ABSTRACT

A description is provided of the work accomplished in the course of a Title III funded project at the Pueblo Elementary School in Scottsdale, Arizona. Part I of the report describes the function of the instructional materials center in a school with an open-class learning center design. Part II deals with the coding system created to retrieve instructional materials to match student needs, showing how materials are classified by subject matter area, grade level, and specific concepts and skills. The third part of the document addresses the topic of coding audiovisual materials, presenting details about a computerized cataloging and retrieval system which provides centralized acquisition and cataloging services for non-print materials to the schools in the district. The concluding section offers a catalog of microfiche on 13 different subjects. (PB)

WHY? WHO? HOW?

The Pueblo Instructional Materials Center

INTRODUCTION

The Pueblo Instructional Materials Center (IMC) is part of the Pueblo Elementary School in Scottsdale, Arizona. Pueblo School was opened in the fall of 1970. The physical plan is based on an open-class learning center design. Concepts of differentiated staffing and individualized instruction are utilized. The IMC, where all types of learning resources are provided, is an integral and important part of the school.

The overall design of the IMC provides for

A unified media center with access to a full range of resources of all types by students and teachers.

Media which not only supplements instructional programs but is an integral part of the curriculum.

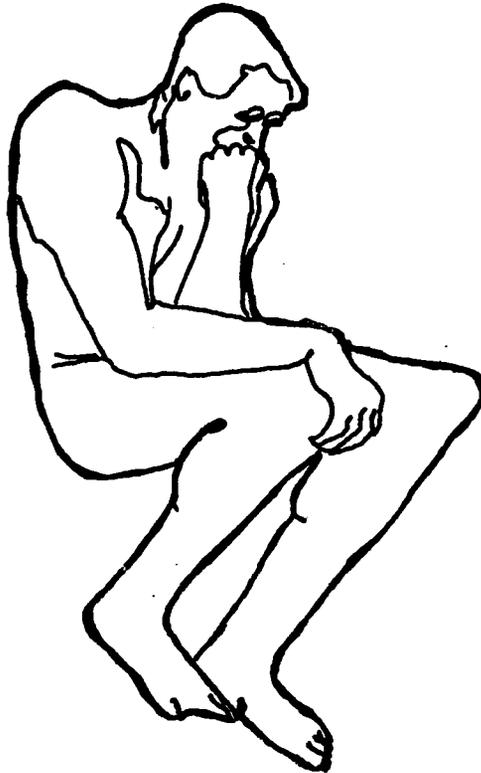

Cooperative effort of teachers, administrator and media specialist in selecting and evaluating resources and planning for their most effective use in the curriculum.

An "open" facility and a flexible schedule where individual students are free to come in for purposeful activities individually or in groups.

An auxiliary "resources center" in each of Pueblo's open-space learning centers where materials and equipment are readily available to students.

Extensive and effective use of parent and student volunteers.

WHY? WHY? WHY?

Underlying the goals and philosophy of the media program at Pueblo are these values:

INVOLVEMENT - we believe that students are more important than materials. Students use the materials and have free access to them. An underlying framework of controls is set up which protects materials and equipment from misuse or loss.

RESPONSIBILITY -we believe in developing independent responsibility in each student for his own behavior and learning. Responsible use of media and equipment is the result of this belief.

