ABSTRACT

A survey of noncredit activities in institutions of
higher education is presented. Contents include refresher activities,
health service activities, technical occupations, and registration
figures. The survey was conducted by means of a questionnaire sent to
all institutions of higher education. (CK)

HIGHLIGHTS

Almost 1 million registrations were reported in noncredit refresher courses in professional and technical occupations by more than 60 percent of the 1,102 colleges and universities which offer non-credit activities.

Total registrations in noncredit continuing education activities in professional and technical occupations were related to level of institution: universities accounted for 74.5 percent; other 4-year and 2-year institutions, 21.3 and 4.2 percent, respectively.

More than one-half of the institutions that offered these activities were other 4-year institutions, but universities had nearly 75 percent of the registrations.

Education courses were the most frequently reported noncredit refresher activities and accounted for 3 out of 10 of the total registrations. The education courses were offered by 312 of the 686 institutions with refresher activities.

Of the total registrations in professional and technical occupational refresher courses, 17.9 percent were in health fields.

Approximately two-thirds of the 216 institutions with refresher activities in the health fields were publicly controlled institutions, and they had over three-fourths of these registrations. Universities alone (public and private) accounted for 4 out of 5 of these registrations.

The nursing profession was served by more institutions than any other health profession or technical occupation, but most registrations were reported in the field of medicine.

About 95 percent of the institutions with noncredit refresher activities in agriculture and forestry were publicly controlled, and they had approximately 98 percent of the total registrations in that field.

FOREWORD

A variety of factors motivate people to participate in adult and continuing education. Some pursue adult education to provide a base for a more complete personal life, others use adult education to develop hobbies or other recreational interests. Still others use adult education to provide knowledge necessary to keep abreast of new developments in their career fields.

Data for this report came from the comprehensive Higher Education General Information Survey (HEGIS) conducted by the National Center for Educational Statistics in the summer and fall of 1968. This survey obtained information on the extent to which colleges and universities offered adult and continuing education, the total registrations, the methods of instruction utilized, and the type of courses offered.

The results are being reported in a series of publications, of which this is the third. The first presented the distribution of institutions sponsoring noncredit activities. The second described registrations.

This initial survey of adult higher education was developed under the direction of Morris B. Ullman, then the Chief of the Adult and Vocational Education Surveys Branch. The survey itself was directed by Florence B. Kemp. J. Eugene Welden, of the Community Services and Continuing Education Branch of the U.S. Office of Education's Bureau of Higher Education, served as a general adviser on this survey and also as coauthor of the report. J. Neil Raudabaugh of the U.S. Department of Agriculture was consultant on the activities of the cooperative extension service. Geneva C. Davis played an important role in preparing the data for publication.

The Joint Committee on Data and Definitions of the Association of University Evening Colleges and the National University Extension Association was of major help in resolving policy issues as they emerged. Members of this Committee were Howell W. McGee, Gayle B. Childs, and Phillip E. Frandson, then chairman.

The key to the success of any survey is the respondent. In this case, special thanks must be extended to the persons who served as campus coordinators for this survey. Their role was not limited to reporting data already available in their files. Rather, they often had to search out data on adult or continuing education activities as offered by various parts of their institutions. This sometimes required that they conduct surveys of their own institutions. Their hard work and strong interest made this survey a reality.

Robert Calvert, Jr., Chief
Adult and Vocational Education
Surveys Branch

INTRODUCTION

The question of obsolescence in knowledge and skill in a professional or technical occupation is receiving increasing attention as rapid increases in new knowledge and changing technology widen the gap between theory and practice.

The professions have a distinctive role in the translation of knowledge into action. The professional makes use of research findings in the planning and execution of new ventures: for example, open-heart surgery, creation of new towns, and development of new structures for the delivery of social services.

Professional occupational development activities provided by colleges and universities bring a dimension of reality to the further education of lawyers, dentists, accountants, engineers, and a host of other occupational specialists. The basic premise underlying such activities is that the refinement of practice and the modification of professional behavior take place when there is a functional relationship between new knowledge and the uses to which it is put. Thus, the emphasis on refresher courses in professional and technical occupations is on the dissemination of information on recent discoveries or latest techniques and their application to job responsibilities.

Although there is no national system of continuing education for professional occupations, there is a trend toward updating requirements for professional recertification or relicensing. For example, the Academy of General Practice of the American Medical Association includes continuing education participation as one of its constitutional requirements for membership.

The growth of continuing education for occupational roles has paralleled, in a sense, the growth of professional schools within institutions of higher education. The increase in occupation-oriented degree programs in the past several decades has been accompanied by an expansion of career refresher opportunities in such fields as health, science, engineering, and management.

Professional associations or organizations cooperate with institutions of higher education in the determination and conduct of continuing education activities, develop courses on their own, and inform their members

of the opportunities that are available. Thus, the on-campus refresher course has been supplemented by the lecture circuit, media presentations (such as closed circuit television), and locally organized seminars and demonstrations.

The information in this report demonstrates the response of institutions of higher education to community and individual needs in this era of rapid technological change. It is based upon OE Form 2300-8, "Selected Adult Education Activities in Institutions of Higher Education, 1967-68," which was included in the Higher Education General Information Survey (HEGIS) package in the spring of 1968. Its purposes were to determine the distribution and magnitude of selected continuing education activities in colleges and universities and to obtain detailed information on professional refresher courses and community development and community service programs. (See appendix C.)—

In Part I--Types of Activities and Registration--of the form, the estimated data were to be reported by type of activity (classes, short courses, etc.) for two categories: degree-credit optional (certain types of recognition other than credit normally used toward a degree or other formal award) and noncredit. These data provided the information for the first two publications in the series based upon this survey. These reports, Noncredit Activities in Institutions of Higher Education, 1967-68: Institutional Distribution and Noncredit Activities in Institutions of Higher Education, 1967-68: Registrations^{1/}, explored the distribution of noncredit activities among the institutions and the numbers of registrations in these activities, respectively.

This third publication in the series on noncredit activities conducted in institutions of higher education covers the refresher courses in professional and technical occupations. The data were developed from Part VI--Professional Refresher Courses--of the survey form. The institutions of higher education were asked to list each refresher course by profession along with the estimated registrations. The courses were to be further identified with the sponsoring administrative unit, type of activity, and topic.

As used in this report, the refresher course in professional and technical occupations is defined as study carried on by practicing members of a professional or technical career (dentistry, dental hygiene, engineering, law, medicine, medical technology, office specialists, etc.) as a means of keeping abreast of developments that directly affect their career activities.

^{1/} U.S. Office of Education, OE-13036 and DHEW (OE) 72-13, by Florence B. Kemp, Washington, U.S. Government Printing Office, 1971.

EXTENT OF NONCREDIT ACTIVITIES

This survey of "Selected Adult Education Activities in Institutions of Higher Education, 1967-68," showed that colleges and universities had over 6.5 million registrations in selected adult education activities. Of this total, 0.9 million were in activities identified as degree-credit optional: creditable but not normally used for credit toward a degree or other formal award. Most of the registrations--over 5.6 million--were in noncredit activities reported by 1,102 institutions.

The registrations reported indicate the total number of persons registered in each activity. Thus, some duplication exists, as an individual could be registered in more than one activity. No attempt was made to determine the number of individual persons (unduplicated count) since institutional recordkeeping procedures usually did not provide this information.

