ABSTRACT

Student enrollment for fall 1975 at Montgomery College totalled 13,907. This figure represents a rise of 1,278 from fall 1974, and a 4,372 rise from fall 1971, the first year for which comparative data are provided. This document provides a profile of the student body in terms of age, sex, race, marital status, residence status, country of origin, high school background, credit hours earned, class, status, curriculum, grade point average, employment, graduation, and future plans. Data are provided for fall 1975, and in many sections comparative data are presented for fall 1971-74. Where meaningful differences exist, day students are compared to evening students. With the recent growth in off-campus enrollment and the recent opening of a new campus, there have been some changes in the composition of the student body. Overall, more students are nonmatriculated (43 percent), female, over 25, and enrolled in one or two courses. While total enrollment has been increasing at about 10 percent per year, the number of students matriculated in transfer programs has declined for four straight years, the number of general education students has returned to 1973 levels after a decline last year, and career students continue to increase in number, though less dramatically than in the past. Nonmatriculated students, however, continue to increase at a rapid rate. (Author/NHM)

INTRODUCTION

The purpose of this report is to describe the Montgomery College student enrolled during the fall 1975 semester - a profile of the entire student body. The variables used to describe the Montgomery student are: (1) age, (2) sex, (3) race, (4) marital status, (5) residence status, (6) country of origin, (7) residence by postal zone, (8) high school, (9) date of high school graduation, (10) date of admission to Montgomery College, (11) hours earned at Montgomery College, (12) class, e.g., freshman, sophomore, etc., (13) status, e.g., new, transfer, re-enrollee, continuing, (14) curriculum, (15) credit hours of enrollment, (16) grade-point average, (17) employment, (18) graduation and future work plans. Where meaningful differences exist, students enrolled during the day are compared to their counterparts who attend classes in the evening.

The student enrollment for fall 1975 was 13,907, including students enrolled for credit courses at the Rockville, Takoma Park, and Germantown campuses, and off campus. These students come from the County, State, out of State, and foreign countries. They were matriculated in many curriculums for a varying length of time and for a variety of reasons - to graduate, to transfer, to pursue an interest, to sharpen or develop a skill. The students demonstrate a diversity of characteristics. With the growth in off-campus enrollment and the recent opening of the new campus at Germantown, there have been some changes in the composition of the student body. Overall, more students are non-matriculated, female, over twenty-five, and enrolled in one or two courses.

1. THE AGE OF STUDENTS

Montgomery College is attracting many students beyond what has been considered the traditional college age. A comparison of the age distribution of the student body between fall of 1974 and fall of 1975 indicates an increase in the proportion of students between 19 and 45 years of age. Proportionally there was little change at the extreme ends of the age distribution.

The shift in the age distribution between ages 19 and 45 produced differences in the second and third quartile ages. Whereas both distributions have the same first quartile age of 18, the second quartile (median) and the third quartile for 1975 are up one year over 1974. These changes are the result of an increase in the proportion of students beyond the traditional college age. (Figure A). While the typical day student at Montgomery tends to be in the early twenties, the evening students college-wide are more likely to be 26 or 27 years old. However, students 35 and older are more likely to attend classes during the day than at night. (Table 1).

2. THE SEX OF STUDENTS

The male-female ratio has been a significant area of change in student enrollment over the previous five years. In the fall of 1971 only 42 out of every 100 students were female, while presently 52 out of every 100 students are female. Another way to state this would be that, while male enrollment has shown a 20 percent increase since fall 1971, female enrollment has shown an 81 percent increase. This shift has been felt less among students enrolled in 12 or more credit hours where males still predominate, even while showing a slight decline. The number of female students carrying 11 or fewer credit hours, however, has more than doubled during the past five years. (Table 2).

Presently, a female student is about twice as likely to be enrolled in eleven or fewer hours than in twelve or more hours, while a male student is about equally as likely to be represented above as below the twelve-hour mark. (Table 3). Rockville and Takoma Park campuses differ in this regard. Women enrolled on the Rockville Campus are more likely to carry twelve or more credit hours than women enrolled elsewhere within the College, while men attending classes on the Takoma Park Campus are more likely to carry lighter loads than their counterparts at Rockville. In the fall of 1975, the Germantown Campus had no students with twelve or more credit hours, while off-campus sites enrolled only three. In both instances, female students predominate.