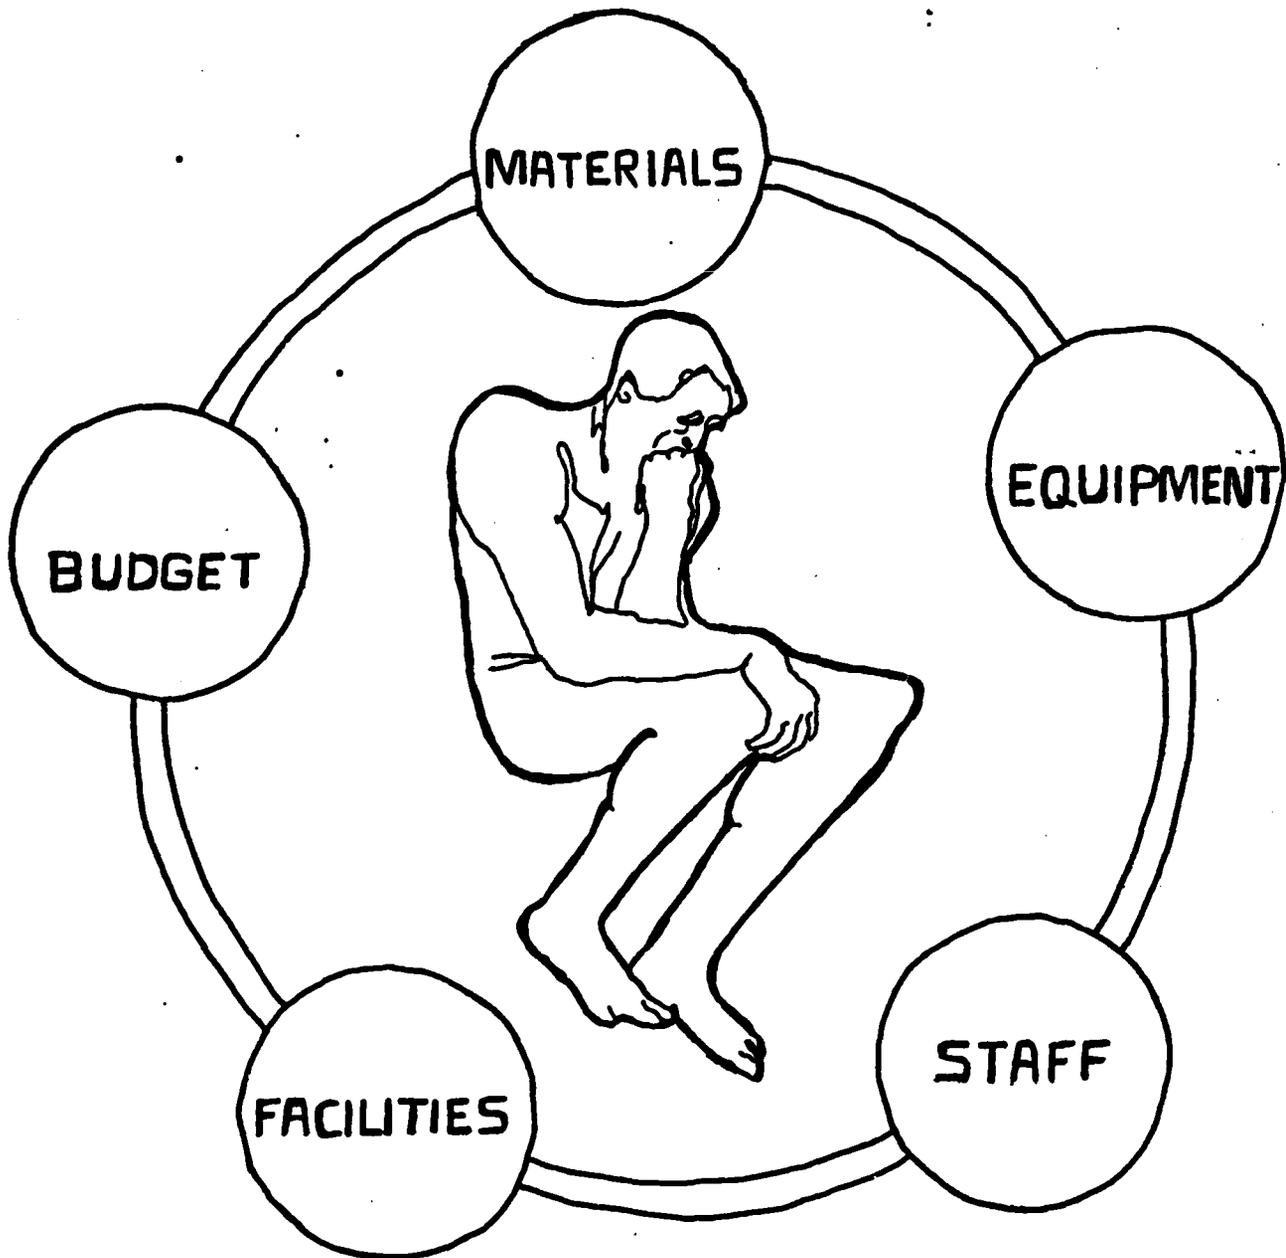

SENSITIVITY - we believe that each student who comes to the IMC is unique in terms of his own needs and feelings. Awareness of these differences is the basis to our providing for varied purposes in use of media and learning spaces for students.

- SCHOLARSHIP - we believe in encouraging pursuit of knowledge and learning. Freedom to examine and explore media provides stimulation to each student in his search for meaningful information.
- AUTHENTICITY - we believe in open, honest communication with students as well as faculty and staff. Cooperative effort is essential in providing a meaningful resources program.
- DEMOCRACY - we believe in providing an atmosphere of warmth and participation with absence of authoritarian rigidity, where purposeful learning is evident.

Our Basic PHILOSOPHY

It is the task of education to prepare individuals who are capable of meeting the challenges of a rapidly changing and complex society. Education is a process. The focus is on helping each learner become responsible for his own education. Skills of inquiry are developed in the search for basic concepts on a continuous progress basis--where each student may progress at his own rate. This type of individualized learning is a basic philosophy of Pueblo School. The existence of an effective media program is essential in working toward desired educational goals of all persons within the school. Learning resources are an integral part of the school's curriculum. The role of the media center director is one of guiding and enriching learning experiences for students, not merely supplementing the curriculum. The total school staff affects and is effected by the media program. Emphasis is placed on the cooperation and coordination of all persons, including school district personnel, who are involved in instructional processes.

HOW? HOW? HOW?

IMPLEMENTATION: PROGRAM AND SERVICES

Facilities

The spaces provided for various types of activities express our philosophy. Flexible use of space is basic. Areas include the following:

1. Large group reading and study area .
2. Display areas, such as display case, shelf space and bulletin boards to which students from all over the school contribute. These areas are a true expression of the many and varied activities which Pueblo students are involved in . . . from individual students' model car collections in the display case to an array of self-made rockets from a 6th grade science class to artistic creations hanging from the ceiling.

3. A listening-viewing area equipped with wet carrels and electric strip tables for use of audio-visual materials; carrels are also used for individual study.
4. Two small seminar rooms for small group study or listening and viewing purposes--with a movable partition.
5. A "silent reading room"--strictly for silent reading enjoyment--furnished with floor lamps, bean bag chairs and large pillows.
6. A typing and activity area for students engaged in projects.
7. Office area for IMC staff.
8. A work room for processing new materials, production of media, use of copying machines and maintenance of A-V equipment purposes (this includes a photographic dark room).
9. A communication center for audio transmission to each of the learning centers. The rationale for placing the sound system (including intercom) in the IMC was to assure its primary use for instructional purposes.
10. A multi-purpose "preview and conference" room which is presently utilized as a career education center.
11. Professional-curriculum office area where the school's professional library is housed.
12. Storage area for A-V materials. This is located near the circulation desk and thus provides for supervised access to media by students.

Student Use of the IMC

The concept of an "open" facility demands great flexibility on the part of everyone concerned. At times there may be only a few students in the center; at other times it may be crowded to capacity. The basic premise on which all use of the IMC is based is purposeful activity. This may involve individual students or small groups who, for purposes of accountability, must have some type of pass from their teacher during school hours (first and second graders, for example, have a clothespin attached to their clothing which is marked: "IMC PASS"). Before and after school the IMC is open to anyone--with no "passes" required. If student groups of more than five or so wish to use the IMC, the teacher arranges for a scheduled time and plans the activity with the

• **IMC Director.** Activities for larger groups may include the following: checking out and reading books, using A-V materials, learning study and reference skills, (research skills are best learned when there is a need for the student to use them as part of some project--rather than teaching these in isolation), general orientation sessions and special research groups. Because of this type of set-up, individualized help is the primary "teaching" activity which goes on in the IMC. As regular weekly "library" periods are not usually scheduled, careful planning by teachers is essential to make certain that every child does have time and opportunity to take advantage of the IMC resources and facility.