The survey form also requested estimated registration data for two broad categories of adult or continuing education: community development and community service programs (part IV) and professional refresher courses (part VI). More than half of the institutions of higher education with noncredit activities reported courses within these two categories, and registrations in these activities accounted for more than half of the registrations in all noncredit courses. (See charts 2 and 3.)

The 1967-68 survey provides data on 94.3 percent of the institutions contacted; the nonresponse rate of 5.7 percent had a negligible effect on the data reported, since most of these institutions were among the smaller and newer institutions. The survey returns are summarized in the following tabulation. Data in this report refer to the United States (50 States and the District of Columbia).

Chart 2—Distribution of noncredit adult education registrations in institutions of higher education, by major category: United States, 1967-68

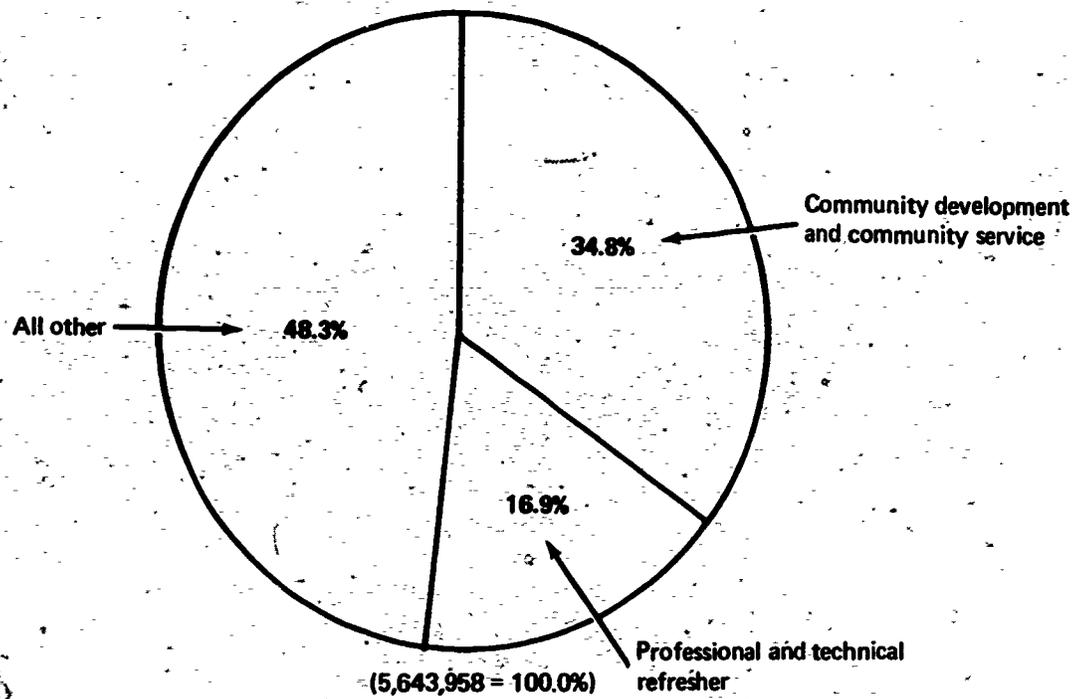

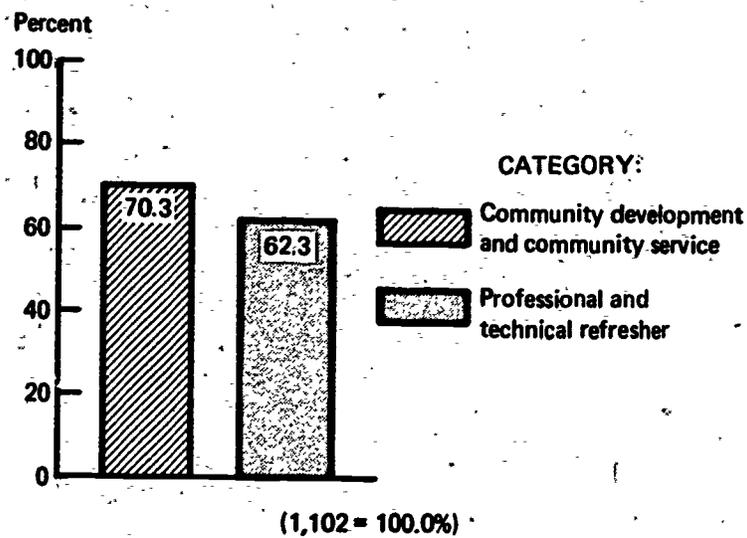

Chart 3—Distribution of number of institutions of higher education with noncredit adult education activities, by major category: United States, 1967-68

(Many institutions offer both refresher and community development activities; therefore, the number of institutions with these activities is not additive.)

<u>Surveyed institutions</u>	<u>Number</u>	<u>Percent</u>
Total	<u>1/ 2,336</u>	<u>100.0</u>
Respondents	<u>2,202</u>	<u>94.3</u>
Reporting no adult education	979	41.9
Reporting adult education activities	<u>1,223</u>	<u>52.4</u>
Noncredit activities	<u>1,102</u>	<u>47.2</u>
Noncredit activities only	611	26.2
Noncredit and degree-credit optional	<u>491</u>	<u>21.0</u>
Degree-credit optional only	<u>121</u>	<u>5.2</u>
Nonrespondents	<u>134</u>	<u>5.7</u>

Special programs offering refresher courses in professional and technical occupations (see Survey Procedures and Definitions for further discussion) were among the activities commonly underreported. These are generally short-term noncredit activities and frequently include those that may be cosponsored with professional and technical associations and with business and industry. They may involve one or many organizational units within an institution and relate to data that are not normally collected by campus administrators.

Data from a related U.S. Office of Education publication, Participation in Adult Education, 1969, Initial Report^{2/}, also show that institutions of higher education are an important source of instruction for continuing education activities. They were among the three leading sources of instruction, accounting for 25.2 percent of the total participants (unduplicated count) in adult education. The other major channels of these activities were public and private schools (27.7 percent) and on-the-job training (27.5 percent).

This publication analyzes noncredit refresher courses for professional and technical occupations by control (public, private) and level (university, other 4-year, 2-year) of institution.

^{1/} The survey form used in collecting these data was mailed with the Higher Education General Information Survey to all institutions in the higher education universe in the fall of 1968. Since the data requested refer to the school year 1967-68, coverage was adjusted to the fall 1967 universe of 2,367 institutions. By the time of reporting, however, 31 institutions had merged with other schools. These reports were combined to show a universe of 2,336 institutions. Excluded were U.S. Service Schools and institutions in outlying areas (Canal Zone, Guam, Puerto Rico, and Virgin Islands).

^{2/} OE No. 72-1, by Imogene E. Okes, Washington, U.S. Government Printing Office, 1971.

In addition, these professional and technical refresher courses are further distributed between two categories: health and nonhealth occupations, the latter referred to in this report as selected occupations. The health occupations are readily identifiable and represent an area that traditionally has been analyzed.

