## ABSTRACT

The charge given to the Task Force on the status of Women at the University of California, Davis, was to determine the employment opportunities for women on the Davis campus. The Task Force addressed itself primarily to 4 major employment categories: non-academic staff, academic staff, faculty, and administration, with lesser consideration given to employment opportunities for female students. The data consist basically of analyses of the distribution of men and women currently employed within each of the 4 employment categories. Further analyses include examinations of sexual profiles over time, studies of hiring and promotional patterns for men and women, comparisons of qualifications and salaries for female-typed jobs and male-typed jobs, and comparisons of the proportions of women employed in specific areas to the proportion of women available in the work forces for those areas. The Task Force attempts to identify and define problem areas in which employment opportunities for romen do not appear to be the same as those for men. Specific courses of action are recommended to implement changes in these areas. (Author/HS)

## Report of the

# Tosk Force on the Status of Women at U. C. Davis 

Prepared under the Chairmanship of Kathleen M. Fisher Assistant Professor Genetics Department University of California Davis

June, 1972

## Acknowledgements

We are grateful to Chancellor Meyer for his unwaivering support of our efforts; to wsistant Vice Chancellor Robert Glock, John Uribarri, and Nadine Thomas the Office of Planning and Analysis for the extensive services and resources provided to us; to Vice Chancellor William. F. Dukes for permitting us to examine the academic files; and to Professor Robert Allard and the Department of Genetics for their generous secretarial support. We would like Eo thank Donnis Shimek, Helen Curro, Deanna Falge, Lorena Herrig, and many other individuals on the Davis campus and in the Office of the President who assisted us In the collection and analysis of our data. We are especially indebted to Kay Morris for her patience and expertise in typing this report.

PART I
INTRODUCTION

## INTRODUCTION

Charge. The charge given to the Task Force was to determine the employment opportunities for women on the Davis campus.

Extent of Survey. The Task Force addressed itself primarily to the four major employment categories: non-academic staff, academic staff, faculty, and acministration, with lesser consideration given to employment opportunities for female students. Related areas of concerr, such as the special problems facing minority women, were briefly examined.

Nature of data. The data consist basically of analyses of the distribution of men and women currently employed within each of the four employment categories identified above. Further analyses include examinations of sexual profiles over time, studies of hiring and promotional patterns for men and women, comparisons of qualifications and salaries for female-typed jobs and male-typed jobs, and comparisons of the proportions of women employed in specific areas to the proportion of women available in the work forces for those areas.

Assumptions. The Task Force has assumed that the opportunities for women should be the same as the opportunities for men. The validity of this assumption has not been explored here. It seems justified, since it is in essence required by law. Bearing this in mind, the status of women has been examined relative to the status of men.

It has also been assumed that UCD desires to be an equal opportunity emp. Consequently, an effort has been made to identify those attitudes and policies, both written and unwritten, which-have direct bearing on employment opportunities for women. For while prevailing conditions are best measured and described by the quantifiable
data described above, changes in those conditions can only be implemented through changes in the more qualifiable areas of personal attitudes and established practices.

Recommendations. The Task Force has attempted to identify and define problem areas in which employment opportunities for women do not appear to be the same as those for men. Specific courses of action are recommended to implement changes in these areas. The recommendations of the Task Force on the Status of Women are presente in Section II. The information from which our recommendations developed is presented elsewhere in the text.

Discussion. Solutions to the problems described herein are dependent upon a continuing re-evaluation by individuals and institutions alike of their prejudices, practices, stereotypes, and categorizations. The good must be sorted from the bad, the useful from the useless. Above all else, awareness is required. In this report, we have at times taken the opportunity to educate, to generate awareness of the problems of women, to explore the inplications and ramifications of the data.

## Part II

## RECOMMENDATIONS

of the
TASK FORCE ON THE STATUS OF WOMEN
at the
UNIVERSITY OF CALIFORNIA, DAVIS

## I.

STAFF, FACULTY, AND STUDENTS
A. with regard to the STATUS OF WOMEN at Davis,
we recommend that the CHANCELLOR:

1. Appoint an Assistant Vice Chancellor for Affirmative Action for Women to work closely with the Vice Chancellor of Academic Affairs on the implementation of affirmative action hiring and promotion of women, both faculty and staff.
2. Appoint a standing Committee on the Status of Women at Davis, having thirteen members, to be named by the ASUCD (two members), the Graduate Student Associacion (two members), the University Staff Assembly (three members), the Academic Staff Organization (two members), and the Faculty Women's Caucus (two members). The Assistant Vice Chancellor for Affirmative Action for Women should chair the committee and the Affirmative Action Program Coordinator should be an ex officio member.
3. Irvest the Commttee on the Status of Women with authority to review all policies and procedures affecting the status of women at UCD (and any proposed changes in these policies or procedures) and all campus-wide, departmental and unit plans for affirmative action hiring and promotion. The Committee should have independent authority to reject unsatisfactory policy or procedural changes and affirmative action plans and to require revisions.
4. Establish an Affirmative Action Review Group, including adminstrative officers, to automatically review every case in which promotion or retention is denied to an academic woman. In addition, provide the opportunity for any academic woman who has been denied promotion or retention since October, 1968 (the date when Executive Order 11375 became effective) to request full review by the Group, and to be reinstated if that is the recommendation of the Group. Pending the establishment of the Group, the Administrative Officer now charged with responsibility for Affirmative Action is to calry out this review.
5. Invest the Affirmative Action Review Group or Officer with the authority to inspect all records and to obtain additional information from departments, ad hoc committees, and the Budget Committee of the Academic Senate whenever the Group deems it necessary or desirable.
B. with regard to CHILD-CARE FACILITIES,
we reconmend that the CHANCELLOR:
6. Establish child-care facilities on or near campus for the children of all university students, staff and faculty members.
7. Establisn a reasonable, pay-as-you-can scale to supplement University funding.
8. Include facilities for children of all ages, including infants; for day, after-school, evening, and overnight accommodations (the latter to permit employees and faculty to attend professional meetings away from campus, and for students on university business) ; and for sick children (to reduce enforced abeenteeism of female or male employees).
9. Include participating parents in decisions regarding policies and procedures of the centers.
C. with regard to the WOMEN'S CENTER,
we recommend that the CHANCELLOR:
10. Make needed funds available to finance the student-, staff-, faculty- and community-oriented activities of the Women's Center, in order to insure that women have a place to meet on campus and to conduct their programs and counselling services.
11. Request that the Counseling Center assign a female staff member, to be selected by the Women's Center, to the Women's Center for full-time work as a counselor and coordinator.

## II. <br> FACULTY MEMBERS

A. with regard to FACULTY RECRUITMENT AND HIRING,
we recommend that LRTMENTS:

1. Commit themselves to an affirmative action plan for hiring female faculty members; including specific goals and timetables, with an immediate goal of placing women on their faculties at each professorial rank to reflect che proportion of women trained in the field.
2. Actively search for and recruit worien candidates for faculty positions. Departments should not a priori assume that married femaie candidates are unable or unwilling to move.
3. Recruit faculty from eligible Lecturers and other academic staff personnel before searching outside the university.
4. Advertise all faculty vacancies publicly in professional journals and in the Davis comunity so that all interested persons have an opportunity to apply.
5. Consult with and utilize regional and national registries of professional women when recruiting for a position, including women's caucuses of appropriate professional associations.
6. Give preference in hiring to qualified female candidates over qualified male candidates until the proportion of women on the faculty reflects the proportion of women trained in the field.
7. Defer hiring white male faculty members until affirmative action hiring of women and minorities is completed. If no woman or minority candidate can be found after an intensive search over a reasonable period of time, the Committee on the Status of Women may be pettioned to waive the affirmative action requirement.
8. Hire women faculty members at ranks identical to those at which males with similar qualifications are hired.
9. Publicize the abolition of nepotism restrictions and encourage qualified spouses of currently employed faculty members to apply for available positions.
B. with regard to FACULTY PROMOTION,
we recommend that DEPARTMENT'S:
10. Establish timetables for the represi atation of women faculty members at each professorial rank at least in proportion to the number of women trained in the field.
11. Identify currencly employed faculty women who were hired at lower ranks and/or promoted more slowly than similarly qualified men, and immediately promote them to the levels commensurate with their qualifications.
12. Compensate individual faculty women who have been subjected to discrimination by paying back salaries retroactive to 13 October 1968 (the date when Executive Order 11375 became effective or to any subsequent date at which an individual faculty woman was hired whether or not the women are currently employed by the University.
13. Promote women at the same rates and according to the same standards used for men, once past inequities have been rectified.
C. With regard to other FACULTY PERSONNEL POLICIES,
we recommend that DEPARTMENTS:
14. Facilitate part-time appointments (in line with new University regulations) for womer and men at all professorial. ranks who desire such positions, without prejuaice to eligibility for promotion, tenure, sabbatical leave, or other fringe benefits.
15. Create equitable teaching loads, research expectations, and administrative responsibilitles for persons holding parttime appointments to reflect accurately their proportionately reduced salaries.
16. Facilitate leaves of absence for women and men at all professorial ranks who desire such leaves without prejudice to eligibility for promotion, tenure, or sabbatical leave.
17. Insure that female faculty members share equally with males in teaching responsibilities, utilization of research funds administered by their department, access to 11 -month rather than 9 -month academic appointments, and in all other areas of departmental operation.
D. with regard to FACULTY COMMITTEE ASSIGNMENTS,
we recommend that the CHANCELLOR:
18. Appoint at least one woman to all university committees charged with formulating recommendations concerning major policy-making decisions.
19. Appoint at least one woman to all ad hoc committees charged with the review of a woman candidate for faculty appointment or promotion.

## III.

ACADEMIC AND NONACADEMIC STAFF EMPLOYEES
with regard to STAFF EMPLOYEE CLASSIFICATIONS,
we recommend that the UFEICE OF THE RRES IDENT:

1. Analyze all job classifications to identify those filled predominantly by one sex.
2. Elfminate all references to the sex of the worker in academic and nonacademic job descriptions and application forms except where there is a bona fide sex requirement.
3. Reclassify all positions so that salaries accurately reflect educational prerequisites, job experience, skill levels, and job responsibilities; immediately upgrade salaries of all men and women in low-paying (female-typed) Job classifications to parity with higher-paying (maletyped) job classifications having comparable requirements of education and experience.
B. with regard to STAFF HIRING, both academic and nonacademic,
we recommend that the AGADEMIC AFFAIRS OFFICE and the PERSONNEL OFFICE:
4. Commit themselves to an affirmative action plan for hiring women in academic and nonacademic staff positions, with an inmediate goal of placing women in all job classifications to reflect the proportion of qualifiable women in the appropriate labor market. Specific goals and timetables should be developed for each job series.
5. Consider any qualified woman or man as a candidate for any position, regardless of its previous sex-typed bias.
6. Give preference in hiring in male-dominated job classifications to qualified female candidates over qualified male candidates until an equitable ratio of female to male employees is achieved in that job classification.
7. Hire women employees at levels identical with those at which male employees with similar qualifications are hired.
8. Advertise all academic staff vacancies publicly in professional journals and in the Davis community so that all interested persons have an opportunity to apply.
9. Consult with and utilize regional and national registries of professional women when recruiting for high-level administrative positions.

STAFF PROMOTION, both academic and nonacademic,

## that DEPARTMENTS AND UNITS:

3h specific goals and timetables to attain representawomen at each level of job classification, at least ortion to the availability of women in the appropabor market.

7 currently employed staff women who were hired at evels and/or promoted more slowly than similarly ed men, and immediately promote them to the levels rate with their qualifications and length of service.
ate individual staff women who have been subjected cimination by paying back rages retroactive to 13 1968 (the date when Executive Order, 11375 became Je) or to any subsequent date at which an individual oman was hired. Women should be eligible forcomon whether or not they are currently employed by Gersity.
women employees at the same rates and according to standards as those used for men, once past inhave been rectified.
on-the-job training for women to acquire the needed to upgrade themselves to more professional positions.
D. With regard to other STAFF PERSONNEL POLICIES,
we recomend that the OFFICE OF THE PRESIDENT, the ACADEMIC

## AFFAIRS OFFICE and the PERSONNEL OFFICE:

1. Design or review career ladders, horizontal, vertical, and diagonal, to assure opportunity of advancement to and through classification series, from unskilled to skilled, non-professional to professional and non-professional to managerial jobs.
2. Expand the number of part-time positions at both professional and nonprofessional levels, by creating tandem teams of two part-time persons to fill single full-time positions.
3. Eliminate discriminatory policies against part-time employees by making employee benefits (e.g. eligibility for leaves, merit salary increases, health and retirement benefits) available to all employees on a straight prorata basis.
4. Establish paid maternity and paternity leave for not less than three months for all female and male employees, regardless of marital status, with full continuance of retfrement bencfits, health benefits, and earned time for merit increases, with a limit of two leaves per employee.
5. Permit unpaid leaves of absence for female and male employees for child care for periods up to one year each, utilizing accumulated sick leave and vacation benefits before the unpaid leave begins.
6. Assure that female and male employees returning from leaves of absence, whether paid or unpaid, are placed in the same position or in a position of comparable rank to that held before the leave began.
7. Grant to academic staff members full faculty status, with its attendant benefits such as tenure, sabbatical leave, flexible work hours, and Academic Senate membership.
8. Grant to nonacademic staff members more flexible work hours, where feasible.
9. Clarify the category of Lecturer to insure an equitable balance of teaching and/or research and/or administrative duties, and establish written policies regarding fringe benefits such as sick leave, vacation, retirement, security of employment, etc.
10. Assure that nonacademic staff members who are asked or expected to work overtime may refuse to do so without preJudice, and that those who do work overtime may freely choose between the options of taking compensatory time off
during normal working hours or receiving over i ha pay. The financing system whereby overtime pay is derived from stringent departmental budgets and whereby persons who work overtime are expected to "understand" why they cannot be paid must be completely revised.
11. Establish mandatory sensitivity training courses for supeivisors at all levels of employment in the University, to include sessions specifically devoted to exposing and eliminating sexist attitudes and practices.
12. Give women employed by the University in any capacity (clerical, administrative, library, etc.) the opportunity to be hired for other available positions for which these women have the potential to fill by reason of educational qualifications or experience without regard to their present employment status or salary. (For example, some educationally overqualified and capable women are in clerical jobs since they could not find suitable employment because of lack of other opportunities for women in the past. They now find themselves labeled as clerical employees and are unable to overcome this handicap.)
```
IV.
UNDERGRALUATE AND GRADUATE STUDENTS
```

A. With regard to UNDERGRADUATE STUDENTS,

We recommend that DEPARTMENTS:

1. Actively challenge sex-role stereotyping of undergraduate majors by encouraging females to enter predominantly male fields (and vice versa), by advertising the opportunities for both males and females in those fields, by publicizing the accomplishments of fomales in predominantly male fields (and vice versa), and by providing appropriate faculty models.
2. Establish cours es in women's studies, where relevant (e.g. women in literature, women in politics, the history of the women's movement) and incorporate into existing courses of all types, information recognizing the contributions of women in the field.
B. With regard to UNDERGRADUATE STUDENTS,
we recommend that the COLLEGE OF LETTERS AND SCIENCE:
3. Establish an undergraduate major in Women's Studies.
C. with regard to GRADUATE STUDENTS,
we recommend that DEPARTMENTS:
4. Actively search for and recruit female graduate students, with specific goals and timetables, to work toward an equal representation of men and women in the graduate program.
5. Eliminate considerations of age, marital status and children in admitting students for graduate study and in providing financial support.
6. Place at least one woman on all graduate admissions committees.
7. Facilitate part-time courses of study and leaves of absence for men and women students with family responsibilities, without prejudice to advancement or continuation in the program. (Revision of the Planned Educational Leave Program and the Division of Extended Learning may accomplish these goals.)
8. Insure, in so far as possible, that female graduate students, on receiving their degrees, are placed in positions of status and prestige equal to those obtained by similarly qualified male graduate students. Departments should periodically review the employment status of their graduates to measure the success of their efforts.
D. with regard to UNDERGRADUATE AND GRADUATE STUDENTS,
we recommend that the CHANCELLOR:
9. Insure that schools and colleges of UCD eliminate considerations of age, marital status and number of children in admitting students for undergraduate or graduate study and in providing financial support.
10. Facilitate part-time courses of study leading to undergraduate and graduate degrees at proportionately reduced fees. (Removal of the limitations presently associated with the Division of Extended Learning may accomplish this goal.)
E. with regard to STUDENT EMPLOYMENT,
we recommend that PLACEMENT SERVICES:
11. Insure that all companies and individuals recruiting on campus consider my qualified woman or man as a candidate for any position, regardless of its previous sex-typed bias.
12. Refuse to permit any company or individual to specify the sex of the applicant for any position, either directly or indirectly (as in job descriptions using the words "he" or "she"), except for bona fide sex-related positions (e.g. male actor).
13. Eliminate all questions on application forms or in personnel Interviews pertaining to the applicant's marital status, number of children, or future marital or childbearing plans.
F. with regard to STUDENT HEALTH,
we recommend that STUDENT HEALTH SERVICES:
14. Provide a complete range of health care services relating to pregnancy, abortion, and childbirth.

SECTION IIIA

A STATISTICAL ANALYSIS OF THE DAVIS FACULTY: COMPOSITION, PROMOTIONS, AND HIRING PRACTICES

Susan McKillop
Mary Regan
Robert Glock
John Uribarri

## Introduction

The study of the position of academic women at the University of California, Davis, is divided into three parts:

1. A description of the male-female composition of the Davis faculty in 1971-72 by rank, based upon the Winter 1972 Academic Senate membership list for the upper academic ranks, Assistant, Associate and Full Prifessor, and a November 1971 computer printout of departments by rank and average salary provided to the Task Force by the Office of Planning and Analysis for the lower ranks, Lecturer, Supexvisor, Assoc-iate-In. This section also includes a study of the distribution of men and women on the faculty, 1962-1971.
2. A ten-year study by campus and by college of male-female promotional patterns to tenured rank (Associate or Full Professor) and to equibalent (Lecturer with permanency of employment; Supervisor or Associate Supervisor; various permanent research ranks). These data were compiled from the annual promotion lists published in the University Bulletin, 1962-1971. The "rank" or "equivalent rank" were determined by the presence of names in the records of the Academic Senate and further consultation of departmental listings in the UCD catalogs for those names absent from the Acadenic Senate lists.
3. A study of the position of women in 24 representative academic units distributed in the following areas: Humanfies (History, Art, Philosophy, English, Foreign Languages); Social Science (Anthropology, Sociology, Political Science, Psychology, Economics); Science (Botany, Chemistry, Zoology, Mathematics, Physics); Agricultural and Environmental Sciences (Biochemistry-Biophysics, Food Seience, Applied Behavioral Science, Animal Science, Agricultural Economics); and the Professions
(Medicine, Education, Law, Engineering). These units were selected to achieve a wide distribution within the faculty and to represent, where possible in light of that distribution, departments with large student enrollments. Effort was made to see that the sample was a fair representation of the position of women on the faculty; if there is any bias in the choice of samples, it is in the direction of a more lavorable impression than Academic Senate women actually experience, for the overall percent of women holding senate titles in this sample exceeds that of the campus as a whole, with $5.5 \%$ wonen faculty in the sample compared to $4.6 \%$ women faculty at Davis. The 24 academic units account for $63.4 \%$ of the entire Academic Senate faculty, $76.1 \%$ of all Senate women, and $62.8 \%$ of all Senate men.

The data on the 24 academic units include the male-female faculty mix, the mce-female student mix (including degrees granted), some data on student support (Teaching Assistantships, Fellowships), a ten-year analysis of the initial hiring practices; and an analysis of national PhD production in each field for the periods $1969-70$ and 1963-70 as well as the production at the five top-rated schools (where ratings were available) for like periods.

Data were obtained from a variety of sources which are specifically indicated for each of the tables. In general, the sources are: the Winter 1972 Academic Senate membership list, the Academic Senate membership lists $1966-67$ to $1971-72$; the computer printout of departments by rank and average salary (November 1971) provided to the Task Force by the office of Planning and Analysis; UCD Catalogs 1962-1971; information supplied by the Registrar's Office, the Graduate Division, the Dean of Admissions, School of Law, School of Medicine, and the Office of Financial Aids; 1962 to 1970 editions of U.S.O.E. Earned Degrees Conferred. National
data on Art Departments (which do not require the $\mathrm{Ph} . \mathrm{D}$. for practice faculty) were obtained from the Gollege Art Association.

This study has benefitted from the helpful cooperation of most bodies approached for information. It could not have been completed in its present form without the generous assistance of the Office of the Davis Division of the Academic Senate and of the Office of Planning and Analysis, both of which made instantly available the statistical data requested. We are indebted to Doris McKnight, Mary Aldrin and Lucy Sells for patient searching of records, advice, and expertise. We also are grateful to Orville Thompson, Chairman of Applied Behavioral Sciences, for his support.

1. The Faculty

In the winter of $1972,95.4 \%$ of the Academic Senate members at
Davis were male. Furthermore, the $4.6 \%$ who were female were concentrated in the lower ranks. Ninety-seven and six-tenths percent of the full Professors, $95.1 \%$ of the Associate Professors, and $93.0 \%$ of the Assistant Professors were men.

Table 1
UCD Academic Senate Membership
Winter 1972
( $\mathrm{N}=995$ )

| Rank | 0 | 9 | Total | $\%$ | $\%$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Professor |  |  |  |  |  |
| Associate |  |  |  |  |  |
| Assistant | 490 | 12 | 502 | 97.6 | 2.4 |
| Lecturer with <br> Permanency | 192 | 10 | 202 | 95.1 | 4.9 |
| Faculty in Residence | 951 | 19 | 270 | 93.0 | 7.0 |
|  | 7 | 3 | 10 | 70.0 | 30.0 |
| Total | 949 | 46 | 995 | 95.4 | 4.6 |

Source: Academic Senate membership list, Winter quarter 1972
On the Academic teaching Staff (on-1adder, non-Senate positions), however, women fared better: only $76.7 \%$ of these positions were held by men. Approximately $60 \%$ of the women in teaching positions had non-1adder classifications (Lecturer, Supervisor, Associate-In), although only $20 \%$ of the men were in non-iadder ranks.

| Total | 211 | 64 | 275 | 76.7 | 23.3 |

Includes Lecturer with permanency. Source: Computer print-out of Departments by Rank and Average Salary, November, 1971

There is a disproportionate tendency at Davis to place women in categories that do not lead to tenure and do not generally provide access to research funds, sabbatical leaves or other facilities Which are vital to scholarly careers. Furthermore, persons holding Academic Staff teaching positions tend to have heavier teaching loads than those with Academic Senate rank, and they therefore have greater difficulty in pursuing other scholarly endeavors such as research and publication.

Women in ladder positions are located in only a few scholarly areas in the College of Agricultural and Environmental Sciences. They are found primarily in fields traditionally thought to be female: Applied Behavioral Sciences (which includes Child Development and Design), Consumer Sciences, and Nutrition, all of which are outgrowths of the former Department of Home. Economics. These three departments account for $62.5 \%$ of the women in ladder positions in the College.

Women with teaching positions in Agriculture are almost three times more likely to be Academic Staff than are men with teaching positions, 44. $8 \%$. compared to $15.1 \%$.

## In the College of Letters and Science, Senate women are located

 in four areas. English (59), Botany (29), the foreign languages (59) and Sociology (39) account for $68.2 \%$ of the Academic Senate females in L and S .Table 4A

There is probably historical reason for the presence of women in English, where four-fifths of them were already employed two decades ago, when the Department's primary function was to service the science and agriculcure curricila. In Botany, a successful experience with a distinguished woman rrofessor in the '50's may have paved the way for other women. The foreign languages and Sociology are fields with high female student enrollments, both locally and nationally (see Table 11 where these academic units are studied in depth). Physical Education has also been recognized as "Women's territory," where four women have persevered, although all of them are in non-Senate Academic Staff ranks (Supervisors), two of the four with permanency of employment. The entire renainder of the College is represented by only 7 other Senate women. In Letters and Science, women are $2-1 / k$ times more likely to hold Academic Staff positions than men (68.1\% vs. $28.2 \%$ ).

The School of Veterinary Medicine employs three women with Senate membership, although none of them are in tenured professorial ranks.

Table 5a

November 1971

Nor have women fared well in the School of Medicine, which has grown to 123 Academic Senate positions since the arrival of its first faculty member in 1966. Among these, 118 are men and 5 are women. Only one of these women is tenured; two of them are non-tenured regular faculty; the other two are Faculty in Residence, that is, hired on soft money, with Academic Senate membership, but without the right to accrue time toward sabbatical leave or tenure. Thus, forty percent of the women in Medicine are in a position of being "second-class citizens"; only $7 \%$ of the men are in like status. In the time that Medicine has hired 71 men with tenure, it has hired one woman with tenure.

At this writing, the Law School employs one half-time female lecturer who does not have Academic Senate status.

Engineering, with a faculty of 63 , employs no women in either Academic Senate or Academic Staff positions.

The percentage of women in the Academic Senate has not increased over the past decade, the period of greatest growth of the Davis Campus. In the winter of 1972 , the representation of women in Senate ranks was only $0.5 \%$ higher than itt was in $1962-3,4.6 \%$ vs. $4.1 \%$ ). This increase is due primarily to addition of two "second-class status" categories to Senate membership: Lecturers with permanency of employment and Faculty in Residence. Without these two new categories, the Senate is in fact approximately at the level of 20 years ago ( $4.2 \%$ vs. $4.3 \%$ ): The overall average for the last five years was exactly the same as the base figure for 1962-3: 4.1\%. Essentially, then, the representation of women on the faculty has remained unchanged. Since 1962-3, the maximum fluctuation in either direction was only a half percent.

From this evidence, we must conclude that the discriminatory patterns indicated by the present faculty distribution are not recent; they have existed for a long time and are presumably a function, knowingly or unknowingly, of persisting faculty attitudes (Section IV).

The proportion of women in Academic Senate positions at D.avis is
strikingly similar to those found at Berkeley (by the subcommittee on the Status of Women, appointed by the Berkeley Academic Senate Committee on Senate Policy). As is shown in the table below, the daca on the present composition of the Davis faculty vary little from the data published in the Berkeley repct (p. 25, Table IV-I).

Table 8
Representation of Men on the Davis and Berkeley Faculties: Percentages Compared

| Rank | Davis (1972) | Berkeley (1969-70) | Difference |

| Assistant | 93.0 | 95.0 | +2.0 |
| Academic staff | 76.7 | 72.5 | -4.2 |

Source: Lavis: Tables 1 and 2 ; Berkeley: Report of the Subcomittee on the Status of Academic Women on the Berkeley Campus, May 1970.

Lhese data show that Davis has been slightly more receptive to women s, is:
at the Assistant Professor rank, but has not bettered Berkeley's record in the tenure ranks nor at the Academic Staff level. Furthermore, the stable pattern of male-female representation found at Davis over time Is paralleled by similar longitudinal stable patterns at Berkeley. In light of these findings, many of the conclusions of the Berkeley report should be considered applicable to Davis.

## Summary of Findings

1. Women are under-represented on the faculty at the University of California at Davis.
2. UCD women faculty seldom attain ladder ranks.
3. Women are placed predoininantly in Academic Staff teaching.positions. The University evidently considers women to be qualified and able to teach, but does not consider them qualified to hold "status positions."
4. Women faculty are concentrated in a few areas, primarily those which have long been stereotyped as acceptable fields for women. Many departments have no women faculty.
5. The overall patterns of sex distribution have persisted unchanged for at least twenty years in spite of the extraordinary expansion of the Davis campus and the substantal modification of its goals during that period.
6. The discriminatory patterns identified at Davis are remarkably similar to those found at Berkeley, both in the present and the longitudinal faculty distributions.

## 2. PROMOTIONS

The promotional structure lies at the heart of the problem being considered in this report, for the granting or withholding of tenure and the distribution of other rewards function as perhaps the chief means by which authority is maintained and preferred values are perpetuated. One of these values seems to be the perpetuation of a faculty membership which is predominately male.

In the University of California system, secrecy marks nearly every stage of the promotion procedure; information on a candidate passes upwards through a series of doors opening in only one direction, in which the candidate usually, and the department chairman often, cannot find out the nature or underlying reasons for the actions in the levels above. ${ }^{1}$ But the promotional procedures, however obscure, do much to reinforce the inequalities already evident at the hiring level.

Where women receive promotion: The "female" areas. Women are present and have persevered in fields generally conceded to be "female": those related to Home Economics, women's Physical Education, and those with a historical reason at Davis to contain women, such as English and Botany. In the College of Letters and Science, the foreign language departments (combined for purposes of this study) also have two tenured women and two female permanent Lecturers. In the winter of 1972, there

[^2]were only three other women with tenure in L \& S (Philosophy, Music, Politićci Science).

In the College of Agricultural and Environmental Sciences, most women are found in the outgrowths of the former Department of Home Economics. Only four tenured women are in other fields, although two of the four are in discipines contingent to Home Economics concerns: Food Scienceand consumer studies in Agricultural Economics. The one faculty woman in the Law School teaches family law. From this data, it appears that the faculty is less troubled by female colleagues in areas they consciously or unconsciously concede to be properly female.!"

Where women receive promotion: analysis of the Colleges and Schools. Promotions to tenure have been achieved by women only in the Colleges of Letters and Science and in Agricultural and Environmental Sciences. We analyzed the promotions to Associate and Full levels over a ten-year period, 1962-3 to 1971-2 (Table 9). Our source, the lists published in the University Bulletin, contained the most complete and accurate data readily available, although it presented some problems: (1) persons promoted at odd times were not included and (2) these lists combined professorial titles with the equivalent titles which did not bestow Academic Senate membership benefits. Comparison of promotion and Senate membership lists allowed professorial titles to be identified.

The College of Letters and Science. In L\&S, only 5 women, as contrasted to 211 men, were promoted in the professorial ranks during the ten year period. Three women and 17 men were promoted to equivalent ranks (Lecturer with permanency of employment, Supervisor or Associate Supervisor, various research titles). This means that $92.5 \%$ of male promotions were in the professorial ranks while only $62.5 \%$ of the female

[^3] Bulletin.
promotionswwere professorial. Said another way, only $7.5 \%$ of the men promoted were in the less-prestigious equivalent series, while $37.5 \%$ the women belonged to this group.

The College of Agricultural and Environmental Sciences. In A. \& E.S., 9 women, as contrasted to 149 men, were promoted in the professorial ranks. One woman and 42 men were advanced in the equivalent title series. In this college, 9 of the 10 women promoted were in professorial titles ( $90.0 \%$ ) while 149 of the 191 men were professorial ( $78.0 \%$ ).

A comparison of the statistics drawn from the two colleges suggests that A. \& E.S. has been receptive and fair in its promotional practices; although the overall representation of women in A. \& E.S. is still low.

The other Schools. During the same ten-year period, the School of Veterinary Medicine made 49 promotions ( 48 to rank and 1 to equivalent). A11 of these promotions were men.

The School of Engineering, which promoted 31 individuals, employs no women. The School of Medicine, being relatively new, had promoted only 10 of its 123 faculty by the time the 1971-72 1ists were published. A11 of these were men and one of them was in equivalent title The Law School, which promoted 1 man, contains no tenured women as of this writing.

The portion of women in the tenure procedures. To receive tenure status, a person must be hired at tenure or receive a favorable decision from the combined input of the tenured faculty in the department, the secret ad hoc committee, and the Budget Committee; the Budget Comittee is technically able to overturn decisions made at lower levels. In practice, however, it is almost impossible to find a negative judgment at the department level overturned by superfor jurisdiction. Consistent
department support is needed at each in-step level of pre-tenure employment if the candidate is to be promoted successfuily. If it has been withheld at any early stage, extraordinary support from the department and the departnent chairman is required. when the tenure decision is made, if the candidate is to survive. It is impartant, then, to ask whether support is given equally to men and women in the early years upon wich Survival depends.

Data gathered in 1970-71 (Section IIIB) identified 13 women who had been employed in $L \& S$ on a non-tenured basis and had served in the University for five years or more, long enough to allow evaluation of their promotional rates. These women were found in eight departments. To determine whether or not the males and females in these departments were promoted according to the same standards, the pronotional histories of the 13 women and the 71 men employed on a nor-cenured basis and who had served for at least 5 years in the same eight departments were examined. The positions of the men and women at the end of five years' service were compared. For purposes of analysis, an incremental weighting of 1 through 11 was given to the various in-step positions ${ }^{1}$, and group means and standard deviations were computed for the two groups. The mean score for women was found to be 4.8 - that is, in the latter part of Assistant Professor, Step II - while that of the men was 6.8 , or in the latter part of Assistant Professor, Step III. The standard deviations in both cases were the same: 2.5. In a less refined categorization, the data were grouped.into four categories and weighted incrementally. 2 The
1 The categories and weightimgs were: Instructor (1); in Step I
(2); completed Step $\mathrm{I}(3)$; In Step II (4); completed Step II (5); in Step III (6); completed Step III (7); in Step IV (8); in Step V (9); Associate Professor Step I (10); Above (11).

2
The categories and weightings were: complotion of Step $I$ (1); completion of Step II (2); completion of Step III (3); Step IV and above (4).
mean, median and mode for each group were determined. The mean and median for women were found in Step If while those for men were found in Step III. The modal group for women was found in Step I although the mode for men was in Step II. In each case, then, the answer was the same; the mean, median and mode all disclosed that women were disadvantaged: as a group, they were one full step below the comparable male group. In practical terms, the women were two years behind the men at the end of five years' service. They were denied equal salary and placed in a weakened position for the jump to tenure, which must be accomplished at most by the seventh year if it is to be accomplished at all.

From these data; it is apparent that the eight integrated departments (all of which were willing to hire women in ladder positions) have not advanced their women as vigorously as their men. This fact is even more telling when it is considered in light of the comparable qualifications these women presented at hiring (Section II1B). Because the women were a rank lower than they should have been, they were placed in double jeopardy; not mly was it probably rore difficult for them to gain favorable department and ad hoc committee evaluations, but also they required unustal support at the "eleventh hour" in order to receive the larger than normal advancement necessary to survive.

Temale prospects of academic job security. One of the most elasive. aspects of a study of promotional practices is that of flow - the turnover of non-tenured faculty members. But this information is needed if one wishes to test whether Davis is another example of the often-heard accusation that higher education is "a revolving door for women." Does Davis "move its women on" in disproportion to its rejection rate for men? There is, of course, no way to learn the circumstances of faculty departures, whether they are for "better positions" or in response
"to the handwriting on the wall." But one can learn something about. the flow of faculty by following the careers of all non-tenured faculty presment in a given year. This method was tried.

Our base consisted of all individuals holding non-tenure ladder positions in 1964-65. These individuals were followed through seven years either to temure or departure. The year 1971-72 was the latest year in which promotion or departure should normally account for everyone in the group. A count of the Assistant Professor listings in the 1964-65 catalog produced 200 names, and at this writing, 12 persons (1.1 men and 1 women) remain in the current Academic Senate list as Assistant Professors in their eighth, mandatory terminal year. For them to survive, a last-minute reprieve is required.

When the careers of the 200 non-tenured faculty were followed to tenure or to departure, the following facts were found: 103 of them received Associate Professorships at UCD (97 men and 6 women) -- more than half of the total. But the tenure was disproportionately granted. Figures show that $53.2 \%$ of the men survived the tenure hurdle ( 97 of 182) wilie only $33.3 \%$ of the women survived ( 6 out of 18 ). Two other women (11.1\%) were "saved" by being given liecturer positions, although not one of the men was assigned this secondary status. Nine women failed to survive at all and one is still in limbo. Non-tenured women in 1964-65 had only one chance in three to become Associate Professors in the usual seven $y$ ge, while non-tenured men had better than a fifty-fifty chance for the same reward.

While higher education at Davis may not be "only a revolving door for women," it revolves considerably more often for them than for men. The cost to women of hiring and promotional patterns at Davis.
consequences of hiring and promotional patterns, comparisons were made betwee, the available pool of qualified women ${ }^{1}$ and their actual representation in the Colleges and Schools. The patterns of the College of Letter:s and Science may be used as an example.