Auxiliary Resources Centers

These are generally located in the central area in each open-space learning center (a learning center is the "open classroom" building where students and teachers work together). Although all audio-visual equipment and materials are centrally accounted for through the IMC, most of the equipment is actually distributed or checked out to the learning centers for easy access by students and teachers. Materials and books may be checked out on a long or short term basis by teachers and housed in their "resources center" (R.C.). One person in each learning center, either a teacher or a paraprofessional, is designated as "resources coordinator" (R.C. Coordinator). This person works closely with the IMC Director in communication and implementation of the resources program, including responsibility for some of the technical aspects involved in operation of audio-visual equipment and machines.

Materials

The IMC provides a central access point for information regarding all types of learning resources. These include library books, audio-visual materials such as filmstrips, film loops, cassette tapes, sound-filmstrips, records, transparencies, slides, kits, pamphlets, pictures, periodicals and files of community and staff resources. Materials are continually evaluated as to effectiveness to assure quality in terms of purposes.

1. Selection of Materials

A variety of selection aids are used and input is obtained from students and teachers. Teacher curriculum teams, in particular, are involved in recommending appropriate and needed materials to meet needs for a variety of maturity and ability levels, interests and subject areas. All materials are classified, as are books, by the Dewey Decimal Classification System. A computerized cataloging system for audio-visual materials is in use which provides the IMC with book print-outs of all materials by title of items, by subject classification, subject heading and type of media. In addition, computer-printed 3 x 5 catalog cards are obtained for these materials which are interfiled in the central card catalog so that book and non-book resources may be easily identified from one source. Students have free access to the media storage cabinets (as they do to book shelves) and are free to use any of these materials in the IMC (equipment is set up in the listening area for viewing these materials). A student may check out one item or set (such as a filmstrip or record) and keep it out overnight. All such materials must be returned to the IMC by the beginning of the next school day. Books are checked out on a two week basis. No fines are assessed for overdue books. Responsibility is stressed and developed.

2. Other Materials Services Include:

- 2.1 A pamphlet and picture file of free and inexpensive materials
- 2.2 Old magazines for students to cut up for reports or pictures
- 2.3 Subscription to daily newspapers
- 2.4 "Birthday Books"--instead of bringing a treat for his class any student may purchase a book for the IMC
- 2.5 A file of catalogs of educational materials for teacher use
- 2.6 16mm films are ordered from the district film center (IRC) through the IMC
- 2.7 Periodicals subscriptions

A-V Equipment

A computerized system for inventory and accountability purposes makes keeping track of equipment a comparatively simple matter. A computerized print-out is available indicating the type of equipment, identifying numbers and assigned location (IMC or which learning center). A 3 x 5 computer-printed card giving this same information is attached to each machine for identification purposes. As previously indicated, most of these machines

are housed in the various learning centers for easy access and use. Students may, if they need to, check out filmstrip viewers and cassette tape recorders to take home overnight. The R.C. coordinator in each of the learning centers or the student's teacher takes responsibility for return of these items by the next morning. Students and teachers are trained, through R.C. coordinators or in the IMC, in the use of A-V equipment. Simple maintenance of A-V equipment is done here, but equipment is sent to the district repair shop for major problems. Because of the school's philosophy which stresses individualized learning, a greater quantity of items such as filmstrip viewers and cassette players has been purchased. Other types of equipment includes: two television receivers (with video tape hook-up capability), several programmed learning machines, tape recorders, record players, filmstrip-slide projectors and viewers, sound filmstrip projectors and viewers, overhead projectors, listening stations, a 35mm camera and a variety of production equipment (dry mount press, copying machines, etc.).

Budget

Budgetary allocations are determined by the school district. The IMC Director, under the direction of the school principal, plans expenditures for equipment, books, audio-visual materials and supplies in accordance with perceived needs of the school.

WHO? WHO? WHO?

The materials center staff, including professional and non-certified persons, has ultimate responsibility for the success of the media program. The staff includes:

1. The Director of the Instructional Materials Center who has the total, over-all responsibility for materials center functions and services. He should have broad professional preparation in educational media, as well as a teaching and librarian's certificate.

Specific duties include:

- 1.1 Supervise activities of other media personnel
- 1.2 Plan for systematic communication with staff and school community regarding areas of mutual concern: attend teacher planning meetings, curriculum team meetings, publish a weekly or bi-weekly "IMC Newsletter" for the staff. This newsletter becomes the primary channel of intra-staff

communications. Opportunity should be provided for feedback and suggestions from the staff as to the media program. Open communication with staff and administration on an informal basis is essential to an effective working relationship. Communication with parents includes contributing items to the Pueblo Parent Council Newsletter.

- 1.3 Plan for selection and evaluation of materials
 - 1.4 Report to and plan with the school principal
 - 1.5 Serve as instructional resources consultant and materials specialist
 - 1.6 Assist students in their use of the IMC
 - 1.7 Work with teachers in curriculum planning
 - 1.8 Coordinate, catalog and schedule instructional materials and equipment for most effective use
 - 1.9 Advise the faculty on new materials and equipment available
 - 1.10 Act as resource person in the learning centers if practical considerations allow this
 - 1.11 Conduct in-service training in use of media as needed
 - 1.12 Supervise student assistants
 - 1.13 Communicate with district personnel
2. Clerical/Technical Assistant (Library Aide) -- who has responsibility for the supportive clerical and technical functions essential to the operation of the center: typing of newsletters, correspondence, book orders, requisitions, catalog cards, notices, lists and other records, handling mail and office routines, recording and filing catalogs, inspecting and filing materials and cards, reading shelves, supervising work room activities in materials production and copy services, district film requisitions and distributions, assisting in supervision of student assistants and students in the materials center, technical aspects of equipment operation and maintenance, and some housekeeping details.
3. Parent volunteers -- who, according to ability and training assist in the types of duties outlined for the IMC Aide. These volunteers are invaluable to the operation of the IMC. Each has some special talent or interest with which he contributes in a very unique way to the program. The excellent para-professional support frees the IMC Director for performance of professional duties and responsibilities.