As the distinction between these fields is used frequently in this report, a list of components follows:

Health Service Professional and Technical Occupations

Chiropody or podiatry	Optometry
Dental hygiene	Osteopathy
Dentistry	Pharmacy
Hospital administration	Public health
Medical technology	Radiologic technology
Medicine	Veterinary medicine
Nursing	Other
Occupational and physical therapy

TOTAL NONCREDIT REFRESHER ACTIVITIES IN PROFESSIONAL AND TECHNICAL OCCUPATIONS

Registrations

Noncredit refresher courses are offered by publicly and privately controlled institutions of higher education at all levels (universities, other 4-year, and 2-year institutions). Chart 4 and table 1 present registration data for 1967-68. Of the 955,786 noncredit registrations in such refresher activities, 17.9 percent were in the health fields and 82.1 percent in selected occupations.

In the health fields, the public sector accounted for 76.5 percent of the 170,657 total registrations. For selected occupations, the publicly controlled institutions reported 658,557 registrations, or 83.9 percent of the total. By both control and type of institution, most refresher activities were concentrated in public universities, where 64.6 percent of these registrations were reported. Almost three out of four registrations were in universities and over 4 out of 5 were in the public sector. The private sector had a higher proportion (17.4 percent) of professional and technical registrations than of total noncredit registrations (13.6 percent).

Universities accounted for about the same percentage of both the total noncredit registrations and noncredit refresher registrations, 73.6 percent and 74.5 percent, respectively. The other 4-year institutions had 12.4 percent of the total noncredit registrations and 21.3 percent of the noncredit refresher registrations. This contrasted with 2-year institutions, which accounted for 14.0 percent and 4.2 percent of the noncredit and refresher registrations, respectively.

In the public sector, the other 4-year institutions had 8.0 percent of the total registrations in noncredit activities, compared with 17.0 percent of the total in refresher activities. In the private sector, however, the other 4-year institutions accounted for about the same percent of total registrations in each distribution, 40.6 percent and 41.5 percent, respectively. (See table 2.) Over 90 percent of the total noncredit and the noncredit refresher registrations for the 2-year institutions were in the public sector. Among all public institutions, 15 of 100 registrations in noncredit activities were in 2-year colleges. This compares with approximately 5 out of 100 registrations in refresher courses.

In both public and private institutions, level appears to be a significant factor in number of registrations. Registrations in refresher activities, ranked in order of magnitude, were: universities, other 4-year, and

Chart 4—Estimated registrations in noncredit refresher courses in professional and technical occupations in institutions of higher education, by control and level of institution: United States, 1967-68

Note.--Percent details may not add to totals shown because of rounding.

2-year institutions. For example, universities accounted for 72.8 percent of such registrations in the selected occupations, and 2-year institutions only 4.8 percent.

In addition, there was a positive correlation between size of institution and relative registrations in noncredit adult or continuing education activities. Thus, institutions with "regular" student enrollment of 20,000 or over reported more than one-half of the total noncredit registrations.^{1/}

Information on type of institution sponsoring professional and technical registrations appears in table 2.

Table 2.--Percent distributions of estimated registrations in noncredit activities and refresher courses in professional and technical occupations in institutions of higher education, by control and level of institution: United States, 1967-68

^{1/}U.S. Office of Education, Noncredit Activities in Institutions of Higher Education: Registrations, 1967-68, OE No. 72-13, by Florence B. Kemp, Washington, U.S. Government Printing Office, 1971.

Institutions

The participation of institutions of higher education in noncredit refresher activities in the professional and technical occupations indicates an awareness of the need to provide opportunities to update knowledge and skills. The more than 5.6 million noncredit registrations were distributed among the 1,102 institutions out of a universe of 2,336. The nearly 1 million registrations in the professional and technical occupational refresher activities were in 686 of the 1,102 institutions with noncredit activities.

Of these 686 institutions, 618 or 90.1 percent had courses in selected occupations, whereas only 216 or 31.5 percent had refresher courses in health fields. Further details appear in table 3.

Approximately half (47.2 percent) of the 2,336 institutions in the survey universe sponsored noncredit activities; 62.3 percent of these 1,102 institutions had refresher activities in the professional and technical occupations. Public universities had the highest rate of participation, 94.5 percent; 86 of the 91 universities had refresher courses.

Publicly controlled other 4-year institutions had a much higher rate of participation than did similar private institutions. The 2-year institutions participated strongly in refresher activities--50.4 percent in the public sector (182 of 361 with noncredit activities) and 34.4 percent in the private sector (21 of 61).

Table 4 presents percentage distributions of the institutions with noncredit activities and the institutions with refresher courses in the professional and technical occupations. These distributions also demonstrate that institutions in the public sector were more heavily involved in both the noncredit and refresher activities in the professional and technical occupations.

Table 3.--Number and percent of institutions of higher education with noncredit activities and refresher courses in professional and technical occupations, by field and by control and level of institution: United States, 1967-68

NONCREDIT REFRESHER ACTIVITIES IN PROFESSIONAL AND TECHNICAL OCCUPATIONS, BY FIELD

Registrations

The 1967-68 total estimated registrations of 955,786 in institutions of higher education are distributed between the health fields and selected fields by control of institution in chart 5, and registrations in these refresher courses in each of the professional and technical fields are ranked in descending order of magnitude in table 5.

The scope of the activity is wide and indicates a response, even though a limited one, to new technologies such as medical technology, radiologic technology, public health, etc. The sample list of courses presented in appendix B further reveals the responsiveness of the institutions of higher education to emerging needs.

Chart 5—Distribution of estimated registrations in noncredit refresher courses in professional and technical occupations in institutions of higher education, by control of institution and by field: United States, 1967-68

Courses in education rank at the top, accounting for 3 out of 10 of the total registrations. Historically, professional advancement and even salary levels in the educational professions have been linked with continuing education.

Table 5.--Distributions of estimated registrations in institutions of higher education with noncredit refresher courses in professional and technical occupations, by control of institution and by field: United States, 1967-68

Radiologic technology	459	459	--	37	35	--
Osteopathy	357	100	257	38	37	36

Other areas in which incentives exist, either through legislative requirements for continuing education or professional recognition, are engineering, law, medicine, osteopathy, etc. Rapid changes in technology in business operations have acted to stimulate registrations in management courses. The broad range of courses reflects the awareness of the professional and paraprofessional of the need to update skills.

There is a strong similarity in registration ranking of the five leading professional and technical fields in both public and private institutions of higher education, with a notable exception. In private institutions law takes sixth place and theology moves up to third place.

Anomalies revealed by the data are best explained through an understanding of the sources of education in particular areas. For example, forestry and agriculture are the historic domain of land-grant institutions (public sector). Theology, however, is historically associated with many of the Nation's leading private institutions. It is then readily understood why over 98 percent of the registrations in forestry and agriculture are in the public sector and almost 85 percent of the registrations in theology are in the private sector.

Institutions

Over half of the institutions in the public sector and more than 40.0 percent in the private sector reported refresher activities in professional and technical fields (table 3). Shown in rank order by field are numbers of institutions with these activities. (See table 6.) Education leads in number of institutions with refresher activities (312 out of 686). Management, engineering, and real estate and insurance also rank among the top five in both publicly and privately controlled institutions. Nursing ranks fourth in the public sector but shifts to ninth in the private sector, whereas theology ranks 24th in the public sector but moves up to second position in the private sector.

Medicine and law are noticeably absent from top-ranking positions because of the relatively small number of medical and law schools in the institutional universe.