TOTAL	3316	3309	6625	2537	4745	7282	5853	8054	13907

Female students tend to be older than their male counterparts, with average ages of 27 and 24 years respectively. The females tend to enroll either in day or evening classes, while the majority of students who are enrolled in a combination of day/evening classes are male. A breakdown of the male-female ratio by type of curriculum reveals that the single largest group of females are not matriculated in a curriculum but are classified as "special." Career curriculums are evenly split between male and female, while transfer curriculums have a slightly higher proportion of males. (Table 4).

In summary, female students presently outnumber males at Montgomery College and, in contrast, tend to be older, non-matriculated, and likely to be enrolled for eleven or fewer credit hours.

TABLE 4

MALE AND FEMALE ENROLLMENT BY
TYPE OF CURRICULUM
FALL 1975

	CAREER	TRANSFER AND GENERAL ED.	NON- MATRICULATED "SPECIAL"	TOTAL
Male	1449	2643	2533	6625
Female	1440	2432	3410	7282
TOTAL	2889	5075	5943	13907

3. THE RACE OF STUDENTS

A racially diverse student population attends Montgomery College. Figure B shows the racial composition, using foreign-born as a separate category. Approximately 80 percent of the total student population is white, 7 percent is black, and 11 percent foreign-born. The remainder belong to Spanish, Oriental, American Indian, or other racial groups.

In general, the racial distribution of Montgomery College parallels that of Montgomery County. The main differences appear to be a slightly higher proportion of black and foreign-born students enrolled at the College. (Table 5).

Foreign-Born*	6.9%	11.0%
Other	1.2%	1.7%
TOTAL	100.0%	100.0%

*Exclusive of other groups

4. THE MARITAL STATUS OF STUDENTS

Single students outnumber married students at the College by better than two to one. While single students are more likely to attend classes during the day, about as many married students attend day classes as evening classes. (Table 6).

TABLE 6.

THE MARITAL STATUS OF STUDENTS ATTENDING DAY AND EVENING CLASSES

FALL 1975

	SINGLE STUDENTS		MARRIED STUDENTS		NO RESPONSE		TOTAL	
Day	6342	73%	1828	21%	540	6%	8710	100%

Day/Evening	1126	72%	337	21%	113	7%	1576	100%
TOTAL	9020	65%	4064	29%	823	6%	13907	100%

5. THE RESIDENCE OF STUDENTS

Over 90 percent of the students enrolled at Montgomery College are classified as County residents and about 3 percent are Maryland residents in counties other than Montgomery. Another 6 percent of the students either reside out of the State or are foreign students. The proportion of County residents increased over fall of 1974, while the proportion of non-residents has decreased. (Table 7). Some of this decline may be attributable to the reduction in the proportion of international students holding student visas in preference to other types.

TABLE 7

THE RESIDENCE OF STUDENTS ATTENDING MONTGOMERY COLLEGE FALL 1974 AND FALL 1975

	MONTGOMERY COUNTY RESIDENTS	MARYLAND RESIDENTS	NON- RESIDENTS	TOTAL
Fall 1975	12661	377	869	13907
Percent	91.0%	2.7%	6.3%	100.0%
Fall 1974	11234	360	1035	12629
Percent	89.0%	2.8%	8.2%	100.0%

6. COUNTRY OF ORIGIN

The international student population comprises about 11 percent of the fall 1975 student enrollment. Over two-thirds of these students possess either student (F) or immigrant (K) visas, with the immigrant visas being more common. (Table 8).

A total of 99 countries are represented by these 1494 students. Iran is the country of origin of 164 students, almost three times as many as from Thailand, the next greatest contributor. Nigeria (52), India (51), and Nationalist China (51) follow in line. (Table 9).

Most of the international students are County residents. Those with student and visitor visas are officially classified as out-of-state residents, comprising about one-third of the total. (Table 10).

7. COLLEGE ENROLLMENT BY POSTAL ZONES

Almost 94 percent of all the students who enrolled at Montgomery College for the fall 1975 semester had ZIP codes which were located in Montgomery County, Maryland. Six of the 37 postal zones in the County overlap into other jurisdictions.