4. Student assistants -- who are selected from grades 5-8 (through cooperative planning between the IMC Director and the teachers) to work 1-2 hours a week in the IMC. The bases for selection vary: special needs for active purposeful involvement by some students who otherwise have little academic success, special talents or interests as in working with A-V equipment, interest in working as an IMC assistant. Students volunteer for this responsibility and must obligate themselves to work at least one semester. They may work out of a study hall, an independent study period or out of some subject area, such as language arts, where the activities they perform in the IMC support and enrich their skills in the subject area. Student assistants are scheduled to work at regular times each week so that two or three students are always available. They are trained to perform functions such as the following: checking books and materials in and out, finding book cards for returned books, shelving, helping children locate books and materials, helping students operate the machines in the "listening area", filing magazines, and aiding in production activities. Each student assistant must complete a "self-evaluation" sheet each time he works. This sheet becomes the student's record of activities and, with a written comment added by the IMC Director, this sheet is given to the child's teacher for use in his evaluation of the student's performance.

WHY? WHO? HOW?

. . . because we believe in creating a love for learning

. . . "we", the Pueblo IMC Staff, work together to

. . . involve each student in meaningful learning experiences.

"KEEPING ORDER"

PART II

CODING INSTRUCTIONAL MATERIALS

**CODING SYSTEM
FOR INSTRUCTIONAL MATERIALS**

**STAFF UTILIZATION FOR CONTINUOUS
PROGRESS EDUCATION PROJECT
E.S.E.A. TITLE III**

Developed by:

**Dr. Richard Fawley
Reed Dons
Rita Freeman
Gerry Nagle
Merilee Wilson**

CODING SYSTEM

In recent years an increasingly large number of instructional units have been developed which focus on concepts and performance objectives. Some kind of cataloging or coding system is necessary if the retrieval of the available units is to match the needs of the students. Such a system is also valuable for organizing future materials developed locally or materials prepared by projects throughout the nation.

The following coding scheme is based primarily on skills and concepts listed in each separate subject area. The meaning of the different letters and symbols is described below.*

Column <u>1</u>	Subject area identification
LA	Language Arts
MA	Mathematics
SC	Science
SS	Social Studies
AR	Art
VM	Vocal Music
IM	Instrumental Music
PE	Physical Education

Column <u>2</u>	Grade level designation
0	Kindergarten
1	First Grade
2	Second Grade
3	Third Grade
4	Fourth Grade
5	Fifth Grade
6	Sixth Grade
7	Seventh Grade
8	Eighth Grade

Column <u>3</u>	Major division or concept of the subject area shown by capital letter according to code on following sheet for each subject.
-----------------	--

*When something to be coded is applicable to all the areas within the category, an X should be used.

- Column 4 Minor division or concept of the subject shown by Arabic number according to code on the following sheet for each subject.
- Column 5 Subdivision or skill shown by a lower case letter according to code on the following sheet for each subject.
- Column 6 This column can be used for more specific breakdown of the unit if needed e.g. P might indicate an individual learning packet.

—Note: An asterisk following any symbol indicates that the topic or skill shown is the main topic or skill but that the unit covers more as well.

Sample Coding:

SC 3 - P 7 *a*

This refers to a science unit for third grade in the area of physical science. The unit emphasizes the concept of "space" and the skill of "observing", but includes other concepts and skills as well.

SCIENCE CODING SCHEME

CODING AUDIO-VISUAL MATERIALS

BEST COPY AVAILABLE

COMPUTERIZED CATALOGING AND RETRIEVAL SYSTEM

FOR AUDIO-VISUAL MATERIALS

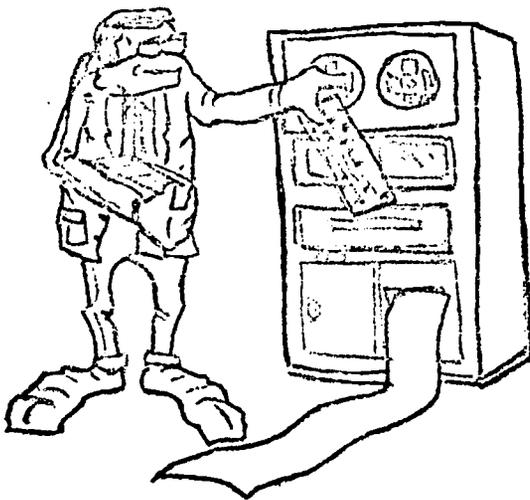

PUEBLO ELEMENTARY SCHOOL

JUNE WORKSHOP 1972

STAFF UTILIZATION FOR CONTINUOUS

PROGRESS EDUCATION PROJECT

E.S.E.A. TITLE III

Developed by:

Christa Metzger

Revised: March, 1973

COMPUTERIZED CATALOGING AND RETRIEVAL SYSTEM FOR AUDIO-VISUAL MATERIALS
PUEBLO ELEMENTARY SCHOOL

Introduction

The cataloging of audio-visual instructional materials has traditionally been a complex and time-consuming task for school librarians. The emergence of an increasing number of totally unified learning resources centers, which combine services for books and non-book materials, has increased the need for an effective cataloging system for audio-visual materials.

The Scottsdale School District provides centralized acquisition and cataloging services for all elementary school library books. For non-print materials, however, no such services are now available. A computerized cataloging system for these materials was developed to meet this need and is now in operation in the Pueblo Elementary School Instructional Materials Center.

The system is very simple, using only an 80 column tab card, and may easily be adapted for use in any instructional resource center or library which has access to basic computer equipment, including a key punch, sorter and any basic computer.

