ABSTRACT

A description and evaluation of the Elementary and Secondary Education Act Title I-funded programs for the state of Maryland are presented in this report. Programs concentrated on instruction in language arts (reading) for students with special educational needs in the first, second, and the third grades. Developmental reading readiness for children in kindergarten received some attention in 23 of the 24 Local Educational Agencies. Sixteen Local Educational Agencies included mathematics components in their regular term projects. Program objectives addressed the broad areas of improving basic academic skills in reading and mathematics, improving personal and social development, and alleviating the physical and health deficiencies which impede educational attainment.

PREFACE

Fiscal Year 1975 was a kind of watershed in the history of Title I of the Elementary and Secondary Education Act. It was the end of ten years and, under new legislative authority, the beginning of a new era. The fundamental purpose as enunciated in the original Public Law 89-10 remained unchanged: to assist local education agencies (LEA's) with high concentrations of children from low-income families to meet "the special educational needs of educationally deprived children." The major changes in the law extending Title I--Public Law 93-380, or the Education Amendments of 1974--reflect primarily a strengthened emphasis on parent involvement and program evaluation.

This report is organized to provide maximum access to the data submitted by the LEA's in project applications and end-of-program evaluation reports. Salient information on the Fiscal Year 1975 Title I program in Maryland and the evaluation results are presented in the Highlights section at the beginning of the report. Chapter I contains descriptions and tables relating to the participants, the budgets, and the staffing of the program. Budgets are provided for LEA's and for the State according to account number and program component. Chapter II describes the procedures employed by the State Title I staff in administering the program in the State's 24 LEA's. Chapter III contains information on the involvement of parents and local agencies and organizations in the program.

Chapter IV is the heart of the report: narrative explanations and tables presenting the achievement results of the participants in the program. We believe that this report presents solid evidence of the educational efficacy of the Title I program in Maryland.

HIGHLIGHTS

Administration and Finance

- Maryland received a Fiscal Year 1975 allocation of \$26,786,951 under Title I of the Elementary and Secondary Education Act for the operation of programs for educationally disadvantaged students in schools having a high concentration of low-income families.
- The number of LEA's with school-level parent advisory councils increased from 18 in Fiscal Year 1974 to 24 (all LEA's) in Fiscal Year 1975.
- The administration of Title I by the State Education Agency continued to be marked by close contact between State regional specialists and local staff through frequent monitoring visits, communications, meetings, and workshops.

