 IDENTIFIERS *Elementary Secondary Education Act Title I; ESEA
 Title I; *South Carolina

ABSTRACT

In South Carolina 235,420 children were served by Elementary Secondary Education Act Title I programs. The Fiscal Year 1975 allocation to South Carolina was 30,882,029 dollars. Reading activities were provided for 64 percent of Title I students, math programs for 48 percent, and dropout prevention activities for nine percent. The instructional activities offered were usually conducted in a learning center staffed by a certified teacher and aide. Local Educational Agencies reported that the problems encountered most frequently in administering Title I programs were; delay in announcement of allocation amounts, inadequate Title I funds, limitations imposed by federal and state regulations and guidelines, and, inability to obtain qualified staff. Test data reported by local districts were analyzed according to a norm-referenced evaluation model. Results showed that most students in programs on a twelve month testing cycle maintained the same level or regressed slightly, while those on a fall-spring testing cycle showed greater than expected gains. A total of 12,475 dropout-prone students were served in Title I programs. Of these, 5.7 percent dropped out, compared to an overall state dropout rate of 1.2 percent. (Author/JM)

ABSTRACT

Participants

Title I served 135,420 children, representing 24% of all elementary students and 14% of all secondary students in South Carolina.

Funds

The FY 1975 allocation to South Carolina was \$30,882,029. Of this allocation, \$27,037,330 was budgeted during FY 1975 in approved project applications for local school districts. Seventy percent (70%) of the budgeted amount was spent for salaries, paying a total of 4,076 personnel in the winter and 631 in the summer. The largest single group of personnel was teacher aides, 2,124.

Program Description

Reading activities were provided for 64% of Title I students, math programs for 48%, and dropout prevention activities for 9%.

An estimated average of \$10,891 per district was spent for pre-service and in-service; of this \$3,133 came from Title I funds and the remainder from other sources. Twenty hours was the average total time each teacher participated in pre-service and in-service. Title I teachers had an average of ten hours paid planning time during the summer and 1.3 hours per week during the winter. The instructional activities offered typically were conducted in a learning center staffed by a certificated teacher and aide. Students were regularly scheduled to the center for less than five hours per week. The typical Title I teacher planned instruction independently of the regular teachers and used a commercially published curriculum package.

LEA's reported that the problems encountered most frequently in administering Title I programs were:

1. Delay in announcement of allocation amounts
2. Inadequate Title I funds
3. Limitations imposed by federal and state regulations and guidelines
4. Inability to obtain qualified staff

Needs Assessment

Data supplied by the Statewide Testing Program reveal clearly that the average grade equivalents of South Carolina students are below national norms at all grade levels tested. This fact is true for all students and Title I students. National percentile ranks indicate that the State's fourth graders perform somewhat more poorly than the students in the other three tested grades. Title I students in the seventh grade perform relatively somewhat better than those in the fourth, ninth and eleventh.

CTBS BATTERY TOTAL EXPECTED AND OBTAINED
MEAN GRADE EQUIVALENTS (SGE) AND NATIONAL PERCENTILE RANKS
FOR ALL STUDENTS AND TITLE I STUDENTS IN
GRADES 4, 7, 9 and 11 (OCTOBER 1974)

GRADE	EXPECTED SGE	EXPECTED PR	OBTAINED SGE (ALL)	OBTAINED PR (ALL)	OBTAINED SGE (TITLE I)	OBTAINED PR (TITLE I)
4	4.1	50	3.3	31	2.6	12
7	7.1	50	6.1	38	4.2	15
9	9.1	50	8.1	38	5.1	12
11	11.1	50	10.1	37	6.6	10

Results of Testing

Test data reported by local districts were computed by grade level, by testing date, and by the title of the test used. Data were analyzed according to a norm-referenced evaluation model. Expected post-test scores were computed and compared to obtained post-test scores for data resulting from the CAT and CTBS which were the two most widely used tests. Results, in general, showed that programs on a twelve month testing cycle maintained the same level or regressed slightly, while those on a fall-to-spring testing cycle showed greater than expected gains. Absolute gains, measured in scale scores, were

approximately the same for both groups. It has not been determined whether the two groups were actually different or whether the apparent difference in effectiveness is spurious. The difference could result from not conforming to testing dates that correspond to publisher's norming dates.