Table 6.--Distributions of institutions of higher education with noncredit refresher courses in professional and technical occupations, by control of institution and by field: United States, 1967-68

**NONCREDIT REFRESHER ACTIVITIES IN HEALTH SERVICE
PROFESSIONAL AND TECHNICAL OCCUPATIONS**

Registrations

Chart 6 shows distributions within the public and private sectors of the estimated registrations in, and institutions of higher education offering, noncredit refresher courses in the health service professional and technical occupations, by level of institution. Details by specific health field follow.

Reported registrations in medicine neared 45 percent of the total registrations in the health fields in 1967-68. The next most active were nursing, dentistry, and pharmacy. By contrast, medical technology accounted for only 2.0 percent of the total registrations reported by 215 institutions of higher education with refresher activities in the health fields.

Chart 6—Distributions of estimated registrations and of institutions of higher education with noncredit refresher courses in health service professional and technical occupations, by control and level of institution: United States, 1967-68

In the field of medicine, refresher courses were offered in a wide range of specialties: urology, surgery, obstetrics and gynecology, pediatrics, and dermatology. Courses were reported in specific diseases, such as cancer, diabetes, and arthritis, as well as in the diagnosis and treatment of rheumatic diseases. Health care courses for special populations such as the aging and students were also indicated by colleges and universities. Dentists were enrolled for courses in preventive orthodontics, oral pathology, and X-ray techniques. Courses were also offered in new dental procedures and in management of dental practice. As in medicine, there were refresher courses in dentistry for children and care for the aging patient.

Registrations in nursing numbered 27,974, or 16.4 percent of total registrations reported in health service occupations. The estimated number of registrations in dentistry was 18,785 (11.0 percent). Registrations in dental hygiene courses, however, numbered 787 (0.5 percent). Pharmacy course registrations totaled 13,969 (8.2 percent). Thus, the long-established health professions of medicine, nursing, and dentistry accounted for 71.6 percent of registrations reported in the health service professional and technical occupations. In the newer disciplines or fields such as hospital administration and physical therapy, relatively small numbers of participants were recorded.

In nursing there was considerable emphasis, in the courses reported, on preparing individuals for reentry into the profession. The nurse as supervisor also was reported frequently. In addition, nurses were enrolled in such areas as nutrition, diabetes, clinical practice, and neurosurgical care. Courses for pharmacists included antibiotics, drug therapy, aerosol technology, and "role" conferences in medical care and mental health. Hospital administrators attended courses focused on ward management, control systems, and the administration of long-term care facilities. Among the opportunities for continuing education in public health were: comprehensive health planning, ambulatory care service, student health, and family planning in an urban society.

The "other" health courses were designed to appeal to practitioners in more than one of the health fields and attracted 13,060 registrations, which accounted for 7.7 percent of total registrations.

Consonant with the concentration of registrations in the longer established health professions, refresher activities were centered in the universities, where 82.4 percent of all registrations were reported. Two-year institutions, by contrast, recorded only 1.6 percent of total registrations in health-related areas.

Further details of the distributions of these estimated registrations by control and level of institution are shown in table 7 and appendix A, tables A-1, A-2, and A-3.

Table 7.--Percent distributions of estimated registrations in institutions of higher education with noncredit refresher courses in health service professional and technical occupations, by control and level of institution and by field: United States, 1967-68

Note.--Percent details may not add to 100.0 because of rounding.

Institutions

Of the 216 institutions of higher education which offer professional refresher courses for physicians, nurses, dentists, and a host of other health specialists, 139 (64.4 percent) were under public control; 77 (35.6 percent), under private control. Together they constituted 19.6 percent of all institutions reporting noncredit activities for adult students in 1967-68.

The nursing profession was served by more institutions (106) than any other occupational group in the health-related areas. Of these institutions, 81.1 percent were publicly controlled; 18.9 percent, privately controlled.

The next largest number of institutions (54) reported courses in medicine, closely followed by 48 institutions reporting refresher activities for pharmacists and 41 for dentists. The smallest number of institutions (two) reported courses in radiologic technology, while four institutions indicated refresher courses in chiroprody or podiatry and in osteopathy.

Courses for the continuing professional development of hospital administrators were provided by 39 institutions of higher education. Percent distributions of numbers of institutions with health service professional and technical occupational refresher courses, by field and by control of institution, are shown in table 8.

There has been vigorous activity on the part of professional associations--particularly in medicine, dentistry, pharmacy, and hospital administration--for continuing education. Although data used in this report do not permit analysis of relationships between such associations and institutions of higher education in the conduct of professional refresher offerings, follow-up procedures used in the survey indicate that they cooperate in the determination and scheduling of some of the courses. This connection between the professional association and the institution is underscored by the requirements of certain associations that "continuing education credit" may be obtained through "university-sponsored courses."

For most health-related areas of continuing study, the majority of institutions offering noncredit refresher work were publicly controlled. The participation rate for public institutions ranged from 57.1 percent to 100.0 percent for all areas except two. For the professions of chiroprody or podiatry and of osteopathy, three of the four reporting institutions were under private control.

Sixteen institutions, largely publicly controlled, reported courses prepared for members of several of the health service specialties. These courses were usually problem oriented. Featured were refresher activities in drug experimentation, emergency treatment, health of the school child, and the patient and his family.

Further details on the characteristics of the distribution of these activities among the 216 institutions may be found in appendix A, tables A-4 and A-5.

Table 8.--Percent distributions of institutions of higher education with non-credit refresher courses in health service professional and technical occupations, by control of institution and by field: United States, 1967-68

Field	Number of institutions	Percent with course in field, by control

1/Details exceed total number of institutions because many institutions reported courses in more than one field.

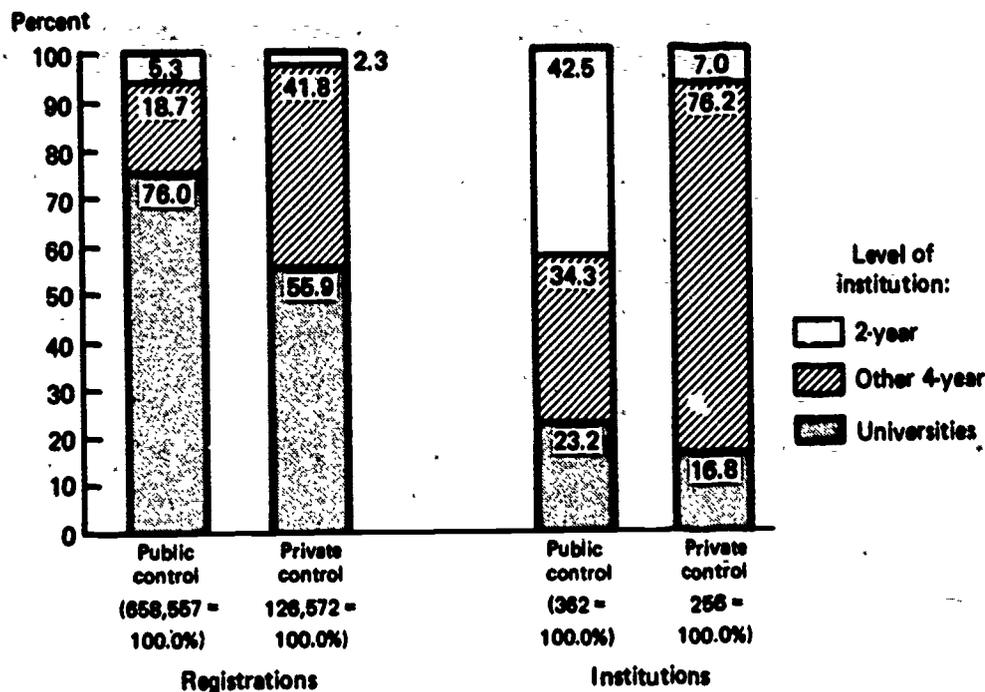

NONCREDIT REFRESHER ACTIVITIES IN SELECTED PROFESSIONAL AND TECHNICAL OCCUPATIONS

Registrations

The distributions in chart 7 show, by level of institution, the estimated registrations in institutions of higher education and the institutions sponsoring noncredit refresher courses in selected professional and technical occupations. A discussion of these distributions, by special field, follows.