Participants and Services

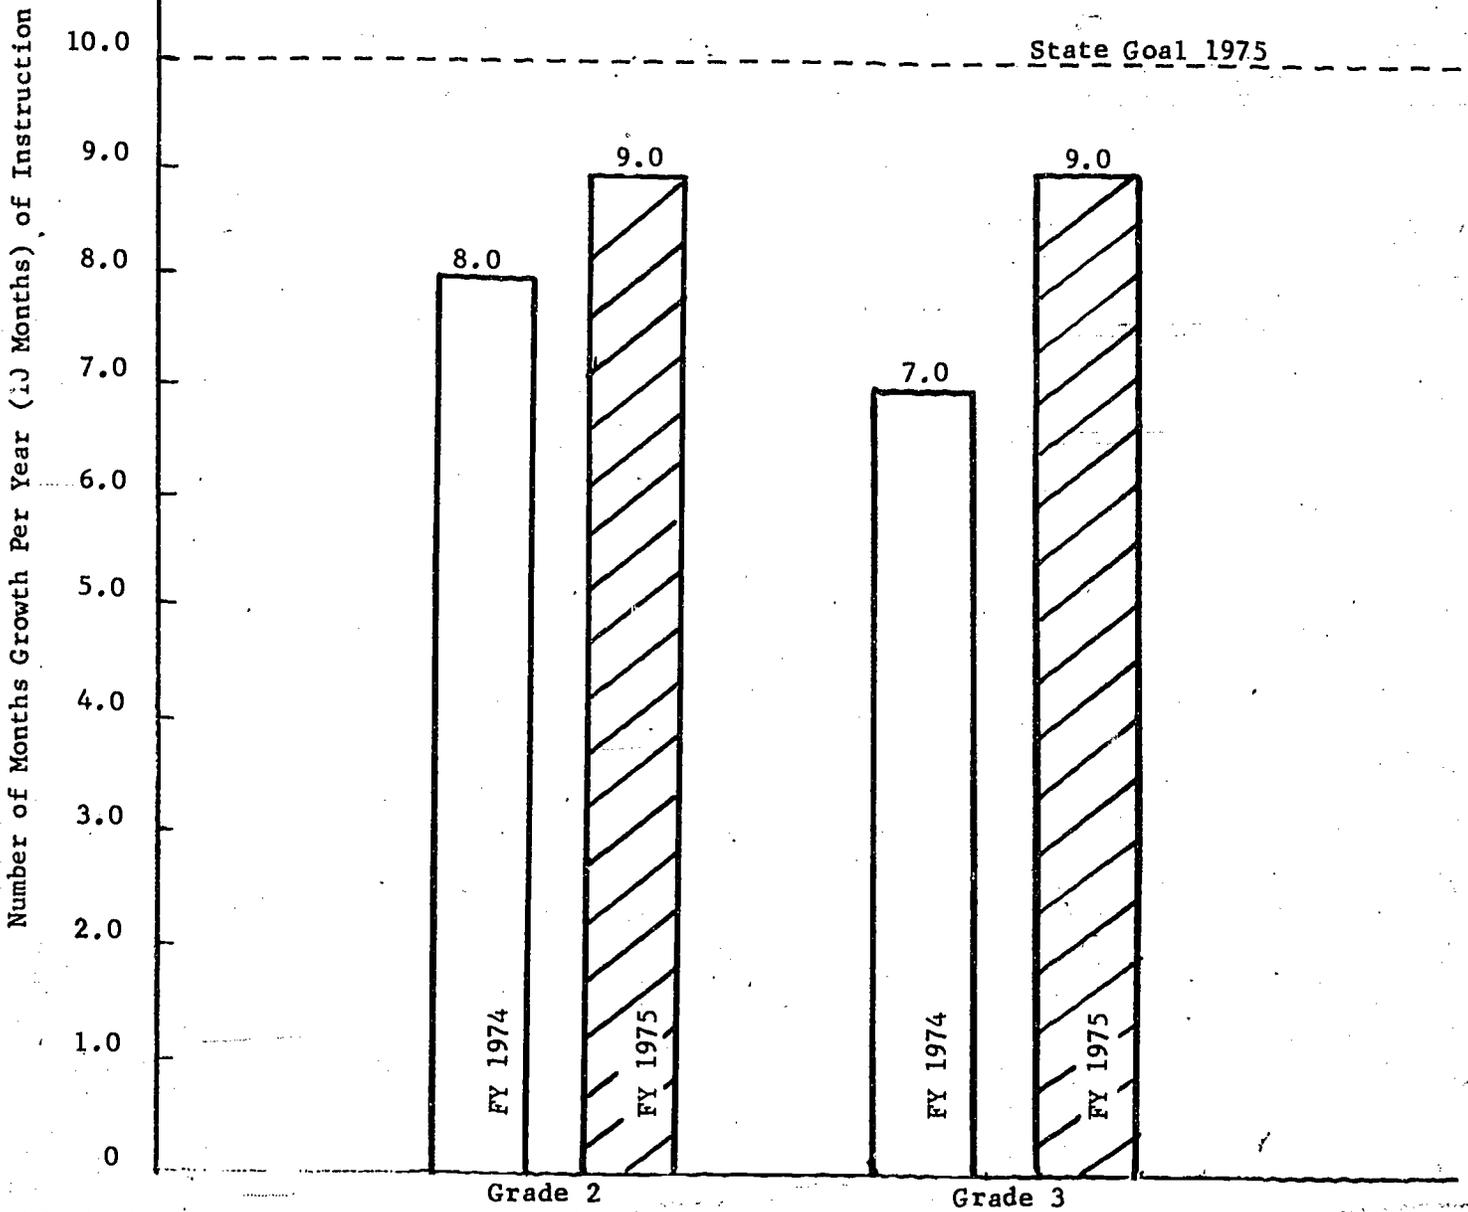

- Supplementary programs of compensatory education supported by Title I funds served a total of 64,618 students in the State's 24 LEA's.
- More than 70 percent of the students served participated at the kindergarten through grade three levels.
- Instructional programs in developmental readiness, reading, and mathematics accounted for nearly 75 percent of all program funds.
- Title I programs in Maryland employed 2,417 teacher aides to reinforce the instruction of classroom teachers. Individual and small-group instruction by the aides was based on a diagnosis of the specific needs of each Title I pupil conducted by the classroom teacher with the assistance of reading specialists and resource teachers.
- More than 75 percent of the participants received some health services to enable them to benefit fully from the instructional program.

Reading Achievement Results

- The statewide average rates of growth for second- and third-grade children in ESEA Title I Programs for Fiscal Years 1974 and 1975 (Graph 1) continued to increase toward the State goal of 10 months per year as follows:
 - Grade 2 - from a rate of growth of 8 months in 1974 to 9 months in 1975.
 - Grade 3 - from a rate of growth of 7 months in 1974 to 9 months in 1975.
- The statewide average percentages of students tested who made 10 months growth per year of instruction during Fiscal Years 1974 and 1975 (Graph 2) have increased as follows:
 - Grade 2 - from 32 percent in 1974 to 41 percent in 1975.
 - Grade 3 - from 31 percent in 1974 to 42 percent in 1975.

I. PROGRAM DESCRIPTION

The Title I program in Maryland concentrated during Fiscal Year 1975 on instruction in language arts (reading) for students with special educational needs in the first, second, and third grades. Developmental readiness for children in kindergarten received somewhat less attention in 23 of the 24 LEA's. Sixteen LEA's included a mathematics component in their regular term projects.

Participants