Dropouts

A total of 12,475 dropout-prone students were served in Title I programs. Of these, 5.7% dropped out, compared to an overall state dropout rate of 1.2%.

I. BASIC STATISTICS

A. Total number of operating LEA's in the State	<u>92</u>
B. Number of LEA's participating in Title I	
1. during the regular school term only	<u>92</u>
2. during both regular and summer terms	<u>16</u>
C. Unduplicated number of pupils who participated in Title I programs	
1. enrolled in public schools	<u>134,792</u>
2. enrolled in nonpublic schools	<u>628</u>
D. Number of Title I cooperative projects	<u>3</u>
1. number of districts participating	<u>35</u>

The total number of children served by Title I began a steady decline after FY 1971. Apparently this decline ceased. The number of students enrolled in Title I programs for the past five years are shown below.

<u>Year</u>	<u>Number of Title I children served</u>
FY 1971	289,276
FY 1972	188,238
FY 1973	152,613
FY 1974	121,368
FY 1975	135,420

In keeping with the state philosophy which emphasizes preventive rather than remedial education, there are proportionally more students enrolled in Title I programs at the elementary than at the secondary level. See Table I-1 for enrollment data.

The number of pupils participating and the amount of Title I expenditures are presented in Table I-2 and Table I-3. It is evident that Title I efforts are concentrated on reading.

* Data used to compile this Table was taken from the Title I Progress Report which is developed by the State Title I Office from approved project applications.

II. STATE AGENCY STAFF VISITS AND MONITORING PROCEDURES

Each project in the state is scheduled for an on-site review by the Title I staff on a rotating two-year cycle. These reviews are one aspect of the total reviewing and monitoring process which begins with pre-submission of proposals in April. Pre-submission enables the Title I staff to schedule individual conferences with each of the ninety-two districts in the state. During these conferences, weaknesses in the proposals are identified and corrected, thereby minimizing last minute changes after the official submission date.

The Title I staff begins on-site program reviews in the fall. The major purpose of these on-site reviews is to ensure that program operations are being conducted in accordance with the specifications set forth in the approved project. If, during the initial review, it is determined that there is need for corrective action, the district is given thirty days to make changes. A follow-up review by the Title I staff is then made to validate that corrective action has been taken. If the Title I staff determines that corrective action has not been taken, funds may be terminated.

During fiscal year 1975, forty-eight initial on-site program reviews and thirty follow-up reviews were made. In addition, accountants from the Office of Finance conducted nine comparability reviews.

III. PROGRAM INFORMATION

The data reported in Table 3-1 indicate that more elementary and secondary schools conducted reading activities than any other activity in both regular and summer terms, and that mathematics programs also were emphasized. These data reflect the state's continuing emphasis upon basic skills programs.

LEA's reported various types of problems in implementing Title I programs. These reports are summarized in Table 3-2. As in the past, the most frequently cited problem has been the delay in announcement of allocation amounts.

In the past several years a great deal of emphasis has been placed on providing programs for children who have some major type of mental or physical handicap. Without Title I funds, many local districts would not have adequate funds to offer a sufficient number of classes for the number of children determined eligible.

Title I affords local school districts the opportunity to expand compensatory programs in eligible areas by providing supplementary materials and equipment and paying the local supplement for the teacher involved. Title I funds can be used only for additional classes above those classes which were offered by the LEA before the inception of Title I.

In fiscal year 1975, 10,724 special education students participated in Title I programs. This data, as compared with fiscal year 1974, in which 12,329 students participated shows a decrease in the number of children who receive benefits for these services. A large percentage of the cost for educating handicapped children is being absorbed by the local and state agencies.

Additional data describing Title I program activities were collected and are summarized in Tables 3-3 through 3-6. According to these reports, a typical Title I reading program is conducted in a learning center staffed by a certificated teacher and a full-time aide, to which students are assigned less than five hours a week, but on a regular schedule. Typically, students' daily lessons are planned independently by the Title I teacher who uses a commercially published curriculum package. Most students participating in Title I programs have been selected on the basis of at least two objective criteria, and the most frequently employed selection criterion is standardized test scores.