Chart 7—Distributions of estimated registrations and of institutions of higher education with noncredit refresher courses in selected professional and technical occupations, by control and level of institutions: United States, 1967-68

(Except health service specialties)

Education professionals in 1967-68 accounted for 36.4 percent of the 785,129 reported registrations in selected occupations. Next were engineering (10.8 percent), law (9.9 percent), management (9.1 percent), and natural and physical sciences (5.0 percent), as shown in table 9.

Continuing education offerings for teachers were often directed to the improvement of instruction at both the elementary and the secondary levels. Included were sessions dealing with the social science curriculum, high school physics, industrial arts, and modern mathematics. Speech and hearing, linguistics, musicology, and the integration of the physical sciences were other areas reported by colleges and universities. Some examples of courses related to methods and techniques of instruction

Note.--Percent details may not add to 100.0 because of rounding.

were use of film as a living art, use of current news media as a teaching aid, and methods and materials in classroom speech improvement. The general area of educational administration was represented by such topics as human relations, equal employment practices, and clinical conferences for school personnel administrators.

Highly specific courses were offered for specialties within the field of engineering. Two examples were advanced petroleum reservoir engineering and computer applications in mineral processing at low temperatures. Other offerings for engineers were corrosion engineering, plastics, ceramics, a conference on "Energy Conversion Research," and a refresher course in power instrumentation.

Colleges and universities served the continuing education needs of the legal profession through a variety of offerings. Among the activities reported were courses in trial procedure, wills and probate, farm and ranch law, patents, civil practice, and penal law revision. Review courses in preparation for the bar and accounting examinations were also offered by institutions of higher education.

For the management professions, courses tended to focus on the processes of administration and supervision. Among the course titles reported were scientific decisionmaking, management and the behavioral sciences, and modern management structures. Other areas included principles of purchasing, operations research, taxation and the controllership, and courses for special groups such as photographic dealers, transportation agents, and tire dealers. In the business-related areas, institutions of higher education cited courses concerned with banking practices, money and capital markets, Federal income tax, and the securities and investment market.

The following occupational areas each enrolled less than 1 percent of the total registrations in selected professions and technical occupations: personnel and public relations, labor union administration, library science, government, computer science, and architecture. Other professional registrations ranged from 1 percent to 3 percent in the following areas: Theology, investments, social work, secretarial studies, journalism, home economics, finance and banking, clinical psychology, and accounting. Registrations in agriculture were 3.1 percent; in real estate and insurance, 3.9 percent.

Registrations in activities designed for labor union leadership roles (administrative or supervisory) were offered by universities, rather than other types of institutions, in a ratio of more than 4 to 1. For only one professional group--theologians--did other 4-year institutions register more participants than the universities.

Among the science courses offered were those designed especially for biologists, chemists, physicists, and earth scientists.

Refresher activities in the library field dealt with such topics as textual criticism, reference services, and cooperation between university libraries. Illustrative of continuing theological education opportunities were courses

entitled drama in the parish program, church and community studies, contemporary theology, and marriage crisis counseling.

Appendix tables A-6 thru A-9 present additional estimated registration data and percent distributions by control and level of institution.

Institutions

As noted earlier, more institutions of higher education (312) offered refresher courses in education than in any other field (see table 10). In terms of control, 64.1 percent of the 312 are public institutions and 35.9 percent private. By type of institution, 54.2 percent were classified as other 4-year institutions, 27.6 percent as universities, and 18.3 percent as 2-year institutions.

The second highest number of institutions (166) provided courses in management. Following closely behind management was engineering, with 156 institutions.

Fields offered by the fewest schools were labor union administration (12 institutions), other (13 institutions), and architecture (20 institutions).

The distribution of colleges and universities with noncredit refresher courses by control and level in the selected professional and technical occupations is shown in table 10.

Refresher courses in professional and technical fields tend to reflect the regular degree programs of colleges and universities. For example, public institutions of higher education offered almost 95 percent of the refresher courses in agriculture and forestry. Public institutions also participated, at a significantly higher rate than private institutions, in the fields of home economics (86.2 percent), stocks and investments (83.8 percent), personnel and public relations (82.8 percent), and government (80.0 percent). Theological studies are usually associated with private institutions. In this survey, 80.2 percent of the institutions reporting continuing education in theology were under private control. Further data on the distribution of each of the selected professions and technical occupations appear in appendix A, tables A-10 and A-11.

In summary, course offerings for selected professions and technical fields covered a wide range of subject matter, general as well as specific, and enrolled a great variety of specialists.

There are marked differences in size of registrations between publicly and privately controlled institutions. Institutions under public control (362) reported 83.9 percent of the registrations, while private institutions (256) accounted for 16.1 percent. Even more dramatic was the level of registrations for these activities in the public universities. These institutions (84) reported 63.7 percent of total registrations in professional and technical career development activities.

Table 10.--Percent distributions of institutions of higher education with non-credit refresher courses in selected professional and technical occupations, by control and level of institution and by field: United States, 1967-68

SURVEY PROCEDURES AND DEFINITIONS

The survey of "Selected Adult Education Activities in Institutions of Higher Education, 1967-68," provided the data for this report. The questionnaire, OE form 2300-8, was part of the Higher Education General Information Survey (HEGIS) package mailed to all the institutions of higher education in spring 1968.

Adult or continuing education includes activities designed for adults and out-of-school youth who are not regularly enrolled as students in institutions of higher education and whose interests are not ordinarily served by the regular degree program. Estimated registration data were requested for all courses in continuing education completed between July 1, 1967, and June 30, 1968, or any other 12-month period in 1967-68.

Registrations are the reported total number of individuals participating in each activity each time it is offered. Therefore, an individual is counted in total registrations each time he participates in an activity; and registrations, as reported, involve duplication of individual persons.

Few schools keep central records for noncredit activities; no attempt was made to obtain an unduplicated count of registrants. The survey was institutionwide in scope, and data were requested to reflect the selected adult or continuing education activities of undergraduate, graduate, and professional schools; schools of general studies; technical institutes in addition to those conducted by extension departments; and special institutes, bureaus, or other units of the institution. Many institutions appointed coordinators to assemble data from their various subdivisions.

Outside the scope of this survey are social or recreational activities that do not entail instruction, high school courses, activities for high school youth, and activities of less than 3 hours of planned instruction. Excluded also are courses creditable toward degrees of similar awards and courses based on 1-year or 2-year curriculums.

The refresher course is defined in this report as study carried on by practicing members of a profession or technical occupation (dentistry, dental hygiene, engineering, law, medicine, medical technology, office specialists, etc.) as a means of keeping abreast of developments which directly affect their career activities. (See appendix C for additional details.)