It is the purpose of this pamphlet to describe this system in some detail. Basically, the pamphlet has two functions:

- 1) to serve as a guide to patrons of the IMC in the Pueblo Elementary School
- 2) to include sufficient technical data to allow implementation of the system in other school libraries/instructional resource centers.

Christa Metzger
Director, Pueblo IMC

Summary Overview of the System

1. All A-V materials are classified as are books, by the Dewey Decimal Classification System.
2. All pertinent information such as type of media, title, number of parts, grade level, publisher, physical specifications and subject heading is recorded to be punched into computer cards.
3. The following types of print-outs from the Data Processing Center are distributed so that teachers and students have full access to media information:
 - 3.1 Type of media listing
 - 3.2 Dewey classification listing
 - 3.3 Title listing (alphabetical)
 - 3.4 Subject heading listing (alphabetical)
4. In addition to these "book" catalog print-outs, the Data Processing Center prints 3 x 5 cards for each item cataloged. These are interfiled in the library card catalog, so that book and non-book resources may be easily identified from one source. Identification labels for shelving may also be obtained.

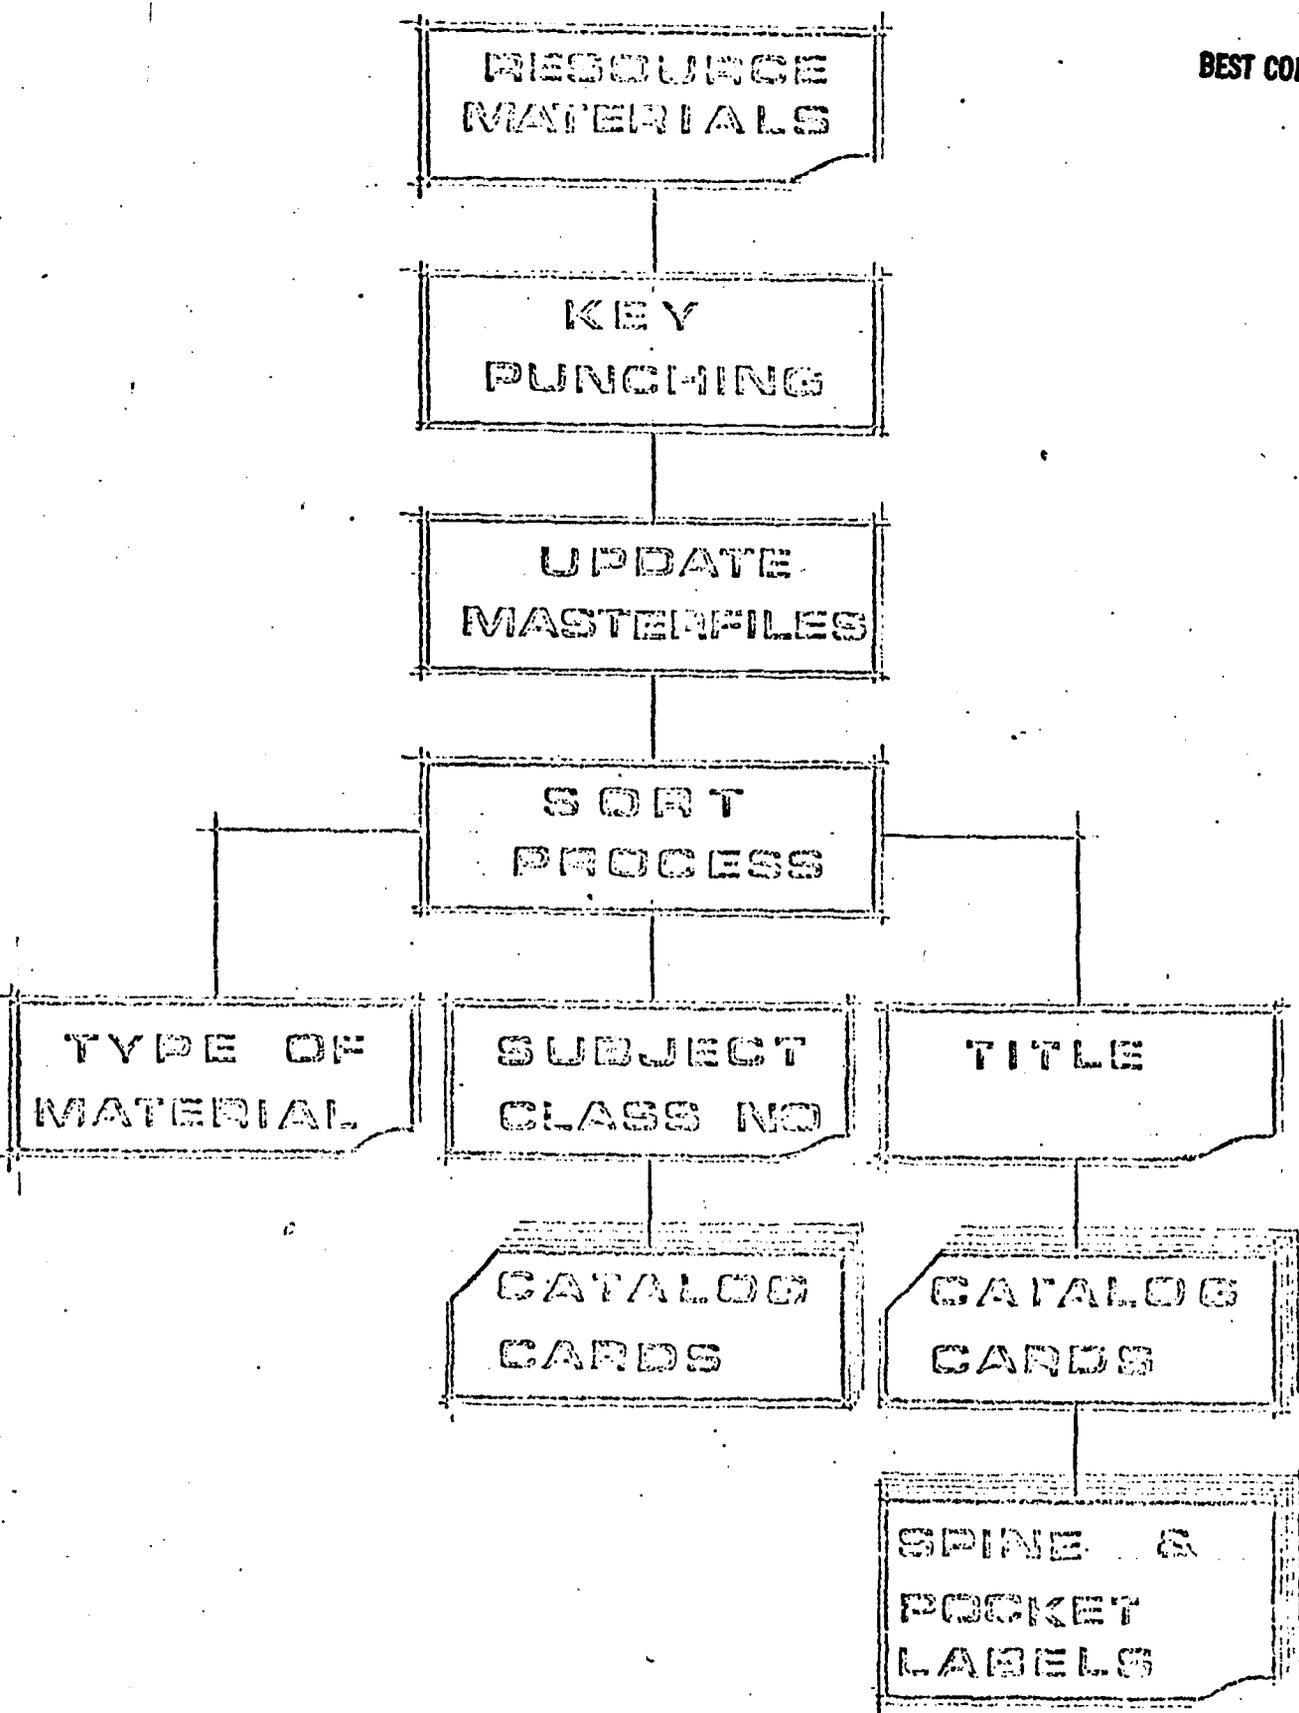

Advantages of a computerized cataloging system

1. More efficient and sophisticated retrieval of instructional resources.
2. Information is available to the user more rapidly and completely than with a manual system.
3. Simple repetitive routine tasks are reduced, thus relieving library personnel from such operations and freeing them to work more with people and the materials themselves.
4. Improved accuracy in cataloging.
5. Updating of materials collections is easy and information concerning newly acquired materials can be disseminated efficiently and rapidly.
6. Through various types of book print-outs, information is readily and easily available to the user.
7. Information output may be retrieved in various ways: (1) Print-outs according to classification numbers, subject headings, titles, type of materials, etc. (2) Computer-printed catalog cards which are interfiled in the central card catalog.
8. Materials listings according to specific needs and interests of users may be obtained.
9. Book catalogs (print-outs) provide instant reference in selection of recommendation for purchase of new materials. Areas of weakness can be quickly identified.
10. A complete, up-to-date financial picture is available at all times.
11. This type of system may be expanded to a total library automation system. Continuous evolvement and improvement is easily possible.

Description of the system--procedures (For further details see "Instructions to Librarians and Media Specialists", Appendix A.)

The System Flow Chart (Fig. 1) illustrates the major elements which make up the cataloging system operations. Each step is described below:

1. Resource materials - The data elements of all materials which are to be entered into the computer card are identified and recorded on the A-V Media Work Sheet. Information is obtained from the material itself and the producer's description and is recorded manually by the librarian and staff. The spaces marked "D.P. use only" contain the final coded and counted form of all elements to insure that the key punch operators are in no doubt about the nature and order of the component parts of the entries. This worksheet also serves as a request form for teachers in selection of materials (information is entered into spaces available, not "D.P. use" columns; library personnel will transfer the information in coded form to the "D.P. use" spaces). The specific data elements and codes will be discussed later in this paper.
2. Key punching - These media worksheets become the source documents for key punching. They are submitted to the Data Processing Center with a standard district data processing work request. Information from these sheets is punched into formatted cards by the operators in the Center.
3. Master files - Two master files of the punched cards are kept: one in the Pueblo IMC, to be used as a shelf list, to add, delete and make changes; the other is in the Data Processing Center to be used for obtaining print-outs. Magnetic tape storage is available in the Scottsdale District Computer Center and data from the unit cards is stored on magnetic tapes. (Availability of magnetic tape storage is not essential to this system.)

SYSTEM FLOW CHART (Figure 1.)

4. Sorting - This is done in the computer center in a variety of ways, according to the type of output format desired. Entries are arranged into sequences by title, call number, subject heading, type of medium, etc., producing a book catalog in that sequence.
5. Output - Book catalogs are produced consisting of listings by title of materials (alphabetical order), by type of media, Dewey Decimal call number, and subject heading. Spirit duplicating masters may be obtained which allow for multiple reproduction to serve each classroom or learning area as well as the central school IMC.

In addition, two 3 x 5 catalog cards are produced by the computer center for each item. These are interfiled in the card catalog; one by title, the other by subject heading.

Up-to-date print-outs to include newly acquired materials, changes in data elements of existing materials, or specific print-outs requested by users for special needs (such as a particular subject area print-out, grade level appropriateness, etc.) may be obtained at any time depending on the workload of the data processing center. For our purposes, a yearly updating of print-outs has been sufficient. Work sheets for new materials are processed by the computer center during the early summer months.

Printed labels for identification and shelving of materials may also be obtained through the computer.

Data Elements and Codes

In the automation of cataloging, traditional rules and procedures of cataloging generally have been observed, although in a mechanized system certain rules, such as presenting information in a prescribed order on a card, becomes less crucial.

