 IDENTIFIERS Elementary Secondary Education Act Title I; ESEA Title I; Georgia

ABSTRACT This report provides descriptions and statistics on Georgia's ten Youth Development Centers designed for the care of delinquent children. Title I courses include business education, cultural enrichment; small appliance, furniture repair, and basic skills, with an emphasis on the latter. Results of the enrichment courses fall in the cognitive, affective, and psychomotor domains. Gains such as increased knowledge of jobs available and training necessary for each, improved peer relationships, and development of marketable skills are reported. Program content is said to be determined through a needs assessment which takes place at each center. Performance objectives are written for the programs once needs and priorities are established. This area is stated to be of greatest potential for the centers. Although some centers state objectives in limited, observable, and behavioral terms, other centers state their objectives in non-behavioral terms establishing no definite criteria for measuring the impact of these programs. Another area of potential for the entire system is said to be that of instructional activities and methods. The incorporation of a more comprehensive system of describing instructional activities and methods is seen as a way to remedy the situation. Additional areas of possible common interest for all the centers are said to be systems used for scheduling and patterns of organization. (Author/AM)

There are six regional and four state institutions in Georgia designed for the care of delinquent children. Known as Youth Development Centers, these residential facilities are operated by the Youth Services Section of the State Department of Human Resources. ESEA Title I funds are made available to these Centers through the State Department of Education to provide supplementary educational services to the residents, many of whom are school dropouts or are achieving far below their ability and age level.

Title I Youth Development Center projects are supported through the Title I program for Neglected and Delinquent Children. The following steps, from application to implementation, are followed for each Youth Development Center Title I project:

1. The U. S. Office of Education notifies the state Title I director, of the amount of funds which will be available through the Title I Program for Neglected and Delinquent Children in the ensuing year. The state director relays this information to the state consultant for Neglected and Delinquent Children (N & D Consultant). The consultant, in turn, informs the superintendent of each regional and state institution for Neglected and Delinquent Children (Youth Development Center) that funds have been allocated.
2. Youth Development Center authorities begin to assess the needs of children in residence.
3. The Neglected and Delinquent Consultant visits the Youth Development Center and, when necessary, assists Center authorities in writing a project proposal. In this proposal, the Center must "Identify and describe each of the instructional activities and the related supportive services to be provided."

4. A project proposal in rough draft form is submitted to the state Title I office for tentative approval. Recommendations are made toward improving the proposal.
5. A final draft in substantially approvable form is submitted to the state Title I office before the deadline date.
6. Upon approval of the project proposal, notification of approval is made to the State Commissioner of Human Resources, with copies sent to the appropriate Youth Development Center Title I curriculum consultant and to the superintendent of the state or regional Youth Development Center.
7. Funds are allocated and the project is implemented. The state N & D Consultant monitors the project, remaining in constant touch with the Youth Development Center Title I curriculum consultant through on-site visits and telephone conversations.
8. The project is the subject of both an on-going evaluation and a complete year-end evaluation.

The ten Youth Development Centers in Georgia were allocated \$485,318 in FY 1974. Of this amount, \$450,576 was budgeted for use during FY 1974, with the remaining \$34,742 to be carried over to the FY 1975 budget. In addition to the \$485,318 allocated for FY 1974, \$130,000 in Title I funds were carried over from FY 1973. This brought the total amount of available Title I funds for FY 1974 to \$615,318, of which the amount budgeted was \$580,576. The ten Youth Development Centers reported expenditures of \$425,270 during FY 1974. Table 1 provides a breakdown by Youth Development Center of allocations, amounts budgeted and amounts expended for FY 1974.

Table 1  
 Title I Allocation, Amount Budgeted and Amount Expended, by Center

Institution	FY 1974 Allocations	FY 1973 Carryover	FY 1974 Budget		FY 1974 Expenditures
			FY 1974 Regular	Total	
Atlanta	\$ 45,846	\$ 5,244	\$ 42,564	\$ 47,808	\$ 33,017
Augusta	162,545	17,463	150,909	168,372	148,552
Macon	36,121	28,101	33,535	61,636	39,569
Milledgeville	185,236	60,852	171,976	232,828	151,832
Albany Regional	9,725	3,032	9,028	12,060	6,821

Rome Regional	9,262	3,057	8,599	11,656	7,391
Sandersville Regional	8,335	3,107	7,739	10,846	8,753
Waycross Regional	9,262	3,056	8,599	11,655	9,984
TOTAL	\$485,318	\$130,000	\$450,576	\$580,576	\$425,270

The number of students that participated in Title I programs in 1974, regardless of length of participation, was 3102 for the ten Centers. The number that participated for an average of one full year was 1014.4. This number is considerably less than the number that participated, regardless of length of stay, due to the fact that the length of residence of individual children at a Youth Development Center may vary from one day to several months or even years. Added to that is the fact that this number, 1014.4, is a "duplicated" number. That is, some of the students participated in more than one activity and were therefore counted more than once. An unduplicated count of students that participated an average of one full year would be even less, therefore.