The number of students enrolled at the College from each postal zone is shown in Figure C.

Of those students having Montgomery County ZIP codes, 85 percent live in the area indicated by the shaded portion in Figure D. This service area, composed of 15 postal zones, is essentially the same as that indicated in the fall of 1974.

Yield is measured by the number of students enrolled at Montgomery College per 100 households in each postal zone. The range is from a low of 0 (20709) to a high of 17.9 (20702) students per 100 households. For comparison, the rates of yield were divided into four levels shown on the Key in Figure E. A household in the Rockville area (20800) is more likely to have a member attending the College than one in almost any other part of the County. This high yield area has increased by two postal zones since the fall of 1974. Yield per household should not be confused with the actual number of students who reside in the ZIP areas as the population density varies greatly from area to area.

8. THE HIGH SCHOOL GRADUATES OF 1975 AT MONTGOMERY COLLEGE

Approximately 19 percent of Montgomery County public school graduates enter the College in the fall following their high school graduation. Rockville High sent the greatest proportion (30%) of its 1975 graduating class to the College, while Walt Whitman contributed only 11 percent of its graduates to the entering class of fall 1975 (Table 11).

Many high school graduates delay their entry into college and enroll six months or a year, or even more, after they complete their secondary education. Thus, by fall of 1975, almost 26 percent of the 1971 graduating class had enrolled at the College. (Table 12).

Private schools sent only 3 percent of their graduates to the College and the parochial schools in the County contributed 11 percent of their graduates to the fall 1975 class. The Academy of Holy Cross and the Academy of Holy Names tend to approximate the public schools in this regard. (Tables 13 and 14). Thus, the sum contribution of 1975 graduates from County public, private, and parochial schools to Montgomery College was 1886 students, or 18 percent of all the graduating seniors in the County.

9. DATE OF HIGH SCHOOL GRADUATION

The high school graduation dates of students enrolled for the fall 1975 semester span a period of 65 years. (Table 15). Another index of the variability in this regard is the fact that every high school graduating class from 1922 to 1976 has at least one representative enrolled. While recent graduates are certainly more prevalent, about one-fourth of the students graduated from high school over ten years ago. These figures substantiate the age distribution presented earlier and support the conclusion that the College services a sizeable number of students beyond the traditional college age.

10. THE DATE OF ADMISSION TO THE COLLEGE

First-time entrants to the College account for 5412 students, or 39 percent of all students enrolled for the fall of 1975. Most of these are first-time entrants to any college, although some have transferred from other institutions while others have even earned degrees previously. An additional 504 students had entered during the summer session making the first-time entrants 42.5 percent of the student population. Approximately one-quarter of the students were continuing their studies for a second year at Montgomery College. However, it should be noted that approximately 28 percent of the students enrolled at the College in fall 1975 had entered two or more years previously, including one student who entered Montgomery College as early as the fall of 1947. (Table 16).

Generally, two-thirds as many students return to classes the following academic year as enter each year. Off-campus students prove exceptional in this regard as only about one-quarter of the fall 1975 enrollment were students continuing from the spring. The fact that off-campus students tend to begin their studies at an off-campus site and then subsequently enroll in classes on a campus may account for this high proportion of new students.

TABLE 16

SEMESTER IN WHICH STUDENTS

TOTAL	1051	10532	2324	13907

11. THE NUMBER OF CREDIT HOURS EARNED BY STUDENTS

The cumulative number of credit hours Montgomery College students have earned on the average is 19-21 (excluding students entering for the first time who have not yet earned any credits). The cumulative number of hours a student has earned is related to his/her attendance, day or evening. Evening students characteristically have earned fewer credit hours, while students attending a combination of day and evening classes have exceeded the average hours earned by at least 3 credits, or one course. (Table 17).

