This monograph is the fifth in a series summarizing the work progress of the Human Services Manpower Career Center, a special research and development project funded by the U.S. Department of Labor. This report describes the action taken by a committee of child care workers, educators, welfare mothers, manpower specialists, and concerned lay citizens in: (1) developing a neighborhood-based program model for providing comprehensive child care services to disadvantaged inner city families, and (2) designing a manpower development and staffing plan which would open career opportunities in child care for welfare mothers and other residents of inner city neighborhoods. The recommendations from the committee call for a network of child care mini-centers to be supervised by a central support unit. The program model includes comprehensive school services to school aged children and parents, with full utilization of the resources of other community human services agencies. The document includes a staffing plan, a career development component, and an implementation strategy along with a description of how one community organization adapted the model for its residents. Other monographs are available as VT 016 354 and VT 016 358 in this issue. (SB)

This report on a special manpower project was prepared by the Human Services Manpower Career Center under a contract with the Manpower Administration, U. S. Department of Labor, under the authority of the Manpower Development and Training Act. Organizations undertaking such projects under the Government sponsorship are encouraged to express their own judgment freely. Therefore, points of view or opinions stated in this document do not necessarily represent the official position or policy of the U. S. Department of Labor.

The monograph series was prepared by Myrna Bordelon Kassel, Ph.D., Director, Human Services Manpower Career Center.

Information on how to obtain additional copies of this report and of others in this series may be obtained from the Office of Research and Development of the U. S. Manpower Administration, Washington, D. C. 20210.
This document is Number Five in a series of five monographs which summarize the work in progress of the Human Services Manpower Career Center. The Center was established in July, 1969 by the Illinois Employment Security Administrator with the assistance of a United States Department of Labor, Manpower Administration, Office of Research and Development, planning grant. In 1970, Contract No. 82-15-70-22 was awarded to the Illinois Bureau of Employment Security by the same agency to enable the work of the Center to continue for a second year.

The monograph series includes the following five parts:

I. AN OVERVIEW OF THE WORK PROGRESS REPORT
II. CAREER SYSTEMS IN STATE HUMAN SERVICES AGENCIES
III. A CORE CURRICULUM FOR ENTRY AND MIDDLE LEVEL WORKERS IN HUMAN SERVICES AGENCIES
IV. COMMUNITY ORGANIZATION FOR ALLIED HEALTH MANPOWER
V. NEIGHBORHOOD-BASED CHILD CARE SERVICES FOR THE INNER CITY
NEIGHBORHOOD-BASED CHILD CARE SERVICES FOR THE INNER CITY

SUPPLEMENTARY SELECTED REFERENCES
In this monograph we present a program model, a staffing plan and a program implementation strategy for developing a planned network of neighborhood-based child care services in inner city communities.* This program model is based upon a feasibility study funded jointly by the Human Services Manpower Career Center and the Illinois Board of Vocational Education in the amount of $3,000.

When the study was completed, the Center initiated efforts to interest potential sponsors of a demonstration project. The second part of this monograph shows how one neighborhood group, the Christian Action Ministry in Chicago, not only adapted the program model to its own local needs, but was also able to expand the range of services to be offered while at the same time utilizing its existing community resources to reduce the per capita costs projected for a comprehensive child care service.

I

THE REPORT OF THE STUDY COMMITTEE

A. BACKGROUND OF THE STUDY

The study was conducted by a Child Care Study Committee consisting of ten community agencies, public and private. Elias Picheny, of the Social-Educational Consultation Service, chaired the Committee and served as Study Consultant and Project Coordinator. Staff from the Center provided technical assistance to the Committee. They augmented and edited the original report in order to give emphasis and clarity to certain sections. The findings and recommendations contained in the original document, however, were fully incorporated.

What emerged from this collaborative effort is an unusual document. First, the program model which was developed represents a realistic attack on some of the critical problems facing inner city mothers and children. Second, the manpower component of the model is based on a careful examination of the specific range of services to be delivered. Finally, in the proposed training design, the effort has been made to fit the training to the needs of the service program as well as to the characteristics and aspirations of the trainee group.

This integrated planning process was achieved by bringing a group of child care workers, educators, manpower specialists, welfare mothers, concerned lay citizens and agency administrators together over a period of several months.

* The two documents on which this section is based are Neighborhood-Based Child Care Services for the Inner City, jointly published by the Human Services Manpower Career Center and the Illinois Board of Vocational Education, May 1971 and Comprehensive Child Development, Career Development and Family Services, an unpublished proposal developed by the Christian Action Ministry, May 1971.
In our experience, such interaction rarely takes place in program planning for human services. As a result, we have a disappointingly large number of manpower programs fashioned primarily to provide jobs rather than services to the community. We undertake costly vocational training programs without fully examining the actual tasks that graduates will be expected to perform on the job. And finally, to complete the chain of errors, we generally fail to consult either clients or trainees in planning our service programs and training operations.

We see this report as a contribution to the planning of vocational education programs in the child care field. We also offer it as a practical example of action research. For, while the study presents some new information and some new ideas, its major impact has been to strengthen inter-agency support for the implementation of a program model genuinely responsive to the urgent needs of families in the inner city neighborhoods of Chicago and elsewhere.

B. BASIC COMPONENTS OF A COMPREHENSIVE CHILD CARE PROGRAM

The elements that go to make up a comprehensive child care program are well understood by a great many people. In Chicago, as in other cities, one merely has to refer to the recommendations which have emerged from 4-C's* planning groups presently studying the needs for child care services.

The necessity for involving community residents in the planning, staffing and administration of local human services programs is also widely acknowledged. Public and private agencies are becoming increasingly aware that programs can no longer be designed and delivered from the outside. If they have not come to this realization independently, a growing number of community organizations have certainly made the point extremely clear in recent years.

In the manpower field, the federal government in such programs as New Careers, the states and the cities undertaking Public Service Careers Programs all give evidence of the growing commitment to make more effective use of human resources. In short, it is now well-established public policy to encourage the development of career opportunity programs for workers in both public and private sectors of the economy.

There is very little, therefore, that this study can add to our general store of knowledge about children's needs, community expectations, or the components of an acceptable manpower program. What is perhaps the most important contribution made in this study is that all of

---

* Community-Coordinated Child Care Program Committees, the planning groups established on local and regional levels to stimulate planning and program development in this field.
these elements have been brought together to produce an integrated program model.

This report was published and made available to concerned agency administrators and community leaders who, for the most part, are thoroughly familiar with the inner city's need for child care services. Since the literature in this field is plentiful, no purpose was served by elaborating on what is already known or can be easily acquired from other sources. We, therefore, made a conscientious effort in the report to set the stage only briefly and to move directly into the heart of the matter.

As concerned community groups and agencies began to read and respond to this document, we urged them to make comparisons between the potential of this program model and the various alternative approaches now being offered throughout the country for the provision of child care services in inner city neighborhoods.

Our proposed model makes no claim to being the cheapest, the easiest or the only effective way to meet the need. We chose the small-sized program unit, however, as against the big, impersonal day care factories which some cities are turning to, fully aware that per capita costs will be higher in a smaller program. We think it is worth the extra dollars in terms of the quality of the environment and the services provided to children.

We chose a community model instead of a private-for-profit entrepreneurial model. We staffed the program with human service's workers who can provide effective linkage between the needs of families and available community services. We included a parent education program as well as continuing education and career opportunities for staff.

We believe that the social benefits to be gained by developing community responsibility, parent involvement, the up-grading of workers and comprehensive family services are not generally available through private purveyors of commercial day care services. These are the choices we made and we urge others to weigh their own.

C. THE OBJECTIVES OF THE STUDY

In developing this child care program model, the Study Committee sought to achieve four major objectives:

1. To Put the Needs of the Child First

Although the contribution that quality day care services can make to the child, the family and the community has been widely understood for a long time, Americans, until recently, have never demanded or supported extensive day care services. In contrast, many European countries and even some of the world's underdevel-
oped nations have sponsored impressive day care programs for many
years. It has been the policy of French governments, for example,
to provide free day care services for working mothers since 1877.*

In this country prior to the 1960's, day care programs were gener-
ally available only to families who could afford them. Neither
private enterprise nor government was willing to subsidize quality
day care for low-income families. The only exception to this per-
sistent national pattern occurred during the periods of national
emergency.

Our first aggressive effort came during the Civil War when we es-
tablished day care centers "for the children of women needed to
manufacture soldier's clothing and to clean military hospitals."**
Not until the Great Depression of the 1930's, in legislation estab-
lishing the Works Project Administration, did we renew the effort.
Hundreds of WPA day care centers were opened for the purpose of
providing jobs to unemployed teachers, nurses and others. Once
again in World War II the need to recruit women workers in war in-
dustry stimulated heavy federal expenditures for day care.

In all of these moments in our national history, day care services
were established primarily to deal with the crisis of war or the
ravages of mass unemployment. The needs of children were of sec-
ondary concern.

In the past decade, a new national purpose emerged to spur the
establishment of day care programs. In the 1962 and 1967 amend-
ments to the Social Security Act, we undertook the effort to
move welfare recipients from public assistance into employment.
The Work Incentive Program (WIN) became the principal instrument
to achieve that purpose.

Not until 1969 did we begin to see legislation genuinely addressed
to the developmental needs of children.*** Even though existing

*** The Head Start Child Development Act, the Comprehensive Pre-
School Education and Child Day Care Act and the Family Assist-
ance Act were introduced in 1969 and the Comprehensive Head
Start Child Development Act in 1970. All contain extensive
provisions for encouraging quality day care.
and pending legislation restrict funding to programs which give priority to welfare mothers and other disadvantaged families, it appears that we have finally arrived at the point where public policy reflects a concern for the needs of children and demands that the services provided be addressed to those needs.

What are the implications of this shift of public attitude and concern? What does this mean in terms of the kinds of programs we will now design and support?

The child care program proposed here is unequivocally committed to the child as its central concern. If other benefits flow from the operation of the program, they are a welcome bonus. The important point is that the program is designed primarily to enhance the well-being and development of the child. It is not a mere instrument to reduce welfare costs or to create jobs.

2. To Provide Supportive Human Services to the Family Unit

Throughout the country, in communities large and small, Comprehensive Neighborhood Service Centers are being established or planned. The power of this movement stems from a growing realization that the present organization of our human services delivery system is fragmented, costly and destructive to human welfare.

In Chicago the eleven Urban Progress Centers operated by the Chicago Committee on Urban Opportunity share space with the Illinois Employment Service and the Cook County Department of Public Welfare. This plan of operation was worked out by the collaborating agencies in an effort to provide a multi-service center in strategic neighborhood locations. This arrangement takes cognizance of the fact that an overwhelming number of persons seeking work are also in need of public assistance, housing, medical care, day care, legal aid, family counseling and other related services.

The Illinois Department of Mental Health is one major State agency which has moved rapidly in the direction of decentralization into the neighborhoods of Chicago through its sub-zone centers. The Woodlawn Service Project offers another example of the attempt to develop the kind of inter-agency coordination which can be responsive to the needs of the residents in a specific inner city neighborhood. Under construction on the West side of Chicago is the first Model Cities Neighborhood Service Center. A proposal is being finalized for the construction of a second such center on Chicago's South side. Eventually it is hoped that Neighborhood Service Centers will be available in each of the four Model Cities neighborhoods. These are some of the indications
of the movement which is taking place toward a more unified neighborhood-based service network.

A rational long-range plan for the City of Chicago would undoubtedly call for the establishment of such Comprehensive Neighborhood Service Centers throughout the community, beginning with those inner city neighborhoods where the needs are most acute. We are, nevertheless, a long way from having the funding capability or the legislative mandate to move boldly in this direction. In the interim, however, we can make every effort to strengthen existing neighborhood services and to build into new neighborhood programs the broadest possible scope of service.