In this publication an institution is counted as having a noncredit activity or a particular professional or refresher activity if at least one such activity is reported. Separate reports submitted by branches or other components of an institution were checked to assure an unduplicated count of the registration data.

Institutions are classified as shown in the Office of Education Opening Fall Enrollment reports--4-year or 2-year, according to length of program. The 2-year institutions offer programs extending at least 2 but less than 4 years beyond high school. The 4-year institutions are further classified in two groups--universities and "other" 4-year. Universities are institutions that give considerable stress to graduate instruction, confer advanced as well as bachelor's degrees in a variety of liberal arts fields, and have at least two professional schools that are not exclusively technological. Four-year institutions not meeting these criteria make up the "other" 4-year group and include all institutions that grant bachelor's or higher degrees or some other type of recognition equivalent to such degrees (e.g., ecclesiastical recognition in a theological institution).

The short-term professional and technical occupational refresher activities include data that are not normally collected by campus administrators. Factors that contribute to the underreporting of these data included lack of common terminology, lack of uniform and/or established recordkeeping systems, and decentralized administration.

(1) Terminology:

The term "professional refresher course" was interpreted in different ways by responding institutions. (See Appendix C--Survey Report Form.) Data were reported for courses designed for "professional" secretaries, dental hygienists, etc. Institutions included courses for the paraprofessional and/or technician. It was judged more appropriate in this initial study to accept the data as given: refinements may be developed, based upon this experience, for subsequent surveys.

(2) Registration and recordkeeping procedures:

Followup procedures revealed more noncredit activity than reported, such underreporting resulting from a lack of records. For example, refresher activities conducted by the university-related cooperative extension services were not fully reported. In other cases, participants in these refresher courses often are far removed from the age and status of "regular" students, and college officials overlook them in reporting registrations. Although there were a few instances of overreporting, followup procedures most commonly resulted in additional reporting of noncredit data.

(3) Decentralized administration:

Since the professional and technical occupational refresher courses are dispersed in various units and generally without a central reference point, they may have been completely overlooked when the institution's report was developed.

Special editing procedures were related to credit category and the overlap in data between professional refresher courses and community development and community service programs. The credit category was requested in part I of the survey form--Types of Activities and Registration--which required the respondent to indicate estimated registrations by type of activity (classes, short course, etc.) and by credit category. However, in Part VI--Professional Refresher Courses--the respondent was asked to provide estimated registrations by type of activity without specifying the credit category.

The credit or noncredit status of the professional refresher courses listed in part VI was determined through examination of replies in part I. The activity designated in part VI was linked with the categorization by type of activity in part I; i.e., degree-credit optional or noncredit. (E.g., refresher course in engineering is shown as a conference, but the data in part I show no registrations for a degree-credit optional conference; examination reveals that the refresher activities are essentially noncredit.)

The discussion of institutions participating in the professional and occupational refresher courses is limited to institutions with noncredit refresher courses. Rarely does an institution offer only a degree-credit optional refresher activity or a refresher course with credit that may not normally be used toward a degree or other formal award. (See Appendix C--Survey Report Form.) Although the refresher activities in this survey are essentially noncredit there is a noticeable exception in the field of education. Here it is estimated, from a review of the data, that a maximum of 5 percent of the institutions offering the refresher activities in education reported degree-credit optional activities in education and that these institutions accounted for a much smaller percentage of the total registrations in that profession.

Data overlap occurs because some continuing education activities could be classified both as a professional refresher activity and as a community development or community service program. To avoid the double count it was decided that whenever the professional content of the course was oriented toward practical community problems, it was classified as a community service or community development program.

It is estimated that less than 5 percent of the total registrations classified in the professional and technical refresher category could also be classified in community development or community service programs. However, since many institutions offer activities in both categories the total number of institutions offering these activities is not substantially affected. Large registrations in lecture series were adjusted upon consultation with the respondent to assure that the average attendance per lecture in the series was shown. These data were included only when they were identified as community development and service programs or professional refresher activities.

Appendix A

STATISTICAL TABLES

The data in the appendix tables show distributions of the numbers of institutions of higher education with noncredit professional and occupational refresher courses and the extent of registrations, by control of institution (public or private) and/or level of institution (university, other 4-year, or 2-year) and by profession or occupation for the United States, 1967-68.

Appendix B

LISTING OF REFRESHER ACTIVITIES IN PROFESSIONAL AND TECHNICAL OCCUPATIONS OFFERED BY INSTITUTIONS OF HIGHER EDUCATION, 1967-68

Data for the following list of educational activities come from Part VI-- Professional Refresher Courses--of the survey form. Along with other data, responding institutions were requested to indicate topics of refresher courses. Although this listing is only a sample, it demonstrates that individuals return to institutions of higher education for the purpose of maintaining skills and/or advancing career interests. It also demonstrates institutional response to a wide scope of educational needs.

Health Service Professional and Technical Occupations

Chiropody or podiatry

Podiatric medicine and surgery
Surgery

Dental hygiene

Basic concepts in dental hygiene
Dental team in practice
Dental technology
Developing clinical excellence
Relicensing refresher

Dentistry

Dental management of the aging patient
Dentistry for children
Full mouth reconstruction
Modern concepts in bridge design
New procedures in dentistry
Oral pathology
Practical endodontics for general practitioner
Preventive orthodontics
Production and use of photographs in dental office
X-ray techniques

Hospital administration

Administration of long-term care facilities
Hospital ward management

Medical technology

Instrumentation in medical technology
Medical assistants - laboratory procedures

Medicine

Application of X-ray analysis
Changes in medical care
Common metabolic disorders
Internal medicine
Medical aspects of aging
Neurology
Pediatrics
Radiology of the skull
Selected topics in medicine
Surgery

Nursing

Death and the family
Diabetes and the nurse
Head nurse functions
Neurological and neurosurgical nursing
Nursing in the intensive care unit
Nutritional aspects of aging
Preparing the R.N. for reentry into nursing
Study of sociopsychiatric concepts in the practice of nursing
Trends in nursing service

Optometry

Optometric procedures
Vision care of aging patients

Osteopathy

General medicine practice
Hematology

Pharmacy

Advances in pharmaceutical sciences
Aerosol technology
Antibiotics
Drug therapy
Hallucinogenic drug law
Hospital pharmacists' actions and activities
Institutional pharmaceutical sciences
Pharmacists' role in medical care
Pharmacists' role in mental health
Symposium on pain

Public health

Ambulatory care service
Comprehensive health planning
Family planning in an urban society
Management seminar for public health administrators

Veterinary medicine

Animal diseases
Clinical diagnosis and management of heart diseases in dogs
Dermatology of small animals
Evaluation of bulls
Examination of reproductive problems in cows
Research in veterinary medicine

Other (refreshers: courses for practitioners of many professions)

Addictions - drug, alcohol, food, and tobacco
Children with learning disorders
Community psychiatry
Family psychiatry
Health of the school child
Hospital management of challenging psychiatric problems
Mentally retarded adult in the community
On-the-spot treatment
Patient and his family

Selected Professional and Technical Occupations

(Except health service specialties)

Accounting

Courses

Accounting theory
Auditing
Cost accounting
Managerial accounting
Manufacturing accounting
New computer methods in accounting

