ABSTRACT
       Three components (manpower needs, availability of
students, program effectiveness) for priority training area rankings,
drawn up by the Priority Training Areas and Priority Programs Ad Hoc
Committee of Iowa, supplement the areas list identifying the
occupational areas for priority programs. Career education
consultants worked with management staff personnel to develop a model
establishing methods and procedures for building a rating system for
each factor with the use of various data sources as tools for rating.
Section 1 of this three-part report introduces the document. Section
2 provides the descriptions and examples of rating techniques for
each component. Section 3 discusses ranking procedures; the results
of which are updated every year. A five-page table of priority
program rankings is provided with the program areas names assigned
according to the Office of Education taxonomy structure. Points are
allocated according to manpower needs, student availability, and
program effectiveness. The appendix contains the career education
planning model and lists its components (people needs data, resources
data, and determining program effectiveness). (JB)

CONTENTS

IOWA PRIORITY TRAINING AREA RANKINGS

I. Introduction

The Priority Training Areas List, published earlier this year, (January, 1974) identified the occupational areas with a significant net labor demand (labor demand less labor supply). Developing priorities in programs, however, requires the consideration of several other essential factors. These factors were identified by the Priority Training Areas and Priority Programs Ad Hoc Committee during their sessions, and included such components as Manpower Needs, Availability of Students, and Program Effectiveness. Further discussion and investigation led to the more detailed model whose components were listed as:

I. Manpower Needs

II. Availability of Students
   A. Student Interest
   B. Student Need

III. Program Effectiveness
   A. Attrition
   B. Placement Rate
   C. Cost/Benefit

After the components were identified, Career Education consultants worked closely with management staff personnel to develop a working model to establish methods and procedures for building a rating system for each component. Formulas and equations were developed and applied to rate each program for each identified component. Then the ratings were summed to arrive at the relative rankings of the programs.

Every attempt was made to achieve and retain the optimum degree of objectivity in the ratings. Information utilized was gleaned from such sources as the Career Education Needs Information System (CENIS) Interface, program cost data from the Area Schools Division, annual vocational education student follow-up reports, and the Dictionary cf Occupational Titles (D.O.T.) supplement entitled "Selected Characteristics of Occupations (physical demands, working conditions, training time)." Use of these data sources as tools for rating the various components greatly reduced the number of subjective judgments required.

II. Descriptions and Examples of Rating Techniques for Each Component

    A. Manpower Needs - 30 Points Maximum

       Manpower Needs Component - 30 points maximum

       a. Sources of Data:
          Career Education Needs Information System (CENIS)
          Labor Demand Survey reports.

       b. Rating Procedures:
          Locate the labor demand for 1975 for each program area to be rated. Subdivide the demand figure into the expansion/replacement factors. Derive the percentage relationship between the two factors and apply this percentage against the labor supply. Subtract the resulting supply factors from the need factors to obtain the net needs. Find the relationship of the net needs factors to the total current employment in this occupation and show these percentages. Since expansion needs are much more significant for training considerations than are replacements, a three-to-one weighting factor is used to reflect this relationship. Thus, expansion percentages are multiplied by three, replacement percentages are multiplied by one, and the resulting percentages are summed. This summed percentage factor is then multiplied by 30 (the total point value allowed for this component) to derive the final point allocation.

       c. Examples of Rating Method:

Taxonomy	Program Area Name	Labor Demand		Supply		Net Need	% of Need in Occup.			Points
04.1900	Transportation	Expans.	1,612	41	(51%)	1,571	14% x 3 =	42		
		Replace.	1,574	39	(49%)	1,535	14% x 1	14		
			3,186	80		3,106			56% o' 30	17
07.0303	Nursing Assistants	Expans.	221	63	(9%)	158	2% x 3 =	6		
		Replace.	2,183	637	(91%)	1,546	18% x 1 =	18		
			2,404	700		1,704			24% of 30	7

    B. Availability of Students - 40 Points Maximum

       1. Student Interest Component - 20 points maximum

          a. Sources of Data:
             Career Education Needs Information System (CENIS) Student Interest and Labor Supply survey reports, operating information for average section size.

D. Rating Procedures:
From the CENIS Interface, locate the number repre-
senting primary student interest. Then divide this
number by the sum of the average section size plus the
total supply, $P = \frac{Si}{Ss + Su}$ where P = points, Si = Student
Interest, Ss = average Section Size, and Su = Labor
Supply. The result comprises the point assignment for
that occupation.

c. Examples of Rating Method:

Taxonomy	Program Area Name	Student Interest	Avg. Section Size	Supply	Points (20 max.)
04.1900	Transportation	3,189	12	80	20
07.0303	Nursing Assistants	565	10	700	1

2. Student Need Component - 20 points maximum

a. Sources of Data:
Dictionary of Occupational Titles (D.O.T.) Supple-
ment I and the Postsecondary CE-4 Program Master (for
length of program).

b. Rating Procedures:
Each program has been rated to determine its poten-
tial for meeting the needs of individuals with specific
employability problems.