While the small neighborhood-based day care program cannot possibly provide the whole spectrum of human services to its clients, it can, nevertheless, go beyond merely providing day care for the pre-school child. For here, at the point of daily contact with the child, staff will have the opportunity to understand and respond to the needs of the family unit for other services. Some of these needs can be handled promptly by staff of the day care center itself. Others will require referral, instruction of clients, the representation of client needs to other agencies and vigorous follow-up to assure the delivery of service.

Looking ahead to the time when an operating network of Comprehensive Neighborhood Centers may become a reality for Chicago, we will still need to rely on such smaller outposts as these to provide as many direct human services to the client as their resources will allow. It actually makes no difference whether the service program provides primary medical care, mental health, day care or other specialized service. The obligation each agency outposted at the neighborhood level has is to make an effort to deal with the client in terms of all of the needs he presents. If the agency cannot meet those needs, it must be prepared to provide referral and linkage to whatever other resources are available in the community.*

* In a June 1970 conference sponsored by the Human Services Manpower Career Center, Arnold Nemere, Health Manpower Specialist for the University Research Corporation, estimated that, based on his experience with OEO health centers, a community health center should be prepared to serve approximately 40,000 residents in the surrounding area in collaboration with four satellite centers. Each satellite center is responsible for providing services for 10,000 of these residents. In such a health care system, the satellite centers would be relied on to provide primary medical care, health education and related human services, using the Community Health Center and local hospitals as back-up resources. The same decentralization concept is applicable to the Comprehensive Neighborhood Service Center or any other network of neighborhood-based services.
For now, then, and for the future, this expanded services concept appears to offer the best way to serve the client and to make most effective use of available community resources.

In this program model, therefore, we pay attention to the impact of the total family situation on the child. The staffing plan and the service program are geared to making the child care center a place to which the family can bring any problems which affect their security and well-being.

3. To Provide Inner City Residents with Career Opportunities in the Child Care Field

On December 18, 1970, the White House Conference on Children ended with twenty-three recommendations for Presidential attention. One of these called for adequate funding to provide training for at least 50,000 additional child care workers for the next ten years.

Where will these workers come from? Who will train them? What kind of training programs will we need? How long a training program is needed to prepare a child care worker? For what kinds of tasks? At what levels?

All of these questions are highly appropriate if we are to make a realistic assessment of manpower and training needs for expanded child care services in the inner city. It is an unfortunate fact that many well-conceived day care program designs contain staffing plans which bear no relationship to the actual supply of professional manpower in the urban ghetto. Plans which call for a Master's Degree in Social Work for program director and a Bachelor of Arts for supervisory staff are essentially pipe dreams. We cannot begin to meet the needs of inner city children if we continue to ignore the grim realities of supply and demand in the professional labor market. The fact is that we do not now have such a supply of professionals to draw upon nor can we expect the supply to get much better within the next decade.

Furthermore, as in the case of health manpower, the problem is as much a problem of distribution of available manpower as it is supply.* We have no reason to believe that by merely increasing the

---

* A manpower survey conducted in 1968 by the Welfare Council of Metropolitan Chicago disclosed that of all MSW social workers in Chicago, 70% were employed in private agencies. For the State as a whole, the overall vacancy rate was twice as high in the public sector as in the private. Almost 4/5 of all MSW's were in the four major "case serving" fields. In Chicago, neighborhood and community work agencies together accounted for only about 5% of all social work manpower at all educational levels.
supply of professional workers in Chicago we will automatically guarantee their deployment into ghetto areas.

There are a number of other factors to consider in designing a manpower component for child care services in the inner city:

a. While many professionals tend to equate the quality of service a worker can give with formal academic education, recent experiences in poverty programs, community mental health centers and social agencies operating in the inner city contradict this view. They provide impressive evidence that indigenous workers, given appropriate entry level training and opportunities for continuing education, can often achieve far more effective outreach, develop closer rapport with clients and effect more successful, pragmatic solutions of client problems.

b. An increasing number of community colleges are beginning to produce middle-level manpower for the human services. The graduates of these programs, many of whom live in the inner city, constitute an excellent source of supply for filling direct care, supervisory and management jobs in their own neighborhood agencies. To the extent that the community colleges provide relevant work-study curricula, persons coming out of these programs should even be better equipped for the actual tasks to be performed in a child care center than many persons with traditional graduate school education.

c. The human services professional is frequently misused by engaging him in tasks for which he is actually over-trained. In view of the persistent small supply of professional workers, a more efficient use can be made of these scarce skills by using qualified professionals as trainers, consultants and program evaluators.

If we are committed to serving the needs of children in the inner city, we must begin now to design realistic staffing plans for child care services and to open wide the opportunities for the training of thousands of new workers. If we do not meet this challenge, we can expect that inner city residents in increasing numbers will attack their child care problems themselves with or without the benefit of professional guidance and with or without the training required to produce and sustain a high quality program.

This is already happening in many cities. In Chicago, a number of community organizations and youth groups have
already moved to establish their own day care centers. In New York City, nine such centers staffed by neighborhood people serve 225 children in programs operating separate and apart from the regular city day care program.

On November 5, 1970, 100 mothers, teachers and children from these centers invaded the headquarters of the New York Department of Human Resources to demand funds and the legitimization of their staffing arrangements:

"The principal distinction of the community-controlled centers involves personnel and staffing. In most cases the administrative head or education director, or both, may not meet the academic standards required by the city for financing.

Advocates of the community-controlled centers contend they are better prepared to provide significant programs because the members of the staff come from the local area."

The child care staffing plan developed for this program model takes these critical issues into account. It is designed to open up new employment opportunities in the child care field for residents of the inner city and to provide, through accredited entry-level and on-going training, a wide variety of career options for all levels of workers employed in the program.

4. To Develop and Sustain Full Community Participation in Program Management

From the present national administration down into the neighborhoods of Chicago we hear a rising chorus of demand for the decentralization of power, programs and money. Beyond the level of rhetoric, however, there are some significant disagreements and some important issues to be resolved.

What kinds of power can and should remain in the hands of government at local, state and federal levels? What responsibilities shall local community organizations have in making decisions concerning priorities, programs and the funds to be spent in their respective neighborhoods?

In the area of day care, we have an excellent opportunity to confront these issues and to test out some new models for government-community collaboration. To meet the needs for day care in the inner city, we will need extensive funding support from all levels of government. It follows that in order to protect both the children to be served and the taxpayers who contribute the funds, governmental authorities must lay down certain basic program standards.

It is essential that these standards be flexible and that they be re-examined continually. Otherwise, we run the risk of producing the kinds of archaic and restrictive regulations which have hamstrung innovative programs in the past. These governmental standards must go beyond merely recommending community participation in program management. The time has come when we need to see the development of such local community responsibility as a prerequisite for a high quality program.

Community organizations, on the other hand, who demand unconditional community control are short-sighted if they fail to see the value of standard-setting and quality surveillance by governmental funding authorities. In demanding complete autonomy, they are also selling short the workers employed in their own neighborhood programs. In a mobile society such as ours, people move from one neighborhood, one city, one state to another. Workers in neighborhood agencies have a right to expect that their training and skills will be marketable wherever they go. This means that neighborhood programs, particularly the training programs, cannot be so parochial and so unrelated to the mainstream of job opportunities and training requirements that the worker cannot move with ease into the labor market.

It is also worth remembering that community control is extremely hard and demanding work. It calls for knowledge, skills and a continuing commitment to excellence. As many community organizations have discovered, merely shifting the locus of control does not necessarily deliver a high quality program.

Somewhere between absentee management by outside authorities and unconditional community control by indigenous groups lies a broad new terrain for collaborative management of the human services in our inner cities. In designing this neighborhood-based child care program, it was our intent to build in such practical modes of collaboration between responsible government and responsible community groups.

D. THE METHODOLOGY

In carrying out this study, the Project Coordinator sought the participation of individuals and agencies who might eventually become involved in a demonstration of the program. To this end, a Study Committee was
formed which included representatives of key public and private agencies concerned with day-care services and mothers representative of those who might use such services. The scope of the study, the critical components of the model and the possibility of securing acceptance were all subjects for Committee exploration.

The Committee members included all persons who participated in one or more of the five formal meetings held in the late summer and fall of 1970.* The Project Coordinator worked between the meetings with many of the Committee members individually. He also sought the advice of other knowledgeable persons in the community. Members of the Committee and the staff of the Human Services Manpower Career Center contacted and interviewed specific resource persons to verify information or clarify disputed points. Thus the study has a wider base of participation than suggested by the Committee membership alone.

The fact that a staff member of an agency participated in this study does not constitute a commitment or the part of his agency to implement the proposal. It does mean, however, that the agency point of view has already been included in the formation of this report and that there should be few, if any, substantive, theoretical, legal, or procedural barriers to the implementation of this model.

A first step in the study itself was to select a study area. Consultation with the staff of Model Cities led to the selection of an area bounded by Cermak (2200 South), Kinzie (400 North), Steward (400 West) and Cicero (4800 West). This area includes the community areas of West Garfield Park, East Garfield Park, Near West and North Lawndale. In 1960, 381,418 individuals resided in that 1800 square block area, of whom 23.2% were on public assistance and 26% had an income below $3,000.

This area accurately reflects the need for day care services in the inner city and the problems involved in providing these services. A 1966 study by the Welfare Council of Metropolitan Chicago indicated that there was a total of 28,200 children with working mothers in this geographical area. The Council estimated that 7,800 of these children needed day care services. In that year, there were seven full time and two part time day care centers serving this area with a total capacity of 645 children.

A more recent report from the Welfare Council indicates that the total day care capacity in the Study Area increased from 645 in 1966 to 794 in 1969. However, comprehensive data regarding the capacity, enrollment, nature of service and sponsorship of day care programs in the

* See Appendix I for names of agencies and individuals involved in the Study Committee.
Study Area are not readily available.

Nevertheless, the Study Committee, on the basis of available data and the experiences reported by agency representatives, has concluded that:

(1) Less than 10% of those children needing day care in the Study Area are accommodated by existing services;

(2) Many of the existing services represent limited custodial care rather than comprehensive child development programs;

(3) In order to engage in meaningful planning more specific data on needs and resources is needed on a neighborhood basis.

To insure the viability of the plan for its potential clients, the Lawndale Welfare Rights Organization was invited to serve on the Study Committee. These mothers canvassed several blocks in the Study Area and developed a list of over fifty welfare mothers who declared their interest in work-training if appropriate child care services were made available.

A leading Chicago architect familiar with licensing requirements for child care facilities made a careful evaluation of potential facilities in a representative twenty-five block area.

With this basic background information, the Study Committee began to work out the design of the proposed child care center. As requests for information or specific proposals were generated by the Committee, the Coordinator and the staff of the Human Services Manpower Career Center prepared working papers for Committee review. Many of the specific components of the model were revised in group meetings as the overall design began to evolve.

The recommendations of the Committee, therefore, represent a consensus arrived at after vigorous discussion and full exploration of all points of view, with a constant give and take and mutual concern for finding realistic solutions. Throughout this process members of the Committee reflected a commitment to quality of care, a search for new approaches and an urgent concern that Chicago begin to rapidly expand its resources for day care services appropriate to the needs of the children, the families and neighborhoods of the inner city.

E. THE PROGRAM MODEL

The term "day care" has been used to refer to a wide variety of arrangements which can be made for the supervised care of children away from their homes. Programs may offer services for either part or all of the
day during those periods when parents or guardians need or wish to delegate responsibility for such care to others. Day care programs, therefore, have ranged from those which merely provide basic care and protection to those which offer more comprehensive services designed to supplement parental and family roles. These latter programs offer a wide variety of experiences to enrich and stimulate the child's growth and development.

