Services

ABSTRACT

The administrative activity, including organization, staff, budget and external contacts, and the technical progress of IPS development, experimental service, workshops, documentation and related activities of the Center for Information Services (at the University of California, Los Angeles) are reported upon in this document. Pages 9 and 10 may be illegible.) (Related materials are available from the National Technical Information Service as PB 201 754 through PB 201 760 and were announced in GRA 71-18.) (SJ)

## ADMINISTRATIVE ACTIVITY

### ORGANIZATION

Project tasks proceeded as scheduled during the fourth quarter of Phase IIB of the CIS project with no significant changes in organizational structure or assignments of responsibility.

#### Establishment of a CIS Section

Plans drawn up for the establishment of a "CIS Section" within the UCLA Library Systems Department, initially consisting of a section head, Information Systems Librarian, and a secretary, were accepted by the Library's CIS Liaison Committee as the best present method of formalizing the Library's commitment to CIS.

Reacting to the committee's recommendation for early action, further plans have been made to add new staff in January 1972, with Peter Watson becoming section head at that time. He will report to the Head of the UCLA Library Systems Department who has overall responsibility for automation activities in the UCLA Library system.

Physical space for the CIS Section is expected to be available early in 1972.

### STAFF

CIS project personnel for this quarter are listed in Figure 1 by organizational affiliation. Steven C. Farrell, an undergraduate student in Mathematics at UCLA, joined the project in October 1971. He will be doing utility programming and assisting with the operation of the experimental service.

### BUDGET

The table in Figure 2 shows monthly expenditure rates and cumulative expenditures, both projected and actual, for the Phase IIB program during the first twelve months of operation.

### EXTERNAL CONTACTS

Robert Carmichael participated in an ASIS-SLA week-end seminar and workshop held October 8-10, 1971 at Ventura on cost analysis techniques applied to library operations.

Jerry Lieblich and David Simonton of Global Engineering Documentation Services visited ILR on November 3, 1971 to discuss data base development for engineering standards and CIS development plans.

Ida Riordan attended the 1971 Annual Meeting of the American Society for Information Science (ASIS) in Denver on November 7-11, 1971. Prior to the meeting, she attended a tutorial on "Collecting and Reporting Real Costs of Information Systems", and a workshop on "The User Interface For Interactive Bibliographic Searching".

Linda Miroff and Aejnt de Boer attended the 1971 ACM-SIGFIDET Workshop on Data Description, Access, and Control in San Diego on November 11-12, 1971. The workshop was concerned with the problems of data description and data privacy and integrity in generalized data base systems.

Neil Ludlam attended the 1971 Fall Joint Computer Conference in Las Vegas on November 16-18, 1971. He attended sessions on data base management and data security.

Robert Carmichael presented a CIS progress report to members of the University of California Library Council during a two day meeting, November 11-12, 1971 at UC Riverside; and to members of the University of California UNCLSTAF on December 6, 1971 at UC Irvine.

\*Includes 47% overhead on all salaries and 10% benefits on non-RA salaries.

## TECHNICAL PROGRESS

### IPS DEVELOPMENT

The emphasis this quarter was on completing the IPS prototype design and documentation. Five major areas required attention and are described below. Plans were made for the next phase of development, implementation of the prototype, which begins next quarter, and for related support activities.

#### IPS Control Blocks

Major modifications were made to the IPS control blocks to reflect changes in the IPS design that have evolved since the control blocks were originally defined. The revised design is described in the DCS document, "IPS Control Blocks". This document describes the descriptor table, dope vectors, parameter trees, symbol tables, and cross-reference tables.

#### IPS Monitor

A document describing the internal specifications of the IPS monitor was produced. It describes the basic monitor structure, IPS task management, user communication management, job workspace management, packet management, dynamic core management, job log management, installation statistics management, file management, disk space management, and monitor service requests.

#### IPS Analyzers

Modifications were also made to the design specifications for IPS analyzers. A DCS document was issued describing the basic structure of analyzers. This document includes a description of the collector and executor phases of the analyzer, and a description of the file data graph.

#### Prototype SDI Service

Major revisions were made to an earlier document which described the SDI Service and its subservices, Profile Load, Select, Sort, and Report. In addition, preliminary logic diagrams for the SDI Service were produced.

## Input-Output

A major revision to an August, 1971 document containing I/O specifications was produced this quarter. The revised document describes the IPS access method, the data management services it provides, and the macro instructions necessary to use it within an IPS service program environment.

## EXPERIMENTAL SERVICE

### Ca-Condensates

The experimental service, which provides current awareness and retrospective searches of the CA-Condensates file, continued to grow this quarter. The operation ran quite smoothly, the only problems being caused by an occasional late delivery of the weekly tapes.

The data collected from the weekly runs that were made this quarter are tabulated in Figure 3. A comparison of averages for the last two quarters is shown in Figure 4.

### Other Data Bases

Contract negotiations are underway with Engineering Index, Inc., for use of the COMPENDEX File. CIS expects to receive the monthly tapes beginning with the January 1972 issue.