Exam preparation, review

Certified public accountants test - review for test
General review courses

Agriculture and forestry

Animal science
Cooperative forest management methods
Farm management
Labor-saving devices
Log hauling and transport methods
Principles in the development of agricultural policy
Research in agriculture
Safety procedures in forest applications
Sawmill improvement
Soil fertility

Architecture

Architecture refresher short course
Islamic architecture and Western medieval architecture
Research and teaching of architecture

Computer science

Analog computing - uses of - potential advantages and limitations
Automation and the computer
Computers and their uses
Computer problems
Computer simulation in systems design
Effective computer software
Management information systems
Modern concepts in systems analysis
New developments in computer
Survey of digital computer programming

Education-teaching, counseling and guidance

Changing role of the teacher
Contemporary teacher in higher education
Critical problems in education
Education and new technology
How to use new teaching materials
Human relations and educational management
Integrated approach to botany, zoology, ecology, and geology
for junior college teachers
Modern math for teachers
Reading conference
Teaching migrant children
Trends in curriculum development
Use of current news as teaching aid

Engineering

Courses

Acoustics and noise control
Advanced petroleum reservoir engineering
Advanced waste treatment
Ceramic engineering
Corrosion engineering
Energy conversion research
Industrial noise and engineering control
Mine ventilation
New developments in engineering design
Techniques and principles of soil sterilization
Theory and practice of metallurgical engineering

Exam preparation, review

Chemical engineering - refresher short course
General engineering - refresher short course
General review of selected topics
Mathematics - review of applied mathematics for engineers
Mechanical engineering - refresher short course
Refresher course in power instrumentation
Refresher for professional engineers' examination
Review and preparation for State engineering license
Selected engineering topics to qualify participants for professional license examination

Finance and banking

Banking, investments, and insurance
Banking practices
Business and commerce
Certified program in banking
Fundamentals of investments
Money and capital markets
Securities and investment market
Securities exchanges
Seminar banking
Stock investment

Government

Management needs for county government offices
Public agency employees - State and local interviewing techniques

Home economics

Clothing, nutrition, and family economics
Food technology
Obesity

Journalism and the arts

Church organist workshop
Color photography
Composition and literature
Elements of journalism (news, reporting, editing, and copy writing)
Literature and materials of music
Modern ballet choreography
Sketching and painting
Stage, screen, and radio
Writing for publication

Labor union - administration or supervisory

Bargaining agreements - labor-management relations

Law

Courses

Admiralty law
Appellate practice
Aspects of municipal law
Condemnation law
Farm and ranch law
International law
Juvenile law
Patent law
Taxation law
Trial procedure
Wills and probate

Exam preparation, review

Bar review

Library science

Classification and cataloging of library materials
Librarians conference
New trends, public libraries
Reference materials

Management

Controllership as an effective management tool
Executive textile seminar
Financial management of small business
Income tax and business decision
Modern techniques of supervision
Operations research and management science

Management--Continued

Principles of purchasing
Techniques and skills of business operation, including the social responsibilities of business
Transportation management program

Natural and physical sciences

Aerospace physics
Chemical and biological polymers
Precision electromagnetic measurements
Radioisotopes
Science and technology of paper industry

Personnel and public relations

Employee orientation program for personnel directors
Personnel management
Personnel management and supervision
Techniques of personnel recruitment and selection

Real estate and insurance

Courses

Appraisal procedures
Changing concepts in automobile insurance
Escrow practices
Estate planning
Fundamentals of life and health insurance
Group pensions - accident and health
Principles of casualty insurance and trading
Problems of financing and making investments in property
Real estate - finance, practices, principles, and legal aspects
Real estate practice

Exam preparation, review

General refresher course - sales, finance, etc.
Preparation for certification for property and casualty underwriting
Preparation for state examination as life insurance agents
Refresher courses for professional examination - chartered underwriting
Study program

Secretarial studies

Business administration for secretaries
Business theory for secretaries (economics, accounting, money and banking, business law, and general office procedures)
Certified professional secretary (accounting, business law, business)
Medical secretaries (medical terms, anatomy, accounting, and credit collections)
Professional legal secretary (law, secretarial procedures and practices)
Secretarial accounting

Social work

Advanced social work
Casework
Cottage parents
Group work
New techniques in handling social welfare cases
Orientation program for caseworkers
Philosophy and principles for employed social service workers
Program designed for employees of community agencies to upgrade skills
of their employees
Social work seminars
Vocational rehabilitation viewpoint of social-workers

Stock market and investments

Federal income tax
Insurance and real estate investing
Investments
Securities and investment
Stocks, bonds, and mutual funds

Theology

Church and family life
Drama in the parish program
New directions in preaching
Philosophical theology
Seminar on ministering to alcoholics
Sermon preparation and presentation

Appendix C

SURVEY REPORT FORM

BUDGET BUREAU NO. 51-567917
APPROVAL EXPIRES: 12-31-68

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

HIGHER EDUCATION GENERAL INFORMATION SURVEY INSTRUCTIONS AND DEFINITIONS FOR OE FORM 2300-8 SELECTED ADULT EDUCATION ACTIVITIES IN INSTITUTIONS OF HIGHER EDUCATION, 1967-68

OE Form 2300-8 is designed to determine adult or continuing education activities in institutions of higher education and to obtain estimates of the volume of these activities. The data will make it possible to design surveys in the field of higher adult education and to obtain information of a more detailed nature, as needed for the planning and evaluation of these activities.

Higher adult or continuing education includes activities designed for adults and out-of-school youth who are not regularly enrolled as students and whose needs are not ordinarily met by regular degree courses.

The survey is *institution-wide* in scope and activities of all schools or units are to be reported. Include activities of undergraduate, graduate and professional schools, schools of general studies, technical institutes, in addition to those conducted by extension departments, special institutes, bureaus, or other units of your institution.

An activity should be reported if it is *sponsored wholly or partly by your institution* and it is part of the instructional

staffs (*resident and extension*) official university program. The activities are often offered by a distinct administrative unit, e.g., extension division, evening college. Registration is for courses of instruction given under programs of optional degree credit and/or noncredit. Activities conducted jointly with nonacademic organizations are also reportable.

To insure full coverage it is recommended that your institution designate *one* person as coordinator with responsibility for assuring that the requested information is obtained from all relevant institutional components. The coordinator may request additional copies of OE Form 2300-8 to distribute to the reporting units of the institution to use in compiling an institution-wide return.

Please read the instructions, definitions, and schedules that follow before compiling the data. If you need clarification on any of the items or additional copies of this form, please call Miss Florence B. Kemp, Area Code 202, 963-5968 in Washington, D.C.

INSTRUCTIONS

1. **TIME PERIOD COVERED.** Include all courses of instruction completed by your institution between July 1, 1967 and June 30, 1968 or for another 12-month period in 1967-68 that includes summer sessions and intersessions. (Do not include programs begun, but not completed in the 12-month period.)

2. **SCOPE OF THE STUDY.** Report consolidated data; include the activities of the main campus, branches, extension centers, other campuses, all departments or divisions, and all other units of your institution. Report activities conducted on or off-campus, including activities scheduled during any time of the year with meetings conducted during the day, afternoon, or evening or weekends.

3. **ESTIMATED REGISTRATIONS.** Registrations refer to the total number of participants for each type of activity, not to individual persons, i.e., one individual may account for more than one registration. Include registrations for all of the sections of the activity each time it is offered during the twelve-month period. The estimated total number of registrations for each type of activity is requested.