In 1969-70; the latest year for which USOE statistics on national Ph.D. production are available, the disciplines represented by 23 of the $24 \mathrm{~L} \& \mathrm{~S}$ departments ${ }^{2}$ produced 11, 575 male doctorates and 1,926 female doctorates, a total of $14.3 \%$ female Ph.D. recipients. ${ }^{3}$ on the basis of $14.3 \%$, if hiring and promotions were equal to the available pool of doctorates, one would expect to find approximately 54 women on the L \& S Academic Senate ladder faculty, which totalled 380 in 1971-72. In fact, there were only 20. Only 7 women were full professors although 22 should have been expected in a faculty of 151 full professoms. One would also have expected to find 14 women among the 96 associate professors; instead we find four. Promotion and hiring procedures have provided aL $\& S$ faculty of silightly more thana third of what mirimal non-discriminatory practices should have assured in the year 1971-72 based on a vertical representation of $14.3 \%$ (20 instead of 54 ).

Since advanced professorships in 1971-72 rely on Ph.D. production earlier than 1969-70, an examination was madexof Ph.D. recipients during the preceding years: 1964-65, the latest year in which a degreer recipient might normally be expected to have attained the Associate

[^4]Professor rank; and 1957-58, a year in which normal advancement should have resulted in a Full Professorship. As is shown in Table 10, one would expect 16 Full Professors, 11 Associate Professors, and 19 Assistant Professors, at a minimum, when these figures are projected on the pertinent available pools for each level. For example, based on the 1957-58 axailable pool of doctorates, $10.8 \%$ of present Fuil Professors would be women if hiring and promotional practices had not been affectedby other factors. On such a prorated base, the present Letters \& Science faculty would contain 27 tenured womes, almost $2-1 / 2$ times the present actual figure of 1l. Furthermore, trollege-wide hirings and promortions would have produced a Letters \& Science faculity containing 46 women, a figure more than twice the actual representation of 20 .

Similar computations could easily be made for the other Colleges and Schools.

## Summary of Findings

1. Promotions and hirings are predominately made in the areas generally conceded to be female.
2. A higher proportion of women than men affe shunted into Academic Staff positions with permanency of employment.
3. Depressed levels of hiring and the lack of early in-step advancements -- both factors over which the departments have considerable control - are mechanisms by which women have been placed in a disadvantaged position for the tenure evaluation procedus.
4. Women are less likely to attain job security than men.

## 3. IN DEPTH STUDY OF 24 ACADEMIC UNITS

The success of faculty women in hiring, promotion, and retention procedures is initially determined by the actions of the particular departments in which the women work. In order to gain a broad but precise picture the representation of women on the faculty, in terms of obligations under the Executive order 11246 as amended with regard to sex, we examin in depth 24 departments, schools, and colleges, selecting five eacin Irom the Sciences, Social Sciences, Humanities, Agricultural and Redrimmental Sciences, and four from the Professions. The study sample was also sselected to contain departments with large student enrolments. The male-female mix was determined for faculty, academic staff, ami students: (declared majors and graduate students), as well as for teaching assistantships awarded and degrees corferred. The available pool of doctorates was also identified for each pertinent discipline in terms of the national production of $\mathrm{PhD}^{\prime} \mathrm{s}$ in 1969-70, the national production for the eight year period 1963 to 1970 , and the production in $11969-70$ by the five top-rated schools as defined by graduate faculty. Against this informational background, we examined the hiring practices of the 24 academic units from 1963 to 1971.

Summaries of the in-depth study of the 24 departments, schools and colleges are shown in Table 11. The data on which these summary tables are based are given below:

Academic faculty - Tables 3a, 4a, 5a, 6a
Academic staff - Tables $3 \mathrm{~b}, 4 \mathrm{~b}, 5 \mathrm{~b}, 6 \mathrm{~b}$
Graduates and Undergraduate Majors - Appendix 9
Teaching Assistantships - Appendix 10
Degrees Conferred by Departments, Schools, Colleges - Appendix 11
Available Pool of Doctorates - Appendix 12
College Art Association Statistics for College Art Faculties Appendix 13
Summary of Hiring Practices - Appendix 14
Hiring Practices - Raw Data in original copy only - Appendix 17

The pictorial graphs far each of the departments in Table 11 illustrate the faculty compasition by sex at the various academic levels, the white area (women) stmmerimpod on the speckled area (men); in three cases the womenat academic staff level outnumber the men and the speckled area is supermposeu upon the white. In Law, the academic staff consists of one mame one woman and the two coincide exactly. The graphs are all aram $n$ the same scale, approximat: 1 y $3 / 16^{\text {" }}$ for each faculty member. ${ }^{2}$ thesegraphs give visual evidence of the extent to which women are comonated in (or excluded from) certain departments and illustratessme tevels at which they are employed. The data upun which the graphzsanmed are given in Tables 3, 4, 5 and 6 .

The in depth stwdy of 2I Academic units (summarized in Table 11) disthere is closed that/these unimich the percentage of female Academic Senate menbers exceeds the pemmernge of undergraduate women. With the exception of Agriculturamone there is no case in which the percentage of Academic Sematamen exceeds the percentage of women gradWate students. With thasameeption of Agricultural Economics, there is no case in which the Acmidemic Senate women equals or exceeds the poCentially available poollof women faculty as defined by the natiunal production of $\mathrm{PhD}^{\prime} \mathrm{s}$ in 1969-70, the national production 1963-70, or the production of the five pertinent prestige schools in 1969-70.

Department by deparn counts of faculty members in the Davis catalogs for the period 19:63-64 to $1971-72^{3}$ have identified the departments $\bar{l}_{\text {This is also true for Sociology at the Assistant Professor } 1 \text { evel and }}$ Political Science at the Academic Staff level.
${ }^{2}$ For example, the pictorial representation of the Botany Department indicates one woman at Ful⿻ (white) and one woman at Associate professor, rine men at Full (speckled), four men at Associate and five men at Assistant professor. Below the line are five men on the academic staff. ${ }^{3}$ Sumariand in appendices 14 and 15 .
which have been willing to hire women. In ladder ranks (including Acting Assistant Pr(fessor), only Botany, Philosophy, Agricultural Economics and Food ficience have achieved a female hiring percentage which exceeds the netional percentage of women doctorates for the field. Applied Behavioral Sicience, for wiich no national figures are available, has also achisved a seemingly adequate female hiring percentage. In the non-ladder ranks (Academic Staff), six departments have exceeded the national percentage of women doctorates: Agricultural Economics, Biozhemistry-liophysics, Chemistry, English, Foreign Languages and Political Science. The Schools of Medicine and Law have hired a greater percentage of women in non-ladder positions than the national production percentage would suggest, based on the first professional degree instead of the PhD .

One-third of the academic units studied in depth had no wonan in the ladder ranks: Chemistry, Mathematics, Physics, Economics, History, Animal Science, Law and Engineering. Ten units hired no women in nonladder teaching positions: Botany Zoology, Physics, Sociology, Economics, History Philosophy, Food Science, Animal Science, Engineering. More than one-fifth the units did not hire any woman in either category, Academic Senate or Academic teaching Staff, during the eight-year period.

## Summary of Findings

1. In general, the hiring and retention policies at Davis have not equalled the available pool of women faculty members nor do they reflect the patterns of female representation in graduate and undergraduate enrollments.
2. The rarity of women in some departments and schools forwards patterns already set. Academic units have not recognized the importance of women faculty as models to encourage female aspirations in fields that are predominately male.

Conclusions

In conclusion, the present mechanisms are not sufficiently effective to insure equitable hiring and pronotion of female faculty members. Existing affirmative action procedures, to insure the hiring of women need to be strengthened. Furthermore the administration needs to establish a special review group including administrative officers with authority to review all records in cases in which promotion or retention is denied to a woman or complaints of discrimination reach the group. If it is determined that discrimination has occurred, the individual should be reinstated to the appropriate level.

The status of women faculty at Davis was examined by two distinct and separate approaches. Chronologically, the first study done by the Task Force was the one described here, in Section IIIB of the report. The College of Letters and Science was selected as a typical academic unit; information concerning all, faculty who were employed by the College at the time of the study (spring 1971) was obtained from a study of the academic personnel files, which were kindly made available to us by Vice Chancellor Dukes.

A second, more comprehensive study (described in Section IIIA) was undertaken during the spring quarter, 1972. Included in Section IIIA is a complete analysis by sex of the faculty and academic staff at Davis, a 10-year study of faculty fromotional patterns for the entire campus, and an in-depth examination of 24 departments from the various colleges and schools. Data was obtained from Academic Senate membershi.p lists, University Bulletins, a computer printout, and yarious other sources.

Because these two studies were done at different points in time, by different authors, and with different data bases, no attempt has been made to synthesize the two. On some points, the reports may appear to be repititious. In fact, it is particularly interesting to note that the conclusions drawn with regard to hiring and promotional patterns at Davis are essentially identical, even though the routes taken to reach those conclusions are very different.

## 1. Results

Are there significant differences in the hiring and promotional patterns for men and women faculty at UC Davis? In order to answer this question, a study was made of the promotional histories of all academic personnel employed in the College of Letters and Science in the spring of 1971.

The study includes those faculty with the rank of Assistant Professor I or higher (i.e., ladder positions) plus Lecturers and Instructors having both Ph.D.'s and greater than half-time appointments. The Departments of Education and Physical Education were excluded because , of their use of special title series, making across the board comparisons difficult. The 23 remaining $L$ and $S$ departments were grouped according t:o field (Table 1). Altogether, 357 men and 21 women are represented (Table 2).

Table 1
L \& S Departments Grouped According to Field

Table 2
378 Faculty Included in the $I$ s Study

| Field | $\begin{gathered} \text { Ladder Posism } \\ \text { Faculcy } \end{gathered}$ |  |  | aulty with Trregular Titles* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \#** | \%? | \% | \#* | \# 9 | \% ${ }^{\text {a }}$ |
| Biological Sciences | 35 | 3 | 7. ${ }^{4}$ | 2 | 0 | 0.0 |
| Humanities and Fine Arts | 117 | 12 | 9.3 | 20 | 2 | 9.1 |
| Physical Sciences | 88 | 0 | 00 | 5 | 1 | 16.7 |
| Social Sciences | 80 | 2 | 2.4 | 10 | 1 | 9.1 |
| Total | 320 | 17 | 5.0 | 37 | 4 | 9.8 |

For each of the 378 individuals; the following information was tabulated: name, address, date of first appointment in an academic title, department, school, marital status, sex, degree(s), date of degree(s), degree-granting institution(s) and complete promotional. histories, including position, rank, step, salary, title code, percent time, and number of years at each step. Care has been taken to mask individual identities in compiling the data, although complete anonymity may be impossible where women are concerned simply because there are so few of them.

The College of $L \& S$ is assumed to be representative of the various schools on the Davis campus. L\& $S$ was selected for the purposes of this study in preference to the professional schools because of the broader interest base represented and in preference to the College of Agriculture because of difficulties encountered in the changing usage of job titles in the latter.

[^6]
## 2. Results

Male and female faculty at Davis are approximately equally wellqualified, as determined by the status of the institutions from which they received their degrees (Table 3). Degrees were divided into two catego:ies, Prestigious and Non-Prestigious, according to the ratings of the effectiveness of doctoral programs listed by discipline and published by the American Council on Education in 1971. Institutions which scored 1.5 or better in a given discipline were considered Prestigious for that $त$ : scipline, while those with ratings bela 1.5 were considered Non-Prestigious. UC degrees are indicated senaratuly as UC Berkeley (where degrees are Prestigious in most disciplines) or UC-except-Berkeley (where most departments are Non-Prestigious). For 20 of the male faculty, no degrae-awarding institution was identified. Of the remainder, $65 \%$ of the men and $62 \%$ of the women hold Prestigious degrees or degrees from UC Berkeley, while $29 \%$ of both sexes hold Non-Prestigious degrees or degrees from UC (except Berkeley).

| Total | 100.0 | 337 | 99.9 | 100.0 | 21 | 99.9 |

Female faculty have been employed longer than male facuity on the average (Figure 1). Years of employment were divided into three-year blocks (i.e., 0-2, 3-5, 6-8, etc.). The numbers of single and married males and females in each category were determined, and an average time of employment was calculated for each grou?, arbitrarily using the middle number in each time category (e.g., faculty employed 6-8 years were assumed, for the purposes of the calculations, to be employed for 7 years). Married women, on the average, have been employed more than twice as long as married men, with 17.3 years for the women compared to 7.7 years for the men. Single women, on the average, have been employed three years longer than single men ( 9.3 compared to 6.3 years)

Women faculty are, on the average, older than men faculty (Figure 2). Married and single male and female faculty were categorized according to age in five-year brackets (i.e., 25-29, 30-34, etc.). An average age was calculated for each group, arbitrarily using the lower age in each bracket (e.g., 25 years for the $25-29$ bracket). On the average, married women faculty are ten years older than married men faculty ( 45.6 compared to 35.4 years old), and single women Eaculty are nearly seven years older than single men faculty (44.6 compared to 38 years).

We have now established that male and female faculty come from approximately equally prestigious institutions, and that female faculty are generally older and have been employed longer than the male faculty. Given just these facts, we might expect to find many women on the L \& S faculty, since the lower turnover rate of females would seem desirable. We would also expect to find males and females hired at approximately equal levels, and to find the female faculty currently in the higher echelons of the college profile, since they are older and

have been employed ionger. Is this in fact the case? The answer is, emphatically, NO.

Women are under-represented in every field. Althougi they comprise $50 \%$ of the population, women occupy only $5 \%$ of the ladder, sitions in the College of $L \& S$ (iable, 2). That is, women are currently employed in ladder positions at one-tenth the level which would be expected if males and females were raised from birth without sexual bias and discrimination. Or, given that the available work force of female Ph.D.'s is currently $10-13 \%$ of the total Ph.D. labor force, women are employed in ladder positions at the $39-50 \%$ level.

Women are more frequently employed in non-ladder positions. Positions with irregular titles usually confer less status, less pay, and/or less opportunity for advancement than do comparable positions in the ladder series. Yet women are found in this group twice as often as in ladder positions. (Women hold $9.8 \%$ of the irregular titles and $5 \%$ of the ladder positions.) Looking at it another way, $10.4 \%$ of all male faculty $(37 / 357)$ are employed in positions with irregular titles, whereas $19 \%$ of all female faculty (4/21) are employed in such positions.

Women are underemployed in nearly all departments (Figure 3). Women's degrees are primarily in the areas of the Biological Sciences, Social Sciences, Humanities, Education, and Journalism, so the available work force in these areas is more than $13 \%$ female. Nineteen of the $L \& S$ departments are included in these categories; yet only three of them have more than $13 \%$ women. Fewer women earn Ph.D.'s in the Physical Sciences, but there are no women in the four Phys. Sci. depts. (Fig. 3).

[^7]Figure 3
Number of women and men
in $L$ and $S$ departments

Female faculty are hired at lower initial positions than male
faculty. Since there is considerable variation between departments, comparisons were made within each of the twelve $L \& S$ departments which employs at least one faculty woman. To protect the identity of the females, the departments are not identified by name. The highest initial position given to a male faculty member currently employed in a department was compared to the highest initial position given to a female faculty member currently employed in that department (Figure 4). In every instance, the highest level male appointment was higher than the highest level female appointment. The differences are particularly pronounced in the Social, Physical, and Biological Sciences. In order to obtain an estimate of the approximate salary differentials, a salary was assigned to each position from the regular 1971. 9-month pay scale. "Off-scale" positions were arbitrarily assigned the salary of Professor Step VI, and "Lecturer" positions were assigned the minimum salary in the Lecturer series. An average initial salary for males and females was then calculated (Table 4). The average highest initial salary given to a male in each department would be, had he started in 1971, $\$ 18,425$. Similarly, the average highest initial salary received by a female in each department would be $\$ 11,488$, only $62 \%$ of that received by the males.

Table 4
Salary Differentials for Male and Female Faculty (all salaries calculated according to 1971 9-month pay scale)

|  | All Male Departments | Integrated Departments <br> o |  |
| :---: | :---: | :---: | :---: |
| Average Highest Initial <br> Salary per Department | $\$ 17,955$ | $\$ 18,425$ | $\$ 11,488$ |
| Average Highest Present <br> Salary per Department | 22,100 | 22,100 | 14,784 |

Female faculty curre tly hold lower positions than do male faculty. The highest present steps held by maie and female faculty per department were determined (Figure 5). In eleven out of twelve departments, men currently hold the highest position. In the twelfth, the highes; male and highest female are in similar positions. An estimate of the average salary differential was obtained as described above. The top male in each department is currently earning an average salary of $\$ 22,100$, while the top female is earning only $\$ 14,784$, or $33 \%$ less than the top male salary. This situation prevails in spite of the fact that the women are older and have been employed longer!

The top initial and current salaries in the eleven all-male departments are comparable to the top salaries received by men in the twelve mixed-sex departments (Figure 6, Table 4).

One might argue that it is misleading to look at only the top positions, and that the picture may be different if we examine overall averages. Unfortunately, the picture remains unchanged. :

Sixty-two percent of the women are hired below the median initial step for all L \& S faculty (Figure 7). Only 49\% of the men fall below the median.

Similarly, $57 \%$ of all women currently hold positions below the present median for all L \& S faculty, in spite of the fact that they are older and have been employed longer (Figure 8). Only 51\% of the men fall below the median.

Female faculty are promoted more slowly than male faculty. The promotional history of each individual who has been in the faculty ranks for 4 years or more was compared to a "standard promotion rate" (Table 5). The promotional histories were classified as "advanced," "normal," or "slow." Slow promotional histories are those in which a

person spent more than the standard number of years in any position or at any step, or where the progression was not continuously upward. Advanced histories are those in which a person spent less than the standard number of years in any position or at any step, or where the person skipped steps. Acting and visiting titles were counted as equivalent to non-prefixed titles. There were many erratic promotional histories which were "slow" at one point and "advanced" at another. A determination of the overall progress was made in these cases, and the history was considered "normal" if the slow and advanced periods balanced one another. Those which match the standard are, of course, also classified as "normal."

Table 5
Standard Promotion Rate

Only $20 \%$ of the women are promoted faster than the standard norm, while $41 \%$ of the men are promoted faster (Table 6 ). Similar 1 , $47 \%$ of the women are promoted slower than the norm, while only $27 \%$ of the men have slower promotional fistories.

Table 6
Promotional Histories of Male and Female Faculty

| College | Total | Advanued |  | Normal. |  | Slow |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0 \% 9 | 0 | $\%$ | ${ }^{\circ}$ | ¢ | $0^{\circ}$ | \% |
| Social | 65 1 | 24 | 1 | 20 | - | 2.1 | - |
| Biological | 31.3 | 11 | 1 | 9 | 1 | 11 | 1 |
| Physical | 67.0 | 27 | - | 23 | - | 17 | $\cdots$ |
| Arts and Humanities | 9211 | 42 | 1 | 29 | 4 | 21 | 6 |
| Totals | $255-5$ | 104. | 3 | 81 | 5 | 70 | 7 |
| Percents | 100\% | 41\% | 20\% | 32\% | 33\% | 27\% | 47\% |

Males with administrative duties are promoted faster than the overall male population, while women with administrative duties are promoted slower than the overall female population (Table 7). While $41 \%$ of al1 male faculty have advanced promotional rates, $61 \%$ of those with administrative responsibilities are in the advanced group. It appears that administrative responsibilities are generally assets toward a successful university career for men. Not so for women. Although the number of women with administrative duties is almost insignificant (3), $67 \%$ (2) have slower promotional rates and $33 \%$ (1) have/has the normal rate.

Table 7
Promotional Histories of Male and Female Faculty Having Administrative Responsibilities

|  | Total | Advanced | Norma1 | Slow |
| :---: | :---: | :---: | :---: | :---: |
| Hale | 56 | $34(61 \%)$ | $12(21 \%)$ | $10(18 \%)$ |
| Female | 3 |  | - | $1(33 \%)$ |

Women are given Acting titles more frequently than men. Fifteen percent (54/357) of the male faculty have held Acting titles; none of them had Ph.D.'s. Twenty-four percent (5/21) of the female faculty have held Acting titles; nearly half of them (2/5) had their Ph.D.'s!

PART IV

THE ACADEMIC WOMAN:

A SURVEY OF FACULTY ATTITUDES AT UC DAVIS

Ruth B. Dixon Judith V. May

We wish to thank the following people for their invaluable assistance: Karen l'aige, Dorian iryer and Tamara Navarro in formulating the questionnaire; Nadine Thomas and Robert Glock in administering it; Linda Thorpe, Holly Knauert and Susan Wilcox, all of the Social Science Data Service, in analysing the data; and Robert Glock and Dorothy Lowry for their critical reading of the report.

The status of women in a university community raises the issue of how an elitist institution dedicated to excellence simultaneously serves the democratic values of egalitarianism. More and more reports are revealing that women are underrepresented in most graduate departments and on university faculties, and are proposing that universities make institutional reforms to correct this underrepresentation. Do faculty members at Davis ©eel that academic women experience discrimination? Are they prejudiced against women as colleagues? Do they support the institutional changes that are being proposed to increase the representation of women?

To\&find out, we conducted a survey of faculty attitudes toward women and toward a series of policies that affect women's position in the university * In this report on the findings, we shall show that most faculty members do acknowledge that, in general, women are discriminated against in the job market, but fewer perceive that qualified women in their own field might have difficulty getting ahead. Most faculty members are not prejudiced against their women colleagues, for they overwhelmingly reject the notion that women are not as competent as men of critical thinking, research, graduate teaching, or administrative work. Many male and female faculty members believe that women in the academic world are less professionally oriented than men, however, and some male respondents especially fear that children and marriages suffer when women work. And Davis professors are divided in their opinions about the kinds of institutional reforms that would make it possible for more women to teach in the university and to enhance their productivity. Some faculty members adamantly oppose such reforms.

[^8]Faculty members do hold some prejudices against women, as our data will show, but in this report we have chosen to emphasize the sources of support or lack of support for the kinds of changes that many feel are essential if women are to become equal participants in the academic社 world. We shall be arguing that policies and practices which on their face apply to everyone in fact affect women with much greater severity. For example, all faculty members with children are affected when a university does not provide child-care services for its employees, but women -- who have traditionally been assigned responsibility for childrearing -- bear the consequences most heavily, frequently to the detriment of their professional careers and ambitions.

In this report we have made every effort to report the data objectively, but we have not refrained from using this opportunity to educate our readers as to how some policies have unequal impact on men and women. Just as racial minorities have had to sensitize their fellow citizens to the practices of institutional racism, so women have to trace out the consequences of institutional sexism.

It is important to remember that this report describes and analyzes the responses to an attitude survey. There is no possible way of discovering from these responses whether sufficient support exists in the university to enact all of the reforms we have proposed, or none. For one thing, social scientists are well aware that attitudes do not alone determine behavior. For another, policy decisions in a university are not made by majority rule, and thus majority and minority opinions are not readily translated into policy. Finally, much of the impetus. for reform in university policies and practices is coming from outside the university under the auspices of the civil rights and contract compliance clauses of federal legislation, and thus, attitudes within
the university are by no means determining. Nevertheless, even with all of these provisos, we feel that the Davis community will find much in this report that is informative and stimulating.

## Tre Sample

In May, 1971, an eight-page questionnaire was sent to ali faculty members at UC Davis holding the rank of Lecturer or higher. In all, 1089 questionnaires were distributed. The office of Academic Affairs reports that at least 65 faculty members were on leave and away from campus during the Spring Quarter. Of the cemaining 1024,621 returned their questionnaires, giving a response rate of $61 \%$, about normal for a mailed survey. Sixteen of the returned questionnaires were received either too late to be included in the analysis or were largely incomplete, leaving a total sample of 605. Considering the length of the questionnaire and the extreme time pressures on faculty nembers late in the Spring Quarter, we found the majority response very encouraging.

Faculty members in the College of Letters and Scince and in Agriculture, constituting approximately $67 \%$ of the total Davis faculty, make up $70 \%$ of the sample. Thus, faculty members in the professional schools of Law, Medicine, Veterinary Medicine and Engineering are slightly underrepresented. Full professors, approximately $47 \%$ of all faculty members (including lecturers), are $46 \%$ of the sample. Statistical tests showed that those who refused to answer particular questions within the questionnaire were usually not distinguishable as a group in their overall attitudes from those who did answer, but whether this applies as well to those who did not return the questionnaire at all cannot of course be determined.

Outline of the Report
In Part I of this analysis of the responses to the questionnaire, we compare the attributes of a "typical female faculty member" with those of an "ideal faculty member of either sex" and show that women fall short of the ideal on all but one characteristic, but women think of themselves as coming closer to the ideal than men do. In Part II we compare the responses of male and female faculty members to 45 questions on attitudes and policy, and point out how a general approval of women as colleagues is not translated into support for policy changes that would bring more women into the academic profession. In Part III we relate pro- and anti-feminist attitudes to such variables as the respondent's sex, marital and family status, school or college, academic rank, and political identity, and demonstrate that attitures about women are more closely tied to a political "world view" and to current family and university status that they are to factors more distant in time such as parents' education or employment. Finally, in Part IV we discuss the overall meaning of these findings with special reference to reconciling egalitarian ideals with current university practice in hiring, promotion, and working conditions of female faculty members.

## I. THE "TYPICAI female faculty member"

Do people have a mental image of what a "typical" female faculty member is like, and if so, what are her characteristics and how does she differ from their image of what an "ideal" faculty member (of either sex) should be like? Respondents were asked to indicate their impresion of a typical female faculty member by placing an $X$ along a sixpoint scaje between eleven pairs of attributes such as tense-calm, passive-aggressive, and dependent-independent. Then, on turning the page, they were asked to make the same evaluation of what they considered to be an ideal faculty member of either sex. The following charts show the distribution of responses along the six-point scale for each pair of attributes, and the extent and direction in which the typical female faculty member deviates from the ideal.

Many people disliked the formulation of the question about the "typical female faculty member," feeling that it enforced stereotyped thinking where none existed or that they knew too few female faculty to form a judgment. Nevertheless, about four-fifths of the males and threequarters of the females in the sample responded. *. The concept of an "ideal faculty member of either sex" was apparently much easier to handle, for nine-tenths of both sexes replied to these items.

In the following charts, the typical female faculty member closely resembles the ideal on two dimensions: she strikes a perfect balance

[^9]between being demanding and accepting and between being passive and aggressive. Beyond this, she is slightly less ambitious, independent or cooperative than the ideal Eacuity member would be, and very much less open, calm, logical, rational, or productive. Where male and female respondents differed in their conception of a "typical female faculty member," the female respondents reported an image that comes closer to the ideal than that of their male colleagues.

The charts are ordered so that the modal "ideal" category moves from the left-hand extreme to the right. A close correspondence of "ideal" and "typical" profiles representing the percentages of respondents checking each space on the scale does not of course mean that individuals necessarily rate the two close together.

A. THE IDEAL FACULTY MEMBER IS "OPEN"BUT THE TYPICAL FEMAL: IS NOT

[^10]Over $40 \%$ of the male and female respondents insist that the ideal faculty member is extremely open, but the typical female faculty member falls far short of this ideal in being too closed in both women's and men's eyes. Women see one another as being more open than men do, however, and thus as coming closer to the 1 deal.
B. THE TYPICAL FEMALE IS SLIGHTLY LESS AMBITIOUS THAN THE IDEAL.

Both men and women see the ideal faculty member as highly ambitious, but preferably not excremely so. Women are somewhat more ready to find arition in one anor and thus to zate the typical female faculey nember as approximating the ideal than are men.
C. THE TYP CAL FEMALE IS SLIGHTLY LESS COOPERATIVE THAN THE IDEAL

There is a greater difference of opinion across the faculty on the ideal balance between cooperativeness and competitiveness than there is on other dimensions, presumably because both attributes are valued under differing conditions. On the whole, the male faculty puts more emphasis on cooperation than does the female faculty in its image of an ideal professor; women tend to look more for a balance between the two. The typical female faculty member, in both men's and women's eyes, does attain such a balance, but it is geighted s1ightly too far toward the competilive end of the scale to be ideal.
D. TYE TYPICAL FEMALE IS IDEAL ON THE DEMANDING-ACCEPTING SCALE

Once again, a balance between the two extremes is considered most desirable, although there is considerable spread. ife respondents see the ideal faculty member as being slightly more accepting than demanding whereas females tend to emphasize the demanding side. It is interesting to note on this dimension that the male concept of the typical female comes closer to the women's ideal, and the female notion of a typical female comes closer to the men's ideal. In their image of a typical female faculty member, each pleases the other's ideals more thai their own!
E. THE TYPICAL FEMALE FACULTY MEMBER IS FAIRLY FEMININE, BUT THE IDEAL TENDS TOWARD THE MASCULINE:
 na scale of feminine-masculine, bue the notion of an ideal faculty member of either sex being rated on this scale proved to be far more difficult.* Many respondents insisted that the deal should be either

[^11]totally feminine if a woman, or totally masculine if a man; they were not willing to consider the traits of "masculinity" and "femininity" apart from gender. Ambiguous or multiple responses are not included in this chart.

The typical female faculty member tends to be somewhat feminine, but approximately one-third of the respondents marked her on the masculine side. An additional analysis showed that those who found the typical female to be the most feminine were, elsewhere in the questionnaire, most supportive of imprevements in the status of women, and those who found her most masculine were least supportive. Women valued masculinity in the ideal somewhat less than men, and feminnity swewhat more.
F. THE TYPICAL FEMALE FACULTY MEMBER IS NEARLY IDEAL ON THE PASSIVEAGGRESSIVE SCALE

Men and women see the ideal faculty member as being more aggressive than passive, but extreme aggressiveness is almost as undesirable as extreme passiveness. The typical female faculty member comes fairly close to the fdeal in both men's and women's opinion, but both groups
see her as slightly more passive than the ideal.
G. THE DEAL FACULTY MEMBER IS CALM; THE TYPICAL FEMALE TENSE

The idea faculty member is calm, but not extremely so, with males valuing calmness more highly than females. The typical female, on the other hand, is seen as somewhat tense, although females see one onother as coming somewhat closer to the ideal of calmness than males do.
H. THE IDEAL FACULTY MEMBER IS LOGICAL; THE TYPICAL FEMALE MORE EMOTIONAL

dmotion and logic are presumably both valued attributes, but when it comes to describing what an ideal faculty member would be like, logic clearly wins. The typical female faculty member as seen by men strikes a balance between the two attributes, with about as many putting her on the emotional side as on the logical side. Women are sharply divided, with half seeing the typical female academic as highly logical, another $30 \%$ seeing her as somewhat emotional, and only $10 \%$ putting her between the two categories! At the same time, women do not value extreme logic along with a total absence of emotion in their ideal faculty nember quite as much as men do.
I. THE IDEAL FACULTY MEMBER IS INDEPENDENT; THE TYPICAL FEMALE MORE DEPENDENT

Both men and women like an ideal xaculty member to be independent, although not necessarily extremely so. The typical female, according to women, follows this ideal fairly closely, but the typical female according to men is too dependent for their liking.

## J. THE IDEAL FACULTX MEMBER IS EXTREMELY RATIONAL; NOT SO THE

 TYPYCAL FEMALE

IRRATIONAL
RATIONAL

Extrene rationality is highly valued, especially when contrasted with irrationality! Women value extreme rationality slightly less than men, but women clearly see themselves as coming closer to the ideal than men do.
K. THE IDEAL FACULTY MEMBER IS EXTREMELY PRODUCTIVE; NOT SO THE TYPICAL FEMALE

The more productive the faculty member, the better, according to both men and women. Yet it is obvious from the graph that men see the typical female faculty member as being less productive than they would like, alchough once again women see themselves more favorably.

In sum, male and female respondents generally agree on most qualities of an ideal faculty member. Such a person should be extremely open, productive and rational; highly ambitious, logical, independent, calm and cooperative; and somewhat aggressive and accepting. Female respondents value cooperativeness, calmess, and being accepting somewhat less than men do.

Men view the typical female faculty member as appropriately aggressive and accepting, and nearly independent enough, but insufficiently rational, ambitious, logical, cooperative and feminine, and much too tense and closed.

In comparison, women see the typical female faculty member as coming closer to the ideal. (Of course, these summary profiles conceal the wide range of opinion shown in the charts.)

What role do such stereotypes play in the admission of graduate women and the hiring and advancement of faculty women in the university? Because faculty women are currencly a small minority within the university and, consequently, have little influence over most graduate admizsions and faculty hiring aid promotion decisions, their more favorable attiudes cannot be expected to prevail. If, as in our sample, many faculty men view the typical female faculty member as less logical, rational, or productive - three characteristics of great importance in the judgment of academic qualifications - women, in the university may
be severely disadvantaged. However, if most faculty men believe that the "typical male faculty member" similarly falls short of the ideal (a consideration that could not be pursued in this questionnaire because of limitations of time and space), then women may not be as disadvantaged as it appears fru these findings.
II. FACULTY ATTITUDES TOWARD ACADEMIC WONEN AND INSTITUTIONAL REFORM

We turn aw to a discussion of the distribution of responses of male and female faculty members at Davis to 41 statements conceling women's role in the academic world.* Faculty members were asked to strongly agree, agree, disagree, or strongly disagree with each statement. Although no neutral or "no opinion" category was included, respondents could refuse to reply to any particular statement and in general about 5 to 10 percent did so. ${ }^{\dagger}$ The statements are grouped in the discussion that follows into eleven clusters containing intercorrelated items as they appeared in a•factor analysis of the responses to all 41 items. The statistically defined clusters or factors are surprisingly clear and follow closely a "common-sense" sorting of items that was undertaken prior to the analysis of the results. The account begins with the area for which there is most consensus: that discrimination exists against women in general and that women do tend to make competent academic colleagues. There is less support for the notion that women are as career-minded as men in the university, however, and considerable fear is expressed that marriages, husbands and chi.ldren inevitably suffer when women work. In the last section we review some proposed changes in personnel policy that would integrate women more closely into the academic communty by reducing institutional constraints against their full participation, only to find that there is much conflict over the idea of such reforms, and much resistance to them.

[^12]
## A. Existence of Discrimination

MOST FACULTY MEMBERS ACKNOWLEDGE THAT WOMEN ARE DISCRIMINATED AGAINST IN OIJTAINING JOBS AND RESEARCH GRANTS

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | $\lambda$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Many qualified women can't get good jobs, although men with the same skiils have less trouble | $M$ F | $\begin{aligned} & 20.5 \% \\ & 40.9 \end{aligned}$ | $\begin{aligned} & 61.8 \% \\ & 50.0 \end{aligned}$ | $\begin{gathered} 14.4 \% \\ 4.5 \end{gathered}$ | $\begin{aligned} & 3.3 \% \\ & 4.5 \end{aligned}$ | $\begin{array}{r} (4 \Omega 2) \\ (44 .) \end{array}$ |
| Men generally have an easier time getting research grants than their female colleagues | M F | $\begin{array}{r} 4.3 \\ 19.4 \end{array}$ | $\begin{aligned} & 49.9 \\ & 52.7 \end{aligned}$ | $\begin{aligned} & 42.5 \\ & 25.0 \end{aligned}$ | $\begin{aligned} & 3.3 \\ & 2.8 \end{aligned}$ | $\begin{array}{r} (391) \\ (36) \end{array}$ |
| People tend to find highly successful women particularly threatening | M F | $\begin{aligned} & 2.9 \\ & 7.3 \end{aligned}$ | $\begin{aligned} & 34.3 \\ & 46.4 \end{aligned}$ | $\begin{aligned} & 54.4 \\ & 36.6 \end{aligned}$ | $\begin{array}{r} 8.4 \\ 9.8 \end{array}$ | $\begin{array}{r} (452) \\ (41) \end{array}$ |
| The truly qualified women in my field have no trouble achieving renognition and getting ahead | M F | $\begin{aligned} & 15.2 \\ & 14.3 \end{aligned}$ | $\begin{aligned} & 48.2 \\ & 30.9 \end{aligned}$ | $\begin{aligned} & 30.9 \\ & 40.4 \end{aligned}$ | 5.7 14.3 | $\begin{array}{r} (475) \\ (43) \end{array}$ |

Faculty members overwhelmingly agree that women experience job discrimination; yet remarkably fewer believe that "truly qualified" women in their own field have difficulty achieving recognition. Women are much more likely than men to perceive discrimination within the academic world, for only a little over half of the men compared to almost three-quarters of the women feel that men generally have an easier time getting research grants than their female colleagues. Interestingly, female respondents - all presumably "truly qualified" academic women - more readily agree that people tend to find highly successful women particularly threatening, revealing much about the ambiguities of their position under existing conditions.