TABLE 17

THE CREDIT HOURS EARNED BY STUDENTS AS OF THE BEGINNING OF THE FALL SEMESTER OF 1975

HOURS EARNED	DAY	PER- CENT	EVENING	PER- CENT	DAY/EVENING	PER- CENT	TOTAL	PERCENT OF TOTAL

12. THE CLASS OF STUDENTS

The College has experienced a major change in the students' class designations over the past year. The number of non-matriculated students who are considered neither freshmen nor sophomores increased 29 percent between fall of 1974 and fall of 1975. On the other hand, the number of freshmen or matriculated students with fewer than 27 earned credit hours decreased by 2 percent during the same time period, and the number of sophomores (matriculated students with 28 or more earned credit hours) increased by only 2 percent. (Table 18, Figure F). This was the result of the decrease in the proportion of matriculated students.

TABLE 18

13. THE CURRICULUMS OF STUDY

At Montgomery College a student may matriculate in any one of a number of curriculums designed to serve a variety of individual needs. Transfer curriculums include those leading to an Associate in Arts degree and are aimed at preparing a student to transfer to the upper division of a four-year college or university. The two-year program in General Education, generally considered a transfer sequence, may be used to prepare oneself broadly either for employment or for continuing one's higher education. Career curriculums are primarily intended for students planning to enter a chosen career field. Included in this group are special one year programs leading to the granting of a certificate.

Students may, however, attend classes without matriculating in any particular curriculum and do so for a variety of reasons. These include those students wishing to delay deciding in which curriculum to matriculate, citizens returning to college in order to complete their education, those beginning their college career but at a cautious pace, as well as those individuals attending for self-improvement, preparation in a special job-related skill, job upgrading, to name a few.

In the fall of 1975, about 43 percent of the student population were not matriculated in a curriculum. Transfer and general education students accounted for just over one-third of the student body while career students comprised about one-fifth. (Table 19).

TABLE 19

ENROLLMENT BY PROGRAM

FALL 1975

PROGRAM	TOTAL COLLEGE	
	STUDENTS	PERCENT OF TOTAL COLLEGE
Transfer	2192	16%
General Education	2942	21%
Career	2830	20%
Non-Matriculated	5943	43%
TOTAL	13907	100%

An examination of this distribution over the previous six years reveals some interesting trends. While total enrollment has been increasing at about the rate of 10 percent per year, the number of transfer students has declined for four straight years. General education students, while showing a decline last year, are now close to their 1973 level. Career students have continued to increase in number, although less dramatically in recent years. Non-matriculated students, however, continue to increase at a rapid rate. (Table 20). These non-matriculated students also tend to take lighter credit loads. (Table 21).

Of the 2830 students matriculated in career curriculums for the fall semester of 1975, about 34 percent were enrolled in Business and Commerce Technology, 24 percent in Public Service Technology, 21 percent in Allied Health Services, 11 percent in Data Processing, and 10 percent in Engineering Technology.¹

Matriculated students tend to be day students at a rate of about 2 to 1; however, the non-matriculated students choose day classes as often as evening classes. A student in a transfer curriculum is the most likely to be a day student. However, many matriculated students attend a combination of day and evening classes. On the other hand, the non-matriculated student is not as likely to attend a combination of classes. (Table 22).

In summary, non-matriculated students at Montgomery College are characteristically different from matriculated students, inasmuch as they tend to take lighter loads and are about equally likely to attend during the day or evening, but not during both times. Matriculated students generally take heavier loads and tend to be day students.

¹These are U. S. Office of Education program categories.

14. THE CREDIT HOUR LOAD OF STUDENTS

While some students carry as many as 25 credit hours in one semester, the most common load is three credits. Peaks in the distribution occur at multiples of three, reflecting the fact that most course offerings carry three hours of credit. (Figure G). Traditionally, the student body has been dichotomized into full- and part-time students. Different regulations and requirements applied to the two groups. More and more community college personnel have found that such a classification structure is meaningless in terms of student needs and the way in which the College serves the students. In actuality, the credit hour load distribution is a continuum and at no point can a clear distinction be made between the students carrying one load and those carrying another. In reality, students may change their load of credit hours several times during their tenure at the College, perhaps because many work full-time or part-time while attending.

Significantly, within the non-resident population, the majority of the students are enrolled in twelve or more credit hours. The fact that many of the non-resident population are foreign students who must satisfy their student visa requirements of a minimum number of hours of attendance may partially account for the difference in attendance patterns of resident and non-resident students.

A COMPARISON OF
CREDIT HOUR LOAD DISTRIBUTION
FALL 1974, 1975

FIGURE C.

