE

Sample Area _____
Address _____ Apt. No. _____
City _____ County _____ State _____
Interviewer _____
Date _____ Time of Day _____

1. How many children 9 years of age or younger live in this household? _____

INTERVIEWER: IF THE RESPONSE TO Q1 IS NONE SKIP TO Q3.

2. Would you please tell me the ages of the children in this household who are 13 years of age or younger? Please start with the youngest child.

INTERVIEWER: For each child, determine if male or female and the age, and enter this data in Table A below. Determine the relationship of each child to the respondent, and who is responsible for the day-to-day care of that child.

TABLE A

Child No.	Age	Sex	Relationship to Respondent	Who is responsible for the day-to-day care of this child?	
				Respondent (Check below)	If not the respondent, who?
1					
2					
3					
4					
5					
6					
7					
8					
9					

INTERVIEWER: Responsibility for day-to-day care does not necessarily imply financial support. The person that would be responsible for making day care arrangements (if any) is the one we want to identify in the last 2 columns.

3. Are any (other) children taken care of in your home during the day (besides the ones that live here)?
- Yes (GO TO Q.4)
No

IF NO: A. If there are children listed in Table A, GO TO Q.8.
B. If there are no children listed in Table A, GO TO Q.9.

4. How many days a week are these children taken care of here?
- 2 or more days a week (GO TO Q.5) Less than 2 days a week (or "no regular pattern")

IF LESS THAN 2 DAYS A WEEK:

A. If there are children listed in Table A, GO TO Q.8.
B. If there are no children listed in Table A, GO TO Q.9.

5. How many of the children are here 7 hours or more a day?
- 1 or more None

IF NONE: A. If there are children listed in Table A, GO TO Q.8.
B. If there are no children listed in Table A, GO TO Q.9.

6. Do any of these children's parents pay to have these children cared for here?

Yes
No

IF YES: This is either a family day care home or a group home. Question 7 will determine which OPERATOR QUESTIONNAIRE to use. Do not ask Q.8 or 9.

IF NO: A. If there are children listed in Table A, GO TO Q.8.
B. If there are no children listed in Table A, GO TO Q.9.

7. Who is in charge of the children while they are here?

Respondent....read Paragraph I
Other.....read Paragraph II

I. IF RESPONDENT: Determine if she pays anyone from outside the household who comes to help most of the time the children are there. If so, use long form OPERATOR QUESTIONNAIRE. If not, use short form OPERATOR QUESTIONNAIRE. (Do not ask Q.8 or 9.)

II. IF OTHER: Arrange interview with this "other" person. Determine if this person pays a second person from outside the household who comes in to help most of the time the children are there. If so, use long form OPERATOR QUESTIONNAIRE. If not, use short form OPERATOR QUESTIONNAIRE. (Do not ask Q.8 or 9.)

8. Some of the following questions are going to be concerned with day care for children 13 years of age or younger. Some of the day care programs have certain income requirements for people who may need financial help. Would you tell me whether your total family income (before taxes) last year was.

Less than \$8,000. . . .1
\$8,000 or more. . . .2

IF \$8,000 OR MORE: Ask Q.9.

IF LESS THAN \$8,000: Follow instruction below. Do not ask Q.9.

IF THIS RESPONDENT HAS CHILDREN OF HER OWN 9 YEARS OR YOUNGER OR IS RESPONSIBLE FOR THE DAY-TO-DAY CARE OF SUCH CHILDREN, BEGIN THE PARENT QUESTIONNAIRE AT THIS TIME.

IF RESPONDENT DOES NOT MEET EITHER OF THESE REQUIREMENTS: Follow instructions for EXTENDED FAMILY HOUSEHOLDS to determine who should be interviewed. Use PARENT QUESTIONNAIRE with that individual.

QUESTION 9 TO BE ASKED ONLY FOR THOSE CASES WHERE INTERVIEW TERMINATES WITH SCREENING QUESTIONNAIRE.

9. May I have your name and phone number so that my supervisor can check to see that I have really been here?

Name _____

Phone # _____

ANNUAL INCOME

- A. UNDER \$2,000
- B. \$2,000 - \$2,999
- C. \$3,000 - \$3,999
- D. \$4,000 - \$5,999
- E. \$6,000 - \$7,999
- F. \$8,000 - \$9,999
- G. \$10,000 OR MORE

PARENT QUESTIONNAIRE

(FOR LISTED USERS OF DAY CARE CENTERS
AND
AREA SAMPLE CASES)

conducted by

Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852

IF INITIAL SCREENING INDICATES NO CHILDREN
IN HOUSEHOLD 9 YEARS OR YOUNGER, DO NOT USE
THIS QUESTIONNAIRE. TERMINATE INTERVIEW
UNLESS FAMILY DAY CARE HOME OR GROUP HOME.

234

INSTRUCTIONS FOR CENTER USER INTERVIEWS:

Begin the interview by asking QUESTIONS 1 and 2 of the Screening Questionnaire.

Do NOT ask any other questions from the Screening Questionnaire in interviewing center users. Enter address, etc. of respondent below:

Address _____

Apt. # _____ City _____

County _____ State _____

Interviewer _____

Date _____ Time of Day _____

Name and Address of Center

1a. Other than the children 13 years of age and younger, how many people live in this household? (INCLUDE YOURSELF)

(Give Number) _____

1b. Could you tell me the approximate age of each of these people.

INTERVIEWER: Be sure respondent starts with self. Fill in first column below. Determine sex and relationship to respondent of each.

#	Age	Sex	Relationship to Respondent
1	_____	_____	<u>Respondent</u>
2	_____	_____	_____
3	_____	_____	_____
4	_____	_____	_____
5	_____	_____	_____
6	_____	_____	_____
7	_____	_____	_____
8	_____	_____	_____

1c. Who is the head of household? (CIRCLE AGE OF HEAD OF HOUSEHOLD IN 1st COLUMN ABOVE.)

2. What was the last grade in school that you completed? (ENTER NUMBER IF 12 OR LESS) _____

Some college 13
 College graduate 14
 Post Graduate work 15

3a. Are you employed, in training, or in school at this time?

Check As Many As Apply

- Yes, employed
 Yes, in training
 Yes, in school
 None of these (GO TO PAGE 5)

3b. How many days per week do you usually (work/go to school/go to training)?

_____ Days

3c. How many hours per day do you usually (work/go to school/go to training)?

_____ Hours

4a. On the last day you went to (work/school/training), what time did you leave the house?

_____ AM
 _____ PM

4b. What time did you get home?

_____ AM
 _____ PM

5. START WITH THE FIRST CHILD LISTED IN TABLE A OF THE SCREENING QUESTIONNAIRE, FOR ALL CHILDREN FOR WHOM RESPONDENT IS RESPONSIBLE, DETERMINE WHAT DAY CARE ARRANGEMENTS WERE USED FOR THIS CHILD ON THE LAST DAY THAT THE RESPONDENT WAS AT WORK (IN SCHOOL/IN TRAINING) AND ENTER THESE ON ONE COPY OF THE DAY CARE CHART. BE SURE YOU ACCOUNT FOR ALL THE HOURS THE RESPONDENT WAS AWAY FROM HOME. BEGIN BY ASKING:

"ON THE LAST DAY YOU WENT TO (WORK/SCHOOL/TRAINING), WHERE WAS YOUR (Ex: six-year-old-son) FROM THE TIME YOU LEFT FOR WORK UNTIL YOU RETURNED?"