## B. Attitudes Toward Women as Colleagues

1. MOST FACULTY MEMBERS BELIEVE THAT WOMEN ARE AS CAPABLE AS MEN OF INTELLECTUAL ACHIEVEMENT

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| It seems $\therefore$ me that women are jusi as capable of dcing competent research is men | $\begin{aligned} & M \\ & \mathrm{~F} \end{aligned}$ | $\begin{aligned} & 42.0 \% \\ & 70.5 \end{aligned}$ | $\begin{aligned} & 52.4 \% \\ & 25.0 \end{aligned}$ | $\begin{aligned} & 5.2 \% \\ & 2.3 \end{aligned}$ | $\begin{aligned} & 0.4 \% \\ & 2.3 \end{aligned}$ | $\begin{array}{r} (498) \\ (44) \end{array}$ |
| Women are probably not as good at critical thinking as men | M F | $\begin{aligned} & 1.5 \\ & 0.0 \end{aligned}$ | $\begin{array}{r} 10.5 \\ 2.4 \end{array}$ | $\begin{aligned} & 58.1 \\ & 32.5 \end{aligned}$ | $\begin{aligned} & 29.9 \\ & 65.1 \end{aligned}$ | $\begin{array}{r} (485) \\ (43) \end{array}$ |

Apparently, if women suffer discrimination it is not because they are perceived as intellectually inferior to men. Male and female respondents overwhelmingly agree that women are just as capable of doing competent research as are men. (However, many more women agree strongly than men.) Similarly, respondents believe that women are as good at critical thinking as men, but even so, $12 \%$ of the male respondents feel that they are not!
2. MOST FACULTY MEMBERS SEE WOMEN AS COIPETENT COLLEAGUES

|  |  | $\begin{gathered} \text { Strongly } \\ \text { Agree } \end{gathered}$ | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Generally speaking, women do not handle professional status with much sophistication or restraint | $\begin{gathered} M \\ F \end{gathered}$ | $\begin{aligned} & 1.1 \% \\ & 0.0 \end{aligned}$ | $\begin{aligned} & 5.4 \% \\ & 0.0 \end{aligned}$ | $\begin{aligned} & 62.5 \% \\ & 34.1 \end{aligned}$ | $\begin{aligned} & 30.9 \% \\ & 65.9 \end{aligned}$ | $\begin{array}{\|} (475) \\ (44) \end{array}$ |
| Men who regard faculty women favorably usually change their minds when they have to work closely with them on departmental committees | $\frac{M}{F}$ | $\begin{aligned} & 1.5 \\ & 2.6 \end{aligned}$ | $\begin{aligned} & 8.0 \\ & 0.0 \end{aligned}$ | $\begin{aligned} & 73.0 \\ & 53.8 \end{aligned}$ | $\begin{aligned} & 17.5 \\ & 43.6 \end{aligned}$ | $\begin{gathered} (412) \\ (39) \end{gathered}$ |
| Sexual tensions are likely to cause problems when women are on the faculty | M | $\begin{aligned} & 1.8 \\ & 2.3 \end{aligned}$ | $\begin{aligned} & 7.4 \\ & 2.3 \end{aligned}$ | $\begin{aligned} & 67.6 \\ & 47.7 \end{aligned}$ | 23.2 47.7 | $\begin{gathered} (457) \\ (4.4) \end{gathered}$ |
| Women tend to be better at teaching younger undergraduate students than at teaching advanced graduate students | $M$ $F$ | $\begin{aligned} & 0.7 \\ & 0.0 \end{aligned}$ | $\begin{aligned} & 9.3 \\ & 0.0 \end{aligned}$ | $\begin{aligned} & 74.0 \\ & 64.1 \end{aligned}$ | $\begin{aligned} & 16.1 \\ & 35.9 \end{aligned}$ | $\begin{array}{r} (430) \\ (39) \end{array}$ |
| I would be reluctant to hire a woman for a faculty position because she would probably not stay on the job as long as a man | M | $\begin{aligned} & 2.3 \\ & 2.3 \end{aligned}$ | $\begin{array}{r} 14.5 \\ 2.3 \end{array}$ | $\begin{aligned} & 59.7 \\ & 39.5 \end{aligned}$ | $\begin{aligned} & 23.6 \\ & 55.8 \end{aligned}$ | $\begin{gathered} (484) \\ (43) \end{gathered}$ |

Neither are women discriminated against because they are thought incapable of handling professional responsibility. Most Davis faculty members view women as highly competent colleagues. Only small minorities claim that women cannot hardle their professional status with dignity and resi int, that their presence creates sexual tensions anong faculty members, or that they are better suited to teaching undergraduates than graduate students. But $17 \%$ of the male respondents believe that a woman will not stay on the job as long as a man, and would be reluctant to hire women for this reason!
3. MANY FALULTY MEMBERS D $D$ NOT SEE WOMEN AS SERIOUS PROFESSIONALS AND ADMIT THEY WOULD FAVOR A MALE CANDIDATE

|  |  | $\begin{gathered} \text { Scrongly } \\ \text { Agree } \end{gathered}$ | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| In my opinion, departments with more women on their faculties have less prest:ige than those with fewer | $\begin{aligned} & \mathrm{M} \\ & \mathrm{~F} \end{aligned}$ | $\begin{aligned} & 2.2 \% \\ & 2.2 \end{aligned}$ | $\begin{aligned} & 15.8 \% \\ & 23.7 \end{aligned}$ | $\begin{aligned} & 70.3 \% \\ & 44.7 \end{aligned}$ | $\begin{aligned} & 11.7 \% \\ & 28.9 \end{aligned}$ | $\begin{array}{r} (418) \\ (38) \end{array}$ |
| Female faculty do not publish as much as males in their field | M | $\begin{aligned} & 1.3 \\ & 2.7 \end{aligned}$ | $\begin{aligned} & 26.4 \\ & 13.6 \end{aligned}$ | $\begin{aligned} & 61.5 \\ & 48.7 \end{aligned}$ | $\begin{aligned} & 10.8 \\ & 35.1 \end{aligned}$ | $\begin{gathered} (379) \\ (37) \end{gathered}$ |
| All other things being equal, if confronted with a choice between a male or female candidate for a faculty position I would favor the male |  | $\begin{aligned} & 3.3 \\ & 2.4 \end{aligned}$ | $\begin{aligned} & 44.8 \\ & 14.2 \end{aligned}$ | $\begin{aligned} & 43.5 \\ & 54.8 \end{aligned}$ | $\begin{array}{r} 8.4 \\ 28.6 \end{array}$ | $\begin{gathered} (451) \\ (42) \end{gathered}$ |
| Men in the academic world are generally more career oriented than their female colleagues | M | $\begin{aligned} & 7.1 \\ & 9.1 \end{aligned}$ | $\begin{aligned} & 41.9 \\ & 34.9 \end{aligned}$ | $\begin{aligned} & 42.7 \\ & 31.8 \end{aligned}$ | $\begin{array}{r} 8.2 \\ 25.0 \end{array}$ | $\begin{array}{r} (475) \\ (44) \end{array}$ |

However, many faculty members - women as well as men -- do not view women as serious professionals. Eighteen percent of the men and $26 \%$ of the women believe that departments with more women on their faculties have less prestige. (One does not know whether these responses reflect private attitudes or public reality.) Substantial minorities of both men and women believe that women do not publish as much as their male colleagues, and almost half believe that academic men are more career oriented. If faculty members believe that their prestige is enhanced by the productivity of their departmental colleagues and that women are less productive, then ley may be reluctant to hire them. In this context, it is noteworthy that nearly half of the male faculty members and one-sixth of the women admitted that, even if all other things were equal, they would choose a male over a female job candidate!

## C. Attitudes Toward Faculty Members as Spouses and Parents

1. Faculty members feel that men are more capable of combining MARRIAGE AND CAREER THAN ARE WOMEN

|  |  | Strongly <br> Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Few women are capable of <br> being good wives, <br> mothers, and profes- <br> sionals simultaneously | M | $11.3 \%$ | $40.5 \%$ | $37.6 \%$ | $10.6 \%$ | $(470)$ |
| Few men are capable of |  |  | 11.4 | 45.5 | 36.4 | $(44)$ |
| being good husbands, | M | 4.4 | 28.5 | 47.9 | 19.2 | $(480)$ |
| fathers and profes- | F | 4.6 | 9.3 | 53.5 | 32.5 | $(43)$ |
| sionals simultaneously |  |  |  |  |  |  |

Although they perceive women as competent colleagues, faculty members feel that women are more ficequently handicapped by conflicts between family and career responsibilities than are men. This perception may reflect the reality of existing conditions more than a bias against wives and mothers working, but nevertheless, women were less likely than men to agree that few women are capable of being good wives, mothers and professionals simultaneously. Only one-fifth of the faculty women agreed compared to half of the men. Women were also less likely to think that few men are capable of being good husbands, fathers and professionals simultaneously, although one-third of the men thought this was the case.
2. SOME MEN FEAR NEGATIVE CONSEQUENCES WHEN WIVES WORK

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| The husband of an academic woman is often forced to perform domestic duties that should not be his responsibility | M F | 2.9\% 0.0 | $\begin{gathered} 13.5 \% \\ 0.0 \end{gathered}$ | $\begin{aligned} & 66.3 \% \\ & 53.6 \end{aligned}$ | $\begin{aligned} & 17.4 \% \\ & 46.4 \end{aligned}$ | $\begin{array}{r} (415) \\ (41) \end{array}$ |
| Husbands and wives who both have faculty positions always end up competing with each other, whether they intend to or not | M F | $\begin{aligned} & 1.6 \\ & 0.0 \end{aligned}$ | $\begin{array}{r} 15.7 \\ 0.0 \end{array}$ | $\begin{aligned} & 71.9 \\ & 52.4 \end{aligned}$ | $\begin{aligned} & 10.8 \\ & 37.5 \end{aligned}$ | $\begin{array}{r} (427) \\ (40) \end{array}$ |
| Professional competition between a husband and wife is bound to be harmful to a marriage | M F | 4.0 4.8 | $\begin{aligned} & 28.6 \\ & 14.6 \end{aligned}$ | $\begin{aligned} & 59.4 \\ & 56.1 \end{aligned}$ | $\begin{array}{r} 8.0 \\ 24.4 \end{array}$ | $\begin{array}{r} (451) \\ (41) \end{array}$ |
| In my opinion, children of working mothers are not as we.11 adiusted as children of nonworking mothers | M F | 9.1 2.5 | 34.7 15.0 | $\begin{aligned} & 43.8 \\ & 42.5 \end{aligned}$ | $\begin{aligned} & 12.4 \\ & 36.4 \end{aligned}$ | $\begin{array}{r} (452) \\ (40) \end{array}$ |

One man in six fears that husbands of academic women would be weighed down with domestic duties, and that faculty husbands and wives would inevitably compete with each other. More substantial minorities believe that professional competition between a husband and wife is bound to be harmful to a marriage, and that children suffer when their mothers work. The fact that many more men than women have these fears suggests that some men feel a strongstake in keeping their wives at home.
3. FACULTY MEMBERS FEEL THAT WOMEN HAVE A BIGHT TO PURSUE INCREASED JOB OPPORTUNITIES

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Wonien should hold off making demands until more of: the derands of minority group members are met | M | $1.5 \%$ 0.0 | $\begin{aligned} & 5.7 \% \\ & 6.9 \end{aligned}$ | $\begin{aligned} & 61.2 \% \\ & 41.9 \end{aligned}$ | $\begin{aligned} & 31.5 \% \\ & 51.2 \end{aligned}$ | $\begin{aligned} & (470) \\ & (43) \end{aligned}$ |
| In my opinion, in the tight job market such as we have now in the universities, women really have no business pushing for increased job opportunities | $\stackrel{M}{\mathrm{M}}$ | 2.0 2.3 | $\begin{aligned} & 8.7 \\ & 2.3 \end{aligned}$ | $\begin{aligned} & 50.9 \\ & 22.7 \end{aligned}$ | $\begin{aligned} & 38.3 \\ & 72.7 \end{aligned}$ | $\begin{array}{r} (493) \\ (44) \end{array}$ |
| Women should be considered for fellowships and other support without consideration of their marital status | M | $\begin{aligned} & 23.8 \\ & 44.2 \end{aligned}$ | $\begin{aligned} & 65.1 \\ & 48.8 \end{aligned}$ | $\begin{aligned} & 9.9 \\ & 6.9 \end{aligned}$ | $\begin{aligned} & 1.2 \\ & 0.0 \end{aligned}$ | $\begin{gathered} (495) \\ (43) \end{gathered}$ |
| Graduate education for women is a poor investment since they often do not use their training | M | $\begin{aligned} & 3.2 \\ & 0.0 \end{aligned}$ | $\begin{array}{r} 26.7 \\ 2.3 \end{array}$ | $\begin{aligned} & 54.0 \\ & 50.0 \end{aligned}$ | $\begin{aligned} & 16.0 \\ & 47.7 \end{aligned}$ | $\begin{array}{r} (474) \\ (44) \end{array}$ |

The majority of faculty members do not fear negative consequences to the family, however, and almost all feel that women, regardless of marital status, do have a right to press for greater opyortunities even in a tight job market and in competition with minority group members. It is remarkable, nevertheless, that $30 \%$ of the male respondents think that graduate education for women is a poor investment because they often do not use their training!

## D. Attitudes Toward Institutional Reforms to Alleviate Discrimination Against Women

We have seen that faculty members believe that women are discriminated against and should demand increased opportunities, that they are highly competent colleagues (although many perceive them as less productive than men), and that women are likely to have difficulty combining the roles of wife, mother and professional under existing conditions. What, if anything, are faculty members willing to do to change these existing conditions -- to help women become equal participants in the academic world? Those who prefer reform without conflict will be dismayed by these findings, for faculty members are sharply divided on most feminist proposals for institutional reform, and what is more, they are more likely to have a strong opinion.

1. Reforms that Assist Faculty Members Who are Spouses and Parents a. FACULTY MEMBERS DIVIDE SHARPLY OVER REFORMS TO A.SSIST FAMILIES

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| All faculty should be permitted to hold less thai full time appointments without prejudice to eligibility for promotion, tenure, and sabbatical leave |  | $13.9 \%$ 28.6 | $\begin{aligned} & 40.1 \% \\ & 45.2 \end{aligned}$ | $33.2 \%$ 26.2 | $12.8 \%$ 0.0 | $\begin{array}{r}(476) \\ \hline(42)\end{array}$ |
| Faculty members, regardless of sex, should be permitted leayes of absence to take care of young chil.dren |  | $\begin{aligned} & 10.5 \\ & 28.6 \end{aligned}$ | $\begin{aligned} & 42.4 \\ & 33.3 \end{aligned}$ | $\begin{aligned} & 32.1 \\ & 33.3 \end{aligned}$ | $\begin{array}{r} 15.0 \\ 4.7 \end{array}$ | $\begin{gathered} (474) \\ (42) \end{gathered}$ |
| Husbands and wives should be able to hold faculty positions in the same department so long as each does not participate in promotional decisions regarding the other | M | $\begin{aligned} & 10.4 \\ & 30.2 \end{aligned}$ | $\begin{aligned} & 37.5 \\ & 44.2 \end{aligned}$ | $\begin{aligned} & 34.4 \\ & 13.9 \end{aligned}$ | $\begin{aligned} & 17.6 \\ & 11.7 \end{aligned}$ | $\begin{array}{r} (498) \\ (43) \end{array}$ |
| The university should make childcare facilities available to all faculty members and employees who desire them | M F | $\begin{aligned} & 15.0 \\ & 28.6 \end{aligned}$ | $\begin{aligned} & 28.0 \\ & 38.1 \end{aligned}$ | $\begin{aligned} & 35.5 \\ & 30.9 \end{aligned}$ | $\begin{array}{r} 21.6 \\ 2.4 \end{array}$ | $\begin{array}{r} (482) \\ (42) \end{array}$ |
| Plovision should be made for paid maternity leave for, female faculty | M M | 5.8 16.7 | $\begin{aligned} & 30.8 \\ & 33.3 \end{aligned}$ | 43.2 42.8 | $\begin{array}{r} 20.2 \\ 7.1 \end{array}$ | $\begin{array}{r} (486) \\ (42) \end{array}$ |

Only half of the male respondents compared to three-quarters of the fenales believe that faculty members should be granted part-time appointments without penalty or leaves of absence to tike care of young children, or that husbands and wi.ves should be able to teach in the same department. Forty-three percent of the men compared to $67 \%$ of the women agree that the university should provide childcare services, and

37 compared to $50 \%$ agree that female faculty members should receive paid maternity leave. On every reform except the first, more men expressed strong disagreement than strong agreement. Quite the opposite was the case for women, although significant minorities among them also resisted each of the propivals.
b. SUPPORT FOR FAMILY-RELATED REFORMS VARIES WITH MARITAL STATUS

| Those who agree with |  | Never Married |  | Married |  | Formerly <br> Married |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \% | $\cdots$ | \% | \# | \% | \# |
| Part-time | 4 | 26.6 | 15 | 54.1 | 447 | 76.7 | 30 |
| appointments | F | 50.0 | 12 | 86.3 | 22 | 83.3 | 12 |
| Leaves of | M | 18.8 | 16 | 53.5 | 445 | 65.5 | 29 |
| absence | F | 25.0 | 12 | 77.3 | 22 | 81.8 | 11 |
| University | M | 38.6 | 16 | 40.9 | 452 | 74.2 | 31 |
| facilities | F | 33.3 | 12 | 71.4 | 21 | 83.4 | 12 |

As one would expect, support for these policies is strongly related to marital status. For both men and women, formerly-married respondents (who are now separated, divorced or widowed) are more likely to support reforms facilitating the combination of careers and families than are married faculty members, and the never-married support them least. With, 1 each of these marital categories, women are far more likely to favor change than are men. Divorced men are particularly supportive of reform, however, to an extent equal to married women and far surpassing never-married women. It appears that men who, by virtue of their own life experiences assume responsibilities traditionally assigned to women, especially appreciate the need for policies that permit the comination of professional and familial responsibilities.

## c. SUPPORT FOR MODIFYING NEPOTISM REGULATIONS VARIES WITH MARITAL STATUS

| Those who agree with |  | Never Married |  | Married |  | Formerly <br> Married |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \% | \# | \% | \# | \% | \# |
| Modifying | M | 35.3 | 17 | 47.5 | 466 | 27.8 | 31 |
| nepotism | F | 58.3 | 12 | 85.7 | 21 | 84.7 | 13 |

Half of the men compared to three-quarters of the women favor employing husbands and wives in the same department. Although the restrictions on nepotism technically affect both men and women, in fact, women generally must make the career sacrifices. Again, support for this policy varies with the personal situation of the respondent. Half of the married men, one-third of the never-married, and only one-quarter of the formerly-married men favor modifying nepotism regulations. Among women, however, the level of support is much higher, especially among the married and formerly-married who would be most directly affected.

## む. SUPPORT FOR MODIFYING NEPOTISM REGULATIONS INCREASES WITH SPOUSE'S EDUCATION

What about those married men who have so little enthusiasm for relaxing nepotism regulations? Are they trying to thwart their wives' ambitions? Our data suggest a somewhat more charitable interpretation. Among male faculty members whose wives have a PhD, nearly three-quarters
support changing nepotism regulations. (Fourteen of the fifteen female respondents whose husbands have a PhD favor the change!) Male faculty whose wives have an MA degree or less provide little support for the change, however, and they constiture nine-tenths of the sample of married males. Again, those who are dirertly affected by existing restrictions are most likely to want to change them.
2. Reforms that Create Equitable Practices of Recruitment and Advancement

FACULTY MEMBERS SUPPORT POLICIES CREATING EQUITABLE PRACTICES OF RECRU ITMENT AND ADVANCEMENT

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Persons with lectureships or research appointments should be periodically reviewed for auvancement to assistant professorships or higher | M F | $\begin{aligned} & 15.5 \% \\ & 32.5 \end{aligned}$ | $\begin{aligned} & 63.7 \% \\ & 55.8 \end{aligned}$ | $16.0 \%$ 9.3 | 4.8\% 2.4 | $\begin{array}{r} (458) \\ (43) \end{array}$ |
| When faculty positions become open, they should always be listed publicly in the official organs of professional associations so that all interested persons have an opportunity to apply | M | $\begin{aligned} & 22.6 \\ & 54.6 \end{aligned}$ | $\begin{aligned} & 47.1 \\ & 38.1 \end{aligned}$ | $\begin{array}{r} 25.6 \\ 6.8 \end{array}$ | $\begin{aligned} & 4.7 \\ & 0.0 \end{aligned}$ | $\begin{gathered} (486) \\ (42) \end{gathered}$ |
| Age should not be a criterion in admitting men or wowen to graduate school or considering them for faculty positions | M | $\begin{aligned} & 14.3 \\ & 33.3 \end{aligned}$ | $\begin{aligned} & 37.0 \\ & 28.6 \end{aligned}$ | $\begin{aligned} & 40.5 \\ & 33.3 \end{aligned}$ | $\frac{8.1}{4.7}$ | $\begin{gathered} (491) \\ (42 .) \end{gathered}$ |

Because so many faculty women have been relegated to ron-ladder positions and passed over when regular faculty appointments are made, it is important to create opportundties for movement out of these positions.

[^13]Large majorities of faculty members believe that persons in non-ladder. positions should be reviewed regularly for possible advancement. Large majorities also favor listing all faculty openings publicly so that all interested persons have an opportunity to apply. Much less support exists for admitting older persons to graduate school or initial faculty appointments, a policy that particularly affects those women who have postponed thei: careers until after their child-rearing years.

## 3. Reforms that Place Women in Positions of Authority

WOME THAN MEN

|  |  | Strongly Agree | Agree | Disagree | St rongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A standing committee on the Status of Women at Davis should be appointed to report annually on the progress of the campus in achieving equality of opportunity for woman | $M$ F | $\begin{aligned} & 10.1 \% \\ & 27.9 \end{aligned}$ | $\begin{aligned} & 42.8 \% \\ & 44.2 \end{aligned}$ | $\begin{aligned} & 36.5 \% \\ & 18.6 \end{aligned}$ | $\begin{gathered} 10.5 \% \\ 9.3 \end{gathered}$ | $\begin{array}{r} (474) \\ (43) \end{array}$ |
| Women should be represented on al1 Senate committees that have major responsibilities for academic policy | $M$ F | $\begin{aligned} & 14.4 \\ & 41.5 \end{aligned}$ | $\begin{aligned} & 37.9 \\ & 34.2 \end{aligned}$ | $\begin{aligned} & 37.6 \\ & 22.0 \end{aligned}$ | $\begin{array}{r} 10.1 \\ 2.5 \end{array}$ | $\begin{array}{r} (466) \\ (41) \end{array}$ |
| Women should be $\pm$ ncluded on every departmental committee of graduate admissions | M | $\begin{array}{r} 3.3 \\ 20.0 \end{array}$ | $\begin{aligned} & 25.6 \\ & 35.0 \end{aligned}$ | $\begin{aligned} & 56.6 \\ & 45.0 \end{aligned}$ | $\begin{array}{r} 14.5 \\ 0.0 \end{array}$ | $\begin{array}{r} (456) \\ (40) \end{array}$ |
| A Department of Women's Studiles should be organized at Davis if there is a demand for it | M | $\begin{aligned} & 3.2 \\ & 7.1 \end{aligned}$ | $\begin{aligned} & 26.3 \\ & 21.4 \end{aligned}$ | $\begin{aligned} & 40.7 \\ & 38.1 \end{aligned}$ | 29.9 33.3 | $(472)$ $(42)$ |

Three-quarters of the female faculty but only half of the male faculty feel that women should be represented on all major Senate policy-making committees, and that a standing committee on the Status of

Women at Davis should, be appointed to cversee the achievement of equality of opportunity for women. Fifty-five percent of the women compared to $30 \%$ of the men feel that women should be included on all departmental committees of graduate admissions (of course, each department would need female faculty members for this). Only $30 \%$ of both men and women favor organizing a Department of Women's Studies at Davis similar to those organized at some other colleges and universities, even if there is a demand for it, and one-third of the faculty women (slightly more than the men) disagree strongly with the idea.
4. Reforms that Overcome Past Discrimination Against Women EXCEPT WHEN THE ISSUE OF MALE OPPOSITION IS RAISED, FEW FACULTY MEMBERS FAVOR SPECIAL RECRUITMENT OF WOMEN

|  |  | Strongly Agree | Agree | Disagree | Strongly <br> Disagree | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Departments should actively seek women faculty members even when some male faculty are opposed to the idea | M | $\begin{aligned} & 10.5 \% \\ & 29.3 \end{aligned}$ | $\begin{aligned} & 43.0 \% \\ & 48.8 \end{aligned}$ | $\begin{aligned} & 38.6 \% \\ & 22.0 \end{aligned}$ | $\begin{aligned} & 7.9 \% \\ & 0.0 \end{aligned}$ | $\begin{array}{r} (461) \\ (41) \end{array}$ |

| Departments with small percentages of women graduate students should actively recruit more women | M | $\begin{array}{r} 4.0 \\ 14.9 \end{array}$ | $\begin{array}{r} 20.8 \\ 22.5 \end{array}$ | $\begin{aligned} & 61.7 \\ & 60.0 \end{aligned}$ | 13.5 2.5 | $\begin{gathered} (476) \\ (40) \end{gathered}$ |
| Female applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the number of women trained in the field | M | $\begin{array}{r} 3.7 \\ 21.5 \end{array}$ | $\begin{aligned} & 14.0 \\ & 30.9 \end{aligned}$ | 53.9 40.4 | 28.4 7.1 | $\left\|\begin{array}{l} (486) \\ (42) \end{array}\right\|$ |

Over half of the male respondents and over three-quarters of the fema1. -en 'hat departments should actively seek womer faculty even 2. "aculty are opposed to the idea, but once the issue of the una. mess of male opposition is removed, support for the active recruitment of women plummets. Only $25 \%$ of the men believe that departments with small percentages of women graduate students should actively recruit others, and only $18 \%$ believe that female applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the number of women trained in the Eield! It is interesting that slightly over half of the female faculty members favor preferential hiring of faculty women but only $37 \%$ of them favor active recruitment of women graduate students. Whereas high proportions of men strongly disagree with preferential hiring, high proportions of women strongly agree.

Preferential recruitment of graduate and faculty women to overcome past discrimination is the policy that receives the least support of all the policies in the survey. Yet, nationwide, the number of "affirmative action"'programs to encourage hiring of racial minorities and women is growing, and such programs are increasingly seen as legitimate and effective means for correcting long histories of direct and indirect discrimination. As a result of legal actions throughout the United States, affirmative action programs are being developed by a number of colleges and universities who seek to avoid the penalty of withdrawal of federal funds for non-compliance with the 1968 Executive order 11375 prohibiting federal contractors from discriminating on the basis of sex. Yet such a program receives the support of only one-fifth of male faculty members at Davis and one-third of the female faculty.

Active recruitment and preferential hiring does not mean that

#### Abstract

"quality will be sacrificed" or that "women with fewer qualifications will be hired over men with more," as so many insist. It does mean that where qualifications (always difficult to determine precisely) are relatively equal, preference must be given to female rather than male candidates until equitable ratios of men and women are achieved.

Active recruitment of female graduate students is also necessary to overcome a history of discrimination. Past numbers of female applicants for graduate programs may themselves reflect discriminatory practices and should not be used by departments as an excuse for the underrepresentation of women. Programs for bringing minority students into graduate schools show how quickly the number of qualified applicants grows when word spreads that departments are truly interested in finding and encouraging such students.

"Why can't a woman be more like a man!" This seems to sum up faculty attitudes toward academic women and institutional reform at Davis. Respondents are very willing to acknnwledge women's competence in the performance of academic duties and to deplore the existence of discrimination against highly qualified females. But policies that draw attention to women as women meet with resistance. Although they acknowledge that women have special difficulties in combining the roles of wife, mother and professional under existing conditions, approximately half of the male faculty members and from one-quarter to one-third of the females are not willing to support proposals for university sponsored childcare centers, part-time employment without penalty, or leaves of absence to take care of young children -- all proposals that would reduce these difficulties. There is even less support for paid maternity leave.

Many faculty members do not recognize that women have an important
role to play as women on university policy-making committees or in departments as authorities about themselves. And fewer than one male in five believes that female applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the numbers of women trained in the field.

In the next section, we will pinpoint some groups among the Davis faculty that recognize $L$ z need for institutional responsiveness to women's rights. Unfortunately we will also find that these groups are numerically small and relatively powerless.

## III. DETERMINANTS OF FEMINISM

We have seen how male and female faculty members as a whole have responded to individual statements concerning the role of women in academic life and to proposals for institutional reform. But among what groups in the Davis faculty is support for the equal participation of women most likely to be found?

To answer this question, we condensed the data into a simplified "feminism index." Persons scoring high on the feminism index hold favorable attitudes toward women as professionals and toward institutional reforms supporting equal participation by women. The index was constructed by coding the answers to 27 attitude and policy statements for each respondent so that the "least feminist" response received one point, the next, two, the next, three and the "most feminist," four points.* Each person was then assigned a total feminism score out of a maximum of 100 points and a minimum of 25 points, based only on those questions among the 27 that he or she had answered. The mean feminism score for the sample of 605 faculty members was 63.1 with a standard deviation of 10.5. Group scores above 62.5 show pro-feminist leanings and scores below 62.5 are anti-feminist.

In the section that follows, the relation between feminism scores and such variables as sex, age, family background, current family status, position in the university, and political identity are explored. The most pro-feminist groups are found to be women, young faculty members, divorced men and women, men with highly educated wives, and persons who consider themselves to be "left liberal" or "radical" politically.

[^14]
## A. Sex

WOMEN ARE MORE PRO-FEMINIST THAN MEN

| Sex | Number | Percent of Total | Average FEMINISM SCORE |
| :---: | :---: | :---: | :---: |
| Male | 525 | 91.9 | 63 |
| Female | 47 | 8.2 | 73 |
|  | 572* | 100.0 | Range $=10$ |

As we have seen, the 47 female respondents comprising $8 \%$ of the total sample responded more favorably to the feminist issues raised in the questionnaire than did the 525 males. Their average feminism score was 73 compared to 63 for men, one of the larger differences found between groups.

## B. Age

YOUNGER FACULTY MEMBERS ARE MORE PRO-FEMINIST THAN OLDER MEMBERS
$\left.\begin{array}{|ccc|}\hline \text { Age } & \text { Number } & \begin{array}{c}\text { Percent } \\ \text { of Total }\end{array} \\ \text { Males } & & \text { FEMINISM SCORE } \\ 20-29 & 32 & 6.2\end{array}\right]$

* Numbers do not add to 605 because some respondents did not provide information on sex, age, rank, etc.

Younger faculty members are more pro-feminist thar older faculty members, with the exception of the very small number of female professors over the age of 60 whose group average is the highest of them all!
C. Family Background

1. Education of Father and Mother

ONLY WOMEN'S ATTITUDES ARE AFFECTED BY THEIR PARENTS'
EDUCATIONAL ATTAINMENT

| Education of Mother | Number | Percent of Total | Avera FEMINISM |
| :---: | :---: | :---: | :---: |
| Males |  |  |  |
| High school | 295 | 56.9 | . 63 |
| Some college | 93 | 19.0 | 62 |
| $B A$ or equivalent | 8 | I 72 | 63 |
| MA or equivalent | 3.1 | 6.0 | 65 |
| PhD or equivalent | 4 | 0.8 | 64 |
|  | 517 | 99.9 | ge $=3$ |
| Females |  |  |  |
| High school | 19 | 42.2 | 71 |
| Some college | 9 | 20.0 | 70 |
| BA or equivalent | 13 | 28.9 | 77 |
| MA or equivalent | 4 | 8.9 | 78 |
| PhD or equivalent | 0 | 0.0 | - |
|  | 45 | 100.0 | $g e=8$ |

Surprisingly, the educational attainment of their parents has no effect upon male faculty members' feminist at titudes. However, those female faculty members whose mothers received at least a $B A$ or whose fathers received an $M A$ or $P h D$ are significantly more pro-feminist than those whose parents had less education. It is interesting to note that parents of female faculty meinbers were more likely to have post-graduate training than the parents of males.

## 2. Eaploymerit of Mother

FACULTY MEMBERS WHOSE MOTHERS ALWAYS WORKED ARE MORE
PRO-FEMINIST THAN THOSE WHOSE MOTHERS WORKED SOMETIMES OR NEVER
"Was your mother employed when you were living at home?"

| Employment of Mother | Number | Percent <br> of Total |
| :--- | :---: | :---: | | Average <br> FEMINISM SCupe |
| :---: |
| Manes |
| Yes, always |
| Yes, sometimes |
| No, never |

The majority of Davis professors grew up in families in which the mother was newer employed outside the home. Faculty members whose mothers were always employed hold somewhat more pro-feminist attitureqs than those whose mothers worked sometimes or never.
D. Marital Status

FEMINISM VARIES WITH MARITAL 〔TATUS FOR BOTH MEN AND WOMEN

|  |  |
| :---: | :---: | :---: | :---: |
| Marital Status Number Average |  |
| Of Total | FEMSISM SCORE |

| Males |  |  |  |
| :---: | :---: | :---: | :---: |
| Never married | 17 | 3.3 | 58 |
| Married | 474 | 90.8 | 63 |
| Divorced | 23 | 4.4 | 71 |
|  | 514 | 98.5* | Range $=13$ |
| Females |  |  |  |
| Never married | 12 | 25.5 | 64 |
| Married | 22 | 46.8 | 74 |
| Divorced | 10 | 21.3 | 81 |
|  | 44 | 93.6* | Range $=17$ |

Nine-tenths of the men in the sample are married but fewer than half of the women. Yet for both sexes the relation between marital status and feminism is consistent: those who never married are least feminist, those who are married are more feminist, and those who are divorced are the most feminist.

[^15]1. Wife's Education

HUSBANDS OF HIGHLY EDUCATED WIVES ARE MORE PRO-FEMINIST

| Education of Wife* | Number | Percent <br> of Total |
| :--- | :---: | ---: |
| High school | 36 | Average <br> FEMINISM SCORE |
| Some college | 7.6 | 59 |
| BA or equivalent | 91 | 19.4 |
| MA or equivalent | 186 | 39.6 |
| PhD or equivalent | 41 | 24.7 |

Male faculty members whose wives have PhD degrees are far more feminist than those whose wives do not, but they make up less than $10 \%$ of the sample of married men.
2. Wife's Employment

HUSBANDS OF WORKING WIVES ARE SLIGHTLY MORE PRO-FEMINIST
"Is your spouse employed now?"

| Empioyment of Wife* | Number | Percent of Total | Average FEMINISM SCORE |
| :---: | :---: | :---: | :---: |
| Yes, full time | 78 | 16.7 | 64 |
| Yes, part time | 87 | 18.6 | 66 |
| No | 303 | 64.6 | 61 |
|  | 468 | 99.9 | $g e=5$ |

Only one-third of the wives of faculty members in the sample are currently employed outside the home. Their husbands' attitudes are slightly more pro-feminist than the attitudes of men whose wives do not work.