IV. NEEDS ASSESSMENT

The South Carolina State Department of Education has adopted a five year plan to increase the educational quality of South Carolina schools. The plan has the following major objectives:

1. To reduce the number of dropouts by at least 50 percent by 1975.
2. To reduce the number of students repeating the first grade from the present 15 percent to a maximum of 5 percent by 1975.
3. To establish a statewide program of public kindergartens available to all 5-year-old children by 1975.
4. To measurably improve the basic verbal and quantitative skills of the inschool students by 1975.
5. To provide an adequate occupational training program for 100 percent of the secondary school students who choose it by 1975.
6. To increase the number of high school graduates entering post high school training to at least 50 percent by 1975.
7. To develop an adequate educational program for youth with physical, mental or emotional handicapping conditions by 1975.
8. To increase the total adult enrollment in basic and high school programs from the present 40,000 to at least 80,000 by 1975.
9. To promote programs to provide adequate and qualified professional and para-professional personnel to staff the state's educational system.
10. To incur the implementation of at least a defined minimum educational program in each local school district by 1975.
11. To develop and maintain a system of continuous evaluation and upgrading of education.

The State Board of Education has further mandated that districts in which a need for improving the basic skills areas or reduction of the dropout rate exists, Title I money must be

first directed toward reading, mathematics and dropout prevention programs. In order to implement the mandate, the Title I application includes a needs assessment package which is designed to solicit data related to the reading and mathematics achievement and dropout rate from each district. The data utilized for assessing district needs in the achievement areas is taken from the annual Statewide Testing Program. This procedure allows for consistency in the state and local needs assessment endeavors, and provides a consistent reference point for comparing achievement among districts.

The testing plan for October 1974 is summarized below.

<u>Grade Level</u>	<u>Test(s) and Level</u>	<u>Sample</u>
4	Comprehensive Tests of Basic Skills, Form S, Level 1 and Short Form Test of Academic Aptitude, Level 2	All public school students and approximately 95% of Catholic school students except those enrolled in special education programs.
7	CTBS/S-2	All public school students and approximately 94% of Catholic school students except those enrolled in special education programs.
9	CTBS/S-3	10 percent stratified random sample
11	CTBS/S-4	10 percent stratified random sample

Each district receives total district, individual school, and individual pupil reports for both Title I participants and total school populations, and the Office of Federal Programs receives similar reports aggregated at the district and state levels.

Local Title I Coordinators utilize district and school reports for local needs assessments. If the reading scores of 35 percent or more of the students in a district's priority schools fall at or below the 25th percentile according to national norms, a reading program must be implemented by that district with Title I funds. A similar requirement is imposed for mathematics performance. If fewer than 35 percent of the students score below the 25th percentile in either or both of these instructional areas, a Title I program is not mandated for the area(s) for which this performance level occurs.

Data from the Statewide Testing Program, aggregated for the entire state, are presented in Table 4-1. The entries in this table are national percentile ranks corresponding to the average performance of "all" students and Title I students in the 4th, 7th, 9th and 11th grades in South Carolina. An examination of the data in this table reveals that South Carolina students tend to score relatively lower in mathematics and reading than in other areas. Further, 4th grade students are systematically scoring relatively more poorly than students in other grades.

The data show also that Title I students score relatively lower in mathematics and reading than in other areas. No consistent pattern, however, is evident to indicate that one grade tends to perform systematically below the others. Fourth graders are relatively lower in mathematics and science, while 11th graders are lower in reading, language and mathematics.

Since the Statewide Testing Program is conducted in the fall, several weeks after Title I students have begun their activities, these data also demonstrate that selection procedures are successfully identifying educationally deprived students for Title I participation.

V. EVIDENCE OF EFFECTIVENESS

Evaluation of Achievement

Data reported in this section represent test scores that are compatible with a norm-referenced evaluation model. Aggregating the district test data at the state level is difficult at this time because of at least two constraints:

1. Pre-test to post-test time intervals vary and do not always conform to publisher's norming dates.
2. Non compatible evaluation models have been utilized.

Efforts are currently under way to ensure that the data will become increasingly aggregable. These efforts are consistent with the recommendations that are being made by RMC Research Corporation.

Reading total scores and math total scores from both the Comprehensive Tests of Basic Skills (CTBS) and the California Achievement Tests (CAT) were aggregated separately, by grade level, from the annual evaluation reports submitted to the State Department of Education from districts reporting both pre-test and post-test data. These tests were selected for analysis because they are the most widely used for program evaluation. The pre-test average scale scores were used to project the expected post-test score using the procedure recommended in a norm-referenced evaluation model (RMC Manual UR-243). Results are summarized in Tables 5-1 through 5-4. The data gleaned from fall-to-spring testing have been compiled separately from the spring-to-spring testing results.