Projects operated during the summer of 1974 and the 1974-75 school year served a total of 64,618 students in 320 public and 49 nonpublic schools. Of the total participants, 61,927 attended public schools and 2,691 attended non-public schools.

Table 1 gives the number of participants by grade level. Table 2 provides a breakdown of participants and allocations by LEA's.

Budgets

Instruction accounted for 74.4 percent of the approved Title I budgets in the State. Out of the \$20,959,852 budgeted for instruction and evaluation, 71.2 percent supported language arts and 20.5 percent went for developmental readiness. Instruction in mathematics accounted for 4.6 percent of Title I funds for instruction. Sixteen LEA's had a mathematics component in their Title I projects.

Evaluation accounted for 3.7 percent of the total State program funds. Two LEA's -- Anne Arundel and Wicomico counties -- budgeted no Title I funds for evaluation. Out of the State total of \$776,315 budgeted for evaluation, 79.4 percent was spent by Baltimore City. Budgets by account number and by program category are presented in Tables 3 and 4.

Staff

During the 1974-75 school year, 3,472.5 full-time equivalent staff members were employed to develop, implement, and evaluate the Title I projects. Staff assigned as teacher aides totaled 2,417.3, or 69.6 percent of all Title I staff. These aides worked in the classroom with Title I children individually and in small groups to reinforce the instruction of the teacher in the basic skills.

The distribution of teachers across the grade levels reflects the program emphasis on the primary level. Only Baltimore City included prekindergarten and kindergarten teachers. The Washington County project employed five prekindergarten teachers. One-third of the school systems employed elementary school teachers in their projects.

Table 5 is a breakdown of Title I project staff by 22 categories.

Supportive Services

Health services were provided as part of the Title I program by 21 of the 24 LEA's at a total cost of \$665,519, according to Tables 3 and 6. Medical and dental care thus represent the largest area of supportive services. Table 6 gives the number of participants receiving supportive services by category.