Waycross Regional	X												

\* The number 2 indicates two activities in this area for this Center.

The activities listed in Table 2 are not meant to be mutually exclusive. For example, the category Basic Academic Skills includes reading, which is also considered a "Communication Skill," but both categories are mentioned for descriptive purposes. Several centers included as part of one program reading, speech, spelling and composition. These programs are referred to as "Communication Skills." Other programs included reading, also, but combined with mathematics, rather than with speech, spelling and composition. These programs are described as "Basic Academic Skills." A similar situation exists in the area of mathematics, since some centers combine it with reading for programs in "Basic Academic Skills," while others have separate programs, "Mathematics Skills."

The greatest emphasis was placed on the basic skill areas of reading, communication skills and arithmetic. This is evidenced by the fact that 59% of all programs provided fall into one of the basic skill categories. Half the centers, however, provided enrichment programs in addition to instruction in basic skills.

The amount of time students participate in Center programs fluctuates from month to month and from Center to Center. Discontinuation of services in any of the programs is generally a result of the student's having left the Center. Since children typically remain longer at State Centers, the length of stay for residents is measured in months at State Centers and in weeks at Regional Centers. Table 3 shows the number of students participating in each FY 74 program by the amount of time they spent in that program. Because students who participated in an activity might also have participated in additional activities, it is probable that individual students appear more than once in Table 3.

Both the total number of children served during FY 74, and the average number of children served at any one time, are shown in Table 4, by activity and by Center. The first number shown in each block is the total number of children served in that Center's program during FY 74. The second number is the average number of children being served by that program at any one time during FY 74.

This table provides additional evidence that a great deal of emphasis was placed on the basic skills. A total of 1428 participated in the basic academic skills (reading, and math), 1403 in communication skills (reading, speech, spelling, composition) and 562 in mathematics skills. The grand total for basic skills programs was 3393 participants. The remaining seven program areas averaged only 292 participants.

Two Centers, Augusta Regional and Gainesville Regional, offered programs designed to increase students' motivation. Augusta with 252 participants and Gainesville Regional with 398 together totaled 650 participants for this type of activity.

The high number (611) participating in orientation activities reflects the dimensions of the orientation program offered by one large center, the Milledgeville Youth Development Center.

The median age of FY 74 participants was 14.5 years, but as Table 5 indicates, the age range of Youth Development Center participants is quite broad. This table also indicates the degree of participation by Center. Overall, 63% of all resident children participated in Title I-funded programs.

	Partic.	13	34	52	152	299	582	841	939	186	3	1					3102

\* Res. = Residents, Partic. = Participants

\*\* Each resident at the Milledgeville Youth Development Center participates in its orientation program, therefore the number of participants is equal to the number of residents.

Table 6 shows, by Center, the amount of Title I funds expended and the total amount of funds expended for each Title I project. It also shows the expenditure per participant averaging one full year of participation.

Of the 27 Title I Youth Development Center programs conducted in FY 74, fewer than half (41%) of them received supplementary funds of 15% or more from state and other federal sources. This means that without Title I funds the children living in Youth Development Centers would not have received the services and participated in the remedial activities made possible through the Title I program.

Table 7 shows the number of Title I staff members by Center and gives the amount of money paid for their services by Title I. This table indicates that all systems used Title I monies to employ aides, while only three paid teachers with such funds. Of the total amount expended by all Centers in 1974 (\$425,270 - Table 1), 74.6% went for salaries (\$317,108).

Since a relatively large proportion of children participates in programs for only a brief period of time (See Tables 3 and 4), it is difficult to measure comprehensively both the academic and the emotional impact which a Center has on each child. But even a few days of instruction may be the turning point for a child. In general, the local Center evaluators report that the Title I projects provided services which materially contributed to the accomplishment of the project objectives.

