#### ABSTRACT

Data from a survey on serials arrangement procedures and policies at academic libraries was used by the University of Rhode Island (URI) Library in changing current serials policies. Ten libraries, four of which have similar serial holdings and user populations to URI, responded to a questionnaire. Information was obtained on classification versus alphabetization of serials, and missing issues, cataloging, and title change procedures. Based on analysis of this information, recommendations were made for the URI Library concerning: (1) annual publications; (2) bound and unbound serials; (3) newspapers; (4) public catalog entries; (5) computer printouts; (6) incomplete volumes; and (7) title changes. The questionnaire is appended. (KP)

AN INVESTIGATION OF SELECTIVE COLLEGE AND UNIVERSITY LIBRARIES' SERIAL ARRANGEMENT

by

ELIZABETH GATES KESLER

GAY TEBOREK

and

UNIVERSITY OF RHODE ISLAND LIBRARY KINGSTON, RHODE ISLAND 02882

FEBRUARY 1977

This paper is the result of a study conducted by a Dean's Committee at the University of Rhode Island Library. It explains the initiative for the study, the procedures followed, and the recommendations that were made to the Library's Administration. It is hoped that the statistical information will be of help to others conducting similar surveys or making similar decisions.

\* An Investigation of Selective College and • University Libraries' Serial Arrangement

Historically, serials in the University of Rhode Island have been shelved in different locations determined by whether the serial was bound, unbound, catalogued, uncatalogued, classified, or unclassified. The alphabetical sequence for unbound current serials began on the first floor and continued to the second floor. 'Bound serials were classified in either the Dewey Decimal or Library of Congress Classification system and intershelved with the monographs. Incomplete volumes were stored in a non-public area which had limited access after Library office hours. Uncatalogued and unclassified bound titles were designated by "W" in the public records, on the spine, and shelved in another alphabetical sequence. All of these sparate locations were inconvenient, inefficient, and confusing to the Library users.

In Spring 1973, the initial proposal for the Library's new addition indicated to the Library Faculty that the increase in floor space would allow all bound and unbound serials to be shelved on one floor. This offered an opportunity for a major change in serials arrangement and policy. Immediately, many questions arose concerning the best way to arrange the serials. Most prominent was whether bound and unbound serials should be classified or alphabetized.

The Dean, University Libraries appointed the Serials Arrangement Committee to investigate all aspects of existing problems, to study alternative arrangements and policies, and to make recommendations for a viable system for the University of Rhode Island Library.

Introduction Realizing that the experiences of other academic libraries would be highly relevant to their work, the Committee made a search of the literature in the fall of 1973 and found still valid Gloria Whetstone's 1961 statement "Literature published in the field of scrials revealed little or no material on procedures in college and university libraries."1

Preliminary on-sight investigations of serial collections in libraries at the Marine Biological Laboratory in Woods Hole, Massachusetts, Providence College, and the University of Connecticut, and the undergraduate ibraries at the Universities of Tennessee, Iowa and Michigan gave evidence that these academic libraries faced similar problems but that solutions were not consistent. Some of the inconsistencies in serial practices are as follows:

- 1. Definitions were not consistent for a serial, periodical, journal, etc.
- 2. Main entry for serials published by an organization were established under corporate body in some libraries and under the title in others.
- Title changes, mergers, splits, cessations, were handled in a variety of ways:

   a. Some libraries relabelled the spines with each title change.
  - b. Some libraries listed changes on the shelf beneath the journal.
- .4. Various authorities for main entry were used.
- 5. Current issues of journals were shelved either with bound serials or in a separate collection.
- 6. Unbound, incomplete volumes were stored in open shelves, closed shelves, current periodicals room, and with bound serials.

1. Whetstone, Gloria, "Serials Practices in Selected College and University Libraries", Library Resources and Technical Services, V.5 (4): 284-290, Fall 1961.

- Different departments were responsible for servicing journals after they had been processed and placed on the shelves.
- 3. Listings of journals and holdings records could be found in the public'
  - catalog, computer print-outs, separate serial catalogs, and in non-public records.
- 9. When serials were arranged alphabetically, various filing systems were used. (Nord by word with articles omitted; word by word with articles included; by title, letter by letter.

The on-sight inspections served only to add more questions rather than to provide solutions for the existing questions. The Committee decided to expand the survey of academic libraries, in hope- of finding a trend or preference for one mode of procedure.

Procedure A set of questionnaires<sup>2</sup> was developed and mailed to the libraries included in the Whetstone study,<sup>3</sup> and eight additional libraries. The additional libraries selected had serial holdings of approximately the same number of titles as the University of Rhode Island Library, and a similar user population consisting of undergraduates, graduate students, faculty and researchers.