[^16]E. School or College

THE LETTERS AND SCIENCE FACULTY IS MORE PRO-FEMINIST THAN THE FACULTIES OF THE OTHER SCHOOLS AND COLLEGES (EXCEPT FOR LAW)

| School or College | Number | Percent of Total | Avera FEMINISM |
| :---: | :---: | :---: | :---: |
| Males |  |  |  |
| Law | 6 | 1.2 | 70 |
| Letters \& Science | 198 | 39.5 | 66 |
| Medicine | 63 | 12.5 | 64 |
| Erigineering | 41 | 8.2 | 62 |
| Veterinary Medicine | 42 | 8.3 | 60 |
| Agriculture | 152 | 30.3 | 60 |
|  | 50.2 | 100.0 | ge $=10$ |
| Females |  |  |  |
| Law | 0 | 0.0 | - |
| Letters \& Science | 22 | 48.9 | 76 |
| Medicine | 2 | 4.4 | * |
| Engineering | 0 | 0.0 |  |
| Veterinary Medicine | 2 | 4.4 | * |
| Agriculture | 19 | 42.2 | 73 |
|  | 45 | 99.9 | ge $=3$ |

Forty percent of the sample are faculty members in Letters and Science, $30 \%$ are in Agriculture, and another $30 \%$ are in the four professional schools. If one foregoes generalization about the Law faculty because of the small number of respondents, then the Letters and Science faculty is the most pro-feminist, followed in order by Medicine, Engineering, and (tied for last place) Veterinary Medicine and Agriculture.

[^17]
## F. Academic Rank

1. SUPPORT FOR FEMINIST ISSUES DECLINES WITH INCREASING ACAJEMIC RANK

| Academic Rank | Number | Percent of Total | Average FEMINISM SCORE |
| :---: | :---: | :---: | :---: |
| Males |  |  |  |
| Lecturer | 40 | 7.9 | 66 |
| Assistant Professor | 134 | 26.5 | 65 |
| Associate Professor | 100 | 19.8 | 63 |
| Full Professor | 231 | 45.7 | 61 |
|  | 505 | 99.9 | Range $=5$ |
| Females |  |  |  |
| Lecturer | 19 | 41.3 | 78 |
| Assistant Professor | 13 | 28.3 | 73 |
| Associate Professor | 6 | 13.1 | 67 |
| Full Professor | 8 | 17.3 | 69 |
|  | 46 | 100.0 | Range $=11$ |

Support for feminist issues declines with increasing academic rank. In other words, lecturers and assistant professors are more pro-feminist than are associate and full professors who comprise the largest proportion of the faculty. Note that $41 \%$ of the females in the sample but only $8 \%$ of the males hold the rank of Lecturer! And the women Lecturers, presumably only too conscious of the problems associated with their low rank, are considerably more supportive of reform than are higher ranking women.

Because associate and full professors wield much more influence over university governance than other ranks, it is particularly relevant to examine their attitudes toward female faculty and toward various reforms. Interestingly, associate and full professors differ 1ittle from assistant professors in their perception that discrimination against women exists, that female faculty are competent colleagues but less
professionally motivated than men, and that women encounter difficulties in combining careers and families. They do differ in their attitudes toward policies affecting women, however.

In order to examine these attitudes, policies have been grouped according to the individual and group rights that they imply:

Individual Rights
(a) The right of all interested and eligible candidates to be - considered for an appointment.
(b) The right of all candidates to be considered on the basis of their qualifications without regard to age, marital status, and family responsibilities.
(c) The right of faculty members to receive assistance in combining their professional and familial obligations.

## Group Rights

(a) The right of women to representation on advisory and policymaking bodies.
(b) The right of women to representation on screening bodies.
(c) The right of women to the use of university facilities for the study of women.
(d) The right of women to equitable membership in the student body and on the faculty of the university.
2. SUPPORT FOR BOTH INDIVIDUAL AND GROUP RIGHTS DECLINES WITH ACADEMIC RANK

| Group |
| :---: | :---: | :---: | :---: |
| Rights |$\quad$ Percent Who Agree with Policy

It is important to realize that the individual rights identified apply to both male and female faculty members, but affect women much more than men. Faculty members support individual rights more than they support women's group rights. This, of course, is consistent with the individualistic ethos of tho university which is supposed to distribute rewards on the basis of individual merit. Only recently, with studies showing conclusively that universities, like other institutions, have not lived up to this ideal, have various minorities demanded recognition of their rights as a group.

In general, faculty members are most favorable toward those policies that preserve their decision-making authority intact and least supportive of those policies that set conditions upon how they can exercise it. In other words, more faculty members support policies that bring eligible candidates to their attention and expand the pool of eligible candidates while leaving the decision as to who is hired and what policies should apply to women in their hands. Fewer support policies requring consultation with women about matters affecting women (on advjsory, policy-making and screening committees) or developing expertise about women in a department devoted to women's studies, and fewer still support policies requiring departments to prefer women over equally qualified men until the number of women graduate students and faculty reach equitable proportions within the department.

Full professors appear to be most zealous in guarding their dec-ision-making authority; the only right a majority of them support is that of considering all interested candidates for an appointment. A majority of associate professors recognize this right plus the right of all candidates to be considered on the basis of their qualifications without regard to age, marital status, and family responsibilities.
(Their support for permitting leaves of absence for childcare, like their support for granting part-time appointments without penalty, is taken to indicate that they feel family responsibilities should not bar employment.) A majority of associate professors alsimrecogize the righe of faculty women to representation on advisory and policy-making bodies. Interestingly, they are much more willing to see women represented on university decision-making bodies than on departmental admissions committees. A majority of assistant professors recognize these rights plus the right of faculty members to receive assistance in combining their professional and familial obligations, but significantly, they do not support granting women faculty members the individual right of paid maternity leave. Only among lecturers does a majority recognize the right of women to representation on screening committees. Among none of the ranks does a majority recognize the right of women to use university facilities for a Department of Women's Studies, or the right of women to equitable membership in the student body and on the faculty of the university. In general, faculty members are more likely to support those policies that affect current and potential faculty members as individuals and less likely to support those that benefit women as a group. In particular, tenured faculty, who have the most influence within the university, are least inclined to constrain their own authority ir order to increase equality for women within the university.
G. Political Identity

1. FEMINIST ATTITUDES ARE POWERFULLY LINKED TO POLITICAL ATTITUDES
"Generally speaking, how do you consider yourself politically?"

| Political Identity | Numher | Percent <br> of Total | Average <br> FEMINISM SCORE |
| :--- | :---: | :---: | :---: |
| Somewhat conservative | 99 | 18.4 |  |
| Middle-of-the-road | 216 | 40.0 | 56 |
| Left liberal | 207 | 38.3 | 62 |
| Radical | 17 | 3.2 | 78 |
|  | $\boxed{539}$ | 99.9 | Range $=\frac{72}{22}$ |

Finally, faculty members' attitudes toward feminist issues are powerfully linked with their political identities. It may not be surprising to learn that feminism is one among a number of political issues about which most men and women have definite opinions, but it is surprising to Iearn the extent to which political identity affects feminism scores.

Only three faculty members identified themselves as "very conservative" and so their responses are combined with those calling themselves "somewhat conservative." Together the group's average feminism score was 56. The numerous "middle-of-the-road" and "left liberal" faculty members scored 62 and 68 , respectively, and the small group of "radical" faculty members scored a high 78.

To some it may be distressing that political identification and feminist attitudes are so closely intertwined, but egalitarian issues have always divided the right and the left in this country, and the content of liberalism and conservatism is continually changing. Issues that today divide radicals and conservatives frequently become tomorrow's status quo. Hopefullys feminist issues are in the midst of such az movement along the spectrum of political opinion.
2. SUPPORT FOR INDIVIDUAL AND GROUP RIGHTS VARIES WITH POLITICAL IDENTITY

| Group |
| :---: | :---: | :---: | :---: |
| Rights |$\quad$ Percent Who Agree With Policy

A majority of conservatives recognize only the individual right of all interested and eligible candidates to be considered for an appointment. A majority of middle-of-the-roaders recognize this right phus the right of all candidates to be considered on the basis of their qualifications without regard to age, warital status, and family responsibilities. A majority of the liberals recognize these plus the right of faculty members to receive assistance combining their professional and familial obligations and the right of women to represertation on advisory and policy-making bodies. Only radicals recognize all of the rights including the right of women to representation on screening committees, to the use of university facilities for women's studies, and to equitable membership on the student body and on the faculty of the university.

Conservative faculty members differ most from other faculty members over the issues of university financed childcare centers and maternity leave. Apparently they believe that family and professional responsibilities should be strictly separated. Conservative and middle-of-theroad faculty members differ most from liberals and radicals over family assistance and group rights policies. Like radicals, liberals believe that women should be represented on university committees, but they are significantly less likely to support positive efforts to overcome Inequities in the proportion of women graduate students and faculty. In their personal attitudes, faculty members have obviously not caught up with policy trends on the national level where minorities have successfully established the legitimacy of using statistical ratios to prove the existence of discrimination. Because these victories are recent, it can still be hoped that faculty members will gradually reduce their resistance to group rights as local and national leaders begin to convince them of their legitimacy and usefulness.

## CONCLUSIONS

Do faculty members at Davis believe that academic women experiemas discrimination? Are they prejudiced against women as colleague 3 ? Do they support the removal of institutional barriers that now force women into marginal positions or out of the academic profession altogether?

Some faculty members are prejudiced against women, as their responses to the questions in the survey reveal. For example, some view the typical female faculty member as more emotional than logical, more irrational than rational, and not as capable of critical thinking as a man. However, most faculty members do view women as competent colleagues, easily able to handle their professional obligations as long as family responsibilities do not interfere. But in comparing men and women, almost half believe that women are less committed to a professional career, and large minorities believe that they are less productive and have greater difficulty in combining the roles of spouse, parent and professional simultaneously. Of course, some of these perceptions are not necessarily prejudices but may simply reflect the reality of existing handicaps that women experience when they pursue academic achievement.

What is dismaying about the responses to the survey is that few faculty members perceive women's handicaps as problems requiring institutional solutions. Large majorities acknowledge that women generally experience career discrimination, but many fewer believe that women in their own field are discriminated against and thus they do not support reforms substantially revising recruiting practices and eligibility criteria. The majority perceives that women have difficulty in beimg wives, mothers and professionals simultaneously, yet many strongly
resist measures to provide asiistance to faculty members for child care. Many also resist placing women in crucial policy-making positions where they could tackle these problems directl; and set up procedures for correcting past inequities against women as a group.

It is this notion of groun rights that is most alien to the faculty. While they acknowledge the rights of individuals, they balk at granting women as a group the right to be represented on all major advisory, policy-making and screening committees or to equitable membership in the student body and on the faculty of the university. Almost half of the men and over one-quarter of the women even balk at creating a standing committee on the Status of Women at Davis to report annually on the progress of the campus in achieving equality of opportunity for women!

Although little conclusive eviaence yet exists that enactment of the reforms examined in this survey -- the reforms that feminist groups throughout the country have demanded -- would greatly increase the representation of women on university faculties, a number of studies do show that women students and faculty feel professionally discouraged by current policies that deny them, among other things, part-time employment, paid maternity leave, leaves of absence for child care, and the right to teach in departments where their husbands teach. Whether or not current policies are intended to discriminate against women, they add up to a strong pattern of institutional sexism against which women are forced to struggle.

Many faculty members believe that existing practices are fair and non-discriminatory. In response to an open-ended question in the survey, "In your opiaion, what is the current mood among your colleagues in the department about seeking and/or hiring women in regular faculty positions?", most faculty members declared in one form or another, "Sex is
irrelevant. We consider everyone on the basis of their qualifications and hire the best person we can get." (Or they evade the question by pointing out that their department is not hiring anyone.) In response to another question, respondents overwhelmingly replied that when they hire new faculty members, they look for excellence in teaching or research, strength in the department's particular area of specialization, or someone who can "balance out" the department and fill in the gaps in the . major fields. Very few add that they they also take into account the race, sex or political identification of the candidate (yet over half of the male respondents agreed that if confronted with a choice between equally qualified male and female candidates they would prefer the male).

These responses, of course, are what one rould expect from persons who are not aware that they are discriminating. But we submit that faculty members are being discriminatory when they aver that sex is irrelevant, because only when faculty members become self-conscious about the ways in which existing practices do handicap women can they begin to eliminate discrimination against women. Existing practices, while they may fulfill the technical requirements of equality of opportunity, have not produced and cannot produce equality of representation, or result.

It is unfortunate that those who are most committed to reforms that assist women in becoming equal participants in the academic world are the least powerful or numerous in the university community. Given their small numbers at the present time, women alone can hardly be expected co bring about the necessary changes, however intensely they feel. Younger faculty members and nontenared professors exercise no great influence; divorced males are empathetic but rare, about as rare as
men who are married to women with $\operatorname{PhDs}$. Thus, if reforms are made, they are as likely to come from outside pressures as from the efforts of those individuals in the university who are most directly affected, although these individuals may exercise considerable leadership.

In an institution such as ? university which is dedicated to excellence judged by universal standards, evidence that these standards are biased in application is disorienting and aggravating to those who uphold them. In this context, the association between political identity and feminist attitudes takes on a new significance. Ultimately, the disposition of feminist reforms may depend upon the assimilation of new perspectives on egalitarianism and how it is achieved.

In this report we have tried to show that women are unduly $\mathrm{I} \cdot \mathrm{ndi}$ capped by policies that technically apply equally to men and women but in fact adversely affect women's ability to pursue professional ambitions. We are suggesting that instead of raising a series of hurdles before women and welcoming those who surmount them, the university community should start with different assumptions: first, that women are as capable as men of doing competent academic work; second, that many more women would be motivated to pursue an academic career if they were not systematically discouraged from that course; and third, that if women are unuerrepresented in the university, it is because the university's policies and practices work against them. As long as unequal results are apparent in the representation of men and women at different levels of professional status within the university, the university community will know tnat its policies are discriminatory and that it should take steps to correct them.

## PART V

WOMEN MARRIED TO FACULTY MEMBERS:

A SURVEY OF ATIITUDES AND OPINIONS

Ruth B. Dixon
Judith V. May

## INTRODUCTION

How do wives of faculty members at UC Davis perceive the role of women in academia? What responsibilities do they assign to the university for meeting the needs of working women? Do their views more closely resemble those of their husbands or of female faculty members?

What special problems do women married to faculty members confront in their own lives at Davis? Does the university community provide opportunities for their involvement in activities outside the home? Does it provide worthwhile employment? Does the community fully utilize the training and talents of this highly educated group of women?

To find out, we mailed questionnaires (similar to those sent to faculty members and discussed elsewhere in this report) to a random sample of 200 faculty wives.* $\dagger$ Three women could not be contacted, and of the remaining 197, 126 returned their questionnaires, giving a response rate of $64 \%$. However, two questionnaires arrived too late to be ' included in the analysis, leaving a total sample of 124 women.

In general, the responses reveal that faculty wives are more feminist than male faculty members on the subject of women in academia, but are less feminist than the female faculty members. Their intermediate position on these issues holds with remarkable consistency throughout all but two of the attitude and policy questions asked in the survey, as well as in their assessment of what a "typical female faculty member" is like.

Wives of faculty members represent a tremendously valuable resource

[^18]to the community, for, as we shall show, over three-quarters are college graduates and one-third have advanced degrees. Most of these women, aside from raising their children, are actively involved in various cultural, service-oriented and political organizations upon which the community depends.

Must wives perceive a numbe of obstacles to their working or being n school. Only one woman in three is employed and only one in ten works full time. Among those who do work, $40 \%$ complain that their jobs dr not make full use of their education, training, or talents. Because over two-thirds of the wives who are not now employed said they would like to be working if they could find an interesting job, especially if it were part-time, one gets the impression that much of the energy devoted to community activities is a consequence of the somewhat restricted availability of professional employment for women in or near Davis.

While most women express general satisfaction with the situation of faculty wives at Davis and suggest no improvements, others are keenly aware that the lack of employment opportunities and childcare services, among other factors, inhibits the full utilization of their interests and skills.

## I. ATTITUDES ABOUT ACADEMIC WOMEN AND INSTITUTIONAL REFORM

As a group, wives of faculty members hold more favorable attitudes toward acadenic women than do their husbands on all major issues considered in the survey; the differences are slight on some issues and great on others.

First, their image of what a "typical female faculty member" is like tends to come closer to the mere favorable description given by women professors themseives, and closer to the traits considered appropriate for "an ideal faculty member of either sex."

Second, compared to faculty men, wives are more likely 1) to acknowledge the existence of discrimination against women; 2) to believe that women are as capable as men of intellectual achievement; 3) to view women as competent and serious professionals; and 4) to doubt that women's employment is likely to harm the marriage or the children.

Third, women in the sample are also more likely than male professors to support policy changes in the university that would recognize 1) the rights of women as individuals to consideration for academic appointments without regard to age, marital status or family responsibilities, and to assistance from the university in combining their professional and familial obligations; and 2) the rights of women as group to representation on all major university committees, to the use of university facilities for the study of women, and to equitable membership in the student body and on the academic staff.

However, wives hold slightly less favorable attitudes toward acudemic women than do the academic women themselves. Their opinions as a group generally fall between those of men and women on the university faculty.
A. Images of the "Typical Female Faculty Member"

MEDIAN RANKINGS ON A SIX-POINT SCALE OF PAIRED ATTRIBUTES

| Attributes of the "Typical Female Faculty Member" $\dagger$ 1................................ $\varepsilon$ | Median Rankings By |  |  |
| :---: | :---: | :---: | :---: |
|  | Male Faculty (505)* | Faculty Wives (124)* | Female Faculty (44)* |
| Open . . . . . . . . . . . . . . . Closed | 3.4 | 2.8 | 2.4 |
| Ambitious....... Unambitious | 2.7 | 2.3 | 2.3 |
| Cooperative. .... Competitive | 3.2 | 3.0 | 2.9 |
| Demanding. ........Accepting | 3.4 | 3.4 | 3.8 |
| Feminine............ Masculine | 3.0 | 3.1 | 2.8 |
| Passive...........Aggressive | 4.2 | 4.4 | 4.1 |
| Tense................... Calm | 3.3 | 3.8 | 3.9 |
| Emotional...........Logical | 3.7 | 4.1 | 4.6 |
| Dependent.......Independent | 4.4 | 4.9 | 4.9 |
| Irrational . . . . . . . Rational | 4.3 | 4.9 | 4.9 |
| Unproductive..... Productive | 4.5 | 4.9 | 4.9 |

Hơ do women married to Davis professors describe the "typical female faculty member"? How does this image compare with the image that male and female faculty members hold of the "typical female faculty member" and of the "ideal faculty member of either sex"?

Respondents were given a list of paired attributes and asked to check the point on the stx-point scale between them that corresponds to their image of a typical female faculty member for that attribute. For example, for the pair, "open...closed," a respondent who regards female

[^19]faculty members as extremely open would check the space marked " 1 " on the scale. The table shows the mediar rankings for each of these attributes given by male and female faculty members and by faculty wives. For the purposes of this table, the scale between the attributes is treated as if it were a continuous one with fine gradations from 1 to 6 rather than a discrete one with options for checking only $1,2,3,4,5$ or 6 . Using this method of analyzing the data, we can see that the median point for male faculty members for the attribute of openness is 3.4. This means that half of the faculty regard the typical female faculty member as more open than this, and half more closed. Comparing their view with those of female faculty and faculty wives, we can see that both groups of women regard the typical female faculty member as more open than the male faculty members do, and more open than closed, for their medians are 2.4 and 2.8 respectively.

Most faculty members, whether male or female, believe that the ideal faculty member of either sex should be extremely open and highly ambitious and cooperative. Faculty wives more nearly share the viewpoint of female faculty members who find themselves more open, ambitious and cooperative than men do. All three groups find female faculty members slightly more accepting than demanding, a balance generally regarded as ideal.

Evidence internal to the questionnaire shows that respondents who score the typical female faculty member high on femininity tend to be more pro-feminist on other issues than those who score her on the masculine side of the scale. Faculty wives, like their husbands, regard the typical female faculty member as slightly less feminine, on the average, than do faculty women themselves.

Male and female faculty members prefer moderate amounts of
aggression and calmness in the ideal faculty member. Thus, when wives find the typical female faculty member slightly more aggressive than do male and female faculty members themselves, they are assigning an attribute considered desirable in a faculty member. Wives believe that female faculty members are abont as calm as female faculty members say they are.

Finally, faculty members believe that the ideal professor should be extremely logical, independent, rational, and productive. Wives rank faculty women higher on these qualities thar their husbands do and as high as faculty women do themselves.

In sum, faculty wives beileve that female faculty members more closely approach the ideal than male faculty members do, but they regard female faculty members slightly less favorably than women faculty regard themselves.
B. At.titudes Toward Academic Women

ATTITUDES ABOUT WOMEN IN GENERAL AND ACADEMIC WOMEN IN PARTICULAR

| Existence of Discrimination and the Right to Work | Percent Who Agree |  |  |
| :---: | :---: | :---: | :---: |
|  | Male (505) | Faculty Wives (124) | Female Faculty (44) |
| Existence of discrimination against women: |  |  |  |
| Qualified women have greater difficulty getting good jobs | 82.3 | 86.8 | 90.9 |
| Women have greater difficulty getting research grants | 54.2 | 83.3 | 72.1 |
| Successful women are particularly threatening | 37.2 | 46.9 | 53.6 |
| Truly quallfied women in my fleld have no trouble | 63.4 | 60.2 | 45.3 |
| Right of women to push for increased job opportunities: |  |  |  |
| Graduate education a poor investment for women | 30.0 | 9.4 | 2.3 |
| Don't make job demanas until. minority demands are met | 7.3 | 9.4 | 6.9 |
| Don't make demands in tight job market | 11.8 | 12.8 | 4.6 |
| Professional Competence of Women |  |  |  |
| Intellectual achievement: |  |  |  |
| Women as capable of doing cotipetent research | 94.4 | 95.9 | 95.5 |
| Women as capable of critical thinking | 88.0 | 86.5 | 97.6 |

| Professional Competence of Women | Percent Who Agree |  |  |
| :---: | :---: | :---: | :---: |
|  | Male Faculty (505) | Faculty Wives (124) | Female <br> Faculty (44) |
| Competent job performance: |  |  |  |
| Women don't handle professional status with restraint | 6.6 | 7.6 | 0.0 |
| Men don't like to work with women on committees | 9.5 | 6.8 | 2.6 |
| Sexual problems arise when women are on faculty | 9.2 | 8.7 | 4.6 |
| Women better at teaching younger undergraduates | 9.9 | 6.7 | 0.0 |
| Women won't stay on the job as long as men | 16.7 | 14.2 | 4.7 |
| Women as serious professionals: |  |  |  |
| Departments with more women have less prestige | 18.0 | 23.3 | 26.4 |
| Women don't publish as much | 27.7 | 30.5 | 16.2 |
| Men are more career oriented in the academic worle | 49.1 | 38.4 | 43.2 |
| All other things being equal, I would favor the male | 48.1 | 37.2 | 16.6 |
| Combining Professional and Familial Responsibilities |  |  |  |
| Success in combiming merriage and career: |  |  |  |
| Few women capable of being good wives, mothers, professionals | 51.8 | 46.2 | 18.1 |
| Few men capable of being good husbands, fathers, professionals | 32.9 | 19.4 | 13.9 |

| Combining Professional and Familial Responsibilities | Percent Who Agree |  |  |
| :---: | :---: | :---: | :---: |
|  | Male Faculty (505) | Faculty <br> Wives <br> (124) | Female <br> Faculty <br> (44) |
| Consequences of women's employment to marriage and children: |  |  |  |
| Husband forceat to perform domestic duties not his responsibitity | 16.3 | 6.4 | 0.0 |
| Faculty husbands and wives inevitably compete | 17.3 | 12.7 | 10.1 |
| Professional competition bound to be harmful to marriage | 32.6 | 32.7 | 19.5 |
| Children ©f working mothers not as well-adjusted | 43.8 | 35.6 | 21.1 |

Women married to faculty members overwhelmingly acknowledge the existence of discrimination against women in general and the right of women to push for increased job opportunities. They andso see women as highly competent professionals, just as capable as men of intellectual achievement and of good job performance, but they do astiow sone doubts about the professional commitment of women in academiien, just as some men and womer academics themselves do. Faculty wives are more likely. than faculty women to feel that marriages and children suffer when women work, and that women have great difficulty comizning the roles of wife, mother and professional.

The table compares the views of faculty wives with those of male and female faculty members, showing the percentages of each group who either "agree" or "strongly agree". with a number of statements regarding women. The complete wording of the items can be found in Section II of the faculty survey. Because the general pattern of responses was
discussed in detail there, this brief discussion will focus upon the unique aspects of the faculty wive's perspective.

In two instances where faculty wive: differ considerably from male and female faculty members, they express a more pro-feminist opinion than do both women and men in thiversity. Wivas are more likely than faculty members of either sex to believe that "men generally have an easier time getting research grants than their female colleagues," and less Tikely to believe that "men in the academic world are generally more career-oriented than their female colleagues..."

On other issues, however - those involving the professional coum petence of women and the consequences to a marriage and to children women's employment - wives are more feminist than male faculty members. but less feminist than female faculty members. They are considerably more likely than female faculty members to agree that "the truly qualified women in my field have no trouble gaining recognition and getting ahead," that "female faculty do not publisk as much as males Q in their field," and, surprisingly, that "all other things being equal, if faced with a choice between a male or female candidate for a faculty position, I would favor the male."

One-third of the faculty wives, compared to one-fifth of the femathe faculty members and two-fifths of the male faculty members agree that "children of working mothers are not as well-adjusted as children of non-working mothers," and almost one-third of the faculty wives and male faculty members, compared to one-fifth of the female faculty members, agree that "professional competition between a husband and wife is bound to be harmful to a marriage." Faculty wives disagree with female faculty members most on the issue of whether "few women are capable of being good wives, mothers, and professionals simultaneously." Forty-six
percent of the wives and 52 percent of the male faculty members agree with the statement, but only $18 \%$ of the faculty women do.

## C. Attitudes Towazm Instilutional Reform

OPINIONS ABOUT LNIVERSITY POLICIES THAT RECOGNIZE WOMEN'S RIGHTS

| Individual Rights | Percent Who Agree |  |  |
| :---: | :---: | :---: | :---: |
|  | Male Faculty (505) | Faculty Wives (124) | Female Faculty (44) |
| The right of all interested and eligible candidates to ne cmsxdered for an appoinnent: |  |  |  |
| Treview lecturers fior advencement | 79.2 | 93.2 | 88.3 |
| Inisst available positions publícly | 69.7 | 89.4 | 92.9 |
| The 工right of all candidates to beaconsidered on the bastis of their qualifications without zegard to age, maritall status or family responsibibilltes: |  |  |  |
| Consider women for fellyowships megardless of maritellistatus | 88.9 | 83.4 | 93.0 |
| Consider applicants regeadless of age | 51.3 | 84.7 | 61.9 |
| Modity nepotism regulations | 47.9 | 59.7 | 74.4 |
| The right of faculty members to receive assistance combining their professional and familial obilgations: |  |  |  |
| Grant part-time appointments without penalty | 54.0 | 53.7 | 73.8 |
| Permit leaves of absence for child care | 52.9 | 53.9 | 61.9 |
| Provide university-sponsored childcare facilities | 43.0 | 50.0 | 66.7 |
| Grant paid maternity leave | 36.6 | 36.7 | 50.0 |

As we have seen, virtually all of the wives of faculty members sampled recognize the existence of discrimination against women and their right to pursue increased job opprtunities. Do they also support specific institutional reforms that would make it possible for more women to teach in the university?

A majority of wives do favor most institutional reforms included in the questionnaire. In particular, they overwhelmingly support reviewing lecturers periodically for advancement and listing all available faculty positions publicly. Very high proportions also believe that graduate women should be considered for financial support regardless of their marital status, and that men and women should be considered for graduate admissions or faculty appointments regardless of their age.

Three-quarters agree that "women should be represented on all Senate committees that have major responsibilities for academic policy," and at least half support modifying the nepotism regulations so that husbands and wives can be employed in the same department, granting part-time appointments without penalty and leaves of absence for men or women to take care of children, and providing universitysponsored childcare facilities. Half also believe that "women should be included on every departmental committee of graduate admissions" and that a standing committee on the Status of Women at Davis should be appointed.

Only four proposals fail to gain the support of a majority of the wonen in the sample. Slightly less than half favor the organization of a Department of Women's Studies if there is a demand for it, and $37 \%$ favor paid maternity leave for female faculty members. Only $25 \%$ of the wives agree that "departments with small percentages of women graduate students should actively recruit more women, " and only $21 \%$ agree that "fenale applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the number of women trained in the field." In these instances they share the view of male faculty members who similarly oppose these reforms.

Faculty wives support two proposals much more strongly than the
 compared to $28.5 \%$ of the female faculty members and $29.5 \%$ of the males agree that a Department of Women's Studies should be organized at Davis if there is a demand for it, and $85 \%$ of the wives compared to $62 \%$ of the female faculty members and $51 \%$ of the males believe that age should not be a criterion in graduate admissions or faculty hiring. Because faculty wives who take time out for childrearing may face discrimination on account of their age if they decide to return to school or to find jobs commensurate with their training once their children are older, they are understandably sensitive to this issue.

Faculty wives are considerably less likely than female faculty members to believe that the university has responsibility to help faculty members combine their professional and familial obligations. They are considerably less likely to support 1) changes in nepotism regulations to permit husbands and wives to hold positions in the same department; 2) part-time employment for men or women without prejudice to eligibility for promotion, tenure, or sabbatical leaves; 3) paid maternity leave for female faculty members; or 4) university-sponsored childcare centers. They are also less likely to support the appointment of a standing committee on the Status of Women at Davis, and very much less likely to support affirmative action hiring of women faculty members. On these issues, their views are similar to those of male faculty members.
II. FACTORS ASSOCIATED WITH FEMINIST VIEWS AMONG FACULTY WIVES

We have seen how the 124 wives in the sample responded as a group to questions regarding their image of the typical female faculty member and their attitudes and opinions regarding academic women and institutional reform. In this section we will explore briefly some differences within the group of wives to see which subgroups among them are most likely to favor feminist issues. For this purpose a "feminism score" was derived for each respondent based on her answers to 27 attitude and policy questions on which significant differences of opinion appeared. The highest possible score is 100 , the lowest 25 ; thus a score reflecting neither pro- nor anti-feminist views overall would be 62.5. The average score for the 124 wives is 67 with a standard deviation of 11 . With this score the wives fall approximately midway between the 525 male faculty members who scored 63 on the average and the 47 female faculty members who scored 73.

Pro-feminist sentiment cends to be stronger among the younger wives, among those whose mothers and fathers have graduate degrees, among wives who themselves have PhDs, and among women who are employed either parttime or full-time.
A. Age

YOUNGER WIVES ARE MORE PRO-FEMINIST THAN OLDER WIVES

| Age | Number* | Percent <br> of Total | FEMINISM SCORES |
| :--- | :---: | :---: | :---: |
| $20-29$ | 14 | 11.5 | 72 |
| $30-39$ | 45 | 36.9 | 70 |
| $40-49$ | 32 | 26.2 | 66 |
| $50-59$ | 20 | 16.4 | 62 |
| $60+$ | $\frac{11}{122}$ | $\underline{100.0}$ | Range $=\overline{10}$ |

Wives in their twenties and thirties hold more feminist attitudes than those who are older.
B. Parents' Education

WOMEN WHOSE PARENTS HAVE GRADUATE DEGREES ARE MORE PRO-FEMINIST

| Father's Education | Number | Percent of Total | FEMINISM SCORE |
| :---: | :---: | :---: | :---: |
| High School | 6.1 | 50.4 | 66 |
| Some college | 21 | 17.4 | 66 |
| BA | 11 | 9.1 | 65 |
| MA | 1.3 | 10.7 | 72 |
| PhD | 15 | 12.4 | 71 |
|  | 121 | 100.0 | Range $=7$ |
| Mother's Education | Number | Percent of Total | FEMINISM SCORE |
| High School | 65 | - 54.2 | 67 |
| Some college | 28 | - 23.3 | 66 |
| BA | 20 | 16.7 | 68 |
| MA | 7 | 5.8 | 76 |
| PhD | 0 | 0.0 | - |
|  | 120 | 100.0 | Range $=10$ |

* Numbers do not always add up to 124 because all respondents did not provide information on al categories.

Women whose parents received no more than a high school education (half of the sample) are as feminist as those whose parents went to college. Only women whose parents have an MA or PhD hold significantly more feminist attitudes, just as among faculty women.
C. Mothers' Employment

WOMEN WHOSE MOTHERS ALWAYS WORKED ARE SLIGHTLY MORE PRO-FEMINIST than those whose mothers stayed at home

| "Was your mother employed when you were living at home?" |  |  |  |
| :--- | :---: | :---: | :---: |
| Mother's Employment | Number | Percent <br> of Total | FEMINISM SCORE |
| Yes, always | 13 | 10.7 | 70 |
| Yes, sometimes | 42 | 34.4 | 69 |
| No, never | $\underline{67}$ | $\underline{54.9}$ | 66 |

Over half of the women now married to Davis professors grew up in households in which their mother never worked. But whether or not the mother was employed makes surprisingly little difference in attitudes toward working women, for women whose mothers always worked are only slightly more feminist on the average than those whose mothers never worked outside the home. A similarly small association was found for men and women faculty.
D. Education

WOMEN WITH PhDs ARE MORE PRO-FEMINIST

| Education | Number | "Percent <br> of Total | FEMINISM SCORE |
| :--- | :---: | :---: | :---: |
| High school | 6 | 4.9 | 69 |
| Some college | 22 | 18.0 | 65 |
| BA | 56 | 45.9 | 66 |
| MA | 28 | 23.0 | 69 |
| PhD | 10 | $\underline{8.2}$ | 74 |
|  | $\underline{122}$ | 100.0 | Range $=\frac{9}{9}$ |

One-third of the wives of faculty members at UC Davis have graduate degrees. Women with MAs and PhDs support feminist positions more than those with some college education or with BAs, but as a group, six women with high school educations score as high on the feminism index as those with MAs. It is interesting to note that as a group, the ten women with PhDs in the sample receive the same feminism scores as the 47 female faculty members, 74 and 73 respectively.*

## E. Employment

WOMEN WHO WORK ARE MORE PRO-FEMINIST

| Employment | Number | Percent <br> of Tota1 | FEMINISM SCORE |
| :--- | :---: | :---: | :---: |
| Full time | 12 | 9.8 | 75 |
| Part time | 29 | 23.8 | 70 |
| None | 81 | 66.4 | 65 |
|  | $\underline{122}$ | $\underline{100.0}$ | Range $=\overline{10}$ |

Only one-third of the women in the sample are employed outside the home, and only $10 \%$ work full time. Support for feminist positions

[^20]increases with employment: as a group, women who are not employed are least Eaminist, women who work part-time are more feminist, and women who work full time are most feminist.

Half of the women with PhDs and $39 \%$ of those with MAs are employed, compared to $34 \%$ of the women with BAs or with some college and only $21 \%$ of those with high school education. Despite these differences, within each educational category feminism is higher among those who are employed.
F. Employment and Preschool Children

NON-WORKING WOMEN WITHOUT PRESCHOOL CHILDREN ARE LESS FEMINIST

| Number of <br> Preschool Childreri | Full time |  | Part-time |  | Not employed |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Feminism <br> Score | No. res- <br> pondents | Feminism <br> Score | No. res <br> pondents | Feminism <br> Score | No. res- <br> pondents |
| None | 78 | 9 | 68 | 22 | 63 | 51 |
| One, two or three | $*$ | 2 | 74 | 7 | 71 | 29 |

Obviously, under current conditions, women who have preschool
children find it especially difficult to work outside the home, and almost one-third of the faculty wives do have preschoolers at home. Just $7 \%$ of these women are employed, compared to $38 \%$ of those who are childless or whose children are older.

Among the women with preschoolers, those who work are slightly more feminist on the average than those who do not. But among the women who are childless or whose children are in school or beyond, those who work are mucn more feminist than those who do not. Women without preschoolers who work full time score 78 on the average, compared to 68 for those who work part-time and only 63 for those who are not employed. It is apparent that women who have greater opportunity to work, but choose not to, are least feminist.

