## ABSTRACT

This report presents summary analyses based on data obtained in a study of the physical facilities inventory and the regularly scheduled resident classes taught at the state-controlled colleges and universities in Virginia. The data reflect the actual utilization of instructional classrooms and teaching laboratories for Fall 1970, and are presented for both the resident day classes and the resident evening classes taught Monday through Saturday. The report is divided into 3 sections. The first section presents data relating to the utilization of instructional space by resident day classes only. The second section presents data relating to the utilization of space by resident evening classes only. The final section compares figures on resident day classes for Fall 1968 and Fall 1970. (HS)

and Mary, Petersburg

---

<sup>a</sup>Data for Virginia Commonwealth University reflect the Academic Center only. Data for the Health Sciences Division were not included.

<sup>b</sup>Data for Lord Fairfax Community College and New River Community College were not included in this report since all resident class instruction was conducted in leased or rented facilities.

<sup>c</sup>Eastern Shore College and Patrick Henry College, reflected in this report as two-year branch colleges, became part of the Virginia Community College System on July 1, 1971.

## INTRODUCTION

During the academic year 1970-71, the State Council of Higher Education for Virginia conducted an extensive study of Higher Education Facilities in Virginia as part of a comprehensive planning study funded by the Division of Academic Facilities of the U. S. Office of Education. This study, relating to current facilities, was designed to provide information useful in planning future construction needs for higher education in Virginia. A result of this research, as presented in this report, provides insightful data and analyses as of Fall 1970 for all state-controlled institutions of higher education in Virginia. This report presents information with regard to the actual utilization of instructional classrooms and teaching laboratories.

A basic factor in the determination of long-range physical facilities needs is an analysis of the utilization of existing space. Such information may provide clues concerning the efficiency of the management of current facilities, and thereby may be of assistance to institutions in obtaining greater utilization in future years. Moreover, a study of this nature is essential to the review of space planning guides established for the use in determining future construction needs to meet anticipated increases in enrollment in higher education in Virginia.

This report is the third in a series which have presented comprehensive summary analyses in separate tables for instructional classroom and laboratory space. The first of the series entitled Utilization of Instructional Space at Virginia's Colleges was released in December, 1968 and reflected data as of Fall 1967. The second in the series, Utilization of Instructional Space, presented data as of Fall 1968 and was published in September, 1969. Selected data from the latter of those reports appear in Section III of this report for purposes of comparison. Funds to conduct this research were received from a Higher Education Facilities Comprehensive Planning Grant from the Division of Academic Facilities of the U. S. Office of Education.

This report presents summary analyses based on data obtained in a study of the physical facilities inventory and the regularly scheduled resident classes taught at the state-controlled colleges and universities in Virginia. Data on leased or rented facilities and resident class instruction conducted in these non-state owned facilities were excluded from the study. The Health Sciences Division of Virginia Commonwealth University, the Departments of Marine Science and Medical Instruction and related facilities at the University of Virginia, the School of Marine Science at The College of William and Mary, and the Virginia Associated Research Center have also been excluded from the study.

The data which appear in this report reflect the actual utilization of instructional classrooms and teaching laboratories for Fall 1970. Other space, such as instructional service areas, special class laboratories and faculty offices, although classified as instructional space, is not included in these analyses.

For the purposes of this report, data have been presented for both the resident day classes taught and the resident evening classes taught that utilize instructional classroom and/or teaching laboratories Monday through Saturday. The time period for day classes (7:00 a.m. through 4:59 p.m.) has been divided into ten 50-minute periods with 10-minute intervals between periods. The evening schedule (5:00 p.m. to 11:00 p.m.) has been divided into six 50-minute periods with 10-minute intervals between classes. This division provides not only a common daytime basis for comparison of data but also indicates the degree of evening usage of space in all of the institutions. Where necessary, appropriate adjustments have been made in the data to equate them to 50-minute periods.

The total amount of instructional space included in this report is 2,157,112 assignable square feet. Of this amount, 1,133,242 assignable square feet is classified as general classroom space. This figure represents 25.3 per cent of the total instructional space and 14.9 per cent of the total educational and general space in the state-controlled institutions in Virginia.