In this program model the terms "day care" and "child care" are used interchangeably to describe programs which provide the fullest possible range of services that available resources will support.

1. Some Basic Assumptions

The persons, both child care specialists and laymen, who collaborated in this study brought certain other prior assumptions to the task of designing the program model. Some of these are based on research findings; others on observation and experience with inner city family life:

a. Research data in the field of educational psychology continue to provide evidence of the tremendous learning potential of the pre-school child. It is, therefore, essential that staff providing direct care services to children be trained to function as early childhood educators rather than as mere caretakers.

b. Any educational experience can be vitiated if the total milieu of the learner is neutral or is opposed to the learning experience. Therefore, the entire family, and in particular the mother, must be involved in and supportive of the goals of the child care program.

c. Insisting that a mother relate to and transport her children to a number of program centers organized according to age categories adds needless complication to an already pressured existence. This problem can best be dealt with by establishing programs which accept children of pre-school age through high school.*

d. Transportation is difficult and costly to the inner-city poor. Car pools are rare and public transportation is not always convenient or feasible for young children. Therefore, programs should be located within walking dis-

---

* The Study Committee did not address itself to the special problems of infant day care, but the CAM proposal, as discussed later, did include services for infants in group homes.
tance of the users.

e. Transportation problems are not the only reason for developing small-scale service units. From the point of view of the emotional needs of the pre-school child, the smaller group program offers a more manageable transition from the home situation into a community care setting.

f. While innovative pilot projects often include excellent training programs for staff, they tend to be isolated from the mainstream of accredited training for other available jobs in the community. We, therefore, propose a staff development plan for this project which can not only stimulate vertical mobility inside the program, but can also provide the competencies and credentials to enable workers to obtain employment in other private and public agencies.

g. City planners have estimated that at the present rate of renewal, it will take approximately 400 years before we are able to tear down and rebuild those buildings in Chicago which need to be replaced. Therefore, if a child care program is to have any significant impact on this generation of Chicagoans, it must make use of all facilities currently usable or capable of renovation at reasonable cost.

2. The Service Program

This program is designed to provide a comprehensive child care program on a neighborhood basis serving the residents of the immediate neighborhood in small groups, utilizing neighborhood facilities, thus avoiding the high costs and long delays involved in the renovation or construction of major buildings.

The services provided in this model include:

(1) Quality child care for 40-50 pre-school children;

(2) After-school programs for a similar number of school children;

(3) Family life education and social services for the families affiliated with the program; and

(4) A developmental program in child care and human services for all members of the staff.

The program is headquartered in a Central Unit which serves a twenty-five block area. The Central Unit is responsible for providing administrative and supportive services of five Mini-Centers located in the catchment area.
Each Mini-Center, serving a five block area, and, therefore, within walking distance of all its clients, carries the primary responsibility for serving eight to ten pre-school children for the full day and a similar number of elementary and high school children after school hours. The Mini-Center is open for child care service from 7:00 A.M. to 7:00 P.M., Monday through Friday, as well as two or three evenings a week for family life education and other services.

The pre-school program will provide a full range of experiences to stimulate the growth and development of each child. Emphasis will be placed on creative play, an emotionally responsive environment, the maintenance of wholesome dietary and health habits, the development of self-confidence and the building of satisfactory relationships with other children and adults. Through field trips into other neighborhoods and the central city, the children will have frequent opportunities to become familiar with other ethnic and racial groups, other lifestyles and new sources of learning and pleasure presently unavailable in most inner city neighborhoods.

The school age program will provide opportunities for self-determined group activities, recreation and assistance with school work. The older children will be given individual attention as needed and will be encouraged to assist the staff in working with the younger children.

The family life education program will encourage learning experiences designed to support stable family life. Activities will be planned to help individual members of the family understand their appropriate roles and relationships. Mothers, in particular, will be encouraged to improve their skills as homemakers, to learn new ways of teaching and playing with their children and to gain a fuller understanding of their own anxieties and concerns.

Staff resources will be available to provide direct assistance with special family problems and to make appropriate use of outside resources. In addition to the medical services available to the children, family programs will provide health education to prevent the onset of illness and to encourage early treatment. Consultation will be available to individuals seeking to enroll in job training programs or who experience difficulty in adjusting to new job situations.

The work of the five Mini-Centers is supervised and supported by the staff of the Central Unit whose key responsibilities are:

a. To handle all major administrative responsibilities for the Mini-Centers such as payroll, personnel record-keeping, budgeting, the rental and purchase of facilities and equipment;
b. To act as a back-up and relief staff for Mini-Center workers who are in training, ill or otherwise unavailable for work;

c. To provide direct program support both from its own staff of full-time workers and from its pool of professional consultants. If a Mini-Center Director, for example, needs assistance in working with a child who is physically or mentally handicapped, such help can be requested from the Central Unit. The latter will either provide a member of its staff with competence in this problem area or will arrange for a specialist to consult with the Mini-Center Director;

d. To supervise the planning and conduct of the family life education program, serving as group leaders for discussion sessions and arranging to bring in outside resources who can contribute to the program;

e. To supply auxiliary health and human services to the families affiliated with the program;

f. To plan and supervise the staff development program which provides all employees with accredited entry level training and on-going opportunities to pursue their full career potential;

g. To solicit the participation of volunteer and student workers in the operations of the Mini-Center; to prepare these volunteers and students for making an effective contribution to the program and to deploy them wherever they can be most profitably utilized;

h. To organize and maintain close working relationships with the local community through a Governing Board comprised of clients, staff and community representatives.* The functions of this Board are to participate in the recruitment and selection of both clients and staff, to take responsibility for all major policy and program matters, to monitor the use of funds and to evaluate the effectiveness of the overall program. Board members are also actively involved in helping to build the understanding and support for the program throughout the entire community without which this program cannot succeed.

Keeping in mind that the demand for these child care services will far exceed the available slots, the Study Committee re-

* For a review of parent, staff and community participation in program management see Head Start Policy Guidelines, available through the Office of Child Development, HEW.
commends that the following priorities be considered in enrolling participants. In ranking order they are:

(1) Dependents of welfare recipients who are enrolled or agree to enroll in the federal WIN program.

(2) Dependents of welfare recipients who are employed or enrolled in other training programs but do not have satisfactory child care arrangements.

(3) Dependents of welfare recipients enrolled in remedial education programs not related to the WIN program.

(4) Dependents of non-welfare individuals whose earnings fall below the "low income level" as determined by current United States Department of Labor criteria.*

(5) Dependents of moderate income families. These families should be expected to pay a fee based on a sliding scale according to income and size of family.**

3. The Physical Facilities

The survey made of structures in the study area that might be suitable for the program indicates that there are many potential spaces available. They will, however, have to be screened on a very selective basis to avoid heavy initial expenses.

The consultant architect estimates that 750 square feet to 1,000 square feet will be required for each Mini-Center of which 560 square feet to 700 square feet are needed for the direct activities with children. The remaining space will be utilized to provide a small office for record-keeping and counseling with parents as well as the required storage space, kitchen and at least two toilets. With the exception of existing church facilities which might already have a full code kitchen, it is assumed that the facilities to be used would provide only a warming kitchen and a refrigerator and that the noon meals would be catered.

a. Storefronts - There are many unoccupied stores within the target area which can be used. All of the available stores, however, are in older buildings and will require a substantial

* See Appendix V for Guidelines to Determine Low Income Levels Based on Family Size.

** See Appendix V for Proposed Monthly Fee Schedule.
amount of rehabilitation work. Costs for the rehabilitation of such space should be anticipated in the range of $10,000 to $12,000, providing the spaces selected are in a reasonable state of repair.

b. Churches- While there are many churches within this area, relatively few of them are either new or equipped with adequate facilities for the day care program. One relatively new church located on South St. Louis Avenue could provide excellent facilities for a Mini-Center. The space consists of one large classroom and three smaller spaces all located on the first floor. This structure could be adapted to meet all code requirements including the kitchen for an estimated $2,500. Since most of the churches in the area are older structures, some alterations would be required. Budgets to bring these facilities up to code requirements would be in the range of $5,000 to $8,000.

c. Apartments. The most desirable apartments would be located in new facilities now being developed by the Chicago Housing Authority or by private or "not for profit" developers under FHA programs #235 and #236. Major savings can be made by negotiating with developers prior to construction. By making minor modifications in the construction plans, facilities could be developed at a nominal capital investment.

d. Prefabricated Units. Prefabricated facilities ranging in size from 12 feet x 60 feet to 20 feet x 45 feet were also considered. Such facilities could be established on vacant land and could easily be moved if necessary or desirable. It is estimated that the cost for purchasing and installation, including a nominal amount for landscaping, would run between $8,000 and $14,000.

Based upon his survey the architect concludes that "an ample number of facilities are available throughout the entire area at an average cost of $10,000 or less. Depending upon the flexibility of locations and given time to negotiate with potential developers or redevelopers of properties, it may be possible to cut these costs very substantially."

4. The Staffing Plan

To staff the Central Unit and its five Mini-Centers, the program requires twenty-eight full-time workers. Additional staff resources include professional consultants, volunteers and students engaged in work-study programs.

Employees are recruited primarily from the community itself and
every effort is made to utilize welfare mothers who wish to enter child care and human services careers. Graduates of community college programs in child development and human services are sought for supervisory and management positions with preference going to persons living in the catchment area.

In view of the scarce supply of trained child care workers in the inner city and the limited number of training programs currently available in Chicago, selection of staff is based not upon formal education requirements, but on personal maturity, commitment to children, experience and motivation to participate in a continuing education process.

Although no formal education requirements are considered mandatory for workers employed at various levels in the program, job descriptions do indicate where persons coming into the program from the outside may enter if they have an Associate of Arts, Bachelor of Arts or Master of Social Work Degree. In view of the high priority placed on continuing education for all staff, it is a policy of the agency to give employees who demonstrate excellence in work performance and learning capacity the opportunity to be promoted from within to more responsible jobs. Such experienced employees will compete without prejudice for higher level positions in the program with more academically trained applicants.

The basic reasons for such a policy are two-fold: 1) The demonstrated job performance and commitment of a worker to the program are highly valued as compared with an applicant who may have excellent academic training but less experience and no prior relationship to the community and 2) Persons who have completed extensive professional training, including field experience, and wish to contribute to the program are most effectively utilized in other critically important roles.

The direct care services to children and the auxiliary services to families are provided by the full-time staff. Professional consultants are not utilized to direct the program, but rather to provide specialized support services to the staff, to assist both in staff training and family education programs. They are also participants in the Center's on-going process of evaluating the effectiveness of its overall program.

The Table of Organization which follows utilizes job titles consistent with the Child Development Career series proposed by the Human Services Manpower Career Center for use in the Illinois Department of Children and Family Services.* The pay grades and

* Equivalent Degree Level as used here reflects the degree normally required in comparable State positions. Even though degrees are not required for higher level positions in this program, they are shown here to indicate where persons with these degrees might enter the program.
salaries are based on those presently in use in the State Civil Service. Although the State does not have a Human Services Worker series at this time, the City of Chicago has declared its intention to introduce this title into its Department of Human Resources and several other agencies.

We have, for purposes of this study, used both the Child Development and Human Services titles to indicate a substantive difference in function between these two kinds of workers. The Child Development Workers are primarily engaged in program services to children. The Human Services staff are essentially generalists, working with families and providing linkage to other community resources. While these functions differ, it is not in any sense mandatory to set these positions up separately in a Civil Service classification system. If, for example, a Human Services generalist series were introduced into a Civil Service system, it could serve to cover a wide variety of specialized job functions in the human services. Individual working titles could continue to be used to describe the work functions of staff members in a particular program. But, for the purposes of rationalizing salary structures and job requirements and in order to facilitate lateral transfers and programs, one Civil Service series could be used to include all direct care workers in the human services agencies.