\* These figures may vary from a strict accounting figure since these figures were compiled by the Centers prior to the completion of final fiscal accounting reports, and in some cases reflect some estimation.

In addition to presenting substantive data about the accomplishment of these project objectives, local Center evaluators were asked to include in their reports answers to the following two questions:

1. How successful was the project in meeting the stated objective?

✓ unsuccessful \_\_\_\_\_ somewhat successful \_\_\_\_\_ successful \_\_\_\_\_  
 very successful \_\_\_\_\_

2. How relevant is the evidence presented above (in the evaluation report) in documenting the successfulness of the project in meeting the stated objective?

not relevant \_\_\_\_\_ somewhat relevant \_\_\_\_\_ relevant \_\_\_\_\_ very relevant \_\_\_\_\_

Table 8 indicates that most evaluators felt both that the project was successful and that the evidence presented was relevant.

Table 9 presents summary data for the ten Centers regarding funds, students, staff and programs.

\*\* R = Reading

\*\* L = Library Skills

\*\* A = Academic Achievement, R = Remedial Instruction

Following is a brief description of the instructional activities offered by each Center, the measures used to evaluate each project's effectiveness, and evaluation results.

### BASIC ACADEMIC SKILLS

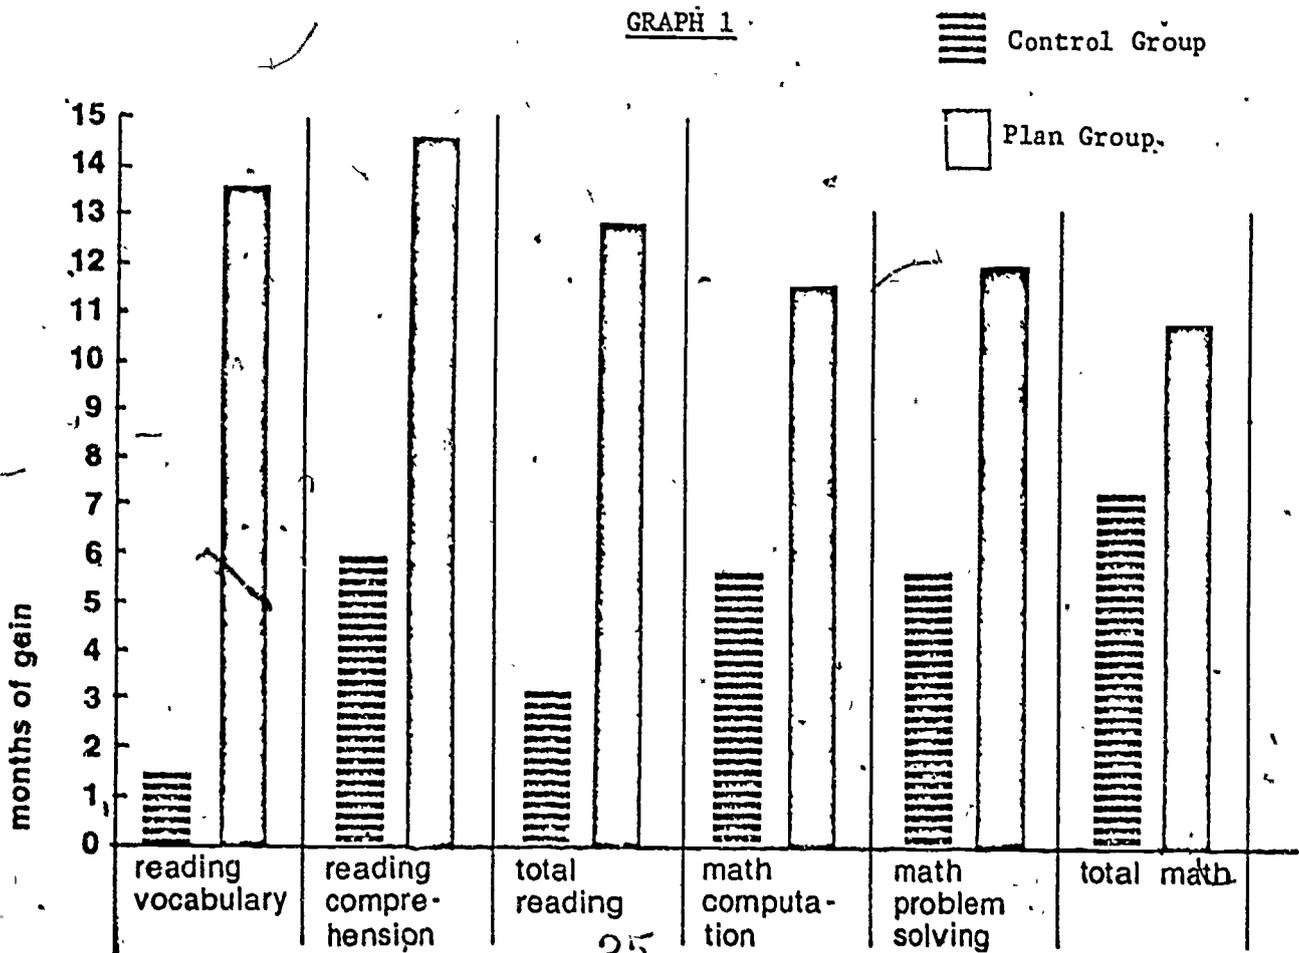

Each of the ten Youth Development Centers provided instruction in reading, communication skills and/or mathematics skills. Of these, four Centers conducted programs involving combinations of these activities, and were therefore placed in the Basic Academic Skills category.

The Milledgeville Youth Development Center conducted two such activities - one in remedial instruction and one for academic achievement. In the remedial area, a variety of media and resources were used to "minimize or eliminate academic retardation by developing positive attitudes, motivation, ability to compete, ability to communicate and better relationships in classes." A variety of readers, films, filmstrips, cassettes and tapes were among items used to improve students' skills in reading and mathematics. In addition to these skills, several students were taught the months of the year, the days of the week, and to tell time. The administration of the California Battery of Achievement Tests both pre- and post-instruction showed a Reading Grade Level increase of .82 and a Mathematics Level increase of .35.

In the activity designed to "increase academic achievement," the Milledgeville Center selected students to participate in Program Learning According to Need (PLAN), a computer managed, individualized learning program. This approach involved the use of a variety of audio visual materials and equipment, with special emphasis on the student being responsible for operating equipment himself and at his own pace.