4. **EXCEPTIONS AND EXCLUSIONS** are listed below:
a. Exclude activities which include less than 3 hours of planned instruction.

b. Exclude activities which are primarily social or recreational. (This exclusion would not apply, however, to swimming classes or other organized recreational courses which include 3 or more hours of planned instruction.)

c. Exclude high school courses and activities for high school youths.

d. Exclude courses creditable toward academic degrees or similar awards, including courses based on 1-year or 2-year curriculums. Enrollees in such courses should be reported in the regular enrollment forms of this survey, i.e., OE Forms 2300-1, 2300-2.3, 2300-2.8, 2300-5 and 2300-6. (Courses reportable on those forms—and not reportable here—include: (i) Correspondence courses creditable toward a degree or other formal award; (ii) Courses leading to certificates which are essentially equivalent to bachelor's or higher degrees; and (iii) Curriculums of 1-, 2-, or 3-year programs leading to degrees or other awards in occupational areas, including curriculum of at least 1 year whose completion makes the student eligible, upon examination, for licensing by a State authority.)

DEFINITIONS

CREDIT CATEGORIES

DEGREE-CREDIT—OPTIONAL. This term refers to certain types of recognition other than credit normally used toward a degree or other formal award. An example of a degree-credit—optional activity might be that contributing toward occupational advancement, or certification or other recognition of attendance; such recognition may be a kind which, though not automatically credited toward a degree or other formal award, may be so credited on the initiative of the student.

NONCREDIT. This term includes instructional activities exclusive of the degree-credit—optional activities defined above.

TYPE OF ACTIVITY

1. **CLASS.** A regularly scheduled meeting of a group formally organized for instruction in a specific topic or area, and extending over an entire session or intersession.
2. **SHORT COURSE.** A short course differs from a class as defined above only insofar as it extends over a more limited time period and may begin and terminate at any time.
3. **CONFERENCE, INSTITUTE, AND/OR WORKSHOP.** An organized instructional program which meets for 3 hours or more in continuous session except for meals and recesses.
4. **LECTURE SERIES.** A form of activity consisting essentially of a series of lectures. The presentations are often based on a common theme. Registration for the entire series is encouraged although attendance at individual lectures may be permitted.
5. **DISCUSSION GROUP.** A method of instruction with regularly scheduled meetings that have intervening time periods. The major emphasis is upon the intellectual interaction of the group. Participation is emphasized.
6. **CORRESPONDENCE COURSE.** A course of instruction involving a continuing exchange between instructor and student and conducted primarily by written communication.
7. **CLOSED CIRCUIT TV INSTRUCTION.** Instruction through the medium of TV with program preparation and distribution completely controlled by the institution.

8. **BROADCAST TV INSTRUCTION.** Instruction over commercial or educational TV channels which is available to the public but permits viewers the option of registering with your institution and meeting its requirements. The registration to be reported is that for which there is some evidence of participation, e.g., registration for credit, purchase of a study guide, etc.

9. **CLOSED CIRCUIT AUDIO-INSTRUCTION.** Instruction over a closed circuit audio system completely controlled by the institution.

10. **BROADCAST RADIO INSTRUCTION.** Instructions broadcast over one or more radio stations available to the public but allows listeners to exercise the option of registering with your institution and meeting its requirements. The registration to be reported is that for which there is some evidence of participation, e.g., registration for credit, purchase of a study guide, etc.

COMMUNITY DEVELOPMENT AND COMMUNITY SERVICE PROGRAMS

Community development and community service programs ordinarily focus on (a) citizen participation in improving the physical and social environment, (b) the problem-solving process, and/or (c) services to the public as a whole.

CONSULTATION OR TRAINING SERVICES

This includes counseling or training services given as part of a community development or community service program.

PROFESSIONAL REFRESHER COURSE

This includes study carried on by practicing members of a profession (*dentistry, engineering, law, medicine, etc.*), as a means of keeping abreast of developments which directly affect them.

NOTE: Since community development and community service programs, and professional refresher courses utilize one or several of the types of activity listed above, they should be reported in terms of those activities in Part I and they should also be reported separately in Parts IV and VI, respectively.

1. INSTITUTION CODE NUMBER

Please read instructions and definitions before completing this form.

2. CORPORATE NAME AND ADDRESS OF INSTITUTION (Include ZIP Code) 3. NAME AND TITLE OF COORDINATOR

4. AREA CODE - TELEPHONE NUMBER - EXTENSION

5. IF IN 1967-68 YOUR INSTITUTION CONDUCTED NO ADULT EDUCATION ACTIVITIES AS DEFINED IN THIS SURVEY, CHECK BOX BELOW. COMPLETE ITEMS 1 THROUGH 4 ONLY AND RETURN THIS FORM TO U.S. OFFICE OF EDUCATION OTHERWISE, COMPLETE ALL APPLICABLE ITEMS.

NO ACTIVITIES IN SCOPE OF THIS SURVEY

ADULT EDUCATION ACTIVITIES, 1967-68

PART I - TYPES OF ACTIVITIES AND REGISTRATION. In Columns (b) and (c), enter the estimated or anticipated total registration for this type of activity. For each activity with over 200 registrants, please report details in Part III. This tabulation includes activities of community development and community service programs with 3 or more hours of planned instruction. Professional refresher courses also may involve more than one type of activity and are included in this tabulation. Details are reported in Parts IV and VI. These data do not reflect consultation services which are separately reported in Part V.

TYPE OF ACTIVITY (a)	ESTIMATED REGISTRATIONS		TYPE OF ACTIVITY (a)	ESTIMATED REGISTRATIONS	
	DEGREE-CREDIT OPTIONAL ACTIVITIES (b)	NONCREDIT ACTIVITIES (c)		DEGREE-CREDIT OPTIONAL ACTIVITIES (b)	NONCREDIT ACTIVITIES (c)
1. CLASSES			8. BROADCAST TV INSTRUCTION		
2. SHORT COURSES			9. CLOSED CIRCUIT AUDIO-INSTRUCTION		
3. CONFERENCES, INSTI- TUTES, AND/OR WORKSHOPS			10. BROADCAST RADIO INSTRUCTION		
4. LECTURE SERIES			11. OTHER (Specify)		
5. DISCUSSION GROUPS					
6. CORRESPONDENCE COURSES			12.		
7. CLOSED CIRCUIT TV INSTRUCTION					

PART II - SUMMARY OF LISTINGS. Enter the total number of activities in 1967-68 for each item listed below. An activity is defined as an individual lecture series, correspondence course, discussion group, etc.

ITEM	NUMBER OF ACTIVITIES
1. COURSES OF INSTRUCTION WITH 200 OR MORE TOTAL REGISTRATIONS (List in Part III)	
2. COMMUNITY DEVELOPMENT PROGRAMS AND COMMUNITY SERVICE PROGRAMS (List in Part IV)	
3. PROFESSIONAL REFRESHER COURSES (List in Part VI)	

CORPORATE NAME OF INSTITUTION _____ 1. INSTITUTION CODE NUMBER _____

PART III - ACTIVITIES WITH OVER 200 REGISTRATIONS. For any individual adult education activity such as, an institute, a conference, short course, etc., with 200 or more registrations, please furnish the detail outlined below. **NOTE:** Exclude community development and community service program activities, consultative service, and professional refresher courses. They are separately reported in Parts IV, V, and VI, respectively.