In all but two cases, the Serials Librarian or Head of the Serials Department filled out the questionnaire. In the cher two cases, the Head of Technical Services and a librarian in technical services completed the questionnaire. For purposes of consistency, in answering the questionnaire, the definition

of a serial, as stated in the Anglo-American Cataloging Rules, 1967, was used:

"a publication issued in successive parts bearing numerical or chronological designations and intended to be continued indefinitely. Serials include periodicals, newspapers, annuals, (reports and yearbooks, etc.) the journals, memoirs, proceedings, transactions, etc. of Societies."

The above definition does not include rumbered monographic series. The cover letter accompanying the questionnaire included the definition and other instructions.

Six of the sixteen originally surveyed libraries, the University of Iowa (Iowa), Pennsylvania State University Penn), Duke University (DUKE), North Carolina State University at Raleigh (40SU), the University of Texas at Austin (Texas), the Hilton S. Eisenbower Library at Johns Hopkins University (Johns Hopkins), and four of the additional libraries, Dartmouth College (Dartmouth), the James Branch Cabell Library at Virginia Commonwealth University (Virg.), Rockefeller Library at Brown University (Brown), and the University of Maine at Orono (Haine) returned questionnaires.

2-See Appendix A. 3-Whetstone p. 284. 4-See Appendix B. The questions sought to determine how these selected Libraries arranged serials, handled cataloging and binding practices, kept in-house records, and maintained serial collections. More specifically, they referred to the problems listed in the introduction of this paper, which had been identified by the Committee.

Tabulations of the responses to the questions are in the following tables. The tables follow the sequence of the cuestions on the questionnaire. When a question was not answered by a library, the name of the library is omitted from the table. In an instance where the question diffinity apply to the anwering library, NA has been used.

The following is a summary of the answers given on the questionnaires:

## Serials Classified VS Alehabetized

Ø

The size of the current serials collection appeared to be a determining factor in classifying or alphabetizing serials. Comparing the size of the libraries serial collection (Table 2) with the categories of serials classified (Table A.1) shows that four out of the eight libraries with over 10,000 current subscriptions classify all serials. Newspapers are not classified in the remaining four libraries with large collections. Iowa does not classify and Duke classifies selected journals and periodicals.

All reporting libraries classify some serials. In particular, annuals and yearbooks are classified without exception. Virginia Commonwealth University classifies memoirs, proceedings, reports, reviews and transactions, if the title is received annually.

The two libraries with the least number of current subscriptions also classify the least number of serials. Virginia and Maine, classify two and six categories respectively. Both libraries arrange bound journals and periodicals alphabetically, and noted that their collections are easily controlled. Maine cited economic advantages for alphabetizing.

Among the many advantages given for maintaining bound serials in a classified system are that this approach places all materials relating to one subject in one place; requires one filing system for serials and monographs; shelves new titles near older, more familiar titles; and provides ease in handling title changes, mergers, cessations, and titles in foreign languages. Successive title cataloging is also possible. None of the reporting libraries cited any advantage for arranging serials in alphabetical order. One library representative states that there are "not many" advantages in their practice of alphabetizing journals and periodicals, and would undertake the project of classifying these serials as well, if funding were available.

There is a greater variation in the shelving methods for Canbound issues of classified serials than there is for shelving the bound volumes. Dartmouth and Johns Hopkins use a combination of all three methods - unbound issues classified and shelved separately from the bound, classified and shelved with the bound, and arranged alphabetically. Of the three libraries that classify all unbound issues, one shelves them with the bound issues, one shelved them with the bound issues and the other two libraries shelve them separately. Maine and Virginia do not classify journals, periodicals and newspapers and do shelve them alphabetically.

The Library of Congress Classification System is used by all reporting libraries for classifying serials with the one exception of Duke, which uses the Dewey Decimal System. In all cases where bound serials are classified, these serials are intershelved with the monographs.

#### Missing Issues/Incomplete Volumes.

All libraries reported that they made an attempt to replace the missing issues of a volume before it is bound. The length of time that a library waits for these issues to be located varies from two weeks (iowa) to one year (Virginia).

Four libraries leave the incomplete volume in the public stacks until the issues are secured or the decision is made to bind without the missing issue. Of the six libraries reporting that incomplete volumes are not left in the public stacks, only two, Johns Hopkins and Duke, do not maintain a public record of

where the volumes are stored.

### Cataloging Practices

The prevailing practice among the reporting libraries is to catalog serials. Half of the libraries catalog all serials and three additional libraries catalog all serials except newspapers. Reports are not cataloged by Maine, and Penn will catalog a newspaper if it is retained on microform. Virginia does not catalog journals, newspapers, and periodicals, and will catalog memoirs, proceedings, reports, reviews, and transactions if it is published annually.

Maine is the only library which selectively provides subject headings and added entries. Cataloging in all other libraries included subject headings and added entries.

The Union List of Serials, New Serials Titles, and Library of Congress Cataloging are used to establish main entries, by all reporting libraries. •Additional sources c<del>it</del>ed are national bibliographies, the Virginia Union List of Serials, the Berkeley List of Serials, BUCOP, and Half Century of Soviet Serials.