The 1,023,870 assignable square feet of teaching laboratory space considered in this report is 22.8 per cent of the total instructional space and 13.4 per cent of the total educational and general space in Virginia's state-controlled institutions.

It should be noted that the analyses that appear in this report are based on quantitative data only and do not reflect the quality of instructional space in either of the classifications.

This report is divided into three sections. The first section presents data relating to the utilization of instructional space by resident day classes only. The second section presents data relating to the utilization of resident evening classes only. The third section compares figures on resident day classes for Fall 1968 and Fall 1970.

## DEFINITIONS OF TERMS

Period--A unit of time approximating one hour during which time a class would be assembled. For the purposes of this study, a normal class period consisted of 50 minutes of instruction with an allowance of 10 minutes for changing classes. A scheduled class meeting of two consecutive hours, or a total of 110 minutes, was considered as 2.2 class periods. Classes meeting in other time patterns were included in this study as proportional parts of the standard 50-minute period. For example, a class meeting scheduled for 75 minutes has been reflected in this study as 1.5 class periods.

Room-Period Use--The number of periods (usually interpreted as hours) that a room is occupied by a class. A room, for the purposes of this report, was considered in use whenever a regularly scheduled class was conducted in it regardless of the relationship of the seating capacity of the room to the student enrollment of the class.

Average Room-Period Use Per Week--An average determined by dividing the total number of room-periods scheduled per week by the total number of rooms.

Student Station--The area used to accommodate one student for one period of instruction. It is normally considered to be the area occupied by a desk, chair, laboratory table, or other suitable furnishing.

Student-Station-Periods Occupied (SSPO)--The number of student stations that are occupied in a given time period. For example, the occupancy of one student station for one room-period (50 minutes) would represent one student-station-period occupied. The following formula may be applied in obtaining the total SSPO for a given week:

$$\text{Total SSPO/Wk.} = \frac{\text{Total Student Minutes Occupied}}{50 \text{ Minutes}}$$

Student-Station-Periods Occupied Per Week Per FTE Student (SSPO/W/FTE)--A statistic that represents the number of hours (periods) per week that each FTE student utilizes a student station in a given facility (i.e. general classroom, teaching laboratory, etc.). The figure is obtained by dividing the total student-station-periods occupied per week by the number of FTE students.

Average Student-Station-Periods Per Station Per Week--The average number of hours (periods) that a student station is used per week as obtained by dividing the total SSPO by the total number of student stations.

Per Cent of Station Use Per Week When Room In Use--A measure of how nearly the total number of student stations in a room are filled only during those periods that regularly scheduled classes are held in the room.

## DEFINITIONS (Continued)

Full-Time-Equivalent Student (FTE)--A statistic derived from the student-credit-hour productivity of an institution. The number of FTE students is obtained by dividing the total number of undergraduate, first professional, and graduate semester or quarter credit-hours produced by 15, 15, and 12 respectively.

Full-Time-Equivalent Day Students--That number of FTE students who attend classes during the hours from 7:00 a.m. through 4:59 p.m.

Daytime Class--Any scheduled class with beginning time between and including 7:00 a.m. and 4:59 p.m.

Evening Class--Any scheduled class with beginning time between and including 5:00 p.m. and 11:00 p.m.

Assignable Square Feet (ASF)--The square footage in a building assigned to or available for assignment to an occupant, including every type of space functionally usable by an occupant (excepting custodial area, circulation area, and mechanical area).

Educational and General Space--That space referred to as academic and administrative support space. Generally, it is that part of the facilities inventory related to the education, research, and extension and public service activities of the institution as well as the necessary supporting activities of general administration, student services, public relations and other general institutional activities, libraries, and physical plant maintenance and operations.