## WORKSHOPS AND CONFERENCES

On Thursday and Friday, November 4 and 5, 1971, at UCLA, a meeting took place between members of NSF Office of Science Information Services (OSIS), and representatives of the eight agencies presently receiving NSF-OSIS support in developing innovative information services for science and technology on university campuses. Being the first such meeting, it was devoted to identifying problems of mutual concern and exploring possible mechanisms for approaching their solution co-operatively. Names of those attending are given in Figure 5.

Although the proceedings were recorded on tape, the quality of the recording turned out to be poor and transcription has proved difficult. The attempt to obtain a full transcription for distribution to the attendees will be continued. Meanwhile, highlights of the two day agenda (Figure 6) are summarized below.

Thursday, November 4, 1971

After introductory remarks by Vice Chancellor Barber of UCLA and W. B. Kehl, the three west coast agencies gave presentations covering the origins, basic goals, present status, and future directions of their respective projects. E. Parker and J. Schroeder (Stanford) first discussed SPIRES/BALLOTS. Parker outlined their aim of acting as an "information retailer" mediating large and frequently complex files of information to users with highly specialized individual information requirements, and of the prime place given to development of on-line capabilities for SPIRES/BALLOTS. SPIRES II, the first operational version, is designed to become active in mid-1972. Schroeder then gave details of the system's capabilities, in terms of the hardware environment, file building, file manipulation, and searching, and outlined its relation to other computational activities at Stanford.

P. Rohn (Univ. of Washington) next discussed in similar detail his Treaty Information Project. This had its origin in one person's perception of a large gap in the management of legal information, namely international treaties. Condensed information regarding the 15,000-18,000 such treaties signed since 1920 is being encoded for machine manipulation, to be available to the community of scholars, lawyers, diplomats, and others working in this field.

After lunch, UCLA's CIS staff reported on their project. P. Watson outlined the broad implications of having the ultimate responsibility for acquiring data bases and making them available to a campus community rest with the library. He pointed to their experience so far in mounting trial services through UCLA Library units from CA-Condensates, and the project's technical assistance with ERIC and Census tapes. R. B. Briggs followed up with a presentation on technical aspects of CIS development; the interim software used for experimental services, and the specification and design of general purpose programs for the operational CIS system.

The group then heard R. T. Braden of UCLA's Campus Computing Network describe the ARPA network of major research computers in the U.S. This communication network enables the sharing of outstanding national resources in such areas as software and large core capacity; hardware assets such as the developing trillion-bit store and the ILIAC-4 computer; and large or specialized data bases. ARPANET is not yet fully operational, but many of the protocols for the various types and levels of communication are complete, and such activities as transmitting a program for submittal to another computer in the system are already being carried on.

Thursday evening was devoted to an informal discussion among the group about specific proposals for additional co-operation between centers. While the ARPANET represents the sophisticated end of the spectrum, a wide range of more mundane, but realizable, goals (e.g., sharing statistics, newsletters, etc.) also was explored. A particularly important point that began to emerge from the day's discussions was concern over the impact of these new methods (of getting information about documents) upon the library if they are called upon to deliver the actual documents.

Friday, November 5, 1971

The Principal Investigators and the NSF representatives met to continue discussion of the issues raised the previous day. Again the linking of computerized bibliographic services to document delivery systems formed a main talking point. M. Day (NSF) delineated the role of NSF in these developments, and pointed out that the academic segment of the information community, as represented at the meeting, was a basic component in a potential nationwide network. He said that NSF would in the future be paying more attention to science communication as an integrated whole. He closed with a review of the recent UNISIST meeting.

#### DOCUMENTATION

The current list of documents in the Document Control System (DCS) is given in Figure 7. Copies of these documents are available upon request with the understanding that they are working papers and are subject to change.

#### RELATED ACTIVITIES

##### ERIC

The Education-Psychology library will resume offering current awareness and retrospective search service during the next quarter. A conversion program has been written to convert the ERIC TAPES format to the TEXT-PAC format. The service will resume as soon as the updates to the file arrive. Searches will be made using the TEXT-PAC system.

##### CAIN

Dr. Ed Jestes, Library Systems and Automation Coordinator at the University of California at Davis (UCD) visited the CIS Project on December 27 and 28, 1971. A successful test run was made using TEXT-PAC to search a sample CAIN tape. Fifteen profiles prepared by Dr. Jestes were used for the search.

Beginning in January, an experimental service from the CAIN file will be offered with service to users being provided through the UCD Library and the computer processing being done at UCLA. The service will be made available to all interested persons.

### Census

As reported in the last quarterly report, the UCLA Library has available for use the First Count 1970 U. S. Census computer tapes. The tapes were acquired from DUALABS (National Data Use and Access Laboratories, Inc.) of Arlington, Virginia, and are in a compressed format. A set of programs for processing the data was also acquired from DUALABS.

The Public Affairs Service of the library is the contact point. Both Census Bureau and DUALABS documentation are available there and, in addition, a specialized Census tape reference service is provided daily. Access to the tapes is controlled by a data set security system developed by CIS. CIS has also provided assistance in installing the DUALABS programs at CCN.