15. DAY AND EVENING CLASSES

On a collegewide basis, students who attend only day classes or a combination of day and evening classes tend to be enrolled for twelve or more credit hours. Evening students, in contrast, are more likely to be enrolled for eleven or fewer hours. (Figure H).

FIGURE H

16. THE AGE AND CREDIT HOUR LOAD OF STUDENTS

Younger students tend to take heavier loads as more than twice as many students 18 to 20 years old enrolled for twelve or more credit hours as those in the same age range taking eleven or fewer hours. This is atypical in a distribution in which those enrolled for eleven or fewer hours predominate in virtually every age category. Still it should be noted that some 623 students 26 years old or older were enrolled for 12 or more credit hours in the fall of 1975. (Table 23).

TOTAL	8054	5853	13907

17. THE RESIDENCE AND CREDIT HOUR LOAD OF STUDENTS

When categorized according to residence status - County, Maryland, or out-of-state, the students of Montgomery College have a unique credit hour load distribution. Within each residence category, the load distribution has remained similar since fall 1971, although experiencing a slight decrease in the average load per student. The exception to this are the out-of-state students whose average credit hour load has increased slightly in recent years.

In the following charts the average load is the single figure that can be used to describe each distribution. The full-time equivalency (FTE) of students denotes the number of students enrolled for 12 or more credit hours, plus an accounting of students enrolled for 11 or fewer hours, that equates them in terms of a 12-hour load. This number of FTE's highlights the comparability of part-time and full-time students without regard to those students who carry loads in excess of 12 credit hours. Its use is limited in describing the total enrollment of the College.

County Residents

The total number of County residents enrolled at the College has increased 40 percent in the five-year period since fall of 1971. However, the FTE has increased by only 30 percent within the same period. The difference is reflected in the increase in the number of students carrying lighter credit loads. The three-credit hour load category doubled and the six-credit hour category almost doubled, while there was little change in the number of students enrolled for

15 or more credit hours. The growth in the off-campus program and the opening of the Germantown campus have contributed to the increase in students taking less than 12 credit hours, and is reflected in the decrease in average load during this period. (Figure I).

Maryland Residents

Maryland residents from outside Montgomery County exhibited a decrease in total enrollment, FTE, and average load during the past five years. During this period, the number of state residents taking a single three-credit course more than doubled. No other credit hour load experienced such dramatic changes, and the changes that did occur often vacillated between increasing and decreasing. Maryland residents most likely will continue to come to Montgomery College for a single course in an increasing proportion and will tend to carry 12 or more credit hours in a decreasing proportion. Thus, the average load of state residents will continue to decline. (Figure J).

Out-of-State Residents

In contrast to Maryland residents, the out-of-state students have exhibited an increase in total students, FTE, and average load since the fall of 1971. More recently, however, the total number of students enrolled for the fall of 1975, along with FTE, declined significantly from their high 1974 figures. This drop may be attributable to stricter enforcement of visa requirements by the Immigration Service and the lower out-of-state tuition charged by other colleges in the Metropolitan Washington Area. The number of out-of-state students is expected to continue to decline in the near future.

18. GRADE POINT AVERAGE OF STUDENTS

The grade point average (GPA) is the sum of the quality points earned, divided by the total credits a student has attempted. The typical Montgomery College student has earned a GPA between 2.50 and 2.99. There is no difference in the GPA of day students, evening students, or day-evening students. Although off-campus students have a slightly higher GPA (3.00 to 3.49), it should be noted that they have also earned fewer credits and are older.

19. EMPLOYED STUDENTS

Two-thirds of the students at Montgomery College are employed. The majority of these working students hold full-time jobs. Forty-five percent of them are employed in fields related to their studies. However, working full time does not mean a student attends classes only at night, nor does it mean he or she enrolls in only one or two courses. Over a fourth of the students who are enrolled in 12 or more credits hold full-time jobs. (Table 24).