[^21]G. Number of children altogether

WOMEN WITH NO CHILDREN OR ONE CHILD ARE LESS FEMINIST

| Number of Children <br> Expected Altogether | Number | Percent <br> of Total | FEMINISM SCORE |
| :--- | :---: | :---: | :---: |
| None | 4 | 3.6 | 60 |
| One | 1 | 6.3 | 62 |
| Two | 36 | 32.1 | 69 |
| Three | 40 | 35.7 | 68 |
| Four | 13 | 11.6 | 69 |
| Five | 7 | 6.3 | 67 |
| Six | 1 | 3.6 | 59 |
| Seven | 112 | 0.8 | $*$ |
|  |  | 100.0 | Range $=9$ |

All but four women in the sample expect to have some children by the time their childbearing is completed; $58 \%$ expect to have three or more. Women in their thirties and forties have the largest families, with two-thirds expecting three or more children. Younger and older women desire smaller families; only one-quarter of the women now in their twenties intend to have three or more children and only onequarter of the women in their sixties had families of this size,

Surprisingly, women who expect between two and seven children are more feminist than those expecting no children or one child. However, eight of the eleven women who have no children or one child are found in the over-forty age group, which as a whole is least feminist. Among women in their twenties, who are most feminist as a group, all but one woman expects to have at least two children, and she stated she would . have morn if she were able to do so.

It may be that mothers of two or more children are more feminist

[^22]because they are conscious of the difficulties they face in trying to combine their family responsibilities with a career or with other outside activities than are women with no children or only one, or it may be that they hold more positive attitudes toward fully dereloping all of women's potentialities.

## H. Job Satisfaction

EMPLOYED WOMEN WHO ARE LOOKING FOR A BETTER JOB ARE MORE FEMINIST

| Would you like a better job? | Does present job make full use of training? |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Yes |  | No |  |
|  | $\begin{gathered} \text { Feminism } \\ \text { Score } \end{gathered}$ | No. Respondents | $\begin{aligned} & \text { Feminism } \\ & \text { Score } \end{aligned}$ | No. Respondents |
| Yes | 73 | 4 | 75 | 10 |
| No | 72 | 20 | 62 | 6 |

Sixty percent of the 40 women working outside the home feel that their jobs make full use of their education, training and talents, but $40 \%$ feel they do not. Working women who would like a better job if they could find one are more feminist than those who would not, and the small group of six women whose jobs do not make full use of their skills yet are not looking for a better job are the least feminist. Presumably the latter group, small as it is, has either settled for or resigned itself to less than fulfilling employment and is therefore less concerned on the average about difficulties that women with higher expectations face.

In sum, women who are more directly confronted with the dilemma of working and raising children simultaneously, women who are younger, and women who are themselves highly educated or come from fatalies with
highly educated parents, hold more favorable attitudes toward academic women and institutional reform.

## III. PROBLEMS CONFRONTING FACULTY WIVES AT DAVIS

Are wives of Davis faculty members satisfied with the opportunities for employment, education, and other outside activities that the university community provides? Their responses indicate that they are apparently satisfied with the range of recreational, social and volunteer group activities available for interested women in Davis, but find opportunities for employment and, to a lesser extent, for continued education, severely limited.
A. Why are more women not working?

We have noted that, of the 124 women who responded to the survey, 81, or two-thirds, are not now in paid employment. Is this because they simply do not want to work? Not at all. A surprising $70 \%$ of those who are not now working responded affirmatively when they were asked, "Are there any conditions under which you would consider working? (Check all that apply.)"

Fifty women checked the simplest category of all: "If I was offered an interesting job"! Forty-nine said they would like to work part time. Many others would work if the job fully utilized their qualifications, if it paid well, or if childcare or household help were available. Several others would work if their children were older, if they felt a real financial need, or if they did not have to commute (over one-third of the working women commute to Woodland, Winters, or Sacramento). Given their great willingness to work, why aren't more of these women doing so? When the women were asked what they perceive to be the greatest obstacles that faculty wives face in finding satisfying employment in or near Davis, only 15 women out of 124 said there are no obstacles. Wetl. over half mentioned that there are simply not erough jobs in the area,
especially interesting or well paying jobs. One-third mentioned the lack of child care centers and the lack of household help. (Recall that almost one-third of the women have preschool children.) Onequarter cited discrimination against women in general or faculty wives in particular, and a few pointed to the difficulty of receiving certain kinds of professional training or retraining in Davis and the existence of so many highly qualitied and trained people in the area.

Faculty wives who are already working also face difficulties in finding satisfying employment. As we have seen, $40 \%$ of those who are currently working either full or part time do not feel that their jobs make full use of their education, training or talents! Many who are working in their chosen field would like to upgrade their jobs. Others, trained in teaching, social work, humanities or the creative arts (the most popular college majors among the group) find themselves in lowlevel clerical jobs. Eight of the 19 employed women with Bachelors degrees are in clerical or sales positions along with two of the nine employed women with Masters degrees. They face a discouraging future.

Many women realize that they are unlikely to find good jobs in the area. "I believe that most women mariried to faculty members have accepted that they cannot find a suitable job," writes one woman. "Although I feel that the younger college generation of men and wismen should have a preference in obtaining more education, $I$ think it is a great waste of very often highly int 1 igent women that faculty wjes cannot very often find a stimulating job or obtain further education."

Another woman points out that opporsunities for educated women vary with the health of the economy: "Many of the faculty wives whom I know do work or are continuing their educations; however, in this area, probably few will find interesting and fulfilling employment.

Altogether, this 'recession' nationwide means employment problems fot all, especially educated women."

Thus, women who want to work face two related problems. First, they must compete vigorously for the few interesting and well-paying jobs open to them in or mear Davis. Second, those with children are discouraged by the shortage of part-time jobs and of household assistance at dow-ost, high-qual thy childcare centers.

## B. Why are more women not in school?

For some faculty wives, continuing their education is an alternative to seeking employment at the present time. Half of the sample of wives have en rolled in regular or extension classes at Davis or other colleges nearby at some time in the past, but only 17 women ( $14 \%$ ) are currently enrolled, and of these, only six are working toward a degree. Are they simply not interested?

One-quarter of the respondents did cite lack of interest as one of their "greatest obstacles" to returning to school. And one-third of the sample perceived no obstacles. Among those who did, however, lack of childcare facilities, lack of household help, the cost of tuition, the difficulty of finding suitable employment after graduation, and the difficulty of competing with younger students are each mentioned by at least $10 \%$ of all respondents. Smaller numbers mentioned other problems, such as the lack of encouragement from family or friends, discrimination against older applicants and wives of faculty members, poor grades in the past, and lack of credit for past courses.

Thus among those who are interested in continuing their education, many perceive a number of barriers to be overcome. It is no wonder that
so many faculty wives believe that ape should not be a criterion in the admission of graduate students to the unjversity, especially because over nine-tenths of the rempedinats are over thirty.
C. Are the activities available to faculty wives in Davis worthwhile?

The vast majority of women in the sample agreed that, "in general," the activities available for wives of faculty members in Davis are worthwhile. Only 11 women -- $12 \%$ of those who responded to the question -disagraet: $\frac{1}{2} p$ parently, then, theas Mindy educated women find plenty of activities in which to become involired, despite the lack of opportunities for employment, and, to a lesser extent, for continuing education. What do the women do? An andoumding 59 separate organized groups were mentinned by the 92 women who reported on their own current activities, ranging from art and literature and language groups through school and church organizations to community political groups. In addition, many women reported regular sports, entertaining, and other recreational activities. one woman commented, "There are literally fundreds of activities of every \&ind and description here in Davis." Another observed, "It seems there are plenty of different things to do. It's just a matter of afinding your own thing. ""

One does get the imprescirar, however, that many women invest their energy in the many "self-impruwement" and volunteer groups becanse they are denied paid job opportunities. Certainly, the community benefits greatly from this talented pool of free jabor. One woman writes: "tside from opportunities for professional employment in a field of your choice, opportunities for a rich and busy life are available. If the volunteer services of this community were eliminated (mainly married women) it would be as much a loss as if we lost key professional people. Volunteer work is not rewarding financially or in status - but if you
don't need that, 0.K."
Some women even find that much of the volunteer work is more interesting than most available jobs would be, but that does not mean they would not value prestigious and well-paying regular employment. "Since I don't have to work at this point, I am more selective. I would rather do challenging volunteer work than accept most jobs available to women in Davis. Local politics and community activities can be very satisfying ... but recognition and money are nice, too."

However, other women strongly deny the importance of working for money or prestige. One respondent, perhaps speaking for many, criticized what she perceived to be the underlying assumptions of the questionnaire: "that an education is training for a job, that working for pay is a basic motivation of individuals, and that our culture has a built-in discrimination against women. .. If wives view their role as maintaining and preserving and broadening the culture along with the duties of citizenship, then the demands on their time and talents and knowledge are enormous, opportunity is unbounded, satisfaction unlimited, and discrimination by sex nonexistent."

Those wives who express contentment with their position are perhaps the "silent majority" of women in Davis. Yet one wonders how women whose educations have prepared them to make a real contribution in the public sphere reconcile themselves to the underutilization of their talents. One respondent suggests that underlying many expressions of satisfaction is considerable frustration and disappointment.

[^23]disappointment in their lives, as though something is being missed but they are not sure what. A young wife can be proud to be the wife of Dr. So and So and the mother of those dear So and So children; but the children grow up and do not need her very much at a surprisingly early age; her husband is involved with his work; and she is apt to feel herself an appendage no longer needed. It may also be galling after a while to be introduced as the wife of Dr. So and So as though she had no identity of her own. And like other women she has to face the bitter fact of being suddenly oluz- than the students her husband teaches, full of energy and even intelligence but with no place to put it. I think that this accounts for much of the neurotic behavior that is evident (and heaven knows how much of this is concealed) and may contribute to breakup of families that might not ordinarily fall apart.

Some women putter around with Art Center courses or even Extension courses, but their attitude is too often one of trying to fill in the empty hours rather than following a deep commitment of sorts. Too many organizations for women impress me as another way of filling the hours, and although the purpose of these organizations is often lofty and even satisfying, perhaps it's not enough any more. Women want more meaning in their lives.

## D. What changes are needed?

At the end of the questionnaire, respondents were asked "What changes, if any, do you think are needed to improve the situation of fac'ulty wives at Davis?" Twenty-five women insisted that no changes are needed, or that if women are discontented, it is their personal problem and "the change, if needed, would be primarily in the personality of the individual." Six others thought they would be a lot better off if the "faculty wife" label were dropped entirely, and if women stopped trying to live vicariously through their husbands: "I object to being catered to or categorized according to my husband's position or my sex," and "I do not enjoy activities solely for faculty wives such" as Farm Circle."

Other suggestions were:
"Allow wives to take classes as auditors if extra space is available or for credit at a reduced cost or reduced load" (14 respondents)
"More part-time jobs," and "More jobs in general" (7 respondents)
"Decent and low cost childcare facijities in Davis from 8 to 5 for everyone" (7 respondents)
"Repeal the anti-nepotism law!" (6 respondents)
"More culturally oriented, service-oriented activities within the faculty wives group" (4 respondents)
"A closer and more meaningful relationship with the University" (committee membership, use of facilities, etc.) (3 respondents)
"Greater opportunity for older women to work toward new careers regardless of family situation" (1 respondent)
"Improve wages!" "Fair opportunity for women!" (1 respondent)
(One woman asked for the impossible: "a different Guv, and less politics from the departmental level on up within the University. Then, perhaps, the faculty men could relax and be better husbands.")

It is interesting to note that although many respondents checked numerous obstacles to finding a job or attending school earlier in the questionnaire, they failed to mention these items when asked what changes would improve the situation of faculty wives in Davis. For example, 61 women checked that there are "not enough jobs" or "not enough interesting or well paying jobs" in Davis, yet only seven mentioned the need for more jobs in the open-ended question. Thirty-nine women checked "lack of child care facilities" as one of the greatest obstacles facing faculty wives in finding satisfying employment, yet only seven mentioned this need. Thirty-six women checked "lack of household help" as an obstacle, yet none suggested this need. Twenty-three agreed that discrimination against hixing faculty wives was an obstacle, yet orly one mentioned the need for improved wages and "fair opportunity for women."

Apparently the faculty wives do perceive serious obstacles to their employment and further education, but do not translate their perceptions into demands for change. They value the professional competence of women and support university reform more than their husbands, but when
proposing changes in their own situation, if they make any at all, they recommend more of the same - more classes, more cultural and service activities, a closer relationship with the university.

Perhaps they focus on these activities because they seem more amenable to change than is the supply of jobs, for example. Yet it is obvious that faculty wives have serious problems stemming from the undersupply of employment opportunities, household help, and child care. Furthermore, it is obvious that their talents are underutilized, and the university and community do not properly recognize their contributions. Women trained for professional work find the ferver drating their labors and being thankful that they at least have voluntary service work to sustain their intellectual anc $r$ essional interests!

What can the university do? As an educator and employer - actual or potential -- of thousands of Davis women, among them many wives of its own faculty members, the university might acknowledge its obligations to women who are geographically restricted by their husband's employment, and who are thus in relatively poor bargaining positions. We recommend that the university commit itself to the following program:

In education:

1. Permit part time education and leaves of absence for all students without penalty; eliminate age restrictions in admissions policies. (The new Division of Extended Learning program for degree candidates is a step in the right direction, but only if funds are made available for hiting additional faculty.)
2. Reduce the cost of tultion; eliminate discrimination on the basis of age and marital status from fellowships and other forms of financial support.
3. Provide pay as you can childcare facilities for all students.
4. Sponsor educational programs of special relevance to women, including a program of women's studies, by creating a new department or coordinating courses in existing departmerits provide unjversity facilities where women in the communty can join with women students, faculty members and staff to develop thejr interests and pursue solutions to their problems.

In employment:

1. Look to the Davis community firse in filling university positions at all levels of staff and faculty; advertise all such pusitions publicly in campus and city newspapers, so that all qualified women have an opportunity to apply.
2. Eliminate existing restrictions against the employment of husbands and wives (or other close relatives) in the same department, so that women who are trained in the same field as their husbands can hold positions for which they are qualified.
3. Hire women at the levels of employment for which they are truly qualified, not just at the lowest levels; pay women employees at a rate comensurate with their responsibilities; give preference to women in hiring and promotion for adminisuative positions and faculty appointments until the proportion of women employed reflects their proportion in the labor market for these positions.
4. Permit employees in all staff and faculty positions to hold part-time positions without penalty to fringe benefits, eligibility for promotion, f-c.; increase the number of positions for which two halftime workers could be employed rather than one full time worker.
5. Eliminate the prejudicing assumptions that faculty wives wfl not stay on the job long because their husbands are mobile, that they really do not need the job, and that they do not need to be paid as much as a man.
6. Provide pay as $70 u$ can childcare facilities for all employees.

Women married to faculty members at Davis oppose discrimination against academic women, yet few actively oppose discrimination against faculty wives - despite their acknowledgement when asked that obstacles do exist to the full realization of their talents. As we have seen, among the two-thirds of the sample of 124 women who are not now working, $70 \%$ agree that they would like to work under certain conditions, the most frequently cited being "If I was offered an interesting job"! What is more, among the one-third who work either full or part-time, only $60 \%$ feel that their jobs make full use of their education, training or talents.

Faculty wives form a captive group of skilled and nenergetic workers in Davis. As a group they are highly vulnerable to exploitation by the university and by the community at large, both of whom receive the benefit of their labor free or below its real value. If the women could find interesting jobs, preferably part-time, and if they could share the responsibilities of housekeeping and child care, many women now actively involved in community affairs of various sorts would no doubt switch to paid employment. Some respondents say that they do not care for "fame or money" and that they are happy to perform the essential services they perform without public recognition. However, so long as women married to faculty members have no choice but to forego these rewards because they are denied their full place in the public sphere and are denied the esteem that comes from making a widely recognized and financially rewarded contribution, they are denied the opportunity for an independent identity and must continue to live, as one respondent put it, largely as "the wife of Dr, So and So and the
mother of those dear so and So children."
The primary responsibility of the university in this regard is to restructure its educational and employment practices in recognition of the right of married women to equal education and employment, and to establish day care centers in recognition of the right of women with children to equal education and employment. Women who are wives and mothers are unfairly disadvantaged in pursuing non-familial goals. Men who are husbands and fathers experience few such disadvantages.

PART VI

# NON-ACADEMIC STAFE EMPLOYEES 

RoDert Gerould
Sandra McCubbin
Dorothy Lowry
Kathleen Fisher

## Collection of Data

In June, 1970, the Campus Personnel Office was requested to provide a census of non-academic staff employees at UCD by position, title, series, number, and sex. Information concerning salary ranges and job descriptions was obtained from the UCD Personnel Manual and the Policy and Procedures Manual. In addition, a questionnaire was distributed to a sample of staff employees. The exact intent of the questionnaire and its interest specifically in women was not revealed in order to prevent sexual bias in the replies. Respondents who wished to contribute additional information were asked to comment on the questionnaires or to contact Task Force members in person. Many respondents did comment ari//or call, and several were interviewed. Some comments from these employees are included in this report.

General Findings

The data demonstrate that women do not fare as well as men in the University, Women employees are heavily concentrated in low paying clerical positions. Even outside of the clerical area, women predominantly occupy low paying job categories; the supervisory, higher salaried positions are almost exclusively filled by men. In general, a woman needs considerably more education and more special skills than a man, in order to eam a salary equal to that of the man.

## I. Male and Female Salaries Within Education Brackets

Among Non-Academic Staff

In the spring of 1970 , about 900 questiontiaires were distributed to three select groups of staff employees at UC Davis.* A random sample (every tenth individual) of abouc 350 employees was selected from the membership list of the University Staff Assembly. In addition, questionnaires were sent to the approximately 350 academic non-senate employees on the mailing list of the Academic Staff Organization. Finally, a questionnaire was sent to one "representative" (Administrative Assistant or Secretary) of each of the 200 academic and non-academic departments on campus; the list of "representatives" was obtained from the Personnel Department, and was used to ensure that at least one person in every department was contacted. A follow-up reminder was mailed out when the initial returns began to dwindle, in an effort to increase the number of responses. Altogether, 338 questionnaires were returned: 102 from academic staff (to be discussed elsewhere) and 236 from non-academic staff.

[^24]Among the non-academic staff sampled, more than half (54\%) of the males and only one-tenth of the females earn more than $\$ 900$ a month.

Salary Brackets of Non-Academic Staff
Respondents to the Questionnaire

In contrast, nearly two-thirds (63\%) of the females earn less than $\$ 700$ per month; whereas only one-fourth of the males are in the low income brackets. How can these differences be accounted for?

More male respondents ( $80.4 \%$ ) than female respondents ( $72.2 \%$ ) have been employed for more than three years.

This difference in length of service may be a contributing factor, but can hardly account for the salary differentials described above and below.

C

Approximately $20 \%$ of the males and females have Bachelor's degrees.

Education Levels of Male and Female
Non-Academic Staff Respondents

| Education | \% |  | $0^{\circ}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 4 | \% | \# | \% |
| High school | 139 | 77.2 | 31 | 55.4 |
| Bachelor's | 37 | 20.6 | 12 | 21.4 |
| Master's + | 4. | 2.2 | 13 | 23.2 |
| Totals | 180 | 100.0 | 56 | 100.0 |

However, there are proportionately more females with High School educations ( $77 \%$ females compared to $55 \%$ males), and more males with Master's degrees. In order to determine whether the differences in education could account for the overall male and female salary differences, an analysis was done within each educational group.

## Males earn more than females within each education bracket.

Salary Distribution of Male and Female Staff Within Education Brackets and by Length of Service

*Percents indicate the fraction of a given sex in each salary bracket for that educational class.

The salary differentials become more pronounced with increasing levels of education.

Among those with a High School education, $36 \%$ of the men earn more than $\$ 900$ a month, while only $8 \%$ of the women are so fortunate. Considering only those employees who have worked for more than three years, the picture remains essentially the same: $41 \%$ males and $10 \%$ females are in the upper income level. Only $42 \%$ of the males with a High School diploma, compared to $61 \%$ of the females, make less than $\$ 700$.

Salary Distributions of Non-Academic Men and Women With High School Diplomas

The proportion of women declines precipitously below the $\$ 600-$ 700 salary range, and among the questionnaire respondents women are essentially non-existent among non-academic staff in the $\$ 1000+$ monthly income brackets.

Seventy-three percent of the women respondents with Bachelor's degrees have monthly incomes below $\$ 700$, yet on 1 y $8 \%$ of the men respondents receive such low pay (see preceding table). In fact, $58 \%$ of males with Bachelor's degrees earn more than $\$ 900$ per month, and nearly half of these have been employed for less than 3 years!. In contrast, only $11 \%$ of the women are in the higher paying category, and they have all been employed for more than 3 years.

Salary Distributions of Non-Academic Men and Women With Bachelor's Degrees

With graduate degrees, $50 \%$ of the females $(2 / 4)$ earn less than $\$ 900$, while $92 \%$ of the males $(10 / 11)$ earn more than $\$ 900$. The numbers are small, yet the pattern seems clear. There is a marked tendency for $\$$ higher salaried positions to be filled by men.

In examining the data, it is important to remember that the questionnaires represent a relatively small sample of staff employees. Furthermore, certain biases have been introduced by the sampling procedure. For example, the use of the list of "representatives," while providing a method for reaching every department on campus, undoubtedly resulted in a somewhat different distribution of female respondents than would have been obtained from a completely random sample. The figures on pages 3 and 4 and the table on page 5 probably do not accurately reflect the distributions of all non-academic males and females. on the other hand, the salary distribution of males and females within education brackets (table on page 6 ) should not be significantly affected by the sampling procedure, except for the usual hazards associated with sampling smali numbers.
II. The Distribution of Males and Females in Non-Academic Job Series

The Campus Person.:el Officer provided a list of the non-academic staff job titles (and numbers) which are currently in use on the Davis campus, with the numbers of men and women employed in each title. The list was compiled in June, 1970. The salary range for each job classification was obtained from the Policy and Procedure Manual, and the jobs were grouped into series according to that manual.

With this information, mean salaries for men and women in each series were calculated. The actual salaries of individual employees were not provided; consequently, the maximum salary given for each job classification was chosen for the computations. The reader should note that this method results in somewhat inflated average salaries, since it is unlikely that most employees are in fact at the top of the pay scale for their job classification. Inherent in this approach also is the assumption that males and females are treated equally within each job classification. If there are tendencies for females to be clustered at the lower end of a given salary range, and males clustered at the higher end (or vice versa), we would not see that with this data. The differences we do see in comparing average male and female salaries for various job series reflect differences in distribution of the sexes in the job classifications within those series.

In the following table the series are listed in order of decreasIng average salaries (based on the highest salary in the series; male or female), down to an average salary of $\$ 600$ per month (the series below解 this level will be discussed subsequently). For ease of reference, the serles have been grouped according to $\$ 100$ monthly pay increments (based on highest salary in the integrated series) below the $\$ 1000$ per month level. These groupings are ours and are not part of the university classification system.

Distribution of Males and Females in Non-Academic Job Series, With Average Salaries by Sex

| Group | Title | Series \# | \# $0^{\circ}$ | \# 9 | $\begin{aligned} & 0^{\prime} \text { Ave. } \\ & \text { Salary } \end{aligned}$ | $\begin{aligned} & \text { iq Ave. } \\ & \text { Salary } \end{aligned}$ | Percent* Difference |

* "Percent difference" Is calculated by dividing the difference between the two average salaries by the higher salary, times 100.
** Monthly salaries.
***** Series in which the average female salary is greater than the average male salary.

Distribution of Males and Females in Non-Academic Job Series, With Average Salaries by Sex (continued)

* "Percent difference" is calculated by dividing the difference betwon the two average salaries by the higher salary, times 100.

There are 37 series in which the average salary is $\$ 600$ or more. Men and women are tncluded in 30 of these series, while in flue there are males only and in two there are females only.

In 26 of the 30 integrated job series, the average male salary is higher than the average female salary. In other words, in $8 \% \%$ of the non-academic job series at Davis (excluding for the moment the 4 lowest paying series), the men tend to be employed in higher job classifications and the women tend to be employed in lower job classifications.

In nearly half ( $13 / 30$ ) of the series, the average male sal iry is $15 \%$ to $30 \%$ greater than the average Eemale salary.

Job Series in Which Males Earn $\mathbf{1 5 \%}-30 \%$
More Than Females

| Title | \# $0^{\prime \prime}$ | \# 9 | Percent* G\&Eerence |
| :---: | :---: | :---: | :---: |
| Extension | 5 | 7 | 29.5 |
| Engineering | 76 | 1 | 29.4 |
| Food Management | 2 | 3 | 28.7 |
| Mech. Equipment | 133 | 1 | 28.1 |
| Cultivation | 158 | 10 | 24.5 |

| Public Information and Publications | 7 | 11 | 17.5 |
| Hospital Misc. | 6 | 24 | 16.7 |
| Fiscal | 5 | 24 | 16.7 |
| Custodial | 195 | 88 | 16.1 |
| Personnel | 15 | 5 | 15.3 |
| Actuarial and Statistical | 27 | 26 | 15.0 |
| Food Preparation | 8 | 22 | 14.5 |

* "Percent diffyrence" is calculated by dividing the difference between the two average salaries by the higher salary, times 100.

The signifisance of the salary comparisons in two of the series is questionable, sinse there are many men and only one woman employed. In the remaining series, however, there sre sufficient númbers of men and
women to make meaningful comparisons; there are more women than men in seven of the series and more men than women in the remaining four. In only one of the four series in which the average female salary is greater than the average male salary (Theatrical Production and Auditorium Management), is the female salary as much an $10 \%$ greater than the male salary (series indicated with an asterisk in table on pages 10 and ; 1).

The ratio of males to females decreases in proportion vith decreasing salary levels.

Distribution of Sexes According to Salary Levels

| Group* | Month1y <br> Salary | \# of | \# 9 | Ratio <br> otof |
| :---: | :---: | :---: | :---: | :---: |
| I | $\$ 1000+$ | 166 | 59 | $2.8: 1$ |
| II | $900-999$ | 176 | 46 | $3.8: 1$ |
| III | $800-899$ | 492 | 110 | $4.5: 1$ |
| IV | $700-799$ | 1184 | 642 | $1.8: 1$ |
| V | $600-699$ | 461 | 379 | $1.2: 1$ |

* See text at bottom of page 9 for explanation of Groups.

Not only do men hold the higher job classifications within each series, but they hold more of the jobs in the better paying series. There are three to four times more men than women in higher paying series, while there are nearly equal numbers of men and women in the series having average monthly salaries of $\$ 600-700$.

As indicated previously，there are seven series which employ only one sex．

Sex－Typed Job Sertes

| Title | Ser：$-⿰ ⿰ 三 丨 ⿰ 丨 三 ⿻ ⿻ 一 𠃋 十$ | $\begin{gathered} \# \\ \text { Men } \end{gathered}$ |  | Average Male Salary |
| :---: | :---: | :---: | :---: | :---: |
| Architecture | 6902－6969 | 10 | 0 | \＄1369 |
| Construction | 7001－7004 | 1.4 | 0 | 1195 |
| Mechanical and Construction | 8270－8315 | 36 | 0 | 982 |
| Maintenance | 8114－8153 | 252 | $0 \%$ | 888 |
| Stationary Equip． | 8231－8248 | 33 | 0 | 864 |
|  | Total |  | Average | ， |
|  | Men | 345 | Salary＊ | \＄ 922 |

| Title | Series 非 |  | $\begin{gathered} \# \\ \text { Men } \end{gathered}$ | Average <br> Female Salary |
| :---: | :---: | :---: | :---: | :---: |
| Nursing | 9093－9126 | 56 | 0 | \＄ 866 |
| Steno and Secretarial | 5002－5009 | 209 | 0 | 614 |
|  | Total Women | 265 | Average Weighted Salary＊ | \＄ 667 |

＊Computed by multiplying the number of individuals at each salary times that salary，finding the total，and dividing by the total number of individuais．

Except for tradition，there is no obvious reason why the other sex should be excluded from these series．Certainly in Stenography and Maintenance， Wheta there are large numbers of employees and minimal education re－ tomments；the sex－typing cannot be attributed to the availability of only one sex in the work force．

Furthermore, the average weighted salary of the ail-male series is $38 \%$ higher than the average weighted salary of the all-female series, even though the minimum education requirements are frequently lower in the male series. For example, the largest female series, Stenography and Secretarial (5002-5009), requires at least a high school education for every job classification. The average monthly salary is \$614. In the largest male series (Maintenance, $8114-8153$ ), on the other hand, half of the job classifications require only an eighth grade education and half require high school. The average salary is $\$ 888$.

Looking at a professional field, every job classification in the Nursing series (female) requires at least two years of education ond high school (to obtain an R.N.). The average salary is $\$ 866$. None of the job classifications in the Construction (male) series require education beyond high school. The average salary is $\$ 1195!$ In the Mechanical and Construction (male) series, four job classifications require at least two years of college; the rest require no more than high school. The average salary is $\$ 982$

The high average pay of males in construction and related areas reflects, of course, the success of the male dominated unions in attaining high salary scales rather than particular bias on the part of the University. The issue ten is: Can and will the University take action to overcome the stx discrimination imposed upon it by the unions?

Four-year nursing programs are more comnon than the two-year programs. Several job classifications in the Nursing series require both an A.B. and an R.N., or five years of school beyond high school. All of the job classifications in the Architecture series require four years of college. Yet the architects make $\$ 503$ more per month or $\$ 6036$ more per year than the nurses.

To reiterate，jobs typically filled by women have higher require－ ments and lower salaries than those filled by men．

In an employment category with large numbers of men and women，and in which no sexual bias would be expected the average male salary is more than $10 \%$ greater than the average female salary．This series in－ cludes laboratory technicians，lab assistants， 1 ab helpers，and scanners．

Average Salary in the Laboratory Job Series，By Sex

| Title | Series $⿰ ⿰ 三 丨 ⿰ 丨 三$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The numbers of males and females employed in each lab technician and lab assistant job classification are shown in the following figure．

Promotional Chain－Laboratory

Note：Lab Tech III is a specialized classification；promotion in most cases goes I－II－IV．

There is lictle difference between male and female ratios in the lower paying labosatory assistant series at steps $I$, II, and IIf, but only males reach the step IV level. Similarly, in the lab technician series, the ratio of males to females at the IV level is greater than six to one, mile at steps $I$ and II it is less than two to one. On the basis of the sample described earlier, there is little reason to suspect that length of employment could account for these differences. Once again, a pattern emerges in which females are clustered in the lower paying jobs within a series, while the males successfully attain the top steps.

In what has traditionally been a woman's field, food preparation, males earn more than females at both management and manual levels.

Male and Female Salaries
in Food Management and Preparation

| Title | Series \# | \# ${ }^{\circ}$ | \# | ơ Ave. Salary | \% Ave. Salary | Percent Difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Food <br> Maniagement | 5412-5453 | 2 | 3 | \$1210 | \$ 864 | 28.6 |
| Food Preparation | 5512-5684 | 8 | 22 | 602 | 515 | 14.5 |

Furthermore, the salary differentials are large ( $15-29 \%$ ). It seems that iri the university environment, females seldom can compete successfully with males, even in fields where the majority of the available work force is female.

The pattern of female dominance in the lower levels and male dominance in the higher levels is illustrated by an examination of several promotional chains (see figures on the following page).

With a total of 9 editors in the Public Information and publications series (7672-7705), six (all female) are at steps $I$ and $I I$, while three (all male) are at steps III and IV. Examination of the cashier promotional chain in the Fiscal series (4609-4622) yields similar results.

The principle of equal pay for equal work does not prevail.

Unequal Pay for equal Work

| Title | $\# \sigma$ | \# $q$ | Minimum <br> Requirements | Average <br> Salary |
| :--- | ---: | ---: | :--- | :---: |
| Custodian | 157 | 0 | Gramnar School | $\$ 457$ |
| Maid | 0 | 88 | Eighth Grade | 415 |

The average salary for women (naids) doing custodial work is $10 \% 1$ ess than the average salary for men (custodians) doing similar work.

Furthermore, the entry level requirements for women (maids) is
higher than that for men (custodians). Women mist complete eighth grade, while men need only complete gramar school (which mav be sixth, seventh, or eighth grade, depending on the school system'. In order to obtain joís similar to those held by men, women must be better qualified and be willing to work for less!
III. The Lowest Paying Job Series

Distribution of Males and Females in the Lowest Paying Non-Academic Job Series, With Average Salaries by Sex

| Group | Title | Series \# | \# 0 O | \# 9 | $\sigma$ Ave. Salary | ¢ Ave. <br> Salary | Percent Difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| VI | Library | 6732-6784 | 45 | 579 | \$579 | \$592 | -2.2 |
|  | General \& Typing | 4671-4724 | 248 | 1395 | 526 | 569 | -7.6 |
|  | Physical Ed. | 6552-6594 | 194 | 94 | 462 | 483 | -4.4 |
|  | Miscellaneous | 4921-4962 | 292 | 139 | 424 | 417 | 1.7. |

The above table is a continuation of tie table on pages 10 and 11 , s'owing the four lowest paying job series (salaries less than \$600). This group has been separated from the others because it deserves special attention. You will remember that men predominated in all of the higher paying groups.

Only in the lowest paying group of job series are there more women than men. Women, in fact, outnumber men more than two to one. Interestingly, the average female salary in three out of four of these series is higher than the average male salary, although never by more than $7.6 \%$

The minimum qualifications required for jobs in these series frequently exceed those for (male dominated) higher paying jobs. For example, in the Libxary series, the job classifications used on this campus are those of Library Assistant I through IV (6762, 6761, 6760, 6759). These jobs require at least a high school education (plus two to five years library expexierre), ard individuals with college degrees are preferred. Construction Inspectors (7001-7004) have similar minimum requirements (high school plus experience) and are paid twice as much..

Some job classifications require eight more years of education than others at similar salary levels. The following tabla compares the education required in four $\}$ previous experience.

Education Requirements
(in the absence of previous experience)
and Salaries for Four Job Classifications

| Title | \# $0^{\circ}$ | \# | Minimum Requirements | Salary |
| :---: | :---: | :---: | :---: | :---: |
| Custodian* | 157 | 0 | Grammar School | \$457 |
| Maid | 0 | 88 | Eighth Grade | 415 |
| Clerk Typist I | 0 | 49 | H.S. Grad + Typing Skills | 405 |
| Library Assist:ant I | 5 | 98 | 2 years College | 457 |

* The Custodian 'job classification has recently been opened to women.

To obtain a job as Custodian, an individual with no previous experience is required to have six years of grammar school education. He earns a starting salary of $\$ 457$ per month. To obtain a job as Library Assistant $I$, an individual with no previous experience is required to have two years of college. She earns a starting salary of $\$ 457$ per month.

This illustrates the general observation that female-typed jobs tend to pay less than male-typed jobs. A sex-typed job classification is one which is predominantly or exclusively filled by one sex, such as Architect (male) or Secretary (female). Library Assistant I is a female-typed job because 98 of 103 employees in that ciassificatson ere female. Those 98 females, along with the five males, suffer from the exceptionally low salary of that job classicication. Similarly, ary female Custodians (three have been hired as of 1972) benefit along with
the males from the relatively high salary of that classification.
Women more than men suffer adversely from the sex-typing of job classifications and its attendant salary differentials. Many reasons can be hypothesized and rationalizations suggested for the high salaries accorded to male-typed jobs (such as Architect, Construction Worker, Maintenance Man, Custodian, Business Manager): working conditions are less pleasant, work is associated with powerful labor unions, physical labor is required, men are more aggressive, men are heads of households and need higher salaries, to name a few. Similarly, reasons and rationalizations can be produced to account for the high requirements and low wages associated with female-typed jobs (such as Secretary, Nurse, Typist, Library Assistant): women are less aggressive, women have not joined powerful unions (they are often excluded by them). there is an abundance of unemployed well-educated women, women form the "surplus labor prol" which operates on a different set of standards than the "basic labor pool" of men, women are supported by their husbands and don't need to work, women are not career oriented.