The following information is recorded for each item (refer to A-V Media

Work Sheet - Fig. 2):

1. School Number
2. Media Code
3. Storage Code
4. Year Code
5. Print/Copy Number
6. Call Number
7. Title
8. Maturity (grade) level
9. Length or quantity of parts
10. Producer/Publisher
11. Physical specifications
12. Cost
13. Funds - Source
14. Subject Heading

As this system is specifically designed for non-book resources, no author space is allocated. Non-print materials are generally known by title and accredited to a producer or publisher rather than an author. When an author and title entry is required, as for a fiction record, for example, the "subject heading" space is used for one of them.

Most codes used are mnemonic and can easily be decoded by anyone familiar with educational media. Each book print-out given to staff members includes a sheet of the level codes (Fig. 4) and media codes (Fig.3) used.

ENTRY DESCRIPTIONS

1. School Number - Three (3) Characters
2. Media Code - Three (3) characters--to identify all possible media formats and combinations of these (see Fig.3).
3. Storage Code - Two (2) characters (numeric). Instructional materials are shelved according to the Dewey Decimal Classification numbers. However, physical specifications, such as size, impose storage limits. Individual filmstrip cans are placed in a hole drawer, but when a filmstrip is accompanied by a disc recording or cassette tape, it will be stored on a separate shelf. The numeric code assigned for storage identification depends primarily on the size of the media container. Sets containing filmstrips or filmstrips

MEDIA CODES

(Figure 3)

<u>MEDIA CODE</u>	<u>MEDIA</u>
AP	Art Print

5	5
6	6
7	7
8	8

with cassette tapes are perhaps the only exception and are all stored together regardless of size. The following numbers are used as storage codes: (The number represents the approximate size of the material)

- (1) Single filmstrips (Example: FS-1)
- (4) Cassette tapes (Example: C-4)
- (8) Filmloops (Example: FL-8)
- (12) Records, transparencies, visual masters (printed originals for making overhead transparencies), picture sets approximately twelve (12) inches high (Example: R-12, TRA-12)
- (15) Filmstrip sets (boxes containing several filmstrips which are part of a unified set) filmstrip-record sets, filmstrip-cassette sets) (Example: FS-15, FSR-15, FSC-15).
- (18) Picture sets approximately eighteen (18) inches high, study prints (Example PIC-18, AP-18).
- (30) Any item, such as a kit or box requiring a larger and separate storage place, such as large posters or maps (Example: KIT-30).

Cabinets or shelves where materials are stored are labeled according to the storage code number so that students and teachers may easily locate materials.

- 4. Year Code - Two (2) characters--to show the date the item was entered (acquisitioned) into the center library.
- 5. Print/Copy Number - Two (2) characters--for purposes of scheduling or inventory--identifies the quantity of any particular title the center owns.
- 6. Call Number Field - Six (6) characters. The Dewey Decimal Classification system is employed, as this system is used for library books in the Scottsdale District.
- 7. Title - Thirty (30) characters. Official title from material itself used, including subtitles. Series titles should follow immediately to the right end of the title of each item within a series (series titles will usually need to be very much abbreviated, but must appear in order to identify the item as part of a set). A separate card is made for the title of a series or set followed by the word "set".

The total number of characters in the title field is 30. This is sufficient for most titles, although abbreviations may need to be used at times.

8. Level - A three (3) character field is used with the codes as shown in Fig. 4
9. Length code - Intended to measure the duration of a presentation or the quantity of parts of a set or series. It has a three (3) digit field.

Filmstrip (or Sound Filmstrip) sets ... number of titles in the set
Disc or tape recording ... playing time in minutes
Film or Film Loops ... showing time in minutes
Filmstrips (single) ... frames
Transparent pictures & flat materials (slides, transparencies,
study or art prints) ... number of parts in set
Multi-media kits ... total items in kit

10. Producer/Publisher Code - Characters in field: Six (6). The main purpose of this code is to indicate the source for additional copies. Lists of coded names for producers of educational media are available, but as long as the librarian keeps a record of codes used, it is not essential to use such commercially-produced lists. Codes should resemble the actual names as closely as possible. For a listing of sample codes see Appendix A "Instructions to Librarians and Media Specialists."

Local productions may be included by naming the source person or group who developed the materials.

11. Physical Specifications - Field--two (2) characters. These will vary between types of media; they are specific to two broad classes of media; video materials and audio materials. The information is recorded as described on the A-V Media Work Sheet. The playback speed code requires only one space, as the first digit is sufficient to show the playback speed (Example: 33-1/3 RPM speed recording: code 3, 45 RPM speed : code 4, etc.).
12. Cost (approximate) - Three (3) numeric characters to state the price in whole dollars.
13. Funds-Source -- One (1) character (alphabetic code). This field is essential when a record must be kept of materials purchased with federal funds. This code may be expanded to other fund sources if needed.
14. Subject Heading - Fourteen (14) spaces are available for one subject heading--probably in abbreviated form. This subject heading will be typed, in unabbreviated form, on one set of the 3 x 5 cards which are interfiled in the library card catalog for use by students.

Steps in Processing of Materials

1. Complete the Media Work Sheet - when ordering, or after materials are received. A separate media work sheet must be made for each item in a set, so that individual titles may be retrieved easily. If the call number of an individual title varies from the call number of the total set, reference to that set title (abbreviated form) and its Dewey Classification number must be made in the "title field".
2. Identification labels and check-out cards - If identification labels are not computer produced, type labels and check out cards for containers and for the items within containers. Labels need to include only the following information for identification:
 1. Media code
 2. Storage code
 3. Dewey Decimal call number

Example:	FSR-15	FS-1	C-4
	930	398.2	921A

Check-out cards will show this identification number in the top lefthand corner. To aid students in locating A-V materials, the media code, storage code and call number on the catalog card in the library card catalog may be underlined or circled in red

3. Store materials in appropriate storage cabinets.
4. Take completed media work sheets to the computer center. Obtain print-outs and catalog cards from the computer center. Distribute print-outs to staff members and classrooms and interfile cards in card catalog.
5. A page showing sample catalog cards and a sample page of each type of print-out is attached. (Appendix B)

Conclusion

The automation system described for Pueblo is a workable, inexpensive answer to an immediate need. It is not an end. It is only the beginning in solving the complex problem of identification and dissemination of information.