In utilizing these particular job titles, therefore, we are not making any rigid or final recommendations that these specific classifications be used.* Much will depend on whether the program is sponsored by a State, City or private agency and whether suitable personnel classifications already exist or need to be created within the sponsor's job classification system.

Central Unit staff includes thirteen workers, four of whom provide administrative services and nine of whom provide program services. The Unit Administrator directs the entire operation with the assistance of the program and clerical staffs.

The Administrator's position calls for an individual with managerial competence and the ability to develop close working relationship with the community. Although it is not essential that the Administrator be a highly skilled child care practitioner himself, he must have a broad grasp of what constitutes a quality program and be able to communicate program goals and needs to the professional consultants and the program staff.

The service operations are administered by a Program Director in collaboration with four Child Development Workers, three Human

* See Appendix for complete job descriptions and specifications for the staffing of the program.
Services Workers and a Community Health Worker. The Program Director is the key person who must provide leadership on all program matters to the Central Unit staff and, through them, to the Mini-Center staffs. In the Program Director, therefore, we look for an individual who is thoroughly familiar with the needs of the direct care staff and can make effective use of professional support services.

The Child Development Workers under him are in close daily contact through field visits and telephone with Mini-Center staff, focusing their attention on the needs and problems of the children enrolled in the program. The Human Services Workers schedule their activities so that they are available at Central Headquarters for consultation with families, can arrange home visits when the need presents itself or accompany clients to other agencies.

It would be highly desirable to have a Licensed Practical Nurse to fill the position of the Community Health Worker. This would enable the Central Unit to provide some primary health care to the Mini-Centers and to handle emergency medical care needs. If a Licensed Practical Nurse cannot be obtained, we recommend that a Community Health Worker, knowledgeable about other community health care resources and trained to function as a health educator be employed. In either case, the health worker will need to work in close collaboration with the consulting physician.

Each Mini-Center has three full-time direct care members on its staff. The Child Development Worker II serves as supervisor and assists both the Child Development Worker I and the Child Development Trainee in the conduct of the day care program and other activities of the Mini-Center. It is here at the Mini-Center that volunteers and student workers are utilized to augment the capability of the staff in conducting field trips, supervising after school recreational activities, tutoring and assisting individual children and parents with their special problems.

The specific responsibilities which pertain to each position in this program are spelled out in detail in the job descriptions contained in the Appendix. These descriptions also include minimum desirable qualifications and selection guidelines. They have been prepared in the technical format and language which can make them immediately useful to personnel administrators in public and private agencies.

5. The Career Development Program

a. The Program as a Training Base for New Manpower. Confident that this neighborhood-based program model would be highly successful in meeting the needs of the inner city, the Study Committee was concerned that each pilot project or projects generate new manpower capable of extending the program model into
other neighborhoods.

Through the establishment of trainee positions in each of the three principal areas, child development, human services and clerical services, a structure exists to bring new workers into the program for a six-month period. At the close of the training period the worker may, if a vacancy exists, move upward into a permanent position, may be spun off into another neighborhood program or may choose to enroll full-time in a community college course of work and study.

In evaluating the size of the staff and the personnel budget recommended for the program, it is important to keep in mind that a basic function of the program is to serve as such a recruitment and training laboratory for new inner city human services workers.

b. Training Prior to Full-Scale Operation. Six months prior to the full-scale opening of the Central Unit and the Mini-Centers, and, subsequently on a regular on-going basis, all employees will participate in an entry level training program. If workers with prior training and experience can be recruited, they will also take part in the training program in order to share their learnings with others, to develop a sense of team membership and to become oriented to the specific goals and characteristics of the program.

During this period, the Center will negotiate practicum experiences for the trainees with nearby day care centers and other programs serving children in various age ranges. This will enable workers to learn by doing, to develop practical skills and to relate the knowledge they are acquiring in more formal sessions to their experiences with children.

To the extent that some of the Mini-Centers can be made ready for partial operation during the first six months, it may also be possible for the trainees to begin to work with small groups of their own clients for limited periods of the day.

c. Elements of An Effective Career Development Program. The success of the career development program requires the full commitment and collaboration of three parties: the Center, the worker and the community college. As the employer, the Center will need to make it clear to each worker that participation in a continuing education program is a basic condition of employment. A release time policy, allowing twenty percent of the work week for training purposes, will be enforced. Supervisors will be expected to plan the work schedules of relief staff, volunteers and students to ensure full coverage of the service program during those periods when employees are in training sessions.
In developing its career program, the Center, in collaboration with its consultants and the community college, will identify the knowledge and skills required for each level of worker in the program. These will be organized into a series of four training sets and together they will constitute a continuum of on-going education to prepare workers for upward mobility. Each employee, in accepting a position with the Center, will be required to complete the training set unless he comes into the program with equivalent prior training. In that case, he may be exempted from those portions of the training which he has already completed.

It is more likely, however, that many excellent and highly motivated applicants will need help in developing their basic skills. Reading ability, for example, is critical, since all direct care workers will be expected to be able to read to children. For these employees the first six months of entry level training should provide intensive help to develop these basic skills.

For those employees who aspire to higher level jobs additional training sets must be successfully completed before promotion can be considered by a Board of Review.

The Board of Review is a panel comprised of a representative selected by the employee, a representative selected by the Administrator and a representative of the Center's Governing Board. In the event that a Center is sponsored by a public agency operating under Civil Service requirements, recommendations of the Board of Review for promotions will require the approval of the Civil Service authority. Machinery of this kind is operational in the State of Colorado and has proved effective in establishing a more objective and, therefore, more equitable procedure for handling promotions.

It is reasonable to expect that among members of the staff certain individuals will demonstrate superior work performance, an unusual capacity to learn and a high degree of motivation for further career development. For these individuals arrangements should be made to provide the scholarship and stipend support that will allow them to enter a full-time course of study at a community or four year college.*

* The Employment-Education Program of the State of Illinois provides such opportunities for educational leave. In the past this program has been used primarily to support students entering graduate school programs. We recommend that these resources now be made widely available to workers entering community college and four year programs. Employers in other government jurisdictions, private agencies and community organizations are also encouraged to adopt such educational leave and stipend policies.
d. Career Ladders and Lattices. During the past year at both City and State levels, personnel policies with respect to the hiring and upgrading of disadvantaged persons have been in a state of transition. The changes that are taking place have been stimulated by the State's Model Employer Program, the Chicago Model Cities Program and the Public Service Careers Programs of both the City and the State. All of these programs have taken some steps to open up new career opportunities for residents of inner city neighborhoods.

However, except for the State's Mental Health Career Series which is presently being implemented, these changes have not yet been firmly expressed in well-articulated career ladders and lattices in the human services agencies. Furthermore, while some of these programs have stimulated agencies to reach out for community training resources, the number of collaborative agency-community college programs fully committed to career development in the human services remains disappointingly small.

In assessing the career opportunities which exist for workers entering jobs in neighborhood-based child care programs, therefore, we must rely on the hope that the momentum for change in the public sector will be accelerated in the coming months and that State, County and City will provide aggressive leadership to all human services agencies by strengthening their career development programs.

The child care program model developed here proposes a personnel structure open at the entry level and committed to providing the fullest possible opportunity for career development for all of its workers. This means that a worker can begin as a child development, human services or clerical trainee and proceed with training and experience to increase his level of competence, responsibility and income-earning ability. This process takes place without compelling the worker to leave his job in order to acquire an academic degree.*

The extent to which manpower recruited and trained within these neighborhood-based programs can move out into other public and private agencies will, of course, depend upon the readiness and commitment of other human services agencies to implement the same principles.

* The career ladder proposed for this program was identical to that proposed by the Center for the Illinois Department of Children and Family Services. See Monograph Number II of this report.
Should the present trend continue and result in permanently opening up new opportunities for the employment and advancement of trained inner city residents and community college graduates, we can confidently expect that persons coming out of these neighborhood programs will be in great demand during the coming years. Many of those who have chosen to specialize in the field of child development will be excellently equipped to function in other settings serving children and youth, including the mentally ill and the retarded. From among the human services generalists many will come prepared to take staff positions in a wide variety of agencies, such as neighborhood service centers, mental health centers and community health agencies.*

6. The Training Design

During the first six month training set, when workers will be combining study and practicum experiences, it is expected that trainees will be able to earn fifteen hours of community college credit.** When the Mini-Centers open, the release time for training policy will allow workers to earn nine credit hours each Fall and Winter semester and six credit hours each Summer term.

* On January 28, 1971, New York City's oldest private social agency, the Community Service Society announced that "it would end 123 years of family casework and individual counseling." These techniques, it said, "had proved inadequate for the poor who face overwhelming problems in the slums. The Society, therefore, plans to attack these problems by working directly with existing neighborhood groups to deliver services, to exert pressure on government agencies and to coordinate existing public and private programs. While the society is not yet clear about what specific work it will do, officials say that projects might range from bookkeeping services for community groups to setting up day care centers." New York Times, January 29, 1971. We cite this example as an indication of the direction which many private agencies can be expected to take in the coming years and which will result in opening up new employment opportunities for indigenous workers.

** At the close of this six month period it is recommended that the worker receive a certificate from the community college giving official recognition to his successful completion of the training program.
In each of these semesters one of the courses is a supervised on-the-job practicum which can be conducted on the site of the Center. Thus it is entirely feasible that a worker entering the program may obtain an Associate of Arts degree in two and one-half to three years.*

A community college core curriculum for the human services has been developed by the Human Services Manpower Career Center which is adaptive to the needs of both the child development specialists and the human service generalists who will be employed in the child care program.** The sequence of courses, seminars and practicum which are suggested require close and continuing collaboration between community college, Center staff and consultants to ensure the relevance of the training to the needs of the program. In those courses which are specific to the child development field, the Study Committee places highest priority on the following six areas to be included:

1. Child Development from Birth to Adolescence
2. Health and Nutrition of Young Children
3. Principles of Early Childhood Education
4. Group Care of Young Children
5. Activity Programming for Children
6. Introduction to Group Dynamics

Since one of the most serious problems we face in expanding educational programs in the human services field is the limited supply of qualified teachers, we recommend that the professional consultants working in this program, as well as experienced trained staff be considered for joint appointments on community college faculties. Such arrangements can build a bridge between the school and the community to the mutual enrichment of both.

In the event that sufficient on-site courses cannot be negotiated successfully because of articulation problems with the four year colleges, three years may be required to complete the community college program.

7. A Program Implementation Strategy

a. A Calendar for Setting Up the Program. To set up the proposed child care operation in an efficient and planful manner, the lead-time required will be approximately nine months. These are the proposed steps to be taken during this period and an approximate time-table for each phase of the advanced planning to be done.

Step I  Activities during the 9th month prior to opening

- Once the auspices of the operation has been determined, employ the Administrative Director.
- Organize the Governing Board and, in consultation with the Board, employ the Program Director, the Human Services Worker II and the Administrative Secretary.
- Set up the plan for financial and other record-keeping.
- Obtain facilities for the Central Unit along with the necessary equipment and furnishings.
- Finalize written agreements with all funding sources and negotiate specific relationships with the WIN program and Cook County Department of Public Aid.
- Spell out specific procedures for the recruitment of clients and staff, including the development of enrollment forms and job application forms.