To facilitate the rating process, the identified
student needs have been converted to a worker trait ar-
rangement, to take advantage of the extensive research
conducted in the development of Volume II of the Dic-
tionary of Occupational Titles (D.O.T.). Expert occupa-
tional analysts from eight national field centers col-
laborated in studying the occupations and determining
the rating for worker trait components.

The identified student needs areas and their cor-
responding worker trait components follow:

Student Needs Areas	Worker Trait Components
Lack of employability skills ———➤	Prerequisite Skills
Lack of high school diploma ———➤	and Knowledges
Physical handicaps ———————————	Physical Demands
Mental/emotional handicaps ———➤	Worker Temperaments
Limiting Socio-Economic —————	Specific Vocational
Circumstances	Preparation (length of program)

The student needs area pertaining to the lack of a high school diploma or its equivalent was not considered separately, since such a requirement is an employer specification, and thus varies from job to job. Each of the worker traits areas are well defined in Supplement I to the D.O.T. For the purposes of this brochure, it should be sufficient to explain that Prerequisite Skills and Knowledges encompass six progressive levels of attainment in three areas: Reasoning Development, Mathematical Development, and Language Development; Physical Demands encompass activities requiring (1) strength, (2) climbing or balancing, (3) stooping, kneeling, crouching, or crawling, (4) reaching, handling, fingering, or feeling, (5) talking and/or hearing, (6) seeing; Worker Temperaments identify twelve different types of occupational situations to which workers must adjust and rate each D.O.T. occupation as to the number and type of such situations which are present; Specific Vocational Preparation refers to the length of training required to achieve proficient job performance. Points are assigned for each consideration, and then summed to indicate the total point value for each occupation.

    c. Examples of Rating Method:(see attached legal-size sample of the Student Needs Rating Scale).

C. Program Effectiveness - 30 points Maximum

    1. Attrition Rate - 10 points maximum

        a. Sources of Data:
            The Student Outcomes (follow-up) section of the CENIS Interface.

b. Rating Procedures:
    Each program attrition (program leaving) rate is
identified as an indication of that program's holding
power. State average attrition rates are compiled and
compared with the program rate. Point values are assigned
according to the relationship of such comparisons as in-
dicated in the following rating scale:

State average ___ + or - 10%	5 points
More than 10% below state average	10 points
More than 10% above state average	0 points
Statewide Attrition Rate = 24%	

c. Examples of Rating Method:

Taxonomy	Program Area Name	Attrition Rate			
		State Average	Program Average	Difference	Points
04.1900	Transportation	24%	0%	+24%	10
07.0303	Nursing Assistants	24%	5%	+19%	10

2. Placement Rate - 10 points maximum

a. Sources of Data:
    The Student Outcomes (follow-up) section of the
CENIS Interface.

b. Rating Procedures:
    Each program rate of placement in occupation
for which trained or a related occupation is compared
with the statewide placement average for all programs.
Point values are assigned according to the resulting
relationship as indicated in the following rating scale:

State average ___ + or - 10%	5 points
More than 10% above state average	10 points
More than 10% below state average	0 points
State Placement Average = 53%	

c. Examples of Rating Method:

Taxonomy	Program Area Name	Placement Rate			
		State Average	Program Average	Difference	Points
04.1900	Transportation	53%	100%	+47%	10
07.0303	Nursing Assistants	53%	37%	-16%	0

3. Cost/Benefit Comparison - 10 points Maximum

a. Sources of Data:
   The document "Program Cost Summary," developed by the Area Schools Division (costs) and the Vocational Student Follow-Up report indicating average wages earned by former students (benefits).

b. Rating Procedures:
   For each program area, locate the appropriate cost per contact hour without capital outlay figure. Determine the average benefit by ascertaining median wages from annual follow-up data. The difference between hourly costs and hourly earnings will be considered the cost/benefit rate. Program cost/benefit figures will be compared with the average cost/benefit rate for all programs to determine point assignment.
   The formula for determining the median wage is:

$$\text{Median} = L + \frac{(N/2 - F)i}{f}$$

   where L = lower real limit of class containing median; N = total number of cases; F = total number of cases below class with median; f = number of cases in median; and i = the class interval. Points are assigned according to the following rating scale:

$.75 or more above average	(1.60)	10 points
.50 above average	(1.35)	8 points
.25 above average	(1.10)	6 points
Average cost benefit	(.85)	4 points
.25 below average	(.60)	2 points
More than .25 below		0 points

c. Examples of Rating Method:
   See attached sheet for examples of the Cost/Benefit Rating Scale.