BE SURE TO ENTER THE TIME CHILDREN ARE IN SCHOOL. (HOWEVER, DO NOT ASK ABOUT PAY OR SATISFACTION FOR THE TIME CHILDREN ARE IN SCHOOL.)

DAY CARE CHART

(TO BE USED TO ACCOUNT FOR CHILD'S WHEREABOUTS DURING ALL HOURS RESPONDENT WAS OUT OF HOME)

CHILD No. from _____
 Table A _____
 Age _____
 Sex _____

I. Arrangements (enter number code using Table B below. If care by sib- ling, enter age in parenthesis)	II. Hours (show actual times)	III. How much do you pay for this arrangement? (If respondent cannot give per child amount, describe in Comments Section.)	IV. How well does this arrange- ment work for you? Would you say you are:			V. If respondent says she is "Not Very Well Satisfied", ask "WHY?"
			Very Well Satisfied?	Pretty Well Satisfied?	Not Very Well Satisfied?	
A. _____	_____	\$ _____ per child per _____	1	2	3	_____
B. _____	_____	\$ _____ per child per _____	1	2	3	_____
C. _____	_____	\$ _____ per child per _____	1	2	3	_____
D. _____	_____	\$ _____ per child per _____	1	2	3	_____

COMMENTS

TABLE B
 Number Codes of Day Care Arrangements to be entered in Column I.

1. Child in School (do not ask Columns III-V for this arrangement)
 2. Mother watches child while working
 3. Child cares for self
 4. In home care by:
 - 4a. Father
 - 4b. Sibling (give age in parenthesis in Column I)
 - 4c. Other relative
 - 4d. Non-relative
 5. Out of home care by:
 - 5a. Relative (whether for pay or not)
 - 5b. Non-relative (no pay)
 - 5c. Woman who cares for children in her home for pay.
 - 5d. Day Care Center, Pre-school (Head Start, etc.)
Nursery school
 6. Before and After School Programs: YMCA, Extended School Program, Settlement House, Recreation Center, etc. (Give name of Center or Program in Comments Section.)
- (Use this section for name and address of Formal Before and After School Programs and to describe payments that cannot be described in Column III and for any other comments.)

ASK ONLY IF RESPONDENT HAS CHILDREN WHO ARE NOT YET IN ELEMENTARY SCHOOL:

- 6a. If you wanted to improve the arrangements for your preschool child(ren), which kind of day care would you like best?
- | | |
|---------------------------------|---|
| Care by someone in your home | 1 |
| Day care in someone else's home | 2 |
| Day care center | 3 |
| Other (Specify) _____ | 7 |
| _____ | |
| Doesn't want any change | 8 |
| Don't know | 9 |
- 6b. How much do you feel you could pay to get this kind of day care for your child(ren)?

Nothing
 \$ _____ per week per child

ASK ONLY IF RESPONDENT HAS CHILDREN WHO ARE IN ELEMENTARY SCHOOL:

- 7a. If you wanted to improve the before-and-after school arrangements for your children who are in elementary school, which kind of arrangement would you like best?
- | | |
|--|---|
| Care by someone in your home | 1 |
| Care in someone else's home | 2 |
| Supervised recreation program
at playground or school | 3 |
| Other (Specify) _____ | 7 |
| _____ | |
| Doesn't want any change | 8 |
| Don't know | 9 |
- 7b. How much do you feel you could pay to get this kind of before-and-after school arrangement for your child(ren)?

Nothing
 \$ _____ per week per child

ASK ALL RESPONDENTS:

8. How often do problems with babysitting or child care arrangements cause you to be late for work or miss a day altogether?
- | | |
|----------------------|---|
| Very seldom or never | 1 |
| Once in a while | 2 |
| Frequently | 3 |

9. What would you expect a child care program to provide?

INTERVIEWER: DO NOT READ RESPONSES. CHECK THOSE RESPONDENT MENTIONS.

- Safe place to leave child.
- Playmates for child.
- Good food.
- Medical program.
- Good care.
- Education (school readiness)
- Training (behavior).
- Good place to play
- Other (Specify) _____
- _____
- _____

NOW GO TO QUESTION 10 ON PAGE 8

NON-WORKING MOTHERS

NW1. If you were working now, which kind of child care would you like best for your youngest child?

(READ THESE)

- Care by someone in your home. 1
- Day care by someone who cares for a few children in her home. 2
- Day care center 3
- Recreation program (before and after school). . . 4
- Other (Specify) _____ 5

DO NOT READ THESE: USE THEM WHEN RESPONDENT VOLUNTEERS THEM.

- Don't know. 8
- Respondent says that she would not consider working (GO TO NW3) 9

NW2. What would you expect a child care program to provide?

INTERVIEWER: DO NOT READ ANSWERS.

(CHECK ALL THAT RESPONDENT MENTIONS)

- Safe place to leave child. . .
- Playmates for child.
- Good food.
- Medical program
- Good care.
- Education (school readiness) .
- Training (behavior).
- Good place to play
- Other (Specify) _____

INTERVIEWER: IF ONLY ONE CATEGORY MENTIONED, PROBE: "ANYTHING ELSE?"

NW3. Have you ever worked since you (had children/had the day-to-day responsibility for children)?

- Yes. 1
- No (SKIP TO NW8) 2

NW4. About how many weeks did you work during the past 12 months?

- None
- # of weeks _____

NW5. Why did you stop working?

INTERVIEWER: DO NOT READ ANSWERS.

(CHECK ALL THAT RESPONDENT MENTIONS)

- a. Child care arrangements respondent used were no longer available.
- b. Did not like child care arrangements.
- c. Wanted to be with children.
- d. Got pregnant/Had a child.
- e. Had to assume child care responsibility for children who were not previously her responsibility . . .
- f. Laid off.
- g. Did not make enough money
- h. Did not like job.
- i. Husband did not like wife working . . .
- j. Illness
- k. Other (Specify) _____

(IF a. OR b. MENTIONED, GO TO NW 7)

NW6. Have you ever stopped working because of difficulty in getting satisfactory child care?

- Yes 1
- No 2

NW7. While you were working, how often did problems with babysitting or other child care arrangements cause you to be late for work or miss a day altogether?

INTERVIEWER: READ THESE.

- Very seldom or never . 1
- Once in a while. . . . 2
- Frequently 3

NW8. Are you looking for work now, or planning to go to work within the next year?

- Looking for work now 1
- Planning to go to work within the next year. 2
- Not looking for work or planning to go to work within next year. . (GO TO NW10) 3

IF LOOKING FOR OR PLANNING TO GO TO WORK, ASK

NW9. What do you think you will do with your children 13 years or younger when you go to work?

INTERVIEWER: PLEASE USE CHILD NUMBERS FROM TABLE A OF SCREENING QUESTIONNAIRE TO ENTER INFORMATION IN TABLE BELOW.

	CHILD NO. FROM TABLE A									
	1	2	3	4	5	6	7	8	9	10
Child will care for himself...										
In home care (includes care by siblings).....										
Family day care home (woman who cares for other children in her home).....										
Day Care Center.....										
Nursery School.....										
Other (Specify) _____										
Don't know.....										

NW10. Some mothers feel they would rather not work while their children are young. Others would like to work but can't find jobs or have no place to leave their children. Is there one particular reason you are not working at this time?

INTERVIEWER: PLEASE READ ALL THE CHOICES BEFORE THE RESPONDENT GIVES HER ANSWER.