The differences between actual post-test scores and expected post-test scores for fall-to-spring testing are, on the average, larger in a positive direction than corresponding differences for spring-to-spring

testing. Of the 18 fall reading differences, 4 are significant* and positive; of the 22 spring reading differences, 2 are significant* but one is positive and one is negative. Of the 14 fall math differences, 7 are significant* and positive; of the 21 spring math differences, none is significant*.

Because of certain known and assumed psychometric properties of test scores and test uses, and certain known and assumed characteristics of student achievement gains and losses, one would conclude that the spring-to-spring test data reported in Tables 5-1 to 5-4 are more reliable than the fall-to-spring data. The insignificant gains shown by the spring data are disappointing. Nevertheless, although individual district obtained and expected differences were not compiled, it is undoubtedly true that some districts' Title I students did exhibit significant gain while students in other districts did not.

The utilization of more systematic and compatible evaluation models, better data reporting procedures, and some analysis of relationships between gains and characteristics of program components may produce information which will result in more definitive conclusions. As was stated earlier in this report, efforts in these directions have been implemented and will continue.

* Significance is based on the difference being equal to or greater than one-third of the grade-level scale-score standard deviation of the national standardization sample.

The entries in Table 5-5 are the grade equivalents and national percentile ranks of mean Title I post-test scores for CTBS and CAT Reading and Math for South Carolina grades 2-12. While the grade equivalents of these Title I students increase (with reversals in Reading at grade 9) through the grade levels, the percentile ranks (with several obvious reversals) show a dramatic tendency to decrease through the grade levels.

Dropout Prevention

Although a cause-effect relationship is difficult, if not impossible to establish, dropout information is one indicator of improvement in school programs. The statewide dropout rate is continuing to decrease, a fact which may be due in part to the impact of Title I. A dropout is defined as "a pupil who leaves school for any reason except death before graduation or completion of a program and without transferring to another school."

As part of the Annual Title I Evaluation, data were collected from the LEAs on the dropout rate of participants in dropout prevention programs. No data are available from non-Title I schools or Title I schools which do not have dropout prevention programs.

As the data in Table 5-6 illustrate, the holding power of Title I dropout prevention programs is impressive. Although the reported dropout rate is higher than the state rate (1.2%), it should be remembered that these programs served only those students judged most likely to drop out of school.

TABLE 5-6
TITLE I DROPOUT PREVENTION PROGRAMS

NUMBER OF SCHOOLS HAVING PROGRAMS	TOTAL NUMBER STUDENTS PARTICIPATING	NUMBER OF DROPOUTS	PERCENTAGE OF DROPOUTS
124	12,475	712	5.7%

VI. COMMUNITY AND PARENTAL INVOLVEMENT

The SEA has always encouraged LEAs to involve parents and the community in the planning and operation of programs in the public schools. Title I has further encouraged the participation of the community as a whole in the development of programs to meet the needs of the educationally deprived child. In an effort to further expand the involvement of parents in Title I programs, the SEA included in the State Title I Manual, the federal regulations concerning parental involvement. Additionally, the Title I project application requires an assurance from the LEA representative which includes the following: (1) that a system-wide council composed of parents of children to be served in public and non-public schools participating in Title I activities is established, and (2) that these parents represent the majority of such council. The form further provides assurance from the PAC representative that the council has been provided an opportunity to participate in planning, development and project operation.

The membership of PACs is summarized in Table 6-1. Note that this is a duplicated count.

The types of activities undertaken by the advisory councils are listed in Table 6-2. With two exceptions, the percentages of districts participating in various types of activities were virtually unchanged; more PACs are involved in program evaluation and fewer are involved in proposal development than during the previous year.

The State Department of Education is now in the process of organizing regional councils within the state. The councils will

consist of the chairman of each district in that region along with selected superintendents and coordinators.

In-service workshops will be conducted for the regional councils. The workshops will cover:

1. History and philosophy of Title I
2. Parental advisory councils' responsibilities
3. Target area selection
4. Program development
5. Program implementation
6. Dissemination
7. Evaluation

Packets will be developed for each district to be used in local in-service workshops.