SAMPLE--STUDENT NEEDS RATING SCALE

Ratings indicate the Program's Potential for meeting the specified student needs as expressed in terms of worker requirements

		Prerequisite Skills and Knowledges (Math, Reading, etc.)				Physical Demands				Worker Temperaments				Specific Vocational Preparation (Length of Program)				
Taxonomy	Program Area Name	Not Required 4 Points	Occasionally Required 3 Points	Usually Required 4 Points	Critical to Performance 0 Points	Not Required 4 Points	Occasionally Required 3 Points	Usually Required 2 Points	Critical to Performance 0 Points	Not Required 4 Points	Occasionally Required 3 Points	Usually Required 2 Points	Critical to Performance 0 Points	4-19 wks 4 Points	20-47 wks 3 Points	48-72 wks 2 Points	73-96 wks 0 Points	Total Points
04.1900	Transportation (Truck Driver)	4					4				3			4				12
07.0303	Nursing Assistant			4				2				2		4				12

SAMPLE--COST/BENEFIT RATING SCALE

Taxonomy	Program Area Name	Median Formula	Average Earnings Per Hr.	Average Cost	Difference	Dev fr Avg Cost Benefit	Points
04.1900	Transportation (Truck Driver)	$222.5 + \frac{(22 - 0 \cdot 22)}{43} \cdot .51 \times 25 = 12.75 \cdot 225.50 = 238.25$	5.96	2.08	3.88	3.05	10
07.0303	Nursing Assistant	$125.5 + \frac{(44 - 2 \cdot 42)}{56} \cdot .75 \times 25 = 18.75 \cdot 50.50 = 69.25$	1.73	2.16	-.43	1.28	0

III. Ranking Procedures

Final point values were obtained by summing the point values assigned for each component, e.g., manpower needs, student interest, student need, etc. The program areas were then ranked in descending order, ranging from a high of 82 points for the Transportation program to 4 points for Agricultural Related Technology.

Program area names were assigned according to the Office of Education taxonomy structure, in order to maintain continuity with the State Titles utilized in the CE-4 Career Education Information System. Since the program areas are often broader in scope then the more specific occupational areas encompassed in the CENIS surveys, the taxonomy name is listed first, with the occupational area shown in parentheses where necessary for clarification or to indicate the emphasis of the CENIS investigation.

In several instances, different program areas received identical ranking scores. Therefore, a grouping number was used in these circumstances (e.g., 9-11, 18-22, etc.) instead of attempting to indicate an artificial delineation by using a different numbering system.

The resulting list of occupational programs ranked in priority order should be useful at all levels of decision making, as planners review existing offerings and contemplate the development of new programs. These data can offer valuable input in the compilation of people needs and manpower needs information, which forms a vital portion of the planning system. This list will not provide all of the data needed for efficient planning, since resource information concerning finances, staff, facilities, and equipment will have to be obtained from other sources. (See Appendix for a Planning Model and Components, which illustrate the factors involved in the planning process.)

The Iowa Priority Program Areas list will be updated at least once each year. During the year additional programs may be reviewed, the various ratings of components accomplished, and revisions made as indicated. Similarly, programs may be eliminated, or the rankings rearranged, according to the input of new data. Changes in the list will be communicated to all users of the Iowa Priority Program Areas listing.

PRIORITY PROGRAM RANKINGS, page 1 of 5 pages

Rank Order	Taxonomy	Program Area Name	Manpower Needs	Student Availability — Interest	Student Availability — Need	Program Effectiveness — Attrition	Program Effectiveness — Placement	Program Effectiveness — Cost/Benefit	Total Pts.
1	04.1900	Transportation (Truck Driver)	17	20	15	10	10	10	82
2	17.0901	Photographic Lab. and Darkroom	30	8	14	10	10	0	72

```

The overall planning diagram applies primarily to long-range, comprehensive planning. These components should be considered in any planning activity, but would normally not involve as extensive data-gathering and analysis.

The objectives-plan-evaluation cycle is continuous in any type of planning or operational effort.

CAREER EDUCATION PLANNING COMPONENTS

PEOPLE NEEDS DATA

Manpower Requirements
  Labor Demand
  Labor Supply
  Student Interests

Population Need Factors
  Age levels
  Sex
  Educational Levels
    Elementary
    Secondary
    Postsecondary
    Adult
  Minority Groups
  Veterans
  Welfare Recipients
  Handicapped
  Low School Achiever
  Economic Status
  Social Adjustment
  Dropouts
  Unemployed
  Underutilized
  Rural area
  Urban area
  Migration Trends

RESOURCES DATA

Staff Resources (public and private)
  Professional
  Support
  Administration and Supervision

Physical Resources (public and private)
  Facilities
  Equipment
  Materials

Time

Financial Resources

Programs, Services, Activities
  (current)

Staff Development (Pre-service,
  In-Service Training)

Community Resources
  Advisory Committees
  Community Support

DETERMINING PROGRAM EFFECTIVENESS

Evaluation (Self-Appraisal, Team Visits, Third Party)
Follow-up Studies
Cost Benefit Analysis