- a. Prefer not to work while children are young
- b. Have problems with finding satisfactory day care
- c. Can't make enough money to afford day care for my children.
- d. Can't find a job.
- e. I'm not interested in working
- f. There's no one particular reason.
- g. Some other reason (Specify) _____

INTERVIEWER: IF RESPONDENT GIVES MORE THAN 2 REASONS, PROBE FOR THE 2 MOST IMPORTANT. DO NOT RECORD MORE THAN 2 REASONS.

NW11. (INTERVIEWER: Please see Interviewers Instructions for situations in which this question is skipped and mark #5 if you decide it should be omitted.)

If satisfactory day care that you could afford was available, do you think you would look for work?

- Yes 1
- No 2
- Depends (on what?) _____ 3
- Don't know. 4

(Respondent clearly not interested in working or sole reason for not working is "can't find a job") 5

10. Could you tell me approximately what the total income of your family was last year? (Total family income includes wages and salaries, pensions, dividends, interest, rent, net income from business or farms and any other money income received by the members of this family.)

INTERVIEWER: Where necessary, explain that the family includes all members of the household who are related by blood, marriage or adoption to the respondent.

Give card to respondent and record number of response:

<u>Annual Income</u>	
Under \$2000	1
\$2000 - \$2999	2
\$3000 - \$3999	3
\$4000 - \$5999	4
\$6000 - \$7999	5
\$8000 - \$9999	6
\$10,000 or more	7
Don't know	8
Refuse to answer	9

May I have your name and phone number so that my supervisor may check to be sure that I was really here?

Name _____
 Address _____
 Phone Number _____

FILL IN, DO NOT ASK:

<u>RACE</u>	
White	1
Negro	2
Oriental-American	3
American Indian	4
Other (Specify) _____	8

Is the operator Spanish-American (Puerto Rican, Mexican, Cuban, etc.) ?

Yes	1
No	2

Please describe on the back any unusual circumstances such as complicated pay arrangements or reciprocal babysitting arrangements, etc.

INTERVIEWER
INSTRUCTIONS

OPERATOR QUESTIONNAIRE

(SHORT FORM: FOR FAMILY DAY CARE HOMES)

FALL 1970

Westat Research, Inc.
11600 Nebel Street
Rockville, Maryland 20852

245

INTRODUCTION

Please record all answers clearly and legibly.

Record an answer for all questions, particularly, where there are several categories, each calling for a "Yes" or "No" answer. Do not leave any blanks.

Be sure to assure the respondent that all answers will be treated as confidential and that no individual respondent or Home will be identified in any of the reports growing out of this project.

The family day care homes will be identified through the use of the screening questionnaire, among the households canvassed in the area sample. The interviewer should keep the following identifying characteristics in mind while completing the screening.

To qualify as a day care facility a home must:

- 1) provide care for at least one child who is not a member of the household; for
- 2) at least 7 hours per day, and
- 3) at least 2 days per week, for
- 4) compensation.

If a home qualifies on the basis of the above factors, the interviewer must determine whether to use the long or the short form of the operator questionnaire. If the operator pays an individual to help in caring for the children most of the time the children are there use the long form. Otherwise use the short form.

INTERVIEWER INSTRUCTIONS

OPERATOR QUESTIONNAIRE (Short Form: Family Day Care Home)

2. The number she presently cares for may be more or fewer than she usually cares for, probe to find out the number she usually cares for.

3. If the operator takes care of two or more children from the same family, please note this in the 1st column by making brackets around the numbers of those children from the same family. Please also note this fact in the margin. Where an operator takes care of two or more children from the same family, obtain any special rates the operator gives. These could include discounts and fees based on income. Note this information below the table and give all types of fees she charges.
- 4c. Put in the unit for which the charge applied, e.g. \$5- per week.
- 20a. This table concerns all the members of the operator's household who live at this address. Please get exact job information when possible, i.e., welding foreman U. S. Steel. For children in family indicate that they are in school and any part-time jobs they may have.
21. Total family income includes all money coming into the operator's household from all family members including the money the operator receives from day care fees.

	Yes	No
Private playground (Not belonging to home)	1	2
Public playground	1	2
Other (Specify) _____	1	2

14a. How much of the time that the children are here do they usually spend:

	<u>Hours/Day</u>
Watching television? . . .	_____
Playing out-of-doors? . . .	_____
Playing indoors?	_____
Eating?	_____
Taking naps?	_____

14b. How much of the time that they are here do you usually spend:

	<u>Hours/Day</u>
Playing games with them?	_____
Reading to them?	_____

14c. Is there anything else that the children usually do while they're here that I haven't mentioned?
(DESCRIBE ACTIVITY AND HOURS PER DAY)

15. Do you teach the children:

	Yes	No
Songs	1	2
Letters of the alphabet.	1	2
Counting	1	2
Other (Specify) _____	1	2

16a. For how many families are you presently caring for children?

16b. For the following questions, I would appreciate your giving me your best estimates. Please give me the following information on the families of the children currently enrolled on a full-day basis.

Number of families _____

a. Parent's Marital Status:

Two parent household _____
One Parent household _____
 Female head of household only _____
 Male head of household only _____
Other (Specify) _____

Don't know _____

Total = _____

b. Family Income (before taxes):

Under \$2,000 _____
\$2,000 to \$3,999 _____
\$4,000 to \$5,999 _____
\$6,000 to \$7,999 _____
\$8,000 to \$9,999 _____
\$10,000 or more _____
Don't know _____

Total = _____

c. Employment Status of Mother:

Full time _____
Part time _____
Not working _____
Don't know _____

Total = _____

INTERVIEWER: TOTALS IN a, b AND c SHOULD EQUAL THAT REPORTED IN QUESTION 16a.

INTERVIEWER SAY: NOW I'D LIKE TO ASK YOU A FEW QUESTIONS ABOUT YOURSELF.

17. How long have you been caring for other people's children?

18a. Have you had any special training in caring for children?

Yes 1
No 2

18b. IF YES, What was this training?

	Yes	No
Nurses training	1	2
Early childhood education	1	2
Other (Specify) _____	1	2

19. How many years of school have you had?

Less than 8 years	1
Some high school	2
High school graduate	3
Some college	4
College graduate	5
Other (Specify) _____	6

20a. Could you please describe the members of your household to me. Please include all members living at this address. Start with yourself.

Person	Relationship to Respondent	Approx. Age	What is their occupation? - job, school, etc.	If Non-Working Adult, ask 20b.	
1	(Respondent)	_____	_____	Yes	No
2	_____	_____	_____	Yes	No
3	_____	_____	_____	Yes	No
4	_____	_____	_____	Yes	No
5	_____	_____	_____	Yes	No
6	_____	_____	_____	Yes	No
7	_____	_____	_____	Yes	No

FOR ALL ADULTS WHO ARE NOT WORKING, ASK:

20b. Does this person receive payments from Social Security or some other pension?

(CIRCLE ANSWER IN LAST COLUMN ABOVE)

20c. Do other members of your household help care for the children?

Yes 1
No 2

20d. IF YES, Which persons help you?

	Yes	No
Husband	1	2
Mother	1	2
Children	1	2
Other (Specify) _____	1	2

21. Could you tell me approximately what the total income of your family was last year? (Total family income includes wages and salaries, pensions, dividends, interest, rent, net income from business or farms and any other money income received by the members of this family.)

INTERVIEWER: Where necessary, explain that the family includes all members of the household who are related by blood, marriage or adoption to the respondent.

Give card to respondent and record _____ of response:

<u>Annual Income</u>	
Under \$2000	1
\$2000 - \$2999	2
\$3000 - \$3999	3
\$4000 - \$5999	4
\$6000 - \$7999	5
\$8000 - \$9999	6
\$10,000 or more	7
Don't know	8
Refuse to answer	9

22a. Do you receive any financial support for your day care services from other sources than the parent fees?