Regardless of the factors contributing to its evolution, the present system unfaixly discriminates against women. While it is easy to pass the blame, and much more difficult to reverse trends which result from a combination of many forces within society, an institution which perpetuates sex-typing of job classifications and sex-related salary differentials is practicing sex discrimination. The data clearly show that women on the average earn less than similarly qualified men, that women are concentrated in lower paying job classifications, and in lower ranks in integrated job e3assifications. For every woman who is working only to earn a second car or a family swimming pool and to whom the lower salaries may not be of serious consequence, there is
at least one other woman who is responsible for the primary support of her family and whose standard of living is directly affected by these practices (it is subsequently shown that nearly $50 \%$ of the non-academic staff women support their families).

## IV. Grievance Procedures.

Sex-typed job classifications and hiring patterns which concentrate females in low-paying job series reflect primarily institutionalized discrimination. What about individual discrimination?

Good grievance procedures rovide important protection to the employee against personal, individual discrimination by the employee's supervisor. In order to be a useful protective device, it is important that the employees have confidence in the procedures and the people who administer them. If an employee fears that airing a grievance will result in a deterioration of working conditions, punitive actions, or job termination, the employee will often prefer to suffer silently with the grievance. He or she may even be reluctant to ask for advice on the subject.

It is difficult to measure the frequency of personal, individual discrimination. However, comments obtained on the questionnaires suggest that employees generally do not have confidence in the existing grievance procedures and that they may be willing to accept what they believe to be discriminatory practices rather than risk their security of employment. For example, in the events described below, the woman obviously feels that she has been unfairly discriminated against, yet she is willing to accept a demotion and loss of status rather than to appeal or to terminate employment.

I vas cold my job classification had been rewritten and a male (nilitary background) was more qualified to fill it. (I had 15 years experience in this particular department and had developed the entire computer system which they are still using. I offered to take a competetive test as I felt I was more qualified for this job as far as ability and experience was concerned. My request was not granted. Personnel said they could do nothing for me. CSEA tried to pursuade me to demand a hearing, but I did not feel this would improve working relationships. I requested a leave of absence to find
another comparable job (rather than take a demotion from Sr . Administrative Assistant in status and pay) and $I$ was forced to accept a rating of Secretary in order to get the Leave of Absence granted. I had to take a $\$ 3,000$ cut to get other University enployment.

My experience rith these men was discriminatory from beginning to end. I was assigned a tremendous work load when other (military background) administrative men wasted high University wages because they had little to do. (I had over 200 hrs . overtime credit for which. I received no thanks or no credit when I left.) Among other things, I was forced to give up a private office to a male with the same level rating as I had, who had one year University experience. I was badgered and belittled; it appeared these men felt threatened by a woman working in "their" area and by devious methods they tried to remove this threat.

Nearly half of the non-academic women employees at Davis are responsible for the primary support of their families, as determined by the survey. This factor, combined with the lack of alternatives in Davis, the expense arid inenvenience of commuting to Sacramento, and the generally tight job mexket, undoubtedly all help to create an unwillingness among staff emplonees to risk security of employment.

Women are Frequently Responsible
for Primary Support of Cheir Families

| Primary Support | Men | Women |
| :--- | :---: | :---: |
| Yes | 54 | 87 |
| No | 6 | 100 |
| $\%$ Respon- |  |  |
| sible for <br> Primary <br> Support | $90.0 \%$ | $46.5 \%$ |

Staff employees are hesitant to air their grievances. Again, this
conclusion 1 s drawn from general attituses perceived and cannot be statistically documented. The phenomenon can be illustrated by some of the comments recelved in the survey, which are summarlzed on the following page.

1. Applicant for UCD employment was never informed of the results of her interview.
2. Applicant for UCD employment was never referred to intervigws, although others she knew with same qualifications (male) were.
3. Applicant for UCD employment received erroneous job description from Personnel Office.
4. Applicant for UCD employment mentioned a previous back injury and interviewer tore up her application.
5. Employee attempted to discuss an employment problem with Personnel and was asked if her supervisor knew she wasn't on the job.

Quotes from three different women employees:
6. "...from the way I was treated (by Personnel) I wouldn't encourage any employee to get further education."
7. "I have never felt that Personnel was really unbiased in handling complaints from non-academic personnel. In some instances, $I$ know the department knew about an airing from Personnel in their department before the individual even got back to her department. We don't feel we have anyone we can just talk to and feel confident it won't get back to the department and create further problems."
8. "I personally have had a very good employment experience during the past 7 years. However, I must be one of the very few in as much as I seldom hear anything good about Personnel.

The existing grievance procedures do not appear to provide adequate protection to the employee, nor do they provide a sensitive mechanism for the employer (University of California) to safeguard against individual infustices. The lack: of confidence indicated by employees toward the present procedures, in combination with the

- imited opportunities for employment in the Davis area, serve to perpetuate rather than to remove problems of discrimination. With regard to sex discrimination, the problem is further complicated by the fact that nearly half of the non-wademic staff women are responsible for the primary support of their families. This group of women would presumably be most career oriented, most concerned about opportunities for advancement, and least willing to risk their security of employment, particularly if they lack the mobility to move to another area. Those who are not responsible for the primary support of their families are in a better position to risk security of employment, but may often be less concerned about long range opportunities for advancement.

SUMMARY

The data easily supports the conclusion that an employment bias against women does exist in non-academic staff positions at UC Davis. The following specific concerns are noted:

1. Women of the non-acadenic staff, on the whole, earn less than men having similar backgrounds.
2. A woman at UC Davis tends to need more education and more experience to earn as much as a man.
3. Women employees of UC Davis lack promotional opportunities. Proportionately fewer women than men reach the upper brackets within their job classifications. Length of employment and turnover rates do not account for the absence of women in managerial positions.
4. Within each job series containing both men and women, women tead to be concentrated in the lower paying job classifications.
5. There are many more job classifications that are sex-typed (exclusively one sex) than can be justified by physical requirement. Furthermore, those positions sex-typed for women tend to pay less than positions sex-typed for man.
6. There are nearly equal numbers of male and female non-academic staff employees. However, $59 \%$ of the women earn less than $\$ 600$ per month while only $33 \%$ of the men do. Men earn more than women within each education bracket.
7. The principle of equal pay for equal work does not always prevail when comparing positions sex-typed for men with those sex-typed for women and having similar duties. In these comparisons, the positions held by women pay less.

The Davis community is geographically isolated and is centered largely around its major employer, the University. As a consequerice, UC Davis has an unusually well educated labor supply consisting primarily of the spouses of faculty, staff and students. Since it is the prevailing social custom that family decisions be centered around the husband's occupational and educational goals, the unemployed spouse is most frequently the wife. As the institution which is largely responsible for the unusual labor market situation, and as the only major local employer, it may be argued that the University has a moral obligation to make reasonable employment opportunities available. As it is now, women are channeled largely into clerical and other low paying jobs, with little hope of significant opportunity for advancement.

Due primarily to the limited employment market in the local area, women who achieve employment at UC Davis are grateful to have a job. They frequently fail to consider the status of their employment and salary with respect to their qualifications and may not recognize discrimination when it happens. Those who do recognize it often accept the situation rather than risk loss of their jobs or the creation of an untenable relationship, with their employers. Undoubtedly, it makes good short-term economic sense for the University to take advantage of the local labor situation. However, the moral and ethical implications of exploitation, as well as the long-range social costs resulting from the misuse of human resources, must both be considered.

Women employees of U.C. Davis seldom utilize established grievance procedures in circumstances involving discrimination. A grievance procedure which discourages its own use is worse than no procedure at all. It is of paramount importance to the process of eliminating discrimnation based on sex at U. C. Davis that a fair and sensitive

ㅍTew

WH? $\rightarrow$ 上

EEtEIETHE

rocedure be established. Such a system should strive to be objective and to eliminate all possibilitics of employer dor harassment. The grievance procedure should be widely ed to employees, and employees should be free to discuss the n confidence with representatives of their own choice. It recommended that che grievance mechanismidentify an individ-. p of individuals to act as counselors for the Staff employees, erve the function of ombudsman to: a) Hear complaints in onfidence b) Advise the employee c) Assist the employee in e problem informally whenever possible d) Refer the employee ate groups or departments to assist in processing a grievance, e desirable.

# PART VII <br> STATUS OF WOMEN AMONG <br> NON-SENATE ACADEMIC STAFF 

Definition
Academic non-senate employees are hired by the University to engage in research, teaching, extension work, and other duties which are related to the University's instruction and research functions. Job classifications in the following series are included in the academic non-senate ranks:

Acting Assistant Professor
Agriculturalist
Agronomist -
Curator
Home Economist
Instruction Supervisor.
Lecturer
Senior Lecturer
Librarian
Professional Research
Specialist
Supervisor of Physical Education
Supervisor of Teacher Education
University Extension Specialist
Although they have academic status, these employees are not eligible for membership in the Academic Senate nor for the rights and privileges associated with said membership. They are represented by the Academic Staff Organization (ASO).

Minimum qualifications for several job classifications in these series specify the desirability of one or more graduate degrees. Criteria for promotion often parallel those used for promotion and advancement in the professorial series, such as professional competence, professional activities, research, creative work, university service, and public service.

Collection of Data
Information concerning numbers and distribution of the non-senate
academic employees was obtained from the membership list of the Academic Staff Organization.

Additional data concerning position, education, length of employment, and personal status of these employees was derived from a survey of all 350 members of the Academic Stalf urganization in the spring of 1971. This questionnaire has been described previously (page VI-2; Appendix 3). There was a $37 \%$ return from academic non-senate employees; responses were obtained from $38 \%$ of the females and $27 \%$ of the males.

A separate questionnaire was mailed to Lecturers in the falï quarter of 1971 (Appendix 4 ). This instrument was sent to 47 fulltime Lecturers ( $67-100 \%$ ) and 60 part-time Lecturers ( $5-67 \%$ ) identified by the ASO membership list drawn from the October 1971 payroll. An additional 20 questionnaires were sent to 20 full-time Lecturers not included on the above list. Responses were obtained from 62 of the 127 individuals, a $48 \%$ return. The respondents, 42 male and 20 female, represent a wide variety of departments in the University.

Additional information about the Lecturer series was derived from the faculty attitude survey (Section III, Appendix 1) conducted in spring 1971 and from the search of the academic personnel files (Section III) done in summer 1971.

Finally, examinations of the Research, Specialist, and Librarian series were obtained in April 1972 from records available in the Academic Staff Organization and from the March 1972 Addendum to the University Library Affirmative Action Program.

Survey results have generally been assumed to be representative of the entire population, although the occasional hazards of such interpretation are recognized, espectally where the sample size is small.

## General Findings

In the University hierarchy, the status of non-senate academic personnel is intermediate between that of Academic Senate members and of non-academic staff. Interestingly, the proportion of women in the academic non-senate ranks is similarly intermediate between the proportions of women found among the ladder faculty and the non-academic staff.

The distribution of academic non-senate women follows the general patterns described previously. They tend to be concentrated in the lower job classifications within series, to earn less on the average than similarly quaiified men, and to have less supervisory responsibility than men. Women tend to be excluded from some job classifications and to be concentrated in others.

More than half of the non-senate academic women are responsible for the primary support of their families. The frequency with which women shoulder such responsibilities runs counter the familiar arguments that women are not "serious employees" and do not need to earn as much as men (all of whom are assumed to be career employees and heads of families).

## 1. Profile of the Non-Senate Academic Staff

Women hold about one-quarter of the academic non-senate positions at UCD. This does not, of course, reflect the proportion of women in the local population, but may approximate the availability of qualified women in the combined B.A./B.S., M.A./M.S., and Ph.D. work force. While some academic non-senate employees have Ph.D.'s and others hold just Bachelor's degrees, the majority have a Master of Arts or Master of Science.

Certain work areas appear to be sex-typed. The tendency to exclude women is particularly pronounced in the agricultural experiment station, where there are 36 men and 2 women, and in agricultural extension, with 71 men and 4 women.

Women tend to predominate in the lower ranks in those job series in which both sexes are employed "

Women Predominate in the Lower Ranks in the Professional Research Series*

* Information from the Academic Staff Organfantion.

For example, in the Research series, all of the women are employed at the A. ${ }^{\prime}$ tant Researcher level; yet more than one-third of the men ; classifications.

Men Predominate in the Higher Ranks in the Specialist Series*

| Title |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Percent | Number | Percent |
| Assistant Specialist | 1 | 11.0 | 6 | 10.7 |
| Associate Specialist | 6 | 66.8 | 23 | 41.0 |
| Specialist | 2 | 22.2 | 27 | 48.3 |
|  | Totals | 9 |  | 100.0 |
| 56 | 100.0 |  |  |  |

* Information from the Academic Staff Organization.

Similarly, in the Specialist series, in which academic appointees are engaged in research in well-defined and specific areas and do not have teaching responsibilities, there are 56 men and 9 women. Forty-eight percent of the male Specialists have been promoted to the top rank, whereas only $22 \%$ of the female Specialists have reached that level. The average male salary is $\$ 108.00$ greater per month than the average female salary (when salaries are computed as described previously, on the basis of the highest possible salary for each job classification).

Women with Bachelor degrees earn less than similarly qualified men,
as determined by the staff questionnaire.

| Totals | 100.0 | 100.0 |

Percentages for Sex by Salary by Education by Years Employed

| Monthly Salary <br> Educationt Years of Employ | $<900$ |  | $\geq 900$ |  | Totals |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\leqslant 3$ | $>3$ | $\leqslant 3$ | $>3$ |  |
| $\sigma$ | 0.0 | 0.0 | 0.0 | 100.0 | 100.0 |
| $\bigcirc$ | 0.0 | 66.7 | 0.0 | 33.3 | 100.0 |
| $\sigma^{\circ}$ | 2.9 | 5.7 | 5.7 | 85.7 | 100.0 |
| $\bigcirc$ | 40.9 | 18.2 | 4.5 | 36.4 | 100.0 |
| 0 | 0.0 | 0.0 | 24.0 | 76.0 | 100.0 |
| + | 0.0 | 0.0 | 33.3 | 66.7 | 100.0 |
| All Males | 1.4 | 2.8 | 11.3 | 84.5 | 100.0 |
| All Females | 32.1 | 21.4 | 7.1 | 39.3 | 99.9 |

Although the numbers are small, the contrast is marked. The eleven men with Bachelor degrees were all employed over three years and all earn more than $\$ 1000$ per month; the three women in this same category were all employed over three years and all earn less than $\$ 1000$ per month.

With a Master!s degree, women earn considerably less than similarly qualified men. Seventy-seven percent of the males with Master's degrees earn MORE than $\$ 12,000$ per year, while $82 \%$ of the females with Master's degrees earn LESS than $\$ 12,000$ per year. In fact, $23 \%$ of women with MA degrees including one who has been employed for more than three years, earn less than $\$ 8400$ annually. None of the respondents with Bachelors degrees earn such low salaries, nor do any of the male respondents with Master's degrees. Looking only at individuals with at least 3 years of service, $87.1 \%$ of the males and only $35.3 \%$ of the females are in the income bracket of $\$ 1000$ or more per month.

A comparison of employees having Ph.D.'s appears to follow a similar pattern ( $33 \%$ women and $12 \%$ men earn less than $\$ 1000$ per month), but the numbers are so small that the difference is insignificant.

Supervisory positions in which five or more employees are supervised are filled predominantly by men.

Supervisory Profile*

| \# Employees Supervised | 9 |  | $0^{\prime \prime}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Percent | Number | Percent |
| 0 | 11 | 34.4 | 19 | 23.2 |
| 1-2 | 15 | 46.8 | 39 | 47.5 |
| 3-4 | 6 | 18.8 | 13 | 15.8 |
| 5-8 | 0 | 0 | 3 | 3.7 |
| $9^{+}$ | 0 | 0 | 8 | 9.8 |
| Totals | 32 | 100.0 | 82 | 100.0 |

[^25]The proportion of females among supervisors having responsibility for one to four persons is approximately equal to the overall proportion of women among academic non-senate employees. Yet none of the female respondents supervise five or more people, while $13.5 \%$ of the male respondents have such responsibili+y. A greater proportion of women (34\%) than men (23\%) have no supervisory duties at all.

Two-thirds (20/31) of academic non-senate females are responsible for the primary support of their families, as ascertained by the staff survey. These figures strongly counter the familiar argument that women do not require as much remuneration for their services as men, and the frequently-made assumption that women are less serious career employees than men.

## 2. Librarian Series

The largest group of women a ademic non-senate employees, $39 \%$, is found in the Librarian series. The proportion of women in this area is not surprising, since librarianship is generally considered to be a "woman's field." Because she is well-represented here, and because this traditionally has been "her" field, the academic woman should do particularly well in the Library. Does she?

There are no women in top administrative positions in the Library.

Librarians*

| Title |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Percent | Number | Percent |
| Administrative | 0 |  |  |  |
| Librarian V | 1 | 0.0 | 5 | 22.7 |
| Librarian IV | 8 | 3.9 | 2 | 9.1 |
| Librarian III | 5 | 19.8 | 10 | 45.5 |
| Librarian II | 10 | 38.5 | 1 | 4.5 |
| Librarian I | 2 | 7.6 | 0 | 18.2 |
| Totals | 26 | 100.0 | 22 | 100.0 |

* From the March 1972 addendum to the Library Affirmative Action Program.

In spite of the fact that more than half of the Librarians are female, all five top administrative positions are filled by men. More than three-fourths ( $77 \%$ ) of the male Librarians, and only one-third (35\%) of the female Librarians, hold positions of Librarian IV or higher. There are no males at the Librarian I level, but $8 \%$ of the females hold that rank. The familiar pattern of male predominance at the top and female predominance at the bottom repeats itself once again. Lídrary.

Administration in the Library*

|  | Number |  |
| :---: | :---: | :---: |
| Ti |  |  |
| Branch Administration <br> Department Heads <br> (Main Library) <br> Department Heads <br> (Health Sciences) | 2 | 1 |
| Total | 2 | 5 |

* See footnote for previous table.

Even at this level of administration, women are not represented as well as would be expected if men and women were on the average similarly qualified and were promoted without sexual bias.

These few statistics, in combination with the data concerning Librarian Assistants presented in the previous section, clearly demonstrate that the situation in the UCD Library parallels that which has been found at UC Berkeley and nation-wide. The reader is referred to A Report on the Status of Women Employed in the Library of the University of California, Berkeley, With Recommendations for Affirmative Action prepared by the Library Affirmative Action Program for Women Committee and released in December 1971. This report analyzes in detail the problems of discrimination which exist in Libraries throughout the country, and thoroughly examines the UC Berkeley Library system.

In the opinion of this Task Force, the recommendations made in the Berkeley Library report should be accepted in their entirety and applied to the UC Davis Libraries.

However, al patterns for women appear to follow pus (section III). For thesereasons, ecturersin Land $s$ is presumed to be hole. in the College of Letters and Science are female, while only $5 \%$ of the $L$ and $S$ ladder faculty are female (Section III).

Lecturers in the College of Letters and Science
Spring, 1971

| $\because$ | With <br> Ph.D | Without <br> Ph.D. | Total |  |
| :---: | :---: | :---: | :---: | :---: |
| $\%$ | 4 | 19 | 23 | 26.1 |
| 0 | 17 | 48 | 65 | 73.9 |
| Total | 21 | 67 | 88 | 100.0 |

Most of the female Lecturers ( $82 \%$ ) do not have Ph.D.'s and are therefore ineligible for higher academic positions. Of those with Ph.D.'s, some women may prefer the part-time status and/or the teaching emphas is which can be found in the Lecturer series, while others accept the Lectureship reluctantly because they lack the geographic mobility needed to negotiate for a better position.

Women Lecturers with Ph.D.'s earn less than similarly qualified men Lecturers in the College of L and S .

Salaries of L and S Lecturers With Ph.D.'s

| Full Time Equivalent Annual Salary | 人 $\%$ |  |  |  |  | $\sigma$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Years of Service |  |  |  |  | Years of Service |  |  |  |  |
|  | 1-2 | $3-5$ | $6+$ | Total | \% | 1-2 | 3-5 | $6+$ | Total | \% |
| 10,600 or less | 3 |  | 1 | 4 | 100.0 | 7 |  |  | 7 | 41.2 |
| 10,601-15,500 |  |  |  |  |  | 5 |  |  | 5 | 29.4 |
| 15,501 or more |  |  |  |  |  | 3 | 1 | 1 | 5 | 29.4 |
| Totals | 3 |  | 1 | 4 | 100.0 | 15 | 1 | 1 | 17 | 100.0 |

All of the female Lecturers with Ph.D.'s (there are only four in our survey) earn the full time equivalent of $\$ 10,600$ or less. Yet more than half of the males with Ph.D.'s earn more than that. In fact, nearly a third of the males earn the equivalent of more than $\$ 15,000$ annually. The majority of both males and females in this comparison have been employed for 1-2 years.

Without Ph.D.'s, male and female Lecturers are more evenly distributed in the various income brackets, although men attain the highest income levels more readily than women.

Salaries of L and S Lecturers Without Ph.D.'s

| Full Time <br> Equivalent Annual Salary | \%ears 0 \% |  |  |  |  | $\sigma$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Years of Service |  |  |  |  | Years of Service |  |  |  |  |
|  | 1-2 | 3-5 | $6+$ | Total | \% | 1-2 | 3-5 | $6+$ | Total | \% |
| 10,600 or less | 10 | 1 | 1 | 12 | 63.2 | 31 | 5 |  | 36 | 75.0 |
| 10,601-12,200 | 2 | 2 | 1 | 5 | 26.3 | 2 | 4 |  | 6 | 12.5 |
| 12, 201-15,500 | 1 |  | 1 | 2 | 10.5 | 1 | 1 | 1 | 3 | 6.25 |
| 15,501 or more |  |  |  |  |  | 1 |  | 2 | 3 | 6.25 |
| Totals | 13 | 3 | 3 | 19 | 100.0 | 35 | 10 | 3 | 48 | 100.00 |

Of those employed for $1-2$ years, $88.6 \%$ of the males and $77 \%$ of the females earn $\$ 10,600$ or less. Rarely does one find a greater percentage of men than women in the lowest imcome bracket! Yet only males ( $6.25 \%$ of them) are found in the topmost income categories $(\$ 15,000$ and over). It is interesting to note that a male without a Ph.D. and $1-2$ years of service is among those earning more than $\$ 15,000$, while a female with a Ph.D. and more than b years service is among those earning $\$ 10,600$ or less.

Femaie Lecturers teach more than male Lecturers.

| Totals | 20 | 100.0 | 42 | 100.0 |

* Results of survey of Lecturers, Fall, 1971.

As determined by the Survey of Lecturers (Appendix 4 ), almost threefourths of the females and only half the males teach 12 to 30 units per year. Conversely, $29 \%$ of the males and only $10 \%$ of the females teach 5 units or less. Most of the men but only one woman in the latter group have full time Lecturer appointments.

In order to examine the teaching loads more accurately, a sumnary was obtained of the 1970-71 Contact Hour Report. Lecturers in the Colleges of Agriculture and Letters and Science were identified by sex, and the total headcount, full time teaching equivalents (FTE's), and contact hours were summarized.

Teaching Loads for Lecturers in the Colleges of Agriculture and Environmental Sciences and Letters and Science, 1970-71*

* Information summarized by John Uribarri, Planning and Analysis Office, from Contact Hour Report.

The information in the table above verifies that women Lecturers generally do carry heavier teaching assignments than men Lecturers. In the College of Agriculture, the females have on the average 3 times as many contact hours as males. The difference is less pronounced when contact hours are averaged on the basis of FTE assignments, with 13.70 hours per FTE for males and 16.34 hours per FTE for females. It appears that in this College males tend to occupy positions having lower teaching components ( 0.2 FTE per male Lecturer), while females tend to occupy positions with larger teaching responsibilities 0.5 FTE per
female Lecturer). In the College of Letters and Science, women Lecturers have 0.38 more contact hours per person and 2 more contact hours per FTE :han do the males.

Male Lecturers achieve security of employment more readily than do females. Among respondents to the Lecturer survey, 5 females and 1.4 males reported length of service of more than 7 years. Twenty percent (2) of the females and $71 \%$ (10) of the males indicated security of employment.

Males are also more likely to be paid on an 11-month rather than a 9-month schedule. Seventy-one percent of the males and $43 \%$ of the females earn 11-month salaries. Some people, males and females, prefer the 9 -month schedule; others prefer 11 -month appointments. It was not ascertained how frequently the job status (9-month or 11-month) reflects the personal preference of the employee.

The ambiguity of the Lecturer title is reflected in the uncertainties of Lecturers themselves, both male and female, about the rights and responsibilities that go with their position. A number of Lecturers (almost one-third) did not know whether they were eligible for basic fringe benefits such as merit pay increases, retirment, health insurance, paid vacation, and sick leave.

Lecturers Are Confused About Their Eligibility for

> Fringe Benefits*
( $\mathrm{N}=62$ )

| Sick Leave? | 34 | 10 | 10 | 8 |

* Information from Lecturer survey, fall 1971.

Lecturers, both male and female, expressed concern about their lack of status in the University community. In addition to teaching and research, Lecturers frequently indicated responsibilities such as supervision of student teachers, graduate students, teaching assistants, and research assistants; undergraduate student advising; service on departmental and campus-wide committees; and administration of such programs as Work-Learn, Economic Opportunity Program, Early Childhood Education, and Agricultural Extension. Despite the obvious contributions of Lecturers to the University program, many commented on the lack of status and prestige associated with their positions, especially as viewed by persons holding ladder appointments or in the administration. Since prestige and self-esteem are important components of job satisfaction, it is not surprising that the lack of recognition given to Lecturers is a constant source of frustration.

Lecturers are also concerned about the vague definition of their positions. Many commented on their heavy teaching responsibilities, advising responsibilities, low pay, and lack of security. Of particular
concern is the apparent lack of standards or guidelines to determine what constitutes a reasonable combination of responsibilities.

Another problem of the Lectureship is that it tends to be a deadend position. For those who are not qualified to enter the professional series or who do not wish to, there are adequate mechanisms for advancement within the Lecturer series. However, for those Lecturers who are qualified and do wish to move up into the ladder series, there is no regular system of promotion. Nor do the heavy teaching loads suggested by the tables on pages 16 and 17 as well as other responsibilities carried by Lecturers permit the research and publication effort necessary for promotions into ladder positions.

Discrimination against women is demonstrated among the academic non-senate staff. The patterns of discrimination include:
1.) The concentration of women at the lowest lemens,
) The absence of women lii important supervisory postitions,
3) Lower salaries ančlower job classifications for women than for similarly qualified men,
4) The exclusion of women from certain work areas and their concentration in others,
5) Higher teaching loads and lower salaries for female Lecturers than for similarly qualified male Lecturers,
6) And the more frequent award of security of employment to male Lecturers than to female Lecturers having similar lengths of service.

It has also been shown that nearly two-thirds of the academic non-senate women respondents are responsible for the primary support of their families.

From the Lecturer survey, a number of problems were identified which are associated with the Lecturer position and which affect both males and females. These include the low status of Lecturers and their exclusion from the rest of the teaching staff (i.e., ladder faculty), the inadequacy (or unavailability) of guidelines for the determination of reasonable work loads, the poor understanding by Lecturers themselves regarding their eligibility for various fringe benefits, and the lack of a regular promotional nechanism from Lecturer positions into ladder positions. The general vagueness and lack of definition in the Lecturer serfes tend to facilltate discriminatory practices, and so these problems are of particular concern to women.

An examination of profile of non-senate academic staff by sex leads to the conclusion that women are discriminated against in this area of University employment. Patterns indicative of discrimination, such as female predominance in Iower job classifications and absence of females in important supervisory and administrative positions, are evident. The distribution of the sexes in various job series suggests that women are both hired at lower positions and promoted more slowly than are similarly qualified men. It appears to be especially difficult for women to attain the topmost rungs of the ladder in any area, even in those areas where women outnumber men. Women are largely excluded from certain job categories even though there is no apparent justifiable reason for their exclusion. It is necessary. that specific Affirmative Action programs be developed to address these problems.

PART VIIII

THE FEMALE STUDENT

Jane Welker
Kathleen Fisher
Kristin Bailiff

The charge of the Task Force on the Status of Women was "to explore opportunities for employment of women on the Davis campus." To a large extent, ther, the status of female undergraduate and graduate students is not of concern in this repori. However, opportunities for women in general are directly related to the amounts and kinds of education they obtain, and to the ways in which they come to think of themselves in relation to society. For these reasons, consideration will be given to some of the attitudes and factors which influence undergraduate and graduate women in the pursuit of their careers.

The opportunities for part-time employment of undergraduate and graduate students are also of concern, as are employment opportunities for male and female students after graduation. Housing availability and part-time enrollment are of particular importance to unmarried individuals (usually female) who have children and Who are totally or primarily responsible for the support of their families. These areas will be briefly examined in this section of the report.

1. The Choice of Academic Majors by Female Students at UCD

According to the American Association for Higher Education Research Report Number 5, tests given to high school seniors and college undergraduate and graduate students indicate that males do best in math and the natural sciences and females do best in the humanities and social sciences. These differences in cognitive styles are presumably an influential factor in the selection of academic majors by females. As demonstrated in Section IIIA, a high percentage of female college students select majors in the humanities and social science areas.

However, the data on cognitive styles also indicate that the differences in composite test scores are slight and that there is a lot of overlap between male and female skills and abilities. The data do not seem sufficient to account for the pronounced clustering of female college students into a rather narrow range of academic majors. It is likely that the determination of a course of study is influenced by other factors which are as important or perhaps more important than the sex-linked cognitive styles, if indeed the latter exist.

Maturation patterns are influenced by early, often rigid, and quite consistent sex-role typing as youngsters internalize behavioral expectations for males and females. Sex-role stereotypes tend to be promulgated by the family, peer groups, schools, teachers, counselors, churches, and mass media. In fact, nearly all segments of the environment serve to reinforce the stereotyped view of appropriate sex-role behavior.

Does the University offer a different perspective toward sex roles as part of its educational process, or does it simply reinforce the stereotypes prevalent in the external environment? Unfortunately, it is
the conclusion of this Task Force that the University experience gererally serves to confirm rather than challenge the traditional views of female roles. For example, there are few female faculty members in many departments and no female faculty in most departments (Section III). There are essentially no females in prestigious administrative positions and few females in high-level policy-making bodies such as the Academic Senate and the Board of Regents (Section IX). Female Deans and Department. Chairmen are extremely rare (Section IX.). On the other hand, nearly all secretaries and many "assistants'to-sumebody" are female. The paucity of professional women involved in the academic community exerts a negative influence on the female student in a variety of ways. Learning often occurs via modeling the behavior of a person who is seen as successful and/or powerful. Female students suffer from the lack in this academic community of successful female professional "models" with whom they can identify. . When female students attempt to model themselves after successful males, they are frequently confused by apparent conflicts imposed by sex-role stereotypes.

Furthermore, the patterns observed in a male-dominated institution lead students to anticipate a different set of rewards/values for female professionals than can be expected for male professionals. It seems "natural" that females should be less successful in their careers than men.

Advising, counseling, and guidance of female students are almost entirely provided by male faculty, often with consequent reinforcement of sex-role stereotypes. After all, decisions in the academic commity ranging from "Who is going to make the coffee?" to "Who will be the next Vice Chancellor?'" are generally made by men, and they tend to follow the traditional patterns.

The net result of the sex-role stereotyping and the University hiring patterns is an acceptance of the status quo by the majority of males and females, both students and staff. Members of both sexes tend to have lower expectations for women than for men. It seems proper fo them for women to have supportive roles but not leadership roles. Most men and women don't stop to question the situation when a woman makes less than the man working next to her, yet she may have more education and a wider range of responsibilities than he does. The general acceptance of the situation by women is illustrated by a survey conducted at UCD by Dr. Marilynn Etzler of the Biochemistry Department in the spring of 1972. In a survey of all women employees of the Davis campus, she found that almost three-fourths of those who responded stated that they had never knowingly suffered the effects of sex discrimination while at UCD.

The stereotyped attitudes seem to prevail among the student population as well, as indicated by a small study of undergraduate females at UCD by Phyllis Jacobs and Janina Jacobs. They surveyed a sample composed of 28 female seniors (Appendix 5). Fourteen of the students were enrolled in Feminine Majors, defined as majors having predominantly female students (English, Art, and Child Development), and fourteen were enrolled in Masculine Majors, defined as those majors having predominantly male students (Economics, Physiology, Veterinary Medicine, Plant Science, Physics, and Biochemistry).. Several items are of interest in this report.

Although few of the subjects themselves disapprove of these professions for females, $79 \%$ of them anticipate disapproval from faculty and
advisors for certain choices. Far from challenging the sex-role. stereotypes, the University appears to be one of the strongest proponents of them in the minds of the students.

The group from whom female students expect the most disapproval for divergence from traditional female roles is their own male peers. More than half expect disapproval even from female peers. Since peergroup pressures tend to be quite strong, especially among young people, these attitudes would be expected to produce many conflicts in the minds of female students who were considering entering any other than the traditionally acceptable fields.

Considerably less disapproval is expected from inḍividụals with whom there are close personal ties - the closest male friend, mother, and father. Yet even with these close friends and relatives, only 54\% to $68 \%$ of the female students expect to receive approval for the pursuit of certain male-typed but otherwise very respectable professions.

Interestingly enough, these observations conflict with two other generally accepted stereotypes. Parents are thought to be as a whole relatively conservative. The University on the other hand, often basks in the image of being liberal, advante guard, and a leader in a dynamic society. Yet it appears that the roles are reversed with regard to sex-stereotyping, at least in the minds of the female students. The parents are seen $t$ be most receptive to change, and the University faculty among the least receptive to change.

In sumary, it appears that the tendency for female students to confine themselves primarily to a rather narrow range of traditionally accepted Female Majors results from a combination of factors which incluae:
a) Possible inherent differences in cognitive style which have for years been reinforced by parents, peers, and public institutions,
b) Strongly held cultural definitions of the "proper" professions for females,
c) Participation in a male-dominated academic community which has done little to challenge the male-female stereotypes,
d) The lack of female professionals (faculty, administrators) necessary to provide models with whom female students can identify,
e) And the paucity of female advisors and general lack of awareness of sex-role prejudices among male advisors.

The easiest route for the female student to follow is the traditional one. She can readily move through her entire college experience with unchanged and even unchallenged attitudes about herself and her role in society. If she decides to enter an area of skill or interest which has been traditionally reserved for males, she will find little support and probably considerable resistance. Although this report has addressed itself specifically to the problems of female students, it is clear that maintenance of stereotyped sex-role images are limiting and damaging to male students as well.

The creation of a Women's Studies Program could do much to further the educational process by creating an awareness of sex-roles and by challenging the stereotypes which have prevailed not only in this academic institution but also in many of the subjects which are studied here. Efforts on the part of the University to eliminate sex discrimination, to place males as well as females in supportive roles; and females as well as males in leadership roles, and to achfeve adequate representation of both sexes in all areas, will undoubtedly be of direct benefit to the entire student population.
2. The Status of Female. Students with Regard to Employment Opportunities and Other Benefits

Housing. Dormitory accommodations are equally available to single and married women. However, living-unit (apartment) accommodations for families are preferentially given to married students. Single individuals (usually femile) with children are permitted in the apartment units, but with lower priority. The bias is even reflected in the name chosen for such accommodations - "Married.Student Housing" rather than "Family Housing." Yet a married couple without children could adjust more readily to dormitory provisions or could more likely afford to live off campus than could a single individual with children. It appears that this policy reflects either the imposition of a moral judgement (divorce or having children out of wedlock is bad) or discrimination in favor of families in which the head of the household is male. It is the opinion of this Task Force that priorities for family housing be given on the basis of financial need, with preference to families with children.

Part-time Enrollment. Part-time enrollment opportunities offer many advantages to the potential student population of the University. Students who otherwise couldn't afford to be here can seek employment and schooling without undue hardship. Individuals young and old who for various reasons prefer to obtain their education at a slower than traditional pace can be accommodated. Greater heterogeneity of the student population can be expected, with consequent enrichment to the entire academic community. Many people are beginning to question whether University educational opportunities should belong only to the young and the carefree.