According to the findings of Dr. Robert Aaron of the College of Education at the University of Georgia, the results were significant. Dr. Aaraón describes his preliminary findings in this way: "Based on this preliminary study the computer managed, individualized learning program has had a very dramatic effect on the achievement behaviors of the experimental pupils. They had no significant advantage in learning rate, age, intelligence quotient, or initial mathematics and reading ability at the outset of the program. Yet, despite the control group's significantly greater number of mean days in the program at the Center, the experimental group clearly out-achieved them in all reading and mathematics subtests."

The following graph illustrates the difference between the PLAN group and the control group. The students who used PLAN showed mean gains in reading of eight months to a year greater than the students in traditional classrooms. And in math, the PLAN group mean gains were from three to five months greater.

To increase the grade level in both mathematics and reading was the objective of the Albany Youth Development Center project. Pre-test and post-test scores from the Wide-Range Achievement Test indicate that for students with a residency of 30 days or more, an average gain of one month was made in reading, one month in spelling and three months in mathematics.

The Wide Range Achievement Tests were selected by the Gainesville Regional Youth Development Center for use in its project, also. Gainesville sought to "assess each child's weakness and strengthen skills in reading, phonics and basic mathematics." Small group instruction was stressed, and test results indicate that for students participating an average of 20 days, overall gains of .76 in reading and .75 in mathematics were achieved.

The Waycross Center used S. R. A. Reading Labs, Hoffman Reading Programs, and L. W. Singer Math Drill and Practice Kits in its efforts to improve reading and math skills of program participants. All students who were residents of the center for 30 days or more were administered the Wide Range Achievement Test. Results showed an average gain in reading of five months, in spelling of four months and in mathematics of seven months. The Waycross Center made this information available to staff members, individual students, judges, probation officers, court services workers and counselors upon request.

#### COMMUNICATION SKILLS

Six Centers conducted programs in Communication Skills. This area includes such skills as reading, speech, spelling, and writing, along with comprehension. The Atlanta Center emphasized individualized reading classes in an effort to "improve the reading achievement of 50% of the students by 0.1 grade level for each month in the program." Of the 119 students in the program, 67 participated for three months or more. Pre- and post-test scores from the Wide Range Achievement Test were available for 43 of these students. The

results of these tests indicated that 58% of the pre- and post-tested students improved to some degree in reading achievement level. Fourteen percent (14%) improved by 0.1 grade level per month. In addition, an informal reading inventory was administered to students. This inventory included items taken from The Diagnostic Reading Scales by George Spache and items developed by Dr. Robert Aaron. Pre- and post-test scores from the inventory on 104 of the students indicate that 83% improved their reading achievement level to some degree and 40% by at least .1 grade level per month.

Remedial reading, speech correction and improvement of self-image was the purpose of the Augusta Center's program in communication skills. A variety of tests were administered, including Diagnostic Reading Scales (George Spache), Wide Range Achievement Test, California Test of Personality, Wechsler Intelligence Scale for Children, Wechsler Adult Intelligence Scale, Hoffman and Sullivan Reading Pre- and Re-Tests as well as teacher-made tests. The results from these tests indicate that as a result of having participated in the program, the students had an improved attitude toward learning; showed improvement in achievement level; exhibited improved peer relationships; showed greater stability; showed less frustration and emotional strain and had fewer behavioral problems.

The Macon Youth Development Center conducted two activities in the Communication Skills area. One activity in reading was designed "to meet the special needs of students reading on a 4.5 level or below." Reading level was determined by pre-testing with the California Achievement Test, Slosson Oral Reading Test and several informal reading and reading readiness tests. Once a student's reading level was assessed, the student was given an individualized program of experiences to follow, designed to meet the needs identified for that student. No post-tests for this activity were conducted, since the Center administers post-tests to all students upon leaving.

Also designed to improve reading skills was the library skills activity conducted at the Macon Center. Students were pre-tested with the California Achievement Test and the Slosson Oral Reading Test. Based on reading scores, an individualized program was designed for each student, so that the materials each was assigned and those each selected from the library were suited to individual needs. As the student progressed, the material got progressively more difficult. As an adjunct to this program, approximately 11 different students per month were involved in producing a monthly newspaper, which required a variety of skills.

Augusta Regional's communication skills program sought to advance each student's achievement level one month for each two weeks stay in the program. The Wide Range Achievement Test was administered as a pre-test to determine needs in reading, spelling and mathematics. A random sampling indicated that for students spending an average of 39 days in the program, reading and math achievement improved an average of six months, while spelling improved an average of four months.

Students participating in Rome Regional Center's program gained an average of seven months improvement for an average of 5.9 weeks spent in the program. These results were obtained from administering the Wide Range Achievement Test prior and subsequent to instruction.

The Wide Range Achievement Test was the instrument chosen by Sandersville Regional Center to evaluate its students in reading and mathematics, also. A random selection of participants' scores show these results: 20 students increased an average of 8.6 months for 1.9 months of participation in the program.

#### MATHEMATICS SKILLS

Four centers conducted programs in mathematics skill improvement. Atlanta sought to improve the achievement level of 50% of its students by .1 grade

level for each month in the program. An individualized approach was taken, and results from the Wide Range Achievement Test administered prior and subsequent to instruction showed that 78% of the students participating three months or more showed some degree of improvement. Fifty-two percent (52%) improved 0.1 grade level for each month in the program, thus meeting the objective.

The Macon Center emphasized the consumer aspects of mathematics in teaching basic mathematics skills such as measurement, telling time, making change and determining weight and distance. A variety of materials and methods were employed in this program including filmstrips, tapes, transparencies, work books, games, adding machines and off campus trips for shopping, etc.

Augusta Regional's mathematics program was designed to advance each student's achievement one month for each two weeks spent in the program. Results from pre and post testing with the Wide Range Achievement Test indicate that students averaging 39 days in the program showed an average improvement in math of six months.

Students at the Sandersville Regional Center showed an average improvement in math of 8.5 months for an average of 1.9 months of participation, based on the Wide Range Achievement Test. Small group instruction was emphasized in this program to "increase the number of mathematics skills over which a student has mastery."

#### OTHER PROGRAMS

In addition to these basic skills programs, many centers provided courses in other areas. The Milledgeville Center offered an array of programs in addition to basic skills. A program in Music Education was designed to provide opportunities for students to express themselves musically in individual or group performances, and to increase their music appreciation.

Another program provided focused on training students in the vocation skills of Repairing Small Appliances and Furniture. Safety and good work habits were emphasized in the repair of items such as hot plates, coffee pots, toasters, hair dryers, vacuum cleaners, electric lamps, chairs, tables, picture frames and book cases. Students learned to operate several tools including the lathe, drill press, jointer, arm saw, hand saw and sander in the process of this program.

A course in Barbering was conducted at the Milledgeville Center to "train students in a vocational skill with emphasis on good work habits." Twenty-six students received on-the-job instruction in cutting and trimming hair and proper care of tools, each progressing at his own rate. Also offered at Milledgeville was a course in Business Education designed to help students become better prepared for the labor market. Students were instructed in typing, bookkeeping and record keeping for a period of approximately 12 weeks.

Also conducted at the Milledgeville Center was a program that familiarized students with the personnel, programs, policies and procedures of the Center. In addition, this program diagnosed students' emotional, medical, social and educational problems. After participating in the orientation and diagnostic program, students were given an objective, staff-developed orientation test covering Center programs, procedures and staff. Of all students taking the test, 84.5% achieved a score of at least 70, which is the minimum satisfactory passing grade.

At the Atlanta Center, students were exposed to a wide variety of career possibilities in the Career Education program. Filmstrips, workbooks and vocational games, posters and field trips were used to provide information and stimulate discussions. Typing instruction was given as a part of this program, also.

Culturally deprived students at the Macon Center were offered instruction in crafts such as embroidery, macrame, weaving, jewelry making, batik, fabric design, block printing and rug making. Goals for each student were established and careful guidance given to help in meeting the goals in the Cultural Enrichment program. The Macon Center offered two additional programs. The Distributive Education program was designed to offer students instruction in marketing and distribution and help them develop an understanding of the social, civic and economic responsibilities of those engaged in distribution in a free competitive society. Students learned stock control, the use of cash registers and display and salesmanship. In the Nurse Assistant program, students were to gain a knowledge and understanding of hospital ethics, human anatomy and procedures for patient care. The course combined formal instruction with clinical experience. Seventy percent (70%) of the graduates of this program are now employed as Nursing Assistants.

Two Centers provided programs designed to increase the student's motivation and to improve his self-concept. The Augusta Center used activities such as a hobby shop, arts, crafts and driver education to capture the students' interest. The Gainesville Center used varied techniques of teaching to interest students in the academic program of the Center. One technique involved the use of "rewards" or "tokens." In this way students earned "money" to purchase special privileges such as snacks, bowling, movies, late TV and play day. More than 83% of the students were able to "buy" play day each Friday of the school year in addition to purchasing other privileges during the week. The use of a variety of audio visual teaching aids and methods elicited observable interest on the part of the students participating in the Motivation program.

SUMMARY AND RECOMMENDATIONS

Georgia's ten Youth Development Centers are designed for the care of delinquent children. Basic skills (reading, mathematics and communication skills) are emphasized in the majority of the Title I educational programs offered at Youth Development Centers. In teaching the basic skills, individualization and small-group instruction are frequently used. A number of Centers are equipped with a wide range of audio-visual materials which are useful in teaching reading and communication skills.

Other Title I courses include Business Education, Cultural Enrichment and Small Appliance and Furniture Repair. Results of the "enrichment" courses fall in the cognitive, affective and psychomotor domains. Center administrators report such gains as increased knowledge of jobs available and training necessary for each (Career Education), improved peer relationships (Motivation), and development of marketable skills (Barbering, Nurse Assistant Program).

Program content is determined through a needs assessment which takes place at each Center. Once programs have been established on the basis of the needs and the priorities of a given Youth Development Center at a given moment, performance objectives are written for the programs. This seems to be the area of greatest potential for Georgia's Youth Development Centers.

Several Centers provided in their FY 1974 reports precise statements in limited, observable, behavioral terms. These Centers were subsequently best able to assess the progress of each student, and ultimately were in position to determine their program's overall success or failure.

Other objectives were stated in terms which were non-behavioral. These seem to have proven less valuable. In many cases no definite criteria were established for measuring the impact of a given program. Consequently, it was difficult for administrators to determine whether their methods were effective.

Another area of potential for the entire system of Youth Development Centers in Georgia is one concerning instructional activities and methods. Many of the Youth Development Center programs report a high degree of success in solving educational problems and in raising achievement levels. These programs undoubtedly contain elements which would interest other Youth Development Center administrators who are confronted with similar problems and who have not been as successful in solving them.

For this reason, a more comprehensive system of describing instructional activities and methods might be incorporated into the present reporting system. Information on methods which have "worked" in one Youth Development Center could then be disseminated to and, if appropriate, used by other Centers. Additional areas of possible common interest are systems used for scheduling and patterns of organization.