II. STATE ADMINISTRATION

The State administration of Title I during Fiscal Year 1975 was conducted by eight staff members paid out of Title I administration funds. Of these eight staff members, the Assistant State Superintendent for the Division of Compensatory, Urban, and Supplementary Programs devoted a third of his time to Title I and an Assistant Director of the Division devoted all of his time to the administration of Title I, but the State paid one-third of his salary. These staff members represented the equivalent of seven full-time staff members, with one of these involved primarily in the administration of Title I programs in State institutions for neglected or delinquent children. Four staff members served as Title I specialists in four regions of the State: Region I (Western Maryland), Region II (Southern Maryland), Region III (Baltimore City and three surrounding counties), and Region IV (Eastern Shore). One staff member worked full-time in Title I evaluation and one worked full-time as a Title I auditor.

The State Title I staff rendered administrative services and technical assistance to the local projects through six methods:

1. Project application development and reviews
2. Project monitoring
3. On-site reviews
4. Meetings with project coordinators
5. Communications by letter and telephone
6. Inservice workshops

Applications for summer projects were reviewed during the last week of June 1974; the school-year project applications were reviewed during early July 1974. The review team for each project consisted of the eight State Department of Education staff members paid out of Title I funds and Department specialists

in reading, human ~~relations~~, and special education; a representative of the State Department of Health and Mental Hygiene; a local Title I coordinator; and a Title I ~~parent~~.

Two meetings ~~were~~ held during the year to acquaint all project coordinators with new regulations proposed by the U. S. Office of Education to implement Public Law 93-380 as well as to inform the coordinators about projected allocations for the current and succeeding fiscal year. Other topics discussed included such areas as needs assessment, evaluation, parent involvement, the use of aides, individualized instruction, comparability, and financial management. In addition to these statewide meetings, each Title I regional specialist conducted several meetings in his region involving coordinators, project staff, and parents.

During Fiscal Year 1975, at least eight monitoring visits were made by the regional specialists to each LEA. These four regional specialists visited approximately a third of the 369 Title I schools in Maryland.

The State Title I staff conducted the formal on-site reviews and monitoring visits primarily for three purposes:

1. To determine the extent to which project operation is consistent with the project application, the federal regulations, and good educational practice.
2. To identify those activities and techniques which show promise for strengthening programs of compensatory education in other schools and school systems.
3. To identify areas in which technical assistance may be needed.

These formal on-site visits by State teams comprising an average of 14 staff specialists were made to five LEA Title I programs during the year.

These visits ranged from two days to four days in duration and included approximately 60 Title I schools.

Each on-site visit began with a briefing and project overview by the LEA staff. Three-member teams visited representative public and nonpublic schools, where they observed the Title I classes and discussed all elements of the project with the principal, resource teachers, teachers, aides, students, and parents. Building exit conferences focused on specific strengths and weaknesses of the project as it was being implemented in the school. Following the school visit the members of the visiting team met to discuss and record observations--concerns and recommendations--in the areas assigned specifically to different team members: attendance areas, participants and services; instructional activities, staffing and staff development, supportive services, evaluation, non public schools, parent involvement, dissemination, financial management, and comparability. A report on findings in these areas was presented orally to the local superintendent and his staff at an exit conference. A written report was sent to the superintendent and the Title I coordinator. Follow-up to this report was provided by the regional specialist, who met with local staff to discuss the project in light of the formal on-site review findings. Steps taken to correct deficiencies observed during on-site and monitoring visits were taken into consideration in the review of projects for Fiscal Year 1976.

Table 7 is a compilation of the major areas of technical assistance by the State Title I staff and the number of LEA's receiving assistance in each area.