Yes 1
No 2 (SKIP TO Q.23)

22b. From what sources?

Federal, state or local government	1
Community organizations	2
Other (Specify) _____	3

23. Is your Home licensed to operate in this community?
Yes . . . 1 IF YES, For how many children? _____
No. . . . 2 IF NO, Are you in the process of
being licensed?
Yes 1
No 2

24. Do you get any assistance from state, county, or local agencies, such as help with program planning, menu suggestions, equipment lists, consultation about individual children?
Yes 1
No 2

25. May I have your name and phone number so that my supervisor can check to see that I have really been here?

Name _____

Phone # _____

INTERVIEWER: FILL IN, DO NOT ASK

I 1a.

RACE OF OPERATOR

Operator Questionnaire
(Long Form)
Editing and Coding Instructions

General Instructions

1. Use a red pencil for coding.
2. Put all codes on right hand margin of questionnaire.
3. Unless provided for in precoded items, the following codes will be used for "don't know" and "no answer."

Don't Know +

This code is to be used in all cases where the interviewer has indicated on the questionnaire that the respondent stated he/she did not know the answer.

No Answer -

This code is to be used in all cases where the respondent should have answered the question but did not do so.

If one of these codes (+ or -) is used in a field of more than one column always put the code in the first column of the field and fill in the rest of the field with zeros. (Example +00)

Items Common to All Cards

	<u>Card Columns</u>

Item No.

Instruction

Card
Column

Notice - There may be more than one type 30 (series) card. The number of cards depends upon the size of the regular staff and number of volunteers.

The coding of this data should be done on a special form whenever there is need for more than one card.

28b.

Title & primary function

11-12

Administrative

Director, owner	01
Assistant director	02
Secretary, receptionist	03
Bookkeeper	04
Clerk, typist	05

Child Service Related Personnel

Teacher	31
Teacher's aide, helper	32
Head teacher, supervisor	33

Supportive

Cook	51
Custodian, porter, maid	52
Driver	53
Nurse	54
Nutritionist, dietitian	55
Social worker	56
Doctor	57

Volunteer - job not given 71

Age use reported age 13-14

Race 15

If American Indian	- code	1
White	- code	2
Negro	- code	3
Spanish-American	- code	4
Oriental-American	- code	5
Other	- code	6

Card Type 30 (series), cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
28b. (cont.)	Sex	16
	If male code	1
	If female code	2
	Hours/week use reported	17-18
	Education level	19
	If less than 8 yrs. code	1
	Some high school	2
	High school graduate	3
	Some college	4
	BA or BS - graduate	5
	Some post-graduate	6
	Higher degrees	7
	Business, technical	8
	Nursing degree	9
	Major area	20
	Education	1
	Psychology	2
	Sociology	3
	Other	4
	Some nursery/day care training	5
	Present salary	21-25
	Notice - Monthly salary if reported as yearly or weekly amount. Assume the salary reported covers the same period of time the center is open, Q. 2b. If wages are reported on an hourly basis, multiply by the reported number of hours per week and by the number of weeks a year (52), then divide by 12 (months).	
	Years of related experience	26-28
	Code to the nearest 1/10 year using a three digit code with a decimal point between the 2nd and 3rd digits, e. g., 2 and 1/2 years would be codes 025.	

Card Type 30 (series), cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
28b., (cont.)	Length of time at center Code the same as given above for experience. Notice - Duplicate the same coding for each of the staff members and volunteers tested. The salary for the volunteer will be coded as (00000).	29-31
	2nd member of staff	32-52
	3rd member of staff	53-73
28a.	Total number of staff members coded for facility Notice - This number will be punched in the first card only of the personnel data deck. If e. g. a facility reported 16 staff members and volunteers, the number 16 would only be punched onto the first card. There would be 5 cards with 3 individuals each and a sixth card with data for the 16th individual.	77-78
	Card Type 30, 31, etc.	79-80

Day Care Operator
(Long Form)

Edit Rules

General

1. After editing a questionnaire put your initials in the upper right hand corner of the front page.
2. Use a red pencil for editing.
3. Whenever you make a change on the questionnaire put your initials next to the change and be prepared to give reasons why the change was made. Keep notes, identifying each questionnaire by the serial number found on the upper right hand corner of the cover page.
4. In questions where there is a possible yes-no answer (1 or 2) for each item in a question:
 - a. If at least one "1" is circled, any blanks must be circled "2".
 - b. If all blank, call the operator.
 - c. If at least one "2" is circled but the others are blank, call the operator.
5. Open End questions:
 - a. List all comments by question number.
 - b. If same answer previously given, tally it.

Specific Rules

Questionnaire
Item No.

1. Change years and months to total number of months.
- 2b. Change the times given so that they are based on the 24-hour clock. For example, 6 a.m. to 6:30 p.m. should read 0600 - 1830. (Must be at least 7 hours.)
4. Should agree with Q. 3. If a "1" is circled in Q. 3, then all of the children in Q. 4 should be full-day. If "2" is circled in Q. 3, all the children in Q. 4 should be part-day. If part-day children only, questionnaire is ineligible.

Questionnaire
Item No.

5. The number of full-day children in Q. 5 should equal number full-day in Q. 4. The same is true of part-day.
- 6a., 6b. and 8 Should individually add to the total full-day given in Q. 5.
7. The number recorded should be equal to or less than the number of full-day children in Q. 5.
9. If a list is maintained record number, zero included, on line provided.
If 2 (no list maintained) is circled, the line provided should be blank.
10. Must make sense in view of Q. 1. If center has been open less than a year, use judgment as to whether a given code should be circled, or a code 6 "not open long enough" should be used.
- 11a. If "no" then Q. 11b should be blank. If "yes" but no such children are enrolled at present there should be zeros in the blanks.
- 12a. If "yes" then Q. 12b should be blank.
- 12b. If "no" in Q. 12a, then at least one "yes" should be circled in Q. 12b.
- 13a. If "no", Q. 13b should be blank.
14. If "yes" in Q. 12a and center is owned and operated by one person or couple, Q. 14 should be coded 8. Code 7 should be used only in centers operated by a private company.
- 15a. If "owned", Q. 15b should be blank.
16. Check this answer with answer in section I (1).
17. If washbasins, toilet facilities or classrooms are circled "one", a number should be given for child-size and adult-size. If either child-size or adult-size has been left blank, edit in a zero. If both are blank fill in "NA" (no answer).
- 18a. If all "no", Q. 18b and 18c should be blank.

Questionnaire
Item No.

- 18c. If given as length X width convert figure to square feet (i. e., 10x10 = 100 sq. ft.)
19. If yes is checked make sure that "all, some or none" is written in and that a replacement cost is checked. If replacement cost is \$800 or more make sure actual cost is recorded.
23. There would be at least one check for each item a to g. It is possible to have two checks on a line. Check answers for consistency with Q. 45.
- 25a. Number of children listed should not exceed the total number of part-day children of school age (five and over) listed in Q. 4. The exceptions are (1) when a center is open more than 7 hours after school--until 10:30 p. m. or (2) five-year old kindergartners who come before and after school are listed as full-day.
If "no" to Q. 25a then Q. 25b, Q. 26a and Q. 26b should be blank.
- 28a. & b. If one person is running the center, then Q. 30, Q. 31, Q. 32 edit "no" and Q. 28c and Q. 29 edit 0.
Number entered in Q. 28a must agree with number listed in Q. 28b. If Q. 28a is one less than Q. 28b, edit it up one because operator probably forgot herself.
- 28b. Salary should be edited to a monthly basis. Make sure title of staff member is given, not name of staff member.
- 28c., 29 and 33. Number of teachers cannot exceed total staff given in Q. 28a.
29. Number certified must be equal to or less than number of college grads.
31. If "none at all" is circled then Q. 32 should be blank.
33. If "yes", must have some non-English speaking children in Q. 6b.