TABLE 6-1
MEMBERSHIP OF PARENT ADVISORY COUNCILS

REPRESENTATION	% OF COUNCIL
Parents of public school participating students	74.9
Parents of non-public school participating students	.9
Parents of non-participating public school students	22.6
Parents of non-participating non-public school students	.2
Public school teaching staff	3
Non-public school teaching staff	1.6
Public school administration	2.1
Non-public school administration	1.3
Other: Businessmen, local community leaders, etc.	1.1

* Since some members are included in more than one area, percentage totals will exceed 100%.

Assist in publicizing the program	95
Solicit involvement from other parents	84
Other	3

VII. DISSEMINATION

During FY 1974, local districts utilized a variety of techniques in disseminating pertinent information to the local community, SEA and other agencies concerning the use of Title I funds. Probably the advisory councils' activities were the most significant means of dissemination. (See Table 6-2). Other techniques are summarized in Table 7-1. Staff meetings and in-service appear to be the most common ways of reaching staff members; while PTA meetings are most often used to reach laymen. The news media are not widely used.

TABLE 7-1

LEA TECHNIQUES USED IN DISSEMINATION
OF INFORMATION AND FREQUENCY OF USE

FY 1975

TECHNIQUES AND METHODS OF DISSEMINATING INFORMATION	NUMBER OF DISTRICTS USING THE TECHNIQUE
Presentation of information and data in staff meetings	90

Special television coverage of project	3

VIII. TEACHER-TEACHER AIDE TRAINING

LEAs that included teacher aides in their project proposals were required to show evidence of coordinated in-service training programs with joint participation of the educational aides and the professional staff members. In addition, the training offered had to be related to the specific duties and responsibilities of involved staff members and aides.

The general pattern of such activities consisted primarily of meetings two to three days prior to the opening of school, and scheduled meetings either weekly or monthly during the school term. Most of the school district's activities emphasized instructional material, equipment and techniques and the evaluation of instruction.

A total of \$288,284.91 of Title I funds was spent on pre-service and in-service combined, an average of \$3,133 per district. In addition, an estimated \$713,750 was spent from other sources. This figure includes a portion of the salaries of non-Title I supervisors and consultants who conducted training sessions. (See Table 3-5).

IX. COMPENSATORY EDUCATION FOR CHILDREN ENROLLED IN NON-PUBLIC SCHOOLS

During the school year of 1969-1970, the SEA made a concerted effort to enhance the participation of eligible non-public school children in the state. The major outgrowth of the effort made by the SEA was a revision of the assurances in Title I projects with regard to participation of eligible children in non-public schools, and proposed specific action to ensure improved assessment and adequate participation.

All districts in which eligible non-public schools are located have initiated a system of joint planning so that representatives of eligible non-public schools participate in the development of the Title I program. Participation of non-public school students in FY 1975 was 628. The majority of the non-public school programs were conducted during the regular school year on a regular time schedule.

X. STATE EDUCATIONAL AGENCY TECHNICAL ASSISTANCE EFFORTS

During FY 1975, fourteen technical assistance workshops were conducted to inform the local administrative personnel involved in Title I of state and federal procedures germane to the successful and legal operation of their Title I programs. In addition to this effort, the Title I staff provided individual technical assistance to school districts upon request.

The workshops which were conducted during July 1974 to June 1975 are as follows:

1. December 3-5, 10-12, 1974. Six PAC Conferences to review Title I Parent Involvement Legislation.
2. September 27, 1975. Instructions for submitting Title I Tydings Amendments, Comparability Reports, and Handicapped 313 Reports.
3. April 7-8, 10-11, 14-15, 1975. Regional Conferences conducted throughout the state to explain Title I pre-submission requirements.
4. April-June, 1975. Individual Conferences scheduled for coordinators, curriculum specialists and evaluators of every district in order to review preliminary draft of FY 1976 proposal.
5. June 19, 1975. Conference to explain final application procedures for FY 1976 proposals and FY 1975 annual evaluation report.

The materials and procedures used in the workshops were developed specifically for use in these workshops. An evaluation of the materials showed that they were effective in imparting information. Many of the proposals reviewed during the pre-submission conferences (No. 4 above) were already in fundable form. This is further evidence of the effectiveness of the technical assistance efforts.