Step II  Activities during the 8th month

- Continue to develop relationships with all key local community groups.
- Initiate recruitment for Child Development Trainees as well as the remainder of the Central Unit staff.
- Begin interviewing applicants for program services and employment.
- Initiate plans with community college for Training Set I, including the identification of leadership and training resources and methods of evaluating satisfactory achievement.
- Develop training materials and curriculum.
Step III  Activities during the 7th month

- Complete employment of all Central Unit staff.
- Conduct orientation and training of Central Unit staff.
- Make final selection of Child Development Trainees.
- Finalize arrangements for Training Set I.
- Make provisions for temporary care of children of trainees.

Step IV  Activities during the 6th, 5th and 4th months

- Begin Training Set I.
- Initiate procurement of Mini-Center facilities; develop plans for remodeling Mini-Centers.
- Order equipment and supplies.
- Evaluate individual trainee performance in the event that any who are proving unsuitable for child care work can be referred to other services and training programs.

Step V  Activities during the 3rd month

- Finalize arrangements for renting Mini-Centers.
- Undertake necessary steps to prepare physical facilities for opening.
- Organize Performance Review Boards.
- Plan evaluation system for project.

Step VI  Activities during the 2nd month

- Conduct orientation meetings with families of each Mini-Center.
- Initiate planning for Training Set II.
- Develop concrete plans for the operation of social, medical, family life and education programs.
Develop concrete plans for training and utilizing volunteers and work-study college students.

Consult with Training Set I staff to recommend trainees for Certification of Satisfactory Completion of Training.

Arrange for implementation of evaluation procedures.

Step VII Activities 1 Month Prior To Opening

. Assign staff to Mini-Centers.
. Recruit and train volunteers.
. Arrange with colleges for student placements.
. Organize Mini-Center operations.
. Make arrangements for food services.
. Interview children and assign them to groups.
. Develop plan for ongoing services to those in job training.
. Conduct "dry run" in each Mini-Center one week prior to opening.
. Publish a manual of operations.

b. Equipment and Supplies. While the core of a quality program depends primarily upon the quality of the staff, it is essential that adequate and appropriate equipment and supplies be made available to the staff. Since detailed lists and guidelines for these items are published by the Illinois Department of Children and Family Services, they need not be listed in this report.*

We would like to emphasize, however, the importance of relating the equipment and supplies purchased to the needs of these inner city children and families. Because programs for more affluent white neighborhoods have constituted the major market for child care equipment in the past, it is particularly desirable that inner city parents and children have a voice in determining what kinds of equipment and supplies meet their own needs. We suggest, therefore, that a committee of parents

* See Program Guides for Day Care Centers and Ways of Developing Well-Rounded Programs for Young Children in Group Care, published by the Department.
and children be involved in selecting the equipment and supplies for the Center.

Because of the multi-service approach taken in this program, additional materials will be required for the social services, health services, family life education and the staff training components of the program. Thus, the Central Unit schedule might include such items as cassette tape recorders, an overhead projector and inexpensive film projection equipment. Some of this equipment may be borrowed or rented from other neighborhood agencies and individuals.

In estimating costs for equipment and supplies we utilized the "Budget Guides for Day Care Centers" issued in 1970 by the Illinois Department of Children & Family Services. The recommended maximum costs for twenty children were applied to this program. In view of the length of time it usually takes to deliver equipment, we recommend that a detailed list of equipment and supplies be finalized and ordered at least four months prior to the planned opening date.

c. Initial Costs for Space and Equipment. The following costs are maximum projected expenditures for renovating physical facilities, for permits, fees and equipment.

<table>

<td><strong>$71,000</strong></td>
</tr>
</tbody>
</table>

d. Operating Budget. The estimated annual budget is $309,310, seventy percent of which is for personnel services. The salaries recommended for each position are based upon the grade level for comparable positions in the State Civil Service pay plan. Step I or the starting salary for the grade is used.

The budget items included are largely based upon the "Budget Work Sheet" of the State of Illinois Department of Children and Family Services. The amounts recommended for staff training, supplies, food replacement and maintenance, emergency needs, dental and medical services and work with parents were based upon the desirable per capita amounts stipulated in the HEW's "Standards and Costs for Day Care." "Desirable" is defined by the HEW to "include the full range of general and specialized developmental activities suitable to individualized development" for a day care center. Estimates for the remaining budget items were based upon current experiences in selected day care centers.

e. Cost Comparisons. The per capita costs for this program are $3,093 per child as compared with the HEW's projected per capita of $2,320 for what that agency describes as a "desirable" program. We have studied the HEW cost figures carefully to determine where this difference of $673 between their per capita cost figure and ours actually lies:

(1) The HEW salary guidelines are unacceptable. The highest salary projected for a staff person is less than what a beginning teacher in the Chicago Public School System earns teaching only 180 days a year. The largest number of positions in the HEW staffing plan are assigned to aides whose salaries are pegged at $4,400 a year. Such salaries are below the Department of Labor's near poverty level for a family of four. Only one salary in the HEW guidelines exceeds the current Bureau of Labor Statistics lower income budget of $7,273 for a family of four in Chicago.

(2) The HEW staffing plan does not provide the number of qualified staff presently required for a day care program by the Illinois Department of Children and Family Services. To deliver the extended day care services in what amounts to a fifty-five hour week, a supervisor in the HEW model would have to spend most of his time not supervising but providing direct care to children. Staff resources are spread too thin to cover the program when employees are on vacation, ill or absent for any other reason.

(3) The HEW plan allocates 10% of its budget for training. The amount specified, however, and the minimal staffing provided cannot support an effective career development program. At best, it might provide in-house staff development activities after working hours. The HEW program falls far short of the twenty percent release time policy specified in our model, a standard which is now widely accepted in New Careers programs throughout the country.

Here, then, is where the $673 difference seems to lie. Our model (1) pays salaries sufficiently attractive to make it worthwhile for people to move from relief to employment; (2) provides realistic work coverage for the kinds of life contingencies that inner city residents are only too familiar with, and (3) makes a full commitment to career development opportunities for staff.
In our judgment, therefore, the per capita cost in this program model represents an altogether reasonable figure, particularly when we take into account the special, practical benefits to mothers and children of the smaller-scale program unit we have proposed.

f. Pre-Opening Costs. The cost of operation during the nine month period depends to a large extent on the speed with which the Director can hire his Central Unit staff. If the Child Development Manager and the Administrative Secretary are employed for nine months, the Child Development Specialist for eight months and all other Central Unit Staff, except trainees, for six months prior to opening, direct payroll costs will total $43,357. If all other personnel are hired at the beginning of the six month training set, the additional costs will amount to $58,740.

Based on this hiring schedule, total personnel costs will amount to $102,097. Adding fringe benefits, training costs and administrative costs brings the nine month total close to $130,000.

This nine-month figure is somewhat misleading, since it includes payroll costs for Welfare Mothers and other disadvantaged persons who enter into the six-month pre-opening period as trainees. Under present policies of the Cook County Department of Public Aid, welfare recipients may remain on Public Assistance until their training is completed. This policy will have the effect of reducing the project's payroll costs during the pre-opening six month training period. It will also provide trainees with the necessary assurance that their welfare payments will not be interrupted either by entering or leaving the training program, should the latter become necessary for any reason.

For all trainees, including welfare recipients, we expect that MDTA and other federal funding support can be pooled to help cover the first nine months pre-opening costs. The particular combination of public aid, stipends and supplemental pay, however, is not as important as making sure that welfare recipients are not financially penalized by entering the program. What happens too frequently is that persons on welfare are urged to remove themselves from public assistance in order to improve their income status, only to discover that the additional costs involved in going to work, attending training classes and paying their own medical expenses place them in a worse economic crisis than when they were on relief. This program must make sure that the worker's situation is significantly improved when he enters the program.
SUMMARY

To summarize, then, costs for the first twenty-one months of the program will include a non-recurring capital outlay of $70,000 maximum, a nine month pre-opening cost of $130,000 which can be substantially reduced by support from the Cook County Department of Public Aid, the WIN program, and other programs and, finally, a $310,000 one year operating budget.

The costs projected for this child care program, however, do not represent the true costs to society. For here we provide approximately thirty families with the opportunity either to remove themselves from public assistance completely or to reduce the extent of family dependency on public welfare. Even for those with large families who may continue to receive some supplemental public assistance, employment in this program will contribute to a new sense of self-sufficiency and some improvement in income status.

The children served, however, are the prime beneficiaries. They not only receive the direct benefits of a program designed to prepare them for the complexities of modern urban living, but they also grow up in a more stable family and neighborhood environment. Hopefully, the increased competence of the children and the availability of successful adult role models in the community will make it unnecessary for them to become a next generation of candidates for Public Assistance, WIN, or other programs for disadvantaged persons.
HOW ONE COMMUNITY ORGANIZATION ADAPTED THE PROGRAM MODEL TO ITS OWN NEEDS AND RESOURCES

In the weeks following a limited distribution of the report, several community groups approached the Center, expressing their interest in demonstrating the program in their neighborhoods. One of these was the Christian Action Ministry (CAM), which was already providing child care services through four centers in the West Garfield Park area. The CAM representatives pointed out that their day care programs were already being developed in ways resembling the proposed model, although after-school services and the career development component had not been part of their operations so far. They were eager to prepare a proposal for doubling their child care capability and enlarging the range of services to include these features.

As a result of this interaction, the CAM organization proceeded to adapt this model to its own local needs and resources. The plan which has emerged represents a strengthening of the original model. All the original components are intact. Linkage with group home care for infants has been added. Finally, by integrating local resources already available to the neighborhood and utilizing both high school and college work-study students, the per capita cost has been reduced to $2,084. This figure is $236 less than the HEW desirable budget and it can be reduced further, if the cost of the career development program can be shared with the State Board of Vocational Education and Malcolm X Community College.

Because the CAM design\* presents an excellent case study of all of the aspects of a comprehensive program, we believe it will be of widespread interest to persons engaged in the planning of day care services for disadvantaged inner city neighborhoods.

A. COMMUNITY SETTING AND NEED

West Garfield Park is a community of approximately one square mile on Chicago's westside. The 1970 Census preliminary release shows the area to have a population of 52,700 people, but estimates of the undercount place the population at 55,000. The community statistics can be listed as follows:

1. It is estimated by the CAP agency that one third of the community is on welfare or poverty level income. The Welfare Council

---

\* Mr. Al Portis and Miss Mary Nelson of the CAM staff prepared this proposal and have generously agreed to sharing its contents with readers of this report.
places it in the highest fifth of areas with high percentages of families under $3,000.

2. The median age of the community is 19.

3. The infant death rate is 45.48, one of the highest in the whole western hemisphere.

4. A Welfare Council study lists West Garfield Park with a "high" need rating for day-care services, with only two Head Start Centers and three licensed day-care homes in the community. (There has been some small improvement since this 1966 figure.)

B. THE SPONSORING ORGANIZATION-CHRISTIAN ACTION MINISTRY (CAM)

The Christian Action Ministry is a community organization consisting entirely of community people who have banded together to deal with the social, economic and educational problems that face them. After the community changed from white to black (1963-4), the church was the one remaining institution. It became a natural base for community action. CAM is chartered under the State of Illinois as a not-for-profit organization, declared tax exempt by the Internal Revenue and not to be a foundation by the Internal Revenue Service. It has been in operation since 1965 and has grown in these six years from four member groups to fourteen, from a budget of $9,600 to one $500,000.

Basic decision-making and policy-making powers are retained in a Common Council which meets monthly and consists of seven delegates from each member group. Each area of action has a task force, which guides that program, hires and fires, holds staff accountable for program results and quality and develops new directions and projects. Staff is responsible to the task force for direction and ultimately to the Common Council.

In its six years of existence CAM has the following track record for results:

1. CAM Academy, a second-chance high school for drop-outs, has been cited by Silberman in his book, Crisis in the Classroom as one of the signs of hope in education.

2. CAM-Tri-Faith Employment Center, in operation for four years, has placed over 17,000 people in jobs at a cost of $11 per placement and ranks highest in the city-wide network of this agency for weekly placements.

3. The Pre-College Program, in its third year, places students not in the top 10% of their graduating class in colleges
across the country with full financial support. Last year 76 students in this program entered college.

4. Our Future, Inc., a local development company patterned as an economic co-operative, has secured two Small Business Administration loans for:

(1) the purchase of a business building and its renovation. It is now leased out to a minority businessman; and

(2) the construction costs of a massive warehouse to assist an energetic minority trucking businessman.

5. CAM acted as a catalyst for two major housing projects in the community, now under construction to provide low and moderate income housing.

6. CAM organized and operates four day care centers.

7. CAM organized and provides community services including adult education, free legal aid, consumer fraud services, income tax services, skill training classes, athletic facilities, youth programs, block club organization and emergency services.

CAM has received program funds from the State of Illinois, the Federal government, foundations; such as, Carnegie, Sears, Fields, Chicago Community Trust, from businesses and individuals.

C. CAM INVOLVEMENT IN DAY CARE AND CHILD DEVELOPMENT

For the past four years CAM has been sponsoring pre-school training programs in its churches in collaboration with the Urban Progress Centers established by the local anti-poverty agency CCUO. Two years ago, having determined that the need for child-care services in the community was acute, CAM opened its first fully-funded day care program in the grade school at St. Mel Church. This program provided full-day care services for thirty children with Head Start fundings.

Experience in this program strengthened the community's awareness of the need for expanded programs and services. In September, 1970 CAM received funding from the State of Illinois to open a second center. Renovation costs for the church to be used were borrowed from the Episcopal Diocese of Chicago and CAM reached out to the University of Illinois at Chicago Circle to obtain assistance on curriculum development.

At the present time CAM provides the day care services at the following locations:
1. St. Mel Day Care Center, funded by CCUO for thirty children. Supportive services are provided to families.

2. St. Barnabas Day Care Center, funded on 50% level by the State of Illinois for forty children. Supportive services are provided and curriculum is being developed on the Piaget model in cooperation with the University of Illinois.

3. Garfield Park Baptist Day Care Center, financed through the combined participation of parents, the Urban Progress Center and CAM, with day care for twenty-five children and no supportive services.

4. Presentation Day Care Center, newly funded by a 50% State of Illinois grant, to open services in July, 1971 for thirty-five children with supportive services.

5. New Morning Star Baptist Day Care, financed by the Urban Progress Center and offering day care services to thirty children. No supportive services are provided.

These centers have opened up as funding and community capability permitted. CAM now sees the need to align them into a coordinated network and to centralize the supportive services so they can be provided to all the centers.

D. THE PROPOSAL*

CAM now proposes to develop a comprehensive child development and family services program for the West Garfield Park neighborhood with the following goals:

1. To provide adequate child care services equal to the need in the community.

2. To incorporate a family life program into the services, which would provide family education, after-school services for older children and infant-care;

3. To work out a model for both community control of the program and decentralized governance of individual centers to ensure maximum participation of the community in decision-making processes;

4. To develop a plan for providing career development opportunities for ADC mothers and other community residents on a step-by-step basis with many points of entry and optional completion levels;

5. To engage in an on-going program of research and develop-

* See page 42 for map of CAM's West Garfield Park area proposed comprehensive child care network.
ment for the purpose of:

a. developing the most effective curriculum to take advantage of the learning potential of the child;

b. evaluating various components of the total program, such as, site locations, styles of control, staffing patterns, with the intent of identifying the most effective.

To achieve these ends, CAM proposes to set up in the West Garfield Park community area ten Mini-Centers which are locally controlled and which would provide: full-day care for 250 children, ages three to five; satellite infant-care group homes for 160 children, ages two months to three years; after school educational and cultural programs for 178 six to twelve year olds, and family services, augmented by medical, dental and psychological services provided by a central facility. Linked to the whole program would be relationships with several educational institutions for training.

In CAM's view, the proposal has several unique features:

1. It is a community-initiated program in a neighborhood which has proved its ability to run effective programs.

2. It offers a comprehensive program which includes infant-care, supportive services, family life services and career development opportunities.

3. It provides an invaluable opportunity to test out several kinds of site facilities curricula and sizes of programs on a comparative basis.

E. DESCRIPTION OF A MINI-CENTER*

Each Mini-Center would be located to within walking distance in order to eliminate the need for expensive transportation and to enhance the family-support nature of the center.

Each Mini-Center program would provide:

1. Full day care services for fifteen to thirty-five children from 7:00 a.m. to 6:30 p.m., including meals.

* See page 42 for Mini-Center diagram.
CAM PROPOSED COMPREHENSIVE CHILD CARE NETWORK
WEST GARFIELD PARK AREA
2. An intensive educational program for the children as part of the day care program.

3. An after-school program for six to twelve year olds providing educational, cultural and athletic activities, staffed by community high school (NYC) and college students (College Work-Study Program). The use of these students as staff for this program would add several important features to the program:

   a. Work in this capacity might interest students in pursuing human service careers;

   b. Students in high school and college would provide positive models for the children, particularly models of male supervision for those children who come out of one-parent homes and do not have enough exposure to male leaders;

   c. These jobs would provide income for the high school and college students involved thus assisting them towards their career goals;

   d. Because the staff would also live in the community, their participation would strengthen the growing fabric of a caring community, in which people are involved with each other and help each other;

4. Satellite infant-care group homes in the immediate vicinity of the Mini-Center. These would provide infant-care services as an integral part of the Mini-Center program, closely connected with the parent group, the supportive services and the career development aspects of the entire program.

There is a critical need for this component. Most of the mothers who have three to five year olds also have younger children and cannot take advantage of a job or a training opportunity unless infant care is provided. Normally, because of the staffing ratio, infant care is very expensive. The group home care model, however, is an expedient and less costly alternative. In CAM's view, however, the group home care setting is not seen as a substitute for the educational and social advantages of a comprehensive child-care center. What they seek, rather, is to develop a network which links the group homes into the child care center during the most formative period of the child's life.

Infant group home care has been developed successfully by the Illinois Bell Telephone Company in Chicago for its own employees.
The company has offered to work with CAM in the implementation of this phase of the program.

The infant-group-home-care component would add the following ingredients to the program:

a. Mothers who are at home with their own children can earn some money by taking care of additional children (up to 4 in a licensed home), thus freeing up other mothers to get training or work.

b. These licensed foster mothers would receive training from the comprehensive program and would be eligible to move into the career ladder, as they desired.

c. Following the Illinois Bell Telephone Co. model, infant care services would then be brought close to the home of the child, usually within a two block area, thus being convenient for the mother.

d. Mothers would arrange to pay the foster mother for the service, or if they were on welfare, CAM would assist the foster mother in getting payment from the Public Aid Office.

e. Offering infant care through the group-home plan would reduce the cost of such services and make it available to many more people.

5. The Family Life program is also seen as an indispensable part of the Mini-Center program. The program would be developed by the staff, parents and the central support unit. It would hopefully offer such activities as family night programs, intensive group work services with parents of troubled children, special educational information and discussion on problems of discipline and child rearing. Other family-support services are already available at the CAM center, such as:

An Employment Center

A General Adult Education Program

Special Courses in Typing, Rapid Reading, Advertising, Photography, Sewing

Legal Aid and Consumer Fraud Services

Athletic Facilities and Events

Counseling with Pastors of the Various Churches
6. Each Mini-Center would be operated by a local Board, consisting of parents, staff with one group vote and one CAM Council representative. Basic decisions about budget, program development and staffing, are the responsibility of that Board. The central staff functions to implement these policy decisions and to provide consultation to the Board.

In order to test several models and thus to determine the best combinations of size of program in relation to each facility, the number of children in each site would differ. Four sizes of programs are contemplated:

- fifteen children
- twenty children
- thirty children
- thirty-five children

The number of after-school children will vary from center to center so that the optimum use of the facility and staff for a quality program can be explored.

F. SUPPORTIVE SERVICES FROM THE CENTRAL STAFF

The central support staff serves as management and consultant for the Mini-Centers, bearing responsibility for the quality and enrichment of programs as well as the administration of funds and services.

Because their function is to provide supportive services, the Central staff receives training in how to help Mini-Center staff grow in understanding and responsibility. In this training process the Central staff learns how to work as a team across disciplinary lines, to provide support without dominating the situation.

Central staff key responsibilities are:

1. To handle payroll, personnel record-keeping, budgeting, rental and purchase of facilities and equipment and other administrative functions;

2. To act as back-up and relief for Mini-Center workers who are in training, ill or unavailable;

3. To provide program support, both from its own full time staff and its consultants, to enhance the quality of the program and to deal with special problems;
4. To organize the planning and implementation of the family life education program through interested participants from staff, parents and community;

5. To supply auxiliary health and human services to the families affiliated with the program (such as are located in the CAM Center already, the employment center, legal aid, etc);

6. To plan and supervise the staff development program which provides all employees with accredited entry level training and on-going opportunities to pursue their full career potential;

7. To handle any training, preparation and recruitment of volunteer workers for the Mini-Centers;

8. To participate in the Central Policy Board (CAM Day Care Board) as members of the team and to help build understanding and support for the program throughout the entire community;

9. To keep informed on funding possibilities and developmental potential and to share this with the Central Policy Board;

Since CAM is a community organization, with an already-functioning policy-making mechanism and a Day Care Board, this structure would be maintained and enlarged, so that Central staff would participate on the Central Board and one CAM Council member would be on each local Board. The CAM Day Care Board (Central Policy Board) would be responsible to the CAM Council for the smooth-functioning and development of the program. The CAM Day Care Board would continue to be composed of two parents from each Center, each Center director as participant with no vote and community at-large delegates from the Council.
MINI-CENTER STAFFING PLAN

Teacher-Director
Head-teacher, if class has only 15
Teacher, if two classes are needed at a center
2 Teacher-trainees for every 15-20 children
1 College work-study Student to release staff for training
1 College work-study Student to supervise the after-school program
1 Neighborhood Youth Corps High School Student for every 5-6 children in after-school programs

Supportive services:
Health Care Worker
Education Aides
Social Service Workers
Program Directors

This staffing pattern does not include cooks and maintenance services. It is hoped that a local minority business can cater the food to each center and that the centrally-staffed maintenance man would subcontract to mothers for some additional "light housekeeping" maintenance services daily in each center.
In addition to the above-mentioned staff and services, CAM proposes the employment of:

a. A bus driver and a mini-bus, which would take children from the Mini-Centers on trips, thus making it possible for each center to have a trip for fifteen children every two weeks. This is an important activity to stimulate the child's learning and his ability to deal with the world.

b. A maintenance man, who would handle the heavy maintenance in each center, dealing with two centers a day, and available for light repair and renovations.

The diagram on the next page illustrates the staffing pattern for the supportive and Central staff.

G. SITES AND KINDS OF FACILITIES

Since CAM has attempted to locate the centers in a pattern which brings child-care services to every corner and locality within one square mile, it has had to accept the location of present structures, while adding new facilities as required.

The result has been to identify a variety of facilities:

- A church basement
- A school
- A mobile unit
- A storefront
- A business facility
- An apartment in a new low and moderate income housing project.

Out of the ten sites proposed for the comprehensive program, estimated preparation costs and work are as follows:

1. Renovation of three churches, one convent and two storefronts at a cost of approximately $12,000 each;

2. Purchase or leasing of prefabricated mobile units at a cost of $10,000 each;

3. Plumbing fixture changes in the new FHA 235 housing, $1,000.

TOTALS: 240  178.  10  9  26  20  36
II. CAREER DEVELOPMENT PROGRAM

A sound and flexible career ladder with many points of entry is one of the major components of this proposal. The CAM career development plan includes the following groups:

(1) ADC mothers entering into work training program.