Part-time enrollment is of particular concern to individuals, primarily female, with family responsibilities. An increasing number of vomen who once abandoned their education to get married now find themselves divorced, responsible for the primary support of their families, and inadequately prepared to earn a living.

At the present time, there are four possibilities open to a person who wants to do part-time undergraduate work on this campus: concurrent education, extension, part-time work with special permission from the Dean, and extended learning. Extension credits often will not be accepted in degree programs. Part-time work with special permission is available only in cases of physical handicap or other exceptional circumstances. (In practice, this has included women with children and working wives.) Concurrent enrollment is limited because admission into any course is dependent on the instructor's permission, and on the fact that the instructor cannot admit a concurrent student if a regularly enrolled student needs the space. The idea of concurrent enrollment is appealing to many students, but they become discouraged when they cannot obtain enrollment in classes they desire. Extended learning, wherein regular courses are offered at times and places convenient to part-time students, offers the best solution to the problem. If the restrictions on enrollment are removed once the pilot program of the Division of Extended Learning is completed, part-time enrollment should becote a feasible alternative for students.

On the graduate level, except for the Extended Learning Program, there is no unfversity policy efther for or against part-time status. Each department determines its own policy. In practice, it appears that part-time graduate status not of ten has been found acceptable since there were only 120 part-time students out of a total of 2300 enrolled (5\%)

In 1971-72, The Division of Extended Learning will inaugurate a pilot program this fall, Eventually, this is expected to provide all parttime graduate students with regular courses at a reduced fee,

Part-time Employment, As has been mentioned previously (Section VI), there is a tendency for sex-typec :obs which are predominantly filled by females to be lower paying than integrated or male-sex-typed jobs having similar education and experlence requirements, Even on the undergraduate level, males appear to enjoy certain employment advantages. There are many more part-time and summer jobs available in fields related to Masculine Majors than chere are in fields related to the Feminine Majors. The small proportion of females who elect Mascurine Majors share the benefits of these job opportunjties with the males in those majors; however, the majority of the females (and the small proportion of males) in Feminine Majors have less opportunity for relevant part-time employment.

For example, in the Jacobs study (Appendix 5; page VII-4) the following question was asked;

Item 43. Have you ever had summer or part-time jobs which were in any way related to your major? If so, what were they? Ten of the 14 subjects in Feminine Majors at some time had jobs related to their studies, of which five (35.7\%) were for pay. Twelve of the 14 subjects with Masculine majors had held jobs related to their fields of interest, and all (85.7\%) were for pay. The jobs were provided by the University in the case of one Feminine Major (7\%) and seven Masculine Majors (50\%).

In spite of this, negative attitudes prevail concerning job opportunities for women in traditionally masculine fields.

Item 46. Has anybody made the following types of remarks about any of your choices of majors? If so, about which major? And by whom?
a) "A woman will have a hard time finding a job in that field."

Five women (35.7\%) in the Feminine group had heard that remark, while 10 women ( $71.4 \%$ ) in the Masculine group had been told that.

Employment: Opportunities for Graduating Female Students. The University and free enterprise are to sex discrimination as the North and the South are to race discrimination. In the University, it is believed that discrimination is not proper and considerable effort is expended to pretend that it does not exist; things happen very subtly. In private enterprise and in many government offices there is no such pretense. Discrimination is practiced blatantly, and discriminatory attitudes are subdued only when it seems expedient (for example, if it seems necessary to do so in order to interview on a particular campus).

Robert Gerould, Placement Advisor at the UCD Placement Center, reports that many prospective employers who interview on campus practice sex discrimination. When Mr. Gerould appears sympathetic to the employer, the discrimination is blatant; when he appears protective of the students, the discrimination is moredevious. A few specific instances of sex discrimination observed by Mr. Gerould are described below:

EXAMPLES OF EMPLOYMENT DISCRIMINATION AGAINST WOMEN STUDENTS AT UCD

## Major Retailer

After interviewing 30 students for positions as Management Trainees during an on-campus recruiting visit, the company representative requested an all-male schedule for his next visit. His reason was that the company needed managers and although they interviewed women, women are never considered for real management jobs. All of the women interviewed were given identical "average" ratings and were rejected.

Marketing Company
The representative interviewed 14 students during a regular recruiting visit, of whom one was female. The recruiter confided after the interviews that the woman was the only qualified candidate, but that he wouldn't hire a woman. The coudent in question was rejected.

Utility Company

The company has separate "management" programs for men and women. The women regularly receive $\$ 50$ to $\$ 100$ per month less initial starting salary. Company recruiters proudly announced this year that one woman had been placed in the male management program, confirming suspicions that the program for women is a sham. The positions women college graduates receive involve supervising clerical workers and are also filled by women with no college education. While proudly and loudly recruiting and hiring college trained women in nonrmanagement "management" jobs, this company quietly moves them to the-back-of-the-bus.

Civil Service
A. by the Civil Service Personnel offices

Most civil service tests for college trained individuals consist of both written tests and panel interviews. The combined scores of these two examinations determines the candidate's place on the Eligible List from which appointments are made. Since most people are seeking more or less immediate employment, and since civil service agencies rarely hire more than 6 people at one time from such a list, a candidate must score high in both phases of the test to have any chance for employment.

One female student tock similar tests in four different civil service jurisdictions. In three, she was number 1 on the Eligibiie List. In the fourth she, the only woman, received the minimum passing score of 70 in the interview, which placed her far down on the list of eligibles in spite of having 98 on the wricten test. Her attempt to appeal was not heard because under the civil service rules a candidate may only appeal a failing score but not a passing score.
B. by Civil Service Agencies

Occasionally, women do appear near the top of civil service lists and their names are referred to agencies for consideration. Most jurisdictions operate on a rule of three. That is, an Agency may select from the top three names on the list when filling a particular position. When three women appear ac the top of the list, this poses a slight problem to the agency.

When an Agency interested in hiring receives the list of names from the Personnel Office, it sends to each candidate an inquiry explaining the vacancy and asking if the candidate is interested. Failure to respond within a stated time period results in notification of the Personnel Office and removal of the candidate's name from the employment list.

In one six-week period three women students received notification that their names had been removed from an employment list due to their failure to respond to an inquiry, although no inquiry had been received. When contacted, the Personnel Agency stated a mistake had been made and that the names would be restored. Within two weeks the same event occurred to the same three women a second time. Further investigation revealed that an Agency was hiring from the Eligible List and had on both occasions notified the personnel agency that the women had not responded to inquiries.

Private Employment Agency
One woman student reports having visited a local branch of a national employment service and being asked by the woman interviewer what salary she, the student, expected. When the student responded with the range $\$ 650-\$ 700$ per month, the interviewer exclaimed in a shocked tone: "Why that's a man's salary!"

Professor Mary Regan in Applied Behavioral Sciences has found that the aspirations of female students decrease as they proceed through their college careers, thile the aspirations of male students tend to increase. This phenomeron is undoubtedly related in part to the increasing awareness among juniors and seniors of the employment opportunities (or lack of them) for women, as well as to many of the factors discussed previourly.

Campus Activities. The female student frequently finds that she is less eligible than the male students to participate in a variety of activities "available" on the Davis campus. The restrictions which are imposed on her because of her sex reinforce her impression that she is perhaps merely a guest in an essentially male institution. For example, the UCD Marching Band was open originally to female and male students and the Band was integrated for the 1958 , 1959 and 1960 seasons. In

7960, the Band members had a leng discussion about whether or not females had the physical endurance to participate in the planned activities. An amendment to the Band's constitution was proposed that would exclude the female members; about $80 \%$ of the members voted for the adoption of this measure. Thus, since the 1961 season, the band has been known as the UCD All-Male Marching Band. Since no counterpart all-female marching band was formed, girls interested in this activity have been entirely excluded.

Similarly, girls find far fewer opportunities for use of the physical education facilities outside of regularly scheduled classes than do the male students. It is important that all campus activities be carefully examined and all unnecessary sex-related biases be removed.

PART IX
WOMEN IN ADMINISTRATION

Ruth Anderson Ruth B. Dixon Robert Glock Kathleen Fisher

Any report on the status of women in the administration at UC Davis must necessardiry be brief. For all practical purposes, there are not now and never have been women in important, visible positions in the UCD administration,

The Davis campus has never had a woman Chancellor.
There has never been a woman Vice Chancellor at Davis.
Among the academic Deans at Davis, there has never been a woman.
The position of Dean of Women has been held by a woman. However,
this is a non-academic post.
Among the management personnel at UCD, there are 27 mer (93.1\%) and one woman in addition to the Dean of Women described above ( $6,9 \%$ female).

Management Personnel at UCD
Spring, 1972

|  | Male | Female |
| :---: | :---: | :---: |
| Chancellor | 1 |  |
| Chancellor Emerİtus | 1 |  |
| Executive Vice Chancellor | 1 |  |
| Vice Chancellor | 3 |  |
| Dean of Universmity Extension | 1 |  |
| Assoctate Deam off University Extension | 1 |  |
| Asstistant Wicm Chancellor | 6 |  |
| Special Assistent to the Chancellor | 1 |  |
| Executive Assiestant to the Chancellor |  | IT |
| University Litbrarian | 1 |  |
| Personnel Offitcer | 1 |  |
| Public Information Officer | 1 |  |
| Business Services Officer | 1 |  |
| Accounting Officer | , |  |
| Development Officer | 1 |  |
| Budget Officer | 1 |  |
| Student Health Service Director | 1 |  |
| Director of the Computer Center | 1 |  |
| Material Manager | 1 |  |
| Campus Architect | 1 |  |
| Administrator of Physical Plant | 1 |  |
| Dean of Women |  | 1 |
|  | 27 | 2 |
|  | 93.1\% | 6.9\% |

The Chancellor, Executive Vice Chancellor, 3 Vice Chancellors, and 6 Assistant Vice Chancellors are all male, as are the 2 Deans, 6 Officers, 2 Directors, and 1 Manager. The one woman in the management group, Executive Assistant to the Chancellor, deserves special notice. She is one of the few women on the Davis campus to succeed in escaping from the clerical dead-end position of Administrative Assistant. She works closely with the Chancellor and bears a great deal of responsibility. Yet her salary is significantly lower than those of the Chancellor and his male assistants, often by a factor of 2 (administrative salaries are a matter of public record available in the Salary and Wages Supplement to the Budget, 1972-3, and need not be reproduced in this report). It seems that on those rare occasions when women do move up into management,", they do so at a respectful distance behind.

Occasionally, women do become Department Heads. At the start of the 1971-72 school year, one Acting Department Head and two regular Department Heads were women. By the end of this fiscal year, the number of female Department Chair persons will be reduced to one.

Statewide administration also excludes women. Looking at the management of the University of Califormia as a whole, a similar picture is obtained. There have never been any women Presidents or Vice Presidents. There have been 120 Regents since the establishment of the University of California; of these, 7 have been women.

Interestingly, the number of women regents has remained nearly constant ( $1-2$, occasionally 0 or 3 ) for 㸱 years, since 1897.

These figures are mat shocking to most of us. Even though the Universaty of Califormia is ampublic institution which is maintained by the sitate of Calfforniappimanily for the people of California, and even though approximately 50\% of the population of California is female, and slighty less than $50 \%$ of the undergraduate student population is female, and $24 \%$ of the neationmestudent population is female, it does not seem surprising to most that there are so few women in administrative positions. Traditionally, surch posts have not been open to women nor have they been actively sought by women, except in institutions which are segregated for women.

Women of ten expect to receive lower salaries than men. A questionnaire was sent to a random sample of 100 senior and graduate women at UCD (Appendix 6) in a variety of disciplines to ascertain their attitudes toward women in administration. Forty percent returned the questionnaire (although not all respondents answered all questions). Asked if they expect to receive the same salary as a man in the same position, 29 said yes and 8 (22\%) said no. for many young women to imagine that ity could be in such positions.

In the same questionnaire, students:resked whether they thought women are capable of being boss; 34 maind yes and 2 ( $5.5 \%$ ) said no. It would be folly to ask such a question of male students: Do you think men are capable of being boss?

Although men retiring from the anmet services find many managerial and administrative doors open to theme, men retiring from raising a family find few if any doors open, remeryess of their educational and occupational qualifications. As the following letter suggests, "Theoretically we shouldithame smething special to offer but who wants us?"

I commend you and your committane survey you are conducting on opportunities for w. I wish you well, and if anything frome it that leads to concrete opportunities, pleament me to your list of potential employees!

I will receive my bachelor's dexmextm English at the end of the winter quarter, although E gmmered junior college in 1937. Marriage, plus education asi Tusiband and children, prevented my obtaining a degree artiol this time.

I am 50 years old, now single, imescellent health, with considerable experience in office warik (largely in education), and need to earn my own living uman graduation.

Aside from fulfilling a promise to myself to "get my degree" sometime, my major goal in returning to college was to escape the tyranny of the typewriter. I would like to do something more significant than bew part of the office furniture.

I have sketched the details of my ownesituation as an example of the special kind of problemsfacjag the mature woman who is returning to the work world. Theoretically we should have something special to offer - but who wants us?

I hope your committee will give spectal consideration to this aspect of women in administration. My letter is a bit flippant, but only to hide the real despair I sometimes feel when contemplating what kindiof job will be available to me next March.

Top level administrators are often hired from outside the university, while qualified women on campus are overlooked. The highest nonacademic staff position generally open to women is the Administrative Assistant category, the top-of-the-line of clerical and secretarial ranks. Many highly qualified women are clustered in these positions, women hith years of experience in supervising clerical staff, coping with a multitude of personnel regulations, overseeing the administration of grants, preparing budgets, scheduling classes, and so on. Considering the turnover of Department Heads, many Administrative Assistants hold primary responsibility for running the departments. Yet few if any of these women ever manage to progress to higher level administrative positions.

Even in the move from Departmental Administrative Assistant to Campus-wide Administrative Assistant, men do better than women.

## Administrative Assistants

June 1970

|  | o | $q$ | $\% 0^{\prime}$ |
| :---: | :---: | :---: | :---: |
| Departmental | 2 | 102 | 1.9 |
| Campus-wide | 4 | 51 | 7.2 |

Why are qualified women on campus overlooked when top administrators
are hired? Some common assumptions about women's career aspirations may be relevant here: that, no matter how long the woman in question has been employed, women in general are not as career-oriented as are men; that women will stop working when they marry, become pregnant, or have children; that if a woman is married, she is a poor risk for a top position because she may leave if her husband moves; that women don't want or need high salarles; or that men and women alike "naturally"
resent being supervised by a woman. On top of these getadies whmen at UCD find that when high administrative posts are filled, candidates from outside the university are frequently sought and preferred over those already employed on campus. (Retired military men are popular choices for many of these positions.)

The University could make great strides in increasing the proportion of women ir administrative positions by upgrading the status of highly qualified women already employed at UCD who are held back in positions that do not fully utilize their training and talents, rather than searching elsewhere, among predominantly male candidates, to fill these vacancies.

THE MINORITY WOMAN

In the University, a world dominated by Caucasian males, minority women must bear the burdens of all women and of their particular ethnic minorities. They suffer from the lack of role models of both women and minority individuals in positions of leadership and responsibility. They tend to lower their aspirations, in comparison to white males, both because of the comination of forces which work to produce feelings of inferiority and because of the practical realizations that so. many doors are closed to them. All of the tendencies which have been described in this report to channel women into lower-paying job categories in spite of their qualifications, combined with the well-known tendencies to channel minorities into lower paying positions, are culminated in the Minority Woman. And the socio-economic toll is particularly great because the Minority Woman is so often solely responsible for the support of her family.

This seemingly overwhelming combination of negative forces is in part counterbalanced by some other factors. The Minority Woman has confidence that she can work. In fact, she generally grows up knowing that she must, as did her mother and her aunts and her grandmothers. She has not had the opportunity that white women have had to sit at home and "be protected" from the world. Thus, she may often have a more pusitive image of herself in terms of her capabilities, and she of ten does not share the frustrations and lack of fulfillment of the leisure-class white woman.

The Minority Woman identifies much more strongly with the struggles for racial equality than she does with the women's movement. Indeed, she has very little parfence with the ideologies of the latter, even though she recognizes that she is just as affected as the white woman by such policies as unequal pay for equal work and underpayment in
female-typed job classifications.

- The minority woman generally has an advantage over the minority man in the white establishment system, since she poses much less of a threat to The Man (i,e., Caucasian males). After all, she is "only a woman."

For many years it was not considered proper or legal to ask an emnloyee's ethnic identity. Now this information is being sought again, and UCD has been using the system of self-identity. Since such inquiries are offensive to many people, they choose not to respond or do not respond ascurately. As a result, every attempt by this Task Force to collect data has resulted in $a n e w$ and different set of figures. Several sets have been arbitrarily selected from the others and are summarized below; the reader should recognize that these statistics are at best approximations.

Employees of Davis Campus*

|  | Total | Minority | \% Minority | Statewide <br> \% Minority |
| :--- | :---: | :---: | :---: | :---: |
| All Employees | 7067 | 965 | 13.8 | 26.1 |
| Male Employees | 4709 | 614 | 13.0 | 14.9 |
| Female Employees | 2358 | 351 |  |  |

* Information from Deanna Falge for UC Davis, 1971.

About one-fourth (26\%) of all the people in the state of California are members of ethnic minority groups. The Davis campus employs minorities at about $50 \%$ of their availability in the statewide population (13.8\%). A greater proportion of female employees (1.4.9\%) than of male emrloyees (13.0\%) are minority individuals.
Ethnic Distribution of UCD Minority Employees
 level of availability in the statewide population $(33 \%$ and $29.5 \%$ levels respectively）．In both of these ethnic groups，the women fare better than the men．Three percent of the female employees are Black，while only $2.3 \%$ of the male employees are Black．Similarly， $5.4 \%$ of UCD fe－ male employees are Mexican－American，yat only $4.0 \%$ of the males are of this ethnic minority．

In contrast，Orientals are employed by UCD at twice their Incidence in the statewide population； $5.8 \%$ of all employees are Oriental，yet only $2.8 \%$ of the California people are Oriental．Unlike the situation with the Blacks and Mexican－Americans，there are proportion－ ately more male Orientals than female Orientals．Perhaps Caucasian males feel less threatened by Oriental men than they do by Black and Mexican－ American men，or perhaps Black and Mexican－Anerican women are more accustomed to working than are Oriental women；a complete discussion of the implications of the data will not be undertaken here．

According to a three－year summary of ethnic somposition of UCD obtained from the Office of Equal Employment Opportunity，the number of American Indians at UCD has more than doubled between 1969 and 1971. It is difficult to evaluate how much of this apparent insrease is real， and how much is a function of data collection errors．It appears from the information above that UCD employs slightly more American Indian males than females．

Not only are minority women underemployed，but they are predominantly found in lower－paying and lowex－status job classifications：

Selected Academic Positions University-wide*

|  | Women | Minority <br> Women | Minority |
| :--- | :---: | :---: | :---: |
| Dean, Professor, Associate and Assistant <br> Professor, Lecturer, Instructor, <br> Associate | $4.2 \%$ | $0.4 \%$ | $2.6 \%$ |
| Dean, Professor | $3.1 \%$ | $0.1 \%$ | $3.8 \%$ |
| Associate and Assistant Professor | $8.9 \%$ | $1.4 \%$ | $8.2 \%$ |
| Instructor | $36.3 \%$ | $2.7 \%$ | $8.2 \%$ |
| Lecturer | $28.2 \%$ | $2.5 \%$ | $11.7 \%$ |
| Associate | $31.3 \%$ | $4.0 \%$ | $15.9 \%$ |

* Based on statistics gathered October 31, 1970, Office for Equal Employment Opportunity.

Only $0.4 \%$ of all Deans, Professors, Associate Professors, Assistant Professo-s, Lecturens, Instructors, and Associates in the entire University of Califoxnia are minority women. Minority men fare six times better than minority women in these positions of authority. The proportions of minority women, like the proportions of white women and total minorities, drops steadily with increasing status. There is a four-fold reduction in the proportion of total minorities between the Associate and Professor/Dean ranks, and a ten-fold reduction in the proportion of women over that span. It is probably not entirely coincidental that there is a forty-fold reduction of minority women. The problems of discrimination against minority women should not be underestimated.

A more thorough examination of the status of minority women on the UCD campus in indeed needed. Unfortunately, the necessary data do not appear to be available at the present time. On the basis of the information which has been examined by this Task. Force, it is likely that patterns of under-representation of minority women seen in the professorial ranks and their concentration at the bottom steps are similarly repeated in most other areas of university employment. There is perhaps one notable exception: two of the most prestigious receptionist positions in the University are filled by black women.

Undoubtedly, the problems associated with being a woman in the University - whether student, faculty, or staff - are compounded by the problems associated with being a minority group member. While minority women tend to see racial issues as the major obstacle to their advancement, the statistics presented here suggest that their sex may be an even greater liability. It would be interesting to know if a more complete analysis would support this conclusion.

## PART XI

PERSONNEL POLICIES

Kathleen Fisher
Sandra McCubbin

Personnel policies in the University of California are established on a University-wide basis, althougin the specifics of implementation are often determined at the campus level. Personnel practices are extremely important determinants of the success or failure of any affirmative action program.

The Task Force on the Status of Women at Davis does not wish to overlook this critical area, yet it wishes to avoid duplication of efforts that have already been expended on other campuses and in the Office of the President. Consequently, the discussions that follow are brief and deliberately incomplete. They are intended to call the reader's attention to some of the major items of Personnel Policy that now present barriers to women, and to recommend revisions that would implement affirmative action for women. More thorough analyses of the problems, as well as more detailed recommendations, can be found in a variety of reports including those indicated below:

1. Replacement of the Nepotisin Regulations, Memo to Vice President Angus Taylor, from the Nepotism Study Ccimittee of the Berkeley Women's Faculty Group (c/o Susan Ervin-Tripp, Dept. of Rhetoric, UC Berkeley)
2. Personnel Practices Related to Women, prepared under the supervision of Rebecca Mi11s, December, 1970, Office of Equal Exployment Opportunity, University Hall, UC Berkeley
3. Task Force Report on Day Care Centers, Davis, 1970
4. A Study of Maternity Leave Policies and Practices In Other Countries and in Industries and Unions in the United States, by Ruth McElhisney, September, 1971, Office of Equal Employment Opportunity, University Hall, UC Berkeley
5. Report of the Chancellor's Advisory Committee on the Employment Status of Staff Women on the Berkeley Campus and in the Office of the President, Part II, Personnel Policies (c/o Afton Crooks, Office of the President, UC Berkeley)

The recommendations made in these reports are applicable to Davis as they are to all UC campuses.

Maternity and Paternity Leave
Maternity leave recognizes the right of a woman to bear children without penalty to her employmei.- status. Executive Order 11246, ammended by Executive Order 11375, states that employers may not penalize women employees because they require time away from work on account of child-bearing. The law requires that childbearing be considered justification for leave for a reasonable period of time, and that the employee be guaranteed reinstatement to the same or similar position and pay held prior to the leave, without loss of accumulated benefits.

Paternity and maternity leaves recognize the rights of both parents (or either parent) to participate in the nurturing of their (his or her) child. As sex roles become redefined, men and women alike assume both breadwinning and childrearing functions. The principle of equal responsibility in the home is becoming increasingly more prevalent. With infant care, for example, the female parent may choose to take the primary responsibility for nurturing the first child, the male parent for the second. Adoptive parents, sometimes single, sometimes male, are also increasing in frequency. The parent of a newborn child, whether male or female, whether adoptive or natural, showl have the right to take a leave of absence from his or her employment situation to care for that infant.?

Patemity and maternity leaves also ecognize the rights of children to begin 1nfe with loving care. It is established fact that the first year and especially the first few months of human life are critical to the emotional and physiological well-being of individuals for their
entire lives. The social investment in providing paid leaves of absence for parental care of newborn infants is relatively small compared to the social investment required to care for or contain emotionally disturbed young adults. Provision of the former may greatly reduce the need for the latter.

There is, of course, precedence for paid leaves. The University gives mitheary leaves with farll pay, even though the individuals on leave are also paid by the Armed Forces. Career employees in the reserves may receive up to 30 days paid leave annually for more than twenty years; maternity and paternity leaves could be limited to two per person. Many industries, unions, and governments around the world have established a value system in which infant care is at least as important as military duty. For example, civil service employees in Sweden receive six months leave of absence with pay for childrearing.

The Task Force recommends that the University of California make at least three month paid maternity and paternity leaves available to all employees, regardless of marital status. Leaves of absence for infant care should be permitted to extend for up to one year, with full pay for the first three months, after which the employee could take accumulated vacation pay and sick leave, and then leave-without-pay status. The employos should be guaranteed reinstatement to the same or similar position held prior to the leave without penalty to retirement benefits, health plans, and earned time toward merit increases.

## Tandem Jobs

A tandem position is one which employs two people, each on a halftime basis. By providing for tandem employment, the University could greatly increase opportunities for part-time employment at all levels.

Tandem jobs increase the opportumties for employment of women.
Many women actually hold two full-time $30 b s$ - one at the University and one at home. Some of these women worli pefer to work less than fulltime in the former position, In fact, in the survey of academic non-senate staff (Appendix 3), $12.5 \%$ of the female respondents who are now working full-time indicated that they would prefer working parttime.

Most of the part-time 䕙obs presenthy available on campus are at low clarical, laboratory, or other sidyuthanate levels. They tend to be low-paying, to be associated with relatively little responsibility, and are often temporary. With tandem ebss the implication is different: the posithon ${ }^{\text {un }}$ "part of" a full-time aquointment rather than a "parttime job." The tandem job concept permits part-time employment in many areas which have previously been restricted to full-time personnel.

Tandem jobs would provide many benefits to the University. Absentesism could be effectively reduced, since one employee could cover for anotite Half-time employees cmatwork extra hours during periods with extra heavy work loads, elimina ing the need to hire inexperienced temporary help. Vacations coulumbe staggered so that the position is never left entirely vacant. Slantis could be combined so that, though their qualifications are similex, one individual could be stronger in one aspect of the job and the tamdem team partner stronger in another aspect. The University is well aware of the phenomenon which frequently accompanies part-time appointments: give an employee two half-time appointments in different areas, and that eqployee often devotes 60-70\% effort to each $50 \%$ position. Similarly, the total employee input from a tandem team would frequently be greater than that which could be a team or by selection and matching of applicants by the employer. Tandem employment and full-time employment could be equally acceptable alternatives for many job classifications, although obviously not for all. For some jobs, tandem employment might be specifically preferred, while in others a full-time appointment might be more satisfactory.

The Task Force recommends that the University provide opportunities for tandem employment in all job classifications in which tandem teams could work successfully.

## Nepotism

The University of Califormia has recognized many of the problems associated with nepotism rules. Briefly, these problems include:

1. More than half of the nepotism cases arising in the University concerIn husbands and wives.
2. Women suffer more from the rules than men.
3. Wives often have to work in tangential departments or research institutes, and often are thrust into marginal job situations in spite of outstanding scholarly activity.
4. Wives sometimes must accept jobs without stipends.
5. Husband-wife teams are prevented from potentially fruitful collaboration.
6. Women frequently cannot apply for research funds because of their tangential job classifications, and therefore cannot achieve recognition as principle investigators, when in fact they often are.
7. Highly qualified candidates may be lost because of the restrictions.

The University has now modified its Staff Personnel Rule concerning the employment of near relatives to the effect that candidares for a vacancy should not be disqualified by reason of near relationship
to an appointee already in the department or by reason of near relationship when simultaneous appointment of near relatives to a department is recommended. Appointment of a near-relative to a department, or continuance of the appointments of two members in the same department when a near-relative relationshid is established between them, requires authorization by the Chancellor. University staff members are not permitted to participate in any review or decision-making processes concerning the employment of near relatives.

The Task Force recommends that the abolition of nepotism restrictions be publicized, that qualified spouses of currently employed faculty and staff members be elcouraged to apply for available positions, and that the Chancellor use his authority to eliminate all unnecessary nepotism restrictions.

## Child Care Facilities

Many women employed by the University have children. For example, among respondents to the staff questionnaire (Appendix 3 ), $45 \%$ of all non-academic staff and $29 \%$ of all academic staff women have at least one dependent child.

Women are frequently responsible for the primary support of their families. Our survey showed that $46 \%$ of 187 non-academic and $65 \%$ of 31 academic female staff respondents are responsible for the support of themselves or their families.

Baby-sitting facilities in Davis are expensive and inadequate. It has been estimated that women in Davis generally spend at least $25 \%$ of their salarles for baby sitting services. Frequently, these consist of no more than minimal custodial care. It is often difficult to find a satisfactory baby-sitter, and even more so to find one who is willing to
care for a sick child. The latter problem contributes to employee absenteeism.

And although the sex roles are gradually being redefined, women are at present primarily responsible for making the arrangements for care of the children, and for providing such care when babysitters are not available.

Faculty women and professional staff women are sometimes unable or reluctant to attend important professional meetings or seminars away from campus because of the absence of adequate childcare services. Since such travel is an integral part of professional careers, and since women more than men are affected by the problems of childcare, the absence of a Child Care Center discriminates against women.

Child care facilities should be as much of an employee benefit as retirement plans and health insurance. The Task Force recommends that day care be provided for the children of all students, staff, and faculty on a reasonable pay-as-you-can basis. Care should be provided for sick as well as for well children. Overnight care should be available for children of employees who leave campus to attend professional meetings, training centers, etc.

## Other Personnel Policies

The Task Force on the Status of Women at Davis concurs with the recommendations made in the report prepared by the Office for Equal Employment Opportunity, in cooperation with the Wright Institute, initially entitled Personnel Practices Related to Women: Summary and Recommendations Based on an Exploratory Study of the Berkeley Employment Office, and now being printed under the title Women and the Personnel Office at UCB. The recommendations from that report are reproduced below.

## Recommendations to the Berkeley Campus Employment Office

A. Authority

1. Issue a general policy statement regarding the employment of women designed to produce a concern for employment problems of women parallel to that engendered by the Cheit Directives on minority hiring.
2. Develop affirmative action guidelines for women.
3. Assign responsibility to assure conformity with policy and directives.
4. Agree upon a procedure and a line of responsibility to ate in conflict, problems, or grievances connected with discrimination by sex.
5. Establish the position of a "Woman's Advocate" or Ombudswoman.*
B. Recruitment and Hirlng
6. Develop a list of sources for recruitment of women similar to special sources used for minorities, e.g., AAUW, Business and Professional Women's Associations, women's colleges, Welfare rights organizatioss, etc.
7. Stop separate advertisements and place all ads in the joint "male and female" section, except where sex is a bona fide occupational qualification. Advise minority recruitment sources that positions are available to both sexes.
8. Unions, when used as recruitment sources, should also be advised of the University's policies, urged to re-examine some of their classifications, and to take affirmative steps to admit women of al1 races to their membership and apprenticeship programs; develop education programi on women with unions.

[^26]AR

Lontinue the current use of professional and nonprofessional ications, orencourage applicants, to fill out both forms, Lever qualified.
lop a system for considering and crediting as employment rience non-pail household and community jobs of applicants; as budgeting and purchasing, community organization and iftee work. Wiive strict standards for prior experience he case of job:s previously $c$ osed to women.
systematically on files, updated at scheduled intervals. cross-file applicants for all classifications for which qualify.
blish affirmative action goals to integrate job roles of and women at all levels of employment.
blish an Affirmative Action file for women of all races ified for positions predominantly occupied by men, and ree ceriew of this file before outside recruitment is orized

St that departmental appointing powers not requine overfiled personnels andelther reclassify positions or accept minimally qualified applicants who are referred. rmine and announce which positions, if any, requine sex as na fide occupational qualification.

Classification, and salary
gr or review career laddexs, horizontal, vertical, and onal, to assure opportuntty of advancement to and through sification series, from unskilled to skilled, non-profesal to professional and non-professfonal to managerial jobs.
2. Facilitate promotion as soon as possible for persons initially placed in positions for which they are overqualified; file spplications of such persons in the Affirmative Action file; when appropriate, waive the probationary ban on promotions.
3. Develop and systematically use a periodically updated promotional file. Employees should be automatically reviewed for promotion at regular intervals.
4. Review salaries in relation to job qualifications and specifications and eliminate inequities that are the result of sex discrimination.
5. In jobs where heavy lifting or other strenuous exertion is required, determine ability on the basis of a physical examination.
D. Training

1. Hold in-service training sessions for supervisors, personnel staff, and employees on sex discrimination and problems associated with breaking stereotyped job roles, attitudes, etc.
2. Establish on-the-job and job upgrading training for women in fields of traditionally male expertise (and vice versa for men).
3. Establish counseling sessions for men and women working in non-traditional sex-typed roles.
4. Systematically establish career development programs for all women employees.

## E. Special Programs

1. Establish such services as child care facilities, counseling, and a reference file of available child caretakers and centers, to aid parents-employed or seeking employment with the Univer-sity-who need care for their children.
2. Guarantee paid maternity and paternity levve for empioyees without loss of job or job status.
3. Provide part-time career opportunities at all levels of employment.
F. Communication
4. Inform the public about University policy against sex discrimination.

$$
12
$$

2. Issue and post statements for applicants and recruitment sources affirming Univensity $\beta>1$ licy against sex discrimination, detailing specific examples of formerly sex-typed jobs now open to both men and women.
3. Make available the ethnic and sex summaries by unit and title code to all Employment Representatives.
4. Provide copies of this and other reports to interested groups.

## G. Investigations

1. Maintain separate statistics for men and women on the hiring and promotion process to review progress and determine the blocks to affirmative action. The present departmental order form could be revised to include sex codes, departmental and recruiter sex preferences, and whether the position is usually sex-typed. Record applications, new hires, requests for transfer or promotion, promotions, and terminations.
2. Seek information to create a detailed profile of male and female employees: rates of turnover, rates of promotion, length of service, actual salaries, educational level, age, ethnic group, level of job-related experience, and number and age of dependents.
3. Continue research and development regarding child care needs and facilities.

FACULTY ATTITUDE SURVEY

UNIVERSITY OF CALIFORNIA, DAVIS

HERKELEY - DAVIS • IMVINE • LOS ANGELES • MIVERSIDE • SAN DIEGO • SAN FRANCISCO

TASK FORCE ON THE STATUS OF WOMEN OFFICE OF THE CHANCELLOR DAVIS, CALIFORNIA 95616

May 18, 1971

## Dear Colleague:

On April 28, 1970, Chancellor James H. Meyer appointed a committee to investigate the status of women on the Davis campus. In keeping with its charge, the committee has established sub-committees to investigate the status of women among administrative personnel, faculty, and students.

Many methods of collecting information are being used. One of them is an attitude survey of all faculty members and a sample of faculty wives. We would greatly appreciate your cooperation in filling out the enclosed questionnaire. Your cooperation is essential if we are to secure an accurate picture of faculty opinion. The efforts of the various sub-committees are being coordinated, so that this should be the only occasion when we will be asking your assistance. Your responses, of course, will remain anonymous. Our findings will be published in a report next fall.

INSTRUCTIONS: After you have filled out the questionnaire, please fold it in half, staple it closed, and drop it into campus mail. (The return address is already stamped on the back.) At the same time, would you please return the enclosed post-card, so that we can record that you have responded without in any way jeopardizing your anonymity. If you have any questions about the auspices of the survey, please call Nadine Thomas in the Planning and Analysis Office (2-0250).

Thank you for your cooperation in this matter.

$$

$$

I PLEASE CHECK THE APPROPRIATE SPACE SHOWING WHETHER YOU STRONGLY AGREE, AGREE, DISAGREE, OR STRONGLY DISAGREE WITH THE FOLLOWING STATEMENTS.

## Strongly

Agree Agree Disagree Disagree

1. Many qualified women can't get good jobs, although men with the same skills have less trouble.
2. In my opinion, children of working mothers are not as well adjusted as children of non-working mothers.

3. Faculty members, regardless of sex, should be permitted leaves of absence to take care of young children.
4. Men in the academic world are generally more career oriented than their female colleagues.
5. In my opinion, in the tight job market such as we have now in the universities, women really have no business pushing for increased job opportunities.
6. It seems to me that women are just as capable of doing competent research as are men.