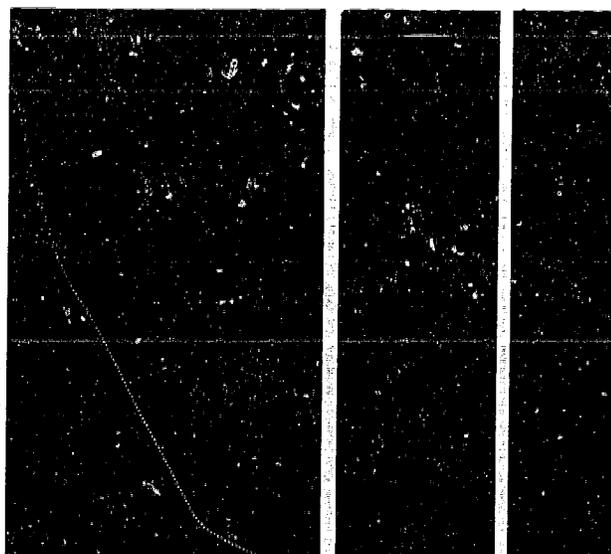

Class Enrollment--The number of students enrolled in a class. This figure includes all students who require accommodations in the facility where the class meets, whether they are enrolled for credit or as auditors. Further, the total group of students meeting in the same room and at the same time have been consolidated as a single class, irrespective of the courses in which they are enrolled.

General Classroom--A room used by regularly scheduled instructional classes which do not require special purpose equipment for student use. Included in this category are rooms generally referred to as lecture rooms, seminar rooms, lecture-demonstration rooms, and general purpose classrooms.

Teaching Laboratory--A room used by regularly scheduled instructional classes which require special-purpose equipment for student participation, experimentation, observation, or practice in a field of study.

The tables which appear in this section present a summary of room-period and student-station-period utilization of instructional space for general classrooms and teaching laboratories. The data presented in these tables relate to regularly scheduled resident day classes only and were derived from two sources of information. Initially, information concerning such items as room number, functional use, room type, square footage, and number of stations for each room at each institution was obtained in a room-by-room inventory for the fall semester or quarter 1970. Secondly, information relating to items such as course number, credit value, enrollment, days of the week, hours of the day, building and room number of each regularly scheduled resident day class taught for the fall semester or quarter 1970 was obtained from each institution as a part of the State Council's data collection system. By cross referencing these basic sources, information on student-station occupancy and room-period use by room was obtained.

**SUMMARY UTILIZATION TABLES OF  
CLASSROOMS AND LABORATORIES  
DAY CLASSES ONLY**

Presented in Table 1 is an institution-by-institution summary analysis of general classroom utilization of resident day classes taught for Fall 1970 at Virginia's state-controlled colleges and universities. It can be seen in column three that the daytime average room-period use per week for the four-year colleges and universities ranged from a low of 10.1 periods at Virginia State College to a high of 35.8 periods at George Mason College. In other words, Virginia State College used their classrooms, on the average, 10.1 hours per week whereas George Mason College used their classrooms 35.8 hours a week. The average room-period use per week between the hours of 7 a.m. to 5 p.m. for all four-year institutions is 21.2 periods.

The daytime average room-period use for the community colleges and two-year branch colleges indicated a range from a low of 5.8 periods at Eastern Shore College to a high of 33.2 periods at Central Virginia Community College. The overall daytime average for the community colleges and two-year branches is 22.0 room-periods used per week.

The per cent of station use per week when rooms are in use is shown in column seven. This calculation provides a measure of the extent to which rooms are filled to capacity when they are used. The hours when rooms are not in use are disregarded in this calculation. The average for the four-year institutions is 63.6 per cent and reflects a range from a low of 42.1 per cent at Virginia Military Institute to a high of 72.4 per cent at Longwood College. The all institutional average is 66.3 per cent of station use when rooms are in use.

The student-station-periods occupied per week per full-time-equivalent student (column eight) is a statistic that represents, on the average, the number of hours per week that a student who is carrying a full load (15 semester hours represents one FTE student), will occupy a seat in a classroom. This figure is obtained by dividing the total SSPO per week by the "Day" FTE students. The average for all institutions is 12.1 hours per "Day" FTE student. It should be noted that student-station-period use per FTE student varies from 15 (the number of semester credit hours for an undergraduate FTE student) for each institution. This can be explained by the fact that students spend a certain amount of their in-class time in rooms other than those classified as general classrooms.

Another of the more important analyses included in this table is a measure of the square feet available per student when rooms are occupied. Column nine indicates that the amount of classroom space per student-station-period occupied average for all institutions is 1.2 square feet.