(2) Mothers operating the group-care homes who wish to be trained as child care workers.

(3) High school students in the Neighborhood Youth Corps who are recruited through a cooperative training program from the neighborhood public schools.

(4) College work-study students who become involved in the program and wish to pursue child care careers.

The staff training is woven into the daily operations of the program in the following manner:

(1) Staff will be relieved to attend classes during nap time each day. College work-study students will be on duty during this two-hour afternoon period.

(2) The training will be brought to the Central Unit four afternoons a week from 1:30 to 3:00 p.m. by Malcolm X community college and the University of Illinois. The other afternoon will be reserved for Mini-Center or total program staff meetings.

(3) By using the Central staff education aides as substitutes at the Mini-Centers, staff will have additional training time to visit other programs in the city and to attend city-wide meetings on day-care.

I. RESEARCH AND EVALUATION

Because this proposal reflects a black community's concern to develop a quality program to meet its child-care needs, an evaluation design is proposed. These are some of the questions CAM wishes to have evaluated jointly by the community and an outside group:

1. Which style of facility is most multi-purpose and economical to operate?

2. What is the effect of the career development component on the community?
The career development program for the teacher-trainees, with 4 afternoons a week in courses, would mean that a trainee could receive an A.A. degree in child development in two and one-half years.
3. Is it advisable to mix an after-school program with a child-care component?

4. How effective is the group-care home setting in feeding children into the day care center?

5. What is the most effective curriculum for the three to five year olds?

It is CAM's conviction that, out of the ten centers to be established in the comprehensive model, one of them should be specially designated as the research and development center. While CAM would provide assistance to outside research staff, it wishes to keep control of the decisions as to what research is undertaken in the hands of the community.

J. PLANNING AND ACTION TIMETABLE

On the basis of its prior experience in developing day care centers, CAM is confident of its ability to carry out a rather pressing time schedule for the development of the entire model.

A timetable for mounting this program, once the funds are available, covers a twelve-month period.

| NOW                                      | Continue to run the five centers |
|                                          | Write and develop comprehensive program |
|                                          | Investigate and firm up relationships with Board of Education, junior colleges, new housing units etc. |

| In Three months                  | Revise going program to include: after-school program, staff training, infant-care program |
|                                 | Hire central staff and train them |
|                                 | Establish new sites and begin renovations |

| In Three months                  | Get the entire career development program underway, with the courses, special training etc. |
|                                 | Hire new staff for additonal centers as they near readiness for operation; train the staff in initial processes |
|                                 | Fully staff central services |

| In Three Months                   | Open new centers, one-by-one as they are ready |
|                                   | Modify any part of the program that seems to be ineffective |
|                                   | Begin setting the goals and tools for the evaluation process and develop the research component |
Thus, CAM projects that, given appropriate staff at the very beginning, the entire comprehensive model would be operational and ready for operation within a twelve-month period.

K. ADDITIONAL POSSIBILITIES AND DEVELOPMENTS

Looking ahead there are two additions to the comprehensive program which CAM proposes to make:

1. CAM is now working on the development of a medical clinic and a 300 bed nursing home complex, to be called the Center for Human Development. This project is expected to be completed in two years. The plan is to build into this new building a day care center and to extend the services of the medical clinic to all the Mini-Centers. Two important outcomes are expected in the combination of a day care center in a nursing home, which CAM wishes to explore:

   a. The combination of nursing-home with day care would be therapeutic for the elderly, giving them an opportunity to give of themselves and be useful in the day care program. It would provide extra staff and volunteers for the day care program as well as grandmother-father figures for the children.

   b. Some of the basic costs of day care could be cut down through joint use of the nursing home kitchen and other kinds of staff. Having a day care center on the premises could also provide service to the 300 employees who will be working in the nursing home. Perhaps this would be the place to try a night-time child care center to meet the needs of certain parents and insure full usage of the facilities.

2. To broaden the services to the foster mothers in the infant group home care program, CAM would like to begin a toy library, probably located at the CAM Center. The loaning of toys to foster mothers and parents, much as a book library works, would enrich the home situation, without additional cost to parents.

INFANT GROUP HOME CARE BASIC COSTS

1 Infant Group Home Care Worker $7,956
Fringe benefits (10%) 795
Services to children (160 at $6) 960

MINI-CENTER AND CENTRAL SERVICES PROGRAM

(240 pre-school; 178 after school) 3-5 yrs. 6-12 yrs. Central

10 Head teachers ($8,460 each) $84,460
9 Teachers ($7,500 each) 67,500
26 Aids ($5,532 each) 143,832
20 College work-study (25%, 15 hrs. wk.) 5,850 $5,850
36 Neighborhood Youth Corps
1 Unit Administrator $11,700
1 Administrative Secretary 7,440
1 Bus driver 8,000
1 Maintenance man 8,000
2 Program Directors ($10,236 each) 20,472
2 Clerk Typists ($5,532 each) 11,064
2 Social Service Workers (I and II) 17,556
1 Co-ordinator, After-school programs 7,956
2 Education Aids (I and II) 17,556
1 Health Worker 7,440

Fringe Benefits (10%) $42,467
Staff Training (10%) 42,467
Educational leave of absence 10,000
Consultants 15,000
Liability insurance 4,000

Food (.75 day, day-care; .10 day, after sch.) 45,900 4,539
Supplies (day-care $75 x 240;
school $40 each) 18,000 7,120
Replacement and maintenance ($15 x 410) 3,600 2,670
Emergency ($20 each) 4,800 3,560
Leasing of minibus and gas and repairs 4,200
Rental ($180 each. mo. $300 central) 18,000 3,600
Utilities 10,000 500
Dental and medical (410 a $60) 14,400 10,680
Conference-travel (staff) 3,000

Misc.
Auditing and reports 2,000
Bank services 300
Printing and publicity 1,000
Housekeeping assistance 15,300
($6 day, each site)
Services to parents (240 x $50;
after school, $10 each) 12,000 1,780
Administrative overhead

TOTALS $488,838 $44,155 $337,916
SUMMARY OF BUDGET COSTS

Preliminary costs $ 90,000
Infant Care Supportive Services 9,711
Care for 240 3-5 yr. olds 488,838
Central Administrative costs (all progs.) 337,916
Program costs, 6-12 yr. olds 44,155
$970,620

SUMMARY OF NUMBERS

Infant Care in Group Homes 160
Child Development Program (3-5 yr olds) 240
After-school program 178

BUDGET ANALYSIS

TOTAL OPERATING COSTS OF MINI-CENTER PROGRAM $870,909
*TOTAL COST PER CHILD OF MINI-CENTER PROGRAM (418) $2,084

* This figure of $2,084 compares favorably with the HEW "desirable program" costs of $2,320, and the Study Committee Manpower Model costs of $3,093.

SOURCES OF INCOME

Projected refunding for St. Mel Center (CCUO) $ 46,790
Refunding for St. Barnabas (State; average) 19,000
Funding for Presentation (State; new grant) 35,000
Welfare reimbursements ($65 child; 120 children) 93,600
Parents fees (120 children; sliding scale; $10 av.) 62,400
Special Food Lunch Program (.55 day; 240 children) 33,660
TOTAL $290,450

Note: This income figure does not include the $12,378 in-kind portion of the CCUO budget, nor does the expense figure include the in-kind services already available at CAM--counseling, employment, legal aid etc.

SUPPLEMENTARY BUDGET SHEET

In assessing the total costs of the community comprehensive child development and career development program, several important factors should be kept in mind:

(1) Included in the costs are not only child-care services and all the supportive services, but also the career develop-
56

ment costs. They can be itemized as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 college work-study students</td>
<td>$5,850</td>
</tr>
<tr>
<td>Staff training costs</td>
<td>42,467</td>
</tr>
<tr>
<td>Educational leaves of absence</td>
<td>10,000</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$58,317</strong></td>
</tr>
</tbody>
</table>

(2) Through the development of the infant-care services, many welfare mothers who could not take advantage of jobs or job-training, will now be able to enter these programs, thus, ultimately possibly relieving the welfare costs.

(3) The 26 trainees, most of whom will be taken from the rolls of welfare recipients, will not only have a job, but will also receive training that will enable them to go up the career ladder to better paying and more rewarding jobs, thus ultimately leaving welfare rolls entirely. These trainees slots are seen as the first stepping stone for advancement to jobs not only in this community, but in other programs, thus opening the trainee slots for new people to move in.

(4) Hopefully, when the CAM Medical Clinic is opened, the cost of medical services per child can be reduced. CAM is also working on a pre-paid health insurance plan, which would provide these services to the family, thus taking these costs out of the child development program.

III

PROSPECTS FOR THE IMPLEMENTATION OF THE PROGRAM MODEL

As this report was being completed, the City of Chicago made a preliminary announcement of its five-year plan to invest 21.3 million dollars in programs designed "to take government services to the neighborhoods."* The announcement indicated that funds will be used to construct five multi-service centers and four health centers in inner city neighborhoods.

In describing the functions of the multi-service centers, Erwin France, Director of the Chicago Model Cities Program, indicated that these facilities would offer a wide range of human services and would involve the use of satellite centers.** "We are going to learn from the first center,"

** Services cited do not include direct child care services.
Mr. France stated, "Our experiment will determine which services should remain centrally located and which should be satellited out."

In view of the direction the City of Chicago is taking, we have suggested that a pilot project such as CAM proposes* to test this child care model on Chicago's westside would be extremely timely. Such a demonstration could help the City explore the role that a child care Central Unit and its satellites can play in a neighborhood, using the first new multi-service center now under construction on the west side of Chicago as a back-up resource.

Another encouraging development is the modification being made in the State Plan for Services to Families and Children which will provide additional Federal funds under Title IV of the Social Security Act for day care services to low income groups.

The City's movement into neighborhood programs combined with this pending modification in State funding policies can set the stage for a significant expansion of day care services in the inner city.

If the demonstration of this model is successful, it can become the basis for a planned network of Central Units and Mini-Centers in other inner city neighborhoods. Such a network should eventually include linkages with group-home day care settings for the purpose of upgrading these services and providing the same career development opportunities for home-based child care workers as will be made available to staff in the Central Units and Mini-Centers projected in this model.

In implementing such a planned neighborhood-based child care system in any community, the participation of all interested individuals and organizations should be sought. A variety of sponsors is required if we are to make any significant impact on the child care needs of disadvantaged inner city neighborhoods throughout the country. City, State and County agencies, voluntary agencies, educational institutions and community organizations can each make their contribution. In some neighborhoods it will be necessary for one or more established agencies and educational institutions to co-sponsor this model and to build into the project provisions for sharing operational responsibility with local community organizations.

As different communities take hold of the responsibility to plan and operate these programs, we expect that the model we have offered will be modified in virtually every case to meet local needs and priorities. We not only expect this to take place, but would vigorously support all local initiatives to shape programs that are genuinely responsive to the special problems, talents and aspirations of each community.

---

*CAM's proposal was presented in the spring of 1971 to HEW and the State Department of Children and Family Services, both of whom have expressed a positive reaction to the plan and are presently exploring collaborative funding possibilities.

APPENDIX II

GUIDELINES TO DETERMINE LOW INCOME LEVELS BASED ON FAMILY SIZE

Several definitions of low income are in use today. The U.S. Department of Labor defines a disadvantaged individual as "a poor person who is either a high school dropout, a member of a minority group, under 22 or over 45 years of age or handicapped." To be considered Poor under this definition total family income should not exceed OEO Poverty Guidelines. The OEO index, however, was not intended to be used as an index of Low Income.