Table 7. SEA Technical Assistance to LEA's During Fiscal Year 1975

	No. of LEA's
A. Administration and Finance	
1. Maintenance of current data on the selection of target schools	12
2. Development and use of uniform criteria for identifying participants	6
3. Development of a balanced program of supportive services in which Title I funds are used only when other funds are not available	4
4. Operation of a program in the nonpublic schools that is comparable to the public school program	5
5. Training of principals, teachers, and aides in evaluation procedures, test interpretation, and data analysis	9
6. Development of improved needs assessment and evaluation procedures that include the nonpublic schools	2
7. Improvement of the dissemination of new Title I regulations and program objectives to school staff and parents	21
8. Improvement of public dissemination of Title I goals and activities	17
9. Development of procedures for identifying and disseminating effective instructional activities	8
10. Maintenance of comparability records in such a manner that they can be readily reviewed	12
11. Development of better controls of Title I inventory	3

18

Table 7. SEA Technical Assistance to LEA's During Fiscal Year 1975

	No. of LEA's
B. Program	
1. Maintenance of records on the diagnosed needs and prescribed instructional activities for each participant	13
2. Development of a sequential curriculum	11
3. Strengthening of the continuity between the kindergarten program and the program in the primary grades	10
4. Development of a mathematics component	20
5. Strengthening of the team approach to instruction by involving teachers and aides in staff development and planning	4
6. Development of classroom procedures that ensure the most effective utilization of Title I aides	7
7. Training of aides to enable them to work skillfully in the areas of reading and mathematics	6
8. Improvement in the involvement of parents in project development, implementation, and evaluation.	9
9. Establishment of active parent advisory councils at each Title I school	10
10. Development of a constitution and by-laws for each parent advisory council	4
11. Development and implementation of effective home reinforcement activities for parents	12

61

III. COMMUNITY INVOLVEMENT

Cooperation with Other Community Agencies

The cooperation between LEA's in Maryland and other agencies relative to Title I continued to increase during Fiscal Year 1975. Generally, the LEA's received more services from health departments and religious organizations and, to a lesser degree, from civic groups.

Table 8 provides a summary of the number of LEA's reporting cooperation with health, social service, civic, and religious agencies and the services obtained from them during Fiscal Year 1972, 1973, 1974, and 1975. Local school systems reported obtaining more services in 1975 compared to 1974 in nine of the 16 categories listed.

Parent Involvement

Title I was amended on August 21, 1974, by P.L. 93-380 to include a major new requirement under Section 141.(a) that each LEA establish school-level parent advisory councils in addition to the districtwide council:

Sec. 141.(a) A local educational agency may receive a grant under this title for any fiscal year only upon application therefor approved by the appropriate State educational agency, upon its determination (consistent with such basic criteria as the Commissioner may establish)-

(14) that the local educational agency shall establish an advisory council for the entire school district and shall establish an advisory council for each school of such agency served by a program or project assisted under section 143(a)(2), each of which advisory councils-

(A) has as a majority of its members parents of the children to be served,

(B) is composed of members selected by the parents in each school attendance area,

(C) has been given responsibility by such agency for advising it in the planning for, and the implementation and evaluation of, such programs and projects, and

(D) is provided by such agency, in accordance with regulations of the Commissioner, with access to appropriate information concerning such programs and projects.

During Fiscal Year 1975, all 24 LEA's established advisory councils at the participating schools. This was the most significant area of increased parent involvement, as indicated in the summary data for Fiscal Years 1971 through 1975 reported in Table 9. Table 10 gives a breakdown by LEA of this same data.

Table 8. Number of LEA's Reporting Cooperation with Other Local and Community Agencies for Fiscal Years 1972, 1973, 1974, and 1975

IV. PROJECT OBJECTIVES AND EVALUATION

Evaluation and assessment are necessary components of any properly conceived educational program. Educators must evaluate the merits of their instructional activities: that is, they must systematically assemble evidence from tests and other assessment devices which will permit others to judge the worth of their educational efforts. As evaluation is the basis for improving instruction this information and procedures for securing it must be the concern of parents, boards of education, state and federal offices, and legislators as well as teachers, building administrators, and local central office staff.

Evaluation is, according to federal regulations, a required component of the Title I program. Using the appropriate objective measures of educational achievement, LEA's evaluate at least annually the effectiveness of their Title I programs in meeting the special educational needs of their Title I children.