#### Title Changes

Nine out of ten of the reporting libraries always recatalog a serial when the 'title changes. The tenth library, Duke, selectively recatalogs. Libraries were asked to describe how the public records would be affected by a title change. Two practices are most predominent. Five libraries catalog the new title and add a reference to the old title that notes the newer title. Four libraries follow rules for successive cataloging that provide linking notes between titles and the last 'title and adds a title varies note.

## Recommendations For University of Rhode Island

With the questionnaires of the responding libraries analyzed and studied carefully, and with the existing practices and community input taken into account, the Committee made the following recommendations to the administration of the URI Library.

Annual Publications

Serials published on an annual schedule will go directly to the bound serial stacks with LC or Dewey Classification when available. An annual title which lacks cataloging and/or classification will be assigned a "W" and an accession number. Each subsequent issue will be given the same "W" accession number as, the first issue. With this "W" number it will be shelved in the bound serials stacks. No annual serial will be sent to the unbound current serial stacks. Bound Serials

1. Will be removed from monograph stacks and placed on one level.

18 -

2. Shelving sequence will be: (a) Library of Congress
 (b) Dewey Decimal
 (c) "W" accession number

3. Government Publications, International Publications and State Publications which currently are assigned LC or Dewey class numbers will remain in the bound section for the appropriate system. Those publications with a Superintendent of Documents number, an International number or a State number will be located in the Government publications collections.

Unbound Serials

1. Will be placed on the same level with the bound serials, but in a separate current periodical room.

2. Will be arranged by classification number or "W".

3. Shelving sequence will be LC, Dewey, "W".

"W" Accession Collection

(. Existing bound "W's" will be given an accession number prefixed by the "W".

2. A copy of the new form (to fit Kardex and route serials) with holdings information will be sent to the person responsible for the computer printout.

3. Existing current unbound issues in the present "W" collection will receive the same "W" accession number as the bound, and will be shelved in the current periodical room.

4. Shelving sequence will be LC, Dewey and "W".

Newspapers

1. Will not be included with the other serial arrangements. They will continue to be shelved in alphabetical order by title.

2. They will be cataloged and listed in the public catalog as well as in the computer printout.

3. The Serials Department will be responsible for the paper and microform holdings of newspapers.

4. Newspapers will be retained according to the criteria assigned by the Serials Advisory Committee.<sup>5</sup>

5. Serials Advisory Committee was appointed by the Dean, University Libraries in 1972 and charged with reviewing new serial requests, cancellations, serial policy and determination of format.

Public Catalog Entries

1. Will follow LC practices in effect at time of cataloging.

19

2. "Serial" will be noted by a shield.

Computer,Printout

1. Will follow LC practices in effect at time of cataloging.

2. Appropriate cross references will be made.

3. Will serve as public holdings record.

Incomplete Volumes

1. Will be left on the unbound current shelves.

2. If attempts to acquire missing issues have not been fruitful within a 6 month time period, the volume will be bound, citing the lack of issues on the spine or on a page inserted before the first page when spine marking is not possible.

3. When it becomes apparent to the Serials Department or other library personnel that a particular title is frequently being bound with missing issues, the title will be sent to the Serials Advisory Committee for microform consideration.

4. If additional issues are missing at binding time (at the end of 6 months) a search will not be made for these additional issues, but the volume will be bound with the same instructions given in (2) above.

5. When an incomplete volume has 50% or more of its issues missing it will be replaced on microfilm.

Change of Title (Merger, cessations)

Cataloging procedures will follow LC practices in effect at time of change of title.

# UNIVERSITY OF RHODE ISLAND KINGSTON • R. I. 02881

University Library

July 30, 1974

#### Dear Serial Librarian,

The University of Rhode Island Library will soon break ground for an addition to the present building. With the increase in floor space, the possibility of housing all serials, bound and unbound, on one floor has become a possibility. A special committee, the Serials Arrangement Committee, has been appointed by the Dean, University Libraries, to study the arrangement of serials in academic libraries.

Attached is a set of questionnaires concerned with various aspects of serials arrangement. The first section contains general questions. The next section, SECTION A, contains questions about alphabetically arranged collections of bound serials. The last section, SECTION B, contains questions about bound serials in a classified arrangement. Depending on how your library arranges serials, would you please answer the questions in either SECTION A or SECTION B or both?

In preparing the questionnaires, the following definition of a serial as stated in the Anglo-American Cataloging Rules, 1967, has been used:

"a publication issued in successive parts bearing numerical or chronological designation and intended to be continued indefinitely. Serials include periodicals, newspapers, annuals, (reports and yearbooks, ect.), the journals, memoirs, proceedings, transactions, etc. of societies."

The definition does not include numbered mnographic series.

Your cooperation in this study will be greatly appreciated. Please return the questionnaire by August 21, 1974. If you would like to know the results of this survey, please feel free to contact the Committee.

Sincerely,

Serials Arrangement Comm.

Elizabeth Gates Amar Lahiri Gay Teborek