A more suitable income index is released quarterly by the Chicago Regional Office of the Bureau of Labor Statistics (BLS). These figures reflect cost of living increases in housing, taxes, transportation, clothing, medical and other expenses. They are based on the concept of Minimum but Adequate income and are listed for a family of four at Lower, Moderate and Higher Budget Levels.

For our purposes we suggest that low income levels be set mid-point between the OEO Poverty Guidelines and the BLS Lower Income Level. By averaging the January 1971 BLS figure of $7,273 for a family of four with the OEO figure of $3,000 we arrive at $5,736, an amount slightly over $1,000 more than the Labor Department's Near Poverty figure. It would appear satisfactory, therefore, in establishing Low Income Guidelines, to simply add $1,000 to the Near Poverty Index.

APPENDIX III

PROPOSED MONTHLY FEE SCHEDULE

In planning a child care center, one must take into consideration that income from fees will at most represent a very minor proportion of the total cost of the operation. The significance of charging fees is that it gives the individual a feeling of participation and sharing as much responsibility as possible for the day care services.

It is assumed that no fee will be charged for welfare recipients whose children participate in the program, nor for any mother upon whom this would work a hardship.

A fee for those who are non-recipients and employed should take into consideration both the total family income and the size of the family. Special arrangements should be made for situations where several children participate in the day care center and where special hardship exists. For example, the second child can be enrolled at one-half the rate, three and more at one-quarter.

The specific fee for each family should be set after an interview with the mother. Below is a proposed fee schedule.

APPENDIX IV

JOB DESCRIPTIONS AND SPECIFICATIONS FOR STAFF

CHILD DEVELOPMENT TRAINEE

CLASS CHARACTERISTICS

Under immediate supervision participates in an intensive on-the-job training and accredited education program designed and organized as a preparation for direct work with pre-school and school-age children in a daycare setting and for other entry-level work closely associated with the care and development of children. Specific responses and general progress in this learning program are observed, reviewed and evaluated by designated staff of the child development program.

EXAMPLES OF DUTIES

Acquires orientation to the program, the agency and to community resources with which the program staff has contact and to other factors essential to the functions and environment of the day-care program.

Assists and participates in providing a variety of play and educational activities for children; observes supervised recreational and skill development activities; accompanies children and staff members on field trips.

Acquires knowledge of principles and practices of child care, of the developmental stages of childhood, of basic human needs and responses and other bases of knowledge necessary or desirable for effective work in a child development program.

Develops skill in interaction with children, in work management, use of language and other methods, techniques and processes required by the needs of the program and its clientele.

Develops familiarity with educational and recreational materials and resources and with their application in a program of child development.

Participates in staff interaction with parents and other individuals and groups in the community; helps in registration and record keeping activities.

Participates in the staff training and career development program; assists in setting up and participates in group activities, staffing conferences and family life programs.
MINIMUM DESIRABLE QUALIFICATIONS

Education open. Previous experience of any specific kind not required.

SELECTION GUIDELINES

Applicants should show evidence of an interest in child care and development work toward a possible career. Ideally, the applicant should give some indications of having spent time with small children and of having positive attitudes toward their growth and development.

CHILD DEVELOPMENT WORKER I

CLASS CHARACTERISTICS

Under close supervision, conducts and participates in a variety of activities associated with a program of day care for pre-school and school-age children concerned with their proper care and development. Works directly with children, but also carries out aspects of the program involving interaction with parents, contact with other individuals and groups in the community and the use of educational and recreational materials and resources. Work is reviewed by observation and by oral reports.

EXAMPLES OF DUTIES

Conducts and participates in a variety of play and educational activities with children; leads recreational and skill activities; escorts children on field trips under supervision.

Maintains and utilizes educational and recreational materials and resources; assists in the development and use of educational materials.

Maintains a safe, sanitary and orderly environment for children in day care.

Participates in developmental and socialization activities by example, demonstration and instruction; assists in the processes of learning good habits of eating, grooming, etiquette, toilet and social relations.

Participates in efforts to seek and find parents in the community who can benefit from the child care and development program; assists in the effort to discover and utilize community resources and community support for the program; acts as representative of the program to community agencies and groups.

Participates in the staff training and career development program; assists in setting up and conducting group activities, staffing conferences and family life activities.

Maintains routine program records; assists in the preparation of reports.
MINIMUM DESIRABLE QUALIFICATIONS

Completion of the required child development training program with satisfactory performance.

SELECTION GUIDELINES

Selection will be made upon satisfactory completion of the basic training program as a Child Development Trainee.

CHILD DEVELOPMENT WORKER II

CLASS CHARACTERISTICS

Under general supervision, directs activities of children and of subordinate staff in a small neighborhood-based day-care center for preschool and school-age children and is responsible for the full or part-time care, safety and developmental activity of participating children; or conducts special activities requiring specific training and skills in working with children as part of the early education and development services component of the program. Supervision is received from program administrative staff and work is reviewed by reports, written and oral, and by direct observation.

EXAMPLES OF DUTIES

Supervises work of subordinate child development staff assigned to a day-care center; instructs and evaluates performance in their work with children; counsels and encourages the career development of staff.

Conducts, plans, organizes and evaluates a variety of general or highly specialized play and educational activities for children; observes behavior and identifies problems of children; seeks help in dealing with problems as required.

Assists in the learning and development of children in habits of eating, grooming, toilet, etiquette and socialization through example, demonstration and instruction.

Confers with parents, community representatives, program personnel and others as they relate to the work of the program in the community.

Assumes responsibility for maintenance of a sanitary, safe and orderly environment in the day-care center.

Participates in the staff training and career development program; assists in setting up and conducting group activities, staffing conferences and family life activities.

Maintains records, prepares and submits reports as assigned.
MINIMUM DESIRABLE QUALIFICATIONS

Completion of the required child development training program with satisfactory performance and some experience in the program. An alternative is satisfactory completion of an approved Associate of Arts program.

SELECTION GUIDELINES

Selection should be made (1) from among those employees who have satisfactorily completed the basic training program as a Child Development Trainee, or (2) from among applicants who have successfully completed a child development curriculum at the Associate of Arts level, or a human services curriculum at the Associate of Arts level with some emphasis on child development. Employees in the Child Development Worker I class should be reviewed for possible assignment to this class within eighteen months after completion of basic child development training.

CHILD DEVELOPMENT SPECIALIST

CLASS CHARACTERISTICS

Under direction, is responsible for the direct supervision of a day-care program conducted through several small neighborhood-based day-care centers for pre-school and school-age children; participates in planning and organizing the program; works closely with consultants to program leadership; is responsible for assuring that staff training and career development programs for personnel are developed and carried out. Work is reviewed through written and oral reports and records and supervisory conferences.

EXAMPLES OF DUTIES

Supervises and directs the child development staff in several small day-care centers; instructs and evaluates performance of day-care supervisors in program procedures and effective work methods and techniques.

Develops and coordinates the staff training and career development program; counsels program staff regarding their performance and career-related achievements; establishes and maintains productive relationships with colleges and other human services employers participating in the program; assists in developing outside field training and job opportunities for staff; assists in negotiating related agreements and contracts.

Serves as expert resource to day-care center staff and other program personnel in child development and early childhood education and in resolving problems concerning the children and their families; provides educational and other program resources and materials.
Coordinates all components of the program and all activities of the
several day-care centers; facilitates effective utilization of program
staff including volunteers and students; assists in recruitment, selec-
tion, promotion and discipline of staff.

Works closely with special consultants and other resource people;
develops effective linkages with community groups and agencies; organizes
and conducts necessary meetings and staff training sessions.

Reviews and evaluates the work and records of the day-care centers;
recommends improvements; participates in annual budget development and
review for program; attends professional meetings; maintains program re-
cords and makes reports as required.

MINIMUM DESIRABLE QUALIFICATIONS

Completion of training courses required by the program with satis-
factory performance and some experience in work at the level of Child De-
velopment Worker II or the equivalent. An alternative is satisfactory
completion of a baccalaureate-level program in child development or early
childhood education or other closely related curriculum as approved by
the program administration.

SELECTION GUIDELINES

Selection should be made (1) from among those employees who have
completed all required training at the level of Child Development Worker
II with satisfactory work and training performance, or from among appli-
cants with bachelor's degree as outlined above. Employees in the Child
Development Worker II class should be reviewed for possible assignment
to this class within two years of work in that classification. Choices
should be made on the basis of demonstrated effectiveness in the program,
abilities in working with children, in supervising staff and in leader-
ship potential.

CHILD DEVELOPMENT MANAGER

CLASS CHARACTERISTICS

Under general direction, is responsible for the implementation,
operation and review of a neighborhood-based program of day-care for pre-
school and school-age children functioning through several small day-care
centers located in the using community; develops and directs all services
and activities within such a program. Work is reviewed through periodic
reports to administrative superiors or governing board.

EXAMPLES OF DUTIES

Plans, organizes, develops, directs and evaluates all services and
activities of a comprehensive day-care program functioning through small
day-care centers. Procures and maintains facilities and program equip-
ment; selects, hires, upgrades and disciplines personnel; promotes the integration and balance of program service components and the achievement of program goals and quality standards.

Establishes and maintains effective working relationships with the public, local agencies and community resources; interprets the program to institutions or organizations interested in or relating to the program.

Organizes and facilitates the work of a local community advisory council to the program; promotes responsible community participation and the development of local leadership.

Procures, organizes and integrates into the program the paid services of special consultants; solicits and arranges for voluntary services of students, teachers, medical and other professional personnel and local community residents.

Supervises, instructs, evaluates and counsels subordinate personnel; oversees and directs the establishment of the staff training and career development program; facilitates productive relationships with local colleges and employers; guides the negotiation of related contracts.

Develops annual budget for program and controls expenditures; assumes responsibility for fiscal management and integrity of the program; maintains extensive records of all budgets, personnel and service transactions; prepares, submits and maintains required records and reports; attends staff and professional meetings.

MINIMUM DESIRABLE QUALIFICATIONS

Satisfactory completion of training courses required by the program at the level of Child Development Specialist and some experience in work at that classification, or equivalent work experience. An alternative is satisfactory completion of a master's degree program in social work, child development, early childhood education, or other closely related curriculum as approved by the program administration and at least one year of experience in a program of child development.

SELECTION GUIDELINES

In selecting applicants from outside the program, experience in program administration, including financial management, is highly desirable. Other stress should be placed upon experience in community work, particularly work relating to services to children and families. Within the program, employees serving as Child Development Specialists should be reviewed for possible assignment to this class, according to availability of position, within two years of service at that classification.
HUMAN SERVICES TRAINEE

CLASS CHARACTERISTICS

Under close supervision performs a variety of outreach, intake and follow-up tasks associated with the identification of families with children in need of day-care services and the provision of social and supportive services to children and families participating in a neighborhood-based day-care program. Work is reviewed through observation, oral reports and supervisory conferences.

EXAMPLES OF DUTIES

Contacts and conducts street, home and office interviews with children, parents and other individuals interested in day-care and other program services; records pertinent data; encourages participation in program activities.

Conducts follow-up according to instructions on current and prospective participants; records and interprets pertinent information.

Provides general information on both program and community services to families and individuals, both in the field and at the point of intake; accompanies and facilitates the referral of individuals to appropriate services.

Assists in the identification and resolution of child and family problems; records information in case records as appropriate.

Participates in day-care activities with families and children, individually and in groups; assists in interpreting children's behavior to parents and family members; assists in the strengthening of family and community life.

Participates in the staff training and career development program; assists in setting up and participates in group activities, staffing conferences and family life education programs.

Prepares and maintains records; assists in reception, intake and registration activities as required.

MINIMUM DESIRABLE QUALIFICATIONS

Completion of the required child development training program with satisfactory performance.

SELECTION GUIDELINES