7. Women should be represented on all Senate committees that have major responsibilities for academic policy.
8. Female faculty do not publish as much as males in their field.
9. Women should hold off making demands until more of the demands of minority group members are met.
10. The university should make child-care facilities available to all faculty members and employees who desire them.
11. I would be reluctant to hire a woman for a faculty
position because she would probably not stay on the job as long as a man.
12. Age should not be a criterion in admitting men or
women to graduate school or considering them for faculty positions.

$$
\frac{1}{14 / 1} \frac{2}{3}
$$

13. Women are probably not as good at critical thinking as men.
14. Female applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the number of women trained in the field.

$$
16
$$

15. Husbands and wives should be able to hold faculty: positions in the same department so long as each does not participate in promotional decisions regarding the other.
16. The husband of an academic woman is often forced to perform domestic duties that should not be his responsibility.
17. Sexual tensîons are likely to cause problems when women are on the faculty.
18. Generally speaking, women do not handle fessional status with much sophistication or restrinnt.
19. Men who regard faculty women favorably usually change their minds when they have to work closely with them on departmental committees.
20. People tend to find highly successful women particularly threatening.
21. Women faculty are more likely to take a personal interest in students than are men.
22. Persons with lectureships or research appointments should be periodically reviewed for advancement to assistant professorships or higher.
23. It is important for female students to have female faculty to turn to.
24. Women tend to be better at teaching younger undergraduate students than at teaching advanced graduate students.
25. Graduate education for women is a poor investment since they often do not use their training.
26. Few women are capable of being good wives, mothers, and professionals simultaneously.
27. Generally speaking, my mother was probably smarter thar my father.
28. All faculty should be permitted to hold less than full time appointments without prejudice to eligibility for promotion, tenure, and sabbatical leave.
29. Departments with small percentages of women graduate students should actively recruit more women.
30. The truly qualified women in my field have no trouble achieving recognition and getting ahead.

## Strongly

Agree
Agree Disagree

Strongly
Disagree
31. Provision should be made for paid maternity leave for female faculty.
32. Women should be considered for fellowships and other support without consideration of their marital status.
33. Professional competition between a husband and wife is bound to be harmful to a marriage.
34. Men generally have an easier time getting research grants than their female colleagues.
35. Women should be included on every departmental committee of graduate admissions.
36. In my opinion, departments with more women on their faculties have less prestige than those with fewer.
37. All other things being equal, if confronted with a choice between a male or female candidate for a faculty position I would favor the male.
38. I generally find it difficult to work closely with a wonan in a professional context without becoming conscious of her as a sexual person.
39. A Department of Women's Studies should be organized at Davis if there is a demand for it.
40. A standing committee on the Status of Women at Davis should be appointed to report annually on the progress of the campus in achieving equality of opiortunity for women.
41. Financial assistance for graduate students should increase with the number of dependents.
42. Departments should actively seek women faculty members even when some male faculty are opposed to the idea.
43. Feh men are capable of being good husbands, fathers, and professionals simultaneously.

Wh. Husbands and wives who both have faculty positions always end up competing with each other, whether they intend to or not.
45. When faculty positions become open, they should always be listed publicly in the official organs of professional associations so that all interested persons have an opportunity to apply.

II PLEASE INDICATE YOUR IMMEDIATE FIRST IMPRESSION OF WHIAT A TYPICAL FEMALE FACULTY MEMBER IS LIKE BY PLACING AN $X$ ALONG EACH DIMENSION IN THE APPROPRIATE AREA.

For example, if there were a "hot...cold" dimension, and your immediate impression of a female faculty member is of one who is fairly cold, then you would mark an $X$ in the area closer to the "cold" end of the continuum.

NOW PLEASE MARK EACH OF THE FOLLOWING DIMENSIONS ACCORDING TO THE SAME INSTRUCTIONS, BUT THIS TIME FOR YOUR IMPRESSION OF WHAT AN IDEAL FACULTY MEMBER (EITHER MALE OR FEMALE) WOULD BE.

IDEAL FACULTY MEMBER
(Male or female)

irrational
 rational
unproductive
 productive open
 closed
 ambitious
 unambitious cooperative

III THE FOLLOWING QUESTIONS REFER TO YOUR OWN ACADEMIC DISCIPLINE AND DEPARTMENT.

1. What is your general impression about how most of your colleagues feel about female scholars in your field? (CHECK ONE)

2. Compared to men, what are the main barriers that a new female faculty member would face in being fully accepted as a colleague in your department?
(CHECK ALL THAT APPLY)
$6 / 1 —$ No special barriers
7/1_Gaining respect as a serious professional
$8 / 1$
$9 / 1$
$10 / 1$ Being considered a friend as well as a colleague

- Getting along with the secretaries and other wome
$11 / \mathrm{L} \quad$ Other (specify)

3. a) Here are some groups that inevitably judge the quality of professional performance in the university. Whose judgement should count the most when the overall performance of faculty members in your department is assessed? (CHECK ONE IN THE LEFT HAND COLUMN)
b) Are there any others on the list whose judgement should count?
(CHECK ALL THAT APPLY IN THE RIGHT HAND COLUMN)
$\begin{array}{cc}12 / 1 & 13 / 1 \\ 2 & 14 / 1 \\ 3 & 15 / 1 \\ 4 & 16 / 1 \\ 5 & 17 / 1 \\ 6 & 18 / 1 \\ 7 & 19 / 1 \\ 8 & 20 / 1 \\ 9 & 21 / 1\end{array}$
The deparment chairman
Tenured faculty in the department only
All faculty in the department
Graduate students
Undergraduate students
The administration
Professional colleagues in other departments or institutions Other (specify)
4. a) What criterion should be most important in considering whether or not to hire a particular candidate for a faculty position? (CHECK ONE IN THE LEFT HAND COLIMNN)
b) What other criteria are relevant? (CHECK ALL THAT APPLY IN THE RIGHT HAND COLUMN)
$2 \%$ Excellence in teaching
2 _24/1—. Excellence in research in the general discipline
3 -25/1_ Strength in the department's particular area of specialization
4 _ $26 / 1$ Ability to "balance out" the department or fill in the gaps in the major fields
5 27/ Political orientation of the candidate
6 _28/1_ Race or ethnicity of the candidate
$7 \ldots 29 / 1 \ldots$ Sex of the candidate
8 _ $30 /$ Other (specify)
5. How many full faculty meetings does your department hold in a normal quarter?
6. Approximately how many times in a year do you attend parties at which the majority of people are likely to be other members of your department?
7. How many members of your department do you consider your close personal friends?
8. In general, how much conflict would you say there is in your department? A great deal $\frac{3 \pi / 1}{3}$ Veme little $\frac{2}{3}$ None at all
9. How many women are there on the regular faculty of your department? (That is, in positions of assistant professor or higher?)

37
10. How many women lecturers, research associates, or their equivalent are there in your department?

38-397
11. How many meetings of professional associations will you have attended in the last three academic years, including this one?
12. In your opinion, what is the current mood among your colleagues in the department about seeking and/or hiring women in regular faculty positions? How about yourself? (ATTACH ADDITIONAL SHEET IF NECESSARY)

IV BACKGROUND INFORMATION (FOR STATISTICAL PURPOSES ONLY゙)

18. How many years have you been at Davis?
19. Generally speaking, how do you consider yourself politically?

Appendix 2.
Survey of Women
Married to Faculty Members

I

TASK FORCE ON THE STATUS (IF WOMEN OFFICE OF THE CHANCELLOR davis, California 95616

May 18, 1971

## Dear Madam:

On April 28, 1970, Chancellor James H. Meyer appointed a committee to investigate the status of women on the Davis campus. In keeping with its charge, the committee has establisher subcommittees to investigate the status of women among administrative personnel, faculty, and students.

Many methods of collecting information are being used. One of them is an attitude survey of all faculty members and a sample of faculty wives. We would greatly appreciate your cooperation In filling out the enclosed questionnaire. Your cooperation is essential if we are to secure an accurate picture of faculty opinion. The efforts of the various subcommittees are being coordinated, so that this should be the only occasion when we will be asking your assistance. Your responses, of course, will remain anonymous. Our findings will be published in a report next fall.

INSTRUCIIONS: Please return the questionnaire in the envelope provided to the Planning and Analysis Office, University of California, Davis. At the same time, would you please return the enclosed post-card, so that we can record that you have responded without in any way jeopardizing your anonymity. If you have any questions about the auspices of the survey, please call Nadine Thomas in the Planning and Analysis Office (2-0250).

Thank you for your cooperation in this matter.
Sincerely,
Kathleen Fisher
Dr. Kathleen Fisher, Chairman Task Force on the Status of Women

I Please check tie appropriate space showing whether you strongly agree, agree, disagree, or strongly disagree witil the following statements.

Strongly<br>Strongly<br>Agree Agrec Disagree Misagree

1. Many qualified women can't get good johs, although men with the same skills have less trouble.
2. In my opinion, children of working mothers are not as well adjusted as children of non-working mothers.

$$
\begin{aligned}
& \overline{5 / 1}-\frac{1}{3}-\frac{4}{6}-\frac{1}{3}-\frac{4}{6}-1
\end{aligned}
$$

3. Faculty members, regardless of sex, should be permitted leaves of absence to take cave of young children.
4. Men in the academic woild are generally more career oriented than their female colleagues.
5. In my opinion, in the tight job market such as we have now in the universities, women really have no business pushing for increased job opportunities.
6. It seems to me that women are just as capable of doing competent research as are men.
7. Women should be represented on all Senate committees that have major responsibilities for academic policy.
8. Female faculty do not publish as much as males in their field.
9. Women should hold off making demands until more of the demands of minority grosp members are met.
10. The university should make child-care facilities available to all faculty members and employees who desire them.
11. I would be reluctant to hire a woman for a faculty position because she would probably not stay on the job as long as a man.
12. Age should not a criterion in admitting men or women to gradu a school or considering them for faculty positions.
13. Women are pr hably not as good at critical thinking as men.
14. Female applicants for faculty positions should be sought out and given preference until their numbers on the faculty approximate the number of women traine in the field.
15. Husbands and wives should be able to hold faculty positions in the same department so long as each does not participate in promotional decisions regarding the
16. The huswand of an academic woman is often forced to perform domestic duties that should not be his responsibility.
17. Sexual tensions are likely to cause problems when women are on the faculty.
18. Generally speaking, women do not handle professional status with much sophistication or restraint.
19. Men who regard faculty women favorably usually change their minds when they have to work closely with them on departmental committees.
20. People tend to find highly successful women perticularly threatening.
21. Women faculty are more likely to take a persons interest in students than are men.
22. Persons with lectureships or research appointments should be periodically reviewed for advancement to assistant professorships or higher.
23. It is important for femal students to have female faculty to turn to.
24. Women tend to be better at teaching younger undergratuate students than at teaching advanced graduate students.
25. Graduate education for wonen is a. poor investment since they often do not use their training.
26. Few women are capable of being good wives, mothers, and professionals simultaneously.
27. Generaily speaking, my mather was probably smarter than my father,
28. All fakists should be permitted to hold less than full time soprentments without prejudice to eligibility for promos.tan ane, and sabbatical leave.
29. Deportments with small percentages of women graduate students should actively recruit more women.
$\frac{331}{2}-\frac{1}{3}$
$\frac{3311}{2}-\frac{1}{3}-\frac{1}{4}$
30. The iruly qualified women in my field have no trouble achieving recognition and getting ahead.

| Strongly |  |  |
| :---: | :---: | :---: |
| Agree | Agree Disagree |  |

31. Provision should be made for paid maternity leave for female faculty.
32. Women should be considered for fellowships and other support without consideration of their marital status.
33. Professional competition between a husband and wife is bound to be harmful to a marriage.
34. Men generally have an easier time getting research grants than their female colleagues.
35. Women should be included on every departmental committee of graduate admissions.
36. In my opinion, departments with more women on their faculties have less prestige than those with fewer.
37. All other things being equal, if confronted with a choice between a male or female candidate for a faculty position $I$ would favor the male.
38. I generally find it difficult to work closely with a woman in a professional context without becoming conscious of her as a sexual person.
39. A Department of Women's Studies should be organized at Davis if there is a demand for it.
40. A standing comittee on the Status of Women at Davis should be appointed report annually on the progress of the campus in achieving equality of opportunity for women.
41. Financial assistance for graduate students should increase with the number of dependents.
42. Departments should actively seek women faculty members even when some male faculty are opposed to the idea.
43. Few men are capable of Leing good husbands, fathers; and prosessionals simultaneously.
44. Husbands and wives who both have faculty positions always end up competing with each other, whether they intend to or not.
45. When faculty posicions become open, they should always be listed publicly in the official organs of professional as sociations so that all interested persons have an opportunity to apply.

II PLEASE indicat'c your immediate first impression of wilat a typical female facility MEMBER IS LIKE BY PLACING AN X ALONG EACH DIMENSION IN TIE APPROPRIATE AREA.

For example, if there were a "hot...cold" dimension, and your immediate impression of a female faculty member is of one 1 io is fairly cold, then you would mark an $X$ in the area closer to the "cold" end of the continuum.

36. What kinds of activities outside the home are you involved in? not counting employment or school)
37. In general, do you think that the activities available for faculty wives at Davis are worthwhile? Yes $\qquad$ No $\qquad$
38. What changes, if any, do you think are needed to improve the situation of faculty wives at Davis? (ATTACH AN ADDITIONAL SHEET IF NECESSARY)

## Appendix 3.

Survey of Academic and Non-Academic Staff $!$

DAVIS CABPUS

To enable us to obtain current knowledge of employment opportunitios and chialoyect reactions to their employment situation at UC Davis, we of the Task force woulc appreciate your completion of this questionnaire. If you would like to discuss further the questions raised here you may include your name and phone numbel and we w:11 contact you. All answers and conversations will be confidential. please return the conpleted questionnaire to: Thancellor's Task Force, Foom , Mrak Hall. Thank you for your cooperation.

1. Is your position (1) academic $\qquad$ , (2) non-academic $\qquad$ ?
2. How many years have you been continuously employed by UC Davis?
(1) Less than 1 year.
(2) More than 1 \& less than 3 years.
(3) Over 3 years.
3. Number of people you supervise directly? $\qquad$
4. Highest level of education:
(1) High school $\qquad$ (3) Master
(2) Bachelor
(4) Ph.D.
$\qquad$
5. Sex: (1) Male $\qquad$ (2) Female $\qquad$ $-$
6. Are you married?
(1) yes $\qquad$ , (2) nio $\qquad$
7. Are you the primary financial support of your family?
(1) yes $\qquad$ , (2) no $\qquad$
8. Do you have dependent children?
(1) yes $\qquad$ , (2) no $\qquad$
9. Is your present job funded by grant money?
(1) yes $\qquad$ , (2) no $\qquad$
10. Gross monthly salary $\qquad$
11. Is your present job:
(1) part-time $\qquad$ , (2) full-time $\qquad$ .
12. Do you prefer:
(1) part-time $\qquad$ (2) full-time $\qquad$ $-$
13. If you are not satisfied with your present job, please check one or more of the following reasons:
(1) Low salary.
(4) Personality conflict.
(2) Inder-emp loyed.
(5) Insufficient merit increases.
—_ (3) Lack of advancement opportunity.
(6) Other - please specify $\qquad$ -
14. Have you ever sought another position on this campus?
(1) yes $\qquad$ , (2) no $\qquad$
15. If so, were you successful?
(1) yes $\qquad$ , (2) no $\qquad$
16. If you were not successful, why?
(1) No position in area of interest available.
(2) Not qualified by education and/or experience.
(3) Person with higher education or skill level hired.
(4) Length of time I could stay on job too short.
(5) Other - please specify
17. Have you experiencod any discrinination in seeking employment at uCl?
(1) yes $\qquad$ ,
(2) no $\qquad$
18. If yes, what do you think was the basis for this discrimination?
$\longrightarrow$
(I) Race
(2) Nationality

- 

(3) Sex
(4) Age
(5) Reli.gion
(6) Other - please speciry $\qquad$
19.: Have you received a promotion while amployed with UCD?
(1) yes $\qquad$ ,
(2) 110 $\qquad$
20. If you have not been promoted, '1y:
(1) Have never sought prowion.
(2) No opportunity for promotion.
(3) Not in present job long enough.
(4) Not eligiule for promotion.
(5) I do not know.
(6) Other - plcase specify
21. Has your spouse sought employment at UCD?
(1) yes $\qquad$ , (2) no $\qquad$
22. Was he/she successful?
(1) yes $\qquad$ , (2) no $\qquad$
23. If not why?
A. Was not sent on interviews by Personnel because:
(1) Nothing open at the time.
(2) Skills not adaptable to University jobs.
(3) Jobs offered not of interest.
(4) Other - please specify
B. Was not hired by Department interviewing because:
(1) Person with higher qualification hired.
(2) Length of time he/she could stay at job too short.
(3) Other - please specify
24. Have you received a merit salary increase while employed at UCD?
(1) yes
,
(2) no

If yes, please indicate the number of times in the last 4 years that you have received a merit increase in each percentage amount:
(1) $0 \%$
(2) $2 \frac{1}{2} \%$
(3) $5 \%$
(4) $7 \frac{3}{2} \%$
25. Have you been satisfied with merit salary increases?
(1) yes $\qquad$ (2) no $\qquad$
26. Have you had a merit increase appealed?
(1) yes $\qquad$ (2) no $\qquad$
27. If yes, was the appeal granted?
(1) yes , (2) no $\qquad$
WOMEN ONLY
28. Have you ever requested a leave of absence for maternity leave?
(1) yes (2) no
$\qquad$
29. Was the leave granted?
(1) yes $\qquad$ (2) no $\qquad$
30. 1f yes, who granted it?
(1) supervisor $\qquad$ (2) Persomel $\qquad$
31. How long was the leave?
(1) 0-2 mos.
(3) 4-6 mos.
(2) 2-4 mos.
(4) Over 6 mos.
32. If leave was not granted, did you appeal?
(1) yes $\qquad$ , (2) 110 $\qquad$
ANSWER ONLY IF MALE AND WIFE FORMERLY WORKED FOR UCD AND NO LONGER DOES .
33. While employed was wife ever refused a leave of absence for maternity leave?
(1) yes $\qquad$ .
(2) no
$\qquad$
34. If yes, was it refused by (1) supervisor $\qquad$ , (2) Personnel $\qquad$ ?
35. Did she appeal?
(1) yes $\qquad$ (2) no $\qquad$ -
$\therefore$.

Questionnaire for Lecturers

Memo to UCD Lecturers
from Barbara Adams, Susan Crockenberg, Margo Kaufman and Jane W elker

Last winter the Chancellor established a Task Force to study the Opportunities for Women at JCD and we are members of a sub-committee studying the opportunities for faculty women on our campus. As we gathered a variety of material we became very interested in the lecturer category because of the variations in defination of this position. The Task Forcelhas been charged wth gathering information and making recommendations, and we would like to include both data and recommendations about the lecturer category.

We are enclosing a brief questionaire to help us gather this information. The data you give us is strictly confidential and will be used only to draw inferences about the situation of lecturers as a group. We would very much appreciace your help by completing the questionaaire. If you have any questions, please call Jane Welker, 752:2959.

## QUESTIONNAIRE FOR TECTURERS

Department $\qquad$ Full time $\qquad$ Percentage/part time $\qquad$
Length of employment at UCD $\qquad$ Do you have security of employment? $\qquad$
Highest degree you have received: _ Are you male $\qquad$ female $\qquad$
Are you pald on a 9 month pay schrdule? By 11 month schedule? ___ by the course? $\qquad$
Are you eligible formerit pay increases? $\qquad$ retirement $\qquad$ ? health Insurance? $\qquad$ Paid vacation? $\qquad$ sick leave? $\qquad$
How many units per year dc you teach? $\qquad$ Who makes up your teaching load?

Do you have a choice in what you teach? $\square$ In when you teach? $\qquad$ Do you work with RA's $\qquad$ TA's $\qquad$ In what capacity $\qquad$

Do you have duties other than teaching? _If so, what are they $\qquad$

Do you serve on departmental ommitices? ___ If so, what are they $\qquad$

Do you serve on campus wide committees? If so, what are they? $\qquad$

Does your department have departmental heetings $\qquad$ ? If so, do you attend $\qquad$ Do you have a vote on departmental policy decisions? $\qquad$ If not, is your opinion requested? $\qquad$ How is your job defined? $\qquad$
 Who defined it? $\qquad$ Would you like a clearer defination? $\qquad$ Can you apply for research funds? do you have time to do research _ Are you involved in a research project? If so, are you the principal investigator? $\quad$ If not, would you be interested in doing researci if there was the time and money $\qquad$

Do you have any comments, suggestions about the lecturer category in general or about your position in specific? Do you have any recoracindations to make about the lecturer category? please use reverse side if necessary.

UNIVERSITY OF CALIFORNIA, DAVIS

November 23, 1970

Dear Senior and/or Graduate Woman at U.C.D.:
Recently a Task Force was established by Chancellor Meyer to make an in-depth study of opportunities for women at the University of California, Davis. As a sub-committee on this task force, we are surveying senior and graduate women in an attempt to ascertain their interest in and encouragement towards a career in administration. It has become obvious that there is a dearth of women administrators on this campus and we hope to get indications as to the reasons for this.

WIll you please take a moment to complete the enc loped questionnair? You may then mail it in the enclosed envelope or return it In person to the Office for Student Affairs, second floor, South Hall. We appreciate your assistance in this effort to make recommendations to Chancellor Meyer for more consideration of women at the University of California, Davis.

Sincerely yours,

Mrs. Ruth E. Anderson, Dean of Women Chairman
for the sub-committee on Opportunities in Administration University of California, Davis

Mrs. Donna Heidanus, U.C.D. Bookstore
Or. Barbara Heller, Physical Education
Dr. George K. York, Food Science

```
Please return to: Dean of Women
    South Hall, Second Floor
    University of California, Davis
```

November 23, 1970

SJJVEY OF SENIOR ANE/OR GRADUATE WOMEN, U.C.D.

1. Whrit is your major?
ax Do you plan to seek employment in your major? Yes No
2. Are you interested in an Administrative position in your career? yes No

3 a. If answer is "yes", are there additional things you must do to qualify? Please list.

3b. If answer is "No", please explain why not.
4. Have you been encouraged or discourăged in pursuit of your major?
5. Are there any professional women in your family? Yes No 5a. Any Administrators? Yes No
6. Do you require any Financial Aid? Yes No

6 a. If "Yes does this limit your amount of education? Yes No 6b. If "No" do you intend to study for advanced degrees? Yes No
7. Have you been told that jobs for women are in short supply in your field? Yes No
8. Do you expect to receive the same salary as a man in the same position? Yes No

8 a. If 'No'", why not?
9. Would you encourage a younger female friend or relative to follow your major. Yes No Please explain why.
10. Do you think women are capable of being the "Boss"? Please explain.

$2_{\text {R }}$
Rating of quality of graduate faculty was taken from A Rating of Graduate Programs, Kenneth D. Roose and Charles J. Andersen, Washington, D.C., American Council of Education, 1970.: 1969-70 figures are on the same top five scinols for each department as listed for the 1963-70 years. Data taken from Earned Degrees Conferred, OE 72-2. The five top schools for the departments rated are as follows (* indicates tie in rating) :

Botany: UCB, UCD, Harvard (data not included), Michigan, Texas, Wisconsin
Chemistry: Harvard, Cal Tech, Stanford*, Berkeley*, and M.I.T. Zoology: UCB, Harvard, Stanford, Yale, Chicago (not re orted in retrievable form).
Mathematics: UCB*, Harvard*, Princeton, Chicago, M.I.T.
Physics: Cal Tech, Berkeley*, Harvard*, Princeton, Stanford*, M.I.T.*

Anthropology: Chicago, Berkeley, Michigan, Pennsylvania, Harvard. Sociology: UCB*, Harvard*, Chicago, Columbia*, Michigan*.
Political Science: Yale, Harvard, Berkeley, Chicago, Michigan.
Psychology: Stanford, Michigan, UCB, Harvard, Illinois.
Economics: Harvard*, M.I.T.*, Chicago, Yale, Berkeley.
History: Harvard*, Yale*, UCB, Princeton, Columbia*, Stanford*, Wisconsin*.
Philosophy: Princeton, Harvard, Michigan, Pittsburg, Cornell.
English: Yale, UCB*, Harvard*, Chicago*, Princeton* (UCB and Harvard tied for second, Chicago and Princeton for four th.
Foreign Languages: Classics-Harvard, UCB, Princeton, Stanford, Michigan, N. Carolina. Fremch-Yale, Columbia, Harvard, Princeton (Harvard \& Princeton taken Exom Romance Languages and Philology), UCB, Chicago. German-UCB, Yale, Indiana, Texas, Stanford. Russian-Harvard, UCB, Columbla, Yale, Chicago. Spanish--Harvard, UCB, Wisconsin, Pennsylvania, Illinois, Michigan, Texas, Yale.
Biochemistry: Harvard, UCB, Stanford, Rockefeller, Wisconsin. Art History: NYU, Harvard, Columbia, Princeton*, Yale*.
${ }^{3}$ In the Art Department, degree achievement is not a formal requisite for practice faculty (MA is usual) although the doctorate is required of the Art History faculty. Information on national art degree production and employment of women in art departments was obtained from preliminary data distributed to Members of the College Art Association in January 1972 by Professor Ann S. Harris, Hunter College. This information sheet is given in Appendix (13).

Appendix 13. COLLEGE ART ASSOCIATION STATISTICS FOR COLLEGE ART FACULTIES

## Appendix 13

National data on College Art Faculties
Ann Sutherland Hatris for the College Art Associatior
PRELTMINARY STATISTICS FOR WOMEN IN C.A:A: PROFESSIONS
I. Ph.D. production (Sources: U.S. Dept. of Education \& College Art Journal, 1967 \& 1971. (Do goverernment statisties combine MFA \& Ph.D.?)

1960-65: 27\% women 1966-67: 43.5\% women 1967-71 (completer \& in progress) $32.9 \%$
(Ph.D.'s, \% women in other fields, 1967-8: general biology 29; biochemistry 22 ; art education 34; early childhood education 100; adult education 21 ; sociology 18.5; history 13 ; psychology 22.5; Spanish 32; English \& Lit. 27.4)
II. DISTRIBUTION OF WOMEN ENCULTY IN 4 YEAR COLLEGES \& UNIVERSITIES: FINE ARTS

In 1963 women were $22 \%$ of all faculty (part \& full time) in such institutions. THiere were then 13,361 such positions. (Source: U.S. Dept. of Educ.)
(Cf. figures: In 1963 women were $18 \%$ of all faculty in 4 year colleges \& universities. Distribution by rank: Full Prof. $8 \%$; Assoc. Prof. $15 \%$; Asst. Prof. $21 \%$; Instructor $29 \%$; Other 37\%)

Distribution of women faculty in 1960 in 20 leading high endow ment \& high enrollment institutions: Fine \& Applied Arts (Source: Parrish in Journ. AAUW, Jan. 1962)

Full Prof. 3.4\%; Assoc. Prof. $18.5 \%$; Asst. Prof. $14.3 \%$; Instructor $11.9 \%$.

Women were $13.8 \%$ of fime a applied arts faculty at all ranks $i m$ the 10 leading high emment institutions tabuluted. Distribution of women faculty in all fields in these 20 institutions in 1960: Full Prof. 3.7\%; Assoc. Prof. 9.3\%; Asst. Prof. 11.4\%; Instructor $16.5 \%$.

Question: . are the high enrollment schools more likely to be studio and the high endowment to be art history? If so, these figures suggest that women artists have a harder time than women art historians.)

Distribution of women faculty in forty one d-pts. of art (incl. art history, studio, art education, etc.) in 1960s (Source: catalogues of institutions concerned published between 1963 \& 1971, the majority after 1967)

Full Prof. 4.7\%; Assoc. Prof. 11.6\%; Asst. Prof. 17.5\%; 23.6\% of Instructors.

Chairmen of Fine Arts Departments, 1970 (Source: AAUW survey by Ruth OItman) (750 institutions were surveyed.)
\% Women: 5\% of all 454 institutions responding; $4 \%$ of co-ed. schools; $6 \%$ of women's schools; $1 \%$ of schools with over 10,000 students; $6 \%$ of schools with under 1,000 students; $4 \%$ of public schools; $5 \%$ of private.
III. C.A.A. WOMEN AS ACTIVE SCHOLARS

Women contributed $23.4 \%$ of the articles in the Art Bulletin between 1965-71, and $19 \%$ of the books reviewed in the same period. Also during this period the \% of books by women reviewed exceeded the of books by women received, suggestiny that their scholarly productions were on the whole slightly more interesting.
IV. WOMEN ARTISTS (source: Women and Art, Winter; 1971; 89E. Broadway, NYC 10002

Whitney Annual: $1965,90.9 \%$ male; $1966,92.4 \%, 1967,91.2 \%$; $1968,93.2 \% ; 1969,94.7 \% ; 1970,78.6 \%$ (aftuer picketing, etc.)

Appendix 17.
HIRING PRACTICES - RAW DATA (original copy only)

TASK FORCE MEMBERS

Ursula Abbott<br>Ruth Alscher<br>Ruth Anderson<br>Kristin Bailiff<br>JoAnn Brach<br>Kathleen Fisher<br>Robert Gerould<br>Robert Glock<br>Dorothy Lowry<br>Sandra McCubbin<br>Romi Meier<br>Lloyd Musolf<br>Dennis Shimek<br>Jane Welker<br>George York

Once upon a time, there was a very primitive society. In this culture, one-half of all the babies born were relegated at the moment of birth to spend the rest of their lives performing menial tasks. They would never be permitted to assume positions of leadership or great.responsibility. Even in their wildest dreams, individuals in the menial-task half of society could not aspilc to become a leader (president, chancellor, chief).

Which half of the society an individual wnuld be assigned to was determined at conception by the random combination of a single chromosome pair, producing certain obvious physical. characteristics. Characteristics resulting in part from the chance combinations of the other 45 chromosomes, such as intelligence, personality, leadership capability, or talent, were considerably less relevant in the determination of the future of that individual.

Gradually, however, a new culture emerged from this primitive tribe of people. Slowly the realization dawned that the characteristics produced by that single pair of chromosomes weren't so important after all, certainly not in regard to intelligence and leadership capabilities. In the new society, there was no arbitrary assignment of duties at birth. Every individual was permitted to mature and to freely seek a position in society which was in harmony with that individual's interests and capabilities.

Of course, the transition between the primitive and the new society occurred very slowly. At first, the menial-task individuals were permitted to leave their narrow confines. As time progressed, more and more of them were allowed to enter previ usly prohibited fields of endeavor. They were even rewarded in currency (monies) for their efforts, although it was understood by all that they would not be rewarded as much as the other half. It was also understood that the menial-task people would never be bosses; while they could work with the other half, they were forbideen to supervise them.

After a very long time in transition, people began to forget about the arbitrary assignments that had been made by their ancestors. Because they forgot, they couldn't understand why people didn't always get equal pay for equal work, or equal jobs for equal skills. Why was half of the population treated differently from the other half? They would scratch their heads and wonder. There was a lot of confusion.

The last FORBIDDEN FIELDS for the menial-task people were the top leadership positions. Everycie knew that the menialtask people were NOT SUPPOSED TO BE BOSSES, even though they forgot why.

Eventually, though, the O1d Ways and the Old Taboos crumbled away entirely, and nobody even remembered what a menial-task person was. From the confusion emerged a beautiful society.

[^0]:    $1_{\text {The overall percentage of men in the teaching ranks (Academic Senate }}$ and Academic Staff) in the winter of 1972 was $91.5 \%$ (1153 $\sigma^{\circ} 107 \%=$ 1260). The overall representation of women, thus, was $8.5 \%$.

[^1]:    *Lecturer Includes only those with Academic Senate status:
    Lecturers with permanency of employment, became members of the Senate in 1971-72.

[^2]:    1. For an identification and evaluation of the Academic Senate procedures used in the promotion and retention of faculty at Berkeley, see the recent study by T. R. McConnell, The Faculty in University Governance, Berkeley 1971. McConnell reports that women at Berkeley are inadequately represented on Academic Senate personnel and policy-making committees, ( 27 ff ) including the restrictively-selected Budget Committee which substantively determines the promotions and retention of individual faculty members ( $p, 30$ ). He further notes that the consequences of secrecy and non-accountability in the Academic Senate operations are important questions to be considered (pp,40; 41). "Berkeley had no effective appeal procedures for persons who had been denied promotion, tenure, or merit increases. Indeed, the personnel process was so confidential at Berkeley that the individual often had to guess at the reasons for his failure to advance," ( $p, 41$ ). Additional discussion of oligarchic behavior and secrecy in Berkeley Academic Senate matters is given by K. P. Mortimer, Academlc Govennment at Berkeley, the

[^4]:    ${ }^{1}$ National figures for earned doctorates conferred all fields by sex of recipient, 1920-1970, are given in Appendix 15.
    ${ }^{2}$ This total excludes Military Science and combines the foreign languages. American Studies program is included because full appointnents have been assigned to it. Other programs have not been included because all members belong jointly to departments and are enumerated there. Because of the method of USOE reporting, statistics on Art were not included.
    ${ }^{3}$ National figures for earned doctorates conferred, disciplines represented by 23 departments are given in Appendix 16.

[^5]:    * Figure cot available.

[^6]:    * Irregular titles include Acting, Visiting, Emeritus, Adjunct, etc., pius Lecturers and Instructors who have both Ph.D.'s and more than half-time appointments.

[^7]:    * According to the "Report of the Subcommittee on the Status of Academic Women on the Berkeley Campus," $10 \%$ of all Ph.D.'s awarded by UC Berkeley in the last 50 years hatve gone to women; nationally, $13 \%$ of all non-medical degrees were uwarded to women in 1968-69; see Suction 1LlA For additlonal data on Ph.D. degrees awanded.

[^8]:    * See Appendix 1

[^9]:    * Those who did not give any impression of a typical female faculty member were as a group neither more nor less favorable to women's rights in their responses elsewhere in the questionnaire than were those who did give such an impression.

[^10]:    *) Numbers of respondents vary, slightly on each dimension, dropping considerably on the "ideal" dimension of feminine-masculine.

[^11]:    * About one-third did not answer.

[^12]:    * Four ambiguous statements were eliminated from the anaigsis of the 45 items included in the original questionnaire.
    $\dagger$ Non-response ranged from a low of $1.2 \%$ to the statement lle sems to me that women are just as capable of doing competent reseftoh as are men" to a high of $24.2 \%$ to the statement "Female faculty do not publish no much as males in their field."

[^13]:    * Numbers too small to show percentages.

[^14]:    * Fifteen items on which there was little difference of opinion across the faculty were excluded from the index, along with three additional items for which a clear interpretation of pro- and anti-feminism was not possible.

[^15]:    * $1.5 \%$ of the males ( 8 ) and $6.4 \%$ of the females (3) are separated or widowed.

[^16]:    * Answered by married males only.

[^17]:    * Numbers too small to report scores.

[^18]:    * Several respondents objected to the term "faculty wife" as a demeaning one because it identifies women only in their relation to a man and not as individuals. However, in the interests of avoiding excessive repetition of the phrase "women married to faculty members," the term is used occasionally in this report.
    + See Appendix 2.

[^19]:    * Numbers refer to the total of each category in the samples; on these items there was a non-response rate of approximately $20 \%$ for male faculty members, $28 \%$ for female faculty members, and $23 \%$ for wives.
    † Underlined traits are preferred in "the ideal faculty member of either sex."

[^20]:    * Not more than one person could have been included in both samples.

[^21]:    * Number too small to report scores.

[^22]:    * Number too small to report score.

[^23]:    It seems to me that being a faculty wife at Davis is, for the most part, a good situation, and I have met many women, the ones we don't hear from, who are content enough with their lot. However, in talking with many wives it is evident that there is a great deal of frustration and unexpressed, perhaps unrealized,

[^24]:    * See Appendix 3.

[^25]:    * Information from the staff survey, spring 1971.

[^26]:    * The Davis Task Force recommends the appointment of an Assistant Vice Chancellor to work closely with the Chancellor of Academic Affairs