APPENDIX A

Instructions to Librarians and Media Specialists

Instructions to Librarians and Media Specialists

General Procedure

1. Complete an A-V Media Work Sheet for each item (instructions below)
2. Type identification labels and check-out cards (with pockets for boxes) for each item, giving the media code, storage code and call number,

Example: FS-1
 398.2

3. Send the A-V media work sheets to the Data Processing Center for processing.

You will receive the following types of print-outs from Data Processing:

1. Two identical sets of 3 x 5 cards (two cards for each item) to interfile in your card catalog (you will have to type subject headings on one of the sets).
2. Book print-outs by:

Title (alphabetical)
Call number (numerical)
Type of media
Subject heading (alphabetical)

4. An updated print-out may be obtained from Data Processing (with additions and deletions or errors corrected) once or twice a year according to your needs.

A-V Media Work Sheet (Fig. 2)

Enter all information on lines provided which are not marked "D.P. Use" ("rough draft" areas). When this information has been checked for accuracy, it should be entered into the "D.P. Use" spaces in coded and abbreviated form. These spaces must be completed clearly and legibly using capital letters (one

letter per numbered space), as they are used by Data Processing for keypunching. To avoid confusion the numeral "0" must be shown "ø". Be sure the capital letter "I" is shown as a Roman Numeral to avoid confusion with the Arabic numeral 1. A media sheet must be completed for each item. Fill out a sheet for a filmstrip set, for example, and for each filmstrip in the set. The set title to which a filmstrip belongs is indicated in abbreviated form in the title field (see instructions below).

Step-by-step procedure for completing each field

The number after each entry indicates how many spaces in the "D.P. Use" area are allocated for that particular field. Note directions for where to start filling in the codes in the "D.P. Use" spaces. The call number, for example, should be completed from left to right (start left), whereas in the cost field you must fill in the spaces at right first (start right).

1. School number (3) Start right -
Use your school number
2. Media Code (3) Start right -
Use the appropriate code from the attached sheet. (Media Codes - Fig.3)
3. Storage code (2) Start right -
This depends somewhat on each school's set-up. If all A-V materials are stored in a central area, use the code below to identify the cabinet where media is stored (label cabinets with numbers). In high schools, numbers or letters may be used to indicate departments where materials are kept. Just be sure you know what your storage code means in your particular situation.

Numbers for storage codes (the number represents the approximate size of the material)

- (1) Single filmstrips (Example: FS-1)
- (4) Cassette tapes (Example: C-4)
- (8) Filmloops (Example: L-8)
- (12) Records, transparencies, visual masters (printed originals for making overhead transparencies), picture sets approximately twelve (12) inches high (Example: R-12, TRA-12)
- (15) Filmstrip sets (boxes containing several filmstrips which are part of a unified set) filmstrip-record sets, filmstrip-cassette sets) (Example: FS-15, FSR-15, FSC-15).

(18) Picture sets approximately eighteen (18) inches high, study prints (Example PIC-18, AP-18).

(30) Any item, such as a kit or box requiring a larger and separate storage place, such as large posters or maps (Example: KIT-30).

4. Year Code (2) -

The last two digits of the year the material was received.

5. Print/copy number (2) Start right -

How many of this item you have. Complete only one sheet for an item even if you have multiple copies (this field will show how many you have).

6. Call number (6) Start left -

Dewey Decimal classification number assigned. All six spaces may be used for numbers, no period is necessary. For Fiction (such as story filmstrips) use the first three letters of the author's name.

7. Title (30) Start left -

Titles may need to be abbreviated to fit into the 30 spaces. Do not begin titles with "The", "A", or "An". The title of a set or series should be followed by a space with dash (-) and the word "SET". On media sheets which are parts of a set be sure to indicate the set title in abbreviated form after the title of the item which belongs to the set. If the set has a different call number from an individual title within the set, this call number should be indicated in this field (as it is essential in locating the individual item). If accession numbers need to be indicated for identification purposes, use this field for such numbers.

8. Level (3) Start right -

Use the level codes listed below

LEVEL	LEVEL CODE
Preschool, Nursery, Kindergarten	K
Primary (Kindergarten - Grade 3).	P
Intermediate (Grade 4-6)	I
Junior High School (Grade 7-8).	J
Senior High School (Grade 9-12)	S
Teacher - Professional Content.	T
General - Universal Application	G
Exceptional Children - Special Education . .	X
Grade 1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8
etc.	

9. Length code field (3) (duration, quantity of parts) Start right -
Indicates the duration of a presentation or the quantity of parts of a set or series (how many items belong to a particular set or kit, such as number of filmstrip titles in a set).
10. Producer/Publisher Code (6) Start left -
Use code from the attached list. (Producers and Publishers Code, next 3 pages. Develop your own for any not listed. Continue using any you may already have developed. Just be sure to keep a record of each code you use.
11. Physical specifications (2) -
Most of this is self-explanatory. Playback speed may be indicated with one numeral (example: 33-1/3 RPM speed recording: code 3, 45 RPM speed: Code 4, etc.).
12. Cost (3) (In whole dollars) Start right -
Record cost on the "set" sheet only, not on each individual title of a set.
13. Funds - Source (1) -
Self-explanatory. Everything left blank is assumed to be District-purchased.
14. Subject Heading (14) Start left -
Because of space limitations only one subject heading can be used. Select the one which best meets your needs. Remember that many materials will be located by using the call number print-out. For fiction sets (such as story filmstrips) use this field to write the author's last name.

Use of Print-outs

Book print-outs may be bound into data processing folders. You may request several copies of each type of print-out so that these may be distributed in your school. A short training session for your teachers should be sufficient to help them learn how to locate media in the print-out. Students will primarily use the cards in the card catalog.