- 34a., b., and c. Each of these units should add to 100%. Convert numbers to percentages. Where numbers are given, make sure they correspond to full-day children given in Q. 4.
- 35a. If "a" is :no", "b" should be blank.
- 37a. and 47c. Round to nearest dollar amount. If 50 cents, round up to next dollar.
38. Total given must match Q. 37a. Individual items must add to the total. Check for consistency with Q. 12b, 13b and 46.
39. If "yes", Q. 40, 42, and 43 should be blank. Answer only in Q. 41. If "no" or "fee not codable" go to Q. 40. If "no fee" Q. 40 to 43 should be blank.
40. If "yes" to a, Q. 41, 43 should both be blank, answer only Q. 42.
If "yes" to b, Q. 41, 42 should both be blank, answer only Q. 43.
If "yes" to both a and b, Q. 41 should be blank, answer both Q. 42 and Q. 43.
If fee "not codable" in Q. 39, answer must be in Q. 40, then Q. 41 to Q. 43 should be blank.
41. When answered SKIP TO Q. 44, (Q. 42 and Q. 43 should be blank).
43. One number should be circled for each column and should descend or be the same in value. For example, if 4 is circled in the first column, then a 4, 3, 2 or 1 should be circled in the other two columns. If 3rd column is blank, code as "no answer".
If over \$45, figure should be to nearest dollar--round 50 cents up to next dollar.
If amount given is for other than a 5-day week, convert figures to weekly amounts.
45. For \$ per _____, if other than a time period (i. e., week, day, year) make note. Field trip can be per trip.
- 46, 47a, b, & c. Should add to 100%. Should agree with Q. 38 and Q. 12b.
If "no" to "a" then "b" is blank. Check Q. 47c with Q. 37 to see if amount received and spent are reasonable.

Questionnaire
Item No.

- 48a. If all "no" or "don't know", Q. 48b should be blank.
- 51a. Multiply any length x width figures out to square feet (i. e.,
10x10 = 100 sq. ft.)
- I-3 Edit to good, fair, poor.

Screening Questionnaire
Editing and Coding Instructions

Card Type 00

General Instructions

1. Use a red pencil for coding.
2. Put all codes on right hand margin of questionnaire.
3. Unless provided for in precoded items, the following codes will be used for "don't know" and "no answer."

Don't Know +

This code is to be used in all cases where the interviewer has indicated on the questionnaire that the respondent stated he/she did not know the answer.

No Answer -

This code is to be used in all cases where the respondent should have answered the question but did not do so.

If one of these codes (+ or -) is used in a field of more than one column always put the code in the first column of the field and fill in the rest of the field with zeros. (Example +00)

Numbering and Processing of Screening Questionnaires

1. Only the screening questionnaires leading to an interview (Operator Long or Short Form, or Parent Questionnaire) will be numbered and processed.
2. The first 14 columns, representing the identification of the questionnaire will be entered on the right upper margin, above the heavy black line (see attached example).

<u>Cols. 1 - 2</u>	<u>PSU No.</u>	01	in example
<u>Cols. 3 - 4</u>	<u>Center (home no.)</u>	26	in example

If this is a Day Care Center and long form operators questionnaire has been filled out, enter here the next available center number within the appropriate PSU and county. Thus, if in PSU 01, county 02, we have listed and interviewed 25 centers, the number of this center will be 26.

If this is a user interview, code center number through which parent (user) was contacted. If this is a Family Day Care Home (Operator Questionnaire: Short Form) number consecutively within each PSU and county.

Col. 5 County no. 2 in example
 Col. 6 Type of block or ED--Blank when respondent is user;
 Col. 7 Type of response

Use the following code for this column.

Day Care Center	1	*1-Poverty, Central City
Family Day Care Home	2	2-Non-poverty, Central City
User		3-Other Urbanized Areas outside Central City
Working	3	4-ED outside Urbanized Areas
Non-working	4	
Area Sample		
Working	5	
Non-working	6	

In the attached example this is a Day Care Center and therefore is coded as 1.

Cols. 8-10 Parent no. 000 in example
 Since this is a Day Care Center the parent no. will be 000. For all other parent questionnaires the parents will be numbered starting with 001 within each PSU.

Cols. 11-14 Tract or ED no. 0059 in example
 This number indicates that this Day Care Center is located in tract no. 59. Some tracts or EDs are designated by numbers followed by decimals, for instance 1805.01. In such a case disregard the decimals and code as 1805. Note: In the case of user interviews this field will be coded 0000.

Cols. 15-16 are blank.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Col. Nos.</u>
1.	Record actual number	17-18
2.	Child No. 1	
	Actual age	19-20

Screening Form and
Parent Questionnaire
Edit Rules

General Instructions

1. Make sure I. D. number printed on Screening Questionnaire matches I. D. number entered by interviewer on Parent Questionnaire.
2. Before starting to edit Screening Questionnaire, look over the Parent Questionnaire and determine whether you are dealing with a user questionnaire or an area sample case. If you are dealing with an area sample case make sure you are dealing with
 - a. a working mother
 - b. a non-working mother

The way to determine whether you are dealing with an area sample case or a user is first to look at the Screening Questionnaire. In the case of a User, only questions 1 and 2 of the Screening Questionnaire should be filled out. In addition, in the Parent Questionnaire, the box entitled "Instructions for Center User Interviews" on the second page of the questionnaire should be filled in.

In order to distinguish between a working and non-working mother in the area sample cases look at question 3a of the Parent Questionnaire. If any of the "yes" boxes are checked you are dealing with a "working" mother, if "none of these" is checked, you are dealing with a non-working mother.

SCREENING QUESTIONNAIRE

See Editing and Coding Instructions for Screening Questionnaire to determine rules for code numbers which are on the upper right-hand corner of the Screening Questionnaire.

Only Screening Questionnaires resulting in an interview will be edited, coded and punched; therefore, in all the questionnaires you are dealing with at least one child under 13 must be entered in Q. 2 Table A.

Be sure that pattern resulting in Parent Questionnaire is correctly followed in Q. 3 to 7. If pattern is correct and if this should not be an Operators Questionnaire (long or short form) go to Q. 8.

If this is an area sample case, the income must be marked as being less than \$8,000. If this is a user case, the income may be above or below \$8,000.

If in an area sample case, Q. 8 is either not answered or the answer was refused, check the answer to Q. 10 in the Parent Questionnaire. If that question is answered edit the proper answer into the Screening Questionnaire. If this answer is more than \$8,000 put both questionnaires aside and call it to the attention of the supervisor. If income is below \$8,000 proceed with editing. If the answer to Q. 10 also is refused, put both questionnaires aside and call them to the attention of the supervisor.

PARENT QUESTIONNAIRE

Questionnaire Item No.