<sup>a</sup>Data for Virginia Commonwealth University reflect only the Academic Center.

<sup>b</sup>Eastern Shore College and Patrick Henry College, reflected in this report as two-year branch colleges, became part of the Virginia Community College System July 1, 1971.

<sup>c</sup>The calculation dealing with "Per Cent of Station Use Per Week When Room In Use" will indicate station occupancy of more than 100% if the total number of student-station-periods occupied per week is greater than the total number of student stations available when the room is in use.

An analysis of the utilization of teaching laboratories during the daytime hours for Fall 1970 at the state-controlled institutions in Virginia is presented in Table 2. Examination of the data appearing in this analysis quickly reveals that teaching laboratories are not scheduled as heavily as classrooms. This is not unusual since such space has special equipment for use by the department to which it is assigned and thereby the laboratory may not be physically suited for other purposes.

The average room-period use shown in column three reveals that the all institutional daytime average is 10.6 hours of teaching laboratory usage per week. The four-year colleges and universities indicated a range from a low of 2.7 periods at Virginia Military Institute to a high of 21.4 periods at Virginia Commonwealth University. The two-year institutions, on the other hand, ranged from a low of 5.4 periods at Southside Virginia Community College to a high of 24.6 periods at Southwest Virginia Community College.

The student-station-periods occupied per week per daytime full-time-equivalent student for teaching laboratories is determined in the same manner as that calculated for general classrooms (Table 1). The SSPO/W/Day FTE student average for all institutions, as indicated in column eight, is 3.1 periods. When this figure is added to the all institutional average of 12.1 periods occupied per "Day" FTE student for general classrooms, the resulting 15.2 periods closely represent the number of semester hours for an undergraduate day full-time-equivalent student.

Presented in column nine is the square feet per student-station-period occupied. The average for all institutions is 4.4 square feet per SSPO which is understandably higher than the average for general classrooms.

<sup>a</sup>Data for Virginia Commonwealth University reflect only the Academic Center.

<sup>b</sup>Eastern Shore College and Patrick Henry College, reflected in this report as two-year branch colleges, became part of the Virginia Community College System July 1, 1971.

<sup>c</sup>The calculation dealing with "Per Cent of Station Use Per Week When Room In Use" will indicate station occupancy of more than 100% if the total number of student-station-periods occupied per week is greater than the total number of student stations available when the room is in use.

Presented in this section are tables which relate utilization data for evening classes only (5 p.m. to 11 p.m.) for each of the instructional facilities. As explained in Section I, the data were derived from information obtained in a cross referencing of the resident classes taught with a room-by-room inventory for each institution. Classes which begin prior to 5 p.m. are considered day classes and comprise Section I of this report and have been excluded from this section of the study. It should be noted that urban institutions have the opportunity to make greater use of their space in the evenings than those institutions which are not located in urban areas. This factor is reflected in the higher utilization figures in the evening for Old Dominion, VCU and some of the community colleges.

Table 3 presents summary data of classroom utilization for evening classes. The average room-period use ranges from a low of 0.2 per week to a high of 11.1 per week. The average for all institutions was 3.2 periods per week from 5 p.m. to 11 p.m.

Data relating to laboratory utilization of evening classes are presented in Table 4. The average room-period use for all institutions is 1.3 periods per week.

<sup>a</sup> Christopher Newport College and Clinch Valley College, reflected in the 1968 study as two-year branch institutions, have since been elevated to four-year status. The 1968 data have been adjusted accordingly in the four-year institutional totals and two-year institutional totals for the purposes of this report.

<sup>b</sup> Data for Virginia Commonwealth University reflect only the Academic Center for both 1968 and 1970.

<sup>c</sup> Germanna Community College, Southside Community College and Virginia Highlands Community College were not in operation in 1968.

<sup>d</sup> Eastern Shore College and Patrick Henry College, reflected in this report as two-year branch colleges, became part of the Virginia Community College System July 1, 1971.

**TABLE 6 - COMPARATIVE SUMMARY UTILIZATION DATA FOR TEACHING LABORATORIES  
FALL 1968 AND FALL 1970  
(EVENING CLASSES ONLY)**