In accord with federal regulations, each LEA is required to plan and provide for an annual assessment of its Title I program. The Title I evaluation plan of each LEA is established in the Title I program application giving the schools an idea of what is expected with regard to the evaluation of the program. When the instructional activities of the program are completed, the results of the local evaluation are compiled and submitted each year to the Maryland State Department of Education. The Department has developed a standard evaluation format to be used by LEA's in reporting their end-of-program descriptive information.

This standard evaluation format requests specific Title I program information such as the number of students involved, the grade span of participants, objectives of the program, and pre- and post-test data for every participant. Evaluators are asked to specify the degree to which objectives

are reached, what conclusions could be drawn, and what recommendations they have for modifications of future program activities as based on the current year's evaluation data.

Although a standard reporting form is used for local Title I reporting, no uniform evaluation design as such has been stipulated in every grade by the State for local use. LEA's have the option of choosing the standardized test instruments for use in their Title I evaluation. However, the State Education Agency recommends that the LEA's use comparable forms of standardized test battery chosen for their program.

A. Project Objectives

For an evaluation to be effective on any level, the reporting and data collection must be directed toward the goals and objectives of the program. Conclusions must be drawn in light of the desired outcomes of the program.

As Title I provides special educational services for children who are significantly below grade level in achievement, it is necessary to identify those children eligible for the Title I program. The use of a standardized achievement test is required to determine educational deprivation. However, the process does not end with the assessment of educational deprivation but continues with the preparation of meaningful instructional objectives to meet those assessed priority needs of educationally deprived children. The preparation of adequate objectives is an integral part of the planning procedures of each Title I program in Maryland. These objectives are derived from and reflect the needs which the Title I activities are designed to alleviate. These goals also complement the State reading goals.

As part of the annual Title I program application form, and again in the end-of-program annual evaluation report, each local education agency is required to list its major program objectives in clear measurable terms,

specifying the types and the amount of change to occur as the result of Title I program activities. During Fiscal Year 1975, as in previous years, each LEA had the option of formulating its own specific Title I program objectives to meet the critical educational needs determined for the Title I children in that school system. Although specific objectives varied somewhat, program objectives generally fell into the broad areas of improving basic academic skills in reading and mathematics, improving personal and social development, and alleviating the physical and health deficiencies which impeded educational attainment.

The most frequently reported objectives for the ESEA Title I programs operating during Fiscal Year 1975 are listed as follows:

1. For the Summer Term 1974:

-To improve the scores for reading and other communication skills one or two months through an individualized instructional program.

-To improve the kindergarten children's reading readiness scores so that they will have the skills necessary to succeed in reading.

-To improve basic mathematics scores for participating children two months for the two months in the program.

2. For the Regular School Term 1974-75:

-To improve reading scores for participating children one year (10 months) during 10 months of instruction.

- To improve the kindergarten children's reading readiness scores so that they will have the skills necessary to succeed in reading.
- To improve the mathematics scores for participating children one year (10 months) during 10 months of instruction.
- To improve the self-image of the children so that they will have a stronger feeling of personal worth and a feeling that they are persons who can learn and can succeed in the school situation.
- To improve the children's attitude toward school and reading and to increase their motivation to learn.
- To improve the health and physical deficiencies of the children in order that their ability to succeed in the school situation may be improved.

Objectives were written for other areas only when improvement in those areas was considered a part of, or necessary for, the development of basic skills.

B. Impact of ESEA Title I Programs

An anticipated average rate of growth of one year for a year of instruction in the basic skill areas is the statewide goal for Maryland Title I participants. In many cases, these children will make significantly

more than the national expectancy of one year's growth per year of instruction; while on the other hand, the cultural, economic, and educational deprivation of children will hamper educational growth despite the efforts made through Title I to overcome those problems. Growth on an average of one year does become substantial when one considers the achievement of the average economically and educationally deprived child prior to the intensive instruction and services provided through Title I.