TABLE 24
THE EMPLOYMENT OF STUDENTS
FALL 1974 AND FALL 1975

	FALL 1974 PERCENT OF STUDENTS	FALL 1975 PERCENT OF STUDENTS
Working full time	42%	45%
Working part time	24%	22%
Not employed	34%	33%
TOTAL	100%	100%

20. GRADUATION AND FUTURE WORK PLANS

Approximately one-fifth of the students attending Montgomery College in the fall of 1975 planned to graduate during that school year. Of the total student body, 10 percent said they would be seeking permanent full-time employment during the school year. While this percentage is relatively small, one should take into account that one-third are preparing to transfer to another institution of higher education and many students are already employed full time and consequently need not seek employment.

21. CAMPUS CHARACTERISTICS

Generally, the characteristics used to describe the typical student at Montgomery College hold for the students at Rockville and Takoma Park. For the most part, Germantown and Off-Campus students tend to distinguish themselves from the rest of the students with respect to many of the characteristics described. Before generalizing about these differences, one should be mindful of the nature of these campuses and examine the exceptions that follow.

GERMANTOWN

Germantown is located up-county. It was newly opened in the fall of 1975 and enrolled 189 students in a high school during the evenings. These students represent less than 2 percent of the College enrollment. Germantown students characteristically are women in their early thirties. The women outnumber the men by almost 3 to 1. Typically, the students are married. Few students have earned more than six credits. Most all of them are non-matriculated students, although five are enrolled in a transfer program and three are in business and commerce. These distinct characteristics seem to arise from the nature of the Germantown campus, its newness, its exclusive evening classes, and its location. As the campus grows, it seems likely that Germantown students will be more like students on the other campuses.

OFF CAMPUS

Off-Campus classes are held in schools, churches, and other facilities throughout the County. The 729 students earning credit at off-campus sites represent 5 percent of the total college. Some

of the oldest students at Montgomery College attend classes at off-campus sites. The majority of the students are female and are married. The student, typically, has earned 7 - 9 credits, or half the credits earned by his counterpart on the campuses. They are mostly non-matriculated special students, while the remaining students elect the transfer program, public service, health service, data processing, or business and commerce curriculums. The proportion of day to evening students is completely opposite to that which exists on the campuses: 38 percent of students attend day classes, 58 percent attend evening classes, and 4 percent attend day and evening classes. The purpose of the off-campus program is to serve a population that would not ordinarily attend on-campus classes. By the nature of the differences between the on-campus and off-campus student, it appears that the off-campus program is addressing its mission and answering a need in the community.

ROCKVILLE

On the Rockville campus, non-matriculated students comprise 41 percent of the student population. The second largest group of students are enrolled in the transfer and general education programs. The remaining 21 percent of the students are enrolled primarily in public service-related technology (7.5%) and business and commercial technology (8.5%). The sum of mechanical and engineering technology, data processing, and health services technology programs account for only 5 percent of the student population.

Matriculated and non-matriculated students on the Rockville campus differ with regard to credit hour load. Non-matriculated

students tend to be enrolled for less than 12 hours, while matriculated students are usually enrolled for 12 or more credits.

Almost two-thirds of the Rockville students attend day classes, about one-fourth attend classes at night, and the remainder attend classes during both the day and the evening. The public service programs have a much smaller proportion of evening students than is characteristic at Rockville as a whole. Business and commerce students are also most likely to be day students.

One out of every two non-matriculated students is a day student. The remainder are almost exclusively evening students. Less than 10 percent of the non-matriculated students attend classes in both the day and evening.

Time of attendance seems to be related to curriculum. Day students and day/evening students are most likely to be enrolled in a transfer curriculum, while evening students enroll most frequently (70% of the time) as non-matriculated students.

TAKOMA PARK

The transfer program is responsible for the largest proportion of the student population (44%) at Takoma Park. Approximately 29.4 percent of the students are non-matriculated; while the health services technology curriculums serve 22 percent of the students.

Over two-thirds of Takoma Park students attend classes during the day, one-fifth attend during the evening, and the remainder attend a combination of day and evening classes. The sizeable degree programs have a slightly larger proportion of day students, and consequently, a somewhat smaller proportion of evening students. For example,

the health services and paramedical technology programs serve a considerably larger proportion of day students and a negligible proportion of evening students. The unique attendance characteristic of the health service students may be attributable in part to the availability of the clinical facilities. There is little difference in attendance patterns of non-matriculated students at Takoma Park from that found on the Rockville campus.