- 1a. and 1b. Make sure that the number entered in C. 1a matches the number of persons listed in Q. 1b.
- 3a. More than one of the "yes" boxes may be checked; however, if the "none of these" box is checked, no others can be checked. If the "none of these" box is checked then this should be a "non-working" mother. The questionnaire should continue with Q. NW1 on page 5; all questions in between should be blank.
- If any of the "yes" boxes are checked, the questionnaire should continue with Q. 3b and all of the "non-working" mother section should be blank.
- 4a. & 4b. Convert a.m. and p.m. times into time according to 24-hour clock.
5. Day Care Chart
- First, make sure that a day care chart is filled out for each one of the children listed in Table A for whom the respondent is responsible.
- Make sure that the correct child number has been transferred from Table A to box in upper left of Day Care Chart. Check to see that age and sex of the child correspond to information given in Table A.
- 5I & 5II. Make sure that all of the hours the mother was away from home (Q. 4a and 4b) are accounted for under "arrangement" and "hours" in 5I and 5II.

Questionnaire
Item No.

- 5III Convert to "weekly" if amount is for a different time period. If one lump sum is given for two or more children, divide by the number of children and allocate equal parts to each child. Any pay arrangements described in the "comments" section should be called to the attention of your supervisor.
- Columns 5III - 5V should not have been asked for periods the child was in school. They should be blank.
- 5V Keep a list of reasons of dissatisfaction (together with the identification number of the questionnaire), so that a code can possibly be developed from the answers.
- 6a. If this question is answered make sure from Table A that respondent has at least one pre-elementary school child.
- 6b. If amount is stated in terms other than weekly, convert to weekly.
- 7a. If this question is answered make sure, from Table A, that respondent has at least one child old enough to be in elementary school.
- 7b. If this question is answered make sure, from Table A, that respondent has at least one pre-elementary school child.
- NW1. If this, and the following NW questions are answered, make sure by looking at Q. 3a that this really is a non-working mother.
- Only one answer should be marked for this question.
- NW 5 & NW6. If a or b are checked, Q. NW6 should not have been asked or answered. It should be blank. If a and/or b are not checked a "yes" or "no" answer should appear in NW6.
- NW9. No more than two different arrangements per child will be coded. If more reasons are checked for any one child, consult with supervisor
- Make sure that at least one box is checked for each child listed in Table A of the Screening Questionnaire.
- NW10. No more than two reasons should be checked.

NW11. If code 5 is circled, check for the following:

In Q. NW1, code should be 9

In Q. NW10, a, e, or f should be checked.

End of "non-working" mother section. The questions on page 8 of the questionnaire should be answered for all respondents.

10. If no dollar amount is circled, number 8 or 9 should be circled. If this is an area sample interview an amount under \$8,000 must be checked.

Parent Questionnaire
Editing and Coding Instructions

CARD TYPE 01

General Instructions

1. Use a red pencil for coding.
2. Put all codes on right-hand margin of questionnaire.
3. Unless provided for in precoded items, the following codes will be used for "don't know" and "no answer".

Don't Know +

This code is to be used in all cases where the interviewer has indicated on the questionnaire that the respondent stated he/she did not know the answer.

No Answer -

This code is to be used in all cases where the respondent should have answered the question but did not do so.

If one of these codes (+ or -) is used in a field of more than one column always put the code in the first column of the field and fill in the rest of the field with zeros. (Example +00)

Columns 1 through 16 will be transferred from Screening Questionnaire leading to use of parent interview. (See instructions for editing and coding screening questionnaire.)

Operator Questionnaire
(Short Form)
Editing and Coding Instructions

General Instructions

1. Use a red pencil for coding.
2. Put all codes on right hand margin of questionnaire.
3. Unless provided for in precoded items, the following codes will be used for "don't know" and "no answer."

Don't Know +

This code is to be used in all cases where the interviewer has indicated on the questionnaire that the respondent stated he/she did not know the answer.

No Answer -

This code is to be used in all cases where the respondent should have answered the question but did not do so.

If one of these codes (+ or -) is used in a field of more than one column always put the code in the first column of the field and fill in the rest of the field with zeros. (Example +00)

Items Common to All Cards

	<u>Card Column</u>
PSU No.	1-2
Home No.	3-4
County No.	5
Home code 2 for all	6
Tract or ED No.	7-10

Card Type 01

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
1a.	Number of days/week	17
1b.	Hours the home is opened Use 0100 - 2400 to code opening and closing times, e. g., 7:30 a. m. to 6:30 p. m. would be coded 0730 1830 (see card)	From 18-21 To 22-25
2.	Enter no.	26-27
4a.	Provide transportation - precoded	28
4b.	Extra for transportation - precoded	29
4c.	How much do you charge?	30-31
	<u>Notice</u> - Record dollar amount to the nearest dollar and write in the right hand margin. If the fee is given for other than a 5-day week, adjust accordingly.	
5.	Meals served - full day - precoded	
	Breakfast	32
	Lunch	33
	Dinner	34
	Morning snack	35
	Afternoon snack	36
	Coder record from Q. 3	37
	Some children six years of age of older present 1	
	No such children present 2	

Card Type 01, cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
6a.	How many children	
	Before } enter no. of children	38 -39
	After } enter no. of children	40 -41
	Both } enter no. of children	42 -43
6b.	Meals served school aged children	
	Breakfast	44
	Lunch	45
	Dinner	46
	Morning snack	47
	Afternoon snack	48
7a.	School aged children in your home - summer months Precoded	49
7b.	No. of school aged children	50-51
8.	Minor illness (precoded)	52
9.	Emergency services	
	Hospital/clinic	53
	Physician	54
	Nurse	55
10.	Physical exam. (precoded)	56
11a.	Precoded	57
11b.	Full day } enter actual no.	58-59
	Half day } enter actual no.	60-61

Card Type 01, cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
12.	Equipment, etc. - precoded	
	Fire ext.	62
	Running water	63
	Flush toilet	64
	Child size tables	65
	Telephone	66
	Isolation space	67
	Television	68
	Cots, etc.	69
	Musical toys, etc.	70
	Doll play, etc.	71
	Art equipment	72
	Books, etc.	73
	Tricycles, etc.	74
	Other	75
	Card Type 01	79-80

Card Type 02

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
13a.	Precoded	17
13b.	Precoded (If "no" in Q. 13a, leave blank.)	18
13c.	Swings Sand box Slide Jungle gym Other (If "no" in Q. 13a, leave blank.)	19 20 21 22 23
13d.	Private Public Other (If "yes" in Q. 13a, leave blank.)	24 25 26
14a.	Watching television Playing outside Playing inside Eating Napping Record no. of hours, round half hour to nearest hour.	27 28 29 30 31
14b.	Playing games with them Reading to them	32 33
14c.	Anything else 1st mentioned 2nd mentioned	34 35
	<u>Response</u>	<u>Code</u>
	Dance	1
	Paint or coloring	2
	Nothing	0
15.	Precoded	36-39
16a.	Code actual no.	40-41

Card Type 02, cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
16b.	No. of full-day families	42-43
16ba.	Code actual no. Total must equal no. of families coded in Q. 16b.	
	Two parents	44-45
	Female head of household only	46-47
	Male head of household only	48-49
	Other	50-51
	Don't know	52-53
	Total	54-55
16bb.	Under 2,000	56-57
	2,000-3,999	58-59
	4,000-5,999	60-61
	6,000-7,999	62-63
	8,000-9,999	64-65
	10,000 or more	66-67
	Don't know	68-69
	Total (must equal total in Q. 16b and 16ba)	70-71
16bc.	Full-time	72-73
	Part-time	74-75
	Not working	76-77
	Card Type 02	79-80

Card Type 03

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
16bc. cont.	Don't know Total (must equal total in Q. 16b, 16ba, and 16bb)	17-18 19-20
17.	Convert years to months	21-23
18a.	Precoded	24
18b.	Nurse Early childhood Other	25 26 27
	If "no" in Q. 18a, leave blank.	
19.	Precoded	28
20a.	1st person <u>Relationship</u>	29
	1. Self	
	2. Husband	
	3. Wife	
	4. Son	
	5. Daughter	
	6. Other male relative	
	7. Other female relative	
	8. Non-relative male	
	9. Non-relative female	
	<u>Age (actual)</u>	30-31
	<u>Occupation</u>	32
	1. School	
	2. Pre-school	
	3. Paying job	
	4. Non-paying job	
	5. Non-working adult	
20b. (1st person)	Yes 1 No 2	33
(2nd person)		34-38
(3rd person)		39-43

Card Type 03, cont.

<u>Questionnaire Item No.</u>	<u>Instruction</u>	<u>Card Column</u>
20b., cont.		
(4th person)		44-48
(5th person)		49-43
(6th person)		54-58
(7th person)		59-63
	Total no. of persons listed	64-65
	If more than 7 persons are listed go to card type 20; start with column 29; e. g., the 8th person would be coded on card type 20, columns 29-33 and so on.	
20c.	Precoded	66
20d.	Precoded	67-70
21.	Precoded	71
22a.	Precoded	72
22b.	What sources	73

Code as follows:

<u>Response</u>	<u>Code</u>
a. Fed., state, local	1
b. Community organization	2
c. Other	3
Combination	
a & b	4
a & c	5
b & c	6
a, b & c	7

Edit Rules

General Instructions

1. After editing a questionnaire, put your initials in the upper right-hand corner of the front page.
2. Use a red pencil for editing.
3. Whenever you make a change on the questionnaire put your initials next to the change and be prepared to give reasons why the change was made. Keep notes, identifying each questionnaire by the serial number found on the upper right-hand corner of the cover page.
4. In questions where there is a possible yes-no answer (1 or 2) for each item in a question:
 - a. If at least one "1" is circled, any blanks must be circled "2"
 - b. If all blank, call the operator
 - c. If at least one "2" is circled but the others are blank, call the operator.
5. Open End questions:
 - a. List all comments by question number.
 - b. If same answer previously given, tally it.

Specific Rules

Questionnaire
Item No.

- 1b. Change the times given so that they are based on the 24-hour clock. Example: 6:00 a. m. to 6:30 p. m. should read 0600-1830.
3. The total children listed should be the same as or less than Q. 2. The total will be less than if the respondent cares for children older than 13 years of age.

If amount given is for other than a 5-day week, convert figures to weekly amounts.

Questionnaire
Item No.

- 4a. If "no", then Q. 4b and Q. 4c should be blank.
- 4c. If "yes" to Q. 4a, figure should be rounded to nearest dollar -- round 50 cents up to next dollar.
- If the amount given is for other than a five-day week, adjust accordingly.
- 6a. Record "some" -- code 1 -- or "none" -- code 2.
- Should correspond with Q. 3. Number of children listed should not exceed the total number of part-day children of school age (5 or over) listed in Q. 3. Exceptions:
(1) When the center is open more than 7 hours after school -- until 10:30 p. m. at night, or (2) five year-old kindergarteners who come before and after school and are listed as full-day.
- If "none", then Q. 6b should be blank.
- 7a. If "no", then Q. 7b should be blank.
- 11a. If "no", then Q. 11b should be blank.
- If "yes" but no such children are enrolled at present, there should be zeros in the blanks.
- 13a. If "no" then Q. 13b and Q. 13c should be blank.
- If "yes" then Q. 13d should be blank.
- 14a. Record number of hours reported. Round half hours to nearest hour.
- Total hours reported should not exceed number of hours reported in Q. 1b.
- 14b. Same as Q. 14a.
- 14c. Record individual answers.
- 16a. Includes families of both full-day and part-day enrolled children.

Questionnaire
Item No.

- 16b. Number of families of children currently enrolled on a full-day basis. May be less than Q. 16a.
- 16ba. Totals reported in Q. 16ba, Q. 16bb, and Q. 16bc must be same as reported in Q. 16b.
17. Convert years to months.
- 18a. If "no", Q. 18b should be blank.
19. Add: Vocational 7
Nursing 8
- 20c. If "no", then Q. 20d should be blank.
- 22a. If "no", then Q. 22b should be blank.

G. 5 Superintendents Questionnaire - Editing and Coding Rules	G-6
G. 6 Mail Questionnaire to School Superintendents - Response Rates.	G-7

Procedure for Mail Questionnaire to School Superintendents

- 1) This mail questionnaire is to be sent to all school district superintendents in the selected PSUs, except where there are less than 300 students in the district.
- 2) The questionnaire will be mailed to the superintendents together with a letter from OEO explaining the purpose of the survey and asking for the cooperation of the superintendent.
- 3) A franked return envelope, addressed to Westat will be included with the questionnaire.
- 4) The superintendents will be asked to complete the questionnaire within one week after receipt.
- 5) If the completed questionnaire has not been received here at Westat's main office 15 days after mailing a follow-up letter will be sent to the superintendent together with another copy of the questionnaire and another franked return envelope.
- 6) We estimate that this procedure should result in a return rate of not less than 75 percent.

OFFICE OF ECONOMIC
OPPORTUNITY

EXECUTIVE OFFICE OF THE PRESIDENT
WASHINGTON, D.C. 20506

January 1971

Under contract with the Office of Economic Opportunity, Westinghouse Learning Corporation and Westat Research Incorporated are conducting a national survey of day care for children. The purpose of this study is to find out about the availability of day care services nationwide, the extent of the need for day care, and the factors which must be considered in developing plans for any significant expansion of day care nationally.

In addition to conducting face-to-face interviews with operators of day care centers and with mothers who use such centers, we also need some information from public school officials.

For this reason we are sending the enclosed brief questionnaire to a national sample of public school superintendents. It asks about the availability of school-operated day care for pre-school children and before-and-after school day care for school-aged children.

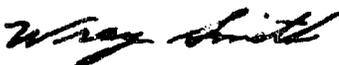

For purposes of this survey, "day care" should be considered as supervised care made available to parents as a continuous program. An example of a program which should not be counted as day care, would be an occasional, 10-12 week, athletic program that does not cover all the weeks in the school year.

We have tried to make the questionnaire simple and easy to complete. We earnestly solicit your cooperation in this effort. The survey, which is the first to be conducted on a national cross-sectional basis in the day care field, will provide badly needed information for both national and regional policy makers and planning bodies. There will be no identification of specific school districts in our published reports.

Please complete the attached form and return it in the enclosed postage-paid envelope directly to Westat Research, Inc.

We thank you for taking the time to respond to our questions.

Sincerely,

WRAY SMITH, Project Manager
Day Care Survey and Analysis
Office of Research and Evaluation

Westat Research, Inc.

Rockville, Maryland 20852
Telephone 301-881-5310

January 18, 1971

Dear Superintendent:

Two weeks ago we mailed you copies of the attached letter from the Office of Economic Opportunity and the enclosed questionnaire.

To date we have not received your completed questionnaire. Since it is possible that the first mailing went astray, we are sending you another copy of the questionnaire. Would you please take a few minutes, fill out the questionnaire and return it in the enclosed postage-paid envelope.

Your cooperation will be greatly appreciated.

Sincerely,

James M. Daley
Project Director

PUBLIC SCHOOL DAY CARE PROGRAMS

A. PRE-SCHOOL AGE CHILDREN

1. Do any of the schools in your district operate a program of supervised day care for pre-school age children?

Yes 1
 No 2 (SKIP TO ITEM 5)

IF YES (there is a program):

2. Please fill in the table below.

	NUMBER OF SCHOOLS	APPROXIMATE NUMBER OF CHILDREN
Full-day only		
Part-day only		
Full-day and Part-day		

If only part-day program is offered, SKIP TO ITEM 4.

3. If any children receiving FULL-DAY CARE are entered in the above table, do parents usually have to pay anything for having their children in this program?

- a. Yes, parents pay the following per child. . . 1
 \$ _____ per _____
- b. Yes and No, depending on family income, number of children or other factors 2
- c. No, parents do not pay 3

4. Does this program generally offer (CHECK ALL THAT APPLY):

	CUSTODIAL CARE	SUPERVISED RECREATION	EDUCATIONAL PROGRAM	OTHER (SPECIFY)
Full-day Program				
Part-day Program				

B. SCHOOL-AGE CHILDREN

5. Do any of the schools in your district operate a program of supervised day care for school-age children?

Yes 1
 No 2 (SKIP TO ITEM 8)

IF YES (there is a program):

6. Please fill in the table below.

	NUMBER OF SCHOOLS	APPROXIMATE NUMBER OF CHILDREN	DO PARENTS USUALLY HAVE TO PAY FOR THIS PROGRAM?	
			Yes	No
Before School only				
After School only				
Before and After School				

7. Does this program generally offer (CHECK ALL THAT APPLY):

	CUSTODIAL CARE	SUPERVISED RECREATION	EDUCATIONAL PROGRAM	OTHER (SPECIFY)
Before School only				
After School only				
Before and After School				

8. Thank you for your cooperation. Please return your completed questionnaire in the enclosed envelope.

Superintendents Questionnaire
Editing and Coding Rules

General Instructions

Code the following in order:

1. PSU No. two digits with leading zero where applicable.
2. County No.
3. County Weight.
4. District number within county. Number districts consecutively as they are coded.
5. Number of schools in district. This number is found in "Education Directory, Public School Systems, 1969-70."
6. Enrollment in district. This figure is also found in the above-mentioned publication.

Questionnaire

Item No.

1. Precoded
If the answer is 2, questions 2, 3, and 4 are blank.
2. Code actual numbers.
3. Precoded. If the answer is 1 and a dollar amount is given, convert to a "per week" figure, if necessary.
4. Code only those types of programs which are offered.

Custodial Care	1
Supervised Recreation	2
Educational Program	3
Other	4
5. Precoded. If answer is 2, questions 6 and 7 should be coded as blank.
6. Code actual numbers, first for "before school only", then "after school only" and last for "before and after school." In regard to whether parents pay or not, code for each category.

Yes	1
No	2
7. Same procedure as Item No. 4.

Mail Questionnaire to School Superintendents

Response Rates

The mail questionnaire was sent to 1,400 public school district superintendents in the counties and PSUs that made up the day care sample.

Of the 1,400 questionnaires that were mailed, 1,277 or 91 1/2 percent were returned within 1 month. Of these returned, 112, or eight percent indicated that some day care was provided in public schools within that district.

APPENDIX H

CONTINGENCY TABLE ANALYSIS

APPENDIX H

CONTINGENCY TABLE ANALYSIS

A number of two-way associations were investigated using contingency tables. These analyses were restricted to selected items on the center and parent questionnaires and used only unweighted frequencies or counts.

The use of unweighted counts is contradictory to the assumptions underlying the chi-square contingency table analysis and the results should be used with some caution. The optimum technique for using contingency table analysis with frequencies having different probabilities of selection is to introduce a third or weighting dimension and to first determine independence relative to this dimension. If the results of the two-way analyses seem to be the same at all weight levels, then the differential weighting can be ignored.

In the present study, there were several weight levels. Use of the above procedure would have caused a serious reduction in sample size if each level were studied separately. Also, construction of the needed tables would have been a major processing task and outside the bounds of the present level of effort.

Some insight into the magnitude of the differences resulting from the selections with unequal probabilities is obtained by comparing the results of the analysis using observed, unweighted frequencies with the results using "average" frequencies. For a selection of two-way analyses, each cell of the table of weighted frequencies was divided by the average weight to produce a table of "average" frequencies. The table of "average" frequencies was then subjected to the ordinary contingency table analysis. A comparison of the differences in the computed chi-square values for the two kinds of frequencies is given in Table H-1. The chi-square values computed from the "average" frequencies are mostly within 15 percent of the usual chi-square value and

would not ordinarily lead to different conclusions relative to the likelihood of an association. The one extreme difference (item 5) involves the largest number of cells which might explain the relatively much larger chi-square using "average" frequencies. However, even here, the analysis would not be affected by the big difference.

Also included in Table H.1 are chi-square values based on the information statistics applied to the unweighted frequencies*. These computed chi-square values have actually been computed for all of the analyses but are given here for this selection of items as examples of the differences obtained. In general, the chi-square value obtained using the usual analyses and that using the information statistics differed very little. The calculation of these two chi-square values is described in the following paragraph.

Let x_{ij} be the unweighted frequency of the ij^{th} cell where $i = 1, 2, \dots, r$ and $j = 1, 2, \dots, c$ are the row and column indices respectively in an $r \times c$ contingency table. Then

(a) The usual chi-square is

$$\chi^2 = \sum_{i=1}^r \sum_{j=1}^c \frac{(x_{ij} - \frac{x_{i.} x_{.j}}{x_{..}})^2}{\frac{x_{i.} x_{.j}}{x_{..}}}, \quad (1)$$

and

(b) The information statistic chi-square is

$$\chi^2 = 2 \sum_{i=1}^r \sum_{j=1}^c x_{ij} \log (x_{..} x_{ij} / x_{i.} x_{.j}), \quad (2)$$

where $\sum_{i=1}^r x_{ij} = x_{.j}$; $\sum_{j=1}^c x_{ij} = x_{i.}$; and

$$\sum_{i=1}^r \sum_{j=1}^c x_{ij} = x_{..}$$

Table H.2 summarizes the results of the associations investigated in the present study. This table indicates the source of the counts used, the number of degrees of freedom and the approximate level of significance. The counts are unweighted frequencies obtained from the questionnaires given in the data units column and related to particular cross-classification as given by the two classification variables. The particular question involved is given in parenthesis along with the names of the first and second classification variables.

If a two-way cross tabulation involves r rows and c columns or rc cells, then there are $(r-1) \cdot (c-1)$ degrees of freedom. This simply indicates the parameter of the chi-square distribution of interest in any particular case. The table of frequencies used in the analysis was formed so that no single cell frequency was less than five. If rows or columns had to be collapsed to accomplish this goal, this was done manually to assure logical combinations. The actual row and column headings appropriate to any one analysis are available from the source computer printouts aided by the question references given in Table H.2.

The level of significance is the probability of obtaining a chi-square value as large or larger than the computed chi-square by chance alone, if the classifications were independent. The smallest tabled probability is 0.001 so that values at this probability may in fact be considerably smaller. All the probabilities given in Table H.2 are with respect to the usual computed chi-square. If the level of significance or probability would have been different using the chi-square value based on the information statistic, this is indicated in a footnote.

Table H.1 Comparison of Computed Chi-Square Values for Selected Items

Item	Data Units and Classifications	Degrees of Freedom	Computed χ^2 Values		
			Unweighted Frequencies	Information	"Average" Frequencies