Prior to Title I, the greatest gain expected of disadvantaged children was less than five months in one year (10 months) of school. However, currently, sizable proportions of Title I children in Maryland are achieving at least eight months' growth. A smaller but still significant percentage is achieving at or above the national norm of 10 months per year.

Although a year's growth in achievement is significant for the educationally deprived child, it is anticipated that future instructional activities will be so structured under Title I as to facilitate an average growth of more than a year by Title I students in order that they might begin to come closer to the norm of achievement in the later elementary grades.

Information obtained from the evaluation reports submitted by the LEA's in Maryland provides positive evidence concerning the success of compensatory educational programs conducted during Fiscal Year 1975. Some of the available information confirming the beneficial effects of Title I programs in Maryland is summarized briefly in the following sections.

1. Test Data: Public School Participants

This section includes data tables which summarize the reading readiness and reading comprehension results of the Title I program participants. These data were derived from an analysis of scores from the standardized tests administered by local systems to the Title I program children.

As yet, no single test has been mandated statewide for the testing of all Title I children although the Iowa Test of Basic Skills was used in the Maryland Accountability program for testing in all schools at the end of grades three, five, seven, nine, and eleven.

Thus, data on reading presented for Title I students represent scores from the following standardized test instruments:

Gates - MacGinitie Reading Test

Iowa Tests of Basic Skills Test

Metropolitan Achievement Test

Peabody Picture Vocabulary Test

Pre-School Inventory

Stanford Achievement Test

The most frequently used test among these was the Metropolitan Achievement Test, which was administered in kindergarten through grade three by more than 50 percent of the LEA's.

Table 11 provides an interpretive phrase describing the post-test level of performance in reading readiness for the kindergarten children. Also, since the scores of the majority of tests administered in kindergarten could not be converted to grade equivalent scores, the average or mean stanine score is provided for this summary of readiness scores.

Tables 12 through 14 provide by LEA the rate of growth in reading per year (10 months) of instruction for children in grades one through three. Each of these tables also includes

information on the number of children in the program, the number of children pre- and post-tested, the name of the test administered, and the average pre- and post-test grade scores of the Title I children.

The rate of growth which appears in the right-hand column of each of these tables is obtained by dividing the difference in the grade equivalent scores by the number of months of participation in the Title I program between testings. For purposes of interpretation this growth rate derives its significance in determining program success when it is compared to the average rate of seven months for 10 instructional months, which was the previously mentioned rate cited for disadvantaged children.

For example, Table 13 shows that in Anne Arundel County the group of Title I children in grade two gained 10 months' growth in reading comprehension for a year (10 months) of instruction as determined by scores on the Metropolitan Achievement Test. This rate of growth indicates that the Title I program was successful for these children when compared to the rate of growth (five months) generally obtained by disadvantaged children without such supplementary educational services. In light of the fact that 99 percent of the Title I program participants are represented in the Anne Arundel County test population for which results were compiled, this rate of growth indicates a high level of success for the program during Fiscal Year 1975.

Another aspect to note in reviewing data in Table 13 is the range of growth rates and the mean statewide rate of growth. The range was six to 12 months' growth per year (10 months) in the categories of growth rates as follows:

10 or more months for five (22 percent) of the LEA's; eight to nine months for 14 (61 percent) of the LEA's; and six to seven months for four (17 percent) of the LEA's. The mean statewide rate of growth in reading comprehension for the second grade Title I youngsters was nine months for a 10 months instructional period.

2. Test Data: Nonpublic School Participants

During Fiscal Year 1975, 15 LEA's provided Title I instructional services to nonpublic school children which represented an increase of two LEA's over last year. Of these 15 LEA's, nine supplied standardized achievement data on the nonpublic school Title I program participants. The data submitted by these nine LEA's are summarized in Tables 15, 16, and 17.

As may be observed, some LEA's reported that children in grades one, two, and three made good progress of eight months or more per year (10 months) in reading achievement during Fiscal Year 1975.

Table 11. Standardized Test Results for Public School Participants in the Fiscal Year 1975 ESEA Title I Program:
