## ABSTRACT

de la Cruz, Beato A.: Zorc. R. David Paul A S.tudy of the aklanon Dialect. Voluee One: Gramar. zeace Corps, Mashington. D.C. 68 230p.: For related document. Soe FL d08 976 : Best copy available

HF-\$0.83 HC-\$12.71 P1us postage. Adjectives: Adverbs: *Dialect Studies: Rorn Classes (Languages) : Function Hords: :*Gramar: Fnstructional Katerials; Language Instruction; Language Patterns; Language Research; Language 0sage; *halayo Polynesian Languages; Horphology (Languages): Horphophonemics; Nominals: Phonology: *'Second Language Ledining: *Unconnonly Taught Languages: Verbs *Aklanon: Philippines

The purposes of this graimar of aklanon are to: (1) prövide teachers with a sourcebook on their dialect, so thet they can understand the formalities of aklanon: (2), provide foreign learner's of the dialect, particularly Peace Corps volunteers or missionaries, with a reference gramara and (3) provide linguists with a treatment of an unresearched dialect. The gramar is divided into the following six units: (1) mreliminary Remarks on aklanon": (2) monology. The Significant Sounds of the aklanon Dialect": (3) "Linguistic Background": (4) "Horphophonemics in aklanop": (5) "The Basic Parts of Speech": and (6) Function Words. The gramar is followed by a bibliography of lingnistic and dialect study books. (CLK)

## APPROVBD FOR PRINIING

First Endorsement, for Peace Corps
25 April 1968

Tommy R. Anderson Ford Foundation Consultant Phillippine Normal College Manjla, Philippines

Second Endorsement, by Peace Corps 3 May 1968

Theresa A. Boucher
Language Officer Peace Corps Manila, Philippines

No part of this book should be copied, printed or otherwise reproduced without the explicit permission of the authors, except for purposes of criticism or review.

This hook is the result of a non-profit project for the benefit of teachers in the province of Aklan and for the instruction of U. S. Peace Corps volunteers and other interested parties. The purchaser is warned that the publication cost of this book is not to exceed--

$$
\begin{array}{ll}
\text { either } & \$ 4.70 \text { per copy [Phdippine currency] } \\
\text { or } & \$ 1.20 \text { per copy [United States currency] }
\end{array}
$$

excluding any costs for postage or handling.

The purposes for this study are tirce-fold: (1) To provide teachers *' with a sourcebook on their dialect; so that they can understand the formalities of Aklanon. With supplementary seminars and workshops, it is hoped that more concise and efficient curriculum guides can be prepared for the teaching of the vernacular. Up to the present time there has been much disagreement abot: such problems as the spelling of the vernacular, and it is hoped that conventions can be established about the dialect through the agency of this present sudy. (2) To provide forcign learners of the dialect, particularily Peace Corps Volunteers or missionaries, with a reference grammar, covering; the peculiarities of the sound and structure of Aklanon speech. (3) To provide linguists with a treatment, however basic or humble, if a hitherto unresearched dialect; and hence to enrich the catalogue of literature available on the lessknown languages or dialects of the world.

Like any paper or publication, this is an unfinished andunending work, a part of an ongoing and growing process. The particular organization or explanation of the phenomena of the Aklan dialect could very well be debated and changed. No doubt, as time goes on and interest'in the dialect develops, subsequent works. will be publishéd and may surpass this paper. This is not, then, to be considered--either by the authors or by the readers--as a finished treatise or an absolute statement about the Aklanon dialect; particularily since this edition is the result of much turried effort to meer a deadline and other requirements.

This grammar will not be easy to read-as no grammar is easy to read. It has not been made to be difficult, although it has been made to be thorough. The reader coes rict have to come to this book sophisticated in linguistic techniques, but if he keens with it, he should leave with a good deal of sopinistication; not only about Aklanon, but about lingyistic methods as well. The study is presented in the light of the above-mentioned purposes and qualifications in the hope that it may encourage those who absotb it to make their own personal-analysis of the vernacular, for it is only in personal struggle that understanding and knowledge are iound. The authors trust, then, thar. it will fill the explicit and projected ncods of the province oi Aiklan, the U.S. Peace Corips, and any other similar interested parties.

The autbors wish to acknowledge gratefully the belp of the following:
Dr. Tommy Anderson of Philippine Normal College for his invaluable linguistic heip in proofreading and editing this paper, who is greatly responsible for the present format and a good . many idcas c̄ontained herein.

The United States Peace Corps for its total support of this project, particularily in the persons of: Dr. Richard Wilson, Mr. John Bossany, Mr. Allan Kulakow, Mrs. Theresa Boucher and Mx. Charles Shackelton. The Bureau of Public Schools, Manila in the person of its directer. Juan C. Manuel for their support.
Mayor Federico O. Icamina and the Municipal Council of Kalibo, who helped in a previous mimeographed edition of this text.
Prof John Ú. Wolff of Comell University, Ithaca, New York, whe gave several suggestions for various articles in this paper.
Mr. Stepincn J. Banka, Peace Corps Volunteer in Kalibo, for proof-reading the entire text and for suggestioos about ite format. Mr. Thumas C. Marshall, past Peace Corps in Banga, Aklan, for helpiag in preliminary research of the dialect.
The various citizens of Aklan, for their informant work, gi ren freely and continually throughout the long perici of tisis book's composition-to whom this book is heartily dedicated.

## UNI ONE: PRELIMINARY RÉMAABKS.ON-AKLANON̄.

1: -LOCATION OF AKLANON. Aklanon, which is spelled "Akeanon" by its writers, and pronounced /Akganon/ ${ }^{1}$ by its speakers, is spoken by some 360 thousand people in or bordering on the province of Aklan on the island of Panay in the Philippines. The dialect is somewhat understandable to the people of neighboring provinces and islands who speak any one of six West Visayan dialects. ${ }^{2}$ These dialects are a family of dialects whose ancestor might be called proto-West Visayan, which in turn was a member of the Malayo-Polynesian family of languages, to which such languages as Tagalog and Cebuano belong.
2. CHART: THE MALAYO-POLYNESIAN FAMILY OF LANGUAGES. Before beginning any formal comparison of Aklanon to other dialects or languages, it would be best to see the dialect in its proper perspective, namely in its place today after many centuries of development.

Granting that language change is a long, slow process and that it is actually difficult if not impossible to, determine an actual "stage" of development, the following chart is meant as an outline of a very difficult to define evolution of proto-fanguages into preseft day Aklanon:
proto-Malayo-Polynesian! (c. 3500 BiC.)

It is our present purpose to show Aklanon's relationship to the other descendants of West Visayan. This examination will be cursory and no attempt will be made to go deeply into the problems of how or why the languages have changed since our purpose is merely to illustrate general similarities among these various sister dialects.

I See Unit Two for an explanation of our phonological transcription.
2
These dialects are found variously throughout the six provinces of the Western Visayas: Ax lan (Aklanon), Antique (Kinaray-a and Hinaray-a), Capiz. (Capisnon, a Hiligaynon-variant), Iloilo (llongo, another Hiligaynon-variant), Romblon (Romblomanon on Romblon island and San Agustin, Tablas; Ohhonganon in Odiongnn, Tablas; and Loocnon-Alcantaranon in Loot and Alcantara, Tablas respectively), and Negros Occidental (Hiligaynon). Despite the different names relating to the province in which the dialect is spoken, there are six basic dialects. All others are admixtures of two or more of the basic six dialects.
3. REFLEX SOUNDS IN.CURRENT WEST-VISAYAN DIALECTS. Otto Dempwolff, a lingutst who researched what he called "Austronesian"; the proto"tongue of such languages as Tagalog, Malay, Javanese, Hawaii, and so on, established in his book ${ }^{3}$ several word lists conjecturing what the shape of many current words in the daughter languages used to look like. A brief list of them looks like this: ${ }^{4}$

| "AUSTRONESIAN" | MEANING |
| :---: | :--- |
| "daga | ("maiden") |
| "higa" | ("red") |
| "udan | ("rain") |
| "balay | ("hall") |
| "bulan | ("moon") |

In this list we find in medial position: two fricative / $/$ / sounds (the one in *daga, the other in "higa'), one instance of the /d/ sound (in "udan), and two /1/ sounds (in *balay and *bulan). In currént West Visayan dialects we find that Aklanon uses a fricative / $/ /$ sound in every word mentioned above in the medial position, the words now being:

| "AKLANON" (1968A.D;) | MEANING <br> /dagaga/ |
| :---: | :---: |
| /pugah/ |  |
| ("maiden") |  |,

Hence, Aklanon maintains a fricative / $\delta /$ in the same position as in the first two words given, but the remaining three words evidence a fricative $/ \mathrm{g} / \mathrm{al}$ so. In the Odiongan dialect of Tablas, Romblon we find the word /"udan/ used today. In current Hiligaynon-related dia lects (llongo and Capisnon) we find the words /balây/. and /bulan/ in use. Searching further we find that these same Hiligaynon-related.dialects use /l/ in the same position where Aklanon uses the / $/$ /:

| "HLLIGAYNON" | .D.) | MEANING |
| :---: | :---: | :---: |
| /dalaga/. |  | ("maiden") |
| /pulah/ | . | ("rea') |
| 「ulan/ | $\cdot{ }^{\prime}$ | ("rain") |
| / fbalay/ |  | ("house") |
| /bulan/ |  | ("moon, month") |

Apparently the many sounds posited by Dempwolff / $\delta, \mathrm{d}, \mathrm{l} /$ and others not discussed here, .had fallen together, at least in part in proto-West Visayan, and since then that particular sound has redivided itself, into the current variety of sounds it represents. Its current reflexes are: generally / / in Hiligaynon-related dialects, / $/$ / in Aklanon, $/ \mathrm{r} / \mathrm{in}$ Kinaray-a (spoken in Antique province) and Hinaray-a (the dialect spoken by the mountain people of Panay), $/ \mathrm{y} /$ in Romblomanon, and $/ \mathrm{d} / \mathrm{l} / \mathrm{r} /$, or $/ \mathrm{y} /$ in Odionganon, Very often, the words of each respective dialect differ by just this one sound mentioued (the reflex) from words of the same roo (nd meaning in the other dialects.

3 Otto Dempwolff, VERGLEICHENDE LAUTLEHRE DES AUSTRONESISCHEN WORTSCHATZES (1934-38).
4 The asterisk (*) symbolizes a reconstructed form. As such it represents a postulated shape and cannot be pronounced.
-2 -
4. CHART: COMPARATIVE WORD LIST OF CURRENT WEST VISAYAN DIALECTS. The following comparisons should illustrate the individual reflexes of each dialect. Note in some cases how borrowing from Hiligaynon, the "lingua -franca" of the West Visayas,occurs:

| ENGLISH | HLLIGAYNON | KINARAY-A | ROMBLON | ODIONGAN | AKLANON |
| :---: | :---: | :---: | :---: | :---: | :---: |
| "maiden" | /dalaga/ | /daraga/ | /dayaga/ | /rayaga/ | /dagaga/ |
| "wait" | /hulat' | /hurat/ | /huyat/ | /huyat/ | /hugat/ |
| "fall" | /hulog/ | /hurog/ | /huyog/ | / $7 /$ | /hugog/ |
| "rain" | 「ulán/ | 「urån/ | Puyãn/ | /udkn/ | /ugin/ |
| "carry" | /dala/ | /dar ${ }^{\text {/ }}$ | /dayå/ | /raya/ | /dagi/ |
| "wise" | /'alam/ | /'aram/ | /alam/** | layam/ | Pagam/ |
| "write" | /sulat/ | /surat/ | /suyat/ | /suyat/ | /sugat/. |
| "nearby" | /lapt/ | /rapit/ | /yapt/ | /dapt/ | /gapt/ |
| "cold" | /lamig/ | /ramig/ | ./yamig/ | /yamig/ | /gamig/ |
| "house" | /balåy/ | /barây/* | /bayǎy/ | /bayǎy/ | /bagry/ |
| "sin" | /salat | /sarat/ | /sayá/ | / $7 /$ | /saga'/ |
| "elder" | /gulang/ | /gurang/* | /guyang/ | /guyang/ | /gujang/ |
| "month" | /bulan/ | /buran/* | /buyan/ | /buyan/ | /bugan/ |
| "only" | /lang/ | /lang/** | /yang/ | /yang/ | /gang/ |
| "ugly" | /law'ay/ | /raw'ay/ | /yaw'ay/ | / 7 / | /gaw'ay/ |
| "evil" | /la'in/ | /ra'in/ | /ya ${ }^{\text {i }}$ / ${ }^{\text {/ }}$ | /ya ${ }^{\text { }}$ /n/ | /ga'in/ |

? - form is not known to authors.'.
** - form is possibly borrowed from Hiligaynon.
*- form comes from Hinariy-a, the dialect of the mountain people of Panay.
5. OTHER SIMILARITIES OF AKLANON TO THE OTHER WEST VISAYAN DLALECTS. Besides the above-stated similarities of vocabulary, Aklanon's. kinship to the other dialects in the region can be cstablished through stiucture or grammar.

First of all, with the exception of the third person pronouns, the pronoun systems of the' West Visayan dialects are identical:

| /ako/ | "Im . |
| :--- | :--- |
| /kami/ | "we:(exclusive)" |
| /kita/ | "we (inclusive)" |
| /lkaw/ | "you" (singular" |
| /kamo/ | "you" (plural) |

The third person forms bear some similarities:

| EivgliSh | HiLIGAYNON | KIS. 1 RAY-A | ROMBLON | ODIONGAN | AKLANON |
| :---: | :---: | :---: | :---: | :---: | :---: |
| "he, she" | /siya/ | /cana/ | /siya/ | /sida/ | /imaw/ |
| "they" | /sila/ | /sanda/ | /sanda/ | /sinra/ | /sanda/ |

Secondly; certain markers are identical in all of the dialects:

\# - Odiongan dialect differ's slightly in these cases. /nak/ is the linking marker and /igwa/marks existentials, though /nga/ and/may/ are also used due to Hiiigaynon influence.

Thirdly, sentence structure and word order are often very closely related if not identical. Note the close parallel in the following examples:
(a) "Where did you stay for the night?"

| where | you | did--lie dowr | (DIALECT) |
| :---: | :---: | :---: | :---: |
| /di ${ }^{\text {tin }}$ | ka | nag ${ }^{\text {higda }}$ ? $\%$ | (HILIGAYNON) |
| $/ \mathrm{di}^{\text {i }}$ in | kaw | nag-hinga'?/ | (KINARAY-A) |
| $/ \mathrm{ri}{ }^{1}$ in | ka | nag-higra* $/$ | (ODIONGANON) |
| $/ \mathrm{Si}^{2}$ in | ka | H2ag-gubog?/ | (AKLANON) |

In the above paradigm we find identical word order, similarities in the words for "wheret", dentical forms for the past-aspect verb prefix (/nag-/n), reflexes of th same root for the verb "lie down" (Aklanon excepted), and similar pronoun forms' (Kinaray-a 'excepted).
(b) "I feel, shy before ladies because I'm still young."

In this paradigm the word order is identical; the pronoun, form (/ako/), zeferent marker (/sa/), and plural marker ( $/ \operatorname{mang} 2 /$ ) are identical in both shape and use; reflexes of the same root exist with the words for "grrl" and "shy"; the words for "young" and "still" are the same.
(c) "I wiil have you teach me."

| will-meausemteach | 1 | (Rm) | you |  |
| :---: | :---: | :---: | :---: | :---: |
| /ma--pa--tudio ${ }^{\text {a }}$ | ako | sa | i:no.] | (HILIGAYMON) |
| /ma --pametudlo' | ako |  | kanimo. / | (KINARAY-A) |
| /ma --pa-turo' | ako | sa | imo./ | (ODIONGANON) |
| /ma-rpa--turo ${ }^{\text {a }}$ | ako |  | kimo./ | (AKLANCN) |

In this flnul paradigm, the future-aspect verb prefix (/ma-/) and the causative infix (/pa/) are the same; reflexes of the same root exist for the verb "teach". In Hiligaynon and Odionganon the referent marker ( $/ \mathrm{Ba}$ ) precedes an oblique case of the pronoun ( $/ \mathrm{imo}$ ) , while ir. Aklanon and Kinaray-a there is a special class of pronouns (/kimo/ and /kanimo/ respectively).
6. THE VOICED VELAR FRICATIVE. Althougi Aklanon has many similarities to its sister dialects stemming from proto-West Visayan, it maintains one difference from them, ramely the voiced velar fricative, or the fricative / $/ /$ / sound, spelled " $e$ " by the Aklanons. This sound is certainly not unique since it is found in at least five other Philippine dialects ${ }^{4}$ and also in other languages around the worlc. ${ }^{5}$ Yet it is unique for the Western Visayas and belongs in any definition of the dialect since it is one of the main characteristics of the dialect,

Although a further discussion of this scund occurs in the next unit on Phonology, no discussion. about the dialect would be crmplete if one were to omit a few of the so"called "tongue twisters" ,inat the local people utter to challenge foreign learners of the dialect:
(a) ENGIISH: "The carabac is wallowing in the mud hole." '. AKLANON SPELLINC: "Ro anwang iaga-eugaeog ea eugan-eugan." TRANSCRIPTION: /ro 'zuwaug tagagugetog sa gugangugán/
(b) ENGLISH: "The brown sugar is sticking in the frying pan:" AKLANON SPELLLNG:, "Ro kaeamay nagahueoeaput sa kaeaha." TRANSCRIPTION: /ro kagainay nagakugugaput aa kagaha? /
7. THB THRBE DIMENSIONS OF AKLANON SPEECH. Aklnnon is not spoken uinformly throughout the province or its surrounding areas. Variations exist which do not directly relate to speech or meaning, such as chaiges in tone, pitch and gesture. In many cases these differ from town to town or even from bariio to barrio. No study of any kind extsts to show exactly what these differences are, and where, how or why they occur. Generally, they fall outside of the province of this work.

However, various forms of "purity" of the dialect cccur wherever the dialect is spoken, and these can be recorded. They are aiscussed here cither because they are necessary for an understanding of the degree to which our present paper applies to a particular mode oi $/$ i speech, or else because they are interesting in themselves. Three sucl dimenisions exist with regard to the differences of spoken Aklanon.

7, 1. THE DIALECTAL DIMENSION. This book records Aklanon as spoken in or around the vicinity of Kalibo. To the degree that other forms of the dialect differ from Kaliboinon or Kalibo Aklanon they will not be adequately covered in the dilscussion of this book. Kalibo Aklanon is not "conservative", in the sense that it evidences borrowing from other dialects, notably Tagalog and Ilongo, and also has a good deal of colloquialisms. Yer it makes/a göod model for genéral Aklanon speech, since it stands between strictly:conservative forms and those which evidence extremely heavy borrowing from other dialects.

[^0]Because of this, the definition of "purity" is relative to the information obtalned for and used in this book. We do not mean to Imply that Kalibo Aklanon is the "pure" or "classic" form, but only that it is the model for this present work. Since Kallbo is the geographical, . economic, educational, and political center of the province of Aklen, there.is justification for such an approach.
‘The following is a CHart or dialbctal'sinilarutibs throughout the aklanon LíNGUAGE COMMUNTY:
(1) Aklanon which has borrowed from other dialects (such as Tagalog and llongo) to some degree, and'also has certain idioms and abbrévistions based on more conservative forms is spoken in the towns of:

Kallbu
New Washington
Numancia
Sapian (Capiz)
(2) Aklanon which has borrowed far less from other languages and has been more or less conservative, retaining forme used during the past forty or so years, is spoken in the towns of:

| Altavas | ibajay (southwestern part) |
| :--- | :--- |
| Balete | Makato |
| Banga | Malay |
| Batan | Madalag |
| Lezo | Malinao |
| Libacao | Tangalan |

(3) Aklanon which has borrowed a great deal, though in varying degrees, from Hiligaynon-related dialects is spoken in the towns of:

Alcentara (Tablas, Romblon)
Jamindan (Caniz)"
Mambusao (Capiz)
Sigma (Capiz)
(4) Aklanon which has borróned a great deal; though in varying degrees, from Kinaray-a related dlalects is spoken in the towns of:
Buruanga
lbajay (northeastern part)
Nabas
Pandun (Antique)
Looc (Tablas, Romblon)
7. 2. THE'AGE DIMENSION. The second dimension runs throughout every individual area where Atlanon is spoken. It is a cross-section of all native speakers, and diyides them generally into three groups: the older speakers (over 55 years old), the middlemged speakers (over 30 but under 55 years old), and trie young speakers (under 29 years old). The older speech is characterized by so-called "decper words" (words that are considered archaic),
more involved or complex sentence structure, and slower speech with higher intonation. The middle-aged speech is considered "standard" and is generally used in exchange conver. sations, with $a$ high degree of English or Spanisk insertions. The young speech is charace terized by a good degree of lagalog or English borrowing, an abundance of shortened forms (which might be termed "slang"), and short sentence structuries. .

7, 3. THE PRESTIGE DIMENSION. The third dimension also ruis throughout the Aklanonspeaking community and involves what is thought to be a "pure" or "classic" form of the dialect. It is used by religious in sermons and by politicians in campaigns. Anyone attempting to speak in the vernacular at a formal occasion is socially,obliged to speaik in this form cr may be subject to ridicule, since English is the most commonly accepted (and expected) form of formal communication, Prestige Aklanon is characterized by:
(1) use of what is thought to be a "classic" or pure form of the dialect. . For example, of the three possible words for "province"--"probissya", "lalawigan" (borrowed from Tagalog), and "eacawigan" (reconstructed according to general Aklanon derivational.rules)-the word "eaeawigan" is considered "classic". due to the presence of the fricative /s/-sound. Generally, where two woids exist, and one of them has the $/ \delta / /$, the • $/ \mathrm{s} /$-word would be preferred, since"it is considered"deep" or "pure."
(2) use of longer, more involved or complicated siructures.
(3) in cases where a choice exists between / $\mathrm{d} /$ and $/ \mathrm{r} /$, as in the markers "ro".and "do", the /r/-form is preferred, the /d/-form being dismissed -. as baby-talk or "inapa" ( $\bar{\prime}$ inapa' $n$. /d/-forms are generally considered colloquial or careless in formal speech or cońversacion.
(4) the same intonation and speed used by the older speakers of the dialec:.

It has been the general intention of the authors to record in this text the grammar and structure of current Aklanon as spoken in or. around the town of Kalibo by members of the middlemaged community, who represent the most acceptable and idiomatic forms of standard Aklanon. Other diffcrences or admixtures have generaliy not been taken into consideration, except in certain instances where close parallels occur, and where such differences are noteworthy.
8. SUMMARY. Aklanon is the dialect of some 360,000 people in "or near the province of Aklan on the northwesteriu portion of Panay. It is also spoken by Aklan settlers on Palawan and Mindannowespecially in Bukidnon and Surigao." It is characterized by a fricative $/ \mathrm{g} /$ sound, but otherwise shares many similarities to the other five West Visayan dialects.' The dialect exists in several forms or dimensions, however the Aklanon spoken in or afound the town of Kalibo by the mid le-aged population is generally under analysis in this présent work.

## UNIT TWO: PhONOLOGY, THE SIGNFICANT SOUNDS OF THE AKLANON DIALECT ${ }^{6}$;

1. INTRODUC.ORY REMARKS. It is the intention of this paper to present the various sounds of Aklanon in as simple.a manner as possible. Kecping in.mind the general nature of the audience, no attempt has been made to go deeply imto the science of phonedics. In most cases, where they are Idemtical or very proximate, the sounds of Bnglish iste used as models for the sounds of Aklanon. This is done since most of those who may be using this book have a good knowledge of the sounds and structure of American English. In those cases where the sounds aignificantly differ from those of English, certain general lingulstic descriptions have become necessary, and they are employed.
it would be best to advise the reader at the very beginaing that two sorts of writing are used in this books the LOCAISPELLING (the way the native speakers of Aklanon generally write down their dialect) and 2 PHONENIC TRANSCRIPTION (a way of writing down the actual sounds uttered by the mative speakers, which has been devised by linguists). Gencrally, the local spelling will be used in this paper. However, wherever such spelling would be incomplete for the purposes of linguistic analysis, transcription of the actual.sounds is used. This and the followng two units make use of such transcription. Spelling is marked by quotation maxks (as in "bakae". for "buy" in Bnglish), while transcription is marked by slantirig lines (as in /bakag/ for "bury" in English).

The most common and essential types of sounds are described (a) by being voiced or roiceless, and (b) by their points of articulation (based on where they are pronounced in the mouth):

> voiced implies receiving sound vibrations from the larynx or voice box. voiceless implies nof receiviag aury sound from the voice box, but merely containing the scond from its own point of articulation.
> bilabial means the sounds articulated at the upper lip by the lower lip. dental means the sounds articulated at the tecth.
> alvoolar means the sounds articulated at the alveolar ridge (the gunn behind the upper teeth) by the tongue.
> velar means the, somuls articulated towards the lack of the mouth by the
> velum or uvila (appendage at the end of the velun).
> glotal means the sounds articulated deeper in the throat, usually by the open or closed position of the glotis.

For those who would like to delve more deeply, further research into more formal texts is recommended.
2. STOPS. The choracteristic feature of a stop is a complete cutting-off of the outgoing ant stream.

2,1. /pit THB VOICELESS BILABIAL STOP [spelled " $p$ " by Aklanons] is formed by closing the lips tightly and is never aspirated (spoken with a puff of breath) as in English initial $/ \mathrm{p} /$. Hence, the Aklanon $/ \mathrm{p} /$-sound is like the American English $/ \mathrm{p} / \mathrm{as}$ found in such words 2 s :
"tap, ston, clap. speed, spend, spoon, span"

[^1]2,2. B/ The VoICED BILABLAL STOP [spelled "b" by. Aklanons] is formed like/p/, but with the addition of voice. The Aklaron/b/sounds like the English/b/in such words as:

Some MINMAL PAIRS in Aklanon bctween the /p/and /b/ sounds are as follows:

| INITIAL /p/ SOUND |  |
| :---: | :---: |
| /pa/ | [particle: "still, yet"] |

2, 3. /t/ THE VOICELESS DENTAL STOP [spelled "t" by Aklanons] is usually formed by bringing the tip of the tongue against the back of the upper teeth. In any position in a word It is unaspirated, unlike the English $/ t /$, which is usually aspirated at the begming of a word. It sounds somewhat like the American Englis: / $\mathrm{t} /$ in the words:
"sit, pit, flat, outdo, stand, step" with the exception that the English /t/ is alveolar (pronounced at the alveolar ridge behind the teeth) while the Aklanon $/ \mathrm{t} / \mathrm{is}$ dental.

2,4. /d/ THE VOICED DENTALSTOP [spelled "d" by Aklanons] is formed like/t/, but with the addition of voice, is in the English words:
"do, dead, bed, said, bedbug, blecding"
with the exception that the English / $\mathrm{d} /$ is alveolar (like the $/ \mathrm{t} /$ / and the Aklanon is dental. Some MINIMAL. PAIRS in Aklanon between the /t/ and /d/sounds are as follows:

| INTIAL /t/ SOUND |  |
| :---: | :---: |
| /rato'/ | ("Lattoo") |
| /takúp, | ("cover") |
| MEDIAL /t/ SOUND |  |

        FINAL /d/ SOUND
    /fiumpad/ ("be distant")
    /̧ukâd/ ("dig into")
/panid/ ("page")"
- 「utod/ ("cut into" segments")

2,5. /ki' THE VOICELESS VELAR STOP •[spelled "k" by Aklanons] is forined by placing the back of the tongue firmly against the velum: The exact point of contact varies, depending on neighboring sounds; but in all cases, the $/ \mathrm{k}$ / of Aklanon is unaspirated, and sounds like the American English $/ \mathrm{k}$ / [spelled " $\mathrm{ck}^{\mathrm{H}}$ or " c "] in the words:
"pack, tickle , stock, tactic, exacting"
2,5. NOTE: Sometimes, when the $/ k /$-sound precedes the voiced velar fricative $/ \mathrm{k} /$, some Aklanons pronounce the $/ \mathrm{k} /$-sound as a VOICELESS:VELAR FRICATIVE $[/ x f j$, as in the words:
د. /akgan/-("̄̄klan') sometimes pronounced [axgan]
/mukgat/ ("open up the eyes") sometimes pronounced [muxgat]
/ inakganon/ ("speak Aklanon")-sometimes pronounced [ituaxfanon]
Hence, this sound is an allophone (añther-way of pronouncing) of the $/ \mathrm{k} / \mathrm{sound}$, and would be transcribed in brackets as [ $x$ ] (signifying an allophone) rather than in slanted lines (signi-fying a phoneme). (See Unit Three for an explanation of thèse terms.)
-2,6. /g/ THE VOICED VELAR STOP [spelled " $g$ " by Aklanons] is formed like the $/ \mathrm{k} /$, but with the addition of voice. Also like the $/ \mathrm{k} /$, the exact point of articulation depends upon the neighboring sounds. It soünds generally like the American English $/ \mathrm{g} /$ in the words:
"god, grain, gable, soggy, taE, pigpen"

Some minimal pairs in Aklanon based on the $/ \mathrm{k} /$ and $/ \mathrm{g} /$ sounds are:

/hagaghag/ ("loosely woven").

2，7．C／THE GLOTTAL STOP［usually only spelled in medial position as＂－＂by Aklanons］ is produced by an abrupt cutting－off of air by the glottis，or vocal bands．Although it is actu－ ally quilte frequent in English，it goes unnoticed since it is not essential to meaning and since no real minimal pairs exist．In English，it often appears at the beginning of words which are spelled as beginning with a vowel；particularily when one is giving contrastive stress as in－ ＂I said．＂am＂，not＇is＇？＂It also occurs between the two parts of the negative expression often written as＂hnh－hnh＂which we would trarscribe as $/ \mathrm{a}^{\mathrm{el}} \mathrm{ah} /$ ．

The glottal stop is generally not spelled out in the common writing of Aklanon．It never is spelled out when it occurs in initial position of words；and no common spelling has been adopted to represent it in final position of words，though some have tried to introduce the Tagalog system of accentuation，the grave／Y used to show final glotal stop，while the acute $/ / /$ is used to show stress．The word pronounced／bata／（meaning＂bathrobe＂）wculd be spelled＂bata＂，while the word pronounced／bata＂／（meaning＂young＂）would also be spelled ＂bata＂，or else，＂bata＇＂by those－few who try to note the difference in pronounciation．Since－ the gencral practice，however，is to leave the final glotal ummarked and to understand which word is meant through context，we must accept it as such，since history has proven that com－ mon or general practices endure．This form of spelling obviously presents the foreign learner with some difficulties，but he will have to learn the differences just as the Aklanon child does， through practice and discovery by context．

Since our present unit ì concerned with the phonology and structure of spoken Aklanon it is linguistically essential to adopt some symbol which can be universally used for the glottal stop in all positions．Our choice bas been the $/ / /$ since it will remind the foreign learner of its presence，and yet will not interrupt the native speaker＂s reading or under＊． standing of the examples．Some authors（like Reid and Wolff）use the symbol $/ \mathrm{q} /$ ，but use of this symbol has proven confusing to both foreign learners and native speakers alike．We jus－ tify our use of $/ /$／because：（a）it adequately represents the glottal stop and yet is not cumber－ some to the reader；（b）it causes both native speakers and non－native learners of the dialect to pause and evaluate its meaning，since，after all，it is a true consonant and is so crucial to many words ${ }^{\text {d }}$ deserves transcription and treatment；and（c）it can be quickly learned and under－ stood and should not long interfere with the reading of the examples．We hope this transcrip－ tiop will be acceptable to all users of this text．

| /tag'as | ("wild, irresponsible") | /tagas/ | ("seep through") |

FINAL GLOTTAL SOUND CONTRASTED WITH ITS ABSENCE (OPEN VOWEL)

FINAL GLOTTAL SOUND f ./ CONTRASTED WITH FINAL /h/

| linti"/ | ("lightning") | /lintih/ | ("goggles") |
| :--- | :--- | :--- | :--- |
| /paga'/ | ("eraser") | /pagath/ | ("red ant") |

2,7. NOTE: There are actually three sorts of final vowel sounds in Aklanon, those that are closed with the glottal sound, those that end in final $/ \mathrm{h} /$-sound, and those that are open. The criterion for making this distinction is drawn from the phenomenon of suffixation. When final suffixes are added, for example /-an/ or / on \% , each type of vowel behaves in its own way.
(1) THE GLOTTALIZED VOWEL SOUND usually shows consonant gemination (see Unit Four, Section 9)-- /bata'/, for example; when suffixed becomes /kabata"an/, or /puití / becomes/kaputi"an/.
(2) THE VOWEL FOLLOWED BY/h/also shows consonant gemination--/botoh/ generally is pronounced as /botohhan/ or /basah/becomes /basahhon/.
(3) THE OPEN VOWEL is usually lost (if an $/ \mathrm{a} /$ ) or changed to a semivowel (if $/ \mathrm{i} / \mathrm{or} / \mathrm{o} /$ ) $^{-\infty}$ /pangasawa/becomes/paugasaw'on/, /'iti/becomes/ityan/, and/tubo/becomes/katubwan/
3. FRICATIVES. The characteristic of a fricative is noisc produced by the stream of breath passing through the constricted opening between an articulator and a point of articulation. When fricatives are voiced, two kinds of sound are present at the same time: the voice or glottal tone, and the local friction-noise.
3,1. /f/ THE VOICELESS LABIO-DENTAL FRICATIVE [spelled as "f" by Aklanons, though sometimes reduced, and, hence, spelled as "p"] is produced by bringing the lower lip close to or against the edge of the upper teeth, so that the breath passing through may be heard. The sound is not native to Aklanon, but has been adopted occasionally in initial position only in such words as:

| /frangkah/ ("be frank") | /farenhiyet/ | ("Fahrenheit") |
| :--- | :--- | :--- |
| /filipinas/ ("the Philippines") | /filips/ | ("Fhilips") |

Very often, this fricative is reduced to a stop /p/as in:
/permi/ ("always"), from the Spanish' "furme"
/presko/ ("refresluag"), from the Spamsh "fresco"
/petsa/ ("date"), from the Spanish "fecha"

3,2. /v/ THE VOICED LABIO-DENTAL FRICATIVE [spelled "v" by Aklanons, except when reduced to the /b/-sound and is also spelled as "b"] is made like/f/, but with the addition of voice. Although the sound is not native to Aklanon, it does occur in certain rames as a result of overcorrection based on English pronunciation of Spanish spelling. The distinction between $/ \mathrm{v} /$ and $/ \mathrm{d} / \mathrm{has}$ been losi in Spanish for several hundred years, though there is a distinction retained in the spelling. Where the Spanish spelling evidences a " $v$ ", some words are pronounced with $/ \mathrm{v} /$ rather than the Spanish and uatural Aklanon /b/:

| /david/ | ("David") |  |
| :--- | :--- | :--- |
| /viktor/ | ("Victor") | /asevedo/ ("Acevedo") |

Most often, however, it remains in both spelling and pronunciation as the stop /b/ just like in the original Spanish pronunciation (though not in the Spanish spelling): "
/bisaya"/ ("Visayan"), from the Spanish "Visayas"
/bisita"/ ("visitor"), from the Spanish "visita"
/biolin/ ("violin"), from the Spanish "violin"
/bolkan/ ("volcano"), from the Spanish "volcan"
/bapor/ ("ship"?, from the Spanish "vapor"
/abokado/ ("avocado"), from the Spanish "avocado"
3,3. /s/ THE VOICELESS ALVEOLAR SIBILANT. [spelled "s" by Aklanons] is usually made by producing a somewhai deep groove in the ceater of the tip of the tongue, forming a channei through which a stream of $a i r$ is directed at the lower edge of the upper front tecth. The tip is variously placed, depending on the position of the $/ \mathrm{s} / \mathrm{in}$ the word being uttered; in some cases the speaker himself varies the position as a matter of personal preference. Some common Aklanon words with the $/ \mathrm{s} /-$ sound are:

| /s/ IN INITIAL POSITION |
| :--- | :--- |

| /sapat/ | ("auimal") |
| :---: | :---: |
| /silak/ | ("sunigght, sunshine") |
| /simbah/ | ("go to church, worship") |
| Pasin/ | ("salt") |
| $\beta$ is $\delta$ t/ | ("little, small") |
| /puså/ | ("broken [glassware or china]") |

/s/ IN FINAL POSITION
/baghs/ ("sand") ; /atris/ ("back up, reverse")
/polis/ ("police")
/hugas/ ("wash off [dishes]")
/pugos/ ("wurth, value")
3,3. NOTE: Sometimes the pronunciation of the $/ \mathbf{s} / \mathrm{s}$ sound is made by directing the stream of air against the alveolar ridge, rather than against the teeth, producing a sound akin to the English/sh/ as in "shect" or "she" making the VOICELESS FRONTO-PALhTAL SIBILANT, This is orily a variation of the $/ \mathrm{s} /-$ sound, and hence it would be an ailophone transcribed as [sli]. No true minimal pairs exist in the dialect to warrant its treatment as a separate phoneme. Although this type of allophone might be considered common in some coses, it is looked upon as carelessnešs of pronunciation and would not be accented in formal or more prestigous speech. We only mention it here to account for its occurance.as an allophone, of the $/ \mathrm{s} /$-sound in some Aklan speech communities.

3,4. /f/ THE VOICED VELAR FRICATIVE [spelled " c " by Aklanons] has been mentioned in the first unit as a sound unique to Aklanon among the West Visayan dialects. It is produced by placing the back 8 f the tongue firmly against the velum (much like for the $/ \mathrm{k} /$ ), and passing a stream of breath through the resulting constricted opening, plus the addition of vnice (much like the $/ \mathrm{g} /$ ). It could be called a, "FRICATIVE $/ \phi / \bar{\prime}$, or ior matters of exemplifying its $\mu=0$ nunciation to the beginner, a "GARGLSD / $\$ /$-SOUND". It occurs in all positions:

| INITIAL/ $/$ / SOUND |  |
| :---: | :---: |
| /ga'ay/ ("dry, withered") | /gab'as/ ("fresh [from the sea]") |
| /gagnat/ ("fever") | /ga'ung/ ("ask permission") |
| /gubot/ ("understand") | /gumgum/ ("incubate, batch an egg") |
| /gukâs/ ("homecoming-gift") | /gunang/ ("mire, mud") |
| MEDIAL / $/$ / SOUND |  |
| 「agam/ ("wise, intelligent") | ['agoka'it/("egg shell') |
| /bagay/ ("house") | /bagangaw/ ('rainbow") |
| /kugon/ ("cooking pot"). | /dug6m/ ("clark, not bright") |
| FINAL/ / / SOUND |  |
| /burog/ ("jellyfish") | /bu'bg/ ("get, fetch") |
| /damog/ ("thick") | /haboth/ ("blanket") |
| /putóg/ ("shortened, clipped off") | /sugag/ .("gamble") |

Some foreign learners of the dialect, seeing the $/ g /$ spelled as " $e^{\prime \prime}$ and also having great difficulties in reproducing the sound accurately at first, pronounce the $/ \mathrm{g} / \mathrm{as}$ a $/ \mathrm{y} /$-sound. Although the /y/ exists in another West Visayan dialect (Romblon) as a reflex of many Aklanon $/ \mathrm{g} /$-sound words, the introduction of this $/ \mathrm{y} / \mathrm{m}$ sound into Aklanon can be seen as a fallacy in the following MINIMAL PAIRS:

| /gabi/ | ('special; single out") | /yabi/ | ("key") |
| :---: | :---: | :---: | :---: |
| /gawa'/ | ("[spider] web") | /yawa'/ | ("Satan; devil') |
| 「agam/ | ("wise, intelligent') | /'ayam/ | ("dog') |
| /tugo' / | ("drip, drop") | /tuyo'/ | ("soy sauce') |
| thabof/ | ("weave") | /haboy/ | ("throw, heave") |
| /sagsag/ | ("iron") | /saysay/ | ("relate, narrate, tell") |

Folk linguistics in nearby provinces (and sometimes in Aklan itself) relates that Anlanon does not have an $/ \mathrm{l} /$-sound, that it only has $/ \mathrm{g} / \mathrm{L}$. They deduce this from the fact that Aklanon has a /g/ cven where most of the other West Visayan dialects have /l/-as in /salamat/for "thank you" (which 1 s /sagamat/ in Aklanon) or /lang/ for "just, only" (which .s /gang/ in Aklanon). This tenet is simply not true. Even if many instances of $/ l /$ in other related dialects occur as $/ \mathrm{g} / \mathrm{in}$ Aklanon, Aklenon still maintains a distinction between the $/ \mathrm{l} /$ and $/ \mathrm{g} /$ and contans both sounds, as can be scen in the following MINIMAL PAIRS between $/ \mathrm{l} /$ and $/ 1 /$ :

| /gana/ | ("cocorut oil") | /lana/ | ("wool") |
| :---: | :---: | :---: | :---: |
| /gok6/ | ("recline on all fours") | /loks/ | ("fool") |
| 'hago'/ | ("lizard") | /halo'/ | ("mixed") |
| /paga'/ | ("craser") | /pala'/ | ("flat-nosed") |
| /dagdag/ | ("strike with intermittently") | /daldal/ | ("long-winded [talker] ${ }^{\text {" }}$ ) |

We shall come to this again when we discuss the $/ / /$-sound (in Section 6, this unit).
Although we called the $/ g /$ a "fricative $/ f / / "$, it differs sharply from the actual $/ \mathrm{g} /$-sound:

INITIAL / / / SOUND

| /gabl/ | ("special; single out") |
| :--- | :--- |
| /gana/ | ("coconut oil") |
| /gusok/ | ("having famished eyes") |
| MEDLAL $/$ /b/ SOUND |  |
| /bagay/ | ("organizéc; set up framework") |
| /bagog/ | ("dried fish") |
| /hugas/ | ("perspire") |
| /saga"/ | ("blame; strain out") |
| /ugan/ | ("rain") |
| /bugos/ | ("alternate, change off") |

$\frac{\text { FINAL / } / \text { / SOUND }}{\text { /bakot/ ("slash, whip") }}$
:/bungog/ ("deaf")
/busog/ ("large seed")
「isog/ ("move backward")

| INITIAL $/ \mathrm{g} /$ SOUND |  |
| :--- | :--- |
| /gabi/ | [the "gabi" plant] |
| /gana/ | ("desire, taste") |
| /gusok/ | ("rib") |

$\frac{\text { MEDIAL /g/ SOUND }}{\text { /bagay/ ("tune [an instrument]") }}$
/hugas/. ("wash off [dishes]")
/saga'/ ("divide, dismember")
「ugan/ ("light [weight]")
/bugos/ ("counterfeit; fake")

| FINAL /g/ SOUND |
| :--- |
| /bakog/ ("bone [of fish]") |
| /bungog/ ("stapid") |
| /busog/ ("satisfied, full [stomach]")" |
| /"isog/ ("courage, daring; belligerency") |

This sound is rightfully thought by people from other dialect-speaking areas to be a prin.cipalcharacteristic of the Aklanon tongue. A great deal of its overall vocabulary bears the sound. Words in the proto-language (see Unit One, Section 3 and Appendix 2) which contained $/ 1 /$ or $/ \mathrm{d} /$ have'reduced to the $/ \mathrm{g} /$. This change is also a phenomenon which lias occured mere recently. Certain words borrowed from the West have been Aklanonized or assimilated. Ir the Spanish ...
"lagare" has become the Aklanon/gagari/ ("saw [tool in carpentry]")
"corral" has become the Aklanon /korag/ ("fence")
"casar" has become the Aklanon/kasad/ ("marry")
Due to the people's spelling of the $/ \mathrm{g} /$-sound as an " e ", the common man-on-tine-street sometimes calls our to "Victory Joe" as "Hi, Joe", actually pronounced /hi jog/.

We lave shown how the $/ \delta /$ appears in all positions above. However, it principally occurs with the vowels /a/and / / . It rarcly occurs with the /i/, usually only with suffixes:
/bakgi/ ("be bought for") which is from "bakae" plus the suffix "-i"
/hambagi/ ("be spoken to") which is from "hambae" plus "-i"
The relationship of the fricative $/ \mathrm{g} /$-suund and the Aklanon $/ 1 /-$ sound is discussed later on in this unit, Section 6. Further discussion also occurs in the next units, particularily Unit Three, Section 7. Numbers 4-5.

3,5. /h/ THE VOICELESS GLOTTAL FRICATIVE [spelled as " $h$ " by Aklanons] is formed with the oral cavity totally unobstructed, and with a verv slight fricative sound. Very often there is no fricative sound at all, giving the impression of a voiceless or "open" vowel.

We have already compared this sound with the glottal stop to some degree. Further illustrations or MINIMAL PAIRS are as follows:

| INITIAL /h/SOUND |  |
| :--- | :--- |
| /hapin/ | ("cover") |
| /hilo/ | ("turead") |

SITILAL / / SOUND
/'apin/ ("side with')
/Pilo/ ("orphan")

- 15 -

MEDIAL fh/ SOUND

| hahof// | ("big, large") |
| :--- | :--- |
| /gahin/ | ("old coconut") |
| /tah8/ | ("ginger tea") |

$=\frac{\text { FINAL /h/ SOUND }}{\text { /intilh/ ("goggles") }}$

MBDIAL / / SOLVAD
/ba'bt/ ("trunk, footlocker")
/ta'in/ ("wicked, evil; ugly")
/ta'8/ ("give")
$0 \frac{\text { PINAL } /{ }^{\prime \prime} / \text { SOUND }}{\text { /linti" ("lightoing") }}$
/raga'/ ("eraser")

When an /h/-sound occurs in the final position, it is usually not spelled by Aklanons. However, when suffixes are added, this $/ \mathrm{h} /$ becomes quite apparent and gets into the spelling:

```
"simba(h)". ("worship")
"eskuyla(h)" ("student")
"tinda(h)" ("goods for sale")
"iba(h)" ("accompany")
"basa(h)" ("read")
"boto(h)" ("vote")
"tawo(h)" ("person")
"simbahan" ("chucah")
"eskuylahan" ("school")
"tindahan" ("market [place]")
"kalibahan". ("companion")
"basahor" ("will be read").
"botoban" ("will be voted for")
"tawohon" ("populated")
```

Because of this phenomenon, the $/ \mathrm{h} /$ is transcribed phonemically on any words which, when suffixed, take an /h/. The reader is referred to our previous discussion on the three different types of vowel sounds in Aklanon (this unit, Section 2,7. NOTB).
4. AFFRICATES arc not native to Aklanon. They have been borrowed from other languages and produce a great deal of difficulty for those, unskilled in pronouncing them. In many cases, foreign words having affricates have been reduced or changed to combinations of local sounds which are easier to pronounce or reprotuce. However, with the rise in literacy and ${ }^{-}$ greater contact with other languages, the sounds have become adopied and are phonemes of the language, since their mispronunciation is already considered foreign by most speakers., They descrve at least cursory treatment.

An affricate is basically a stop (see section 2 ; this unit) with a release which is sufficiertly slow enough to produce a momentary fricative effect before the next sound begins.

4,1. /c/ THE VOICBLESS ALVEOLAR AFFRICATE [spelled "ch"by Aklanons, or else " ts" $^{\prime \prime}$ if and when it is reduced] is formed by bringing the tip of the tongue to the alvcolar ridge (somewhat near the position for the English / $t$ /), and then immediately withdrawing it, but somewhat more slowly than in the release of the English $/ t /$, so that a distinct but brief fricative sound is heard. It is equivalent to the "ch" or "tch", "t" or "ct" of the English:
"hatchet, church, pitchar, picture, mature, bench"
The symbol we have adopted for our transcription is $/ c /$, since: (a) the " $c$ " is otherwise unused in Aklanon spelling, except as a substitute for the $/ \mathrm{k} / \mathrm{us}_{\text {sound; }}$ (b) a similar symbol ( $/ \mathbb{Z} /$ ) is commonly used by linguists; and (c) it is easily accessable on the typewriter. The /c/-sound is marginally phonemic, occuring in the following words in Aklanon:

| INITIAL POSITION |  |  |
| :---: | :---: | :---: |
| /cicargn/ ("puffed pork rind") | /caca/ | ("the cha-cha dance") |
| /sans/ ("ckance, raffle') | /ca/ | ("tea") |

Sometimes the reduction of $/ \mathrm{c} /$ is to the local $/ \mathrm{ts} /-$ sound combination, $2 s$ in:
/litsón/ ("roast pig"), instead of /lecon/
/tisa/ ("tez"), Instead of /ca/
/tsitsaron/ ("puffed pork rind") instead of /cicarón/
However, there are some words where the reduction is unacisptable to native speakers, and hence the /c/-sound becomes definitely phonemic to Aklanon:
/cinelas/ ("sandals"), is never pronounced /tsinelas/, though sometimes /sinelas/
/ceki/ ("check"), is never pronounced /tseki/
/cans/ ("chance, raffle ticket"), is never pronounced /tsans/-
/caca/ ("the cha-cha dance"), is never pronounced /tsa-tsa/.
4, 2. /j/ THE VOICED ALVEOLAR AFFRICXTE [spelled " j " by Aklanons, on: else "dy" if and when it is reduced] is formed in the same manner as $/ \mathrm{c} /$, but with the addition of voice. It is equivalent to the " $\mathrm{j} "$ : " dg ", " g ", or " ge " spelling of the same sound in English words:
"judge, badges, pledged, gentle, Jack, range"
The symbol we have adopted for the sound is $; j /$ since this letter is not native to the Aklanon alphabet and siuce Aklanons themselves use the letter to represent the borrowed sound and/or spelling. Since it is our present purpose to transcribe spoken $8 k l a n o n$ and not written, the adoption of this symbol with only this affricate sound represented by it scems justifiable. Note the transcription of the sound in the following words:

| INITLAL POSITION |  |  |
| :---: | :---: | :---: |
| /jaj/ ("judge") | /joyn/ | ("join, enter") |
| /jas/ . - ("jazz") | /janetor/ | ('janitor") |
| /jet/ ("jet") | /jo/ | ("Joe") |
| /jeri/ ("Jerry") | /jorj/ | ("George") |
| MEDIAL POSITION |  |  |
| /enjoy/ ("enjoy, have a good time") | /eyjaks/ | ("Ajax") |
| FINAL POSIITON |  |  |
| /jaj/ ("judge") | /Jorj/ | ("George") |

Quite often the $/ \mathrm{j} /-$ sound reduces to the native /dy/-sound combination, as in:

| /dyanitor/("janitor") | /dyoyn/ | ("join, enter") |
| :--- | :--- | :--- |
| /indyoy/ ("enjoy, have a good time") | /dyo/ | ("Joe") |

However, as with the $/ \mathrm{c} /$, there are some words where thls reduction to /dy/ is unacceptable to native speakers, and the / j /-sound can be considered phonemic [maxginally] to the dalect:

## /jet/

/Jiyp/
("jet"), never /dyet/
("jeep'خ never / dyip/
/juwn/ ("June"), never /dynwn/
/jaj/ ("judge"), never /dyady/
5. NASALS. In the production of a nasal, the oral cavity is completely stopped at the oint of articulation; but with the velum lowered, both air and sound pass through the nasal iavity and out of the nostrils. Nasals occur in the same positions where stops occur. There ure three in Aklanon.

5,1. $/ \mathrm{m} /$ THE VOICED BILrigial NASAL [spelled " m " by Aklanons] is produced by closing he lips tightly while the velum is lowered and the larynx (vocal chords) produce voice. It xcurs in all positions in Aklanon, as can be seen in the following examples:
INITIAE POSITION

| /mahRg/ | ("dear, expensive") | /mitlang/ ("pronounce") |
| :---: | :---: | :---: |
| /mana | [enclitic particle:"it is said".] | /minuro'/ ("settlement, sitio") |
| /matá/ | ("eye") | /mukfit/ ("open up the eyes") |
| MEDLAL POSITION |  |  |
| /amo/ | ("foreman, lord, master") | /bampang/"play; play witn") |
| /hamitak/ | ("green beans") | -/8um'ot/ ("have enough, satiated") |
| /tiomsog/ | ("become strong or healthy") | /sumwan/ ("tinder-log.'). |
| FINAL POSITION |  |  |
| /an'om/ | ("six") | /gutom/ ("hunger") |
| $\Gamma \mathrm{in} 8 \mathrm{~m} /$. | ("drink") | /tanom/ ("plait") |
| / ha '0m/ | ("prepared, ready") | 「afam/ ("wise, intelligent") |

5,2. /n/ THE VOICED DENTAL NASAL [spelled ${ }^{*} \mathrm{n}^{n}$ by Aklenons] is made with the tongue in position for Aklanon /d/, but with the velum lowered, and voice from the larym:. Again, like $/ \mathrm{m} /$ it occurs in all positions:

| INTIAL POSITION |  |  |  |
| :---: | :---: | :---: | :---: |
| /na/ | ("now" [particle]) | /niswak/ | ("extremely thin") |
| /ram8k/' | ("mosquito") | /nusnus/ | ("scrub") |
| /nigo/ | ("winnowing basket') | $/ \mathrm{mu}^{8} \mathrm{ot} /$ | ("regret") |
| MEDLAL POSITION |  |  |  |
| /an'om/ | ("six") | Pinto ${ }^{\circ}$ | ("wheedle, convince") |
| /anwang/ | ("carabao") | 「intok/ | ("small, short") |
| $/ \sin ^{\prime} 0 /$ | ("who?") | /sumlog/ | ("tease") |
| FINAL POSITION - |  |  |  |
| /-(b)an/. | [common suifix] | /-(b) 0 / | [common suffix] |
| /ngipon/ | ("tooth") | /sip'on/ | ("mucus; cold [sickness ]") |
| /bangon/ | ("arise, get up!) | /tipon/ | ("gather, collect") |

5,3. /ng/ THE VOICED VELAR NASAL [spelled "ng" by Aklanons] is formed with the sack of the tongue against the velum, which is slightly dropped so as to open a passage from he pharynx to the nasal cavity. As in the case of $/ k, \mathrm{~g}, \mathrm{~g} / \mathrm{f}$, the eract point of articulation lepends on the environment with neighboring sounds. In English/ng/ never appears initially it does appear medially and fmally as in "singing" or "tbing") and presents English speating earners of Aklanon and other Philippine languages with some degree of difficulty in articulaion. Such foreign-learners of the diatect will need to practice the sound in all positions:

INTIAL POSITION
/nga/ [linking marker] /ggilo\% ("gum [of mouth]")
/ngagan/ ("name") /ngiya"/ ("laugh senselessly")
/ngagngag/ ("palate [of mouth") /ngisi/ ("laugh silently") /ngawa/ ("wonder, marvel at")
MEDIAL POSITION
bangJd/ ("because [of J")
/bangos/ ("milk fish")
/mingaw/ ("lonesome, lonely")
FINAL'POSITION

5,4. MINIMAL PAIRS BASED ON THE VAKIOUS NASAL SOUNDS:

| /m/-SOUND |  |
| :---: | :---: |
| /mol | ("your') |
| /mana/ | ("it is said" [particled) |
| /mano/ | ("right [opposite of "left"]) |
| Pama/ | ("father") |
| Aumah/ | ("field, plantation") |

/nana/ ("his/hers")
/nano/ ("what?")
Ana/ ("his/hers")
Munah/ ("go ahc̈àd, precede")
/n/-SOUND
/na/ [particle: "now"]
Auman/ ("repeat, do again")
Mina ${ }^{\text {a }}$ / ("there, over there")
/mana/ [particle: "it is said"]
Bugan/ ("moon, month")
pusnus/ ("scrub")
nusnus/ ("scrub") /agusngus/ ("whire, whimper")
fiun8d/ ("flesh") . f'ung6d/ ("very much [so]")

Since Americans have difficulty ir differentiating the $/ \mathrm{ng} /$-sound and an $/ \mathrm{ng} /$-sound followed by a $/ \mathrm{g} /$, the following minimal pairs are iniluded for the purpose of drilling those who find such pairs difficult:

```
\(/ \mathrm{ng} /\)-SOUND
Abanga'/ ("vase, jar")
/gangaw/ ("fly")
/manga/ [plural marker]
```

/ngg/-SOUND
/bangga'/ ("\{́mbiskl")"
/tanggaw/ ("vinegar')
/mangga/ ("mango")

NOTE: Although our transcription follows that of the local spelling (namely "ng") for the voiced velar nasal, it should be recalled that these two letters represent a single sound. We follow the local spelling in our transcription since it is so readly accessable on the typewriter. The standard lingustic symbol for the voicel velar nasal is $/ \eta /$.
6. /l/ THE VOICED' ALVEOLAK LATERA, Led " 1 " by Aklanons] is made with the tip of the tongue touching the alveolar ridge; but wr an opening on both sides to permit some passage of air. It is similar to the English /1/-sound in the words:
"lea, link, loot, glance, black, lesson" but with the tongue set in the position to make an /i/-ṣound rather than in the position to make an /a/-sound as in English.

We have already mentioned that folk linguistics sometimes holds that A.klanon has no $/ 1 /$, that it only has $/ \mathrm{g} /$. We pointed out that this was simply not true (see this unit, Section $3 ; 4$ ). First of all, we find /l/ in an environment with /i/; we rarcly, if ever, find/g/ in the same sort of environment. Note /l/ occurs in all positions with /i/:

## INITIAL POSITION OF / $1 /$

| /libak/ | ("gossip, backbite") |  | -i | /libag/ | ("off key, flat") |
| :---: | :---: | :---: | :---: | :---: | :---: |
| /libang/ | ("console, a | e") |  | /libod/ | ("wander aimlessly") |
| /likdus/ | ("indirect") |  | 1 | $/ 1110^{\circ} /$ | ('whiripool') |
| /limog/ | ("voice") |  |  | /limpak | ("chip, small piece [o |
| /lik 8 d/ | ("back") |  |  | \%ibhan | ("dilute") |

MEDIAL POSITION OF /1/

Secondly, minimal pars can be given which show both /l/ and / $\$ /$ to be significant phonemes of Aklanon:

OCCURANCE OF / / SOUND
/lapad/ ("liquor, alcoholic beverage") /pala/ ("shovel")
N.B. Other minimal pairs of $/ \$ /$ and $/ 1 /$ have been given in this unit, Section 3, 4 .

Thir:lly, in current Aklanon the /l/ can be a morphophonemic variant of / $\mathrm{f} /$ whenever the process of infixing "-in-" oicurs or whenever a word with with medial / $8 /$ undergoes the process of metathesis:

| ROO4 WORD WITH/8/ |  |
| :---: | :---: |
| /ga'ga'/ | ("boil in water") |
| /gahrigt | ("uaughty, nisbelaved") |
| /8umot/ | ("moss") |
| /sugod/ | ("enter") |
| /pudos/ | ("worth, value") |
| Aragos/ | ("revenge') |
| Abugos/ | ("alterıate") |

OCCURANCE OF / / / SOUND
/gapad/ ("wide, expansive")
/paga-/ [prefix denotiug "fond of"]

Further explanation of these last two forms of morphophonernic variants can be found in Unit Four; Section 7, 4 discusses the change of / $/ 8 /$ after the -in - infix, and Section 8, 2 dibcusses the process of metathesis.
5 These three illustrations should adequately prove that /l/ is'a real phoneme naive to current Aklanon speech. The idea that $/ \mathrm{S} /$ is the truc Aklanon sound, and that $/ 1 /$ is not native may have been born in the folk linguistics due to the idea that "pure Aklanon" or prestige forms of the dialect generally make use of words containing the $/ \$ /$ or "ea" sound.
7. /r/ THE VOICED ALVEOLAR FLAP [spelled "r" by Aklanons] is produced by the tip of the tongue, which bricfly touches the alveolar ridge, along with voice from the larynx. In some areas close to Kinaray-2 or among Hinaray-a speakers, the tip of the tongue is set . momentarily into vibration, which produces a trill, but this is not the case with typical Aklanon, and this trilled / $r /$ would only be an allophone of the $/ \mathrm{r} /$ sound, and mighit be transcribed $2 s^{-1}\left[\begin{array}{l}\text { l }\end{array}\right.$.

The usual Aklanon /r/ is somewhat approximated in the following English words:
"latter, matter, fatter, fodder, edited" or the British English pronunciation of "very".

Aklanon has a very limited vocabulary with the initial $/ \mathrm{r} /$-sound, most of the words being borrowed from foreign languages:

/relos/ ("secret pocket");
/renta/ ("reñer")
/repulyo/ ("cabbage")
/resibo/ ("reciaipt")
/rills/ ("rail[way]")
/rima/ ("breadfruit")
/ripa/ ("rafile")
/ritaso/ ("léftóvers")
/riklamo/ ("complaint")
/rosa/ ("rase; pink")

This above list just about constitutes all the words with initial /r/ in current use in fiklanon. The only native words which begin with $/ \mathrm{r} /$ are the topic marker, the deictics (place words), and an enclitic adverb:

| /ro/ | [topic marker], with an alterrnate form | /do/ |
| :---: | :---: | :---: |
| /raya/ | ("this [near mef") | /daya/ |
| /ruyon/ | ("that (near uş") | /duyon/ |
| /ran(h)s'/ | ("that [near you]") | /daritha'/ |
| /rat8/ | ("that [far away ${ }^{\text {l }}$ "). | /dat8/ |
| /riya/ | ("here [near mej") | /diya/ |
| /ruma'/ | ("there [ncar us]') | /duna'/ |
| /rinha'/ | ("there [near you]") | /dinhri/ |
| \%/rits/ | ("there [far away]") | /dit8/ |
| /ray, ${ }^{\text {n/ }}$ | (consequently") | /dayor/ |

However, even if these forms have alternates in /d-/, the alternate / $/ \mathrm{d}-/$ form is not part of - 21 -

PRESTIGE AKLANON. To the above list can be added all abbreviations or contractions plus thelr own particular alternate forms, such as:

| /rang/ | [abbreviation: ro akon nga] | /dang/ |
| :--- | :--- | :--- |
| /ring/ | [abbreviation: ro imo nga ] | /ding/ |
| /ron/ | [abbreviation: ruyon] | /don/ |
| /rikara/ | [alternate form: riya] |  | and so on. Once again, however, the $/ \mathrm{r} /$-form is preferred to the $/ \mathrm{d} /$-form in more formal speech. .

The /r/-sound occurs quite frequently in non-Initial positions of many words both indigenous to Aklanon and borrowed from other languages.

| MEDIAL /r/ SOUND [native words] | MEDLAL /r/SOUND [borrowed words] |  |
| :---: | :---: | :---: |
| /barang/ ("voodoo") | Parte/ | ("art, craft") |
| Surl/ ("buri palm") | Parado/ | ("plow") |
| /giring/ ("indented; ruffled") | /baraha/ | ("playing cards") |
| /gurbg/ ("rough") | /kariton/ | ("wheel") |
| /hirád/ . ("dull, not sharp") | /diretso/ | ("straight [ahead]) |
| /matarung/ ("just, righteous") | /harana/. | ("serenade") |
| /paraw/ ("sailboat") | Cobrahi | ('work, labor") |
| /sarâng/ ("afford") | /siguro/ | ('probably') |

The final /r/-sound generally occurs in foreign-borrowed words:

## FINAL /r/ SOUND

| Pasukar/ | ("sugar [white ${ }^{\text {r }}$ ) | /panglabár/ | ("wash face [with towel]') |
| :---: | :---: | :---: | :---: |
| /konfessar | ("confess") | /pasyar/ | ("promenade; wander") |
| 「 estair/ | ("live [at], dwell") | . /preparâr/ | ("prepare") |
| /harbo:/ | ("harbor; port") | /samar/ | ("Samar") |
| /lugair/ | ("place") | /tumår/ | ("take medicine") |
| /meyor/ | ("mayor") | /tukar/ | ("play [an instrument]") |

Although folk linguistics marrates the $/ r /$ is not a native Aklanon sound, and that it is borrowed from foreign languages, we find from the above stated examples that $/ \mathrm{r} /$ is, in effect, a significant phoneme of current Aklanon speech. The theory of folk linguists not only is contrary to certain given facts, it even runs counter to the idea of prestige Aklanon which makes use of and preiers /ro/ over /do/, and the $/ \mathrm{r} /$-form words over their possible /d/-form alternates.

This brings us to the end of our discussion of the pure consonant sounds. In the following sections, we shall discuss the vowels and the semivowels, which are signuficantly different phonemes from the consonants. Vowels are the forms which allow consonants to be truly perceived and heard. A consomant, standing alone, is an extremely difficult sound to hear.

8．SEMIVOWEIS or VOCOIDS are different from vowels in that they are not found in the center or nucleus of a syllable，and are always found in a consonantal position（that is，＂they， are always in the same syllable with a true vowel）．They ulso are of briefer duration than a vowel．

8，1．／w／THE VOICED LABIOVELAR SEMIVOWEL is formed by rounding the lips sligitly while raising the dorsum of the tongue towaird the velum；and then moving it rapidly into pe－ sition for the next vowel．It might be considered a consonantal version of the Aklanon／o／－ sound．It occurs in all positions，and is also spelled＂w＂by Aklanons：

| INITLAL PISITIION |  |
| :---: | :---: |
| ／waga／ | （＂left［not right ${ }^{\text {P }}$ ）${ }^{\text {c }}$ |
| ／wago＇／ | （＂eight＂） |
| ／walig／ | （＂very young coconut＂） |
| ／wakas／ | （＂blabber＂） |
| MEDIAL POSITION |  |
| 「away／ | （＂fight＂） |
| 「awas／ | （＂overilow＂） |
| 「awat／ | （＂cumbersome＂） |
| 「iwi＇／ | （＂taill ${ }^{\text {（ }}$ ） |
| FINAL POSITION |  |
| 「ayaw／ | （＂leave behind；don＇t＇${ }^{\prime \prime}$ ） |
| ／tawtaw／ | （＂dip up and down＂）． |
| ／libakaw／ | （＂Libacao［town in Akl |

There is no occurance of／wo／initially known to the authors；and only the word／tawo／con－ tains such a combination．Even in this last case，the combination produces a diphthongular effect as／ta00／．

8，2．／y／THE VOICED FRONTO－PALATAL SEMIVOWEL［spelled＂y＂by Aklanons］is formed by britiging the front of the tongue close＇to the palate and back part of the alveolar ridge，with the tip pointing toward the upper teeth．The degrees of separation between the tongue and palate and berween tongue and teeth are influenced by the environment with the next or，following vowel．It may be considered a somewhat consonantal version of the Aklanon／i／－sound．It occurs in all positions：

| INITIAL POSITION |  |  |
| :---: | :---: | :---: |
| ／yabi／（＂key＂） | ／yelo／ | （＂ice＂） |
| ／yasyas／（＂milled rice＂） | ／yoyo／ | （＂yo－yo＂） |
| ／yaya／（＂nursemaid，many＂） | ／yubit／ | （＂gossip maliciously＂） |
| MEDIAL－POSITION |  |  |
| ／bay玉w／－＂brother－in－iaw＂） | 「ayam／ | （＇dog＂） |
| ／buy6t／（＂grab，hold＂） | ／ayad／ | （＂fix，improve＂） |
| ＂／buyon／（＂dumb，speechless＂） | Aya／ | （＂here＂） |
| ／piycng／（＂close the eyes＂） | 「uyon／． | （＂approve，conform；like＂） |

## FINAL POSITION

/paypay/ ("beckon, call with hand")
/baybay/ ("beach")
/saysay/ ("tell, narrate, relate")
/puypuy/ ("tired muscles")
/panay/ ("Panay [island]")
/baboy/ ("pig")
9. VQWE LS have two basic characteristics which distinguish them from any other soupds. First of all, they are formed without any stoppage of the oral cavity or any constriction sf narrow as to create local sound. Secondly, they are syllabic or nuclear in that they ate the most prominent sounds in the syllables to which they belong, when taken individually. In Aklanon, no syllable exists without a vowel, and with the exception of diphthongs (see stection 10 , there is only one vowel per syllable. Just about the only exception to this is the hiss so commonly used to catch the attention of another person, which is syllabic, but which has no vowel at all: /pssst/.

Aklanon has a total of five vowel sounds, three of which are native to the dialect, and two of which have been adopted under Spanish and/or English influence, but which have become phonemic to at least some degree. Before treating each vowel individually, it is best to view the criteria or dimensions of vowel sounds:
(a) HIGH, MID, and LOW refer to the tongue height or the helght of the highest part of the tongue during the pronunciation of a vowel. 'In the English words
"beet, bit, bait, bet, bat, bot"
we see the tongue dropping successively (along with the jaw). These six sounds can be separated two-by-two into the qualities of: HIGH' ("bect - bit"), MD ("bait - bet"), and LOW ("bat - bot").
(b) FRONT, CENTRAL, and BACK refer to the part of the tongue which is bighest during the pronunciation of the vowel, whether it is towards the front, middle or back of the mouth. FRONT ("beet"), CENTRAL ("bet"), aqnd BACK ("boot").
(c) TENSE and LAX refer to the degree of relazation of the tongue in uttering a vowel. Generally open syllables have tense vowels, while closed syllables have lax vowels. For example, in the word /si'in/ ("where") in Aklanon, with the syllabification being \% 5 si- ${ }^{*}$ in/ we find the first /i/ open in its syllable (with no consonant following it and attached to it), but the second /i/ is closed (preceded by the glottal $\Gamma /$ and followed by the $/ \mathrm{n} /$ ). Hence, the first $/ i / \% / \mathrm{si}--/ ;$ is TENSE, while the second/i/, /-in/ is LAX. Since no vowels differ solely with regard to tension, it is not necessary to specify this in the definition of each vowel sound. That is to say, any vowel can be either tense or lax, depending on its environment.
(d) ROUND and UNROUND refer to the lips--whether they are relaxed or spread. However, all Aklanon back vowels are round, and all front and central vowels are unround, and to further specification-is necessary.
(c) LONG and SHORT refer to the length of pronunciation, which depends very much on the individual environment of each vowel. In general, the tendency is that stressed vowels are longer than unstressed, and that open vowels are longer than closed. For example, the word /sagamat/ or "saeamat" ("thank you") in Aklanon has three /a/-sounds. The syllabification of the word would be/sang反--mat/ with the stress on the penuitimate syllable. There -are two open vowcis (sa--) and (ga-t and one closed (mat). Of the three, /ga/s vowel is the longest because it is both open and stressed. Of the remaining two, /sa/s vowel is second longest, beciuse it is open, though not stressed; and/nat/s vowel is the shortest
because it is closed and not stressed．
9，1．／i／HIGH FRONT VOWEL［spelled＂$i$＂by Aklanons］is similar to the sound in the English＂seat＂or＂beat＂（when tense in Aklanon），except that the English is somewhat diph－ thongularized；and similar to the sound in the English＂sit＂or＂bit＂（when lax in Aklanon）． It occurs in all positions in Ala non words：

| INITIAL TENSE／i／ |  |
| :--- | :--- |
| 「ibah／ | （＂accompany＂） |
| 「ikog／ | （＂tail＂） |
| 「ilong／ | （＂nose＂） |

N．B．Technically speaking，the above examples are not＂initial＂since they are ali preceded by the glottal stop $/ \%$ ．However，in spelling the glottal is not transcribed， and hence these are initial sounds to most Aklanons．

MEDIAL TENSE／i／
／bill／（＂cost，be worth＂）
／sipa＇；（＂kick＂）
／bihod／（＂caviar，fish eggs＂）
／pitsay／（＂native lettuce，endive＂）

MEDLAL LAX／i／
／bikwagon／（＂clumsy，unskilled＂）
／tikgud／（＂gizzard＂）
／sugid／（＂tell，relate＂）
／bahin／（＂part，sector，section＂）

N．B．The word transcribed／pitsay／is also pronounced／picay／and the ts syllabification in either case is／pi－－tsay／or／pi－－cay／leaving the vowel sound opera．：－

N．B．Technically speaking，the final lax／i／examples are not really＂final＂in that they are followed by the glottal stop $/ \%$ ．Once again，we give way to the most common form of spelling which leaves the glottal stop untranscribed，and considers the final／i／ in these cases as literally＂final＂．

9，2．／c／MD FRONT VOWEL［spelled＂$e$＂by Aklanons］is similar to the sound in the English words＂say＂and＂they＂（if and when it is tense in Aklanon）；and similar to the sound of English＂said＂and＂dead＂（if and when it is lax in Aklanon）．The sound is generally somewhat diphthongular when it is tense．

The sound was not native to Aklanon and was borrowed，but since has become phonemic． At least one minimal pair exists to show its differentiation from the／i／－sound：
／pare＇／（＂compadre，godmother＂）／mari＇／（＂priest＂）
The sound does not occur initially，even in borrowings，which reflect only the／i／．However． it does occur medially and finally：

| MEDLAL TENSE／e／ |  | MEDIAL LAX／e／＇ |  |
| :--- | :--- | :--- | :--- |
|  | （cedi／ | （＂Fell＂［girlis name］） | （＂check＂） |
| ／pena／（＂punishment＂） | ／Jet／ | （＂jet＂） |  |
| ／pwede／（＂worthy；all right，can be＂） | ／perms／（＂always＂） |  |  |

FINAL TENSE /e/ Honly tense form finally; no occurance of lax /e/finally

| /fe/ | [nickname for "Fely"] | /sige/ | ("go ahead, go on") |
| :--- | :--- | :--- | :--- |
| /kalye/ | ("strect") | /turpe/ | ("dolt, knave; stupid") |
| /pwede/ | ("worthy; all right") | /pare/ | ("equal; pal, buddy") |

'The fact that the /e/ is at least marginally phonemic to Aklanon can be seen in that pro-nunciation of the /i/ in its place on a stressed syllable in borrowed-words is unacceptable:
/pwede/ ("worthy; all right") is never pronounced /pwidi/, though sometimes /pwedi/ /sige/ ("go on, go ahead") is rarely pronounced/sigi/, and when it is, this form is not considered formal, but rather illiterate instead,
However, in an unstressed syslable /i/ and /e/ could bealled "unpredictable allophones", in that the /i/ may replace the /e/-sound:

| /pwede/ | or | /pwedi/ |  | ("all right, can be; worthy") |
| :---: | :---: | :---: | :---: | :---: |
| /turpe/ | or. | /turpi/ |  | ('dolt, knave; strpid") |
| /kalye/ | or | /kalyi/ |  | - ("street") |
| /lyabe/ | or | /lyabi/ | /yabi/ | ("key") |

Some borrowed words offer no alternátives since they are now so well known:
/ceki/ ("check") is never anything else, .
/jct/ ("jet") is never anything else,
/bet/ ("bet, wager") is never anytining else.
9,3. /a/ LOW CENTRAL VOWEL (UNROUNDED) [spelled "a" by Aklanons] occurs as in the vowel sound of the following American English words:
"far, father, bonib, cot, not, dock, top, ahit It occurs in all positions in syllables, and undergoes the least amount of change in quality (tenseness or laxness) of all the vowels:

INITIA L POSITION (but following the glottal sound $/{ }^{\prime} /$ )

| Pama/ | ("father") | Pagahon/ ("morning") |
| :---: | :---: | :---: |
| Panib/ | ("harvest") | 「ayo'/ ("ask; bargain for") |
| Papin/ | ("side with") | /'away/ ("fight') |
| MIEDIAL, POSITION of-/a/ |  |  |
| /bagas/ | ("sand") | /pagad/ ("palm; fortunc") |
| /kato/ | ("then, at that time") | - /tumbaga/ ("copper") |
| /dahon/ | ("leaf") | /ramos/ ("palm") |
| /ngawa/ | ("marvel at, be amazed") | /warang/ ("take a walk, wander") |
| FINAL POSITION of /a/: OPEN |  | FINAL POSITION of /a/: CLOSED |
| /baga/ | ("embers") | /baga'/ ("lungs") |
| /asawa/ | ("spouse") | /pags'/ ("eraser") |
| Copa/ | ("rice husk") | 「aps'/ ("mute, dumb") |

9．4．／u／HIGH BACK VOWEL［generally spelled＂$u$＂by Aklanons］like the／i／sound has two allophones．When tense it sounds quite similar to the American English vowel sounds in the words：
＂boot，root，too，tooth，shoe， and when it is l2x it sounds similar to the American English／vowel sound：
"good, book, put, shook, look, foct, hook"

It occurs in all positions in Aklanon words：

| INITIAL TENSE／u／ |  |
| :---: | :---: |
| Putang／ | （＂debt＂） |
| Putak／ | （＂a blunted knife＇） |
| Puling／ | （＂charcoal＂） |
| MBDIAL TENSE／u／ |  |
| ／bugaw／．（W＇wake up late＂） |  |
| ／hụmay／（＂cooked xice＂） |  |
| ／puril／（＂lle，deceive＂） |  |
| ／sutn／／（＂nasty，raughty＂） FINAL TENSE／u／ |  |
| 「aboh／（＂ashes＂） <br> ／sebla／（＂Cebu＂） <br> ／taputapa／（＂dust＇） |  |
|  |  |
|  |  |

／bugaw／．（＂wake up late＂）
Hụil（＂He deceiva＂）
／sutII／（＂nasty，raughty＂）
FINAL TENSE／u／
「＇abdh／（＂ashes＂）
／sebla／（＂Cebu＂）
／taputapi／（＂dust＇）

INITIAL LAX／u／
「ugsad／（＂full moon＂）
「us＇us／（＂slide down；regress＂）
「uswag／（＂advance，progress＂）
$\frac{\text { MEDIAL LAX／uj }}{\text {／gunting／（＂scissors＂}}$
／mukgat／（＂open up／the eyes＂）
／ha＇am／（＂ready，prepared＂）＇
／namak／（＂mosquito＂）
N．B．There is no final lax／u／．In fact the accurance of／the final tense／u／is quite exceptional in Visayan．However， due to foreign influence these few examples illustrate its qccurance（rare as it may be）．

Note that tense vowels are open in their syllable，while lay vowels are in closed syllables．
9，5．／o／MDP BACK．VGivEL，［spelled＂ $0^{n}$ by Aklanons］is similar to the vowel sound in the American English words＂boat＂，．．＂soal＂or＂stole＂（when tense in Aklanon）；and similar to the sound of English＂bought＂，＂core＂or＂store＂（when lax in Aklanon）．Normally this sound would only be an allophone of the above－mentioned／u／－sound，but foreign influence has already estabiished it as a distinct phoneme，as can be seen in the following MINIMAL PAIRS：

$$
\begin{array}{ll}
\text { /lolo/ } & \text { ("grandfather") } \\
\text { /bos/ } & \text { ("boss") } \\
\text { /poro/ } & \text { ("matches" [abbreviation } \\
& \text { of "posporo"]) }
\end{array}
$$

| ／lulu／ | （＂Lulu＂［girl＇s name］） |
| :--- | :--- |
| ／bus／ | （＂bus＂） |
| ／puro／ | （＂pure＂） |

It now can be found in all positions：

INITLAL TENSE／o／
「价us／（＂empty，used up，finished＂）
「obrah／（＂work＂）
「osoh／（＂bear＂）
$\frac{\text { MEDIAL TENSE／／／}}{\text {／goma／（＂rubber＂）}}$
／rasa／（＂rose；pink＂）
／rodas／（＂overturni：win［at cards］＂）

INITIAL LAX／o／
「oktubre／（＂October＂）
Poras／（＂hour＂）
「otso，（＂cight＂）
MEDIAL LAX／o／
／baboy／（＂pig＂）
／dahon／（＂leaf＂）
fisog／（＂brave，daring，belligerent＂）

FINAL TENSE／／／

| Capठ／ | （＂grandchild＂） |
| :--- | :--- |
| ／nigo／ | （＂winnowing basket＂） |
| ／tahb／ | （＂ginger tea＂） |
| ／wag6／ | （＂eight＂） |

FINAL LAX／o／
／＇ayo＇／（＂ask［a discount ］，bargain＂）
／＇ig6＇／（＂fit［into ${ }^{\prime \prime}$ ）
／ngllo＇（＂gum［of mouth ${ }^{\text {M }}$ ）
／sid＇o＂／（＂hiccough＂）

There are instances where the／$/$／sound occurs in more than one position of a word．These are either in words which show reduplication of one syllable，and also in words which have been borrowed from other languages intact：

| ／boto／ | （＂vote＂） |
| :--- | :--- |
| ／loko／ | （＂fool＂） |
| ／lolo／ | （＂grandfather＂） |
| ／komo／ | （＂because＂） |
| ／somo／ | ［family name］ |

| ／soso／ | （＂breast＂） |
| :--- | :--- |
| ／to＂to＂／ | ［pet name for a boy］ |
| ／yoyo／ | （＂yo－yo＂［child＂s toy］） |
| ／lobo／ | （＂big toy balloon＂） |
| ／opo／ | ［the＂opo＂vegetable plant］ |

Outside of these exceptional instances，the occurance of the $/ \% /$－sound in words is quite predictable in accordance with the following observations：
（1）Final syllables tend to be the mid vowel／／，particularily if they are open；while non－ final syllables tend to have the high vowel／a／： FINAL SYLLABLE WITH／o／

| limpyo／（＂clean＂） |  |
| :--- | :--- |
| fidto／ | （＂there＂） |
| ／as $\delta /$ | （＂smoke＂） |
| ／kamio／ | （＂you＂［plural］） |

| NON－FINAL SYLLABLE WITH／u／ |
| :--- |
| Culihi／（＂later on＂） |
| ／／sungat／（＂pry open＂） |
| ／sugid／（＂say，tell＂） |
| 广unga＇／（＂child＂） |

（2）Otherwise an open vowel sound tends to be high $/ \mathrm{u} /$ ，and a closed vowel tends to be mid／o／：

| OPEN VOWEL－－／u／ |  |
| :---: | :---: |
| ／tsuper！ | （＂chauffeur，driver＂） |
| 「upak／ | （＂peeling ［of fruit ${ }^{\text {］}}$ ） |
| ／fungib／ | （＂cave＂）＇ |
| ／tulay／ | （＂bridge＂） |

| CLOSED VOWEL－－／o／ |  |
| :--- | :--- |
| ／libon／ | （＂woven bag＂） |
| hibot／ | （＂go around＂） |
| ／iliong／ | （＂nose＂） |
| ／ka＇on／ | （＂cat＂） |

（3）Unstressed vowel tends to be high／11／，except in final syllables，where it is definitely mid／o7；while stressed vowels are generally mid／$/$／：

## UNSTRESSED VOWEL

Cuwa＇／（＂none，nothing＂［particle］）
「ugâh／（＂small marinated fish＂）
／da̧hon／（＂leaf＂）＊＊
／bágon／（＂provisions＂）＊＊
4＊Note in these last two examples that the／o／occurs in the last syllable because it is not stressed．
（4）＇A final stressed closed syllable can be high／u／if there is a voiced bilabia！：

HIGH＇DUE TO VOICED BILABIAL
／ramik／（＂mosquito＂）
／abơh／（＂ashes＂）
／liban／（＂havurg no holes＂）
／tabobk／（＂across；other side＂）

## STRESSED VOWEL

／bubon／（＂open well＂）
／sugod／（＂enter，go into＂）
／todas／（＂overturn；win［at cards］＂）
／s6brah／（＂too much，surplus＂）

10．DIPHTHONGS．A simple description of a diphthong is that it is the flow of one vowel into another vowel．The technical matter of articulation could be described at great length． However，modern or current Aklanon has lost the distinction between a true diphthong and the simple combination of a vowel and a semivowel．Generally the Atianon diphthong as it occurs today $\operatorname{ran}$ be described as a vowel followed by a semivowel．Instead of calling such a combination a diphthong，we will call it－－for our present purposes－a reduction：

There are a few word which Lilustrate true diphthongs in the sense that it is difficult to establish any syllable division or the independent character of a semivowel：

| iowa＂／ | （＂none，nothing＂），which shows the diphthong Pour＂／ |  |
| :--- | :--- | :--- |
| 「ayam／ | （＂dog＂），which shows the diphthong cluster | 「aiam／ |
| hiya／ | （＂here＂），which shows the diphthong cluster | ia／ |
| 「uyon／ | （＂approve，conform＂），which shows dipthongular 「oiun／ |  |
| ／taw／（＂person＂），which shows the diphthong cluster | ／taino／ |  |

11. CONSONANT CHART $\bar{T}$. This chart is presented as a summery and a review of all the consonant sounds presc it in Aklanon. Those sounds presented in slayted lines $\mathrm{m} / \mathrm{m}^{\mathrm{m}}$ are actual phoncines of Aklanon, while those given in brackets " [ 5 " are altophones of another sound.

|  | BILABIAL | DENTAL | ALVEOLAR | VELAR | GLOTTAL |
| :---: | :---: | :---: | :---: | :---: | :---: |
| STOPS: <br> -VOICELESS: | /p/ | /t/ |  | /k/ | $\Gamma /$ |
| -VOICED: | m/ | /d/ |  | /8/ |  |
| FRICATIVES: <br> -VOICELESS: | /f/ |  | [8h]/s/ | [x] | /b/ |
| -VOICED: | /v/ |  |  | / $/ 1$ |  |
| AFFRICATES: <br> -VOICE LESS: |  |  | /c/ |  |  |
| -VOICED: |  |  | /j/ |  |  |
| NASALS: <br> -VOICED: | /ris: | /n/ |  | /ng/ |  |
| LATERAL: -VOICED: |  |  | /1/ |  |  |
| FLAP [TRILL] | - | [ ${ }^{\text {c }}$ ] | /r/ |  |  |
| SEMIVOWELS: VOICED: | iw/ |  | /y/ |  |  |

12. VOWEL CHART. This chart is presented as a summary and a review of all the vowel sourds used in current Aklanon speech:

|  | FRONT | CENTRAL | BACK |
| :---: | :---: | :---: | :---: |
| HIGH: | /i/ |  | /u/ |
| MID: | /e/ |  |  |
| LOW: |  | /a/ |  |

13. STRESS. The preceding consonant and vowel sounds are phonemes or sounds, which, when put together, make up words which have meaning (morphemes). When these woras are used in sentences, they will automatically have certain stress patterns, which do not enter into the direct meaning of tiae word. But stress can also be a phoneme, or sigadficant and meaningful sound, in the Aklanon dialect, since it strongly, Influences meaning. Such a type of phoneme is called a suprasegmental phoneme by lirguists because it seems to be an extra layer of structure imposed over the basic segmental phonemes (consonants and voweled which also carry their own sort of meaning. The operation of stress in Aklanon can be seen in two distinct ways.

The first way shows stress to differentiate words that have no relationship at all in their meaning, so that mispronunciation (that is, misplacing of stress) carries with il: a very different meanlng. Lock at the following minimal pairs:

The fact that stress is phonemic in these cases should be obvious. Misplacement of stress in these cases makes it difficult (if not impossible) to convey the proper meaning:.

The second way that stress can be seen to be phonemic is with words of related meaning but where difference in stress can cause confusion of the derivational meaning of a word (that is, confusion as to what part of speech it might be):

STRESS CONTRASTS WITH DERIVATIONAL MEANNG DIFFERENCES -

| /kasákay/ [noun] ("fellow passenger") | /kasakiy/ [verb] ("could have ridden')' |
| :---: | :---: |
| /hampatngan/ [noun] ("toy") | /hampangsin/ [verb] ("will be played wich") |
| /pagkE゙on/ [noun] ("food, edibles') | /pagka'sn/ [verb] ("while eatiog') |

Here stress differences are also (more or less marginally) phonemic, since the words are reloted in meaning and mispronunciation might more readlly be understood. Yet the intention aroused in saying /hampangan ko ikaw/ ("You are my plajthing.") as opposed to sajing /hampangsin ko ikaw/ ("I will play with you.") is quite different indeed.
14. PITCH. Pitch is another sort of suprasegmental phoneme. Unlike the phoneme of stress, however, pitch doesn't fit into 2 pattern of individual words, but rather over the pattern of a full sentence-vor sometimes over the pattern of a slugle word (if it lappens to already be a full sentence). In a language like Chinese, pitch can change the meaning of a word. In Aklancn it can only change the meaning or intent of a sentence. Hence, plizeh doen not enter into the direct meaning of a word; it only carries its own sort of meaning inf a sentence pattern.

A full study of the patterns of pitch or intonation throughout the province has yet to be undertaken. One of the principal difficulties in such a study is the ga eat degree of variation from une area to another of the Aklanon-speaking community. Each town, sometimes even earlh barrio, has its own type of intonation or sentence pitch.

This present study will therefore do no more than to indicate three types of intonation by means of commonly accepted symbols, namely /./ for a statement pitch, /7/for: a question pitch, and $/ . /$ for 2 n exclamatory type of intonation. A pause will be indicated $\mathrm{ky} / \mathrm{\%} / \mathrm{T}$. To !llustrate these symbols we might take a look at the word /iya/ (meaning "here") and the word /imaw/ (meaning "he" or "she"). Several sentences could be constructed with several possible intonation patterns, each with a different sort of meaning.

| /lya imaw./ | ("He is here.") |
| :--- | :--- |
| /iya imawl/ | ("Is he here?") |
| /lya imaw'/ | ("He is here') |
| /lya? imaw?/ | ("Uiere? He, hére?") and so on. |
|  |  |

15. SOME NOTES ON STANDARD AKLANON SPE LLING. We have alrcady discussed most letters and symbols used in Aklanon spelling undef each appropriate phoneme. By way of revew we summarize them all here:

There are a few other letters or consonant clusters borrowed in spelling, but which are automatically reduced to local pronunciation patterns. Hence, tho:!gh they may be used in script as foreign letters, particularily in proper names, they are used in speech as native. sounds. Here we find the biggest dichotomy between spelling and pronunciation in the dialect. In each case we put the letter used in quotation marks ("), while the local pronunciation will be put in slanting slines (//):

## FOREIGN LETTERS BORROWED INAKLANON SCRIPT \& THEIR PRONUNCIATION:

"c" -- /k/ or /s/
" $\mathrm{n}^{\prime \prime}$--/ny/
"11" -- /ly/
"x" -- /4s/
" $z^{\prime \prime}$-- /s/
"rr" $--/ r /$, rarely $[x]$
"cu" .- /kw/
"qu" -- /kw/
"tr" -- /tr/ or /ter/
"pr" .- /pr/ or /per/
"fr" -- /pr/, or sometimes/fr/
"Carlos" - /karlos/' "Ocly" - /seli/
"Santo Niño" - /santoh ninyo/
"Ella". - filyah/
"boxing" - /buksing/
"Cruz" - /crus/
"Perro" - /pero/
"cuarta" - /kwarta/
"quarter" - /kwarter/
"train" - /treyn/ or /terEyn/
"pride" - /prayd/ or /per\{́yd;
"fresco" - /presko/; "franka" - /frangkah/
16. SOME PROB LEMS WITH REGARD TO AKLANON SPELLING. Three problems confront the learner of the dialect with regard to spelling. They deserve mention for the benefit of those teachng the vernacular to others; though they are not necessarily problems to native speakers or spellers.
16,1. THE GLOTTAL STOP nught be considered 2 potential problem, though it needn't be so, since native speakers lave generally derived 2 consistent systen: for recognizing it in spelling. INTIALLY, beiore vowels, the glottal step is understood and need not be spelied out: / amoh/ ("lord, master") is only spelled "amo". MENIALLY' BETWEEN VOWELS the glottal is undcrstood, since no diphthongs exist in current Aklanon spelling. Thus /ta' $0 /$ ("give; don't know") will be spelled "tao" and /hu'o/ ('yes") will be spelled "huo". MEDIALLY BETWEEN A VOWEL AND A CONSONANT, OR WHEN A DOUBLE GLOTTAL APPEARS the glotal is spelled out as 2 dash (".."): /man'o/ ("how much7") is spelled "man-o". /ba" oh/ ("turtle") is spelled "ba-o". /tam'is/ ("swect"), "tam-is", and/sin'o/ ("who?") is spelled "sin-o". IN FINAL POSITION the glottal must be learned and/or known by context. It is generally not spelled out, but one can easily te! which word is tmeant by filling in for sense. Therefore/baho/ ("bass [of sound]") and /baho'/ ("odor") are both spelled "baho", yet in a sentence one could easily tell which of the two words was meant.
16,2. THE CONSONANT " $e$ " VERSUS THE VOWEL " $e$ " can eastly be distinguished. If the fricative / $/ /$, spelled "e" appears in an environment with a vowel it will automatically be known
as a consonant since no diphthongs exist in Aklanon spelling, and it could not therefore represent the vowel sound /e/, also spelled "c". Thus, "ae, ie, oe, ue, ea, ei, eo, eu" would be pronounced as $/ \mathrm{ag}, \mathrm{ig}$, of, ug, $\mathrm{ga}, \mathrm{gi}, \mathrm{go}$, gu/ respectively. On the other hand, if "e" appears with a consonant or semivowel it uili be the vowel sound /e/, as in "ye, be, che, se" pronounced /ye, be, ce, se/ respectively. Note the following illustrations:

$16, \dot{3}$. THE "o"-"u" SPELLLNG PROBLEM. ${ }^{7}$ We have already discussed the pronunclationalproblem of having two distinct phonemes $/ u /$ and $/ / /$ introduced into Aklanon. Although many have attempted to devise a foolproof system of spelling the system suggested by Manuel Laserna in 1916 (in his book SUNGKA-AN) has become the most conventional. The following is a slight revision of his suggestions: -
(1) The " $u$ " 4 " $0^{n}$ alternations apply to root words or word bases only. All affixes have a particular fixed spelling and should not change, no matter what the sequence of $/ 0 /$ sounds might be wlthin t - word. Note the following spellings:
"manogitlog" (prefix "manog"" with base "itlog")
"inoghinuesoe" (prefix "inogn" with base "hinuesoe")
"tagipuso-on" (suffix "-on" with base "puso" plus prefix "magi-")
"sumueunod" (base "sunod" with "-un-" inixx and / $/$ g $V_{1}-/$ reduplication, "-cu")
"umadto" (base "adto" with "-uma" infix)
(2) One syllable words are usually spelled with "o" as in: "ro, do, ko, mo, eon, ron". However, one exception exists as a convention. The associnte marker is spelled "ku" to distinguish it from the pronoun form "ko", as in:
"Ro isda' lay ginbakac ko." ("The fish was bought by me.")
"Ro isda" hay ginbakae ku unga'." ("The fish was bought by the child.")
"...ba eáy ko..." ("my house")
"...bacíy ku amo..." ("house of the master")
(3) In the case of root words which are Identical redeplications (see Unit IV, 10, 1) each syllable should be spelled identically according to the way it sounds:

| "lolo" | ("grandfather") | "bukbuk" | ("house grat") |
| :--- | :--- | :--- | :--- |
| "tonton" | ("lower") | "kupkup" | ("embrace, hug") |
| "usus" | ("slip down") | "suksuk" | ("house lizard") |

(4) In root words of two syliawles, an /o/-sound occuring in the first syllable should be spelled "u", and an /o/-sound occuring in the second syllable should be spelled "o". This applies to all native words, whether or not they have two / $/$ /-sounds in them:

| "unga'" | ("child") |
| :--- | :--- |
| "ıeán" | ("rain") |
| "humáy" | ("cooked rice") |
| "baton" | ("receive") |
| "gac-om" | ("[rain] cloue") |

"suedd" .("enter')
"buebng" ("medicine")
"supot" ("papcr bag.")
"huo" ("yes")
"buót" ("psyche, interior self")

[^2]- UNIT THREE: *LNGUISTIC BACKGROUND

1. NEED FOR RIGOR. In a more or less scientific study of a language or dialect, it is esseritial to have a more specific concept about the sound and structure of speech and language than that common to the "man-on-the-street". Vague ideas such as "sound" or; "word" are certainly not enough to grasp the vast treasurchouse of speech, since the rigor of scientific investigation demands a specific pame for each unique species or class. .
2. PHONES. On the other hand, scientific linguistics need not be so difficult. Our very first stage of study hrings us to the smallest and most basic level--to the separate sounds or phones. We can use an analogy to illustrate the methodology of phonetic analysis, lmagine a long fille of soldiers marching across a field; all are different individuals, but they can be divided into smaller groups for the march. We might divide them into three groups on the basis of height--tall, medium, and short. Or we could group them into thin, muscular and fat. Or the grouping could be a combination, such as (a) short and fat, (b) tall and thin, (c) tall and muscular, and so on. In grouping, we pay attention to similarities and -iend to disregard differences. During this process we might notice a number of civilians standing nearby, but we are only interested in the soldiers, so we exclude the civilians from our grouping process. The same is true of our study of sounds. Just as we cannot accept all people for our grouping, for civilians are excluded, so we cannot accept all sound-types or phones that are found within the sphere of Aklan life and speech. Thure are sneezes, coughs, hisses, grunts and other noises which are not part of the language. These are the noises or sounds which we must disregard. However, we do take into consideration those particular sounds or noises which are significant and meaningfu.
3. PHONEMES. Even if no two people or sounds might be identical to a point, there are certainly similarities, and they must complement the group. In a division of the short and fat soldiers (mentioned in our analogy earlier) as opposed to the tall and thin soldiers, what would we do with a tall but fat soldier? He does not complement either of the two groups that we already have. Even if he were the only one, scientifically speaking we must isolate him in a special group for tall and fat soldiers. Such a division of sounds gives us what the lloguists $\approx$ all a phoneme: a group of one or more phone-types (sounds) which sound the same (are phonetically similar) and are in complementary distribution.
4. ALLOPHONES. We have seen, for example, that the $/ k /$-sound exists in Akianon, It is usually unaspirated, that is, it is spoken without the extra breath that Americians put on the initlal $/ k /$. Furthermore, the $/ k /$ occurs in all positions of words or syllables as the voiceless velar stop. Hence, $/ \mathrm{k} /$ is a phoneme of Aklanon. Whether it occurs in the word $/ \mathrm{kuku}$ ( ("nail [of finger or toe]"), /gaki/ ("male, man") or /pisik/ ("splatter"), it is still the same $/ k /$. We have seen how some Aklanons pronounce the $/ k /$ as an $[\dot{x}]$ (voiceless velar frlcative) if it occurs before a $/ g /$ /-sound. Instead of saying [akgan] or [mukgat], they say [axgan] or [muxgat]. In Aklanon, this does not change the meaning any more than a change in pitch or intomation would change the meaning. Hence, $[k]$ and $[x]$ belong to the same classs they are said to be allophones of the $/ \mathrm{k} /$-sound. Furthermore, if an ordinary American were to pronounce the word /kamo/ he would most probatly aspirate his [k]. Such an aspiatated $/ \mathrm{k} /$ might be cranscribed as $\left[k^{h_{1}}\right]$. This sound does occur occasionally in Aklanon, such as when a persou wishes to emphasize the pronunciation of $2 / \mathrm{k} /$, particularily if he inght be whispering. Then we find that $\left[k^{h}\right]$ belongs to the same class that $[k]$ and $[x]$ belong to. They are all allophones of one basic sound or phoneme in Aklanon: /ki.
5. FROM SOUNDS TO WORDS. So far so good. We have seen how the common idea of "sound" is not sufficient to carry the load when at least three exact concepts (PHONE, PHONEME, ALLOPHONE) are present. But simple "sounds" when uttered together or in groups do not automatically lave meaning. When we wish to speak of meaning, we jump from the broad class of "sounds" to the class of "words." But here again we must find a more scientific approach.
6. MORPHS. A combination of phones or sounds which has meaning is called a morph. But just like phones and the column of soldiers passing by, morphs really happen only onee in speech, and then pass on.
7. ALLOMORPHS AND MORPHEMES. Howevar, like phones, morphs may have similarities of sound, and, in addition, similarities of meaning; if so, then they can be called allomorphs--a family of meaningful sounds which are the same in both sound and mraning.

For example, in Aklanon we have the word "ikaw" which means "you" in English. Yet "ikaw" can refer to you, the reader, if I am speaking; but if you are speaking, then "ikaw" refers to me, the writer. We know that the sounds of each "ikaw" are the same; but what about the meaning? Would "ikaw" in one sentence be an allomorph of "ikak" in another? If we define "ikaw" from the standpoint that it means "you" in the sense of "a singular person invoived directly in a conversation, who is not the speaker, but who is referred to by the speaker", then the meaning of "ikaw" is the same in both cases mentioned.earlier. The "ikaw" of the sentence: "ikaw ro nagabasa" ("You are the reader.") and the "ikaw" of the sentence "ikaw ro nagasueat" are allomorphs of the morpheme Xikaw). (Note our symbol here for morpheme, " $X$ ".] Even if the "irst "ikaw" refers to one person, and the second to another, the sound of each is the same, and the gencral meaning (listener, not spicalier) is also the same. Therefore ve satisfy the qualifications for an allonorph--similarity in both sound and meaning.

In the same way that we found the relationship of PHONES; ALLOPHONES, and PHONEMES to each other, we find the relationship of MURPHS, ALLOMORPHS, and MORPHEMES. Just as phones are the mere sounds utterable, while phonemes are the building blocks of all the words and vocabulary in a language, so
morphemes are the building blocks out of which the meaningful utterances of speech are put together. A' morpheme is a group* of allomorphs, each of which is a combination of phonemes; but... in structure of the kind that language shares with many other natural and man-nade phenomena, the whole is more than the sum of all its parts. When phonemes are orgamzed into an allomorph, meaning is added to make a new thing, just as when hydrogen and oxygen are organized into water, a substance emerges that has new and different qualities from its componeuts... Therefore, morphemes, the smallest structural units possessing meaning, occupy a key position in linguistic structure. They are the fugdamental ' ailding blocks out of which everything we say is built. ${ }^{8}$
8 Francis, op. cit., pp. 173-74.

- It is these building blocks which will now be the focus of our attention. It is essenial for a good uncierstanding of both linguistics and of any particular language that we know the morpheines or smallest meaningful segments. Of course, if one ts a native'speaker, this knowledge is automatic; and to an adult speaker it rarely if ever enters into the active process of thought. But to someone who is learning the language, and particulaxily to those who must teach the language to others, such a knowledge is an invaluable aid to both speed and precision in one's work.

8. EXAMPLES OF MORPHENiES. The English word "pages", if thought of broadly, is . only one word. But it is two morphemes: "page" (one sheet of paper in a book) and " $-3^{\prime \prime}$ (the plural form suffix). The word "meaningful" also strikes: a native speaker as only one simple word. But the word actually has three morphemes: "mean", "-ingi" and "-ful". The same" sort of process happens in Aklanön, "Kahueogan" ("meaning") bas three morpternes or three separate, significant building blocks: the prefix "kr-", the root word "hueog" and the suffix "-an". Even a one-syllable word can be divided into many morphemes, so long as in it" there are separate and distinct units of meaning. Take the word "ring" in English; it is one morphemen-a root word with the meaning "to make a bell sound". But the same series of phones making up the word "ring" in A.klanon is very different. In Aklanon, the word "ring" is composed of three morphemes: "r-" (which is the shortened form of "ro" [the topic marker ]), "-i-" (which is the abbreviation for "imo", the pronoun for "your"), and "-ng" (which is the shortened form of "uga" which is the linking marker). Hence, "ring", the abbreviation for "ro imo nga" may be only one syllable or one word in Aklenon, yet it has three morphemes, because it contain three separate meanings. One can see how the old classic terms of "sound" and "word" are misleading, and why the linguist must apply more paecision to his science.

Just as we discovered that the phones $[k],[x]$ and $\left[k^{h}\right]$ in Aklanon are all allophones or parts of the same phoneme $/ \mathrm{k} /$, so we will find that certain morphs are allomorphs of the same morpiteme.

For example, we know in English that the plural is usually marked by the suffix spelled " -s " or "-es". However, -in reality the pronunciation is threefold, namely /-s/, /-z/ or $/ \mathrm{Fz} /$, as in the three respective plurals for "ant", "floor", and "bridge". We have, therefore, three allomorphs for the plural morpheme in English.
9. HOMOPHONES. Sometimes we find two identical sounds, but with two very different meanings. For example, in Aklanon we have the comblnation $/$ tab $\delta^{\prime}$ // whicin can mean "happen" or "a dipper or ladle". Phonologically they are identical, and are called homophones (words which sound the same); but semantically they are different (since they have different meanings). Sometimes these homophones can cause a considerable degree of confusion, so it is good to keep them in mind.
$\Lambda$ classic case of homophones in Aklanon occurs with the combination $/ \mathrm{kz} /$. Look at the following sentences:
(a) "Tapus ka con?" ("Are you through?")
(b) "Napucong ka anwang ro naeunos." ("Ten carabaes were drowned."!
(c) "Ma-uno ro anang katam-is?" ("How is its swcetness?")
(d) "Kakaon ka con?" ("Ilave you eaten yet?")
 is; a linticor used to sthew emanerations, somewhot like the literall meaning of "of" in the English

IDD. WRORD BASES OR ROOT WORISS. We have already discossed the nature of the mor-
 aff pihmernes (minely comsonarts anil vorels).

Ore Ründ of moryberme iniluries those which canry the principal meaning in structures like "truwso" ("persen"), "prean" ("rea"), "ban" ("ear") and the like. They are called word"bases ar Host wrids. They are free or indeneodert morpheones, since very oiten they can stand allowe and have greaning in thexselves. They are somewtat amalogical to vowels, which are" whe lyey diementis of syithbles, and witich can sometimes be full syllables in themselves. Root woundib are the key elements of wards, and very often can stand alope.

1i. AFFIXES. Socmetimes root words do not stand alone. Odher allomorphs or meaningffill srounds are arrached to them. These constitute the other kind of morpheme: alfixes. Af-: frives are mot inee because they never occur alonc; they are always found attachod to bases or Hosert warchs. Titus, they are calied bound morphemes.

祭 Akinmon, there are three classes of affixes:
IIIn 1 . PREFIXES, wich stand before the root wond, are of two sorts, standard prefixes amp posppositive prefixes. The stanciard prefixes are ahways the very first part of the word, whrile prostpositive preines come before the rook word, but (can' follow the standard prefix:

N.B. The postpositive prefixes are marked with the symbol " f ". If another prefix occurs, it will be put beiore the postpositive prefix, otherwise the postpositive prefix will be before the root word and first in position.
11.2. INFIXES, which are put into the root word, usually after the first consonant ("-in-"
 40 diecrate in the following:

| INFIX | ROOT WORD |
| :---: | :---: |
| -in- | buean |
| -in- | tao |
| $\rightarrow \mathrm{min} \mathrm{fl}^{-}$ | sumod |
| -E $\mathrm{V}_{1}$ - | sumod |
| -il-in- | hambac |

| FULL FOIM | MEANING |
| :---: | :---: |
| bimuean | ("monthly") |
| tinao | ("given") |
| sumueunod | ("follower, disciple") |
| sucunod | ("in line") |
| hilinarnbae | ("Last talking") - |

ii, 3. SUFFIXES, which follow the root word, are illustrated by the following:

In Aklanon, root words are the basic unit of speech, and they grow into different meanings and different functions through the various affixes that can be added. The process of affixation, in other words, can change either their meaning or their function. Thus, "tawo" ("person") is basically a noun; in another form "kinatawohan" it means "birthday" and remains a noun, but changes meaning (literally: "that time when one actually becomes a person; birthday"). However, in the form "natawo" it becomes a verb and also undergoes a change in meapting ("born, becoming a person"). In the.forms-"nagatawo" ("is giving birth"), "nagapakatawo" ("is in birth throes"), and other similar forms, the basic root "tawo" undergoes changes in both meaning and function.
12. MORPHOPHONEMICS. When we go about the business of using root words in speech, we see how they grow with regard to either or both meaning and function. A root word and all of its subsequent possibilities of affixation are what go into the making of a word's total range, or, more accurately, a "word range". In this way, we can now discover all the members of the word range "tawo":

| FORM |  | PART OF SPEECH |
| :--- | :--- | :--- |
|  | tawo |  |
| katawohan |  | noun |
| koun |  |  |
| pagkatawo |  | noun |
| kinatawohan | noun |  |
| kinatawo |  | noun |
| isigkatawo |  | nour |
| tawotawo |  | noun |
| tawohon |  | adjective |
| tueotawohon |  | adjective |
| natawo |  | verb [stative] |
| nagatawo |  | verb [regular] |
| pakatawo |  | verb [causative] |
| natawohan |  | verb [locative] |

| MEANING |
| :--- |
| ("person") |
| ("humanity") |
| ("personality, character") |
| ("birthday") |
| ("genitals") |
| ("fellow man") |
| ("puppet") |
| ("lived in, populated") |
| ("slightly populated") |
| ("born") |
| ("is giving birth") |
| ("[bc] in birth throes") |
| ("be born in/at") |

Scmetimes ungoing from a sumple root to various members of the word range the base undergoes changes in sound. There is a branch of linguistics that deals with such changes trom a root word to members of the entire word range, and that study is called morphophonemics. Technically speaking, "morphophonemics deals with the variations in the phonemic structure of allomorphs when accompany their grouping into words." (Francis, p. 210) In Aklanon morphophonemics deals with the chariges in sound, stress or syllabification from root word to a member of the word range, usually when certain processes of affixation take place. This is the subject and discussion of our next unit.

## UNIT FOUR: MORPHOPHONEMICS IN AKLANON

Aklanon has two sorts of root words. There are the normal or simple roots, which represent the root word in its full form. There are also the reduced or changed rcuts, which represent the root word after some sort of morphophonemuc change has occured.

- For example, we have the normal root "bakac" /bakgg/ ("buy"). When this root is suffixed with -an or 'on, this roor changes, the full forms being "bakean" /bakgan/ and "bakeon" /bakgon/. In this case, the reduced root of "bakac" becomes "bake-" /bakg-/. What has happened here? We have lost the vowel/a/ and the word is also resyllabified. Normally we find the syllable division /ba--kag/, but with the reduced root the syliabification is /bak--g-/. This is one form of morphophonemsc change. Altogether in Aklanon, there are ten such types of change.

1. STRESS CHANGE occurs when the simple root word is expanded by affixation to other members of the word range, particularily with suffixation. But it also occurs on occasion, as in English, on a word which changes function from a verb to a noun (e.g. the English noun "pr\&sent" and the verb "present'j.
1,1. Certain verbs, stressed on the second to the last or penultumate syllable, become other parts of speech through change in stress:

|  | VERB FORM |
| :--- | :--- |
| /saba'/ | ("go upriver") |
| /bágay/ | ("put up framework") |
| /táhon/ | ("cover") |
| /báka'/ | ("walk under weight") |
| /géha'/ | ("cook") |

| OTHER |  |
| :--- | :--- |
| /suba'/ | ("river"') NOUN |
| /bagay/ | ("house") NOUN |
| /tabonn/ | ("cover'") NOUN |
| /baka'/ | ("bowlegged") ADJECTIVE, |
| /gahá'/ | ("cooked") ADJECTIVE |

1,2. Certain affixes carry with then stress, while others are not stressed:

| STRESS WITH AFFIX |  | SIMPLE AFFIX |  |
| :---: | :---: | :---: | :---: |
| /hainpangán/ | ("will be played with") | /hampangan/ | ("toy, plaything") |
| /kasakáy/ | ("has ridden") | /kasákay/ | ("fellow passenger") |
| /pagk ${ }^{\text {ºn/ }}$ | ("while eatiag") | /pagka'on/ | ("food, edibles") |

1,3. When suffixes are added, stress umversally changes on roois winch axe orignally accented on the second to the last syllable, since the tendengy of the dralect is to keep the accent on the penultimate syllable of a word:

| ROOT |  |
| :---: | :---: |
| /1root/ | ("go around") |
| /hánıpang/ | ("play") |
| /mánggad/ | ("riches, wealth") |
| /simbah/ | ('vorshı') |
| /hisbd/ | ('difficult") |
| /tápus/ | ("end, fimsh") |
| /sadit'/ | ("sin, err'") |
| /' uswag/ | ('progress, yo on') |

AFFIXED FORM<br>/kalibోtan/ ("universe, world") /hanpángan/ ("toy, plaything") /manggartino": ("rich, weahthy") /simbśhan/ • ("church") /kahstinan/ ("dificulties, hardshp") /katapús:an/ ("termmation, fumsh") /kasap"áana/ ("sıns, smfulness") /ka'uswfigan/ ("progress, development")

2. VOWEL CHANGE. The tende: $y$ in Ahlanon is towards words of only two syllables. Very often with the process of suffixation, an open vowel of the penultimate syllable receives the furst consonant.of the fural syilable. When thus process happens the vowel m, the second syllable is left open, and is usually tost (if /a/) or changed to a semivowel (if /i/ or / / / ) which is then joined to the added suffix. For example, the word "abi" is syllabified /"a-bl/ (meaning "welcome, receive"). When the "-an" suffix is added, the change effected reads "abyan", with the syllabification 7 Thte-yan/ (meaning "friend; one who is welcomed or received"). Note how the $/ \mathrm{b} /$ transferred from the second syllable to the first, and how the $/ \mathrm{i} / \mathrm{changed}$ to $/ \mathrm{y} /$. There are three vowels involved with this process.

2,1. /a/ IS LOST AND REPLACED BY GLOTTALSTOP. In words which contain an open /a/, that is an /a/-sound finally which is not closed with the glottal / $/$ / or an $/ \mathrm{h} /$, the $/ 2 /$ is lost and a glottal stop occurs in its place, joined to the added suffix.

| ROOT | SYLLABIFICATION | ISEW FORM | SYLLABIFICATION |
| :---: | :---: | :---: | :---: |
| asawa | 「a--sa--wa/ | 2saw-on | /'a--saw-r'on/ |
| eaca | /ga--ta/ | linad-an | /h--nad-'an/ |
| mata | /ma--tal b | ginmat-an | /gin--mat--'an/ |

2,2. 1/ IS CHANGIED TO SEMIVOWEL/y/. In words which contain an open final/i/ (not closed with the $; /$ ' or $/ \mathrm{h} /$ sounti), the $/ 1 /$ changes to $/ \mathrm{y} /$ and is joined to the added suffix.

|  | ROOT | SYLLABIFICATION | NEW FORM | SYLLABIFICATION |
| :---: | :---: | :---: | :---: | :---: |
| - | agi | /'a--gi/ | agyan | /'ag--yan/ |
|  | ti | 「i--ti/ | ityan | /'it--yan/ |
|  | cabi | /ga--br/ | nahacabyan | /na-ha--gab--yan/ |
|  | kigı | /ki--gi/ | kiligyan | /ki--lig--yan/ |
|  | sikı | /s1--ki/ | nasikyan | /na--sik--yan/ |

2,3. /o/ IS CHANGED TO SEMIVOWEL/w/. In words which contain an open final/o/ (not closed with the / / or /h/ sound), the / / changes to / w/ and is joined to the added suffix.

| ROOT | SYLLABIFICATION | NEW FORM | SYLLABIFICATION |
| :---: | :---: | :---: | :---: |
| bato | /ba--to/ | kababatwan | /kz--ba--bát-wan/ |
| buto | /bu--t\%/ | binutwan | /bi--nut--wan/ |
| duge | /du--g\%/ | karuguan | /ka--rug--wan/ |
| cabo | /ga--bó/ | linabwan | /li--nab--wan/ |
| tao | /ta--'o/ | taw-an | /taw--'2n/ |
| tuls | /tu--b) ${ }^{\text {/ }}$ | katubwan | /ka--tub-wan/ |

3. VOWEL. LOSS. In keemng with the tendency to have basic two-syllable words, very often a lax fimal vowel (in the midlle of the final syllable) may be lost when the root word is suffixeu. Alons with the change, the mitial consonant sound of the final syllable becomes the fimel consonant schind of the penultmate sylable, and the final consonant sound of the last syllable ef the rout word becunbes the imitial sound, added to the jomed suifix. For example, the word "sught" ("permit, allow") is divided/su--got/; with the addition of the "-an", it is changed to "sugtan", divided/suy--tan/. Note how the/g/transferred from the last to the penultmate sylfule, and al:o how the /o/ wa. lost and the $/ \mathrm{t} / \mathrm{is}$ jomed with the suffix $/$-an/. Any one of the three basie vowel sumd, /a, i, o/ can undergo this change; it is mportant to
note，however，that in all cases the final syllable of the word in question is stressed．There－ fore a final stressed lax vowel is lost in the following words：

| ROOT | SYLL＇BIFICATION | NEW FORM | SYLLABIFICATION |
| :---: | :---: | :---: | :---: |
| basa＇ | ／ba－－sá＇／ | nabas－an | ／na－－bas－－＇an／ |
| patay | ／pa－thy／ | patyon | ／pat－－yon／ |
| pusa＇ | ／pu－－sa＇／ | rapus－an | ／na－－pus－r＇an／ |
| uga． | 「u－－gha／ | ughon | 「ug－－hon／ |
| sakay | ／sa－kây／ | sakyan | ／sak－－yan／ |
| kitin | ／ki－－tin／ | kitnan | ／kit－－nan／ |
| pisik | ／pi－－snk／ | piskan | ／pis－－kan／ |
| sakit | ／sa－－kit／ | nasaktan | ／na－－sak－－tan／ |
| tigis | ／ti－－gls／ | tigson | ／tig－－son／ |
| Isog | ／i－－sठ＇si＇ | isganan | 「is－－gan－－an／ |
| libsd | ／li－－b6d／ | libdan | ／lib－－dan／ |
| lisod | ／li－－sరd／ | nalisdan | ／na－－lis－－dan／ |
| niyog | ／ni－－yठg／ | kanyogan | ／kan－－yog－－2n／ |
| hugod | ／hu－－g6d／ | hugdan | ／hug－－dan／ |
| tukod | ／tu－－k\％d／ | tinukdan | ／ti－－nuk－－dan／ |

4．ASSIMILATION．Sometimes when two phonemes are combined，one of the neighbor－ sounds becomes more like the other．Lh Aklanon，as in most Fhilippine languages and dialects， the $/ \mathrm{ng} /$－sound assimilates to one or other of the three nasal sounds．A quick glance at the consonant chart（11，11）will show the relationships of the masals to the various areas of ar－ ticulation（namely bilabial，dental，alveolar or velar）．

4，1．／ng／ASSiMILATES TO $/ \mathrm{m} /$ when occuring before the bilabial $/ \mathrm{s} /:$

| ／ng／FORM | ROOT |  | NBW FORM |
| :---: | :---: | :--- | :--- |
| ＂sang－＂ | ＂bilog＂ |  | MEANING |
| ＂sang－＂ | ＂bato＂ |  | ＂sambilog＂ |

4，2．／ng／ASSIMILATES TO／n／when occuring before the dental and alveolar sounds／d，t／：

| ／ng／FORM | ROOT |
| :---: | :---: |
| ＂pang－＂ | ＂dulsi＂ |
| ＂pang－＂ | ＂diho＇＂ |
| ＂mang－＂ | ＂duyog＂ |
| ＂mang－＂ | ＂tanggi＂ |
| ＂kasing＂＂ | ＂tuead＂ |

| NEW FORM | MEANING＊ |
| :---: | :---: |
| ＂pandulsi＂ | （＂dessert＂） |
| ＂pandiho＂ | （＂move bowels＂） |
| ＂manduyog＂ | （＂the sleeping one＂） |
| ＂mantanggi＂ | （＂never－never land＂） |
| ＂kasintucad＂ | （＂made from the same form＂ |

4,3. /hg/ RETAINS ITS QUALITY before the velar and glottal sounds $/ \mathrm{k}, \mathrm{g}, \mathrm{k}, \mathrm{h}, \mathrm{i} /$ and also before the semivowels / $w, y /$ :

5. CONSONANT REDUCTION is the loss of a consonant in the root word. It most cften occurs in Aklanon along with the previously mentioned process of assimilation.

5,1. /p/ and /b /are sometimes lost after / $\mathrm{ng} /$ assimilates to $/ \mathrm{m} /$ :

** Another form of assimilation is also present in these cases due to the double presfix; "pang-" follows the assimilation rules of the following prefix "hing-" or "sing-".

5,2. /d, $t$, s/ are sometimes lost ante: /hg /assimilates to / $\mathrm{n} /$ :

|  |  |  |  |
| :--- | :--- | :--- | :--- |
| "pang-" | /tinda(han)/ | "panindahan" | ("going to market"). |
| "pang-" | /turo'/ | "panuro'" | ("teaching") |
| "pang-" | /takaw/ | "panakaw" | ("stealing, theving") |
| "pang-" | /sugid/ | "panugid" | ("relating, narrating") |
| "pang"" | /simbah/ | "panimba" | ("act of going to church") |
| "pang-" | /sudlay/ | "panudlay" | ("combing [hairy") |
| "pang-" | /sukot/ | "panukot" | ('collecting") |

5.3 . $/ \mathrm{k} /$ and $/ / /$ are lost after the /ng/-sound in many instances:

| /ng/ FORM | ROOT | NEW FORM | MEANING |
| :---: | :---: | :---: | :---: |
| "pang-" | /'igpt/ | /pangigpit/ | ("clip or hold together") |
| "pang-" | /'isog/ | /pangis $6 \mathrm{~g} /$ | ("scold") |
| "pang-' | /kalisod/ | /pangalis6d/ | ("suffering") |
| "pang-" | /kahoy/ | /pangahoy/ | ("gather fuel [wood]") |
| "pang-" | /kutana'/ | /pangutana'/ | ("ask questions") |
| "pang-" | /kawl/ | /pangawil/ | ("deep-sca fishing") |
| "mang-" | /kwarta/ | /mangwarta/ | ("one-centavo pieces") |

S. CUNIRACTION. Ancther form of consonant loss occurs in the process of contraction, the fusion of words, particularily in the flow of common sper . .
$6,1 . / n /$ is often lost at the end of words, particularily when followed by the marker "it" or the hgature "nga". Note, also that these markers themselves undergo contraction and lose their vowel sound:

| FULL FORM | CONIRACTED FORM | MEANING |
| :---: | :---: | :---: |
| "eskuy'ahán it hari" | /'ishuylahat hari'/. | ("School of the King") |
| "naimponón it masunod" | /ıa' imponat inasunod/ | ("consisting of the following") |
| "ham-an it mawron" | /ham'at mawron/ | ("why like that?") |
| "owa' man it gusto" | /'uwa' mat gusto/ | ("without any desire") |
| "con it ana" | /gotá/ | [speech particle, parenthetic |
| "akon nga kalisdanan" | /'akong kalisdanan/ | ("my musery") |
| "amon nga eacawigan" | /'among gagawigan/ | ("our province") |
| "kinyo uga tanán" | /kinyong tanín/ | ("to all of you") |

6,2. $7 /$ [the gleital stup] is hewise lost in the cominon flow of speech, particularily defore the marker " $\mathrm{i}^{\text {" }}$ and the hgature "nga":

| FULL FORM | CONTRACTED FORM | MEANING |
| :---: | :---: | :---: |
| "cowá' 11 gusto" | /'uwã t gusto/ | ("no desire") |
| "abór nga tawo" | /abong tawol// | ("many people") |
| "abó' ngra sacamat" | /abong sagamat/ | ('many thanks") |
| "bata' nga cacakı" | /batang dagaki/ | ("a young male") |
| "owat it anomar:" | /'uwa t anuman/ | ("don't mention it; you're weicome") |

6,3. An entare group of contrats cxist in standard spoken Aklanon and center on the five prin-
cipal function markers: "ro/do, ku, it, sa, nga" and on the pronouns. In this case they seem to reduce to one phoneme from each word, representing a total of three morphemes in the final one-syllable contraction:

## COMBINATION

"ro akon nga"
"do akon nga" "ro lmo nga"
"do imo nga"
"ro ana nga"
"do ana nga"
"ku imo nga"
"ku akon nga"
"ku ana nga" "
"it akon nga"
"it imo nga"
"it ana nga"
"sa akon nfa"
"sa imo nga"
"sa ana nga"

CONTRACTION
"rang"
"dang"
"ring"
"ding"
"raa"
"daa"
"king"
"kang"
"kaa"
"tang"
"ting"
"ta"
"saang"
"sing"
"saa"
N.B. In both the spelling and the pronunciation, the "aa" represents a lengthening of the norinal /a/-sound. It does not stand for the addition of a new syllable. Each of the above words in the right column is monosyllabic.
7. CONSONANT CliANGE is similar to the process of assimilation, where, because of a new environnent, a consonant phor me clanges to another consonant phoneme.

7,1. /d/very often changes to $/ \mathrm{r} /$ at the end of a root word which is suffixed:

| ROOT | NEW FORM |  | MEANING |
| :--- | :--- | :--- | :--- |
| /bukid/ | /kabukiran/ |  | ("hilly area") |
| /'akid/ | /akiran/ |  | ("fight as a group, not singly") |
| /gubid/ | /qubiron/ |  | ("be made into twine") |
| /hawid/ | /hawiran/ | ("be held, be restrained") |  |
| /pukhd/ | /puklirou/ | ("be toppled down") |  |
| /sayod/ | inasayora:/ | ("is known") |  |
| /tahod/ | /tahoron/ | ("be respected") |  |
| /tubod/ | /tuboran/ | ("spring [of water]") |  |

7,2. /d/sometmes changes to $/ \mathrm{r} /$ at the beginuing of a root word which has 2 strong accent on its penultumate sy!lable plus some form of prefixation:

| /dayaw/ | /parayaw/ | ("favorite, pet [childy") |
| :--- | :--- | :--- |
| /dugo/ | /karugwan/ | ("mecting at right angles") |

7,3. /d/can also change to /l/ on occasion:
/suggd/
/sugrilanon/
("story")
("worthy oi appreciation")

7,4. /8 /changes to /1 /when in the environment of an /i/-sound, particularity of the - lninfix:

| ROOT | NEW FORM |  | MEANING |
| :--- | :--- | :--- | :--- |
| /ga'ga'/ | /lina'ga'/ |  | ("boiled in water") |
| /gahag/ | /linahug/ |  | ("misbehave") |
| /ganges/ | /linangas/ |  | ("be naughty") |
| /tumor/ | /linumot/ |  | ("covered with moss") |
| /gurge/ | /linurpan/ |  | ("what one dived for") |
| /gakad/ | /linakcian/ |  | ("stepped over with broad steps") |
| /ganggaw/ | /linanggawan/ | ("immersed in vinegar") |  |
| /gubid/ | /linubiran/ | ("be entwined") |  |

7,5. /g/ changes to $/ y /$ when it follows most dental or alveolar consonants $/ t, d, s, n, y /:$

8. METATHESIS 15 the process whereby two Consonant morphemes change the $x$ position. It is not a simple operation, hngustically speaking, since three changes take place: (a) loss of the syllable's vowel sound; (b) metathesis or switching around of the consonants; and (c) movement of the new initial consonant phoneme to the final position of the preceding syllable (refer to thus unit, Section 2 and 3). Let us follow this operation step by step with the word Pinon/ ("drank"). First (a) the final vowel is lost, leaving us with the root/inm/; second (b) the two consonants metathesize or switch around, giving us the form /imo/; then (c) the syllable division results as /"mi--ma/ (with the suffix "-a" being added), from the initial division /' i-nom/.

8,1. Some further exatnples of this particular process read:

8,2. Another occurance of in ctathesis is with the consonant change of the /g /to /I/ sound (refer also to this ant, Section 7,4). Note the following examples:

ROOT
"sucod"
"bacos"
"bucos"
"kacot"
"pucos"

SYLLABIFICATION
/su--g6d/
/ba-gos/
/bu-gos/
/ka--gor/
7pu--gos/

NEW FORM
"Sudlan"
"baslan"
"buslan"
"katlan"
"puslan"

SYLLABIFICATION
/sud--lan/
/bas--lan/
/bus--lan/
/kat--lan/
/pus--lan/

In these examples, note that four changes occur:
(1) change of the $/ \$ /$ to $/ 1 /$ sound,
(2) loss of the vowel sound in the last syllable (all cases above lost / / /).
(3) interchange of the $/ 1 /$-sound and the final consonant sound,
(4) resyllabification of the root word, where the newly adopted initial consonant phoneme becomes the final consonantof the penultimate (second to the last) syllable, and addition of the suffix with the /l/ as its initial consonant.
9. CONSONANT GEMINATION is the addition of a consonant phoneme to the root word, most commonly during the process of suffixation. It is a phenomenon of speech, which is rarely recorded in the commo: spelling of the dialect, particularily in such words as:

| ROO'I | NEW KORM |  | MEANING |
| :---: | :---: | :---: | :---: |
| "bilid" | /bilidlon/** |  | ("worthy of appreciation") |
| "bugae" | /bugadgon/ |  | ("proud") |
| "bulok" | /kabulokkan/ | - | ("worst of all') |
| "dayaw" | /dayawwon/ |  | ("is to be praised") |
| "puso'" | /tagrpuso' on/ |  | ("heart") |
| "puti'" | /kaputi"an/ |  | ("whiteness") |
| "simba" | /simbahhan/ |  | ("church") |
| "tanda" | /tindahhan/ |  | ("market [place]") |
| "tubod" | /tuborran/** |  | ("spring [of water]") |

** N.B. These forms have more than one form of morphophonemuc change.
10. RIEDUPIICATION is the process whereby crartain morphemes of the root word are repeated, causirg certan variations wi the merning from root word to the new form. Several types of redupheation occur in Aklanon.

10,1. PRIMITIVE WORDS is a term given by Rodolfo Cabonce ${ }^{9}$ to those words of two syllables when cons:st ol a redupication or the inst syllable. E. Aiseno Manuel 10 hypothesized that these worde were borrowed as ona syllab!e words from Chinese or Indian languages, but due to the tendency of Mal،yo-polynesian languages to have two syllable words, they became redupincaced as tme went on. Manucl went or to prove that many of the one-syllable versions of these words did, in effect, correspond with Chinese words, with similar meanings. Whether these wolds were actually borrowed from Chnese, or whether both the Chinese words and the Ihhppinc versions stem fium a common stream is not our question here. We only mention the theory as one account for the oc, urance of such words in Aklanon. Suci words do not present any morphophonen'ic problem toidy enther, sance the changes that occured took place far in the past. However, they are mentioned at this time to show the nature of the reduplication within

iU CHNESE:H.EMENTS IN HIETAGALOG LANGUAGE, Manila, 1948.
them, and also to stress that they recefive only one basic accent or stress per word, as is the case with all redeplication in the dialect. Examples of such words are:

| VOCABULARY |
| :--- |
| /bibi/ |
| /bi'bi'/ |
| /bukbuk/ |
| /busbus/ |
| /dabdab/ |
| /dikdik/ |
| /dingding/ |
| /dumdum/ |
| /tos'os/ |
| /nagnag/ |
| /pakpak/ |
| /pispis/ |
| /singsing/ |
| /suksuk/ |
| /tawtaw// |
| /tiltil/ |
| /tubtub/ |
| /tuktuk/ |

| MEANING |
| :--- |
| ("duck") |
| ("edge") |
| ("bamboo gnat") |
| ("tear open") |
| ("flame") |
| ("sift out") |
| ("wall") |
| ("thought") |
| ("slip down") |
| ("ointment, salve") |
| ("wing'") |
| ("bird") |
| ("ring") |
| ("wear, adorn; house lizard") |
| ("dip up and down") |
| ("chip") |
| ("until, up to") |
| ("rust; knock") |

The above is only 2 partial list of the many so-called primitive words in Aklanon.
10,2, FULL REDUPLIC/'TION of the xoct word in Aklanon canries with it the meaning or idea of artificiality, diminution, or genera: lessening of the quality implied in the root word. This can best be seen by contrasts beween the root word and ats meaning, and then the reduplicated word and its meaning.

Two very common expressions of this type are used, which in tanslation to English seem to loose their sense of duminution: "adlaw" means "day", while "adlaw-adlaw" means "every day", but in the sense of the English "each and everv day" (taken individually and as a group). "Taran" means "every, all", whle "tanan-tanan" has a good equivalcnt in the English idion . "carl and every", when implies daminishment in the word "cach", yet includes all in "every".

It should be noted that in this full word redupheation there is only one basic accent or stres: in the entire word, falling on the reduplication, such as /tawolitifoli/.

- 47 -

10,3. REDUPLICATION OF THE FIRST SYLLABLE $\left(-C_{1} V_{1}-\right)$. The Tagalog or Pilipino langsage uses reduplication throughout its very system. Aklanon, on the other hand, does not actively use reduplication, except in words surviving from older forms and also to show $t^{\prime}$ e lespening of the possibility of a verb's happening. In this type of reduplication the first consonant (including the unspelled glottal stop $/$ / $)$ and the first vowel are repeated from the rooc word and infixed into the new form. Some common occurances are:

| ROOT | MEANING | NEW FORM | MEANING |
| :---: | :---: | :---: | :---: |
| "bato" | ("stone") | "kababatwan" | ("a stoney area') |
| "buhat" | ("make, do") | "magbubuhat" | ("creator; God") |
| "buot" | ("one's psyche') | "magbubr-at" | ("supreme will; God") |
| "buot" | ("one's psyche') | "kabubut-on" | ("one's inner self") |
| "buhi" " | ("live') | "nabubuhi'" | ("those who subsist") |
| "buyog" | ("spin") | "tambubuycg" | ("bumble bee') |
| "huya"" | ("shame") | "kahuhuya'" | ("shameful, disgraceful") |

$f$ : least four common words evidence this form of reduplication which took place in antiquity:

| "bayi" | ("woman") | "babayi" | ("woman") |
| :--- | :--- | :--- | :--- |
| "eaki" | ("man") | "eaeaki" | ("man") |
| "dewha | ("two") | "daywa" | ("two") |
| "teyo | ("threc") | "tatlo" | ("turee") |

N.B. The symbol (*) represents a reconstructed form, what the shape of the word might have looked like centuries ago. We don't know for sure, but the possible shapes of the word for "two", for example, may have gone through the following stages:
*dewha -- *derlewha -- *dedwha -- *dedwa -- *daRwa -- *dagwa -- "daywa" over the past thirty or so centuries. The shape *daRwa might be postulated for protoWest Visayan (c. 700 A.D.), while the shape *dagwa might be postulated for protoAklanon (c. 1350 A.D.), and "daywa", of course, is current Aklanon.
Sometimes the reduplicated first syllable obtains the "-in-" infix for purposes of intensification:

| "mahae" | ("dear, expensive") |
| :--- | :--- |
| "tahod" | ('respect") |
| "buot" | ("one's psyche, will") |

| "minamabae" | ("very dear") |
| :--- | :--- |
| "tinatahod" | ("quite respected") |
| "binubuot" | ("come to think of") |

10,4. REDUPLICATION OF THE FIRST VOWEL WITH THE / $/ /-\mathrm{INFIX}, /-\mathrm{gV}_{1}-/$. A frequent form of intensification in Aklanon is accomplished by repeating the first vowel of the root word along with the $/ \$ /$-sound. This form of reduplication is inserted as an infix after the first consonant and vowel $\left(C_{1} V_{1}\right)$ of the root word:

| "saka'" | ("come up") |
| :---: | :---: |
| "sugo" | ("command, ordě") |
| "sunod" | ("follow") |
| "silak" | ("sunshine") |
| "tanum" | ("plant") |
| "tean" | ("rain") |
| "hilo ${ }^{\text {a }}$ | ("poison") |
| "duyog" | , ('slecty") |
| "sakil" | ('pain') |
| "'ulaw: | ('char:st) |

"nagasaeakan'" ("persons coming $1 p^{n "}$ )
"sucugo-on" ("strvant, houschelp")
"sumucuned" ("disciples, followers")
"tigsicilak" ("sunhy season, summer")
"tigtacanum" ("planiing season")
"tigueucan" ("rainy sc.ason")
"makahicilo"" ("poisonous")
"makaducuyog" ("soporific, sleep-inducing")
"makasacakit" ("painful, pam-incucing")
"mal:aueulaw" ("tiirst-inducing")

- 48 -

10,5. / $\mathrm{C}_{1}$ ug(o)-/ REDUPLCATION AS PREFIX. The first consonant of a root word along with /ufo) $/$ can act as a prefix to show diminishment of the quality of the root word, mu _h like the previously mentioned full word reduplication (see 10, 2). The form is basically/ $\mathrm{C}_{1}$ ufo-/ for words of two syllables accented on the penultimate syllable; however an allomorph $/ \mathrm{C}_{1}$ us-/ exists for words of two syllables accemed on the final syllable, or for words longer than two syllables:

| ROOT | MEANING |
| :--- | :--- |
| "barko" | ("ship"). |
| "quot" | ("one's psyche") |
| "hambae" | ("talk, speak") |
| "two" | ("person") |
| "baroto" | ("dugout canoe") |
| "lamesa" | ("table") |
| "manghad" | ("younger") |
| "yaw'anay" | ("not now, please") |

10.6. REDUPLICATION $\cap F$ NASAL AND FIRST VOWEL AFTER /mango $/$ /. The prefix /many/ is used on verbs, however a noun class exists which gives evidence of at least three forms of morphophonemic change (namely assimilation, consonant reduction and reduplication). This constitutes the "mang-" noun class. Take the word "tudlo" ("teach"), for example. With the "many-" verb prefix attached the new form reads "manudio" ("will teach"), evidencing both assimilation and consonant reduction. To make a noun form from this verb, the nasal sound of "mong-" (which here is $/ \mathrm{n} /$ after assimilation) is reduplicated along with the first vowel of the root word (which here is /u/) and inserted as an infix after the first vowel sound, giving us the form "manunudlo" "reduplicated forin is underlined] meaning "teacher".

Examples of this type of reduplication are given in three groups, corresponding to the diffferent classes of assimilation and consonant reduction occuring (see this unit, sections 4 and 5):

## UNT FIVE: THE BASIC PARTS OF SPBECH

## A. WHAT IS GRAMMAR?

Thus far we have been discussing individual units: units of sound and larger untis of sound combinations and meaning, words.

When we put words together, they are not Just thrown into speech haphzardiy. Specific order, or structure, is called for; and without such structure meaning cannot be coaveyed fram speaker to tearer. This building of words into larger orgznized combinations or structures is That is meant by grammar. Grammar is a level beyond the lexical meaning of each individual word. For example, we all know the meaning of the words "hall, town and beautful". Yex, if we put them in that order, we would use the idiom "meaningless" to describe such an arrangement: "hall town beautiful". Now we say that this arrangement is meaningless, not because the individual elements are meaningless, but rather because the combination of those three meaningful elements is not understandable--at least when given in that particular order. Thus, order or structure is in: nortant in the giving of meaning.

On the other band, if 1 say "beautiful town hall". I have combined three meaningful words or elements into a larger structure which is also meaningful. Grammar is a level of meaning beyond the literal meaning of each individual element in a statement.

From the point of view of the Ustener, there are flve kinds of signais which reveal the patterns of structural meaning in which words are arranged. We shall briefly discuss them, - one by one.
l. WORD ORDER is the linear or time sequence in which words appear in an utterance. Without correct word order, statements are difficult if not impossible to understand. Word order is a key point in the conveyance of meaning. Certain levels of word order occur: those most commonly used and accepted by native speakers of a language, those which can be understood with difficulty and sound "foreign" to a native speaker, and those which are unintelligible to a native speaker.

Every language has certain strict limitations on word order. In English the position of is word in a sentence is important to its meaning. Yoor word order often can confuse the meaning, Look at the following serics of words: "sold the fish women the". This series is certainly not structured properly according to the canons of English grammar, and is consequently meaningless. It might make a good word assembly game, but in speech which is trying to communicate --particularily on a rapid, day-to day basis--it would hever be understandable or understoor!.

If we were to rearrange the series this way: "sold the women the fish" if becomes a bit more understandable, but it is not natural word order, and it is still confusing. One cennot tell for sure from the grammar who tif doing the selling, and what - as sold (though sense can fill this type of information). Someone who tried to understand the above statement would do some mental reconstruction, correcting the word order to "The women sold the ftsh. " or to "The fish sold the women." Of coursc, bis sense would prefer the first correction, unless he were listening to some sort of fairy tale wase fisi: actually were doing the selling. It is 'only at this imal point that we have a incaningful, grammatically correct statement.

In Aklanon, word crder strikes a nun-native epeaker [particularily a speater of English] as being quite loose or free. For exarnple, the above example of English could be translated:

# - "Ro mga isda" ginbeligya" ku mga babayi." 

 ("The women sold the fish.")or the word order could also be:
"Ginbeligya" ro mga isda' ku mga babayi."
But the word order would definitely sound foreign or wrong. if it were:
"Ku mga babayi ro isde gincaligya".
N.B. This word order is presented as wronig. The asterisk ( ${ }^{\circ}$ )
is a symbol for a reconstructed or exemplar form.
If the word order were played with enough, an exceptionally ludicrous sentence could result:

- Ro babayi mga ginbaligya' ku 'sda" mga.*
which, besides having misplaced plural markers, implies that it was the fish that sold the women.

The importance of word order to the meaning of a sentence cannot be understated. Although Aklanon may impress some foreign learners as having free or' loose word order (in effect, it just has more possibilities), thefe are definite patterns which must be followed, or else the speaker may sacrifice a good deal of the sense or meaning of what he is trying to convey.
2. PROSODY. Prosody is the over-all musical pattern of stress, pitch, and juncture in which the words of $3 n$ utterance are spoken. The various possibilities of intonation have been mentioned already (sce Unit 11, Section 14). It nee:i only be pointed out here that learning to express oneself musically within the language is important. If one gives a command form of Intonation or pitch to an intended polite request, it no longer means what the speaker might have intended; in effect, it will be a command, and the response from the listener will correspond to the conveyed meaning and not the intended meaning. Instead sf simply getting someone: to do something politely, the speaker (in this case) might inspire an emotion of feax, anger, or simple misunderstanding. It is not so much, therefure, what is said, but also how it is said (or sung) which plays into the prosody of speech.

Mistaken levels of pitch, stress, or intonation either sound forcign, or can-at-their worst --confuse or delete meaning. Many word exime where the difference in stress can be the difference between an inocuous ward and a so-called "dirty word". Propricty; of course, prevents us from quoting such examples, but all members of the Aklanon speech community yare well aware of such differences. Some differences in meaning have also been shown (see Unit II, Section 13 and Unit IV, Section 1, 1-2) to be involved "dth stress. A declarative intonation pattern when a question pattern is meant can ruln the connmination discussion. Such differences as these show that prosody is also an important part of the grammer of Aklanon upeech.
3. FUNCTION WOR.DS. There are two basic classes of words, an open class and a closed class. The open class of words is generally characterized by tiee varigus parts of speech, while the closed class is characterized by funcion words. The open class of words provides a very wide choice of meanings (referring to things or events in the so-called "real world", the world. of speech) and gives the speaker a great deai of freedom to choose. In the structure "The was born yesterday.", for example, we have a wide varicty of choices possible; such as: "cat, dog, calf, baby, boy, garl, lamb" and so oc.

In the structure " $\qquad$ baby was born yesterday" we do not have a wide varicty of choices.

We must choose from the function class, and our choice is limited by both grammar and sense. We could choose "a". or "the" (from the article class), giving us the sentence "A baby was born yesterday" or "the baby was born yesterday". We could also choose some other function words, like "one", "some" or "any". But the ideals that our choice is limited.

Function words are a closed class of words and/or morphemes which embody necessary distinctions and also embody cases where distinctions are relatively few in number. Their basic characteristic as a class is that they have 2 small or limited range of meaning, and they present the speaker with a forced choice; he must simply choose one or the otiner of them. This is to say that the meaning a function word has to convey has to be (and must be) conveyed. The very structure of the language forces it on you.

For example, in Aklanon the structure "Mayadayad do baeay" is possible, meaning "The house is beautiful.". The speaker could use any one of many words in the position of "baeay" ("house"). He could, for example, have sàid "payag" ("hut"), or "eskuylahan" ("school"), or "simbahan" ("church"). He could describe the beauty of countless things. But in his description, he must use the topic marker "do". It is' obligatory--it's allomorph "ro" could also be used; but one or the other of the allomorphs for the topic marker must be chosen. There is no freedom involved. The language forces the structure upon you.

Another example of function words can be seen with the English prepositions. They are function words, and they force you to commit yourself. Each has its own specific meaning, Qs in:
"by the house"
"at the house"
"in the house"
"to the house"
"into the house"
"with the house"
The speaker of English is forced to make a commitment. In Aklanon, however, such a set does not exist, and the language permits the speaker to take a vague way out with "sa baeay" which could mean any one of the above mentioned English phrases. This is net to say, of course, that Aklanon cannot express the above prepositional meanings, for it can; but it does so in a different way, not with function words, but with actual parts of speech: '
"sa kilid it baeáy"
"sa sueód at baeáy"
"sa idacum it bacáy"
("at the side of the house")
("10[to] the house")
("under[neath] the house")

Note that we still have the basic phrase "sa... baeay", but with other qualifieis that make the meaning more explicit.

We might envision function words as the more humble servants of the mpressive lexicai words, but, like humble servants, they are indispensible in getting things ione. It is impossible in Aklanon to build even short structures without then. . Aklanon even seenis to evidence $\alpha$ greater occurance of function words than English, having markers to show case relations, haking of parts of speech, and so on.

Another quality of furction words or the closed class of words is thew resistance to change or innovetion. Parts of speech are always changing, since a lahguage is borrowing words from cevery $s_{\text {;here }}$ of hife; but function words are word, wheh enibody necessary distinctione, and hence do not change at all, eved in centuries of development.
4. INF LECTIONS are morphemic changes, the additions of affixes and concomitant morphoyhonemic adjustments, wluch achipt words to performi structural functions without changing their lexical meanng. For example, "inom" always carries the meanng of "drink". But, as a verb, it has a whole system of affixes which allow it to fit into several contexts:

> "Nakaindm akd it tubi'." ("I have drunk water.")
> "Nagainom ako it tubi'." ("I am drinking water.")
> "Ginainóm nakon ro tubi"." ("The water is being drunk by me.")
> "Nano ro atong ilumnon?" ("What slall we drink?")
> "Paimna ro ayanı it tubi"." ("Have the dog drink some water.")

In each case the root/'inofm/ changes form, or is inflected, so that it can fit into several situations. In each case it has ats basic meaning of "to drink", but it also obtains a fuller grammatical "meamng" by its inflection-by the way it is made to fit into the statement or sentence.

In terms of our earlier discussion of basic word classes (sec \#3) we can call an inflection a function class of grammatical units, since each unt is meant to fill a particular function. Note how each form of the word "inom" was able to fill its function in giving meaning. The def:nition of inflection mentioned "the additions of affixes and concomitant morphophonenic adjustmants." Note the two bappenng in the above $i$ camples. First of ail, the affixes given in the examples arc: "naka-, naga-, gina-, -il--an, pa---a." The morphophonemic adjustments in the case were the / $-\mathrm{li}-/$ infix in the fourth example ( $/ \mathrm{llimnan} /$ ) and the process of metathesis (see Unit IV, 8, 1) in the fourth and fifth examples where che root (/in $\delta \mathrm{m} /$ ) hecomes metathesized to /imn-/, as in /ilimnañ/ and/pa'imna/.
5. DERIVATIONAL CONTRAST is the difference between words which have the same base or root, but which duffer in the number and nature of their derivational affuxes. In other words, it is the difference between various forms of affixes winch change words from one part of speech to another. It is a free class of grammatical units, as opposed to inflect'ons which are the functior. class of grammatical units. Examples of such are given in the following list:

| WORD. | PART OḞ SPEECH | MEANING |
| :---: | :---: | :---: |
| "natawo ${ }^{\prime}$ | verb [starive] | ("is/was born") |
| "nagatawo" | verb [regular] | ("is givog lisith") |
| "katawohan" | noun | ("humanity") |
| "kinatavohan" | noun | ("birthday") |
| "pagkatawo" | noun | ("personality, characies") |
| "tueotawonon" | - adjective | ("slightly populated") |

Note how the root "tawo" is transformed by the various prefixes or suffixes into different parts of speech with different syntactical (grammatical) meanings. Each retnins the basic meaning of the root word, but conerastive meanugs exist between each particular division, or derivation:

Derivational contrast differs from inflection in that uflection is concerned with the various forins of a root word withu a particular part of speech (e.g. the conjugation of a verb or the comparison of an adjective form-class), while derivational contrast is concerned with the differences of both ase and meaming of a root within the different parts of speech. For example, in the Cughsh "the happily nian lazy watched the people go by", we know two ristakes occur. We can correet by changing the adverb "haphiy" to "happy", and the adjectre "!azy" to the advarb "latily", therebu veriving the sentance: "The he?py man lazaly watched the ponple go by."

, happily watched the people go by." In either case, we have examples of derivational contrast:the differences between happy and happily and between lazy and lazily. We can also see how they fit into the meaning of the entire sentence. If mistaken, they can cause a good deal of confusion; therefore both inflection and derivational contrast can be crucial to sentence meaning, and make up a part of the whole process of grammar.
6. SUMMARY. It is the aboye five elements which make up the corpus of grammatical meaning in Aklanon. When we discuss, then, the "grammar of Aklanon" we are principally referring to them. The common notion of speaking with "good grammar" or "bad grammar" is not bound up with this more precise meaning of "grammar", namely the level of meaning A imposed upon individual words when they are grouped together into larger structures to convey meaning.

If the first four units of this book dealt with letters and words, it did so only to prepare the reader for the greater combinations that lie ahead. The putting together of words into sentences, however, is not a ready made process: neither for the infant nor for the foreignlearner. Taking a random group of words which a baby might babble or a foreigner might mimick is not to imply that we have either a statement or meaning, or that a person can speak the dialect. $V^{\prime}=$ have seen how words with meaning are not the only requirement for a statement; there must be a meaningful combination of meaningful words--in other words, we need both lexical and structural meaning to build sentences.

Lexical meaning refers generally to the meaning words have which can be found in a dictionary. It refers to the things that go on about us in the world, not only the real world of "trees" and "rivers" and "people", but also in the world of "thought", "belief", "superstition", "hope" and "love". It is the type of meaning which we can try to define or explain to another, the very core of our conversations and communications.

Structural meaning, on the other hand, is the way meaning gets pur into words, sentences, and communication. It is the sart of thing we have been describing in this unit by worc order; prosody, function words, inflection and derivational contrast.
,The remsinder of this unit will be dedicated to the four basic parts of speech: the reguler and stative verbs, noun andior substantives, adjectives and adverbs. It is these units and their function within the sentence which lay the groundwork for the building up of meaningful ufterances and rational communication. These words constitute the bulk of all words with the above-mentioned lexical meaning. They are the most important single atep in our $\&$ covery oi the why and how of the Akianon tongue.

## B. THE REGULAR VERB

1. THEORY. Verbs are the most important part of any utterance, One cannot speak long in sentences which have no verbs. Verbs are present-rcally or imglied-in almost every utterance. Because of the key importance of the verb in Aklanon, not/only due to the frequency of its occurance and to the fact that it occurs iirst in a sentence of many occasions, but also because of the way whole sentences are built explicitly about or around the verb form, it is not surprising why we choose to discuss it first among the basic parts of speech.

Despite the importance of the verb, and its frequency of occurance, it is probably the most elusive part of speech to define.

> Verbs are the lardest of all linguistic concepts to define, because in linguistic definition the verb is the starting point, the basis on which other definitions rest. It is improbable that a definition can be devised which will have meaning to anyone who does not already know, more or less, what a verb is. Beginners can best be taught what verbs are by having verbs polnted out to them. If a child asks us what a tree is, we do not inform him that it is a perennial plant supported by a large stem, or trunk, of wood; we show him a tree, or severat trees, and then he know's what a tree is. In a similar way we eome to recognize verbs, and when we can recognize them, then we-are-bte to undertake the task of defining and analyzing them. The student who can learn to recognize verbs . can be taught the rest of grammar. Those who cannot leam to recognize verbs, however many verbs are pointed out to them, cannot be taught anything about grammar. ${ }^{11}$

This extract above illustrates the importance of verbs, and yet their clusiveness to formal definition. This was sald with reference to verbs in English; the importance of verbs within Philippine languages was similarily stressed by McKaughan:

Before turning to the thesis proper, we would like to emphasize the importance of describing verbal inflestional categories in the study of Philippine languages. We had at one time emphasized the analysis of the particles or pronouns as relation markers ilmost to the exclusion of verbal inflection. It now seems to us that the primary key to sentence structure is to be found in the verb where basic syntactic relations are indicated, and which is the center of most major sentence types. Further, we ar fonvinced that categories similar to those we have described for Maranzo occ also in the other Philippine languages. ${ }^{12}$
Such is true, we shall see, for the Aklanon verb system: the verb is a center and a ke! .
1,1. NATURAL VERBS. In presenting a theory as to just what a verb is, the first-point already mentioned was to point out some verbs. There are some forms which a native speaker would unquestionably idenify as verbs. It is such forms which naturally should serve as a starting point.

[^3]The notional definition of $\varepsilon$ verb is a word that expresses action, condition or state of being. In Akianon, examples of such are as follows:

(b) CONDITION

| -bangor | ("arise") |
| :--- | :--- |
| -damgo | ("dream") |
| -eaom | ("hope") |
| -handum | ("wish") |
| -higugma | ("love") |
| -pahuway | ("relax") |
| -painoino | ("think") |
| -pukaw | ("awaken") |
| -patio | ("believe") |
| -8alig | ("rust") |
| -quo | ("have faith") |
| -tahod | ("respect") |

(c) STATE OF BEING

| -buhr" | ("be alive") |
| :--- | :--- |
| -ila' | ("like") |
| -taw | ("be born") |
| -tueog | ("be sleeping") |
| -gutóm | ("be hungry") |
| -thaw | ("be thirsty") |
| -duyóg | ("be sleepy") |
| -gary | ("be tired") |
| -asia | ("be satiated") |
| -sumo | ("have enough of") |
| m-akig | ("be angry") |
| -hadlok | ("be afraid") |
| -hidlaw | ("miss, long for") |

Of these three groups, perhaps only the first would automatically strike a native speaker of the dialect as verbs, since they are under the general category of words which express action. The second group, words whicirexpress condition, are frequently mistaken to be nouns, particularily since they often occur after noun determining function markers and become in such
cases, noun forms. However, as we shall see, the words in this column are subject to inflection in the same way that the so-called."action words" are, so they are indisputably memblers of the verb class. The third group, words which express state of being, are sometimes mistaken to be adjectives, particularily since they describe. However, they are inflected for time according to a separate conjugation of stative verbs, and will be described in the following chapter (Chapter C, "STATIVE VERBS"). In all of the above cases, we find inflection for tense' and aspect (degree of completion of action), which is characteristic of and unique to verb classes.
1,2. FORMAL DEFINITION. The previous discussion about the three types of verbs, which mentioned that each class is subject to inflection, brings us to the heart of a formal definution, namely that: 2 verb is any word which $1 s$ or can be inflected for focus, quality, aspect and time. Each of these will be explained as this chapter progresses. In other words, a somewhat redundant, but nonetheless accurate definition of a yerb would read: a verb is any word which is inflected with forms characteristic of the verb class, as distmguished from noun, adjective and adverb classes. Similarily, if it did not sound facetious, a verb is any word which can be inflected according to the forms presented in this section on verbs.

With regard to the form of verbs, one general'zation seems to apply to all classes, namely that all verbs have some form in "na-" in therr inflection. Whether it be a regular or a stative verb, at least one form of the whole class (usually indicating "process-begun") evidences the na : prefix. In actor focus, regular verbs have the form na-coupled with the form lga-in the stmple tenses ("naga-"), and na-coupled with jka-in the ability tenses ("naka-"). All stative verbs havea present or rofi tense form with the simple na-.
1,3. HOKMOPHONIC VERB CLASS. Apart from words which could easily be identified as verbs because of their sense or because of the presence of the na- morpheme, there is a small group of verbs (whose extent has-nat yet been fl'sly determined) which can be distinguished from other related nouns and adjectives by the stres',-superfix. These verbs are jetentical to other forms except that there is a difference in stress (see Unit IV, Section 1,1). A similar phenomenon occurs in English:

$\frac{\text { VERB }}{$|  imprint  |
| :--- |
|  import  |
|  qderess  |
|  desért  |
|  perfect  |}

| OTHER |  |
| :--- | :--- |
| Imprint | (NOUN) |
| import | (NOUN) |
| address | (NOUN) |
| dEsert | (NOUN) |
| perfect | (ADJECTIVE) |

Note how the first column shows stress on the last syllable, whlle the second column illustrates stress on the first syllable. In Aklanon, a similar phenomenon occurs, but verbs will show a stress on the penultimate syllable, while the other forms show stress on the fingl syllable:

| VERB FORM. | OTHER FORM |  |
| :---: | :---: | :---: |
| /báka'/ ("walk under weight") | /baka'/ | ("bow-legged") (ADJECTIVE) |
| /bigay/ ("put up framework") | /bagzy/ | ("house") (NOUN) |
| /baihi'/ ('release, set frce") | /buhr/ | ("alive") (ADJECTIVE) |
| /gåha'/ ("cook, prepare food") | /gaba'/ | ("already cooked") (ADJECTIVE) |
| /süba'/ ("go upriver") | /suba'/ | ("river") (NOUN) |
| /tabon/ ("cover") | /tabon/ | ("cover") (NOUN) |

1,4 SYNTACTIC DEFINITION. In Aklanon, the verb is the key element of the construction in which it occurs. It is a center. Besides telling us about its own emphasis or focus, mode, aspect and tense (all of which will become clear as we discuss them individually), it also reg-
ulates the placement of the function markers or function words in the predication. In other words, besides being words which talk about doing, verbs do lots of things by rhemselves. By just looking at a verb form, or by just bearing one, we can tell what is paramount in the speaker's mind. We will know where the topic will occur in the sentence, and how it will be marked. We can also tell where the instrument of the action (if any $1 s$ expressed) will occur, and how it will be marked; where the direct object or foal of the action will occur, and how it wili be marked; and so on. The Aklanon verb, in other words, is quite the dictator. Once the verb form is put down, dernocratic procedures end, and the rest of the forms in the sentence are pre-detertmined and must follow according to beautifully simple, but rigid, grammatical "laws", or canons.

1,5. VERB DETERMNERS. Perhaps the easiest way to find out whether or not a word is a verb or another part of speech is through the verb determining function words. Members of this class are drawn from several parts of speech, some of them are verbs, others are adjectives or discourse particles when reduced to their basic root; but all of them can function to illustrate or point out a verb.

The class of verb ceterminers is quite large, and some of them allow for more than one verb form after them; but the largest class can be found with the verb prefix mag-. A formal diagrar of this construction would be as follows:

$$
\text { [verb determiner }] \text { - [subject }] \text { - mag }-[\text { verb root }]-[\text { remainder of the sentence }]
$$

This system is quite infallible for unearthing verb roots. Take a look at the following example:
"Naila' ako magadto sa Manila'."
("I want to go to Mamla.")
The verb determiner here is "naila'"; note the verb root "adto" following the mag- verb prefix. Because of the presence of the verb determiner and the mag-prefix, any verb stem can be illustrated. The following is a list of the most common verb determiners:

| VERB DETERMENERS [used with the verbal prefix mag-] |  |  |  |
| :--- | :--- | :--- | :--- |
| anad | ("used [to], accustomed") | dapat | ("should") |
| antigo | ("know how [to do something ]") | gusto | ("want") |
| bago | ("before, prior to") | indi" | ("will not") |
| basta | ("so long as, provided that") | mahimo | ("can, able") |
| bubt | ("will, desire") | naila' | ("like, want") |
| kinahangean ("need; it is necessary") | owa' | ("did not") |  |
| kon | ("if, when") | pw de (nga) ("can; may") |  |

This above list is not extensive. Many other forms exist in the class. However, some of the forms take a different word order (that is, they go into another. slot in the sentence); and still others take different verb prefixes. We will come back to these forms when we discuss "SUBJUNCTIVE AND DEPENDENT VERE FORMS" (thas uast and chapter, 2, 2(6) and (7-8)].
1,6. GENERAL SURVEY. Before we begin our discussion, it would be best to get a general preview of how we whll go about analyzing the character of the Aklanon verb. A glance at the rernainder of this chapter on "VERBS" will show it to be the longest single chapter in this book. Because verbs wo so much, there is so much to be sati about them. An orientation is quite neressary at this time:

1. We have been discussing general THEORIES as to what a verb is, and how we can locate one. We will nuw go on to discuss...
2. TIME in Aklanon varbs. Tume, represented by "ASPECT" and "TENSF" forms, is the

$$
\text { - } 58
$$

one thing unique to verbs among the parts of speech, and is also the easlest to grasp. It is therefore a natural starting point in the analysis of the various verb forms. Then we will go on to...
3. MODE or MOOD in the verb, which qualifies the meaning of the verb in one way or another. The various moods describe the simple occurance of an action, whether or not the acIton can occur (ability), whether the action happened by accident (happenstance), or whether or not the action should or must accirr (command).
4. ROLB consists af a discussion of the various sinuational details occuring in the real world of speech and the speaker. This discussion is a necessary preliminary to give us a good understanding of...
5. FOCUS in Aklation, which is the system of emphasis built rigit into the verb forms, and which orients the entire sentence around the verb. We will discover that focus is not, as some considex, an equivalent to vorce in English, but that it is an extremely different grammatical construction by which one can emphasize any one of four basic sentence elements.
6. The CLASSIFICATION OF STEMS will show the various types of verbs in Aklanon. Not every verb reot behaves the same way or does the same thing as the others. For example, there are transitive and intrausitive verbs, verbs which take one type of object or another, verbs of motion, and manimate verbs. Then we will go on to...
7. INFLECTION, which will discuss all of the verb forms possible in the Aklanon dislect. This will bring together everything we have discussed about time, aspect, mode and focus. After this we will discuss the remaining character of the Aklanon verb--
8. QUALITY, which consists of three subdivisions: General, Causative and Distributive.
9. OTIHER VERB CLASSES OR MODES is a discussion of how substantives or other parts of epeech can be made into verb forms with their own peculiar mood or meaning.
10. Lastly, we will see OTHER VERB QUALIFIERS and how they can change che sense or implication of a verb, cacn in its own subtle way.

Keeping this step by step procedure in mind from the very begiuning can simplify our discussion of verbs, and show how one point leads to another.
2. TIMB is the one thing unique to verbs apart from the other parts of speech. It is also the easiest function of a verb to grasp, and, in elther case, is a natural starting point for our fiscussion on verbs.

In Aklanon, there are different ways of telling time. The philosophers tell us that the events of the world about us are entrenched not only in space, but also in tume. No. only do events happen in space and time, but people like Emmanuel Kant and Albert Einstein have shown us that our thoughts are also relative to space and time. Time is one of thase things pervading our thinking and our being. When we get down to putting across in speect the idea or notion af time, there are two mechanisms in the Aklanon dialect.

First of all, we can say the time exphcitly:

| kaina | ("earller") | daywang oras eon | ("two hours ago") |
| :--- | :--- | :--- | :--- |
| kahapon | ("ycaterday") | sa tatlo pang adlaw | ("in three mose days") |
| kabl-i | ("last nighr") | ku 1962 | ("in 1962 [past. time]") |
| hinduna" | ("later on") | hin-aga | ("tomorrow") |
| makar $\delta n$ | ("now") | sa ulihi | ("later on") |

However, thls mechanism brings us into the general area of adverbs, which we will discuss in detall in a Later chupter (Chapter F, "ADVERBS AND ADVERBIAIS").

A second mechanism, relevant to our discussion here, gets the dea of tine across in the verb itself:
Nagatungtung imáw sa bató.
Nagpatay sanda it kanding? Nakadaog imáw it premyo
Magadacagan imáw. Tan-awa ro pisara.
("He is standing upon a stone.")
("They killed a goat.")
("He was able to win a trophy.")
("He will run.")
("Look at the blackboard.")

Bach one of the underlined verbs carries with it some idea or notion of time. Note that it does so by implication, and that it does so only gencrally. We do not know the actual point of time at which the action has occured or will occur; we only have a vague idea of past, present or future time. Thus, verbs are inflected for time; the forms that are attached to the root words say something or other about the time of the action--whether it be past, present or future.

2,1. ASPECT. The first general notion of time in the verb is given by one of two ${ }^{13}$ basic morphemes denoting aspect, or the degree of completion of an action. All verbs have forms which show one or the other of aspect values; in'addition, at least some of the iorms of every verb Illustrate either the na-morpheme or the ma-morpheme, each of which reveals the aspect of the verb.
(1) THE REAL ASPECT (na-1) ${ }^{14}$ denotes that the action of the verb has already begun. It says' no more and no less. We only know that the action is already a reality. Whether it is going on currently, or recently completed, or finished long ago cannot be known from the form itself. We only know that the action has begun:

```
naila' akó.
nangisda' akó.
nagakaon ak\delta
nagadto ako.
nakasinuba ako.
("I like" or "I liked")
("I am fishing" or 'I fished")
("I am eating" or 'I eat")
("I was going" or 'I went")
("I have gone to church" or "I could
go to church.")
```

(2) THE UNREAL ASPECT (ma-) ${ }^{15}$ is a morpheme denoting that the action of the verb has not yet begun. It says no more and no less. We only know that the action is not yet a reality. Whether it is going to happen in the distant future or the near future, whether it is expected to
$\overline{13 \text { Each }}$ jcus actually illustrates its own two aspect inorphemes:

| na---/ma--- | ACTOR FOCUS |
| :--- | :--- |
| -in--/i $-\cdots-$ | INSTRUMENT FOCUS |
| -in--/pa--- | OBIECT AND REFERENT FOJUS |

For purposes of simplification we only discuss the forms of Actor Focus at this time. They are the simplest to grasp and also the most frequently used morphemes. The others will be illustrated when we discuss "FOCUS".

14 A full chart of the REAL ASPECT MORPHE MES for each focus would read:

| ACTOR FOCUS | na--- |
| :--- | :--- |
| INSTRUMENT FOCUS | - in-- |
| OBJECT FOCUS | $-i n \cdots \#$ |
| REFERENT FOCUS | $-i n-a n$ |

happen, or whether it did not happen at all is not known from the form itself. We only know that the action stated has not yet begun:

("I will like" or "I might like")
("I will fish" or "I may fish")
("I will eat" or "I am going to eat")
("I did not eat")
("I will not eat")
("I can go to church" or "I will be
able to go to church")"

Note in these above examples how the ma- morpheme appears on all verb forms represented. Note that its meaning is limited to the unreal: the action is not yet a reality; it has not yet begun. But also note that when the negative particles are used (ova' and indi') a time element enters the scene. Ova' indicates definitely past time, and indy' indicates definitely future time. The time, let us note, is not carried in the ma-morpheme, but only in the added particle. Only aspect is represented by the mag- form (the fusion of ma- and $\mathbf{g}-$-).
2,2. TENSE. The morphemes na- and ma- refer to the degree of completion of an action, whether or not it has in effect begun. However, these morphemes can be fused with other time or mood morphemes to give more explicit concepts of time or tense. The resulting form will still not be as indicative of time as in the English verbs, but will certainly be more explicit than the two basic aspect forms dy themselves. Taking for ex 3 mole, th r morphemes la-, kg-, and hog- we get the expanded forms:

These expanded forms say more about the actual time or tense of the action and bring us to the heart of our discussion about time in Aklanon verbs. In addition to these above forms, there are some other morphemes used in indicating time relai:ons:

## -um- - <br> jag---

The distinctions that we will draw with regard to the time value of verbs are made on formal and syntactical grounds. In other words, where differences in form exist, coupled with meaning, such as between naga- and nag-, we must obviously draw a distinction. But where we find differences in function, coupled with meaning, we also must draw a distinction. Such a syntactical difference exists between mag- used with own' to illustrate past time, and with india' to illustrate the future.

The various tenses in Aklanon can then be outlined as follows:
(1) THE IMPERFECTIVE (naga-) shows that an action has begun, but that it is not yet completed. The actual time stated by the imperfective can differ. Unmarked by any word to qualify time, the imperfective denotes present time or present tense:

15 A full chart of the UNREAL ASPECT MORYHEMES for each focus would read;

ACTOR FOCUS INSTRUMENT FOCUS OBJECT FOCUS REFERENT FOCUS
ma---
i---
pa--...
pa---an
(a) "Nagasimha ako." ("I am going to church.')
(b) "Nagaadto ak6 sa Nabas." ("I am going to Nabas.")

It can also retain a present meaning if marked by a word referring to present time, such as makaron ("now") or eon ("at thas time")
(c) "Nagasimba eon imáw." ("He is roing to churah now.")
(d) "Nagapanindahin sanda makarón." ("They are marketing now.")
The imperfective can also express the notion of a repeated or habitual action:
(e) "Nagasimba akర adiaw-adlaw." ("I go to church every day.")
(f) "Rayang mga klasi it taeabá hay pagamutya'." ("These types of oysters make pearls.")
(g) "Bisán alinón mo it tago', ro sikreto nagaguwa' man gihapon." ("No matter how you conceal it, a secret gets out just the same.")
However, the imperfective can be used to denote a continuing action in past time:
(h) "Pagabot nana kahapon, nagaeabá kamí sa bubơn." ("When he arrived yesterday, we were washing at the well.")

Note in this last usage how the aspect rather than the time-value of the prefix is reveaied; it refers more to the degree of completion of the action as opposed to the actual time of its occurance. Generally, the expricit notion of time in Visayan is expressed by adverbs or time markers, not in the verb form.
(2) THE PERFECIIVE (nar-) shows that an action has begun and that it is completed. Unmarked by particles it is equivalent to the simple past tense of English:
(a) "Nagsimba ako."
("I Went to church.")
(b) "Nagtanóm sanda it bataw, repulyo, kamatis ag aeogbat." ("They planted beans, cabbage, tomatoes and lettuce.")
The perfective, can also be ised to denote a past perfective statement of time--an action finished prior to another action:
(c) "Bago umabót ro Kastila", si Kalantiaw ro nagsucat ku sucondanan." ("Eeiore the Spanish came, Kalantiaw had writio ' the Code.")
(3) THE EXPECTED (manog-) is used in one of two ways. It can state an immediately cxpected action, an action that is just about to happen:
(a) "Manogtapós ro sine." ('The movic is just about to end.")
(b) "Manoyitlor ro mannók." ("The chicken is going to lay an egg.")

It can state an intended or planned actiot, and in this case could be called the INTENTIONAL tense:
(c) "Manoghalín kunó kamó."
("It is said that you intend to move.")
(d) "Pagabót nana kaluapon, manogsimba ako." ('Wl:en he arrived yesterday, 1 was about to go to church. ")
(4) THE FUTURE (maga-) is used to express a simple statement of anticipated action:
(a) "Magasimba ako."
("I will go to church.") o
(b) "Ro ungá' nga nagtaór kasangagan, magatacsng." . ("The child who caused trouble will go astray.")
In this second example, we find a statement of an action (nagataeang) which is anticipated with reference to another; in this case given in the past (nagtao).
(5) THE SUBJUNCTIVE or hortatory tense is a reduction of the above-stated future form (ma-). This form is used in urging another, usually following the particle mos ("come on"):
(a) "Mos, masımba eon kitá." ("Come on, let's go to churctr now."))
(b) "Mos, matan-aw kitá sa sine."
("Come on, let's see a movie.")
The subjunctuve can be and is used after such particles as:

| bago | ("before, prior to") |
| :--- | :--- |
| basi' | ("maybe, what ıf") |
| basta | ("solong as, provided that") |
| kunta' | ("hopeiully; would that") |
| gikto' | ("might; maybe") |
| kon | ("when, if") |
| pwede | ("could be; possibly; may") |
| sabón | ("might be; perhaps") |
| siglro | ("probably") |

Noie the following uses of the ma- subjuactive verb prefix after such particles:
(c) "Dasi' mahueog ka." ("You might fall.")
(d) "Masimba kunta' ako hundunang hapon." ("Hopefully 1 will go to church laier on this afternown.")
(e) "Basta maapas kamó, maurá eang kamí."
("So long as you will follow, we will just go ahead. ')
Although a distmet -um: conjugation, apart from a mag- conjugation, does not exist in current Aklanon, and most probably died oni long ago, the subjunctive form tas an alternate in -um- possabie for most cases cited above wien the verb occurs with such particles:
(f) "Basi' umadto ka sa Capiz pagkatapos it imong obra iya." ('Maybe you will go to Capiz after your work here.")
(g) "Kon umabot eon si Tatay, mapanaw rayon kit\}." ("When Father arrives, then we will leave.")
(h) "Hugasi ring allma bago kumaon."
("Wash your hands before you cat.")
Both the ma-and the -um- subjunctive affixes illustrate another use of special verb forms after "VERB DETERMINERS" (discussed earlicr in Section 1,5). Further use of such verb
determiners with various verb affixes will be discussed presently in the following articles.
(6) THE DEPENDENT FORM (mag-), with an alternate of ga- in some instances, is somewhat related in both meaning and function to the infinitive of English in such sentences as:
"I like to eat bananas."
"I want to talk to you."
"I hate to go."
"It is necessary to fight for what is right."

In Aklanon, the dependent verb form is used citer such verb determiners as:

| naila" | ("like; love") |
| :--- | :--- |
| naw-ay | ("hate; not want [to]") |
| antigo ("know how [to]") |  |
| buot ("want") |  |
| kinahangean ("necessary; have [to]") |  |
| dapat ("should") |  |
| gusto ("want") |  |

Note the following examples:
(a) "Naila' akó magsiunba kon agahon pa."
("I like to go io church when it is still carly [morning]".)
(b) "Antigo imáw mageangóy." ('He knows how to swim.'")
(c) "Kinaiıangean sanda gaadto sa Antique." ("They must go to Antique.')
(d) "Dapat ikaw magnuóe sa imong kasae-añan." ('You should regret your sins.")
(7) THE PAST CONDITIONED FORM (mag- $)^{16}$ is so-called because its form is related to :he past forms of most verbs. Its meaning is not necessarily restricted to past time. Generally it is used with certain particles to refer to past time:

| owa' | ("did.nu.") |
| :---: | :---: |
| kan-o | ("when [in the past]') |
| isớt | ("almost did") |
| siín | ("where in the past]?") |

(a) "Owá ak'§ magsimba kahapo's." ("I did not go to church yesterday.")
(b) "Kan-o kamb mamul!' kabi-17" ("When did you go home last night?")
It can, however, be used outside of past time situations, particularily with the particle nyaw:
(c) "Aydw magpanaw hago umulf akd." ("Don't leave before I get back.")
(d) "Ayáw magbakáe it mahae." ("Don't buy anything expensive.")
(8) THE FUTURE CONDITIONRD FORM (mag-) ${ }^{16}$ is so-called because of the relationship of its form to the future of many veribs. Its meaning is not necessarily restricted to future time It is gencially used with the particlermi' ("will not") to denote negative future:
(a) "Indi" anay kam6 magpanaw bago <mulî' akó." ("Pleatse do not leave before I get back.")
It can also be used outside of future time situatighs, as will be more clearly seen when we discuss these forms in all focuses in the "INFLECTION CHART" (Section 7). When it is useri in such situations, it is usually used a an flernate form for the ahove-mentioned past conditioned forms. In many cases, outside of clear divisions of past and future time, the two con:ditioned tenses cand alternate freely with each other, particularily with interrogative particles.
(9) THE PARTICLPLE FORM (pag-) is a morè or less abstract yerb form, nominalizing the action to some degree. It is used in one of two ways: either as a gerund or verbal noun:
(a) "Maeumó ro pagsucat ag-pagbasa it Inakeanón nga hambac."
("The reading and writing of the Aklinon language is easy.")
It can also be used to indicate past time in dependent clauses:
(b) "Pagabbt ni Tatay, cagaeabd eót-arnou sa bubón."
("When Father arrived, we were alrca dy washing at the well.")

Note in the last extinple how the independent clause has an imperfective verb form to show the action going on, while the dependent clause uses the participle to. show an action in past time.
2.3. SUMMARY: TIME AND THE AKLANON VERE. We have seen how explicit time is not given by the verb in Aklanon, but rather through adverbs or adverbial statements, or else by trme particles. The verb itself is relegated to aspect, the degrec of completion of an action. There are two basic aspects: the real (gencrally' mafked by na-) nd the unreal (generally markec: by ma-). The real aspect indicates that the action dxpressed by tie verb has already begun, and It has further distinctions of imperfective, perfectiv: and the past conditioned forms. The unrea. aspect states that the action expressed by the varb his sot yet begun, and it has further distinc* tions of expected, furure, subjunctive, dependent, and future condicioned. There is also a participle forin of the verio which is abstract in general, though it can be used to express past time

16 The distinction made here between PAST CONDITIONED and FUTURE CONDITIONED forms may appear as neruly syntactical (that 1 s , based on their use in a sentence and their inenning). However, after we discuss "FOCUS" and see their forms in the object and referent focuses, we will rote sharp formal as well as syntactical distunctions. In Actor loocus, the form for each is mag-, though the future conditioned has an alternative form in -um- on some occasions.
3. MOOD OR MODE is a distinction in the form of verb to express whether the action is concelved as fact of in some other manner. In Aklanon, there are four basic types of mood or mode.
3,1. THE SIMPLE MOOD ( $\mathrm{gra}^{17}$ ) ${ }^{17}$ sumply states the fact of an action. The action is expressed as an actuality that has begun (with the real aspect morpheme) or as an actuality that will begin (with the unreal aspect morpheme):
(a) "Nagatungtung imáw sa bató:"
("He is standing upon a stone.")
(b) "Magaadto pa akó sa amon nga manogpautaing."
("I still will go to our creditor.")
The kg-forms and their variants (with the simple $k-$ ) that were used in the preceding section on "TENSE" are non-other than these mood morphemes operating in conjunction with the aspect morphemes to gave more explicit notions of time. The simple mood has by far the largest number of tense possibilities, duedto the alternations of aspect and modd morphemes. Note the inood morphemes representing the simple mood underlined in the following forms:
naga-
nag-

The simple mood morpheme is not always expressed, since it can be understood, as in the forms: -um- or ma-. In still another case, only the mood morpheme ga- appears, without the aspect morphemes ha- or ma-, when explicit reference to a real or unreal action is. not necessary. Examples of these:
(c) "Siín ka gaadto?"
("Where are you going?")
N.B. No aspect morpheme.
(d) "Masimba eang kamí hınduna'." ("We will just go to church later on.")
N.B. No mood morpheme.
(e) "Umabót cang 1 máw, mapanaw rayou sanda." ("Just when he comes, they will be leaving.")
N.B. No mood norpheme.

3,2. THE ABLLITY OR APTATIVE MOOD (ka-) ${ }^{18}$ states than an action is posswle. The accion is expressed as able to happen (with the unreal aspect morpheme) and as able to have happened (with the real aspect morpineme). Several ideas can be expressed by the aptative with its various forms:

$$
\because \quad \begin{aligned}
& \text { naka- } \\
& \text { maka- }
\end{aligned} \quad\left[\begin{array}{l}
\text { [naha-] } \\
{[\text { maha }-]}
\end{array}\right.
$$

17 This morpheme is used in all focuses, as we'shall see later on. Due to the process of infixation (with -in-) the gra- sometmes gets split:

| maga--- | gina--- | gina---an |
| :---: | :---: | :---: |
| nag- | gin--- | gin---an |
| maga --- | iga--- | paga---an |
| mag- | Ig--- | pag---an |

13 The morpheme ka- is used in the subjective focuses, while ha-is used in tlif objective. Like kga-, cach of these can sontimes be spht by the -in-infix.

- 66 -

For ofic thing, it can express the meaning "have an opportunity to do" [maka-] or "succeed in doing" [naka-]:
(a) "Sa ano kang grado ikeíw sakatapos?" ('What grade did you succeed in finishing?")
(b) "Makatuón pa akó ay may akon man nga skolarship.". ("İ stull have an opportunity to study since I have a scholarship.")
(c) "Nakapapati imáw kakon nga may kapuslanari rong kaliscanan." ("He succeeded in making ine belleve that sufferings have value.")
It can also express the idea of the Eughsh modals "can" or "could", in the sense of physically being capable of doing something:
(d) "Indi' akd makakakwat karén bangód nga mabug-at ron." ("I can not carry that since it is heavy.')
(e) "Naknämat ngani' kunó ro bukbuk."
("It is said that the house gnat could do it a little at a time.")
(f) "Makaeangóy ka?"
("Can you swim?")
The aptative prefix naka- is often used with the particle con to denote perfectivity, as expressed by the auxiluaries "have" or "has" in English:
(g) "Nakakaon eon kam6?"
("Have you eaten alrcady?")
(h) "Nakapanaw eon imáw sa Capiz."
("He has already left for Capiz.")
The maka- prefix can alsb express some degree of accidentality, either unintertional or coincidental:
(i) "Nano ro nakamansa ku cambung ngará?" ("What [accidentally] soiled this dress?") N.B. unimentional
(j) "Nakabubée akó it kahita aga bukót akon." "I [accidentally]took a wallet that wasn't mine.")
(k) "Nakasakáy imáw sa jiyp nga indi" paadtc sa Tangalan." ("He [accidentally] got on a jeepney that wasn't bound for Tangalan.") .
(l) "Nakasubeang kamíni Henry sa tindahan."
("I [accidentally] ran into Henty at the market.")

## N.B. coincidental

3,3. THE ACCIDENTAL MOOD (Ni-) states that an action sakes place compictiny of happenstance. It has come down dy usage generally unmarked by an aspect morpheme, though on some occasions (mostly of deep or archaic use) it can occur with either na- or ma-respectively. Most commonly, however, some other clement in the sentence or clause expresies the thine of the action. The gencral forms, then, are:

$$
\begin{array}{ll}
\mathrm{hi}-- & {[\text { nahl--- }]} \\
{[\text { mahl--- }]}
\end{array}
$$

(a) Teri" hincto ka sa beoengan." ("Naybe you mighit go to the oock figtt.")
(b) "Siln hidedekpi ro isda". kundi" sa ba-ba"?" ("Where else might you catch at fish, buit by the mouth")
(c) "Mabab' hikit-an, maecmo hilipotia." (Scidom seen, easily forgotien.") N.B. The idé of acciderfaluty or happenstance is not properly conveyed in the idiomatic Englist trapsiation. A literal translation could reads "He who migix be seldom seea; mighit be ensuly forgoten."
(d) "Sife bipabo' ro inaway koa bokle iya se atom7" (Where might the figte hate taken place if not here at our place?")
3, 4. THE MPERATIVE MOOD expresses a command or an order. As opposed to the pre-vious mood morpherpes which are coupled wich aspect morphemes to denote time, the imperaive incach cuse consists of one morpheme with two meenings: that of the necessity of the action's being done find that of the time (generally implied to be the immediate future). Such a moupheme, since it tus two meanugs, is called parmannom, because it is like a sititase that bus several things in it.

The imperative mocd however brings us ahead in our discussion, since an understanding of the marphemes represented depends an some anderstanding of focus. There is no single morpherne to rejpesent the imperative; rather there are morphemes for cech of the four different focuses; and in some cases, cach focus has ulterrative forphs or more than one forno.

To simplify matters, each morpiseme cas be ocnsidered to have a different emphasis, depending on the intention of the person giving the commanti. In each case the subject or the doen of the action is uswilly cot e.pressed; just as in English the "you" is omitted fram conmands, the same is generaily trive oi Aklanon. The points of cmphasit possible, and the respective monphemes of each, wili be discussed mare fully in the section on "FOCLS". For the present we will discase COMMANDS EMPHASIZING THE SUEJECT OR DOER OF THR ACTION. ${ }^{1}$ Any one of four ways emphasizing "you" [singular or plural], the doer. are possible in Akianorin
19. Very briefly, the clier focus morphemes for the imperative are:
(1) COMiMhNDS EMIPLASIZING THE ASSOCIATE (insururaent or conveyed object). These an be expressed by use $f$ the imperative prefix i-_ or by use of the aiternate imperative form, the $\mathrm{aiffix}-\mathrm{-an}$.
(a) "Ipilá co paṕc.".
(Tlurow away tie paper.-7
(b) Fuea ro tilót:
("Pour cut the poison.")
(c) "Baligy ${ }^{2}$-án ro singring."
("Sell the ring.")
(d) "DawaránTo asín."
("Fass the salt.")
(2) COMMANUS EIATIUSIZJNG THB DIRECT OBJFCT. These are copressed by the ---a imperaíve morphome.
(a) "Daeta ron."
("Bring that.")
(b) "Gakç ro kacamay."
("Buy the brown sugar.")
(3) COMAIANDS BNHMASIZING TIE RL ERFNT (indirect object, beneficuary ar location). These are expresped by the referent imperatuve morpheme - -
(a) "Banixyí gid ring manazad." ("Guard your possessions well.")
(b) "Taw-i imíw it cukás." ("Give hum a guft.")
(c) "Eebhí 10 sacwac ngarón." ("Wash those trousers.")
(1) By use of the root word morpheme only; that is, the verb stem unmarked by any other morpheme in order to state a simple command:
(a) "Alto sa lbajáy."
("Go to Ibajay.")
(b) "Bakáe it gats."
("Buy some milk.")
(c) "Hippos con."
("Be quiet now.")
(2) By use $\alpha$ the prefix fag--. with the verb root. This form of command is considered very strong and can not be dea when addressing peers ar superiors. The subject may or may not be expressed, though it is usually expressed if plural:
(a) "Pachupos ana kamó tanín."
("Please, all of you, keep quiet.')
(b) "Partiaeá kará." ("Bring this.")
(3) By use of the infix -um--. This form of command is very common in Aklanon. The subject must be expressed by either ka ("you" [sing. ir $]$ or karo ("you" [plural]). Lin this case, then, the subject morphemic is obligatory:
(a) "Bumalae $\mathrm{k}=$ it Coke para sa at u: $=$ bisita'." ("Buy a Coke for our visitor.")
(b) 'Urascto ka sa tindahan ag Duma' ria' ko kaeamay." ("Ge to the market and sell the bevin sugar.")
(4) By use of tie me...- prefix. The fort. of command is considered quite strong and should net he user when scidessing peers or sticitos. The subject is not obligaticry, trough it is gencinily expacssed in Allanon:
(a) "Maghimuróng'." ("Be bul:")
(n) naomi!!' en n kame." ("Gobome now.")
POIITlS COMMANDS are generally given with the subjunctive verb forint:
(c) "Mos, maulí' eon kura." ("Come on, let's, fo home.")
NBGATIVE COMMANDS are given witt the negative particles ind!' (with the future conditoned verb form) or ayaw (with the past conditioned verb form or with the marker it). Some brief examples read:
(d) 'Indy' magpanaw it maeay6' ." :Vo not go far away.")
(e) "Ayán 1 , ("tort sEnor.)
(i) "Ay免u- lt.rnás." ("Don'taugh.")

4. ROLE. ${ }^{20}$ Before we go into the incricate mechanisms of focus involved with the Akla'non verb, we can simplify matters quite a bit by underatanding the concept ot role.

The whole illea of language is the communication of facts about the real world. When things happen, we usually want to talk about them. But when things happen they arc. relative to a goua many factors. An action, for example, is not merely related to itself in terms of the vocabulary used to describe it. Kaon or "cat" does not merely happen by itself. The process of eatIng happens:

- at a certain time: perhaps in the morning (breakfast), at noontime (lunch), or in the evening (supper or dinner);
- In a certain place: perhaps in the kiechen, or the dining room, or at a picnic at the beach, in a restaurant or at the lurish counter;
- with a defmite actor: perhaps you or I are eatiny, perhaps Jose or Mari3, .a maybe that man or child, a carajao, a burd, or a kitten; - wi: . . winite object: periaps rice, meat, vegetshles, fruits, or fish, dessert, or a snack;
- with some sort of instrument: one eats with one's hands, or else with a spoon and fork; we also use plates and bowls;
and various other SITUATIONAL DETAILS, expressed or implied, such as a beneficiary, cause or reason for ti:c action, anci $\approx \approx \lesssim \eta$.

In addition to these relationships wichin the real world of events, the speaker can introduce his own personal bias or emphasis in narrating the action, particularily to show his own point cf view, his own personality, or to skay or iniluence the listener. In other words, he can color the facts for one reason or another.

All of these above-mentioned items (time, place, acior, object, etc.) are what we call situational roles. They are all the possbilities or relations or situations around an action

Can yoù discover the situational detals from thai i.arere? Tine follow ing qucsaions should 1 . to reveal them:
(a) What is happening in the pi : $:$. (What vert d. cribes ace actic.0)
(b) Who is dong the actur; or is the asior a sibject?

(d. Wiat is being used to ouy the vincti" ( $w$. at sine instr., is it")
 focua In Cebuano.
(e) Who will receive the object? (Who is the beneficiary?)
(f) Where is the action going on? (What is the location?)

- (g) When is the action going on? (What is the time or tense?).

The answers to the questions can be outlined as follows:

| S!TUATIONAL DETAIL | AKLANON | ENGILSH |
| :---: | :---: | :---: |
| (a) action or verb: | bákaé | "buy" |
| (b) actor or subject: | tuwo | "person; man" |
| (c) object or goal: | tinapay | "bread" |
| (d) instrument or associate: | kwarta | "money" |
| (e) beneficiary or indirect obj: | unga' | "shild" |
| $(\mathrm{f})$ location or place: | tindahan | "market" |
| (g) time of action (adverb): | makaron | "now" |
| time of action (aspect): | naga--" | ":s [buy png" |
| (appropriate verb form) | gina--- | "is being [bought] |

We now have a list of vocabulary words which represent the various situational details of the picture. But as we discussed much earher in this unit (A. "WHAT IS GRAMMAR7"), meaningful words alone do not convey meaning. Language is a more complicated operation than that. Certainly, all of the above words are meaningtul in themselves; but would the following Aklanon or English combinations make much sense?
(h) "Bakaé tawo tinapay kwarta ungh' tindahan makarón naga. ("Buy man bread money child market tow is ing.)
As far as English or Aklanon are concerned, the above is nothing more than a fatrly nonsensical flow of words. In common, every-day speech such an uncrance would be meaningless (ever. if it is made up of individual words which do have meaning).

It should be cbvious by now that grammar or language is not just the haphazard compiling of words which represent situational detalls [as in the above example (h)]. When we put words which represent situational details into meaningful sentences, grammar makes us choose one syotem or another. It is at this pount that languages differ widely in the range of possibilities. Each langiage offers a speaker its own way of "saying" what we are "seeing". In othex words, besides the bras which a sieakry monself brings into language when he interfrets the everts of tie real worli. the langusc nsc!! : tna ugh its grammatical possibulities and linfitationd also imposes a bias factor. There are certan things in the language itself that might prevent certain expressions. To dis nore ihars hint at thrs bias facter imposed by language would carry us $f_{4}$ anicld anto philosopn: and metapiysics, and such a discussion is simply not necessary for the discuision at hane. Wit ony need to point out . ie fact that language.itself does impoo a blas factor upon the s!itsher. since the events of the real world, which toppen in space fnd time with apparentl) l:tale strueti:rin; $9:$ with their own system of causes and effects, must e put into a grarm "atical svste" ".ti. 1ts own type of structure that is not necessarily based cause

 ow :he one hand, show . 't heis of the culture crecping into the language: on the other,

Another important point to note is that no single sentence can cover every possible situstional role and still te thought to be clear and concise. When we engage in conversation, we give out the news a little at a time. If a speaker attempts to give more than a few situational details per sentence, he runs the risk of being misunderstood. He is literally expecting the listener to bite off and digest far more than the average person is able to chew.

- Or course, the grammar of a language might allow us to express a good number of situlatonal roles at one time; so that an utterance might be considered "grammatically correct". But what the grammar allows and what the common man-on- the-street will put up with are quite different. For example, in English I feasibly can say:
( $i_{1}$ ) "The man is briying bread for the child at the store with money."
but something like that just is nut said, or at least considered good speech. The same is true in AkJanon, I can say:
(in) "Roc kwarta gınabakáe it tinapay gu taw para sa ungá' sa tindahari."
but such a statement is rather long-winded and unacceptable in general spoken Aklanon.
4,1. TYPIS OF ROLES. Before going on to the particular ways Aklanon allows a speaker to express various situational details through "FOCUS", let us look at examples of various roles, how they might be expressed, and where they occur in Aklanon.
(1) ACTORS naturally go along with actions. They are the simple, but ever-present doers of anything that gets done. The role of actor or subject of the action can be seen in the following underlined examples:

## s

(a) "Rot tawong mahnay magpanaw, maubsan it tinapay." ("The person who travels slowly will be left without bread.")
(b) "Roe eaki pumanaw pa-lbajáy." ("The man left for lbajay.")
i (c) "pasto ka pa eang, pang gapaul'" eon kami." ("You are just coming, while we are on our way home.")
(d) "Ginuli' ko rot tueon-an." ("I returned the book.")

(f) "Pamisaea" ing bidhanan no ginhambae ni Carlos." ("What Carlos said was a phrase pregnant [with meaning].")
(2) : isithuainn rs are the tools or utensils used in accomplishing or doing an action:
(a) "Pinationana it siyaw do kancing." ("He killed the goat with a blade.")
(b) "Rok kwarta nazará bakáe mo it kacamay." ("Buy the ir own sugar with this money.")
(c) "Kinabus -ak mo con no sanduko sa kahoy?" ("Have you already used the note in spiting the wood?")
(3) COMPANIONS and/or CONCOMITANTS are usually helpers in the doing of an action. They serve, so to speak, as an extra subject:
(a) "Ihatbd ro ungá' sa anang baeáy."
("Bring the child home.")
(b) "Nagpanaw saṇda [kaibahan] ku andang mga ungd'." ("They ieft with their children.")
(c) "Gaulí' kamí ni Paún." ("I am going hone with Paul.")
(d) "Niagepanindahón sanda nanday Cynthia." ("They are going marketing with Cynthia and her companions.")
(4) DIRECT OBIECTS or GOALS reecive the action of the verb:
(a) "Magabakáe imáw it sugsing."
("She will buy a rug.")
(b) "Eaha on mo ro isdar "." ("Cook the fish.")
(c) "Owá" akd it mahamixae." ("I have nothing to say.")
(d) "Pilakán ro papél."
("Throw away the paper.")
(e) "Eath: anay ro akong cambung." ("Please wash my caces.")
(f) "Nano ring gunsalyan?" ("What [vehicle] did you ride7")
(5) INDIRECT OBJECIS or BENEFICLARIES are indirectly involved in the reception of the action of the verb. Ustally the INDIRECT OBJECT is the person or thing to whom or to which something happens or is done, white the benEFICIARY is the persom or ting for wbom or for whech something eappeas or ss done:
(a) "Tau-an nakon ruyón." ("Give unt tome.")
(b) "Sugıri kam! ku natabơ ."" (" 「cin us wrat "ppened.")
(c) "Daturay para Mmo." ("llat is fer your.")
(c) " Tawg, akín trayskol." ("Call a Tricycle ior ine.")
(e) "Ro wavo nagadtr sa mevor."
("rhe atan we:t $t$ t: \% mayo.")

 iklan-n and : - lnt:
(a) "Naģulf imáw se bacáy." ("He went home.")
(b) "Nagpanaw sanda sa Manila'." ("They left for Mamle.")
(c) "Nagtungtung imáw sa bato." ("She stood upon : tone.")
(d) "Dacha ron sa inyo." ("Hring it to your [place].")
(e) "Nakabalík eon si Pedro sa Malinao." ("Pedro has aleeady returned to Malinao.")
4, 2. SITUATIONAL ROLBS, GRAMMATICAL ROLES, AND FOCUS. Thus far we have discuissed various sivationa: roles or detals as we find them in the environment about us, and how they occur in linguage. In every ue of the preceding numbers we have seen how the situational detalls can be and are expressed in more than one way. This is so because the grammar of ever, language makes grouparigs of ats own in order to simplify the means of discussing events.

It is obvious tin: no language can tackie every phenomenon or event in a unique manuer. In such a case, th : wabulary would be as broad as the uumber of phenomena in the languagespoeking area; zin .ie structure would need a particular mode of expression for every event. or at least for er . . type of callse and/or effect. Things are grouped tegether and abstractions are made : implify matters and make conversation possible to all people about an almost mfinite ra. © of subjects,

We demonstrxi:d eariner that a group of meaningful words must be put together in meantingul fashion; on':rwise we speat non-sense. Language structure cin not and does not allow for total freedon: enery language ias its own way of getting things said, and the speakers of that tonpue must foliow those ways. Langrage can not and does not allow for tocal freedom of vocabulary eithe. If every tree had a name of its own, $a^{-1}$ we had no single abstraction to represenf the group-that is, if we had no word fur kahoy ("wrec"), then there would not be much we could sav abcut trees to someone who had never seen the very tree we were talkufg eixulu, and who did not knox its partacular name.

Take the case of people. Most of us have s name unuque to ourselves. But we also can be describet by a bust of common naines. What if there were no word in the language for tawo ("Jersen"), eah1 ("man"), bayı ("woman"), kataas ("helght"), edad ("age"), end so on? What If we wanted to describe a friend of ours to someone else who Thid never met hum, but our language only gave us his dame? There certanly would nut be much we could say about him, awi orr friend would inave to br: described by his specific name alone; in exiect. he would go undercrabed.

Thus we see that language in gencra! must follow patierns, contain rigorous laws, and af

 and tending to dieredard dfferences. The description of the $v$ :rueus roles nas anse brei wit-
 describe situatioual detals, Aklanon ha: developed a similes : ystem. Aklanon (ike ninst Philipptac languafes) makes une of only 1 our crammatical yoles to dercribe all of the po:sisile situational roles of the real world. These four gramanatical groupings are wint we call 'ous
5. FOCUS. Verbs, we had seen, are the most important part of speech. In our syntactic definition we saw how the verb is a center, and how the other parts of speech in the sentence are made to fit around that center. The mechanism through which this occurs is called "FOCUS". FOCUS IS THE GRAMMIATICAL RELATIONSHP SIGNALLED BY THE VERBAL AFFIX TO A CERTAIN PHRASE IN THAT CI AUSE OR SENTENCE. If verbs are the most important single parts of a sentence, then focus is the most important single grammatical function in the Aklanon dialect, since (a) it determines the construction of the entire sentence, and (b) it is the way that the Aklanon language permits its speakers to discuss actions in the factual world meaningfully.

We mentioned that, apart from the various situationa! details or roles, the speaker, when describing the envuronment around him, adds an element of bias or emphasis to what he is sayling. In other words, the speaker never really narrates what actually happened--to do so would interally have to recreate the entire scene. Instead, he gives his interpretation of the activity. The question of just how close one can come to "the real thing" we will leave to the philosophers; the problem at hand is simply that, when describing the environment, a person can only'say what he saw and how he saw it.
5,1. STRESS IN LANGUAGE. Part of the limitations are not only in the speaker's way of seeing, hearing and perceiving. The mechanism of language itgelf also imposes some bias or emphasis factor. Fach language handles stress in its own way.

English, for example, uses stress and pitch, as shown by the underlining in the following examples:
'What' He w'as the one who did it?"
"I said "ro not 'yes'."
"Do you really believe that?"
"Do you really believe that?"
"Do you really believe that?"
"Do you really belleve that?"
"He went home."
"He went home."
5,2. STRESS THROUGH FOCUS IN AKLANON. Aklanon, on $t^{\prime} e$ other hand, shows its emphasis primarily through FOCUS--an agreement relationship hich consists of a verb form and related function-marked phirases that reveal the empha is patterus of the speaker. It is en agreement relationship because the entire construction is bound together in grammatical relationship to itself, independent of any other forms outside the construction, and the various elements of the construction are tightly tied together.

The elements of the construction in Aklanon are universally:
(1) a verb, with its proper focus affixes;
(2) a topic phrase, which is focused upon, which receives the signal from the predicate, and which is marked by some morpheme [usually ro/do, a topic pronoun, bi/sanday, or a topic deictic ] as the topic ar key point of the clausc; -
(3) other related associate, object or referent phrases givi ig one or more of the situstional detalls.

## 5,3. GENERAL EXPLANATION OF FOCUS. More concretcly, in a situation coarriningr

A. (1) an action
(2) an actor or subject
(3) an instrumet (associate)
(4) an object or goal
(5) an indirect object or bencificing
we may choose-by the graikmatical fleribility of the dialeat-to make any me of these the most im:)ortant or emphasized concept in the sritence. Taking our prevncos en ole from the last section, we could have tie following sitisuriomal obtails:
B. (1) hakaé ("buy")
(2) tawo ("man")
(3) kwarta ("mones")
(4) cinaray ("bread")
(5) unga' ("child")

What possibilities of grammatical function are present? Well, let us look and see:
C. (1) bakáe is definitely 2 verb, and not much else.
(2) tawo could either be the subject or the beneficiary, thong! it is more conceivably the subyect ar actor.
(3) kwarta is definitely the instrument, sinct one burys with moncy; we do not us ally thint oi buying money, so no other choice is possible.
(4) timapay is definitely the direct object or goal, since one biys bread and nothing cise in the above would fill such an object slot.
(5) ungi could cither be the stbjeat or the beneficiary, though it is more conceivably the bexeficiary, since taulcs usually bury for children, and not the other way around.
With these possibilities, several types of sentences might be constructed in English; each with its own emphasis partern:
( $a_{1}$ ) "The man will buy bread for the child with the money."
( $\mathrm{b}_{1}$ ) "The man will buy bread for the child mith tive moncy."
(ci) "The nan will buy bread for the child with the monoy."
(d) "The man will bry bread for the child with the money."

Of course, many more could be constructed, but these four (xamples show some of the possible cmphasis patierns which are most promncut in Aklanon grammar. The possibuluties of English are nut in questica here.
5,4. THE REPRESENTATIVE FOCUSES IN AKLANON are found as follows. That word or phrase which is chosen for amphasis would become the topir phrase; it receives ro/do or an equiva!ent tupic function marker or word. The verb form will 'hen correspond: using--

- a form irom ACTOR FODUS, if the actor is emphasized; or
- a form from IISTRUMEiv2 FOCUS, Lf the instruncit or cher associate is empliasized; oz
- a form froi, filjECT FOCIS, if the geal is emphasized; or clse
- a form from RePFERFNT FOCUS, if the indirect object, beneficiary, o: location of the action is cmplasized.

Only one focus is permisslbleper clause, so only one of the above would be made to apply. Whle many verb forms exist within cach focus, for the present each focus will be represented by a single form, characteristic of its own focus group. The form given inay biregarded as the simple future tense, in the sense that the action described bas not yet begun, but is anticipated to begin. Thus, the REPRESENTATIVE VERB FORM FOR EACII FOCUS is:

Keeping these representative forms for each focus in mind, and remembering that ro (the topic function marker) occurs on the emphasized or focus.rd form (if it is a common noun), we can begin to construct some basic iklanon sentences, usi $\mathbb{C}$ focits correctly, based on the previously given English examples:
$\left(a_{2}\right)$ ("The man will buy bread for the child with the money.") Ro tawo magabakáe...
Literally: "It is the man who will L_y. . ."
Note that: (1) the topic marker (ro) appears on the subject or octor of the sentence, and (2) the verb is thon put inito the Acm - tor Focus form [maga- bakae].
$\left(b_{2}\right)$ ("The man will be:y bread for the child with the moncy.")
Ro kwarta igabakáe .
Literally: "It is the money which will [be used to] buy..." Nete fimit: (1) the topic markes (ro) appears on the instrument of the action (kwarta), and (2) the verb is then put into the Instrument Fncus form [1ga-bakae].
( $c_{2}$ ) ("The man will buy bread for the rhild with the money.") Ro tinapay bakeón...
Literally: "It is the bread which will be bought. .
Note that: (1) we topir, marker appears on the direct object of the action (tinapay), i) the verb is then put into the Object Fo' us form [bakae -on], and (3) morphophonemic change occurs (vowel loss), and the resulting form is bakeon.
( $\mathrm{d}_{2}$ ) "The man will buy bread for the child with che money.") Rc ungáa bakeán...
Literally: "It is the child for whom will be jought. . ." Note that: (1) the topic marki: appears on the beneficiary of the action (unga'), (2) the verb is then put into the Refereat Focus form [bakac -an], and (3) morphophonemic change occurs (vowel loss), and the resulting form is bakean.
The only thing that needs to be done to finisi the sentences at this time is co grasp the other functicit niarkers and their ise.
5,5: THE USES OF THR-FUNCTION MARKERS. ${ }^{22}$. We have seen how ro serves as the topic-marker, that it marks-whatever wo:d or concept is the nost important thing in the speaker's mind. it can occur either on the subject, object, beneficiary or instriment--

22 Also see thus unit, Chapter D, Sections 3 and 4.
whichever we wish to emphasize. If we use one of the Actor Focus forms (the maga-group), then ro must occur inaring the subject or actor. If we use one of the Referent Foeus forms (the -an group), then ro must appear with an indirect object, beneficiary or location, or any other situational role covered by the Referuat Focus. ${ }^{23}$ To put ro, for example, on an actor when the Referent Focus is used would be to make a serious grammatical error:
"Ro tawo bal:cán it tinapay para sa ungd'.
N.B. This sentence might, literally mean: "The bread will buy the man for the child", which is sheer non-sense caused by the above-mentioned grammatical error.

With the proper verb form and zo working hand in hand to put emphasis on the concept foremost in the speaker's mind, what happens to the uther situation: "details or sentence" elements? The cther function riarkers become necessary to clarify the function of the other words or concepts that are not emphasized in the clause or sentence. In other words, they set the rest of the sentence in order; they tie up the loose ends.

- ku marks the actor in all sentences where the actor is unmarked by ro (i.e.. when the actor is not focused on or emphasized.
- Ku also ${ }^{\prime}$ 'rks the instrument, conveyed object, associate., companion, or concomitant of the action when not emphasized.
- it marks the goal or direct object in sentences not in the Object Focus.
- 5 marks the heraialary, indirect object, locaion or other. referent of t'e action when they are not explicitly emphasized or marked 'y ro.

What is important to note is that the various function markers are more or less alternates for or alternates with fceus; they are used when the focus of the same type is not used, or when tie focus does not apply to the situational detail or role they represent.

For example, in the Actor Focus example given previously, we can complete: the sentence as follows:
$\left(a_{3}\right)$ ("The man will buy bread for the child. . .")
Ro tawo iragabakác / it tinapay / pira sa ungá'...
ACTOR FOCUS

| actor | verb | goal | beneficiary |
| :--- | :---: | :---: | :---: |
| "man" | "buy" | "bread" | "child" |

What becomes of the object and the beneficiary when we focus on an actor? Each gets marked by the applicable function mariker. The goal gets marked by the goal or object marker (it); the bencifinry, being classified as a referent, gets marked by the referent marker (sa), as well as the prepositional element for beneficiaries (para). The instrimental phrase (ku kwarta) is omitted here, because it would generally not occur in such a sentence type. It would be grainmatically correct, but idomatically unacceptable.

However, when we turn to the Instrument Focus, the associate narker (xu) can be used to show the actor or sulyect: ,
${ }^{23}$ Sect this unit, Section 5, 6(4) for the various referent roles.
(b3) ("The man will buy breas far the child with the money.") Ro kwarta igabakhe / it tinayay / ku tawo / para sa unga'. INETRUMFNT FOCUS irstrument verb goal actor beneficiary "money" "buy" "bread" "man" "child"
There Is no ambigulty here since the focus is on the instrument (ro kwarca), and every other concept receives a particular marker: "bread" (tinapay), being the object, recelves the objecs marker (it); "man" (twoo), being an unemphasized actor, receives the associate marker (ku); and "child" (unga') receives the refercut marker (sa), aioug with the beneficiary particle (para) to show that it is the benefic'ary of the action, and not the indirect object.

However, in the Object Focus, certain grammatical ambigulty can set in:
(c3) ("The man will buy bread for the child with the money.")
Ro tinapay bakcón / kutavo / ku kwaxta / para sa unga'.
OBjECT FOCUS

| goal | verb | actor | instrument | bercficiary. |
| :--- | ---: | :--- | ---: | :--- |
| "bread" | "buy" | "man" | "moncy" | "child". |

The associate marker (ku) is used twice, the ffrst time to show the subject or actor of a non-Actor Focus sentence; and the second time to show the instrument involved in the action: However, in this case, common sense can fill in where grammatical clarity may be lacking. slace we know that a man buys with moncy, and that money dees noi buy with a man. The word order also helps in detecting the sense of the statement, since the actor in such a case should precede the instrume.2t. A further solution is possible, by marking the instrument with an alternative market (it), which nould serve to indefinitize or gereralue the instrument: that.is, making the tuanslation "with money" rather than "will lee monef." Ons could also mark the instrument with 2 variation of the ku-marker, using kunk, aliough this does not necessarily clear up the grammatical ambiguty.

Besides cases of grammatical ambiguity which have tyo situational role's expressed by the same type of grammatical role in a single chase, we can also have cases where gramis matical relationships remain fixed even if the sltuational roles are diferent. Take the case of the following examples:
(d3) ("The man will buy bread for the child with the money.")
Ro unga' bakeán / it tinapay / ku tawc/ku kwarts.
REFERENT FOCUS
beneficiary verb goal actor , instrumert
"chili" "buy" "bread" "nart" "moncy"
We see how 1 Refcrent Pocus is used to show the bencficiary as the m, , important idea in the speaker'. nind. We also know dint the Referent Forus is used to focus on or emphasize the location or site of an action. Witt. this in mind, let us alter the previous sentence to include a location:
( $3^{*}$ *) ("Ine man will buy bread for the child. . at the market.")
Ro tudatan bakcán / it tuapay i hu tawo / para ba traga'. REFERENT FCCUS

| locatioa | verb | goai | artor | beneficiary |
| :--- | :---: | :---: | :---: | :---: |
| "narker" | "buy" | "bread" | "man" | "child" |

Note how the slot "ro. . bakean" can be filled in with the locillon (theiahan) (as in example $\left.\left\langle\mathrm{d}_{3}{ }^{\circ}\right)\right\}$, or else with the benuficial (unya') $\left\{2 ;\right.$ in example $\left.\left(d_{3}\right)\right\}$.

This last point should be noted well: the grammatical relationships (that is, the slots) remain the same for cach focus, no matter how the situational roles, which are possible for each focus or which are répresented by each focus, may change. Note also that focus does not only imply a form of the verb, but an agreement relationship extending over a full clause or sentence, including a verb and the various function markers and their respective phrases bound up yith that verb.

5,6. 'ROLE DISTRIBUTION AMONG THE FOUR DIFFERENT FOCUS GROUPS. We already observed that there are many possible situational details in the factual world, but that grammar groups them together-eearh language in its own way. We have also seen how the grammatical slot of the topic in the Referent Focus permitted emphasis of either the locaiion of the action ["ro tindahan bakean"] or the beneficiary of the action ["ro unga" bakean"]. Suchis ture of all focuses. The topic slot of each fous is generally open to more than one situational role. The following chart and examples should illustrate thls quite clearly.
(1) ACTOR FOCUS is used to put emphasis on:

- the main actor or subject of the clause or sentance.
(a). "Ro eangka" indi' magbunge tt rima." ("The jacifruit will not bear breadiruit.")
(b) "Ulihi nga ungbd ro hari' nagbangon." ("The king arose very, very late.")
(2) INSTRUMENT FOCUS is used to put emphasis on:
- the instrument used in performing an action.
(a) "Ro kwarta nga una' 82 lamesa hay igabakee it sucf" naton." ("The money that is on the table is for buying our food.")
(b) "Ro sanduko nga mataébm ikiwa' it carne nga matig-a." ("The sharp bolo will be used to cut tough meat.")
- the companion or concomitant in the action.
(c) "Ihatód mo ro unga'. sa becáy." ("Bring the child home.")
- an object which is conveyed or changed by an action.
(d) "Ipilak ro papél." ("Throw the paper away.")
(c) "Leaha' ro karne ag butangín rayon it sabéw."
("Cook the meat, and then put [it] in the soup.")
$i$
- a verbal conveyance.
(f) "Ipacugtd $k o$ pa ro sugilanon." ("That story will still be told by me.")
- special benefaction.
(g) "Ipangamuyo" ro kaedg ku imong mga magueang."
("Pray for the souls of your elders.")
- a special time, which is as yet unreal.
(h) "Anong oras ro thalin it treyn?". ("What time is the departure of the train?')
- the reason or cause of an action, as shown in older or decper

Aklanox cosstructions:
(i) "limpyo mo ro imong utang se eands." ("Clean in the ficlds far.your debts.") [Lterally: "Let those debes of yours be the reason why you clean in the rice fields."] .
(d) "Bselt ykinaaklg nana ro kagahód." ("Maybe the noise will make him angry.") [Aterally] "Maybe the noise will be why he will get angry."]
(3) OBJECT FOCUS is used to put emphasis on:

- the direct object or goal of an action.
(a) "Ronduyon ro akong bue-on." "Tiat is the one which I will take.")
(b) "Batebn nakon ro baeky." ("I will buy the house.")
One should not be confused by what the object is in English and what it is in Visayan. In Aklanon, the Object Focus only emphasizes roles which receive the tozal action of the verb. If the object is conveyed or receives only part of the action of the verb, then either Instrinment or Referent Focus will be used. See each respective focus for the distinctions possible. Onily a limited number of Aklanod verbs take direct objects. Some of them depend highly on idiom. For example, in English;we say "Look at the blackboard.": "Blackboard" seems to be the object of apreposition, and one might ie tempted to translate it with 82 or the Referent focus in Aklanon. However, the verk for "look at" in Aklanon takes the object focus:

## (c) "Tan-awa ro pisara."

 ("Look at the blackboard.")(4) KEFERENT FOCUS is used to put emphasis on:

- the place, site or locality of an action.
(a) "Manila" ro akong ginapaeangpan."
("Manila is where am going.")
(b) "May ana nge ginapanawan."
("He has romeplace to go.")
- the indirect object--person or thing to which the action is done.
(c) "Gintaw-an si Henry it eokís ni Tatay." ("Henry was given ${ }^{2}$ gift by Father.")
(d) "Tanyage ro imong manghod it starapol." ("Offer your younger brother a star apple.")
- the beneficlary--person or thing for which an action is done.
(e) "Gingakén it duisi ku magueang ro anang gumankon.".
("The old man bought some candy for his nephew.")
- the partitive object--a goal which is only partly involved in the action of the verb. Many instances of this are dictated by the idiom of the dialect; where English may consider a direct object, Aklanon considers a partitive object.
(I) "Hatanda -án pa nakon ro anang uyahón." ("I still remember his face.")
(g) "Baptayí ring mangged." ("Guard your riches.')
(h) "Hin-uno eabhan mo ro umdg?" ("Whan will you wash the dirty laundry?")
- the persoa or thing affected by an action.
(i) "Ro among bisita' ginueanán kabi-1." "Our visitor was drenched with rain last night.")
(j) "Namahaén nakon ro sapatos." ("I consider the shoes expensive.")
- an indirect cause or reason of an action:
(k) "Si Pedro ginaakigán ni Karl ku kaeanghis it mge the." ("Carl is angry at Pedro because of the others' noise.")
(l). "Nano rc imong gintangisán?" "What were ỵ̂ou crying about")
- nouns or adjectives which are used verbally.
(m) "Tuti-1 no mga bueak."
( n ) "Beeay! kam!." ("Build 2 house for us.")
(o) "Naeayo-an ro magueang sa anang blyahe." ("The old man felt the distance of his trip.")
Note in all of thesc above examples how a topic marker (ro) , or a parallel topic phrase ;such as ako, rondaya, and so on), is the key to the focus used in the sentence. Note also that sven though the ro or cher phrase is made the TOPIC of the sentence, it is not necessarily he actor or the subject, but rather any one of the many situational roles or details, depending,
$\left(\mathrm{b}_{3}\right)$. "Si Ceorge ro nagkaon it saging." ("George was the one who ate the banana.")
[Although the appropriate forceful English idiom should be:
"The banana was eaten by Gcorge.")
Thus, when the subject is stated, the English passive voice stresses it with a great deal of force; while the Aklanon Object Focus still stresses the object (not the actor) of the action with great force, with the doer of the action still remaining indefinite, unstressed, incidental to the action.
(3) Most importantly, English voice only permïts TWO TYPES OF CONSTRUCTIONS: the active voice and the passive. Aklanon, on the other hand, has FOUR DIFFERENT FOCUSES: Actor, Instrument, Object and Referent Focus classes. Even if some see a parallel between English active voice and Aklanon Actor Focus, and benveen English passive wice and Aklanon Object Focus, there is no equivalent parallel in English for Aklanon Instrument and Referent Focuses. However, as we have pointed out, the parallelism between voice and focus is a forced one, since each language has its own points of emphasis [see (1) and (2) in this section].

Due to this general lack of parallelism between English and Aklanon verß̄al statements, the translator is left with several problems and several possible solutions. In the immediàtely, following section, we will discuss a paradigm in Aklanon. The following are several idiomatic and literal translations that attempt to catch the mood and character of the mechanisms underlying focus [and the meaning of focus] in Aklanon.

Taking the sentence examples used in this section 5,5, we can offer two possible English translations. The first method underlunes the stressed word, which would denote, some stress or inflection made by the voice in Englush, to give empiasis (winile Aklanon, of course, gives stress through the topic position and equivalent focus). The second method in English is to show stress through a retative phrase, sucl as: "It is the . .. who/which will..." (for futureoriented scatences). Please refer to examples ( $\mathrm{a}_{3}$ ) through ${ }^{\prime}\left(\mathrm{d}_{3}{ }^{*}\right.$ ) on pages 78-79.
$\left(a_{3}\right)$ ACTOR FOCUS with focus on the actor or doer of the action: "The man will buy bread for the child." "It is the man who will buy bread for the child."
$\left(\mathrm{b}_{3}\right)$ INSTRUMENT FOCUS with focus on the instrument of the action: "The man will buy bread for the child with the money." "It is the money which the man will fuse to buy bread for the child."
$\left(c_{3}\right)$ OBJECT FOCUS with focus on the direct object or goal of the action: "The man will buy bread for the child with the money." "It is the bread which the man will buy for the child with the money." "It is the bread which will be bought by the man for the child with the money."
"The bread will be bought by the man with the money for the child.
$\left(\mathrm{d}_{3}\right)$ REFERENT FOCUS with focus on the beneficiary of the action:
"The man will buy bread with the money for the child."
"It is the child for whom the man will buy bread with the money." [Some might also yreic: a passive voice rendition, such as--] "It is the child for whom bread will be bought with the money by the man."
( $\mathrm{d}_{3}{ }^{*}$ ) REFERENT FOCUS with focus on the location of the action:
"The man will buy bread at the market for the child.."
"It is the market at which the man will buy bread for the child." [Some other renditions might be--]

- "The market is where the man will buy bread for the child." "The narket is where the bread will be bought by the men for the child."
The very fact that the English translations are so generally cumbersome should be suf:; ficlent evidence that voice in English and focus in Aklanon are unique mechanioms of each respective language. If they were mutually idiomatic, then such kilometric and literal translations would not occur.
(4) DIFFERENCE IN IDIOM. Perhaps the strongest argument against the parallelism of voice in English and focus in Aklanon is the difference in idiorn. Where English makes use of the active voice in many common idiomatic expressions, Aklanon uses the oblique or nonActor Focuses. If such Aklanon expressions were translated into the English passive voice, they would no longer be expressive of the idiom of the language, and,would, in effect; be stilted and difficult to understend clearly. Look at the following common Aklanon idioms, and the Idiomatic and then literal English translations:
(a) "Nano ring ginabasa?"
('What are you reading?')
[Literally: "What is being read by you?"
- "What is that winich is being read by you?"]
(b) "Nano ro (mo aga ginhimo?"
("What dd yop dc?")
[Literal| "What is that which had been done by you?"]
(c) "Sin-o ro ginaosoy mo?"
("Whom are you looking for?")
[Literally: "Who is the one being looked for by you?"]
(d) "Dawatán ro asin."
("Pass the salt.")
[Literally: "The salt is to be passed."]
(e) "Hucatáakó"
("Wait for me.")
[Literally: "I am to be waited for."]
These examples should clearly illustrate the radical cifferences in both idiom and emphasis of the two languages. In all of them, English uses the active voice. Use of the passive is stilted; and while the passive translations may be grammatically correct, they are incorrect in any cormmon speech situation. Note, however, that in the Aklanon, not one of the above examples uses the Actor Focus, "which is often thought to be the parallel of the active voice in English.

If, on the other hand, one were to dictate the Aklanon translation by the English idiom, and use the corresponding Actor Focus where English uses the active voice, then one would not be true to the idhom of the most common and accepted Aklanon speech. The following represents; the mistaken foreign translations of English idioms. The foreign learner is warned
against composing such sentences as these:
( $a^{*}$ ) ("What are you reading?")
*Sa a no ikúw ragabasa?*
(b*) ("Whom are you looking for?")
*Kayo ikáw nagaosoy?*
( $c^{*}$ ) ("Watch your younger brother.")
"Magbantay ka sa mong manghod.*
N.B. These are INCORRECT IDIOMS in Aklanon. Mistakes usually made by western foreign-Iearners of the dialect.
Again, while the translations may be grammatically correct in Akianon, they are generally not idiomatic since the idiom of the dialect calls for use of an appropriate oblique focus in these situations.

In summary, we might say that some languages have focus, and other languages have voice. Each allows the expression of a number of ideas in a unique way, but they are indi. dual. Although there may sometimes be similarities, there is no point of contact between all Object Focus statements in Aklanon and passive voice statements in English. They each say different things, and they say it in different ways.
5, 8. A PARADIGM is a system of parallel variations within a single linguistic environment. The name is derived from the Greek word for "pattern", since a paradigm is basically a way of revealing the patterns of a language's grammar. Paradigms are actually linguistic invest-tons used to illustrate the structure of a language; to this degree they are not real representations of speech.

When a native speaker looks, at a paradigm in his own native language, he is likely to have some reservations in accepting it, particularity since it sounds or looks strange to him. It does not sound like anything he would normally say. That is because paradigms ire basically pedagogical; they are used for teaching the language to anyone who is studying it. Hence, if they sound artificial to a native, this in no way should lesson their weight, since, in effect, they are artificial. Thy are invented and used to teach with, and not to speak with. So if they do not represent the actual way a person speaks, there is no real problem with that, so long as they accurately represent the structure of the language he is speaking.

An example of a paradigm in English would be:
"I write a story."
"I am writing a story."
"I wrote a story."
"I was writing a story."
"I will write a story."
"I will be writing a story." .
"I have written a story."
"I have been witting a story."
and so on. The above paradigm shows changes in tense in English; beyond that, it shows simple as opposed to pr gressive tenses, and they are alligned in pairs. No speech, no conversation in standard American English would ever sound like that; $\}$ et the paradigm has value because each mdividual element of $1 t$ remesents a true concept in and excerpt from rood Enc:hash spec h. The mavidual elements are correct and meameful. The entire paradigm clearby describes centum structures of Enghsil, and is also useful in teaching those strictures.
-86-

103

We have given one paradigm illustrating focus [in Secion 5,5, examples ( $\mathrm{a}_{3}$ ) to $\left(\mathrm{d}_{3}{ }^{*}\right)$ ], based on the Englisn sentence: 'The man will buy bread with the money for the child at the market." Another paradigm illustrating focus is as follows:

PARADIGM: Focus variations in General Quality, with "The mother will slice the meat with the bolo cas the cutting board."
(a) ACTOR FOCUS stressing the actor or doer of the action: "Ro iná magakiwa' / it karne / ku sanduko / sa dapaedn,." $\begin{array}{cccc}\text { actor } & \text { verb } & \text { gaal } & \text { inscrument } \\ \text { "mother" "slice" } & \text { "meat" } & \text { location } \\ \text { "bolo" }\end{array}$
(b) INSTRUMENT FOCUS stressing the instrument used: "Ro sanduko igakiwa' / ku iná / it karnc / sa dapacán." ...... instrument verb actor goal olocation "bolo" "slice" "mother"•"meat" "cutting board"
(c) OBJBCT FOCUS stressing the goal of the action:
"Ro karne pagakiwa-on / ku iń / ku sanduko / sa dapacán." $\begin{array}{lccc}\text { goal } & \begin{array}{c}\text { verb } \\ \text { "meat" }\end{array} & \text { "slice" } & \text { actor instrument } \\ \text { "mother" } & \text { "bolo" } & \text { location } \\ \text { "cutting,board" }\end{array}$
(d) REFERENT FOCUS stressing the location of the action: "Ro dapaedn pagakiwa-an / ku iná / it karne / ku sanduko." location verb actor goal instrument "cutting board" "slice" "mother" "meat" "bolo"

5,9. AN ANALOGY EXPLAINING FOCUS. Anyone who knows how to operate a camera knows that when the photographer has something to photograph, he focuses on $i t$, and all of the parts of the camera (lens, body, aperature, shutter speed, and so on) must correspond to the subject matter. For example, if the man pounts his camera West to take a picture of the mountains, but the body is facing East, when the shutter is snapped; then the plcture will not be of the mountains, though it may be of the sea, or something else that was in the view of the camera. But the point is, the entire camera must correspond to the wish of the photographer. He must aim the camera properly, focus properly on the subject matter (or else the picture will be blurred), open the lens and set the shutter accurately (or else the picture will be too bright or too dark).

Roughly the same is true when speaking Aklanon. Whatever the speaker decides to focus on is made the topic of the sentence (with ro or a simlar topic function marker or funcion word), and the verb form and all other forms in the sentence (be they actor, goal, instrument, location, or anything else) must correspond. Putting ro on the actor, and then using Object Focus makes a direct object of the actor, whether one wants to or not. It is like wanting to, take a picture of a beautiful lady, but aming at a nearby tree instead. What the photographer wants to portray, and what the speaker wants to say, depend on a lot more than will power or desire. Many things must be mampulated first--be they lens; bellows, shutter speed and ap-erature-or topic form, verbal affix, focus, aspect, and the various function markers and slots.
5,10. USE OF FOCUS IS A MATTER OF STYLE. Which focus should be used in a particular case? This question is often asked by foreign learners of the dialect. Very often it is simply a matter of style, particularily when any type of emplasis in the sentence might serve;

3Ithough very often it can be a matter of idiom and flow [as we saw in 5, 7 (4)]. No "law" or observation can be inade which would apply to every situation beyond mentioning that what the speaker feels to be important should be in focus.

What can be seen, however, are cases of poor style or poor handling of focus. A foreigner Iearning English is said to talk "like a young child" if he were to introduce himself:
$\left(a_{1}\right)$ "My name is Pedro de Leon. I am"thirty-five years old. I
$\therefore$ was born in Makato, Aklan. I am a teacher, I am married.
My wife is thirty yêrs old. We have three children."

The continual repetition of " $I$ 's" and the small, single-idea sentences do"not make for a smooth-flowing, gracious English style. The effect on the listener is that the person sounds. like a first grade reader, or else is of low mental ablity. A far better English introduction might read:
( $\mathrm{b}_{1}$ ) "My name is Pedro de Leon. I'm thirty-five years old and' was לorn in Makato, Aklan. I'm currently a teacher, and have a wife who is thirty years old. We have three children."
A similar matter of style exists in Ak!anon. If a foreigner is not acquainted with other Philippine dialects, he tends to master the Act.jr Focus, neglecting the others. His introduction sounds something like this:
( $a_{2}$ ) "Akó si John Smith. Byente-singko anyos ako. Natawo ak' sa Providence, Rhode Island. Gaturd akd it Mathematics.

(I'I'm John Smith'. I am twenty ${ }^{\prime}$ five years old. I was born in Providence, Rhode Island. I am teaching Mathematics. I don't have a wife; I don't even have a girl friend. ${ }^{i}$ )
It would ṣound less vain or less childish in Aklanon if we could get rid of the surplus of ako's, and put some of the ideas together. At least one focus change would make the señTences fit together in better fashion:
(b2) "Si John Smith akó: Bycnte-singko it edrád. Natawo akós sa Prbvidence, Rhode Island. Mathematics ro akong ginathd-an. Wa' man akd it asawa o maskin nobya."
As a matter of good style, one should strive to allow for a natural flow from one sentence to another, particularily with regard to focus. An overuse of one particular focus is a matter of overemphasis; overuse of the Actor Focus can lead to a subtle, perhaps mistaken, impression of vanity or pride in the speaker.

The general flow of conversation demands frequent changes in focus. Note: ${ }^{*}$
(c) "Kumosta ka?. . .Nano ring ginaobra?" ("How are you?.. What are you coing?") Note the charge from actor topic (ka) to object topic (nano).
(d) "Lingkod anay kamb...Basaha ra."
("Please sit down... Read this.")
Note the change from Actor Focus (lingkod) to Object Focus (basaha).
$\qquad$
0. SOME NOTES ON VERB STEM CLASSIFICATLON. Although a complete chart of verb alfixes will be presented in the next section, it must be noted that not every verb root can be inflected for all of the focuses. The classification of verb roots in Aklanon is not a simple matter. It is one thing, for example, to know that kaon ("eat") is a verb root; but it is quite snother thing to know how it is used, what various focus changes mean with that root, ard what particular affixes or affix-corabinations are possible. Such a léngthy stucty has not yet been undertaken. It has been our purpose in this volume te record the possible forms. In a succeeding volune (the dictionary), we hope to inciude each individual verb stem, and to record the frequency of its usage $h$ various affixes or affix-groups.

Basically, the problem is one of coordinating what situational roles are possible with the grammatical role of each verb. For example, some verbs take their goal in the Oijeci Focus; others illustrate a goal as an Instrument (eonveyed object) or as a Referent (partitive object). At best, in this present work, we can record the various classes of verbs and give a few rëpresentative stems or roots for each, in order to.hint at the idion of Aklanon.

Another problem is one of transitivity as opposed to intransitivity. Although this mater does not seem to be involved with the verb root per se, "nevertheless it occurs in the dialect. For example, the verb uli' can mean "return, go home" [intransitive use] or "return, si:e back" [transitive use]. Therefors it'is a member of both Class II and Class VI. The verb tago' can mean "hude oneself" [nntransitive] or "hide (something)" [rransitive]; the verd adto ("go, be on the way") is definitely intransitive, but with a zausative prefix, as in paadto, it could take an object and be used transitively ("cause someone to go").

In either case, due to our lack of research into the problems at hand, the reader is left on his own to identify stem classes. For the native speaker no real problem is posed since ne has the verb classes "built in" after years of trial-and-crior use. For the foreigner, this brief section is meant to make him aware of the fact that not all forms represented in the affix chart (Scction 7) are apglicable to every veri). A knowledge of two things, namely sease and idiom wathin aklanon, becomes imperative. Sense alone can discover that verbs of motion, for example, take no object, and thezefore they cannot be inflected with object Focus forms. Idiom, on the other land, 'is not readily available, and will be a slow and partial revelation through careful study., To know that bakae emphasizes an object with Obje:t Focus, wimle baligya' emphasizes an object with Instrument Focus is a matter of unconscious but operable knowledge to the Aklanon, who sees the grammatical distinction between "ouy" and "sell" which is in the roots of Aklanon idiom. But such knowledge is a matter of long and careful rescarch to the foreign-learner.

As a guideline for our own research for the dictionary, and for the non-native speaker, the followng categories of verb "oots are suggested. The scheme is borrowed from a treatment of the Ivatan dialect, ${ }^{20}$ obviously, since it refers to a language of the Northern Phinppise group, its application to Aklanon is of uncertain value. Nonetheless, it is a good starting pomt. Perhaps a greater or lesser number of classes exists, but the discovery of such will be a matter of a great deal of painstaking and exacting research.
6,i. CLASS I OF REGULAR VERBS. Every mazker is used in its own slot; all focus forms are possible. Marker distribution:
kn marks instruments, associates.
it marks direct objects or gals.
sa marks referents: iocations, beneficiaries, indiregt objects.
26 J. A. Re:d, AN IVATAM SYNTAX (Oceanic Linguistich, Hawaii, 1966), 1p. 16-46.

- 90 -

6,2: CLASS II OF REGULAR VERBS. The Object or goal of the action is shown with the associate or object markes, or else thy the lnstrument Focust There is no Object Focus. ku marks the god or the instrument of thedaction.
it is generally used as an aiternate for the assoctaxe marker, but with an indefinlte meaning [":" rather then "Lhe"].
sa is used to marit referents: locations, besciciarits, indirect opjects.

| AMP | CL |  |  |
| :---: | :---: | :---: | :---: |
| Saligya' | ("seil') | -hambe | ("speak, |
| buutáng | ("put, place") | -parabitana | ("ask, question') |
| - ibwat | ("pags, caary") | -su... | ("tell, say:"). |
| -latod | ("iake") | -te- | ("give") |
| -cubong | ("bury") | -tue | ("carry [on licad]") |

6,3. CLASS III OF REGULAR V̈ERBS. "No object r.. akey and no Object Focus is possible. The goal of the retion is shum by a referent marker .. endphasized by Referent Focus.
ku marks instruments, associates. .
sa mark's gazls; it also mirks general referents, marticularily locations.

6, 4. CLASS IY OF REGULAR VERBS. The objoct and referent markers are interchangeable to show the goal of the action; all c:her markers are used in their own slot. The Referent $\dot{\text { Fo- }}$ cus is used to emphasize the goal; no Object Focus forms are possible.
ku marks instruments, associates.
It: may mark the goal or object.
.sa marks goals; it also may mark standard referents, particularlly locations.
EXAMPLE ROOTS FOR CLASS IV

| -hugas | ('wash [dishes]') | -ojpak | ("peel, skin") |
| :---: | :---: | :---: | :---: |
| - Lampaso | ("polish, sline") | -sillig | ("sweep") |
| -limpyo | ("clean") | -rabón | ("cover [with cloth7") |

6.5. CLASS V OF REGULAR VERBS. The gaal or object is expressied automatically in the verb root, and nobther gath statement is possible. The class is still lasically transitive in rature, be wever, since the goal is present in the rot $:$. Many linstances of this class are

… can mark the instrument, though instrumelitm are rarely mentioned.
S. maris relerints, particularily locations or beneficiaries.

## EXAMPLE ROOTS FOR CLASS V

| EXAMPLE ROOTS FOR CLASS V |  |  |  |
| :--- | :--- | :--- | :--- |
| -pamaroto | ("ride an outrigger") | -pangamód | ("gather sweet potatoes") |
| -pamunit | ("fish with a line") | -pangawíl | ("deep-sea fish"). |
| -pangahóy | ("gather wood") | -pangisda'". | ("fish, go fishing") |

6,6. CLASS VI OF REGULAR VERBS. Verbs in this class are intransitive verbs of motion. The object marker and the Object Focus, and the associate marker ind instrument Focus are obligatorily absent. Companionship can be shown with idiomatic phrases that include the associate marker, but the phzase is rot bound up with the verb form, but rather with the subject [such as kami ni Paul ("Paul and $\mathrm{I}^{\prime \prime}$ )].
sa marks general referents, particularily locations.

| -adto | ("go") | -hapit | ("drop by, stop in"). |
| :---: | :---: | :---: | :---: |
| -agi | ("pass [by]') | -munót | ("go along (with]") |
| -bagtas | ("hike") | "-panàm | ("leave") |
| -daéagan. | ('run') | -saot | ('dance") |
| -gund | ("go out") | -una | ("go ahead") |

6,7. CLASS VII OF REGULAR VERBS. This is another intransitive set, differing from the previous class in that the subject or actor is inanimate, and there can be no assoclate at all. sa marks locations aloné.

| -bükác | ("boil') | -ilog | ("flow') |
| :---: | :---: | :---: | :---: |
| -baga | ("smolder") | -tubo' | ("sprout; grow') |
| -aso | ("sminke") " | -dabả-dabá | ("burn, be aflame") |

6,8. CLASS VIII OF REGULAK VERBS. This intransitive class consists of several forms - denoting reciprocal actors (actors doing the same thing'), and the subject is obligatorlly plural. In most cases, the $/-g V_{1}-/$ infix along with the -an suffix is used on vexb roots; in others, the pang- or jsi- distributive prefixes áre used--in each case to denote recipiocał action.
ku can mark instruments or associates if any are present.
$\overline{\text { Ba }}$ generally marks the location cf the action; it can also mark indirect goals.

| EXAMPLEROOTS FOR CLASS VIII |  |  |  |
| :---: | :---: | :---: | :---: |
| -baearilan | ("shoot one another") | -pangaway | ("fight one another")- |
| -sacaltanan | ("argue, quarrel") | -pangeab8 ${ }^{1}$ | ("knife one another") |
| -sueogirán | ("'tell one ancther") | -sihambae | ("discuss, talk together") |
| --suennggaban | ("bump one another") | -siebria | ('wori together') |

6,9. CLASS IX OF REGULAR VERBS is made up of worde with the diomatic ga-directional or ${ }^{\chi a}$ - placement prefixes. Only Actor Focus and Referent Focus forms are possible.
sa marks referents, particularily the location of the action.
EXAMPLE ROOTS FOR CLASS IX

| "paadto | ("be going") | -pasuba' |
| :--- | :--- | :--- |
| "paeaplt | ("ipproach") | -takilíd |
| "paeny ${ }^{+}$ | ("withdraw") | -talik $\delta$ ( |
| -paulis' | ("gothome") | -talliwan |

('go upstrean")
('turn one's side \{to ${ }^{\prime \prime}$ ")
('turn one's backi [tọ $\}$ ')
("pass by, gu by")
N.B. It should be obvious that the topic marker (ro) always marks the topic in all of the above situations, and is therefore not mentioned. Only the distribution of the oblique (non-topic) markers has been discuesed.
7. VERBAL INFLECTION. By this time, the reader should have a somewhat clear idea of what aspect, tense; mode and focus are with regard to Aklanon verbs. In the past, we have onily discussed the Actor Focus forms (under "TENSE" and "MODE"), and only the future forms (under: "FOCUS"). Now we will take up the full system of forms in each respective focus.
7,1. BY WAY OF REVIEW we will discuss all the terms which aeed qualification in the chart which will follow. A clear understanding of all forms will be necessary in order to understand it.
(a) FOCUS is the system of emphasis within the clause, which is carried over to four verb classes which are made to agree with whatever situational role is emphasized and put into the topic slot.
(1) ACTOR FOCUS puts emphasis on the subject or doer of the action;
(2). INSTRUMEND FOCUS puts emphasis on the instrumen or indirect actor of an action; it also can emphasize the concomitant, conveyed objert, special beneficiary, special time, or reason of the action;
(3) OBJECT FOCUS puts emphasis on the direct object or specific goal of the action;
(4) REFERENT FOCUS puts emphasis on the indirect object, beneficiary or location of the action; it also can emphasize partitive objects, indirect causes or reasons for an actions. and the objects of nouns or adjectives which are made to function as verbs.

In order to simplify the idea of focus, note that the first.two focuses deal directly or Indirectly with the acting of the verb, while the last two deal dircetiy or indirectly with the reception of the action of the verb. Imagine, if you will, that the verb is like a wall. The first two focuses (ACTOR and INSTRUMENT) can be.considered in front of the wall as. SUB : JECTIVE FOCUSES, while the second two can be considered behind the wall as OBJEGTVE FOCUSES. This might be outlined as--

## subjectrve focus.

- Direct actor (Actor.Focus)

## OBJECTIVE FOCUS

- Indirect Actor
(Instrument Focus).
- DIRECT OBJBCT
(Object Facirs)
- INDIRECT OBJECT (Referent Focus)

The subjective focuses are characterized by generally-laving prefixes; while the objective, focuses are generally characterized by having prefixes as will as suffixes.

Sometimes it is easier to envision a ore/turee allignment of the focuses, rather than the two/two alligniment as suggested above. In vie one/turee alligument, we cnvision the Actor Focus as an active-type voice, while the oblique focuses (Instrument, Object-and Referent) are envisioned as goal-type. There is also justification for this since Visayan goals are subject to emphasis by elther one of the three oblique focuses, deperding on the verbiclass of the root. The reader is left to take the best analogy, or the best of cach; in order to grasp the complex mechanism of focus.
(b) MODE can be subdivided into four groups:
-(1) SIMPLE or INDICATIVE MODE, which simply states the fact or vecurance of an action;
(2) ABILITY or APTATIVE MODE, which states the possibility of an action, like the "can". or "coild" modals in English;
(3). ACCIDENTAL or HAPPËNSTANCE MODE, which states the action as accidentally takirg place or taking place completely by chance;
(4) IMPERATIVE or COMMAND MODE, which states that the action must take place, or that the action is obiligatory.
(c) ASPECT refers to the degree of completion of an action. Whereas English verbs have time values (such as presenti past, future), Aklanoin verbs have aspect values (action begun but not completed; action beggun and completed; action anticipated; action not yet begun; etc.) There are two basic divisions of aspect, with subdivisions of TENSE in each:
(1) REAL ASPEGT, which denotes that the action has already begun:

- IMPERFECTIVE show s that the action began, but is still going on;
- PERFECTIVE shows that the action began, and was finished;
- PAST CONDITIONED shows no time in itself; but is related to the perfective

؛- forms.of-some verbs.
(2) UNREAL ASPECT, which denotes that the action has not yet beggun:

- EXPECTED shows that the action is [immediately] anticipated;
- FUTURE shows that the action will happen sometime in the future;
- SUBJUNCTIVE shows a polite urging of an action, if it follows the particle mos; otherwise, after a select group of perticles (like basi', kunta', basta, bago, etc.) it denotes a possible furure action;
- DEPENDENT is a timeless form, related to the infinitive of English;
$\because$ FUTURE CONDITIONED Ṣhows no time in itself, but is related in form to some ${ }^{-1}$ future verbs;
- PARTICIPLE is a forni of abstract verb; it generally does not indicate time, though it can indicàte past time in certain dependent clauses, or be usedasanimperative -
We have not yet mentioned ACTION QUALLTY; but all forms in the forthcoming chart arẽ to be considered of GENERAE QUALITY, which describes the verb only in terms of its actual meaning. We will discuss both CAUSATIVE and DISTRIBUTIVE QUALITY iñ the following Section 8.
7,2. EXPLANATION OF THE INFLECTIONCHART. The chart that follows on the next page will reveal all of the affixation connected with Aklanon verbs of general quality, in all focuses, modes and aspects, provided those veros are REGULAR (not SiTATIVE).

With regard to the linguistic setup of the chart, the position of the root word is shown by a series of three dashes ("---"). Thus, manog-... illustrates a prefix that comes before the entire root vord; -um-- illustrates an infix put into the root word after the first eonsonant [since the glotal stop is unspelled in Akianon, such infixes appear to come first in the yord, before the initial vowel]. And --oon would illustrate a suffix put at the end of a rootword. The reader is reminded that in many cases of suffixation, morphophonemic clanges of one sort or another usually occur [metathesis, consonant gemination, vowel loss, and so on]. Please refer to Unit IV,- "MORPHOPHONEMICS IN AKLANON."

Other symbolls used are:
** - form in this position is. lacking.
() - this part of the form, is often omitted or abbreviated fre the full form.
\# : zero allomorph of an affix:. no form actuálly exists her though one might be expected. .
In order to ailow for a systematic paradigm, the linguists have devised a "zero allomorph". For example, we have gina--.. in both the Instrument and the Object Focuses. In the Referent we have the form gina--an. Since the Object Focus usually has the suffix $\cdots-$ on, we would expect the form to be gima---on, instead, of just gina---. In order to fulfill a desire for linguis. tic completeness and to distinguish the Object Focus from the Instrument Focus, the form gina---is is devised for the Object Focus. In normal spelling, however, the form would be "ginabakae" in both Instrument and Object Focus.

7.3. VERBAL INFLECTIONCHART. This is a chart coinsisting of all the affixes possible with regular verbs. Notall of these affixes are possible with every verb reot. Very much -depends on what class the verb is in (see SectiEn 6, "VERB STEM CLASSIFICATION").
SI
IM
PER
E
F
S
7.4. ANALYSIS AND DLAGRAMMING OF VERBS. A knowledge of diagramming is not crucial to the understanding of a language, but it certainly can be helpful in understanding the structure of a-language. It is important to use a form of diagramming that will be both explanatory and simple. In light of the preceding discussion and chart, if we are to employany system of diagramming to reveal the Aklanon verb, we must find something which will . illustrate the three most crucial points, namely: Focus, Mode, and Aspect/Tense.
$\Lambda$ form of diagramming we have chosen contains the following dimensions:
(1) PART OF SPEECH (i.e. vèrb)
(2) AFFIX and ROOT WORD
(3) FOCUS, MODE, and TENSE FQRMS and the REDUCED ROOT (if any)
(4) FULL STATEMENT OF THE VERB•FORM

Note this in the following examples:
VERB nagakaon

(3) ACTOR F. $\ \operatorname{SIMPLE} M$ :
$\frac{\text { na- }}{\text { IMPERFECTIVE }}$

(2) AFFIX paga---án
(3)

ROOT WORD -daeá

.
 --daeh-

This system of diagramming illustrates in great detail the makeup of the verb form; it analyzes it piece by piece, morpheme by morpheme, and then puts the verb back together ragain. However, exacting as it is, it does not suit our purposes, beyond illustrating that, such diagramming cande-done on the Aklanon verb. We need a more-simple type for our preserit purposes.
7.5. A: MORE SIMPLE SYSTEM OF DIAGRAMMING can be employed to show how the verb is the very center of a clause or sentence. After all, this is the key point about the Aklanof verb-that it is a center. This simpler form of diagramming contains all the salient points of the previous one (in that every point behind the verb is mentioned), but also, combines-with the syistem we used previously in giving a paradigm (see, 5, 8).

The diagram proper consist's of six lines, analyzing the sentence-in simple, straightforward fashion:
(1) a full statement of the sentence or Clause in Aklanon;
(2) the sentence divided into its various bagic elements (phrases);
(3) the statement of each form, such as "Q ${ }^{2}$ " [Question Particle], "A/pro" [Associative Pronoun form], "Nom" (Nominal), siñ so on. Consult the complete list of abbreviations in Appendix"l;
(4) the function of each individual form in the sentence, such as "actor", "verb" (verbal center), "par.g" (partitive goal or object), and so on;
(5) the English meaning in the most literal sense of each sentence element;
(6) an idiomatic English translation of the sentence.

Let us look at an example of this:
(a) "Masimba pa gid'akb."

("I still will be going to church.")
The above constitutes the basic format of diagramning to be used throughout the rest of this book. Since most of the other páts of speech have not yet been covered, many of the explanations given in this format will not be understandable at this time. The zeader is referred to Appendix 1 for a complete hist of all abbeviations used, and also to the various subsequent sections of this paper, dealmg with the various individual parts of speech, such as "NOMINAI.

## "PRONOUNS" and "FUNCTION WORDS".

For the present, our point of emphasis centers on the part of the diagram marked "veitb":

```
(a) masimba .
gAF-S/subj
    verb
    "worship"
```

This extract of the second through the fifth lines of example (a) can be interpreted as follows: First, the verb form is given ["masimba"]. Then, in the line immediately bencath it, we find abbreviations explaining the form in detail ["gAF-S/subj"]. This abireviation is to be read as follows: "Masimba is arverb form of General Quality [" g "], in the Actor Focus [" $\Lambda F^{\prime \prime}$ ], Simple Mode ["S"]. Subjunctive Aspect/Tense ["subj"]. We hâve not yct explained the use or meaning of Quality, but otherwise the other points about the verb should be clear by now. The remaining two lines of the "diagram explain that "masimba" is a "Verbal Center" ["vèrb"] and that its root (simba) has a literal meaning of "to worship".

As an exercise in interpreting these diagrams, we are including further examples. For the present, locate the verb, and using the list of abbreviations in Appendix 1, run through the analysis of each form:
(b) "Siln nimo hidadakpan ro isda" kundi" sa Ba -ba' fi"

("Where else do you catch the fisin, but by the mouth?")"
(c) "Owá' ko pagobrahá ruyon."
, owár /..ko / pagobrahá /is

("I did not do that.")
(d) "Hin-uno imáw parpukewon?"

| hin-uno / | imán | 7 pagpukawon |
| :---: | :---: | :---: |
| Qp | T/pro | gor-S/conf |
| future | goal | verb |
| "when" | "he" | "awaken" |

("At what time is he to be awakened7")
(c) "Indi" maka-angay ro bueawan sá sawáy."

("Gold cannot complement coppor.")

8. QUALITY IN VERBS. The last major characteristic of verbs to be discussed is their quality. All the verb forms discussed in the previous sections were of GENERAL QUALITY. They are unmarked by an morpheme for quality, and the action is described in terms of the root word's basic meaning. There are two other forms for quality, namely the CAUSATIVE and the DISTRBU'TIVE QUALITY. The causative quality adds the notion of having the action done or causing the action to be done by another party. The distributive quality indicatesthat the action of the root word is distributed through time, among several people, or in several ways.

The following three examples make up a PARADIGM which illustrates the thre forms of quality:
(a) GENERAL QUALITY "Magáobra akó it baeáy." ("I will build a house.")
(b) CAUSATIVE QUALITY "Mágapaobra ako it baedy!" ("I will have a house built.")
(c) DISTRIBUTIVE QUALITY
"Magapangóbra akóit baedy:"
(Ti will build several types of houses. ${ }^{\prime \prime}$ )
Note that the sentences are identical except for the addition of the pa- prefix in example (b) and the lpang- prefix is example (c). These two simple prefixes change the meaning of the sentences considerably. They also introduce a few grammatical or syntactical changes, as we shall see presently?

8a. Since the GENERAL QUALITY is unmarked by any morpheme, andioniy describes the root word in terms of its own meaning, we need not say any more about it. Any verb which is not marked with the ]pa-- or lpang- postpositive prefixes can be considered to be of Gericrial Quality.

8b. CAUSATIVE QUALITY. By simply adding the Jpa- prefix immediately bafore the verb root; the quality of a verb can be changed. Instead of a direct actor, there will be a causer; instead of directly doing an action, a person has the action done, or lets it occur.
8b, 1. THE MEANING OF CAUSATIVES IN AKLANON. Look at the following verb stems," and see how their meaning changes by the mere addition of jpa-:

| SIMPLE ROOT |  |
| :---: | :---: |
| kaon | ("eat") |
| kasayod | ("know") |
| kita' | ("sce"). |
| daeá | ("briong") |
| bucóg | ("cut") |
| dumdum | ("think") |
| liucam | ('borrow") |
| intra | ("Join") |
| obra | ("make") |

$: 1$

8b, 2. CAUSA'IVES IN ENGLISH. Aklanon simplifies the making of causative statements, since the addition of only the Jpa- prefix to any vërb root does the job quickly, efficiently and casily. English also has a system of causatives, but the system is complex in use, but subtle in meaning. It is not our intention to discuss the system of causatives in English in any great detail; but some discussion is necessary to offer a comparative framework butween the two languages on one hand, and to set apart the differences on the other. Perbaps the big: gest problem that arises, in this case, is one of translation from one language to the other.

In causatiyes in English, as in Aklanon, we have a causer and an actor. However, in Aklanon the causative is shown by one morpheme, ]pa-, whereas in English any one of threc modal verbs ("let, have, make") or many helping verbs (such as "tell" or "send") can be chosen, each with its own subtle meaning. Note the psychological differences in attitude carried by each causative auxiliary verb in Eng.!ish:

The following sentences in English exemplify the subtle distinctions between the English causatives:

- ( $\mathrm{a}_{1}$ ) "He let him build a house."
$\because\left(\mathrm{a}_{2}\right)$ "He told him to build a house."
(a3) "He sent him to build a house."
( $\mathrm{a}_{4}$ ) "He had him build a house."
( $a_{5}^{4}$ ) "He made him build a house;"
These subtle distunctions are contained in the idiom of English, and are not necessarily within the idiom of Aklanon. To try io capture the idiom of English in Aklanon would involve cumbersome translations, and would be futile anyway, since cach language has its own idiom and means of expression. We saw carlicr [Section 5,7(3)] i. : ir the idiom of focris in Aklanon does not exist in English, and how the English sentences we composed tried to capture the ldiom, but were both cumbersome and kilometric. The samie would be true in trying to translate the above-mentioned English causatives into Aklanoa. The psychological subtlety, in this case, is an idiom in Englisl?, but not in-Aklanon.

## The idiom for causative quality in Aklanon allows for one basic form:

$\left(\mathrm{b}_{1}\right)^{\text {多"Si Pedro ro ginpaobra nana ku beeáy." }}$
("He had Pedro build the house.")
using the dpa- to slow causativity. From the Aklanon translation above we cannot really ${ }^{* *}$ tell the psychologncal disposition or attitude of either the causer or the actor. 'The idiom ot the dialect does not allow diat with just the use of the causative" pa-. Thins, the English translation, using "had" is only a possibility. We could have just as legitimately chosen another causative, such as "let" or "made", since the Aklanon does not explicitly or implicitly state the psychological dmension. However, this is not to say that Aklanon can not express such psychological dispositions. It can use such words as "sugo"" ("command"), "pilit" \'s ("force"), "paadto" ("send") to express the distinctions, if and when necessary. But in this
case we get away from the use of the causative and get into dependent clause constructions. Thus, in trying to capturc ihe causative idiom in English, we would get away froin caiusative conscructions in Aklanon; much like when we tricd to capture the idiom of focus in Akianon we ac'ually got away from voice in'English, using other constiuctions instead.

But if the idiom of Aklanon does not let the causative express the psychological dispositions of the causer and/or actor, the idiom does permit differences in focus, which the idiom of English cannot express. Look at the following examples continuing the form of ( $\mathrm{b}_{1}$ ) given above:

## $\left(\mathrm{B}_{2}\right)$ "Baedy'ro ginpaobra nana kay Pedro." <br> ( $\mathrm{b}_{3}$ ) "Imáw hay nagpaobra kay Ped̈ro it baeay."

Examples-( bl $_{1}$ ) through $\left(b_{3}\right)$ show where the idiom of Aklanon shines. Although the psychological subtleties of English are not known with the ?pa- causative, the dialect permits focus on the causer, the actor, and the object. English translations trying to capture such an idicm for focus.would be cumbersome, as we had already demonstrated. They might read as follows:
( $\mathrm{b}_{1}$ ), "Predro was the one told by him to build a house of
"He had Ped oo build a house." "Pedro was the une made by him to build a housc." "He let Pedro build a house,
( $\mathrm{b}_{2}$ ) "The house was whathe told Pedro to build." "He had Pedro build the house.". "The house was what he miade. Pedro build." "He let Pedro build the house."
$\left(\mathrm{b}_{3}\right)$ "He told Pèdro to brild a house." "He had Pedro build a house." "He made Pedro bíild a house." "He let Pedro buildia;house. ${ }^{\text {it }}$
If more roleş-existed in the sentence, then even a greater variety of focuses might be chosen and demonstrated.

What we mean to point out here is the difference in idiom/between the English causative-which carries psychologicial subtleties in the causer and agent roles-and the Aklanon causa-tive--which allows for focus. variations, but not for' psychological subtleties in the roles. We also wish to remind the translator that, because of the great difference in idiom beiween the two languages, no translation cán be an absolute translation. The closer one translation tries to get to the idion of the target language; the less"true that translation will be to its own idion. What may be found in one language is lost in another. Onjy cumbersome sentences can capture the unique idiom of each respective languqge.
8b, 3. ROLE DISTRIBUTION IN:AKLHNON CAUSATIVE SENTENCES. In Section 4, 1 we discussed the various roles associated with verbs of general quality. Such roles are generally employed also in causative constructions; but; as we have just seen, two additional roles occur, namely the role of causer and that of agent:
(1) CAUSERS are the subjects of causative sentences; they are the people who have the action done. 'They make, let, or have somềne else do the work for them:

27 Dr. T. Andersön, perṣonal commúnication.
(a) "Gimpalingkod nimo ro bisita 7" ("Did you have the visitor sit down?")
(b) "Ro katri ginpatabonan ku kabo sa katolig." ("The foreman had the helper cover the bed.")
(c) "Si Rnney nagpakanta sa anang mga igmanghod." ("Ronay made his brothers sing.")
(d) "Mapabakáe ako kimo lu sueá'." ("I will have you buy the food.")
(2) AGENTS are the caused actors in causarive sentences; they are the peaple who 2re made to do something for-somebody else:
(a) "Palingkora ro bisita ."
("Have the visitor sit down.")
(b) "Ro'karne ginpakiwa ${ }^{2}$ ku inà sa ànang ungá"."
("The mother made her child carve the meat.")
(c) "Paadkuna imáw riya."
("Let him come here.")
As can be seen in the above examples, verbs of causative quality show that the action is done through the agency of others. The subject of such sentences is not technically an àtor, but, rather an influencer or CAUSER. The actor in these cases is the AGENT, the one made to act. Note that the agent is made a referent when not in focus, and is mar'ked"by sa; but is focused by the Object Focus,.. if it is given emphasis.

8b, 4. THE USES OF THE FUNCTION MARKERS WITH CAUSATIVES depend very much on the focus employed in eachisentence. Since this is the case, causatives are more easily classified than the regular verb roots of general quality. The distribution of markers in most cases remains the same. Direct objects, goals, beneficiaries, locations and instruments are marked by the appropriate function markers. (Refer to Section 5, 5 for "THE USES OF THE FUNCTION MARKERS' and also to Section 6 for "VERB STEM C̈LASSIFICATION".)
(1) ACTOR FOCUS AND CAUUSATIVE CONSTRUCTIONS:
ro/do.' [or an equivalent topic function word) marks the causer of the action.
ku can be used to mark instruments or.associates; it is often used to mark the goal. it can mark the goal or diréct object, particularily if it is indefinite,
sa marks the agent of the action, the person made to act; it also can mark any standard referent: the beneficiary, indirect object; location, and so on.
(2) INSTRUMENT FOCUS AND CAUSȦTIVE CONSTRUCTIONS:
ro/do marks the associate of the action: instrument or conveyed object; it very often can mark the direct object or goal of the action toi?
ku marks the culuser of the action; or any non-focused associate.
it can maris the direct object or goal of the action, if it is not in, focus.
sa marks the agent of the action; it also marks any standard referent.
(3) OBIECT EOCOS AND CAUSATIVE CONSTRUCTIONS:
ro/do marks the agent, or caused actor; it can also-maik the direct object or goal.

- 102 -

Note that when unfocused, the agent is marked by a referent marker (s.a); but when focused, It is emphasized by the 'Object Focus.
ku marks the causer of the action, or "any norinal associate.
it marks the goal it the $\mathrm{g} \alpha$ is not made the'tople of the clause (that is, when the Object Focus in this case.emphasizes the-agent rather than the goal).
sa marks the standard referents: location, beneficiary, Indirect object; it marks thee agent, if the agent is not being emphasized in the clause.
(4) REFERENT FOCUS AND CAUSẠTIVE CONSTRUCTIONS:
ro/do marks any standard referent which is emphasized: location, beneficiary, ctc. ku marks the causer or the instrument of the action.
it marks the direct object of the action.
sa marks any non-focused referent role.
It shoulu be noted that the functions for most of the markers are parallel to those covered by focus. The prime differences from gencral quality constructions are that Actor Focuis illustrates or emphasizes the causer, not the actor; and the Object Focus illustrates the agent or doer of the action. When not in focus, the agent is marked by the sa particle, and the causer is maried by the ku particle. These are the key grammatical points behind the causative prefix; otherwise they should create no problem.

The reader should be reminded that most regular yerbs can be subjected to causative . causatives; however instead cf taking a direct object, they take the agent as emphasired -ith Object-Focus. Hence, verb roots that cannot normally be conjugated with the Object' I:sas $;$, receive Object Focus forms when they emphasize the agent of the action.
w, 5. A PARADIGM illustrating the various focuses and function markers shoyi " lp clarify matters quite a bit. In particular, the reader is referred to the General Quanty Paradigm given in Section 5, 8 , and to the following chart to see the similarities and differences between general and causative qualities quite clearly.

Some Philippine dialects, like Tagalog or Maranao, have a whole system of causative prefixes (and other affixes) in their conjugation. Since Aklanon, on the other hand, merely inserts the $\rceil$ pa- postpositive causative prefix immediately before the root word, the construction of causative statements is greatly simplifici.'

The paradigm which follows is extremely formal in nature. It illustrates the grammatical possibilities and the various slots open within Causative Quality statements. The reader will hotice that the sentences are quite long; this is so all of the basic slots possible in causative statements carrbe filled. Such kilonetric sentences would hardly be uttered in everyday Aklanon speech. But such sentences are both possible and necessary for the purpose of a paradigm in order to teach all of the slots that do occur in common parlance. Rare indeed is the sentence that would attempt to give the causer, agent, goal, instrument and location--all in a sińgle breath:

The paradign that follows accurately shows the grammatical slots possible in Aklanon causative statements, although the sentences as such are not to be taken as representeative of common Aklanon speech:

PARADIGM 1: Focus Variations in Causative Quality, all focuses; "The mother will have the child cut the meat with the bolo on the cutting board, ${ }^{m}$.
(a) ACTOR FOCUS stressing the causer of the action:
"Ro ind magapakiwa" / sa unga' / it karne /' ku sanduko'/sa dapaén.". $\begin{array}{ccccc}\text { causer } & \text { verb } & \text { agent } & \text { goal } & \text { instrument } \\ \text { "mother" location } & \text { "slice" } & \text { "child" } & \text { "meat" } & \text { "bolo" }\end{array}$
(b) INSTRUMENT FOCUS stressing the instrument used in the action:
"Ro sanduko' igapakiwa' / it karne / ku iná /. sa unga'" / sa dapacan." $\begin{array}{cccl}\text { instrument } & \text { verb } & \text { goinl } & \text { causer } \\ \text { "bolo" } & \text { "slice" } & \text { "meat" } & \text { "mother"."child" }\end{array} \quad$ "cutting board"
( $b_{1}$ ) INSTRIMENT FOCUS "stressing the goal of the action:
"Ro karne igapaikiwa" / ku iná / sa ungá / sa dapaeán / ku-sanduko'." $\begin{array}{ccccc}\text { goal } & \text { verb } & \text { causer agent } & \text { location instrument } \\ \text { "meat"- "slice" "mother" "child" } & \text { "cutting board" "bolo" }\end{array}$
(c) OBJECT FOCUS stressing the goal of the action:
"Ro karne pakiwa-on / / ku ináa / sa unga' / ku sanduko' / sa dapacán." $\begin{array}{ccccc}\text { goal } & \text { "verb } & \text { "causer agent } & \text { instrument } & \text { location } \\ \text { "meat" } & \text { "slice" } & \text { Ymother" "child" } & \text { "holo" } & \text { "cutting board" }\end{array}$
( $c_{1}$ ) OBJECT FOCUS stressing the agent of the action:
"Ro unga' pakiwa-on / it karne / ku iná / sa dapacón / ku sànduko"." agent verb ,goal causer location instrument * "child" "slice" . "meat" "mother' "cutting board" "bolo"
(d) REFERENT FOCUS stressing the location of the action:

Another paradigm shows a more realistic arrangement of causative slots, and is more representative of coinmon speech:

PARADIGGM 2: Focus Variations in Causative Quality, all focuses; "Mother had Lito buy candy for Maria."
(a) ACTOR FOCUS stressing the causer:
"Nagpabakáe si Nanay / kay Lito / it dulsi / para kay Maria."
(b) INSTRUMENT FOCUS stressing the goal:
"Ginpabakác nl Nanay / kay Lito / ro dulsi / para kay Maria.".
(r) OBJECT FOCUS stressing the agent:
"Ginpabakde ni Ṅanay / si Lito / it dulsi / para kay Marla."
(d) REPERENT FOCUS stressing the bencficiary:

8b, 6. DLAGRAMMING OF CAUSATIVR STATEMRNTS docs not differ much from that de- * ecribed in Section 7.5 for general quallty. The only differences are the addition of the roles for causer and agent, and also the abbreviation for causative qualicy ["c"]. The reader is again referred to Appendix 1 for a full list of abbrevintions.
(a) "joatawag mo ro doktor."

$$
\begin{array}{ccc}
\text { Ipatawág } & \text { mo } & \text { / ro doktor } \\
\text { cIF-S/subj } & \text { A/pro } & \text { Tm Nom } \\
\text { verb } & \text { agent } & \text { goal }
\end{array}
$$

("Have the doctor called.")
(b) "Ro Dyos owa' nagapabayá" sa tawong magahingotif"." ro dyos / owá' / nagapabaya' / sa tawong nagahincolnk': Tm Nom Neg caF-S/impt Rm Nom-Lm gAF-S/impi $\begin{array}{ccccc}\text { causer } & \text { real } & \text { verb } & \text { agert } & \text { v-comp " } \\ \text { "God" } & \text { "not" } & \text { "letbe" } & \text { "person". } & \text { "fy" }\end{array}$
("God docs not leave to himself the person who works hard.")
(c) "Pamat owf' nimo ak $\delta$ pagpasudla sa"andang Club?".
pamat //-owá / nimo / akd / pagpasudla / ̇a andang Club Qp.Om Neg A/pro T/pro cOF-S/conp $\operatorname{Rm~A/pro-Lm~Nom:~}$

('Why dinin't you let me enter their Club?")
8b, 7. IDIOMATIC USE OFATHE jpa-CAUSATIVE PREFIX. The Jpa prefix can be used with words of motion or distance to makeverbs of motion, with the meaning of "to. $\mathrm{go}^{\circ}$ ":

| SIMPLP RCOT |  |
| :--- | :--- |
| -capít | ("ncar[by]") |
| -eayd' | ("far, distant") |
| -banwa | ("town") |
| -bukid | ("mountain") |
| -ilayd | ("inland") |
| -ilawod | ("seawards") |
| -ull' | ("return") |
| Kalibo | ("Kalibo" [town]) |
| Jimeno | ("Altayas"[old namc]) |

| ]pa- IDIOM |  |
| :---: | :---: |
| -pacapit | ("approach") |
| -pacayó | ("withdraw') |
| -palainwa | ("go to tow'n") |
| -pabukid | ("go to the hills") |
| -pailaya | ("go inland") |
| -pallawód | ("go scawards") |
| -pauis ${ }^{\text {4 }}$ | ("go home") |
| -paKalibo | ("go to Kalibo") |
| -pahimeno | ("travel greatly") |

Technically speaking, some confusion could exist between the forms for jpa- used directly as a causative or else idiomatically to represent travelling distances. However usually the sense of tile form car be scen through conr^rt--the way it is used and che intention of the speaker, as in these two examples emplojing paadto in two meanings:
(a) "Pond:o ha pa cang; paulf" eon hamr." ('You're just on your way, [whilej we are aircady going home.")
(b) "Paadtuna imáw riya." ("Have hlm come herc.")

The incaning and use of.cach pa- should be quite clear.

8c. DISTRBUTIVE QUALITY, By almply adding tha Jpang- postpositive prefix to a root verb, with accompanying morphophonemic changes (sce"ASSIMLLAIION" and "CONSONANT REDUCTION" in Unit IV, Sections 4-5), the quality of a verb can be clanged. Instead of a bimple or gencral statement of the action, the action is distributed through time, or among soveral people or objecta, or is made into a process. The changes that take place usually in-rolve-local idiom, and are not always predictable. Thio presents a prablem the foreipn. learner, who must check for the meauing of the lpange pretix with anch verb stem. Some of the meanings and-uses have already been discussed in our section on "VERB STEM. CLASSLFICATi'ION" (this init, Section 6; particularily articles 6,5, 6,6 and 6, 8).
Bc; 1. THE MRANING OF DISTRIBUTIVES IN AKLANON. EXamples of the vartous meanings that the distributive prefix can ady to a verb are seen in the following:.
(1) DISTRUUTION OFTTME OR OBJECT:

(2) LOCALIDIOM; PROCESS VERBS:

| ROOT WORD |  |
| :--- | :--- |
| asawa | ("spouse") |
| kuto | ("lousc,". lice") |
| kita' | ("see") |
| sudlay | ("comb") |
| sigarilyo | ("cigarcte") |

]pange GORM
-pamakíe ("Buy plenty')
-panghueog: ("drop plenty of things")

- pamasyar ("wall around")
-panusí" ("break plenty of articles")
-pana-ó ". ("give plenty")
-penindahán" ("§o marketing")

Jpang- FORM
$\begin{array}{ll}\text {-pangasaiva } & \text { ("court and marry") } \\ \text {-panguto } & \text { ("táse lice from hair') } \\ \text {-pangita" } & \text { ("livelihood") } \\ \text {-panudlay } & \text { ("conibing oncts bair") } \\ \text {-panigarilyo ("cigarctatu smoking") }\end{array}$
(3) GOAL OR OBJECT EXPRESSED IN THE VERB STEM:
]pang- FORM

| -pamanwa | ("act as a citizea") |
| :---: | :---: |
| -pamunít | ("fish with a line") |
| -pargalidy | ("gather woud") |
| -pangawíl | ("go decp-sea fishing") |
| -pangiscia' | ("go sibling') |
| -panabas | ("tallar clothing") |

8c, 2. ROLE DISTRIBUTION AND YOCUS IN AKLNHON DISTRMUTIVE SENTENCES are roughly the same as that of General Quality, with the esception that the objects or actions are pluvalized automatically by the lpang- prefix. The various function markers take the vaxious slots, dep mileng on the class of the root word (see Section 6). There are no clazinges at all in role or g : mmatical function, as occur when the jpa- causative prefix is employed.
8c, 3. EXAMPLES AN: DLAGRAMMING OF DISTRIBUTIVE STATEMENTS are the same as the diagrams glven in bort: Section 7,5 and $\mathrm{Sb}, 6$, with the exception that the abbreviation "d" occurs before the distributive form of the verb. Consuit Appendix 1 for all the abhreviations.

Note that-the distributive forms take on any of the affixes as listed in the chart (7,3), 80 long as the verb class itself pernits that form. Altiough some dialects have complete conjugations for distributives, Aklanon evidences only the insertion of the jpang- prefix, thereby simplifying matters quite a bit.
(a) 'Nagpangisda' sande kabi-1." nagpangisda? / sanda / kabl-1 dAF-S/perf T/pro Adv verb actor past "fish" 'they" "last nigit"

(c) "Makapamueot sancla it kahoy sa idacot baedy."

("They can pick up wood underneath the house.".) •
(f) "Ginpanaw-an nì Carlos-ro anang mga amigo it dulsi." ghpanaw-an / ri Carlos i ro anang mga smigo / it dulsi dPF-S/perf Am Nom Tm A/pre-LmPm Nomi Om Nom $\begin{array}{ccccc}\text { verb } & \text { actor } & \text { poss. } & \text { benef } & \text { goal } \\ \text { give" } & \text { "Carlos" } & \text { "ins" } & \text { "friend" } & \text { "candy" }\end{array}$ ("Carlos gave [plenty of] candy to his friends.")

Bc, 4. DISTRIBUTIVE FORMS DISTINGUISIED FROM INSTRUMENTAL GERUND FORMS. Some con'usion exists between'the pang-'gerun form for tnstrumental or asisociative verbs end the jpang- distributive form. First of all, it should be noted that the Aklanon-dialect has two distinct pang-forms. They are homophones (sec III, 9), but their meanings are distinct, and also their use.

The jpang- distributive form is alwaya accompanied by morphopfionemic change, and, hence, occurs in the forms 〕pam- (before $/ \mathrm{b}, \mathrm{p} /$ ). 〕pan- (before $/ \mathrm{d}, \hat{\mathrm{t}}, \mathrm{s} /$ ) and ]pang- (before $7 \dot{x}, 7 / \pi$. The only time that morphophonemic change docs not occur is before the /h/-sound. Thus, the generalization can be made that the distributive jpang-- fuses with the root word. that follows it:

| bang- | pasyar | becomes | pamasyar |
| :---: | :---: | :---: | :---: |
|  | baliae |  | pamakide |
|  | sukót |  | panukdr |
|  | tahi' |  | panah! |
|  | kahoy |  | pangahóy |
|  | Isda' |  | pangisda' |

On the other hand, the pang-: gerund form for associatives is never acompanied by morphophouemic change, either in itself of in the root word. It remains a distinct; separate unit:

Besides the morphophonemic differences, variations in both meaning and syllabification can be seen in the following pairs:
(a) pangsimba /pang--sinn--bah/ ("clothing worn for church-golng") panimba /pa--nim--beh/ ("the act of going to churci")
(b)
pang-cbra /pang--'ob--reh/
("something used in dolng work") pangobra /pa--ngob--rañ/
("making or doing scyeral things")
(c) pang-isdar /pang--'is--da'/ ("something used $\operatorname{In} /$ /ox fishing") pangisda' /pa--ngis--da'/ ("the act of going fishing")

Although the forms are homophonous in tiemselves, their affixation to root words as well as their use in sentences should establish them as quite distinct. The two pang- forms can be distingulshed by seeing them operate together in such words as:

| (d) pangpamanday | ("something used in the act of carpentry") ["panday"] |
| :--- | :--- |
| (c) pangpanul:ót | ("the act of collecting debts") ["sukot"] |
| (I) pangpanimba | ("the act of going to church") ["simba"] |

This latte: form can be seen in the example:
( $f_{1}$ ) "Ro huyong nanguaumba hay owát pucós kon bukón it hantop sa inyong buót." ("Your going to church is worthless if you do not do it with all ardor.")

$$

9. OTHER VERB CLASSES OR MODES. There are several additional sets of verb affixes which can be used with nouns or other substantives to show verbal qualities, and which fall under the catefory of regular verb iorms. In many cases, these verbs have a separate mood or mode of their own; and are forms of the regular conjugation. However, not all roots can occur with these-affixes; and hence, they are treated scparately.
9,1. THE mang- VERB CLASS. All pang- distributive verb forms can/be reduced to a separate class of verbs in mang-. This particular class constitutes a system of its own, with a very simple conjugation:
nañg-
[the REAL FORM, denoting that the action has already begun; it can signify the present or. the past tenses]
[the UNREAL FORM, denoting that the action has. not yet be-
gur; it can signify thë̀ expected, future or subjunctive'tenses]
N.B. No other forms for-this-class exist; all aspect and/or time values are represented by one or the other of these two forms.
Just like the jpang: distributive prefix, the mang-/nang - forms have the same morpinophonemic changes and fit into a pattern:

| ROOT WORD |
| :--- |
| iscla' |
| kahoý |
| bunít |
| pasyar |
| patáy |
| dilot |
| sueát |
| tabang |

| mang- FORM |
| :---: |
| mangisda' |
| mangahoy |
| mamunit |
| mamasyar |
| mamatáy |
| manilot |
| manueát |
| manabang |

N.B. This list represents the major morphophonemic clanges for each par theular phoneme (viz: glottäı, $/ k, b, p /$ and so on).
(1) DIAGRAMMING AND EXAMPLES OF THE mang- VERB CLASS. Note that focus forms do not apply to this class since, they are automatically Actor Focus by nature. The actual function of the form in terms of aspect can be defined by its use in the sentence;
(a) "Mangutanai sabón sarúda kon may ensayo:"

| mangutana' | / sabón | sanda | kon | may | /ensayo |
| :---: | :---: | :---: | :---: | :---: | :---: |
| DISTR/suh'; | Dp | T/pro | Conj | Tp | Nom |
| verb | posib. actor | link | exist | goal |  |
| "ask" | "perhaps" "they" | "lf" | "there is" "practice" |  |  |

("They patght ask if there will be a practice.")
(b) "Si Pedrb owa' mangayo' it kwarta ay may ana man."
si Pedro / owá' / mang̀ayo' / it kwarta / ay / may / ana / man Tm Nom Neg DISTR/conp Om Nom Conj. Tp $1 / \mathrm{pro}$ / Dp actor past gerb goal: rcasn exist puss. auswr
"Pedro" "not" " "Pedro" "not" "ask for" "money" "since" "is" This" "also"
("Pedro did not ask for money becruse he has his own too." ${ }^{\text {( }) ~}$
(c) "Nangahoy si Ramón kabl-1."

| nangalioy / si Eumón / kabi-i |  |  |
| :---: | :---: | :---: |
| DiSTR/perf | Tni Nom | Adv |
| verb | actor | past |
| "wood" | "Ramon" "last night" |  |

("Ramon was gathering wood last night.")
(d) "Nangawll sanda makarón."

| mangawíl $/$ | sanda $/$ makarón |  |
| :---: | :---: | :---: |
| DISTR/impf | T/pro | Adv" |
| vert | actòr | pres |
| "sea-fish" | "they" | "now" |

("They are going deep-sea fishing now.")
(2) NOMINAL FORM OF THE niang- VERB CLASS. Many menbers of the mang-class can be made into nouns by reduplication of the nasal sound along with the first vowel of the root word, according to the formula: $\mathrm{maN}^{\mathrm{N}} \mathrm{V}_{1} \mathrm{~N}-[$ root]

| ROOT WORD |
| :--- |
| buhí' |
| buli'g |
| patáy |
| sucát |
| turó |
| isda' |
| umáh |
| kahoy |

| mang-VERB |
| :--- |
| mamuhi ${ }^{*}$ |
| mamulig |
| mamatdy |
| manucat |
| manuro' |
| mangisda' |
| mangumdh |
| mangahoy |

| mang- NOUN |
| :--- |
| mamumuhi' |
| mamumulig |
| mamamatáy |
| manunueat |
| manunuri' |
| mangingisda' |
| mangungumah |
| mangangahoy |

Thls form of reduplication was discussed in Uait IV, Section 10,6. This particular noun class, and its meaning, will be discussed later in this unit [Chapter D, Section 2,5 (i)]. Generally, this class can be considered an "occupational noun class"; the noun made from theyeri form shows he person's livelihood or full-time oecupation.

9,2. THE maging - VERB CLASS. A set of verb prefixes can be attached to a subr tantive or substantive phrase to give the verbal quality of "iecoming" to a particular noun or pronoun. Only two forms exist for the set:
nagin(g)- [the REAL FORM, signifying that the action has already begen, equivalent to the "past" or "present", depending on time words included in the chuse]
magin(g)- [the UNREAL FORM, signifying that the action has not yet or had not yet begun, equivalent to "future", "subjunctive" or: "conditioned" forms]
N.B. These prefixes can be coupled only with substartives, that is, nouns, pronouns or oiher nominals.
Grammatically, they are related to the mang- distributive forms, and are used in the same sort of way, but with differences in meaning. They are Actor Focus and only one mode, nignifyling "becoming":
(a) "Nagingkomunista ro Cuba kat pagdaóg ni Fidél Castro sa ribok." nagingkomunista / ro Cuba / kat / pagdabg / nj. Fidél Cảstro / sa ribok
 ("Cuba became Communist once, Fidel Castro had won in the revolutiou.")
(b) "Nagingungá' nàkon imáw pagayáw kaña kú anàng ginikanan."

("He became my child when he was, left behind by his parents.")
(c) "Buórt nakon kuntạ' magingpari'; ugaling owá" madayón ro akon nga handom." buót / nalion / kùnta'. / magingpari' / ugaling... V.det A/pro Dp BECOM/depn Conj verb actor modal v.comp "link
("I wanted to become a priest; however I never continued my plan.")
(d) "Owa'" imáw magingalkalde kon owa'" it bulig ro anang mga amigo."
owáa / imáw / magingalkalde / koñ / owá' it bulig / ro anang mga amigo
Neg. T/pro BECOM/conp Conj Neg Om Nom Tm A/pro-im Pm Nom

| past | actor | verb | link | poss. . goal | poss. |

| "this" | "mine" | "or" | "yours" | "also" | "same" | "just" | "me" |

('Be it mine or yours, it is just the same to me.")
9,3. THE mag-RELATIONSHIP CONJUGATION. This verb class denotes the relationship of people with each other . The distribution of aspect forms in this conjugation employs a different Idiom from the usual, in that the mag-form denotes the present aspect, although it can also denote the future:

| SIMPLE | MODE |
| :--- | :--- |
| mag- | [the form for present time, ineaning "is/are"; with a special cime |
| word it can also denote the future] |  |

There is also an ability mode for this class, though the forms are not commoniy used in colloquial speect::

ABILITY MODE
magka- [an UNREAL FORM, denoting possibility or futurity] nagka- [a REAL FORM, denoting perfectivity or pașit possibility] pagka- [an abstract or PARTICIPLR form, denoting perfectivity]

PLURALIZATION OF THE CLASS. This set permits pluralization when.
three or more people are described in the relationship. Such pluralization is acoomplished by infixing the root with $/-\frac{\delta V_{1}-/ \text {. Examples: }}{}$
"magmanghod sanda" ("They [two.only]'are brother and sister.")
"magmaeanghod sanda"' ("They [three or more] are brothers and sisters.")
(1) MEMBERS OF THIS CLASS include suçh roots as:

| -amá | ("father relationship") | -kumpare | ('relationship through |
| :---: | :---: | :---: | :---: |
| -amigo | ("friendship") |  | religlous sponsorship"') |
| -asawa | ("husband and wife") | -eucot | ("close relationship') |
| -batá | ("[anỳ] xclationship"). | - -hilapir | ("Ieighbor relationship') |
| -kampod | ("cousin-relationship") | -ind | ("mother-child relation") |
| -kilaea | ("acquaintance") | -pareho | ("equal rèlationship") |

(2). BXAMPLES OF THIS CLASS:
(a) "Magamigo eon sanda:"
("They are friends now.")
(b) "Nagkilaea sanda kahapon."
("They met yesterday" or "They became acquainted yesterday.")
(c) "A, magmaeanghod gall'. sanda!"
("Oh, they are really, brother and sister.")
(d) "Nàgkasundo' sanday Maria sa andíng plano."

("Maria and her companions were able to agree on the! r plans.")
(e) "Pagasawa nanda, nagdismayo ro noluya."

| pagasawa $/$ nanda $/$. | nagdismayo $/$ ro nobyar- |  |  |

| REL/paxt | A/pro | gAF-S/perif: | Tm Nom |
| v.comp | actor | verb | actor |
| "marry" | "they" | "faint" | "bride" |

("When they were married, the bride faicied.")
(f) "Owa' pa kaml magkilaca."

| owd' / pa $/$ kami / maghilaea |  |  |  |
| :---: | :---: | :---: | :---: |
| Neg | Dp | T/pro | REL-S/conp |
| post | time | actor | verb |
| "not" | "yet" | "we" | "acquainted" |

("We are not yet acquainted.")

9, 4. THE makipag- RECIPROCAL $\mathcal{S O N U G A T I O N}$. Another set of affixes can be attached to many verb stems to give the mood of instigating an action with or secking mutuality with another person. It is somewhat related to the mag- relationship conjugation, since most of the stems represented there can be affixed with this makipag- conjugation. -There are two alternates for cach form:

$$
\begin{aligned}
& \text { nakig- } \begin{array}{l}
\text { [the REAL FORMS of the conjugation, signifying that the action } \\
\text { naklpag- } \\
\text { has already begun, and that the subject is giving himselfover to } \\
\text { or has surrendered to a-mutualrelationship] }
\end{array} \\
& \text { makig- the UNREAL FORMS of the conjugation, signifying that the ac- } \\
& \text { makipag- tion. has not yet begun, and that the subject has a strong desire } \\
& \text { for mutuality or reciprocity with another] } \\
& \text { pakig- } \\
& \text { [the PARTICIPLE or ARSTRACT forms, which are not often used; } \\
& \text { they sometimes.occur older constructions in dependent clauses] }
\end{aligned}
$$

Examples of the use of these forms.are as follows:
(a) "Naila' akd makighambae kimo:"
("I would like to converse with you.")
(b) "Buót-akd makigsang-ayon sa imong kabubut-on." ("I would like to come to a complete understanding with you.")
(c) "Nakighueáy imdw.ku imong kalisód." ("He shares with you in your-bereavement.")
(d) "Gusto ko makipagkitz' kimo." ("I would like to confer with you.")
(è) "Kung makipagiba ka kana, indi' "gid ikáw.mataeáng." ("If you go with him, you will never go astray.")
(f) "Nakigsatsàt imáw sa among sugilanòn."

('He'is joining us in our conversation.").
(g) "Nakigimpon ako kinyo."

| nakigimpon | akó | / kinyo |
| :---: | :---: | :---: | :---: |
| RECIP/rèal | T/pro | R/pro |
| verb | actor | ind.g. |
| "mix" | "I" | "you" |

("I am trying to mix with you.")
(il) "Nakighibayág imáw kakon."
. ("He is with me in iny Joy,[laughter].")

9,5. THE -in- INFIX VERB CLASS. Certain noun or adjective roots can be infixed with -in- and transformed into verb roots. Although this class of verbs does not constitute a separate conjugation or mode, since it follows the conjugation of regular verbs in all focuses, it fits into this unit of separate verb forins. This verb class can be divided into three subgroups, based on their meaning:
(i) THE "ACTING inKE" MEANING:
-in-FORM

- -inanwang
-inamerikanó
-inarmi
-ininsik
-inabogado
- -inabaýd! .
-pinari
-minagueáng
(2) THE "SPEAKING" MEANING:

| -inakeanón |  | ("speak Aklanon") |
| :--- | :--- | :--- |
| -ininglis | ("speak English") |  |
| -binisaya' |  | ("speak Visayan") |
| -kinastila' |  | ("speak Spanish") |
| -tinagaeóg |  | ("speak Tagalog'") |

(3) CONDEMNATORY OR DEROGATORY MEANING:
-binasios
-binabayí
-inungá
-linahóg
-linangás
-linapsag
-sinapat
("act ill-mannered; say julgarities")
("act like a woman [effeminacy in a man]")
("act like a child")
("be naughty").
("be mischievous")
("act like a baby")
("act like an animal [be very rude]")

Note that these uses of the infix are idiomatic and that they differ from she -in-intensive infix described ín 10,6. The set adopts the standard verb. affixes fof all regular verbs, particularily in the Actor Focus:

$$
\ldots
$$

(a) "Antigo ka magbỉnisayá'?"
antigo / ka /. magbinisayd'
V.det T/pro gAF-S/depn
verbb actor v.comp
"know how" "you" "Visayan"
("Do you know how to speak V_oayau?")
(b) "Ayáv" maglimhóg."

- ("Don't be nauglity.")
(c) "Si Edgar gakinabayó" kon umobra." ("Edgar works like a horse [is carcless] when he vorks:")

9,6. THE $]$ ta - $\operatorname{TOSTPOSITIVE~PREFIX~is~a~phenomenon~retained~from~the~dialect~of~anti-~}$ quits, or so one might suspect, since it is used to describe a state or the placement of icings, yet it is limited to a very small set of verbs:

Certain nouns used today seem to evidence this archaic prefix, though their original! root words are apparently lost:
talibóng
talisay
("a long knife;"sword") ("a cock, rooster")

This same prefix is used in the construction of some commonly used prefixes:

The fan- verbs as! given above can be used with the affixes for regular verb inflection:
(a) "Mádalí' con nakataliwan rang blnuean."

/("The months have already passed by [so] quickly.")
(b) "Tinalikdan nama no inaway."

| tinallkdan' | mana. / so | inaway |  |
| :---: | :---: | :---: | :---: |
| gRF-S/perf | A/pro | Tm | Nom |
| verb'. | actor | local |  |
| "back" | "he" | "fight" |  |

("He turned his back on the fight.")
They can also be used with causative or distributive forms:
(c) "Ginpataliwan nama rob baby ag ana aga bun-on."
ginpatalivan / nona / rob baby / ag / ana aga bun-on cOF-S/perf A/pro Tm Nom. Conj A/pro Lin gÖF-S/futr
verb cause - goal link actor link verb "let pass": "he" "pig" "and" "he". "stab"
("He let the boar pass, and then he speared it.")
9.7. THE $\left[\mathrm{a}(\mathrm{d})\right.$ - DIRECTIONAL PREFIX also seems to have survived from antlquity ${ }_{\text {d }}$ par- ' 才y 'ticularily with the deictics or direction words, making them into verbs:

| ROOT WORD | NiEANING | - (d) | MEANING |
| :---: | :---: | :---: | :---: |
| - iya | ("here [near me]') | -ariya | ("arrive; come here") |
| una' | ("there [nepr you]") | aruna' | ("go near you") |
| Inha' | 'there [near you, |  |  |
| 140 | ('thėre'[far away ${ }^{\text {c }}$ ') | -adto | ('go [away] ${ }^{\text {" }}$ ) |

These forms can be conjugated as any riggular verb of Class VI (intransitive class), and can . also take the idiomaiic lpa- prefix:
(a) "Siĺn ka gaadto?"

| siln $/$ ka $/$ gaadto" |  |  |
| :---: | :---: | :---: |
| Qp | T/pro | gAF-S/impf |
| place | actor | ycrb |
| "where" | "you" | "go" |

("Wेhere are you going?")
(b) "Siín do imong g̀inaadtunán?"

| slín $/$ | do imong. | ginaadtunán |
| :---: | :---: | :---: |
| $Q p$ | Tm A/pro-Lm | gRF-S/impf |
| place | poss. | V.comp" |
| "where" | "your" | "go" |

("Where is the place you are going to?")
(c) "Paariyaha gid ifnáw."
$\begin{array}{ccc}\text { paariyaha } / \mathrm{gid} / & \text { imáw } \\ \text { cOF-l/comm } & \text { Dp } & \text { T/pro } \\ \text { verb } & \text { emph. agent } \\ \text { "come here" } & & \text { "he" }\end{array}$
("Make him come iere.")
A good number of nouns in current use today evidence his ]ad- type prefix. Some of them have traceable roots, though many have derived meanings, the roots of which are lost:

| alima | ("hand") [from lima ("five") - "the place of five fingers"] |
| :---: | :---: |
| alibangbang ${ }^{\text {a }}$ | ("butterfly') [from lhe ("other") - "flying from one to another"] |
| alipután | ("anus") [from jput ("feces")] |
| alipungto | ("the topmost part [of a tree]") |
| alimangu | ("[large] crab") |
| alipueds, | ('whirlpool') |
| alisoso | ('the inner part of a banana heart [8prout ${ }^{\text {' }}$ ) |

Although it is difficult to arrive at-the etymological roots of many of these words, there :s ample evidence remaining in ćurrent Aklanon to conjecture that both the la - nnd a(d)were an active part of the dialect in days long goue by.
10. OTHER VERB QUALIFIERS exist in Akianon which subtly change the meaning or quality of the verb. All together, there are six of them, and they will be discussed one by one.
10,1. THE Nia- POSTPOSITIVE PREFIX is used to show additional aptative or perfective quality in a yerb. It generally means that the state implied by the root word has been already achicved. The particular aspect prefixes then join with it to refer to the time of the state achieved. For example,
(a) musing-musing nagamusing-musing kamusing-musing nagakamusing-musing
(b) tueog matueog. katucóg nagakatuedg
(c) $11 a^{\prime}$ kallá' nagakallá'
(d) hucog kahucog nagkahucog
("smear with soot")
("is smearing with soot")
("state of being sooty")
("is smeared with soot")
("slcep")
("will go to sleep")
("In the state of slecp")
("is already sleeping")
("Hike; love")
("state of liking; courtship")
("is courting")
("fall down")
("state of having fallen down")
("had been in the state of falling down"
[Idiomatically: "was down and out"])
(e) "Nagakasamad pa robisikleta." ("The blcycle is still ruined.")

This form, when used with a simple root word, makes a noun, and ve shall meet it again. in the section on "NOMNALS". It Is also used with other verb qualifiers. It is used with pa - to form paka-, withprapo to form panga-; it is also used with -in- to form kina-. and with 1si- to form the prefix kaslng-. However, all of these are used in forming nouns, and will be discussed in the later chapter on "SUBSTANTIVES".

10,2. THE 〕si- [sometimes $]$ sig-] POSTPOSITIVE PREFIX is used to denote additional distributive qualities. Its use is emphatic and the subject is obligatorily plural (it differs from pang -, which shows an object that is obligatorily plural). For exampic:
(a) obra
("work') magsiobra
("each must do his own work")
(b) hambae
("speak, talk") sihambac ("speak together; hub-bub").

The form is also used with the prefixes mat- or ma-. An even more intensive type of distribution is shown with the distributive mang- (forming the prefix mansix-) which shows a type of helter-skelter distribution of both the subjects and the objects, with little or no cooperation or agreement golng on between the actors). Note these in the following.
(c) dügalling matsigdugaling
(d) hlmos masighimos
(c) hambáe mansighambae
("independent")
("each one does something his own way')
("cican' up")
("each cleans up his own space")
("speak, talk")
("many speaking as they wish, with no accord or cooperatiop; a melec")
(f) "Nagslbakde sanda it cambong." ("They eachi bought a different'shirt.")
(g) painsigan
("cach to his own")
N.B. pa- - ln- lsig- -an. This noun is made up of independeñt.qualifiers.

This form is used with other veab qualifiers. It is used with par- to form pasi-, and with pang- to form pani-; it is also usad with the jka-qualifier in forming the prefix kasing-:However, all of these forms are used in forming nouns, and are discussed later on in this paper ("SUBSTANTIVES", Chapter D, 2)
10,3. THE - $\mathrm{g}_{1} \sim$ PROGRESSIVE INFIX is used to show that an action is continually going . on; it pluralizes the action itself and shows its cònstant recurrence, adding the sense of "always ${ }^{17}$ to, the verb:
(a) saká' sacaka'
(b) bakác bacalía
("come up")
("always coming up")
("buy")
("always buying")

We have mentioned this form as a pluralizer when we discussed the mag- relationship verb class $(9,3)$. It is also used with the prefix'pa- in paea-, with pang- In paeang:, and with ka-in kaca-, sill of these are used verbally:
( 6 ) "Paealibak imáw." ("She is a labitual gossipe:.")
(d) "Nagpacangahoy, sanda sa kagueangan." ("They [all] were gatrering [plenty of] wood in the forest.")
(c) "Nagkieamatify sanda'sa gutom.".
('They were all dying from hunger.")
10:4. THE -in- INTENSIVE-INFIX is used to emphasize or intensify the action of the verb. As opposed to $-\mathrm{VV}_{j}$ - progressive infix; which shows the constant recurrence of an action; the -in- intensive infix emphasize the occurrence of an action on one particular occasion. Thus, the progressive quality shows the occurrence of an action on several occasions, but the intensive quality shows its continual recurrence on a single occasion:
(a) "Nagkinaon sanda sa amon nga saco-saco."
("They ate and ate at our party.")
(b) "Nagahinampang ro nıga ungh" it baraha." ("The children are playing and playing cards.")
Thus form occurs with pa- in plma-, with pang- in pinang-, and with ka- in kina-.

- 118 -

10,5. THE -illn- INTENSIVE INFIX is the fusion of the $-\mathrm{gV}_{1}$ - and the -in-infixes: It is used to striongy intensify and emphasize the action of a verb.
(a) hambac hilinambac
(b) ucín ilinucan
("talk, speak')
("continuous talking, unending chatter")
("rain")
("continuous downpour of rain")

10,6. THE $-C_{1} V_{1}$ - [repetition of the first consonant and first vowel of the root word] dimin uative infix lessens the possibility or degrec of lan action. It is most often used with conditional or happenstunce'statements, "and sometimes with the aptative mood:
(a) "Rayang tuejn-an màbabakáe sa Brioned Commercial." ("This book can be bought at Briones Commercial.')
(b) "Siín hidajakpi ro isda', kundi' sa ba-ba'?"
("Where else might a fish be caughit, but by the mouth?")
(c) "Abó' ro akong naiinom." ("I was able to drink a great deal.

10,7. SUMMARY CHART OF VERBAL QUALIFIERS. The following chart illustrates the function and occurrence of the various action qualiflers:

## C. THE STATIVE VERBS.

1. THEORY. There is a class of words in iklanon that presents itself as particularily had to define or locate. The class has the following attributes or qualities:
(1) It is descriptive, or somewhat like the adjective class; how- i ever, it'does not fit into that class because it does not have standard inflection for degree. For example, the paradigm for adjectives in Aklanon reads like this:

:- | put!' | ("white") |
| :--- | :--- |
| mas puti' | ("whiter") |
| pinakamaputí' | ("whitest") |

but one cannot construct the paradigm:

| "gutơm | ("hungry") |
| :--- | :--- |
| "mas gutóm | ("tiungrier") |
| "pinakggutóm | ("hungriest"). |

(2) The class has verbal affixes in its conjugation, but the dif-

- ferent sets are universally defective in Actor Focūs forms. All have na- forins denoting imperfective aspect value or present time, ? tut usually this form carries Actor Focus meaning:

| naga-oy akd | ("I am.tired.") |
| :--- | ---: |
| nagutdm akd | - ("I am hungry.") |
| naohaw akd | ("I am thirsty.") |
| natawo imáw | ("He was born.") |
| nahueog imáw | ("He fell.") |

-(3) Even though the class has verbal conjugation, 'its forms are very dorferent in most cases from those of the regular verb conjugation:
owá' ko pagbakea ("I did not buy...")
owá' akó grgutma ("I am not hungry.")
No such form as "gi--a" exists in the regular verb conjugation.
(4) These verbs exist in several classes which caribe distinguished from the classes set up for regular veriss, and alsöfrom each other.
Because of these particuiar facts, we have decided to treat these words as a separate part of speech, particularily since they stand apart from either verbs [regular] or adjectives. Since they can be inflected for tense or aspect, they are definitely verbs; since they describe states of being, they are stative; and somewhat related to adjectives. Thus they are called

- "STATIVE VERBS".

The particular subdivisions or classes are introducea in this section on the basis of differences in meaning or function, and also their frequency in current use of the vernacular and their coifugation. Some sets are rather large, others are relatively small. This is a phenomenon of the dialect which is simply recorded, though it cannot be explained from the data at ham.
2. CLASS I OF STATIVE VERRS has the largest conjugation and is made up of verbs that describe intemal feelings or sensations.
2,1. TIIE INFLECTION OF CLASS I iacludes the following forms:
SIATPLE OR INDICATIVE MODE

2, 2. TIIE MEMBERS OF CLASS I can be transitive or intuansitive, and include the following roots:

2,3. EXAMPLES OI CLASS I showing the various affixes are as foilows:
(a) "Niagutóm akó."
nagutóm / akó
STI-S/impl T/pro
verb actor
"hungry" "I"
("I'm hungry.")
(b) "Gina-oy imáw sa sautan."

| gina-oy | imáw | / sa sautan |  |
| :---: | :---: | :---: | :---: |
| Tl-S/perf | T/pro | Rm Nom |  |
| verb | actor | locat |  |
| "tired" | "he" |  | "dance" |

("He was tired at the dance.")
(c) "Owá" imáw giohawa."

$\begin{array}{ccc}\text { owá' } \% & \text { imáw } & \text { giohawa } \\ \text { Neg } & \text { T/pro } & \text { STl-S/conp }\end{array}$
(d) "Giato' hikibót ka kon unabót si Tatay."
("Maybe you would be shocked if Father would arrive.'")
(e) "Uminón ka eagi it tubi" agód indi' ikáw pagohawon sa daean." ("Drink some water now so that you won't be thirsty on the way.")
(f) "Tungód ku imo kakon nga ináywan, indi' ak $\delta$ pagmingawón."
("Because of what you left me, I will not be lonely.")
(g) "Hidlawón akó kimo kon hipanáw ka eon."
('I will miss you if you go away.")
(h) "Naohaw akd it gatas."
("I am thirsty for [some] milk.")
N.B. transitive use of -ohaw.
3. CLASS II OF STATIVE VERBS [intransitive, happenstance set] is somewhat related to the iirst class, with regard to the meaning of some of its members, but it includes only four basic affixes in its conjugation.

## 3,1. THE INFLECTION OF CLASS II:

APTATIVE MODE
REAL

UNREAL
happens Tance mode
[ALL FORMS]

$$
\begin{gathered}
\text { na(ha) --- } \\
\text { ha--- } \\
\text { ma(ha) }-\cdots
\end{gathered}
$$

hi---

The entire set describes a state into which something or someone has become or else refers to something that happened to son:cone or someching involuntarily. This explains why there are only aptative and happenstance affixes; the very nature of the set precludes any simpile mode conjegation.

$$
\text { - } 122 \text { - }
$$

32. THE MENBERS CE CLASS II are usually intransitive. They generally mày not take direct abjecte or goals, though they/can take referent's or indirect goals. The conjugation applics, in these cases, only to a statement of an involuntary or accidental acticn. This class is both anmate and persomal, as opposed to the following class, which is inanimate (6ee Class. III).

3,3. EXAAD:ES OF CLASS I! are 2s follows:
(R) "Kan-o iká\% natawc?"

PHYSICAL CONDITIONS
-duca' ("be lost")
-hueog ('fall [down]')
-matuy ("be dead")
-capus ("be finished")
-tawo ("be born")
-tumba ("fall [over ${ }^{\text {n }}$ ")
-ulihí ("be late")
-wacá' ("disappear")
("When were you born?")
(b) "Owa' si Pedro maizadlox."
("Pedro wes not afraid.")
(c) "Naakig akó sa akorg igkampud." ("I'm angry with my cousin,")
(d) "Naduea' ro akong gumankon," ("My nepher got lost.")
(c) "Basi' maulihí ka sa biyatre." ("Maybe you will be late for 'the journey.")
(n) 'Basi' hilipát ka sa pagdaeá it sucát ngato." ("You might forget to bring that letter.")
(g) "Hamadia' con ak\& sa tawo ngarón." ("T'm already sick and tired of that person.")
4. CLASS III OF STATTVE VERBS [intransitive, inanimate set] is directly related to the second class. but the neen:vers of this set are manimate objects; their subjects or actors can ondy be nam. inate rours on $t:$ nin. Thus, the ro topic ratarker is possible tomark things,

- 4, 1. THE INFLECTION OF CL.ASS III consists of only the following affixes:

Note that there are no simple mode affixes, because the actions described by this class of stative verbs are cither involuntary or accidental (just like in Class II). A different conjugation (in the regular verb system) exists for the roots of this class, if and when the actions are related as planned or purposefully executed. Note the following comparisons:
-(al) "Nagisi' no saewac."
("The trousers got torn.")
N.B. accidental, stative conjugation.
$\left(a_{2}\right)$ "Gingisi' nama no sacwae."
("He tore the trousers.")
N.B. purposely, regular conjugation.
( $\mathrm{b}_{1}$ ) "Bast' masamad rok kamerá:"
("The camera might get broken.")
N.B. accidental, stative conjugation.
$\left(b_{2}\right)$ "Basic" samaron imo rok kamerá." ("You might break the camera.")
N.B. purposeful action, regular conjugation.

Examples ( $a_{1}$ ) and ( $\mathrm{b}_{1}$ ) illustrate members of thus intransitive, inanimate stative class; while examples ( $a_{2}$ ) and ( $b_{2}$ ) illustrate regular verbs in simple modes.

4, 2. MEMBERS OF CLASS $\Pi 1$ are intransitive uses of the following verb roots:

It should be noted that two of the above verbs have homonyms which can best be distr gushed by the sense of a sentence:

| -dayón | ("go through, continue") [stative verb] |
| :--- | :--- |
| -dayon | ("stop over, stay over") [regular verb] |
| -tab8' | ("happen") [stative verb] |
| -tab8' | ("dip into; ladel") [regular verb] |

Note their use in the following examples:
( $a_{1}$ ) "Siln ka madayon?" ("Where will you stay?")
$\left(\mathrm{a}_{2}\right)$ "Siín madayón dato?" ("Where will it cơntinue?")
( ${ }_{1}$ ) "Matabo imaw it tubit ("He will dip for water. ")
( $\mathrm{b}_{2}$ ) "Matab6' ro disgrasya."
("The tragedy will happen.")

## 4,3. EXAMPLES OF CLASS III stative verbs are:

(a) "Nầno bacé ro nahatahb'?"
nano / baeá / ro nahatabo'

| Qp | Qp | Tm ST3-A/perf |  |
| :---: | :---: | :---: | :---: |
| thing | quest | v.comp |  |
| "what" | indeed?" | "happen" |  |

("What [in the world] happened?")
(b) "Nano bacá ro hitab6' kimo kon idto ka man?"
 ("What might have lappened to you had you been there too?")
(c) "Nabuká' ro tacabáh."
('The clam got epcned.')
(d) "Madayón pa ro anang mga plano?" ("Will his plans still go through?")
(c) "Magisi' sabón ro tela." ("The material inight get torn.")
5. CLASS IV OF THE STATIVE VERRS exhbite a curious phenomenon. First of all, all verbs of this class are transitive. Not only do they have the usual Object Focus forms in most cases, they also carry Object Focus meanings. They are classified $2 s$ statives because the) are defective in Actor Focus conjugation, and because they describe certain states int which someone or something might become.
5,1. THE INFLECTIN GF CL_ASS IV. Many of the roots in this class are drawn from the previous tha cla... : it only if and when they are used transitively'. The conld ation is related to that of (ath. 1 , and is as follows:

SIMPLE MODE

5.3. BXAMPLES OF CLASS IV:
(a) 'Indi' kita-on ro pukd kon maducóm."

| Ind! $/$ kita-on / ro bukid / kon $/$ maducóm |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Neg | ST4-S/futr | Tin Nom | Conj | Adj |
| futr | verb | goal | cond. | dscrp |
| "not" | "see" | "mountain" | "if" | "dark" |

("The mountain cannot be secn if it is dark ")
(b) "Makita' kúlkáw sa alas osso."
("I can sec you ar eight o'clock.")
(c) "Owá' ko imáw hieabd'." ("I did hot clance to wound him.")"
(d) "Nakasakít nana si Edgardo." ("Edgar was injuried by him.")
(e) "Ayáw nimo pagsamara ro, akon nga pagkataẃo." ('Do not damage my character.")
(f) "Humaná anay ro aton nga baeáy." ("First finish our house.")
6. CLASSV OF STATIVE VERBS [referent verb class] consists of a very large class of verbs, taken fro:: the other stative classes, that are used much like the standard form's of the Referent Focus, except that forms exist only in the Aptitive and Happenstance Modes. They, are eqentially stative forns because they are descriptive and they are without comparisons of degree. A complement, if one exists or is possible with the form, can be marked by any of the oblique function markers, depending on its meaning. generally
ku marks definite and animate subjects or complemeats; .
it marks indefinite and inanimate subjects or complements;
sia marks definite and inànimate subjects or complenients.
6, 1. TIE INFLECTION OF CLȦSS V REFERENT STATIVES:
APTATIVE OR ABILITY MODE

| REAL | $\begin{aligned} & \text { ha--an } \\ & \text { na--an } \end{aligned}$ |
| :---: | :---: |
| PAST CONDITIONED | na- |
| UNREAL | ma---an |

HAPPENSTANCE MODE

| REAL | (mi)hi---an |
| :---: | :---: |
| PAST SON:ITIONED | ( n 3 ) hi---i |
| UNREiL | (ma)him-an |

Note that the inflection: is the same as the inflection for standard Referent Focus verb stems in thene pitacular mones The duterence buie must be noted as ne of class, whether the stell is serving as a reculaı verd 'describing any Referent Focus action or role), or a stative v.rb (describing a state of feelung or happening).
(. 2 THF MEMBI:RS Or: CLASS $V$ include nembers from all of the previous classes, if ath in $n$ then are used in Referent fucus; sulne examples are as follows:

| -gutơm. |  | -iveru | ("have enough [of ${ }^{\text {" }}$ ) |
| :---: | :---: | :---: | :---: |
| - hlaw | (י'. $:$ (forf') | -hupod | ('be obligecu [to ]') |
| -hapdi' | ( $\cdot .$. : $\left.{ }^{\text {(by }}\right]^{\prime \prime}$ ) | -1:3n:1ad | ("tired ( 0 ! 1 ") |
| -sakít | -". :ir (byi') | -wnef' | ("disappear; lose") |

## 6. IY MPLES OF CLAE-

(a) "Naayawan akó."

| naayzwan / akó |  |
| :---: | :---: |
| $\begin{gathered} \text { STS-A/real } \\ \text { vérb } \end{gathered}$ | T/pro actor |
| "have enough" " |  |
| ( ${ }^{\text {T've }}$ 'rad en | nough.'n' |

(b) "Nawad-an kamf it ungá ."" ,

| nawad-an | keml | kam | it |
| :---: | :---: | :---: | :---: |
| unga' |  |  |  |
| ST5-A/real | T/pro | Om | Norn |
| verb | actor | goal |  |
| "lose" | "we" | "child" |  |

("We lost a child. ${ }^{\text { }}$ )
(c) "Nasaktan ak ${ }^{\prime}$ it duro ku imong ginhambae." ("I was decply hurt by what you said.")
(d) "Natamarán tang maghimo karón." ("'m tired [made lazy] of doing that.')
(c) "Nahugdan akd sa pagariya kimo." ("T fecl obliged to come to you.")
(f) "Mahapdi-án ka sa nina ngara." ("This cut will cause you pain.")
(g) "Ro ana nga naohawán bukón it tubl', kundi' rong kacág it katawce:sn." ("His thirst was not for water, but for the souls of hunanity.")
7. THE Jtag- STATIVE VERB QUALIFIER. Stative verbs generally do not ha:e quaity of a distributive or causative nature. However, the jtag- prefix can be added to many verb roots (regular or stative) to make a stative verb with the meanng "feel like" or "might want to". The general idea of this prefix is to internalize one's feelings. For exumple, saot is a coot meanng "dance", which is a regular verb describing an external action; however, if one says "natagsaot ako", he is stressing an internal desire, "I icel like dancing."
7.1. THE INF LECTION OF VERBS WITH TIIE jtag- QUALIFIER is quite simple:
REAL FORM ma-..
UNREAL FORM ma-..
with no alternate forms possible. It is quite simple to handle.
7,2. EXAMPLES OF THE STATIVE QUALIFIER'S USAGE:
(a) "Natagtangís akó." ('I feel like crying.")
(d) 'Natagbucó' akó sa anang hinambac." ("I felt like laughing at his speech.")
(c) "Natagih' akó it duro." ('Boy, do I have to urinate.')
(d) "Ay, matsa matagiá' ak6 kimo."

("Oh, naaybe 1 might like you." [said in jest])
8. STATIVE ROOTS AS OTIIER PARTS OF SPEECH. Stative roots can be coupled with certain affixes to thake forms that are members of noun and adjective classes.
8,1. STATIVE NCUNS. Tine ka- prefix can be added to a stative root to mal:e a noun describing a sute of peing:

| kiagutom: | ("liunger") | kasakit | ("pain") |
| :--- | :--- | :--- | :--- |
| kega-oy | ("tiredness") | kasubb', | ("sorrow") |
| kalipay | ("joy") | kasum-oe | ("boredom") |

N.B. Soracelmes these roots receive infixation and suffixation, as in the form kabueusgon ("satiation, fullness") [from busog], but these will be treated in detail in our section or "SUBSTANTIVES".

8,2. STATIVE ADJECTIVLS. The make- prefix and the $-\mathrm{gV}_{1}$ - infix-. uplication can be added to hany stative roots to form an adjective with the meaning "ma.es you..."

| makaluucusog | [busog] | ("filling; makes one satisfied") |
| :---: | :---: | :---: |
| makaducuyog | [duyog] | ("soperific; makcs one sleepy") |
| makahiliio' | [nilo' ${ }^{\text {a }}$ | ("poisonous") |
| ${ }^{\prime}$ makaosohaw | [ohaw] | ("makes you thirsty") |
| makasacakit | [sakit] | ("painful; makes you sick:") |
| makasucubo' | [subo'] | ('makes you sad") |
| makatacapon | [maron] | ("contagious") |

8,3. REGULAR VERES can be made from stative verb roots by inserting the kuna-intensive affin: but the meaning in this case is changed to show a continuous and intensive action. The ka-prefix alone is often added to many statives to make regular verbs.

| -kinamatáy | ("dying and dying") | -kailá' | ("court") |
| :--- | :--- | :--- | :--- |
| -kimatucog | ("slecp decply") | -katucóg | ("sleep") |
| -kiaau!hí | ("Je vezy late") | -kasundo' | ("be in agreement") |
| -kinasakit | ("be gravely ill") | -kasayod | ("know") |

EXAMPLES:
(a) "Ginakaila-on ni Marde si Agnes." ("Agnes is being courted by Murde.")
(b) "Hipos anay, nagakatueór si Steve." ("Please be quict; Steve is sleeping. ")
(c) "Nagkinamatáy ro mga manok sa pisti." ("Tlse hickens were all dyay ot plague.")
(d) "Nagkinatucog ro prusipesa liast" sa pagabot ku prinsipe." ('The princess slent and slept until the prace arrived."

## D. SURSTANIIVES: NOUNS.AND NOMINALS:

1. THEORY. If verbs are the most important part of any uterance, nouns follow as the second most important. Where a verb is a key to a sentence, nouns follow'as the bulk of the sentence, serving as a greater part of the door to the total meaning of the sentence. If verbs relate the basic elements of a sentence, those basic elements that are related arenouns or substantives.

Like the verb, the noun is extremely elusive to define. We are all acquainted with the general definition of a nown as the name of a person, place or thing. Although we can clearly see the names of persons or places as noyns, the classification of "tining" is far too vague. We know that "pencil" (lapis), "cow" (baka), "house" (backy) and so on are "things" because they are concrete objects, but more or less philosophical ruminations about masses such as "water" (tuhi"), "blood" (dug $\delta^{\prime \prime}$ ); about qualities such as rednass" (kapueahan), "strength" (cabaskog), "honor" (kadunggman); about actions such as "ticf)" (panakaw). "arrival" (pagabort), "worship" (panimba); or about abstract concepts like "love" (higugma), "thought" (paino-ing), of "respect" (tahod) elude us and confuse the basic definition of a noun as a

Iń addition, the basic definition'is circular or redundant since noum and rame are two forms for the same word. As Roberts says, "Nöional classification of nounsis really a classification of the natters of the universe, and this is not a major responsibility of gram mar. ${ }^{-28}$
1,1. NATURAL NOUNS. Since definition itself is so difficuit, perhaps the easicst way to discover just what constitutes a noun is to find words which any Aklanon would indisputably regard as nouns. Such forms would be of benefit, of course, to begingers at the grammar of the dialect, both foreigners and native children.

Looking to the vague notional definition we could list manes of persons, places and things for a start:

ERIC

| baso | ("glass') |
| :--- | :--- |
| bagoc | ("hell") |
| bangkaw | ("spear") |
| kukd | ("(linger]nail") |
| kuríng | $-\quad$ ("cat") |

| gaw6d | ("young cuconut") |
| :--- | :--- |
| cumáy. | ("love potion") |
| gunting | ("scissors, shears") |
| tacelb | ("yde, color") |
| tibod | ("carthen jar, container"") |

Any of these words fron these three lists would strike a native speaker as a noun or name word. Each of them, as we shall see, is not merely an isolated paxt of speceh; but can beconsidered to be a noun--along with nany words that do not occur on this list--due to its function widhin a sentence. The debatable "natural definition" has only limited use.
1,2. 1OMOPHONIC NOUN CLASS. A small group of words exists which illustrate a nominal quality due to stress. Apart from stress differences, they make perfect minimal pairs with verb forms. They were already listed in this unit, Section B, 1,3(p.57). A partial reading is given here:

| NCUN FORM |  | VERB FORM |  |
| :---: | :---: | :---: | :---: |
| /batay/ | ('house") | sbagay/ | ('Build, set up framework |
| /dagáh/ | ('onc's belongings") | /dagah/ | ("carry, bring along") |
| /tabon/ | ("cover; tablecloth") | /tábon/ | ("cover") |

Note how the accent on the last syllable distinguishes the noun from the verb form. However this criterion for judging nominal quality is limited to a very small set of words and does not help much in our search for : definition of the Aklanon noun.
1,3. FORMAL DEFINITION. A certain serics of morphological peculiarities can show a word to belong to the noun class. These particular forms fall under three headings.
(1) PLURALIZATION WITH mga. "Miga" [as it is spelled by Aklanons, actually pronounced /manga/] is a function word which pluralizes the article it follows. It does not, in ef fect, pluralize the noun form. This can be proven by three observations. First of all, the mga marker can be fused with the ro/do and ku markers, forming rong/dong and kong. - In these cases, the fusion is a topic-plural or associate plural marker. Secondly, the markers for personal name have their owa plural form (si is pluralized sanday; ni, nanday, etc.). The pluralization is fused with the marker, not with the name, Thirdly, the nga can not be used on.nouns that are inherently plural. These observations ${ }^{29}$ should esiabilsh mga' as a function word pluralizing the marker it follows rather than the noun it precedes.

However, because it functions as a marker, the form that follows it is automatically illustrated as a noun. In addition, even if inga pluralizes the function word, such plurality. can only be shown on nouns, and not with the other parts of speech. This is to say that only nouns can be plural; verbs, adjectives and adveribs are not pluralized in Aklanon. Thus we can say that the following are nouns:

| mga isdá' | ("fishes") |
| :--- | :--- |
| mga babayi | ("women") |
| mga baraka | ("stores") |
| mga dagom | ("needles") |

mga $\frac{\text { gahom }}{\text { mga haco }}$
mga namuk
inga tudlo
("powers")
("lizards")
("mosquitoes") т̣ers; toes")

The sanie would be true for any word following rong or doun, which also shows topic position and plurality. Hence, pluralization in-Aklanon, as in English, is a sign of a noun form; although the means of marking the plural m each language is quite different indeed.
$\overline{29}$ Dr. T. Anderson, personal communication.

$$
-131-
$$

(2) NOUN-DETERMINING FUNCTION WORDS also can mark out a noun or a substantive. Inthis case, tnosí adjectives linked to the noun by the ligature nga would serve to identify a noun. A random sample of such words can be picked arbitrarily, and at least:one of them might apply to any word actunlly a noun in itself or functioning as a noun. Five such words have been chosen:

| akon nga, | ("my ...") |
| :--- | :--- |
| duyón niga | ("that...") |
| mayad nga | ("good...") |
| sambato nga | ("one...") |
| tainán nga | ("every...") |

These words can'be used to reveal a substantive form, as in:
(a) "akon nga asawa" ("my wife")
(b) "duyón nga baeáy" ("that house")"
(c) "màyád nga patu'gsiling" ("good consideration")
(d) "sambato nga gugma" ("one love")
(c) "Mayád do tanán nga ginobra nana."

| mayad $/$ | do | tanan | nga | ginobra | nana |
| :--- | ---: | :--- | :--- | :---: | :---: |
| Adj | Tm | N.det | Lm | goF-S/perf | A/pro |
| modf |  | modf | link | Nom | poss. |
| "good". |  | "all" |  | "do" | "hiṣ" |

("Everything he did was perfect.")
In these examples asawa, baeay, patugsiling, gugma and ginobra can be defintely cited as nouns becáuse of their function after the noun-determiners. These words could serve as a good test in any difficult situation to discover whether or not a form were a noun or a nominall. .
(3) THE FUNCTION MARKERS [ro/do, ku , it , sa] mark the words or phrases following them as nouns or substantives. They will be treated in a later section (Section 3). For in now it.wi!l suffice to say that any word or phrase following such a marker is constituted as a nominal. Even if that particular form would normally be another part of speech, it functions as a nominal when following a function inarker. Note this In the following example:
( $\left.a_{1}\right)$ "Ginobra nakon ro bacáy."
("I built the house.")
$\left(a_{2}\right)$ "Baedy ro akong ginobra."
("A house was what I built.")

Note how the topic inarker ro can change a verb phraje intó a noun phrase; note also that the noun-determiner akong also establishes ginobra as a noun.
2. STANDARD NOUN-MARKING DERIVATIONAL AFFIXES. There is a fourth type of form that. shows a word to belong generally to a noun class, but the set is so large that it demands special treatment in a section all its own. The purpose of this section, then, is to discuss all of the standard affixes which generally occur with roots to make noun forms. In the interest of both simplicity and completeness, several groups have been established àcoording to morphological similarities. That is, the groups share or center around a common form, such as, basic root word, ka-type prefix, occupational nouns, and so oh.
2,1. NOTE ON STRESS WITHIN NOUN FORMS. Before going into detail, one generalization can be made about the whole set of nouns as opposed to other parts of speech, particularily verbs. When a noun form and a verb form are humophonic (have the same sounds), liere is usually a basic difference in stress. Verb affixes, which are inflectional, ${ }^{30}$ tend to carry the accent with them, or to influence the accent so that it falls at the end of the root word. Noun affixes, which are derivational, ${ }^{30}$ tend to Ieave the accent within the root word, although normal accent changes may be necessitated (as in the case of 2 suffix at the end of the root word, which moves the accent towards the second to the last s;llable 31). For example, the root word sucbd ("enter") has the verb form sudlin ("be entered"). Note that the verb suffix -an carries the accent with it. On the otiler land, the form knsudlan ("con= tainer") is a noun. and the suffix -an in this case leaves the accent within the root word. With the word hampang ("play") we have the verb iorm hampangén, and the noun form * hampángan. With the root tapus ("end") we have the verb form manogtapís ("just about to end"), and the noun form mane-tipus ("an ender, person who brings a thing to a close"). The same is true of bunit ("angle"), with the verb form manogbuntt ("may go angling") ind the noun form manogbúnit ("an angler"). Thie noun prèfix keeps the accent well within the root word, while the verb affix sends the accent to the last syllable.

Thus, noun forms generally retain the accent somewhere within the" root word, while verb affixes strongly influence the placement of the accent or stress.

2,2. THE SIMPLE ROOT-WORD NOUN CLASS is a group of forms centering on the root word, without any prefixation. However, in son:e cases, the processes of infixation or suffixation occur. The various sub-classes are:
(1) BASIC ROO'r WORDS such as:

| tawo | ("person") | busoe | ("seed") |
| :--- | :--- | :--- | :--- |
| tubi' | ("water") | bucak | ("flower") |
| dugós | ("honey") | bunga, | ("fruit") |
| hari' | ("king") | kahoy | ("trec; wood") |
| oco | ("head") | kabkab | ("fan") |

(2) FOREIGN-BORROWED WORDS from various languages such as:

| FṘOM SPANISH |  |
| :---: | :---: |
| bapdr | ("ship") |
| baríl | ("gun") |
| kabayo' | ("horsc") |
| kutsara | ('tablespoon') |
| karne | ("meat") ${ }^{\text {d }}$ |
| relihiy on | ("religion") |
| swerte | ("luck'') |
| rilis | ("railroad") |

-133-

### 1.50

| FROM | CIINESE |
| :--- | :--- |
| boysit | ("bad luck") |
| pansit | ("meat-noodle dish") |
| syopaw | ("rice bread") |
| tiyán | ("stomachi") |
| tsa | ("tea") |

| FROM INDIAN OR SAINSKRIT |  |
| :--- | :--- |
| daeaga | ("maiden") |
| mahfe | ("dear; expensive") |
| mutya'. | ("pearl; treasured thing") |
| radya | ("rajah, king") |
| turó' | ("teach") |

(3) ARCHAIC SUB-CLASS EVIDENCING REDUPLICATION OF DOUBLE SYLLABLE WORD̄, such as:

| eacaki | ("man") [from stem "gaki] |
| :--- | :--- |
| babayi | ("woman") [from stent "bayi] |
| daywa | ("two") [from stem *dewa] |
| tatlo | ("three") [from stem *tugo] |

(4) REDUPLICATED WORDS, which have a sense of artificiality or lessened quality:

| baeay-baeay | ("toy house") | tawo-tawo | ("puppet, doll") |
| :--- | :--- | :--- | :--- |
| bueak-bueak | ("embellishment") | tingoy-tingoy | ("topmost part of tree") |
| ayam-ayain | ("toy dog; spy") | tiyog-tiyog | ("vagabond"). |

(5) NOUN ROOTS WITH -an. SUFFIX, which generally have the sense of a place or location where the action of the root occurs, such as:

| bakasyoudn | ("vacation spot") | simbahan | /("church") |
| :--- | :--- | :--- | :--- |
| basketbolan | ("Dasketball court") | tindahan | ("market") |
| eskuylahán | ("school") | tubordn | ("spring") |
| cugban | ("sleeping place") | paligosán | ("bathroom") |

(6) NOUN ROOTS WITH $-d V_{1}$ [or allomorph -li-] REDUPLICATION-INFIX AND - an SUFFIX, which also show a place where an action occurs:

| ROOT WORD |  |
| :--- | :--- |
| bati' | ("feel") |
| bitay | ("hang") |
| butho' | ("study") |
| bampang | ("play") |
| ihi' $^{\prime}$ | ("urine") |
| sunód | ("follow") |
| tuón | ("study") |
| tubód | ("gush") |

| NOMINAL FORM |  |
| :--- | :--- |
| bacati-an | ("sickness") |
| bilitaydn | ("gallows") |
| bueutho-an | ("school") |
| heeampangan | ("playground") |
| ilihi-án | ("urinal") |
| sueundan | ("ruler; leader") |
| tueun-an | ("book") |
| tueubdan | ("spout") |

(7) NOUN ROOTS WITH - $\mathrm{gV}_{1}$ - REDUPLICATION-INFIX AND -on SUFFIX, which gener:ally name objects involved with actions:

| bakác | ("buy") | bacakeon | ("things to be iought") |
| :--- | :--- | :--- | :--- |
| basa | ("read") | baeasahon | ("reading materials") |
| buhat | ("do; work") | bueuhaton | ("hings to be done") |
| batyag | ("feel". | bacatyagon | ("feclings; emotions") |
| sugo' | ("order; command") | sucugo-ón | ("servant") |

30 See this unt, Chapter A, Sections 4-5 (pp.53-54) for the differences beiween derivational and inflectional.
31 See Unit IV, 1, 3 for explanation and examples.
(8) NOUN ROOTS WITH THE -m-INFIX AND -an SUFFIX, such as:

| ROOT WORD |  |
| :--- | :--- |
| angkit | $\cdot$ |
| eabá | ("bite") |
| gikan |  |
| ungá'. | ("comene [floths]") |
| ("child") |  |

| NOMINAL FORM |  |
| :--- | :--- |
| inangkitín | ("teeth marks") |
| linabahán | ("clean laundry") |
| ginikanan | ("parents") |
| inunga -An | ("unwed mother") |

N.B. Related to this class are a small set of nouns with the gin-prefix and the -an suffix, such as:

| hari ${ }^{2}$ - ("king") | ginhari-an | ("kingdom") |
| :--- | :--- | :--- |
| halín | ("come from") | ginhalinán |
| ("origin; background") |  |  |

(9) NOUN ROOTS WITH THE SIMPLE -in-INFIX, such as:

| bilanggo' | ("imprison") |  | binilanggo' |
| :--- | :--- | :--- | :--- |
| buean | ("moon") | ("prisoner") ... |  |
| binuean | ("group oi months") |  |  |
| buhat | ("maké; create") | binuhat | ("creature") |
| tawo | ("person") | tinawo | ("personell") |
| ungá' | ("child") | inunga' | ("population; citizen") |

(10) NOUIS WITH THE DIMINUATIVE REDUPLICATION [ $C_{\text {}}$ uf( 0 ) - -- ]. When the first syllable of a rcot word is accented, the allomorph $\mathbf{C}_{\text {jugo }}$ uppears as prefix; otherwise the $\mathrm{C}_{\text {J u }}-$ is used.

| bucobarko | ("toy boat") | luclamesa | ("makeshift table") |
| :--- | :--- | :--- | :--- |
| huechambae | ("reparree") | tucotawohan | ("small population") |
| bueobarcto | ("toy banca") | 广ue-yaw-anay ("procrastination") |  |

2,3. THE pag- NOUN CLASS is related to the Actor Focus verb system, gathis in effeci, the gerurd form of the verb. It is generally equivalent to the verbal nouns of English ending in "-ing." Its subclasses are:
(1) NOUNS WITH pag- as prefix making a noun of an action word:

| $S$ WITH pag- as prefix making a noun of an action word. |  |  |  |
| :--- | :--- | :--- | :--- |
| pagbasa | ("reading") | paghigugma | ("Idve", |
| pagkaon, | ("food; edioles") | paghugor | ("industry") |
| pagguwh', | ("performance") | paghinguha' | ("trying; attempt") |
| pagdumidum | ("thinking, thought") | pagmaháe | ("endearment; charity") |
| paghambae | ("speaking") | pagtu-o | ("faith; believing") |

(2) NOUNS WITII pagka- as prefin, denoting a fixed state;

| pagkabuhi' | ("deliverance") | pagkabuót | ("goodness") |
| :--- | :--- | :--- | :--- |
| pagkalibre | ("freedon!") | pagkatamad | ("indolence") |
| pagkatawo | ("character") | pagkahipos | ("quietness") |
| pagkamatáy | ("death") | pagkatipld | ("thrıftinéss") |

2,4. THE pang- NOUN CLASS is relaced to the Instrument Focus verb system, and is in effect the gerund form of the verb. ly has the following subclasses:
(1)

| panangu | ("dream") |
| :--- | :--- |
| pangutana | ("question") |
| penghitod | ("offeru!g [to God]") |

| pangpanimba | ("worship") |
| :--- | :--- |
| pembalitawan | ("love joust in song") |
| panugiron | ("narrative; story") |

(2) NOUNS WITH panga- as a "refix:

| pangabuhi' | ("life") | pangabudlay ${ }^{\text {A }}$ ("difftculties") |
| :--- | :--- | :--- |
| pangalipdy | ("joy") | pangalisód |

N.B. panga- is the fusion of lpang- and Jka-.
(3) NOUNS WITH pani(ng)- as a prefix:
panimaday ("household") 1 .panimudt ("one's attitudes") panimanwa ("citizenship") panimad-on ("superstitious beliefs") N.B. pani(ng)- is the fusion of lpang- and ]si(ng)-.
(4) NOUNS WITH panghi(ng) - as a prefi::

| panghingaean | ("noun; name for all") |
| :--- | :--- |
| panghimaedd | ("palmesiry; fortune telling") |
| panghimueos | ("taking advantage [of]") |
| panghinakit | ("empathy") |

2,5 . THE OCCUPATIONAL NOUN CLASS consists of nouns which describe the work or tools of V arious professions and occupations. Its sub-classes are:
(1) NOUNS WITH maNV $\mathrm{N}^{\mathrm{N}}$ - snow that the activity of a person is totally characteristic of his occupation; in other words, the person does the action expressed in the root word as a full-time activity: ${ }^{32}$

| mamumulig | ("paid helpers") | mamumunit | ("angler") |
| :--- | :--- | :--- | :--- |
| mangangehoy | ("wood gatherer") | mangingisda' | ("fisherman") |
| mangungumà | ("farmer") | manunucat | ("secretary") |
| manunuro' | ("teacher') | mananahi' | ("tailor") |

(2) NOUNS WITH manog- show.that the activity of a person is not totally characteristic of his occupation; in other words, the person does the action expressed in the root word as a part-time activity:

| manogarado | ('plowman") | manogsucat ("author") |
| :--- | :--- | :--- |
| manoghambae | ("lecturer") | manogpakilaca ("emcee") |
| manogturo' | ('tutor") | manoglimpyo ("cleaner") |

(3) NOUNS WITH mag-C $\mathrm{C}_{1} \mathrm{~V}_{1}$ - reflect an archaic sub-class of occupational nouns referring to God or the Deity:

| magbübuót | ("Supreme Will") |  |
| :--- | :--- | :--- |
| magbubúhat | ("Creator") | magagahom <br> magbubugna $^{*}$ ("Supreme Power") |

(4). NOUNS WITH maka-C, $\mathrm{V}_{1}$ - reflect another archaic sub-class of occupational nouns referring to God or to the actions or God:

| makaako' | ("Redeemer") |
| :--- | :--- |
| makagagahom | ("'Wielder of Eternal Power") |
| makakukusog | ("Possessor of Eternal Strength") |

32 For other references and explanations of this prefix, see Unit IV, 10,6 and Unit V, B, Section 9, 1, article (2).
(5) NOUNS WITH -um-V ${ }^{\text {g }}$ - infix reflect an agent or regular doer of an action:

$$
\begin{array}{ll}
\text { sumueunod } & \text { ("follower, disciple") } \\
\text { tumaeambung } & \text { ("audience, gathering") }
\end{array}
$$

(6) NOUNS WITH inog- show the relationship of a tool to a job:

| inogbunit | ("something used for line-fishi.g") |
| :--- | :--- |
| inogbüs-ak | ("something used for splitting [wood]") |
| inoghambac | ("something to say") |
| inoglimpyo | ("something used for cleaning") |
| inogsueat | ("something used in writing") |
| inogturo' | ("a pointer; the index finger") |

N.B. Related to this class is the one noun form igclaeapat ("utensil").
(7) NOUNS WITH pang- [witin no morphophonemic c̣hange] illustrate an established use for a particular thing;

| pangsimba | ("clothing used for going to church; Sunday-wear") |
| :--- | :--- |
| pangtindahan | ("something used for marketing") |
| pangeamíg | ("apparel worn when it is cold") |
| panglakáe | ("something used for buying") |

2,6. THE RELATIONSHIP NOUN CLASS consists of nouns which describe the relationship of persons or things; they are related to the mag- and makipag- verbs. Subclasses:
(1) NOU'NS WITH mag-illustrate close relationships:

| magamá | ("father-child relationship") |
| :--- | :--- |
| maginá | ("mother-child relationship") |
| magkampud | ("cousin-relationship") |
| magmanghod | ("brother-sister relationship") |

N.B. The $-\mathrm{gV}_{1}$ - infix pluralizes the members of the relationship and indicates a relationship of three or more people.

| magmaeanghod | ("brothers and sisters") |
| :--- | :--- |
| magaeamigo | ("friends") |

(2) NOUNS WITH ig- name a singular, specific relationship:

| igkampud | ("cousin") |
| :--- | :--- |
| igbatá | ("relative") |
| ignanghod | ("sibling") |
| igsu-on | ("godbrother") |

(3) NOUNS WITH isigka- denote a "fellówship" relationship, such as:

| isigkatawo | ("fellow-man") |
| :--- | :--- |
| isigkapareho | ("an equal; fellow of the same class or status") |
| isigkahilapit | ("a neighbor") |
| isigkasangáy | ("a person with the same name as another") |
| isigkaiklasi | ("a classmate") |
| isigkaungh' | ("a fellow child; a sibling") |
| isigkamaestra | ("a co-teacher; a fellow teacher") |
| isigkasakay | ("a fellow passenger") |

2,7. THE ka- NOUN CLASS derives from the use of the previously mentioned Ka- verb juatifier denoting perfectivity. In the case of nouns, it denotes that the quality of the root word has been acheived or attained. It has the following subclasses:
(1) NOUNS WITH ka- can be made from verbs or adjectives:

| VERB ORIENTED |  | ADJRCTIVE ORIENTED |  |
| :---: | :---: | :---: | :---: |
| kabulig | ("helper, servant") | kabug-at | ("weight") |
| kahampang | ("playmate") | kahaba' | ("length') |
| kahugod | ("industriousness") | kaitúm | ("blackuess") |
| kaisog | ("bravery, daring") | kapueá | ("redness') |
| kaumling | ("resemblance") | katans | ("height") |
| ka sakay | ("passenger") | katam-is | ("sweetness") |

(2) NOUNS WITH THE ka- PREFIX AND -an SUFFIX show either an absolute quality of a thing or else.its location:

QUALITY ORIENTED
katapusan ("end; termination") kalipayan ("joy; happiness") kameayran ("improvement") kauswagan ("progress") kasubo-án ("sadiness") .

LOCATION ORIENTED
kabueakan ("bower of flowers") katamnan ("orchard") kanyogán ("coconut plantation"), katawohan ("humanity'.) kapaeayan ("rice field")
(3) NOUNS WITH ka- PREFIX AND -aman SUFFIX:

| kasae-anan | ("sinfulness") ", | kaliscianan ("hardships") |
| :--- | :--- | :--- |
| kadag-anan | ("victory; conquest") | kadungganan ("honor; fame") |
| kapuslanan ("worth, value") | kabangdanan ("reason, cause") |  |

(4) NOUNS WITH Ka= PREFIX and -On SUFFIX [and somctines with various infixes] name a certain state of being, and are related to the Stative Verbs:

| kagutomon | ("hunger") | . kahubut-on | ("one's psyche, interior self") |
| :--- | :--- | :--- | :--- |
| kaohawon | ("thirst") | kaumangon | ("foolishness") |
| kamatayon | ("death") | katueogon | ("slèep") |

(5) NOUNS WITH kini- PREFIX [and sometimes the sutfix -an] usually show "the basic outgrowth of", "the climax of" or "the culmination of" what the root word implies. This prefix brings the root word down to a basic concept, as can be seen in the following:

| , | kinaaeam | ( | kinadman ("one's accumulated skills') |
| :---: | :---: | :---: | :---: |
|  | kinabuhi' | ("one's total life") | kinabudlayan ("fruit of one's labor") |
|  | kinahangean | ("one's need[sf") | kinatawohan ("one's liirthday") |
| $\chi$ | kinasawáy | ("a hasic objection") | kinadiperensya ("a basic problem") |

(6) NOUNS WITH kasi(ng)- as a prefix denote sometiung which comes from the same source or pattern as the root word:
kasimacáy ("someone coming from the same house")
kasinaryo" ("someone coming from the barrio; a barriomate")
kasimanwe ("a town-mpte",
kasingkasing ("heart, core")
kasintuead ("an identical pattern; something coming from the same pattern")

2,8. THE pa-[CAUSATIVE] NOUN CLASS derives from the use of the causative verb prefix pa- in various shapes, denoting that the meaning of the root is caused. It las the following subclasses:
(1) NOUNS WITH SIMPLE pa-:

| paguwa' | ("exit") |
| :--- | :--- |
| pahueam | ("loan") |
| 'pasaka' | ("interest, gain") |
| pasueód | ("entrance") |

| pahanung $\delta d$ | ("adjustment; dedication") |
| :--- | :--- |
| pahisayod | ("notice, notification"). |
| paswerte | ("pot luck") |
| paligos | ("bath") |

(2) NOUNS WITH paka-: $\begin{array}{ll}\text { paka-ayd́d } & \text { ("repair") } \\ \text { pā̄a-abd' } & \text { ("considered as } \\ & \text { plenty") }\end{array}$
pakabuót ("good nature; good sense") pakamatáy ("suicide")
(3) NOUNS WITH pina-:
pinamahde ("someone/thing caused to be dear or' expensive") pinasuedd ("someone/thing contributing to a person's entrance") pinahucasan ("the result of onc's sweat and toil; outcome; production")
(4) Nown WITH paca- show the fondne'ss of a person to do something or his habitual actions: pacakaon ("a person who is always eir ng; a glutton") pacakan-on . ("a person who al pays must be fed; a dependent") pacata-ó ("a person who is fond of giving things away") pacaumdg (" a person who always soils his clothing") pacaugót ("a person who easily gets angered; a crab")
(5) NOUNS WITH paki- as a prefix are rare, and generally considered to be borrowed from Tagalog:

| pakisama | ("ability at maving frieqds oo: mixings with people") |
| :--- | :--- |
| pakiusap | ("talking to a person on behalf of another; mediation") |
| pakitambag | ("a settling or pacifying agreement") |
| pakidawar | ("something which hoists or lifts up") | N.B. Even if some of these forms are borrowed from Tagalog, they are used idiomatically in Aklanon as nouns; they are not now-forms in Tagalog.

(6) NOUNS WITH pakig- as a prefix show a pursuit after or a striving for something:

| pakìgiba | ("the act of seeking companions") |
| :--- | :--- |
| pakigamigo | ("the act of getting friends") |

2,9. THE ta- [location or time] NOUN CLASS derives from the use of the ]ta- verb qualifier. It was noted that la- is an arcluic form, however these particular prefixes are very much in use today :
(1) NOUNS WITII THE taga- prefix show the piace of oxigin of a person or thing:

| tagariya | ("from this place") | taga-idto |
| :--- | :--- | :--- |
| tagabukid | ("from the moreigner'") |  |
| ("from the barrio") |  |  |

(2) NOUNS WITH THE tag- prefix can siguify "ownership of" or "individuality":
tagbachy ("homeowner, landlord")
tagbuhat ("creator; craftsman")

## tagsueat ("an author; a writer") tagana ("owner, possessor")

(3) THE tag- prefix can also be used to make a general substantive giving information which the listener might be expected to be aware of already:

```
tagasull ("that blue thing")
tag-akon ("that thing which is mine")
tag-ginsucat ("the thing which was written")
tag-nagàpangidaron pai indw it diyés it gueing
("when he was still at the age of ten years")
N.B. An alternate for this tag- relative prefix is the kat-prefix.
kat-pued ("that red one")
kat-ana ("that thing which is his")
kat-inobra ("that thing whicn was made")
kat-imo nga ginsueat kahapon
("that thing which you wrote yesterday")
```

(4) THE tig- prefix, along with the $-\mathrm{g}_{\mathrm{g}} \mathrm{V}_{1}$ - infix, is used to show "a season of" or "a time for":

```
tigàcini ("harvest time")
tigbueueak ("flower season")
tiggueutorn ("famine")
tigdaeacagan ("war; time for running")
tigsicilak ("sunny sea son; sumuner")
tigtacanum ("planting season")
tiggaeae-om ("cloudy scason; stormy scason").
```

N.B. Sometimes, though not often, the tag- prefix can be used in the same meaning as the tig- prefix, as in:
tagbucunga ("fruit-bearing season")
tagtáeanum ("planting season')

The above construtes the affixes most commonly used on roots generally functioning as nouns in Aklanon. It gur search for the mature of the Aklanon noun or nomilal, we have golne a long way. We have found that nouns can be said "to mame", but this general definition does not get us far, because it is too vague and indescriptw-it does not say much because it tries to say too much. Then we discussed the eight different classes of noun roots and affixes, which tried to locate nouns by their form or their shape. But this scarch, granting that it is complete, has not quite hit the point either. It is not by definition or by shape that we really can know a noun in Aklanon, but rather by how it is used in speech. Our next section brings us to the very essence of a noun-the way it is used in a sentence. Strangely enough, we will no longer be fiscussing nouns, as such, but rather "FUNCTION WORDS" which make nouns what they are and give them their function withan the sentence.
3. FUNCTION WORDS. Up until now we have been loo cing at two constituent elements or parts oi speech, namely vorbs and nouns. We have been speaking about them separately, outside of the sentences in which they occur, and seeing in what forms they can occur. This, nas been a formal analysis in the sense that we paid attention to their form, more than to their,use. When one deass with nouns alone as isolated forms, such a procedure is possible; but when one turns to the SUBSTANTIVE, which is a more complex nominal involving plurases or clauses, it becomes necessary to discuss synta: (use) more than form. That is, we must see how nouns and substantives fit into a sentence, not only how they look in isolated units.
3,1. FUNCTION MARKERS. We have already mentionec. that the function markers [ro/do, ku , it, sa] not only illustrate or point out a noun or substantive, but also define the element or unit which follows them as a substantive. In other words, THE FUNCTION NiARKERS DO NOT JUST POINT OUT SUBSTANTIVES OR NOMINALS; THEY MAKE SUBSTANTIVES. Any word, phrase or clause which follows and is connected to a function marker is made into a nominal. Tnus we do not merely have a matter of demonstration, but one of creation.

Since the function markers are not really content words and axe members of a ciosed class, thry do not properly belong in this section on "THE BASIC PARTS OF SPEECH." 3ut, on the other hand, witzout a good knowledge of them and their use, one cannot understand the use of nouns in a sentence. Although they have little on: no lexical nieaning of their own, they serve to vary the function of the lexical words they gevern. They are, as we bave mentioned [see $A, 3$, this unit], the humble but indispensible servants of the substantive (nominal) ccustructions in Aklanon speech. Just four in number, they correspond to the four focus types discussed earliex [see B,5, this unit]. Focus allows an Aklanon to stress various situntional roles through the verb; markers or function words point out the various situational roles in the sentence as dictated by the verb, ana they illustrate both the function and the degree of importance of the substantives or nominals which thcy presede and govern.
3,2. OTHER TYPES OF FUNCTION WORDS. In Aklanon, as in most languages, we are confronted with more than one type of nominal or subsuantive construction. The problem at hand, of course, is to determine just how many types there are altogether. The solution-to this problem involves at least two dimensions:
(1) First, we must find a sentence structure that offers what is called "a slot"; a certain function possibility wish suits our purpose. We will then fill tire slot with as many different types of phrases as we find in the dialect. Then we will sort them out and divide then into groups. Each group that will be distinct forms a sub-class or sub-group of the various possible types of function words.
(2) Second, once we have determined how many types of function words there are that fit into any one slot, we must then determine how many slots are available in the structure of Aklanon spench. The results of this second search will bring us beyond the types of function words into the uses of function words.

Let us undertake together this two-fold searcl..
3,3. FINDING THE TYPES OF FUNCTIOH WORDS depeads on finding a sentence vihicin can offer us a slot where all-or at least most-of the typos could fit. Any sentence with an actor that might apply to both persons or things would be adeal, since we need a cross -seation that could be represented by almost any nommal. Such a sentence is not easy to find. If, for example, we pr : the sentence ". . . went to church yes:erclay," we can not fill the slot with thans like "the rock" or "the tree", if we reymred common sense to be used along with
grammar. On the other hand, if we pick the sentence: ". . . is boiling over, " we cannot fill the slot with cuch subjects as "the man. Pedro, she" unless figurative speech were permitted. But these are limitations of sense, and not of grammar.

What we can do is pick a sentence, any sentence, and be aware of its sense limitations. Then, if, it does not work out, we can pick other representative sentences and group all our findings under one category. For example, we might choose the first sentence suggested, and fill the slot with as many forms as possible:
". . . hay nagsimba kahapon."
(". .. went to church yesterday. ${ }^{9}$ )
In filling in the slot, we will group the possibilities by similarities as follows:

ance so on...:
$\left(c_{1}\right)^{\circ}$ "Akd..."
$\left(c_{2}\right)$ "Ikdw..."
$\left(c_{3}\right)$ "Imáw..."
$\left(c_{4}\right)$ "Kitd́..."
('I. . .' 1 )
("You [singular]...")
("He/she. . .")
('You and I...")
and so on. . .
("This [one]. . .")
("That [one]...")
("That [one]...")
('That [one]...")
and so on...
$\begin{array}{ll}\left(c_{1}\right) \text { "Tanán..." } & \text { ("Everyone...") } \\ \left(e_{2}^{1}\right) \text { "Ab }{ }^{\prime} \ldots \text { "... } & \text { ("Many...") }\end{array}$
( $\mathrm{c}_{3}$ ) "Sangkurdt..."
("A few...")
and so on...
The above represents a complete chart of the possibilities for filling the slot of Topic. It does not matter that inanimate nouns, such as bató ("rock") or kahoy ("tree"), or the names of animals, such as ayam ("dog") or baka ("cow") do not fit into this slot, since such words do not require duferent function markers. They still would be marked by ro or do, or be referred to by 1 máw or zuyon type words. They may not be possible because of the sense of the verl, but they are possible in the structure of the dialect. For example, a grammatically meaningful sertence could be constructed: "Ro kuring hay nagsimba kahapon." ("The cat went to church [worshuped] yester(lay.") However, such a sentence would be non-sensical if apphed to the real world, since the root simba actually means "to worship", aid animals can not be said to actually worship the deity.

3, 4. THE TOMIC SLOT. The chart given previonsly represents all the possible function words and/or substantives that can occurfin a single slot, mamely the Topic slot for Actor slot in the particular case] in Aklanon speech. We can therefore subdivide Aklanon functhon words into the following groups:
(1) COMMON NOUNS, which are manked by ro or do [which are allomorphs of each other and can generally be altermated, though ro is the most preferred fo m, except when following the sounds / $\mathrm{d}, \mathrm{t}, \mathrm{n} /$, when do is preferred. Note that larger common nouns phrases can be built and are included in this same slot.
(2) PERSONAL NAAES, the names of people or animals, which are marked by si (if and when a singular name is given] or by sanday [if and when a name representing a plural group is given]. Aklanon, therefore, sets up a strict difference between common and personal nouns; we must say ro bayi, but si Maria; ro mga bayi, but sanday Maria. It should also be noted that persomal manes only apply to people. It does not include the broad class of proper names in Eng!.sh. For example, tic names of towns or countrics aro marked by the common noun markers, not by the personal name markers:

| sa tawo | ("to the person") |
| :--- | :--- |
| kaj Carlos | ("to Carlos") |
| sa Kalibo | ("to Kalibo") |
| sa América | ("to Ainerica") |

(3) PRONOUNS, which are unmarked by any extra function word.:, bat have the function bult into them. The set given is the topic set [aho, ikaw, imaw, kami, kita, kamo, sanua] and serves m the Topic slot. In other slots, we will find that there are different pronoun sets. This phenomenon is similar to English, which also has pronouns serving in various function positions ["I, you, he. .." as opposed to "inc, you, him..."]. <br>)
(4) DEICTICS [the place or demonstrative nominals], which are alse umerted by aeparate function words, but carry the function withon them. They serve in definute function slots, and the set presented [rava, ruyon, ranha', rato] is the set for Topic position. The Aklanon deictics, as we shall see, are set upacoiding to the same eriteria as she pronoun system, and therefore have four forms [inased on "this, near the speaker [near me]; that, near the listener [near you]" and so on]. The English equivalents "this" and "that" only have two forms, based on entirely different criteria.
(5) FUNCTION NOUNS, which are umnarked by any formal marher [such as ro/do] if and when they serve in Topic position. However, as we shall discover later, when they serve in any or all other positions [associate, object, 1 eferent], they must be maxked by the regular function markers [ku, it, sa]. Thus, Lhey oaly need to be distinguished as a-separate class when in Topic position; in all other slots, they serve as and function as common nouns.

## 3,5. FINDING THE OTHER SLOTS OR USES OI FUNCTION WORDS ANIJ SUBSTANTIVES.

Now that we know that we have five distinct types of function words in Allanon, we must apply each of these groups to the different slots available in tine structure of the dialect to see how they will behave, and to find out just how many slots actually occur.

When we discussed role and focus, we observed that although there were many situational roles, there were only four focuses whel covered them all. We also know that there ate only , our basic function markers used in Aklanon, namely ro/do, ku, it, sa, which are used to show the various roles through the mechamsm of specch. We have ahready d.scovered the various function worus used in the ro or Topic slot. We only have to discuver the uses of
the various function words in the remaining three slots--namely, in the place of $\mathrm{ku}_{\text {, }} \mathrm{It}$, and 8a.

The same procedure will do, namely finding a single sentence and using a specific slot to find the various function words, and see how they fit into the pattern. Since we have limited the possible number of function words to five [with a single grouping for both singular personal nouns (marked by si) and plural personal names (marked by sanday), we will need only that number of possibilities to fill cach slot. Let us begin looking for the remaining three slots:
(i) THE ASSOCLATIVE SLOT. We can choose the following for our sentence:
"Ro bacay ginobra..."
("The house was built by...")

|  | ("...the priest.") |
| :---: | :---: |
| ( $1_{1}^{*}$ ) "...ku tawong matambúk." | ("...the fat man.') |
| ( ${ }_{\text {2 }}$ ) "...nï josé." | ("... Joseph.") |
| ( $\mathrm{a}_{2}{ }^{\text {a }}$ ) "...nanday Carlos." | ("... Carl and his family.") |
| (a3) "...nakon." | ("...me. ${ }^{\text {( }}$ ) |
| (a4) "...kurat ${ }^{\text {a }}$ " | (". . .tliat [one].") |
| ( $\mathrm{a}_{5}$ ) ". . .ku tandn." | ("...everyone.") |

In these examples, we have filled the slot for the Associative. the unemphasized actor. This slot could also stand, as we had scen before, for instruments, companions, conveyed objects and so on. Any Associative plarase is covered by one of the above mentioned possbilitles.

However, the Associative offers 2 further range of possibilities. The previous group of Associatives followed the word or phrase with which they were associnted. That set is known as the postpositive grcup, because its members follow the phrase with which they are used. There Is also a preposinve group of Associatives, whose members come before the phrase they modify; they differ in many cases from the standard Associative form, though they are related. Unllke the postpositive set, these must be linked to the phrase they modify by the nga ligature:

$$
\begin{aligned}
& \text { "Ro baeay...ginobra." } \\
& \text { ("The housc was built by...") } \\
& \text { ( } a^{1} \text { ) "....ana hu pari' nga..." ("...by the priest.") } \\
& \text { (a)") "...ana ku tawong matambủk nga..." ("...by the fat man.") } \\
& \text { (a) }{ }_{2}^{2} \text { ) ....ay José nga..." ("...by Joseph.") } \\
& \left(a_{3}\right) \text { "...enday Cerlos nga..." ("...by Carl and his family.") } \\
& \text { (a }{ }^{3} \text { ) "...akon ngz..." } \text { " ("...by me.") } \\
& \text { ( } a_{5}^{4} \text { ) "...kurat }{ }^{2} \mathrm{ng}^{2} . . . " \text { ("...by that [one]. ") } \\
& \text { ( } a^{5} \text { ) "...arda tanán nga..." ("...by everyone.") }
\end{aligned}
$$

Note that the personal names and pronouns have special forms for this prepositive Assoclate class; and that common nouns and the function noun class roquire the use of a pronoun (singular or plural as the case may be) to transform the postpositive form into a prepositive form. Also note that the verb that follows the prepositive Assoclative is part of a noun phrase. When the Associate siot comes before the verb, the verb is part of a suistantive or nominal construction; if the Associate slot comes after the verb, then the verb is part of a verb phrase. Thus, the prepositive Associate is a r:OUN DETERMNER in that it ransforms the part of speech following it into a noun or nominal construction, whereas the postposivive fasociate is a MODIFIER in that it only modifies or describes the word or phrase it follows.
(2) THE REFERENT SLOT. In like manner, we can locate the Referent:

> "Ro cukas ginta-o nauda..."
("They.gave the gift [to]...")

| (bl) "...sa pari'." | (". . .to the pricst. ${ }^{\text { }}$ ) |
| :---: | :---: |
| ( $\mathrm{l}_{1}$.) ". . . sa tawoing matamblk." | (". . . to the fat man. ") |
| ( $\mathrm{b}_{2}$ ) "... kay jose." | (". . .to Joseph. ") |
| ( $\mathrm{b}^{*}$ ) ${ }^{\text {n }}$. . . kanday Carlos." | (". . .to Carl and his femily.") |
| $\left(\mathrm{b}_{3}\right)$ "...kakon." | ('...to me.') |
| $\left(\mathrm{b}_{4}\right)$ "...karató." | ('. . .to that [onc]. ") |
| ( $\mathrm{s}_{5}$ ) ". . satandn." | (". . .to everyoné. ${ }^{\prime \prime}$ ) |

In theser-fimples, we have filled in the slot for the Referent, the indirect object of the ac-

- tion. This slot cculd also be filled in by locations, partitive objects, or any word cr phrase functioning as a Referent. Note that common nouns and function nouns are marked by sa, wille all other personal names, pronouns and deictics are marked by a $k(2)$ - morpheme. In ( $b_{5}$ ) we find the function noun class behaving like a common noun, so there is no need to treat it as a separate class from common nouns. The only time that the function noun class belaves differently from, common nouns is in Tople position, being unmari.ed by ro/do.

It should be remembered that any Referent could fit into the above paradigm. However; the role of beneficiary must betmaried by the additional prepositional element para, as in the following:

| (bl) ". . .para sa pari'." | ('. . .for the priest.") |
| :---: | :---: |
| (bl*) ". . .para sa tawong matambik." (". . for the fat man.") |  |
| ( $\mathrm{b}_{2}^{2}$ ) ". . .para kay josé." | (".. .for Joseph.") |
| (b2*) ". . para kanday Carlos." | ("...for Carl and his family.") |
| (b) ". .ppara kakon." | ("...for me.") |
| (b) ". ..para karató." | (". . .for that [one]. ") |
| (b5) ". . para sa tanán." | (". . .for everyone.") |

(3) THE OBJECT SLOT, Before'we begin looking for the various possibilizies which can fill tise Object slot, we should discuss briefly the sense of the direct object or goal of an action. In Aklanon, persons can never be made the direct object or direct receiver of an action. We must stress, they cannot be made the direct recelvers; though they can be made the Indrect recelvers of an action. Because of this phenomenon, personal manes or pronouns can never fill the Object slot, sluce each of thene deals with people. If a member of the set must be put into the Object slos, then a Referent form of the set will be chosen. The same is true for the deictic set, though the reason in this case is. that a special object form just does not exist in the set. It was for this reason that we postponed the discussion of the Object slot until we had already treated the Referent.

The phenomenon--that people can not be made the direct recelvers of actions--shows a great deal of the respect and politeness which Aklanons (and other Filipinos) show to others. If a person is involved in the reception oi an action, the focus is nest commonly clanged so that the person wall be emphasized or made the Topic of the sentence or clause. Hence, the person become:, the 'fopic, even if he is the Object of the action. On the other hand, if he is involvedin the acilon dixectly, but if he is not made the ropic, he will be made into an indirect receiver or in.tacet object (that 1s, a Referent) in order to soften the cifect of the action. This t: a classic cane where the grammax or structure of a lauguage can reveal something about the culture of the people who speak it. Both Philippine respect and Pillippine indirectness
are evidenced by this linguistic 2 nd grammatical phenomenon. Thus, even if one were to go so far as to eat a fellow human being, he would gencrially have to be made the Topic of the sentenfec, even if he might be the Object of the action--
b "Si Jose ginakaon kung mangingilaw."
("The ogres are ceting Joseph:").
N.B. mangiggilaw ("ogres") are part of a superstitious bellicf. They are giant cannibals who live below the earth and come out on certain nights to eat people.
If one were to insist of making the Object serve as Object, rather than Topic, the structure would be:

$$
\begin{aligned}
& \text { •"Rong mangingilaw kuno nagakaon..." } \\
& \text { ("The ogres are believed to be eating...") } \\
& \text { ( } c_{1} \text { ) "...it pari'." ("...the priest." } " \\
& \left(c_{1}{ }^{\circ}\right) \text { ". . .it matambúk nge tawo." ("...the fat man.") } \\
& \text { ( } c_{2} \text { ) ["...kay Jose."] ("...Joseph.") } \\
& \text { ( } \mathrm{c}_{2}{ }^{\circ} \text { ) ["....kanday Carlos."] ("...Carl and his family.") } \\
& \text { (d3) ["...kakon. "] } \\
& \text { (c) }{ }_{4} \text { ) [". . .karatd."] (": . .tinat [onc]." ") } \\
& \left(c_{5}^{4}\right) \text { "...it andn." ("...everyone.") }
\end{aligned}
$$

In these examples, we have filled in the slot for the Object or goal; any object phrase is covered by one or another of the above mentioned possibilities:' Note, however, that the forms in ( $\mathrm{c}_{2}, \mathrm{c}_{2}{ }^{*}, \mathrm{c}_{3}, \mathrm{c}_{4}$ ) are identical to Referent forms. We can therefore nake the observation that no Object form exists for personal names, pronouns or deictics, since they are filled by Referent.function words. Also note that in ( $\mathrm{c}_{5}$ ) the function noun ciass is marked by it, and operates just like the common noun class represented in ( $c_{1}, c_{1}{ }^{*}$ ); it need not be distinguished beyond its use in Topic slot without the ro/do marker.
3,6. COMPLETE CIIART OF FUNCTION WQRDS IN AKLANON. We have seen that there are five basic classes of substantives or nominals. . We carn lipe them up according to broad syntactic classes (based on their use in sentences) according to the following charts, which the reader will be continually asked to refer to in subsequent sections and axticles. Please note these classes well.

|  | FORM | TOPIC ${ }^{\text {P }}$ CLASS BXPIANATION |
| :---: | :---: | :---: |
| 1. | $\begin{aligned} & \text { ro } \\ & \text { do } \end{aligned}$ | [allomorphic variants which mark conmon nouns as Topics of their clauses] |
| 2. | $\frac{\text { si }}{\substack{\text { say } \\ \text { sanday }}}$ | [singular and plural markers for names of persons, which inark them as:-atus of their clauses] |
| 3. | akó <br> ikdw... <br> imáw. . . | [nembers of the Topic pronoun set whicl, serve in the ropic position of their clauses; they are unmarked since they carry their function within. thein) |
| 4. | raya ruyon ratd.. | [menieers of the Topic deictic class, which serve in the Topic position of their clauses; they are unmarked since they carry their Tuiction within them] |
| 5 | tanán. . .illod' | [members of the function noun class servilig as Topic:] |

It should be noted that the function noun class is only distlaguished in Topic position. In all other slots it operates exactly like a common noun, and is meated as such.

These cliarts will be referxed to continually in subsequent discussions, so it would do the reader well to pause and cvaluate all that is conta!ned herein. What we need to note, and note carctully, is that a Topic in a Visayan sentence is not Just a simple noun form marked by ro or do. Rather, a Topic can be any one of flve possible noun or nomiral forms: common nouns, personal names, pronouns, deictics or menbers of the function zoun class. A Topic, then-as well $2 s$ an Object, an Assoclate or a Referent-lis a grammatical slot open to any one cf several (five or four) possibliltics, any of, which is a Bubstantive; but not all of which are common no:ans. We are dealling with grammatical possibilitles or slots, and not with any slugle pert of speech or sub-closs.

$$
\text { ' }-147 \ldots
$$

4. SUBSTANTIVES USED IN FOCUS CONSTRUCTIONS. Now that we have seen the varjous types of nomand constructions possible in each slot in Aklanon, we should attempt to tie them all up, together with our previous knowledge about role, focus and nominal constructions in the dialect.

Substantives can be used in focus constructionslas governed by the verbal center. "They can also be used as simple noun phrases or clauses in non-focus constructions. It is the purpose of this present section to discuss all nominal constructions that can be governed by the verb--in other words,' all focusable substantives.
4,1. CLIART: ROLE DISTRIBUTIQN AMONG SUBSTANTIVES. Each role we might wish to express in the dalect has a special focus used to emphasize it or. a süeciat function class used to mark it when it is used without any emphasis. Whenever the particular role is being emphasized, the Tophc function class is universally used. (Please refer to the charts just presented on pp. 1-10-47 for defmitions of each class and the distribution of the function word or markers.)

| ROLE | FOCUS | IN-FOCUS | NON-FOCUS |
| :---: | :---: | :---: | :---: |
| TYPE | USED | FUNCTION CLASS | FUNCTION CLASS |
| ACTORS: |  |  |  |
| - actór | Actor | topic | associate |
| - causer | Actor | topic | associate |
| - agent | Object | topic | referent |
| ASSOCIATES: |  |  |  |
| - instrument | Instrument | topic | associate |
| - companion | Instrument | topic | associate |
| - concomitant | Instrument | topic | associate |
| - reason | Instrument | topic | associate |
| - indirect reason | Referent | topic | [particle], referent |
| GOALS: |  |  |  |
| - - direct object | Object | topic | object [indefinite] |
| " | " | " | associate Tdefinite] |
| " | " | " | referent [personal nouns] |
| - conveyed object | Instrument | topic | associate |
| - indurect object | Referent | topic | referent |
| - partial object | Referent | topic | +̇eferent |
| - beneficiaxy | Referent | touic | para - referent. |
| - benefaction | Instrument | topic <br> topic | para - referent referent |
| - location/place | Reierent | topic | referent |
| TIME: |  |  |  |
| - past | ** | ** | associate [ ku$]$ |
| - present | instrument | topic | object [it] |
| - future | Instrument | topic | referent [sa] |

Keepmg this chart in mind as a summary of all we have discussed so far, we will now undertake a point by point discussion of each madividual function class, in order to see how each can int into Aklanon sentences.
4.2. SIMPLE NOUN PIIRASES, AND THE FUNCTION MARKERS. All of the function markers can be seen in the following chart:

N.B. Etymologically speaking, each plural marker for personal names is the abbreviation of the singular marieer along with the forms anda (Associate pronoun form) and ày. Hence, sanday - si anda ay ; nanday -ni anda.ay; kanday - kìy anda ay; ind anday - ay anda ay. No plural form is given for the common nouns since cacil of them can be piuralized by the marker mga. Thas, ro isciz' ("the fish") can be pluralized romgz isda' ("fishes"). The conjunction of ro mga and do mge can be and ofien is contracted to rong/dong. [Sec page 131 for 2 n explanation of mga.]
(1) SUBSTANTIVE-MAKING QUALITY OF THE FUNCIION MARKERS. Each of the above-mentioned function markers ties up or binds together the word, phrase or clause that follows it. It makes what follows 2 single unit, serving whatever partifular function the marker itself serves. What is more, the mariker makes the woid, plorase or clause foliowing it and connected to it info a substantive or nominal construction. Even if the forn following a function marker would normally be a verb or an adjective if suanding alone, that element is transformed into 2 nominal by the function marker. Note in the following diagrammed eximples the way the words and phrases following the function marikers (a) are bound together into 2 slagle unit, and (b) are transformed into nominals or substantives.

("the carabao which is wallowing in the mud hole")
In eacin cise, the lerger iox which follou:s and is connected to the sineller romox is a noun,

 made int $)^{2}$ substantive ity the bindan:-power of the ro topic marker. In eaci of these examples
the word, phrase or clause following ro is the Topic of the sentence (because ro is the Topic marker) and is also bound together into a single substantive. If ro were replaced by any of the other markers, the same would be truc; whatever sentence elements would follow the marker would be bound together into a single unit. Note this in the following example:
(a4) "Namatay si Juán nga bag-ong magtalín sa América." ("Juan who just came from America died.")

The second thing to point out is that any part of speech can serve as a noun, nominal or substantive if preceded by a function marker:

Note in the above examples how each element following the function marker is made into a noun. In ( $b_{1}$ ) "gwapa" is normally an adjective, but now serves as a simple noun. In ( $k_{2}$ ) "makaparaz"' is normally a verb, but is now a noun following the sa-mariker. In (b3) the root word "madal'" can be an adjective or an adverb, but following the 82 -marker it benomes a houn by function. In ( $b_{f}$ ) "ikaarato" would normally be a verb, but here functions as 2 nominal:
(2) THE USES OF THE TOPIC MARKERS [ro/do, si/sanday] When we were discus-. sing the concept of role, we mentioned that a speaker reports the events he witnesses in the $e^{-}$ world with a certain amount of bias or emphasis. He nust do it, first by his very nature 282 human being, which interprets things which are seen; second, by the very nature of language, which forces one to commit oneself with some sort of grammatical or syntactical pattern, precluding other possible forins once one is chosen. The element of bas or empliasis in Aklanon is accomplished through focus, and focus is shown on common nouris by precoding them with ro or do, and on personal names by preceding stugular persons wheh si and plural groups with sanday.

We have already discussed the different uses of focus, particuiarily tu Chepter B, Section 5, 6 ("ROLE DISTRIBUTION AMONG TTEE FOUR DIFFEREIVT FOCUS GROUPS"--Pp. 3C83). No matter what focus is used, the element put ento focus recelves the ro or do marixer, If it is a corumon noun, or the si or sanday markers, if it is a singuler or plural personal name or group.

The usc of the topic markers should be clear hy this time. What should be discussed, however, is the basic structure of the Ahlanon'sentence, and the use of the topic markers In the same bentence on some occasions.
(3) THE BASIC AKLANON SENTENCE coasists of two elements--A TOPIC and A PREDICATE. The topic stresses the most inportant concept in the speaker's mind; the predicate states something about the element or concept, it gives "the news", so to speak. Note the use of the topic function markers to give the most important concepts in the foilowing sentences:
(a ${ }_{1}$ "Si Tatay liay nagpanaw sa Manila'."
("Father left for Manile.')
$\left(a_{2}\right)$ "Ro backy nahumdn kahapon."
("The house was fimished yesterday.")
( $2_{3}$ ) "Sanday Maria bay nagbakse it titirls."
("Maria and her companions bought a doll.")
The Visayan tepics are underlined. The predicates, which say something about the topics are the parts of the sentences not underlined. They are unstressed, and merely report or give news.

However, it is not infrequent-inAxtarion to have tro emphatic concepts stressed within the same sentence. Inthis case, the stiucture consists of two topics--two substantives or nominals, cach made of equal importance, each given the umelight by the function markers. In effect, we have two nominal constructions and two topics, thougn the element stated first is usually considered the more important, while the second clement is considered the news:
( $b_{1}$ ) 'Ro nagpanaw sa Manila' hay ai Tatay."
("The one viho left for Mande was Fathet.")
9
$\left(b_{2}\right)$ "Ro nahumán kahapon hay ro baçáy ugaxa"
("This house was the thing that was finished yesterday.")
$\left(\mathrm{b}_{3}\right)$ "Sanday Narla ro nagbakke it titirís." ("The ones who bought a doll were Maria and ner companions."')
(4) THE USES OF THE ASSOCIATE MARKERS [ku, nifranciay ]. Ail situationai roles that are not put into focus by the yerb, ard cover actors, instruments or other associative functions, are marked by the assöciate markers. In other,words, as long as an instrument or other assoriate is not in focus with rofo or si/sanday, then ha or n/manday will be used to mark the nominal or subste ve functioning as an Associate. Some of the most st indard uses can be seen in the following examples:
(a) "Ro isdá' ginkaon ku unga'." ("The child are the fish.")
(b) "Nasaltan akó ku imong ginhambae." ("I was deceply hurt by what you said. ")
(c) "Magabakác akó it dulsi ku kwarta (ngató)." ('I will buy caddy with that moncy.")
(d) "Gaizalıgya' ináw ku saring adlaw-adlaw." ("She sells bananas cyery day.")

5

- 151 -

The associate marier ku can sometimes alternate with the object marker it to show 2 definite, as opposed to $i n$ Indefinite, nominal. Look at the following two sentences:
$\left(e_{1}\right)$ "Kantahón ikáw ku mga ungá."
("You will be sung for by the children.")
( $e_{2}$ ) "Kantahán ikáw it mga unga'."
("You will be sung for by children.")
N.B. Indefinite.

Note how ir $\left(e_{1}\right)$ "children" is made definite by ku ("the children"), while in ( $e_{2}$ ) the noun is indefinite ("[some] chilifen"). However, the distinction is no longer possible in a sentence whiere coifiision might resuit between the actor and the object: For example, .
(f) "Si Natay ro ginbakeán It isda' ku tawo."
("Mother was the one for whom the man bought fish. ")
The ku-2ssociate maxker is obligatory to show the actor of the sentence. For one thing, the actor in such a case is usually definite. But for another, to reverse the markers in , order to show (grammatically speaking) an indefinite subject, but a definite abject ("a man ...the fish'), would not only be ungrammatica 1 , but also would make a staternent ridiculous to an Aklanon:

> (g) "Si Nanay ro ginbakeín it tawo ku lsda"." : ("Mother was the one for whom the fish bought a man.") .$\quad$

Bven if the intention might have been to construct the sentence: "Mother is the one for whom a man bought tue fish", sentence (g) is not pcssible in Allanon. In such a case, if one wanted to stiess 'the fisin', then the Object Focus vould have to be used, thereby making "the fish" the Topic of the sentence, resulting in: "Ro isda' ginbakere it tawo para Kay Nanay."

Sometimes the structure of the dialect is such that two ku markers might occur in the same sentence. If such is the case, then common sense is left to ludge which role each nom inal is serving. Sometimes an alternate form kung can be used to differentiate between the two:

> (b) "Ro singeing pagabakeón ku caki kung kwerte ngaron."
> ("The ring will be bought by the main with that money.")

The same use of two associste markers in one sentence is possible with ni or ganday:
(l) "Ro baedy ni Doctore Liey ginhimo ni Juin.""
("The zome of Doctora was built by Jun.".")

Such uses of two assoctate phrases in the same sentence should not be confusing since common sense quickly reveals what role cech is serving.
(5) THE USE OF THB OBJECT MARKER [it]. We heve aireacty discussed the Idiosyacracy of the dialect which does noc allow one to make a person the direct abject of an action, but rather makes inm the topic or else the indirect object (Refercnt) in the clause. Thus, we onIf have the object marker it, (for common nouns, and nembers of the function noun class [words 4ke tanan, abo', asangkurot, etc. J). For example, onc can eay:
(a) "Ro amon nga capsag nagz-lnóm it gatar nga 'Alpine'." ("Our baby in [usually] dr(nking ${ }^{\text {NJjping milk. }}{ }^{\circ}$ )

$$
\text { - } 152 \text { - }
$$

Here, the object marker is used on a common noun. It can also appear on 2 member of the function noun class:
(b) "Si Maria bukón gid it mapili'; gakaon imáw it tanán." ("Mary is not at all choosy; she eats everything.")

But if a proper noun, let us say "Pedro", were put into that poaition [absurd as it may be in the sepnse of our lasc sentence], cither the sentence would have to be changed to the Object Focus, emphasizing "Pedro", or else "Pedro" would be made a Referent, but not the Object. We saw this in our form sentence:
( $c_{1}$ ) Rong mangingilaw kunó nagakaon $\qquad$ Pedro.*
No distinct object marker for personal names exists. However, an indirect construction could be made which would use a referent marker (kay or kanday) fith the same general effect, though it is a softer way of putting it:
( $c_{2}$ ) "Rong mangingilaw kunó nagakaon kay Pedro." ("The ogres are believed to be eating Pedro.'")
If a stronger effect were desired, the Object Focus would he used:
$\left(c_{3}\right)$ "Si Pedro kunó ginakaon kung mángingilaw." ("Pedro is the one, so they say, that the ogres are eating.")
Other sentences which illustrate the use of the object marker with common nouns are as follows:
(d) "Makakaon manlaug akó it karne nga owát pambúk." ("I can only eat mri-t which has no fan.")
(c) "Naghakáe cagl ináw it andang gues'?" ("He bought their food right away.")
Note that somerimes the associate marker ku aliernates with the it marker show a definite object:
( $\mathrm{f}_{1}$ ) 'Nakahakáe ka con it gatas?"' ('Did you already muy milk?")
(f2) "Nakabakáe ka eon ku gatas?" ('Did you already buy the inilk?')
In the same manner, the object marker it can alternate with the associate marker, as we s2w on page 152.
N.B. The object marker is used in many idiomatic constructions, particularily with NEGATIVES, ADVERBS, PARBNTHETICAL STATEMENTS as a linking particle or ligature. Since these are not nominal plarases, and they cannot be emphasized or made the matter of a focus pattern in Aklanon, we will discuss these cther uses under each appropriate heading.
(6) THE USE OF THE REFERENT MARKERS I B2, kay/kanday]. All situational roles which are not put luto focus by the verb and cover indirect objects, locations, beneficiaries, and other Referents are marked by the referent inarkers. Examples of such non-emphatic situational roles are:
(a) "Nalle' imáv' Ba ing̣a urgá' ngaráa.".
("He likes thase chiluren.")
(b) "Magsilhig ka sa secog:"
("Svecp the floar.")
(c) "Gatan-aw sanda sa mga panday." ("They are watching the carpenters.")
(d) "Ita - $\delta$ ro kwarta 82 imoig manghod." ("Give the money to your younger brother.")
(e) "Dayang eukis hay para kay Nanay." ("This gift is for Mother.")
(I) "Naga-adto sands kanday Urquiola." ("They are going to the Urquilolas.")
The Western learner of Aklanon is reminded to search out the sense and the idiom of the Visayan referent. The idiom here is something quite $3 i f f e r e n t$ from that ${ }^{\text {of }}$ English. The English idiom in (b), for example, seems to make an object or goal of "floor" ("sweep the floor"), but the Visayan clearly makes it a referent ("sa saeog"). The idea is that one sweeps "dust" off of the floor; and the direct object would be "dust" or "dirt" (perhaps gamio). The "floor" is only the Incation or the indirect object of the action. These idioms should be learne 1 as !ndependent from one's first language in order to.insure correctuess of speech throughout the learning process: The forelgn learner is reminded to look at the chart of Referents (pages $81-82$ ) fif order to grasp the various senses of the Aklanon Idiom. The Aklanon, on the orher hand, is cautioned to be wary of his translations into English.

For example, the use of the Referent or another form could even prove dangerous to the forelgn learner, or could lead to an embarrassing mis-translation on the part of the native speaker. Look at the differences in these two sentences:
$\left(\mathrm{g}_{1}\right)$ "Nalla' ak g ga imong esawa."
("I like your wife.")
$\left(\delta_{2}\right)$ "Naila' akó it tmong asawa."
("I want your wife.")

Note how the simple change from referent marker to object marker effects a sexlous change; 2 change which could prove dangerous to more than just grammatical prowess. A man try ing to compliment another lucky husband might get himself kdlled if be didn't have a good command of the Aklanon idiom. On the other hand, the Visayans lave a hard time grasping the difference between "like" and "want" in Bngilsh, because in their own languago they only have one verl (naila') with a change in markers. The' tend to use only one or the other of the verbs in English (usually "like") in all casas. That is why there is a joke about an American who went around saying he "uked dogs" and then was served one once for dinner. The joke is basod on the fact that Philippine Bnglinh does not differentate between "like" and "want" in Bnglish. However, the above examples should inake the idioms of both languages somewhat clear.

Frequently, sertences in Aklanon contain two or more referent constructions, that is, two or more situational roles covered by the function of a Referent.
(h) "Nagpamantaw akó sa sine as plasa."
("I was looktng at the move at the plaza.")
(i) "Ipadaeá ro sucát kay Emmanuel igga una' gaestár kandey Macabales." ("Sead the letter to Rmmanuel who lives at the Macobalcat place.")
Common sense can usually dectuher the meaning of each Referent, and they will be clear from context.

$$
-154=
$$

4,3. EXPANDISD NOUN PHRASES. Various constructionis exist in the dialect which are combinations of some of the previously mentioned phrases. It has already been noted that the markers fuse all the elements that follow them and are governed by them into a single substantive or nominal construction. These expanded noun phrases can also be part of the focus systems mentioned.
(1) STATEMENTS OF POSSESSION. An assoctate phrase can be "made to precede or to follow a noun or other substantive to describe, modify or qualify it'in terms of ownership or possession. These additional phrases are linked vith the nominal to form an"expanded noun phrase. There are two sets, the prepositive set--which precedes the nouns it modifies; änd the postpositive set-uwhich follows the nouns it modifies: -

COMMON NOUN, singular
COMMON NOUN, plural
PERSONAL NAME, singular PERSOMAL NAME: ${ }_{2}$ plural

| PREPOSITTVE | POSTPOSITIVB. |
| :---: | :---: |
| ana ku. . .nga | ku... |
| anda ku....nga | ku mga... |
| $\begin{array}{r} \text { ay...nǵa } \\ \text { anday } \ldots, . \text {.nga } \end{array}$ | $\begin{array}{r} \text { ní... } \\ \text { nanday... } \end{array}$ |

## Bxamples of these are:

( ${ }_{1}{ }_{1}$ ) "Umóg ro ana ku ungán nga bebce." ("The child's blanket is solled." $\gamma$.
(b1) "Samád do anda ku mgà ungá' ngaz hampıngan." ("The children's toys are broken.")
( $c_{1}$ ) "Anday Magsaysay nga kadag*anan ro mayád $\overline{\text { sa tzián." }}$ ("The Magsaysay party's victory was the best of all.m
(d ${ }_{1}$ ) "Roay Manong nga asawa masakif." ("Older brother's wife is sick.")
The possessive phrase csn be made to follow the substantive, as in the sollowing:
$\left(a_{2}\right)$ "Um6́g to laboo ku ungáa."
$\left(\mathrm{b}_{2}\right)$ "Samád do hampangan ku mga ungá'."
( $\mathrm{c}_{2}$ ) "Ḳadag-anan nanday Magsaysay ro mayad da tznán."
( $\mathrm{d}_{2}$ ) "Ro asawa ni Manong masakít."

Note that in elther case the entire phrasel is made into a single substantive:

The it marker can also alterante in postpositive positicn to show an indefinite possessor:
$\left(e_{1}\right)$ "Napusá' ro macukóng ku ayam."
("The dog's dish was broken.")
( $e_{2}$ ) "Napusá' ro macukóng it zyam.". ("A dog's dish jvas broken.")
（2）LINKBRS．Noun phrases or simple nouns can be expanded simply by liating them． We have already mentioned this phenomenon in Section 4， 2 （1）［pages 149－50］．The entire． phrase is then made to function as a single substantive，depending on the function of the leading marker［the marker which precedes and ties up the entire phrase］．The basic linker， which serves as what the relative＇pronouns and many conjunctions do in English，is nga：
（a）＂Indi＂dapat maghangae sa tawo nga bag－ong buptaw．＂
（＂It is not well to joke with a person who just wote up．＂）
（b）＂Wat sunog nga dukót sa tawong nasusucok．＂
（＂There is no burnt rice to a famished man．＂）
（c）＂Ro Dyos nga Makaako＂naton hay namatáy agơd mecuwás＇kitá sa sacá＇．＂ （＂God，Who is our Redeemer，died in order that we might be dellivered from sin．＂）
Nose that in exampics（a，b）we have an expanded nou phrase serving as a Referent；and in example（c）we have an expanded nominal phrase serving as Topic．
（3）SPATIAL RELATORS．Referent phrases after．sa are used in conjunction with it object phrases to designate explicit location．Since the Aklanon sa is basically nonmcommittal with regard to pointing out a place，the dialect offers this mechanism to state a particular place explicitly．For example，＂sa baeay＂could refer to＂at the house，in the house，ints the house，by the house＂，but the use of the zpatial relators can claxify the cract meaning needed or implied：

$$
\left(a_{1}\right) \frac{\text { sa suebd it bzedy." }}{\text { ("inside the house") }}
$$

（ $a_{2}$ ）＂Ba bulld it haedy．＂ （＂at the side of the house＂）
$\left(\mathrm{a}_{3}\right)$＂ga idgeum it baedy＂
（＂underneatil the huase＂）
Other phrases showing the use of spatial relators are as follows：
（b）＂sa etobang ft olmlahan＂
（＂in front of the church＂）
（c）＂sa ibabaw it bukid＂ （＂on the top of the mounsoin＇）
（d）＂sa pih⿱⺈⿸⿻口丿乚丶 it hospital＂
（＂on the other side of the hospitul＂）
A diagrain of this type of construction is formed as follows，showing the dominance of the whole construction by the marker sa：
（c）

（＂at the edige of the river＇？
These spatial relatars can be made the matter of emphasis through focus：
（I）＂Ginapintahan nanda ro nerente it eskuylahan．＂ （＂They are painting the front of the school．＂）
－ 156 －

4,4. THE PRONOUN SYSTEM. After having discussed the larger class of substantive phrases, we come to another class of substantives: the pronoun. Just seven words, their importance far outweighs their number. They are often classified as a separate part of speech, but their relationship to the markers and to the function slots of nouns makes it far more convenient and reliable to treat them as a subgroup of nouns or substantives.

Modern grammar shies away from defining pronouns since every definition meets some sort of philosophical failure. As their name implies, they "stand for nouns" or take the place of nouns; bence, they are true substantives. Yet phrases and clauses also stand for nouns, and yet are not pronouns. The only way we can arrive at a somewhat suitable definition is to say what they are, and what they can do without:
(a) Pronouns are substantives that never have a marker in front of them; they stand alone, without the ro/do or other markers.
(b) They pever have a pluralizing marker (like inga or sanday), but rather have difforing forms for singular and plural.
(c) They have a special form for each function, which does not involvē the standard function markers [as mentioned in (a)].
In other words, we find them corresponding to all substantives in that they bave plurals and operate within each function (though like the personal names, they $d \Delta$ not have a direct object or goal form); yet they $\dot{u} \sim=$ in a way unique to themselves. Two more points can be made:
(d) The pronouns correspond very closely to the proper name markers [particularily 2y, ni and kay] in that they carry certain morphophonemic similarities, and also do not have. a function as direct object or goal.
(e) The Aklanon pronouns, as opposed to those of English, are totally speaker-listener oriented. They are set up according to the following format:

We shall discuss each class or group of pronouns separately, basing our discussion on their function within a sentence, remembering that they are only 2 special sub-division of functioumarked nouns.
(1) THE TOPIC PRONOUNS [corresponding to si/sanciuy] serve as the Topic or emphatic form of the clause or sentence in which they stand. It should be stresseri that they are not merely the actor, but may be any stressed role brought into focus. They might be actor, object, indurect object or beneffciary, depending on the focus used. The forms are:

Examples of the use of Topic Pronouns in the various situational roles are seen in the following:
(a) 'Nagabaligya' bamí it mais." ("We arc selling corn.")
N.B. Actor.role.
(b): "Ginalugugnia ko ikíw." ("T love yóu.") N.B. Object role.
(c) "Ihat'Od mo akó sa bacáy." "Bring me home.")
N.B. Conveyed object or companion role.
(d) "Kantahín naton sanda."
("We [you and I] will sing for them. ")
N.B. beneficlary róle.
(e) "Mazeam ka gid."
("You are very intelligent.")
N.B. The role here is as a simple topic or subject.

Note that ikaw has an abbreviated, enclitic form ka; and kita has the enclitic form ta. This latter call be seen in the following, often-heard statement:

> (f) "Mos, kaon ta."
> ("Come on, let's eat.")

Such enclitic forms can never stand first in 2 clause or sentence; in fact, they obligatorily come second, following the word or phrase they are bound to. If a non-enclitic form were used, the sentences would read:

$$
\begin{aligned}
& \left(e_{1}\right) \text { "Maaeam gid ikáw." } \\
& \left(f_{1}\right) \text { "Mós, kaon con kiós." }
\end{aligned}
$$

(2) THE ASSOCLATE PRONOUNS [corresponding to ay/anday and ni/nanday] are used in the slots open to associates-unempbasized actors, companions, concomitants and so on. Aithough they are all members of the same class, there are three sub-sets according to their position in the sentence: a prepositive form, a, pospositive form and an enclitic form. We have already discussed postpositive and prepositive positions (see pages 144, 147 and 155), and they should be clear by now. The exrmples given in this article should also illustrate the specific uses of each sub-set of this class.

This particular sub-set comes before the word, phrase or clauce its members complement, and must be linked to that following construction with the nge ligature, which is sometres 3
abbreviated -ng. Examples of thtosub-set:
(a) "Daya ro akon." ("This is mine.")
(b) "Nano xo imong ginaobra?" ("What are you doing?")
(c) "Kon anó ro imong gintanóm, imáw man ro imong pagaanihón." ("What you sow, so you shall reap.")
(d) "Duyón gid ro ana nga ginhalinín." ("Those are exactly his [past] origins.")

As sbown in example (a), this sub-set can be used as a substantive in itself. It also has the same use in an idiomatic place-meaning:
(e) "Nano ro kahatab'' kabi-1 sa inyo?" ("What happened last night at your place?")
(f) "May fiesta sa amon." ("There is a fiesta at our place.")

There is the second sub-set--

| (2b-THE POSTPOSITIVE SUB-SET [reinted to ni/manday]) |  |  |
| :---: | :---: | :---: |
| PERSONAL, ORIENT. | SINGULAF | PLURAL |
| speaker ("I--we") | nakon | nemon |
| speaker-Ustener ('we-you and I" | * | matoin |
| Histener ("thou--you') | nimo | nimyo |
| other ("he/she--they") | name | nande |

This perticular suh-set follows the word, phrase ar clause its members complement, and is not lifiked to that preceding construction in $2 x y$ way; the $n$ - moxpheme of this set is already an automatic linker. Examples of thls sub-set's use:
(g) "Pagasaután naton imáw." ("We [you and I] will dance for him.") N.B. un-emphasized actor role.
(h) "Sifn magadto ro macoter nilnyo?" ("Where did your teacher go?")

- N.B. Role of possession.

It should be noted that this particular sub-set is used after the negative, interrogative and other pre-positive particles. No other pronoun form for the associate is possible:
(1) "Owá' naton pagbaké́ ro singsing, ay maháe." ("I did not buy the ring becsuse it was expenalve.")
(j) "Aýýw ninyo akó paghbayg." ("Don't you laugh at me.")
(k) "Sifn nimo igtritang ro kwarta ngató." ("Where did you purt that money:")

("You cannot scpucate witar in a benl-")
Lestly, there is the thind sob-act, whicin inoks semenal famme-

In the case of these enclitic farms, they
 discourse particles):

(El love you)

$\left(m_{1}\right)$ Ginaligugra la nozom."

(D) "Manhacinita incíw."
("La's speak to himo.")
(0). "दamulif mp con racrizrón"

(He still xunatibecs my moiven)

 foums:

| PERSONAL ORIERNT. | ShyGuLAR | Plumsall |
| :---: | :---: | :---: |
| speaker ("to me-to ms) | loblea | Pramen |
| speaker-listeser (ro ias -to me and ysun") | ** | yneen |
| listencer ("to there-to yox") | 1dxwo | 1 1inago |
| other ("to him/her-to thern") | 9) kzint | bratia |

 nosun sub-set.
Bxamples:
(a) "Naila" ka kim?" ("Do you ifte hert?)
(b) "Una' kanda do liwarta." ("Ibe, moacy is there witin theun.")
(c) "Obrahá roa para bamon." ("Do this far us.")

4,5. THB DEICTICS axe motion pr location words. As such they are adverbs and deserve treatment in a latex section. Howdver, there is a sub-class of these adverbs, differing moxphophonemically trom the base roots, which demonstrate the following nominsl qualities:
(a) They serve in the same function slots that other substentives do, namely Topic, Assoclate and Referent.
(b) They have several forms representing the different functions $2 s$ mentioned in (a).
(c) They have the same orientation as found in the pronoun system, namely:
"this" [close to the speaker]
"that" [close to the Ilstener, not far from the speaker]
"that" [close to the listener, but far from the speaker]
"that" [close to the other, far from speaker-listener]
Because of these points, there is-ample justification for treating in this section the pariseuler sub-class of deictics which serve as substantives in the various function slots.
(1) THL TOPIC DEICTICS consist of five basic sub-sets; á stantaind form, an enclitic form, and three emphatic classes.
(a) THE STANDARD FORM [related to the ro/do markers]

These stand in the usual Topic slot, in any position of the clause:
(a) "Daya ro akong liendom." ("This is my ambition.")
(b) "Pile ruyon?" ("How much is that?")
(c) "Ta-b kon siln dana'." ("I don't know where that might be.')
(d) "Kato hay imong obra." ("That is your job."
(b) THE ENCLITIC SUB-CLASS ZNCLITIC SET

MBANING
("this"-~ncar speaker)
("that"-anear. listener-speaker)
("that"--ncar listener)
("that"--far away)

Bramples of this eub-cless show how the enclitics come second in the clause obligatorily, and that they can never cecur in initial pasition:
(c) "AnS ron?"
("What is that?")
(i) (Ginhlmo to nakon."

This enclitic class is often linked with the ligature nga and used demonstfatively:
(g) "Ay, ro tawo ngare. ..""
("Oh, this fellow...")
(h) "Mayadayad ro andang baeáy ngató." ("Ihat house of theirs is beautiful.")
(lc) THE EMPHATIC SUB-CLASSES consist of three groups, depending on further oricntation to the speaker and/or listener:

|  | SPEAKER ORIENTED | LISTENER ORIENTED. | SPK-LIST. ORIENTED | MEANING |
| :---: | :---: | :---: | :---: | :---: |
| ¢ | hará <br> harón <br> hana' <br> hatd | mawraya mawruyon mawraná mawrató | rondaya <br> ronduyon <br> rońdaná' <br> rondató | ("this"--near speaker) <br> ("that"--ncar listener \& speaker) <br> ("that"--ncar listencr) <br> ("that"-'far away) |

N.B. The following alternate forms exist:
hayra (hará), hayto (ható); mawra (mawraýa), mawron (mawrato)
Each of these above groups is used for special emplasis. If the speaker wishes to respond with a "this".or "that" form emphasizing something at hand, he will use one of the speakeroriented forms. In other words, the speaker-oriented forms are demonstrative; they show something from the speaker's point of view:
(i) "Harón do imo, ag ható do akon."
("This is yours, and that is mine.")
(j) "Hayra sanda tankn." "Mhia is all of them.")
In each of the above examples, the speaker is actually pointing to something and showing it to the listener; per:i2ps, for example, (j) he would be pointing to a picture in a photo album sifowing his eniide family together. The use of the speaker-oriented forms implies two things - that the spe:ker is demonstrating something, and that the listener is aware (usually visually) of what is being demonstrated.

The listener orieated forms, on the other hand, are generally used in response. They imply that the listerer is responding to something the speaker has said or is very much aware of:
(k) "Mawron gid do akong buót alughanon." ("Ir马hat:3 precisely what Inam trylog to say.")
(1) "Mawrã6 ro klasi it eroplano ngz naka uagi kaina." ("That is: the type of airplane that went by earlíer today.")
The speaticx-istener-orlented forms generally imply agreement or common knowledge of both or all purules enagecf in the conversation. They can be used in response to or in demonstrution of 2 point indversa!!y known or understiod: ,
(a:) "Ro:idayan klasi it taeabá hav nagamutya'."
("Tins tyic of oyster makes pearls.")
(n) "Rondató gid no hinambac tu parl'." ("That is precisely what the priest said.")
(2) THE ASSOCLATB DEICTICS consist of the following forms:

$\frac{\text { ASSOCLATE SET }}{\text { kuraya }}$| kuruyon |
| :--- |
| kuran(h)á' |
| kurató |

MEANING
("this"--near speaker)
("that"--near listener and speaker)
("that"-nesar listener)
("that"--far away)
(a) "Rondayang binaeaybay ginsueat kuratong taw. (This poem was written by that man.")
(b) "Sin kat ginduea' kurayan's unga'?" ("Where is that thing which this child lost?")
(3) THE REFERENT DEICTICS consist of the following forms:

| REFERENT' | SETS |
| :---: | :--- |
| karaya | kará |
| karıyon | karón |
| karan(h)áa' | kaná' |
| karat $\delta$ | kató |

$\frac{\text { MEANING }}{\text { ("thls"--rear speaker) }}$
("that"--near listener and speaker)
("that"-near listener)
("ha t"--far away)

Either of these subsets may be used in the Referent or Object slots:
(a) "Nagobra ak kató." ("I made that.")
(b) "Masucít ka kará?" ("Will you write this?")
(c) "Taw-i imáw karơn." ("Give bin that.")
 ("I went to that place, but he was not there.")
4,6. FUNCTION NOUN CLASS. There is a small group of nome which can stand alone, unmarked by rondo in Topic posinon. However, in Oiojoct, Associate f nd Reicuent sluts they must be marked by it, gu or sa respectively. They can also serve as adjectives, modifying noun classes. Hence, they only deserve special treatment when in Topic position. Some members of this class are:

| skis" | ("much, many") | leek | ("a; one") |
| :--- | :--- | :--- | :--- |
| ilia | ("some, other") | daywa | ("two") |
| sangkurठt | ("few, little") | tatlo | ("three") |
| tanán | ("all, every") | sambato | ("one") |

(a). "Abort" hay lye."
("Many are'here.")
(b) "Escarp ins." ("The others are men.")
(c) "Sambzty cans nake-shót." ("Only one arrived.")
5. SUBSTANTIVES USED IN NON-FOCUS CONSTRUCTIONS. Until now we have been discussing the relaticnshp of the function markers to verb centers. We have seen how they are directly linked to focus forms in the verb. It is also possible that the function words be used independently of fecus, usually to link a nominal.or substantive construction to another substantive or noun center. In this instance, the markers or function words do not mark case or function, but rather show attributes of that particular noun center.
5,1. ATTRIBUTIVE USES of substantives link a noun-center to another noun-center with various effects, depending on the function class used.
(1) ATTRIBUTIVE USE OF TIE TOPIC. Examples of the topic markers occuring attributive to a noun-center are as follows:
> (a) "Imaw ragakinahangean it kamisadentro nga putí' nga matag-od ro butkor."
> ("He needs a white shirt that is short-sleeved.")

THithis case, the do-marker amplities the alreaciry long descriptive phrase "kamisadentro nga puti' nga matag-od do butkon." The ngra linker would not be appropriate in place of do Decause it would make Buthon ("shoulder; sleeve") equivalent to the adjective puti' ("white") and matag-od ("short"). Such a construction would be confusing since butkon ts not an adjective in this case, but part of an adjective phrase "matag-od do butkon", which in turn is part of the even harger adjective clause as stated above. Thus, to be cleat and to show the amplification of the adjective matag-od, the marker do is used as an attributive.
(b) "Ro cawo ag ro unga' nagatikáng sa daean." ("The manand the child were walking down the road.")
Here agan, the ro-marker is used to amplify or expand the subject in order to make it cleas chat both tawo and unfé' are involved in the Topic position. Alchough the phrase "ro tawo ag tnga'" would be grammatically correct, the additional use of the Topic marker shows the expanded or amplified subject more clearly.
(c) "Ro imong gina-osoy, haŷ imtaw ro ginhari-an ngará." ("That which you have been looking for is this kingdom.")
Both the Topic pronoun maw and the Topic marker ro join together in making an aincributive phrase: "imáw ro gininari-an ngara." Stress is equâlly put on the phrase "kingdom" and also on "that which you have been looking for" due to the additional statement of Topic flanction words. The sente.ce could have read: "Rondayaug ginhari-an ro imong gina, josoy", but not - with as muah impact or effect as mace possıble with the attributive plırase imf́w ro...".

Consequently, the Topıc markers or Topic function words can be and should be used with now-centers to show aniplification, expansion, or further explanation of ancther noun-center.
 constructions, as oppused to the previously discussed vero-center constructions. These uses can not be focused upon, since they involve more complex phrases, though the.head or man noun-center they attribute can be riade the object of a locus situation. The primary use of the Ausoclate function uldss in the case is to show companionship or association with annther party:
(a) "Nacacto sanda ku unga' sa Baguio."
("I hey went zedththe chuid to Raguo.")
(b) "Magaul' kamo ku inyong mga asawa sa.probinsya?"
("Will you and your wives return to the province?")
(c) "Maadto kamíni Paúl sa sine."
("I am going to the movic along with Paul.")
In, the cases where ku is used, it maintains its definite character. To show an indefinite companion or assocelate (such as "a child", "a man"), the marker it can be uṣed.

Another atrubutive use of the Associate has already been pointed out, namely as a possessive phrase. Such a phrase can be used in either focus or non-focus gituations:
(d) "Siín do macukón! ku ayam?"
("Where is the dog's dish?")
(c) "Mauno ro diskurso ni Juán?"
('How was Juan's speecir')
(f) "Pilá ro imong saevac?"
("llow much were your tronsers?")
Still another use of the Associat is as an appositive phrase, such as:
(g) "banwa it Kalibo"
("town of Kalibo")
( n ) "gubyerno it Akeán"
("c vernnient of Aklan")
The use of the spatual relators, such as "sa pihak it bukid" evidences this appositave use o: the Object marker it, un this case ised assaciatively.

5, 2. TIIE TIME SYSTEM. The three oblique function markers can be used in a ciertain number of phrases, limited by idiom, to express tume.
(1) KU AND PAST TIME. A phrase headed by the Associative marker ias the meaning of "over...agn" in Eng!ish, since the time stated must have occured in toto or completely in the past. A list of such idioms reads:
(a) UNITS OF TIME WITII isaea
ku adaw nga isaća ("some day [in the past]")
ku isaehing adlay. ("the day before yesterday")
ku isaeding dominggo ("the week before last")
ku isacéng bucan ("the month hefore last")
(b) NAMES OF THE DAYS OI THE WEFK; MONTHS, YEALS:
ku Lunes
("last Morday")
ku Martes
ku Enero
('last Tuesday")
tu : x:ajo
("last January")
ku 1963
("last, May")
xu igiô
("in 1963 [past time]")
("last 1043")
$-105-$
(c) NAMES OF IMPORTANT HISTORICAL EVENTS

| ku rebolusyon | ("during the Revolution") |
| :--- | :--- |
| ku gerra | ("during the War') |

However, in other instances of past time, a different idiom is employed, namely the statement of time with the particle eon:
(d) "daywang adlaw eon"
(c) "limang ka buean eon"
("two days ago")
(f) "tatlo ka dag-on con"
("five months ago")
("three years ago'")
(2) it AND PRESENT TIME OR TIME WITHIN. The Object marker can be used in certaln plrases to express a certain time within whet. an action might occur:
(a) "kahapon it hapon"
("yesterday afternoon")
(b) "ku petsa 21 it gabi-i"
('on the night of the twenty-first')
(c) "sa sucdd it daywang oras" ("within the next two hours")
(3) sa AND FUTURE TIME. The sa-maxker is used to express time in the future:
(a) "sa daywa pang adlaw" ("in two more days")
(b) "sa Lumes" ("on Monday")
(c) "sa masunód nga domingge" ("next week')
(d) "sa 1975" ("in 1975")'

5, 3. PREPOSITIONAL ELEMENTS. Since the marker sa is not a locative or a preposition in itself, other torms become necessary to clarify preposinonai-type meaning. Most of these prepositional elements are used in conjunction with a referent marker (sa, kay/kanday) or a referent form (bakon, kato) to convey theur full meaning.

The list of prepositional elements in Aklanon is not very large:

| Langou | ("becausc" (ṻ̈n! ) | macapit | ('near') |
| :---: | :---: | :---: | :---: |
| giken | ('from" !longol) | maeay ${ }^{\text {\% }}$ | ("far fiomm. distant") |
| latro | ('from") | para | ("for" [bencficiary] |
| harengód | ("Lbout" | tubtub | ("untll) |
| hasta | ("until, up to") | rungod | ("bccausc" [ral aspect]) |

Bxamples and diagramming of such sentences would be as follows:
(i) "Imáw dungganon nga tawo halín sa anang kabata-an." imáw / dungganon nga tawo / halin sa anang kabata-an T/pro. $\quad$ ddj $\quad \mathrm{Lm}$ Nom PE Rm A/pro-Lm Noin actor modf. link comp. time poss. time "he" "honorable" - "man" "from" "his" "youth"
("He was an honorable inan from the time of his youth.")
(b) "Nagsugllanon samda ianungód sa gerra:" ("They spose about the wiar.")
(c) "Ró andaug bacaly maespit s bukid pero macayó' sa banura." ("Therr house is near the mountam but fil from the town.E.")

5, 4. STATEMRNTS OF COMPARISON will be treated in detail in the following chapter on "ADJECTIVES". However, we need to note that the function markers or function words play an important role in making comparisons in Aklanon. Both the Associate and the Referent phrases are commonly used:
(a) "Ro kusóg ku tawo ngarón eabí pa ku sa anwang."
("That fellow's strength is inore than that of a carabao.")
(b) "Mas matàas pa si Tomás ku kay Philip." ("Thomas is much Eiller than Philip.")
(c) "Si Pedro hay mas matambók pa kimo." ("Peter is much fatter than you.")
COMMON NOUNS
PERSONAL NAMES
PRONOUNS:
speaker
speaker-listener
listener
other

Examples of their use:
(a) "Sinay Carlos 'Makaon eon kitá." ("Carl faid: "Let's cat.'")
(b) "Sinanda ku mga tawo hay 'Indi' sanda makamunót.'" ("The people said 'They could not go along.' ")
-(c) "An ${ }^{\text {sinimo?" }}$ ("What did you $\operatorname{siy}$ ?")
(d) "Kunakon hay maacam ka." : ("I said that you were intelligent.")
Of these two groups, the sin-forms are prefer din the dialect around the Kalibo area. In the northern part of the provnne, particularily around lbajay, the kun-forms are generally used, particularily is alternates for the sin-forms.
$\sigma$
There is a small set of pronouns which has an alternate quotative form, used as discourse parricles and enclitics:

$$
\begin{array}{ll}
\text { tics: } \\
\text { makon } & \text { ('I say, I said') } \\
\text { maton } & \text { ("'. [should say" [usually used in giving corrections]) } \\
\text { mana } & (" h e / \text { she said; it is said" })
\end{array}
$$

Another such form exists which is the fusion of kun- and ano:
kunठ ("it is sald; it is believed")
, These forms will be discussed later on In the section on "ENCLifics" (īnit $\mathrm{V}, \mathrm{F}, 1,3$ ).

5, 6. PARENTHETICAL ANI IDIOMATIC USE OF THE PRONOUNS. The Aklanon dialect has a good number of dioms centering around pronoun forms and abbreviations for the promouns. The reader is referred to the section on "CONTRACTIONS" (p.44) to see the frequency of contractions in Aklanon speech. Further' idioms involve--
(1) - parenthetical use of the marker it and many abbreviations:
(a) "Kagwapo ka ting."
("You're a handsome devil, you are'. ")
N.B. Full foŕm: "Kagwapo ka it imo."
(b) "Owá' ka mating karón it magustohan?"
("You don't have any liking for that?")
N.B. F- 4 form: "Owa' ka man it Imo nga..."

Such contractions as these are employed by Allanons in theil everyday speech. This idiom must therefore be accepted as current informal speech, and che abbreviations within it as part and parcel of the entire form. The full forms are written for the benefit of the foreignlearners 80 that they can see the sense of the abbreviations and master the idiom for themselves. The English translations are not literal, but rather attempt to catch the idiom of the dialect, particularily in (a) where the pronoun form is repeated: ka ting - "you. . you are".
(2) sentences without a formal Topic function word. Such sentences could be said to be without focus since they do not carry the usual Topic function phrase, but only a parenthetical pronoun phrase:
(c) "Indi' tang ragpati kimo."
("I won't believe you.")
N.B. Full form: "Indi' it akon nga magpati nimo."
(d) "Bukón pa tana it soldado lató."
("He still wasn't.a soldier at that time.")
N.B. Eull form: "Bukón pa it ana it soldado kató."

These forms are highly idiomatic and frequient in current Aklanon speech. These parenthetuca, forms could be considered to be a $\underline{\text {-morpheme }}$ and the akon Associate pronoun class:

| [rneaker] | takon, tang | tamon |
| :--- | :---: | :--- |
| [speaker-listener] | ** |  |
| [listener] | timo, ting | taton |
| [ocher] | tana, | tinyo |
| tanda |  |  |

(3) the use of the parenthetical expression ta [it ana] and the Referent pronoun system. The statements that result are highly idiomatic descriptive sentences based on the iorm:

Examples: ka -[adjective root] $+\underline{t a}+\underline{k}-\cdots$-[referent pronouil form]
(a) "Kahinay ta kimo'." ("You're so slow!' "i)
(b) "Kabuór ta kana'" ('He is so very kindi ")
(c) "Kaisog ta kakor." ('I am very brave.")
(d) "Kaftúm ta kanda." ("They are so black'.")

This constriction arrees the himral Fingh-h meaning' "It is very [descriptive element] to... [pronoun form]." Once again, these forms are part of the corpus'ef informal, but very frequent hkianca mpecch. Bucnu:e of the frequency of such forms, they cannot be ignored in a complete treatment of the dalect's structure.

## R. ADIECTIVES.

1. THEORY. The desire for precision in modern linguistics makes it difficult, if not impossible to define any part of speech. For any definition suggested, there are usually a host of exceptions. If we say, for example, that nouns name substances and that adjectives name qualities, the philosopher would ask us to prove that cither of those elusive terms ariu-lly exist, and we would find the idea of either of them melting in our minds.

1, 1. NATIIRAL AD'ECTIVES. Looking for words which name qualities, we can find the following forms in Aklanon that seem to be natural adjectives:

| itám | ("black") | cunot | ("rotten") |
| :--- | :--- | :--- | :--- |
| putí | ("white") | hilaw | ("raw, unripe") |
| pueá | ("red") | hilong | ("drunk") |
| bata' | ("young") | kambang | ("two-colored!") |
| eagi. | ("old, ancient") | isog | ("brave, daring") |

Certain words, then; automatically fit the tefinition of words which name qualities, but they do not account for the entire class of adjectives.
1,2. SYNTACTIC DEFINHTION. It is a fact that nouns can be said to name, but adjectives do not iit effect mame, they describe, modify, reinforce or otherwise limit. Hence, we fi-d not a notional defimtion, but rather a syntactic definition which says a hitle bit more about adjectives.

The primary identufiable quality about adjectives is their ability to fill the slots left blank in a structure such as:

> "rọ cawo nga...(1)... hay medyo nga ... (2)..."
> ("The . . .man is somewnat...")

These two positions may be described as (l) following the nga linker and describing a nominal form in a substantive clause dound tugether by a function marker; (2) following the ligature nga in a descriptive clause marked by a qualifier (such as medyo). This frame is intended to be a type oi criterion to deine adjectives, and is of gemmenatical interest only. Obviously, most of the statements derived will be circular:, yet they will zeveal au adjective form in a paradhen:
(a) "Ro tawo nga magueang hay medyo nga mabuót." ("The old man is son.ewint kind.")
(b) "Ro tawo ngn mabuot hay medyo nga mangraxanon." ("The kind man is somewint tich.")
(c) "Ro tawo nga manggaranon hay metyo nga magueang." ("The rich min is somewhat old.")
The above examples illustrate the adjectival quality of magueang, mabuot and manggaranon. The basic framewurk: couid be altered to identify a wider range of adjectives:
(d) "Ro macayón ny luglr hay medyo nga mayád." ("Me unstant pince is sonsevilut good.")
(c) "Ro mayáa nga sugianon hay medyo nga inlucesudo." ("The grod su, ry io swmewht nteresting.")
 ("The interesiting vacation spot is somewhet distant.")

If we adopt this frame, we must accept the conscquence that not every adjective form will fit. On the other hand, there may be some other parts of speech which would fit by sense, but yet not be true adjectives. If we examine the problem more closely, we will find certain criteria with regard to the form of adjectives that settle the problem more satisfactorly. The formal definition of adjectives will take us into the next two sections. The first will deal with the basic affixes or derivational affixes most common to adjective forms. The second will deal with the comparison or degree of adjectives.
1,3. GENERAL DEFINITION OF ADJECTIVES. In light of the previous observations, we can say the following about adjectives:
(1) They are predicat've or descriptive words.
(2) They have no infl, on for focus, aspect or tense like verbs; but they do have inflection for degree, ani e compared or used in comparisons.
(3) Whereas verbs ibav pussible form in na-: most adjectives have a root form in ma-, and they hare no fo. . 1 in ma-.
(4) Adjectives can occur afte qualifiers whicn \%dicate the degree to which an adjective is meant to apply. These qualifiers illustrate an adjective to be an adjective; they point out adjective corstructions.
2. STANDARD ADJECTIVE-MAKING DERIVATIONAL AFFIXES. There are a amber of affuxes whein commenly occur with adjective bases or othar bases to make up adjective forms. In some cases, these afixxes are homophonous with affixes used with other parts of speech. In this case, it becomes necessary to remind the reader to be aware of the differences, parucularily between the ma-verb prefix and the ma-adjective prefix. Generally, there is no duference in stress or accent, and the form must be known through its meaning and/or context in the chause or sentence. For the sake of simplicity and completeness, the various forms have been grouped togctiner, centering around a common formi. .
2,1. THE BASIC ADJECTIVE RGOT CLASS is a group of forms centering on the root word without any type of prefixation, though infixation or suffixation is possible.
(1) ADJECTIVE BASES such as:

| - | Rimbt | ("stingy, thrifty") | bulok | ("bad, lousy") |
| :---: | :---: | :---: | :---: | :---: |
|  | eaha' | ("cookeci") | mayád | ("good") |
|  | bata' | ("young") | mahat | ("dear, expensive") |
|  | eunór | ("rotten") | ibs | ("different; other') |
|  | sadyá' | ("pretty") | sadyth | ("happy-go-lucky") |

(2) REDUPLICATED WORDS, which have the sense of artificiality or diminishment:

* asul-asúl ("slightly blue"), from asul ("blue") camig-eamíg ("cool"), from eamig ("cold") init-init ("warm"), from init ("hot")
(3) ADJECTIVES WITII -in-INFIX, with the meaning "has the claracter of":

| binata" | ("ycuthful") | inadlaw | ("daily") |
| :--- | :--- | :--- | :--- |
| binucan | ("monthly") | inunga' | ("childish") |

(4) ADJECTIVIS WITH THE -an OR -on SUFFIXES, with the meaning "has the cuality
tavol:on ('populated") thsikoish ("laiving tuberculosis")

$$
-170-
$$

2,2. THE ma- X XJECTIVE CLASS is probably the largest class of adjectives, since mais the characteristic prefix for most adjectives.
(1) ADJECTIVES WITH ma-AS PREFIX:

| mabug-at | ("heavy") | mahilab | ("fatty, greasy") |
| :--- | :--- | :--- | :--- |
| madamoe | ("thick") | masubót | ("sad, lonely") |
| maeaba-ab | ("lukewarm") | mataas | ("tall, high") |
| macapad | ("wide" | matacaw | ("cowardly") |
| macangás | ("naughty") | matambuk | ("fat") |
| mahapdi' | ("painful') | matam-ís | ("sweet") |

(2) ADJECTIVES WITH maka-PREFIX AND . . $\mathrm{gV}_{1}$-INFIX. This sub-class is made up of roots from the Stative Verb class, and has the general me. ing of "-oust" or "-some" in English.

| makadueuyog ("soporific") | makasacakit | ("painful; makes one sick") |  |
| :--- | :--- | :--- | :--- |
| makahieilo' | ('poisonous") | makatacapon | ("contagious") |
| makakueueba' | ("fearsome") | makaucugot | ('angersome, outrageous") : |
| makahicilong ("intoxicating") | makacueu-oy | ("pitiful, saddening") |  |

(3) ADJECTIVES WITH ma -PREFIX, -in- INFIX, AND -on SUFFIX are somewhat simlar to the English "-fuel" or "-ing" adjectives:

| mabinuligon | ('helpful") | mapainubsanon ("humble, self-eifacing") |
| :--- | :--- | :--- |
| masinaligon | ('trustworthy") | mahinigugmaon ("loving") |
| matinahoron | ("respectful') | matnanda-on ("mmdful, always remembers") |

(4) ADJECTIVES WITH ma - PREFIX AND -an SUFFIX are : ?lated to (3) above:
masaligan ("trustwortiny")
matamarán ("perpetually lazy") ,
(5) ADJECTIVES WITH THE maki- PREFIK denote "an indulgence to" or "prone to":
$\begin{array}{ll}\text { makibaeus. } & \text { ("quick to revenge") } \\ \text { makidanak } & \text { ("quick to slap") } \\ \text { makikvarta } & \text { ("mon ey-hungry, covetous") } \\ \text { makidyos } & \text { ("godly, religious") } \\ \text { makiparyente } & \text { ("devoted to one's family and/or relatives"). }\end{array}$
2,3. THE pa-ADJECTIVE CLASS is directly related to the Ipa- causative verb and noun prefix forms listed in previous chapters. It consists of several sub-classes:
(1) ADJECTIVES WITH THE pact- PREFIX denote a "devotion to" or a "fondness for":
paeakaon ("fond of eating") pacadumdum ("fond of thinking") pacahibaýg ("Lond or laughing") E aumóg ("always soiling clothes")
(2) ADJECTIVES WITH THE pina- PREFIX denote that someone or something was led to do sorre action:

| , | pinalaon | ("forced to eat") |
| :---: | :---: | :---: |
|  | pinahambae | ("askedto speak") |
|  | pinaisdog | ("rcmuested to move ov |
|  | pimhalif | ("caused to transfer") |
|  | pinasuedd | ("made to go in") |

All of these ahove forms represent the majority of cerivational affixes $u$ with adjectives in current Aklanon specch. There are other affixes, as we slall pres, 'y see, but they represent a change in the degree of an adjective. Since they represent a change in the degree of an adjective, they are inflectional rather than derivational, and deserve separate trea ment.
3. THE DEGREE OF ADJECTIVES. Both adjectives and verbs are predicatives. They predicate or say something about nouns or nominals. Verbs predicate, as we have seen, by means of tense, aspect, mode, focus and quality. Adjectives predicate, or say what they have to sav, by degree. They tell just how far the quality they describe applies.

In Aklanon, the ma-adjective class illustrates, as well ats simple adjective bases or roots, some six distinct levels or degrees:

1. POSITIVE, which simply qualifies or describes:
2. Diminieitlve, which weakens the quality of the description;
3. RELATIVE, whe 1 predicates a mildy unequal relationship;
4. INTENSIVE, whic 4 illustrates a great degree of a quality;
5. SUPER LATIVF, w uch illustrates the highest degree of a quality.

We will discuss these various degrees 2. dividually.
3,1. An siljective which simply states son:ethng, or describes, is said to be in the POSITIVE DEGREE:
(a) 'Maabtik ro unga'."
("The child 1 s quick.")
(b) "Itún ring buhók."
("Your bair is back.")
(c) "Ro sagıng ngará hay habae."
("This hanana is almost rupe.")
3, 2. An adjective is made DIMINUATIVE by repetion of the root word. If the form normatly calls for the ma-prefix, then ma- is used as prefix and the root word is repeated:
(a). "3ualok-bulok ro akong obra." ("My work is fairly poor.")
(b) "Mainit-1nít do tubs'." rithe water 1 ; warm.")
(c) "Iambok-tamyok ha timo." ("You areathle bit stont.")
(d) "Ro salxfw neaacat-acát." ("Ihe souf" ${ }^{\text {a litile }}$ (ou saly.")

3,3. An adjective can be made RELATIVE by use of the -nd- infix. In some cases, usuably with adjectives that obhgatornly have the ma-prefix, the -uf-infix is fuset with the ma-prefix forming a new prefix, mutma-. In other instances, wbre the ma- prer . is not cbligatory and the root word can generally stand alone, the maCjug- prefix is used. beamples:

| L.a-OBLICATCRY•ROOIS |  |
| :---: | :---: |
| mayíd | ("good') |
| malue | ("'ioar") |
| inadacom | ("decp") |
| hahaba' | ("long") |
| mataas | ("tall") |
| STANDARD BASE ROOT: |  |
| bug-at | !"heavy") |
| tam-1s | ("sweet".) |
| tambok | ("fat") |

| RELATIVE: FORM |  |
| :---: | :---: |
| muere:ayád | ("slightly inctrar') |
| muemaháe | ("sligh:iy dearer") |
| muemadacom | ("slightly Jeeper:") |
| muemalalas | ("slightly longer") |
| muematas | ("slightly tuller') |

| RFLATIV FOPM |  |
| :---: | :---: |
| mabuebug-at | ("slightly heavicr") |
| natuetam-is | ("siigh:ly sweeter") |
| matuctambok | ("s'ightly fatter") |

These relative forms are not necessarily used in comparisons, particularit; of any two different thangs. Usually the relative degree is used in coinuariug a person or thing against itself: (a) "Muenataas con do anang uaga'."
("His ch:: 'Tis already a bit taller.")
(b) "Matuctan:-is yo pabielsi ngarí." ("This dessert is a little sweeter.") .
(c) 'An_urucbug-at do eapsag." ("The baby is heavier.")
3.4. An adjective can be made to ine INTENSIVE by use of the ka-prefix, whict adds the meaniag of "very" or "very much so" to the aciject ve base:
(a) "Kasadya' io sine kabi-i." ("The incure last night was very nice.")
(b) "Kanamit do pagkaor sa andang saco-saco."
"The food at their party was very delicious.")
(c) "Kaeapad do subá'."
("The river is extremely wide.")
3,5. THE SUPERLATIVE degree, when used outside of comparisons, can be shown any; one of three ways:
(1) The ka - prefix and the -an suffix can beadded to the root to show the highest degree of a quality. Thes is considered the mose ndiomgtic way in Aklanon today:
(a) "Kabahocaín nga tawo ra."
("This is the tellest fellow.")
(b) "Katam-isén nga dulsı ro akong ginsa mitín ngarón." ("I just tasted the sweetest candy.")
(c) "Kamahacín ro andang mga presyo." ("Then prices are the highest.")
(2) The pinaka-prefix can be added to a root word to denote that the quality of the adjective is believed to he the highest:
(a) "Imaw ro pinakamªcam nga estudyante sa atong eṣkuylahan." ("He is considered the sinartest student in our sciool.")
(b) "Pinakami,ngaranon imáw sa ta,ún natöng kasinaryo.". ("Among our harriomates, he is considered to be the richest.")
This pinaka-prefix is thought by folk linguistics to be borrowed from Tagalog. However, its use and necanng in many instunces differ quite slarply from that Northern Philippine dialect a id should establish it as an independent Aklanon phenomenon.
(3) Very often the discourse particie gid is used with sur erlative quality connotations: (a) "Roncayang ginhimo nimo hay mayád gid."
("This work of yours is the best.")
*) "Magasto gid rc inyong ginpaha-om."
("Your preparations were extremely extravagant.")
3,6. AN ADJÉCTIVE COMPARISON CHART OF DEGREE OF INTENSITY. By comparing two related, antony moas acijectives we can graphically see the varying degrees of intensity:

| DECREE | ADJECTIVETFORM | , | MEANING |
| :---: | :---: | :---: | :---: |
| SUPERLATIVE: | kaeumohán |  | ("casiest") |
|  | pinakamacur: |  | ("considere¢ ${ }^{\text {ca }}$,iest") |
| -- | maeumd gid |  | ("most casy") |
| INTEISIVE: | kàeum ${ }^{\text {d }}$ |  | '*very easy") |
| RELATIVE: | muemacumd |  | ("a-little easic.") |
| POSITIVE: | macunio |  | ("easy") |
| DIMINUATIVE: | macumo-cum ${ }^{\text {d }}$ |  | ("slightly easy") |
| NEGATIVE: | bukón it maeumó |  | ("not easy") |
| NEGATIVE: | bukon it malisód |  | ("not difficult") |
| DIMINUATIVE: | malisȯd-lisód |  | ("sligitly difficult") |
| POSITIVE: | malisód |  | ("difficult") |
| RELATIVE: | maluelisód |  | ("a litile more difficult") |
| INTENSIVE: | kalisodd |  | ('very difficult') |
| SUPERLATIVE: | malisód gid |  | ("most difficult"). |
| SURKLATIVE: | pinakamalisód |  | ("considered most difficult") |
| 1 | kalisorán |  | ("most difficult") |

This particular chart should give the reacer a graphic example of the way adjectives can vary in meaning or degrec, and how levels can be distinguished in one's way of speaking. Indeed, the landling of adjectives creatively in poctry and good prose is a true art.
4. QUALIFIL:RS ane a select group of function words which indicate the degrece to which the meanmg of the adjective with wheli they appear is applicable. Since they can also appear whth adverbs, they are not exclusive adjective-determiners, and cannot necessarily be used as a test for the adjective slot. Thequalifiers are of different sorts, and can be grouped by their posituon in the clause, and whether or not they are linked to the word they gualify. With this criterion in mind, we can distinguish two types of qualifiers:

4, 1. THE QUA LIFIERS THAT ARE LNKED TO THE ADJECTIVE FORM are as follow :

| WITH it |  | VIITII nga |  |
| :---: | :---: | :---: | :---: |
| bukdn it. . . | ("not; un-") | sobra nga. | ("too. . ${ }^{\text {") }}$ |
| it duro | ("vary...") | masyado nga | ("quite.. .") |
| sobra it... | ("too...") | nga mayád | ('extremely...') |

Examples of these, along with thejeasic pattern for diagramuning are as follows:
(a) "Bukón imáw it manggaranon."

(b) "Sobra nga kamahíc ro singsing."
("The ring is too expensive.")
(c) "Róamong macstra masyado nga buót:" ("Our tcacher is quite kind.")
(d) "Maugán im:lw it duro." ("He is extremely lighweight.")
(c) "Rondatong iscla' mabahofe nga ungd. ('That fish was extremely bege.")
4, 2, TIE Q'JALIFIERS TIATT ARE NOT LINKED TO THE ADJECTIVE FORM are taken from a group of function words cenled discourse perticles. Two of them. are prepositive (that 16, they come before the word they complement) and one of them is postpositive (that is, it follows the word it complements):

$$
\begin{array}{ll}
\text { matsa... } & \text { ("ut appears; it seenis as if") } \\
\text { medyo... } & \text { ("somewhat; about") } \\
\text {...gid } & \text { ("very; extremely; most") }
\end{array}
$$

Nete tiat we have atready discussed gid in our section about the "SUPEPLATIVE" (nage 172). Examples of these qualifiers are as follows:
(a) "lyatsa macamíg ro tyompo makarón."
("The temperature today appents to be cold.")
(b) "Matsa maisog̣ imáw,"
("He is somewhat belligersat.")
(c) "Medyo malofe ro anang mga baroug." ("His barongs are somewhat expensive.")
(d) "Mainít gid do sabáw." !"'The soup is very hor." ")
The enclitic gid car be tased for cmphasis with the other qualifiers:
(c) "Mahic gid nga mayed ro andang kaciy."
('Then: house was so very expensive.")

5. STATEMENTS OF COMPARISON. Traditional grammars hadiong discussed the comparative and superlative degrees of adjectives, but they falled to see clearlyto what extent adjectives are the centers of syntactic or grammatical constructions. When an adjective is used alone to describe; we do not have much to do in the way of sentence analysis; but when the adjective is used to compare one thing aganst another to set one thing into one group and another thing anto another group, thein we have a good bit happening in the sentence that deserves comment.

We bave seen how a verb is a center, and how the whole clause is ted together throughthe verb. Adjectives, we noted, are also predicates; they can also be centers of some very complex constructions. Usually when we have two nouns and an adjective in clause, wé hive 2 comparison. In ingunge, there are generaly two types of companisons-compariens - of related and comparisons of unrelated hhigs. Looking at it in another way. we have an EXTBRNALCOMPARISON-a comparison of outside groups defined to be differentind we have an INTERNAL COMPARISON-a comparison of inside gioups defined to be similar or the same.

The old schools with their traditional grammar clearly saw the two types of comparisons. and labeled them "comparative degree" and "superiative degree". In oo doing, part of the precision and desill with regard to statements of comparison is lost. For eximple, the "complerative degree" was thought to irclude statements with the general comparative form of the adjective: "He is zallex than his father.". After discussing such comparative forms for adjectives, the traditional grammars went to the superladte degree. In effect, they had missed many other types of comparisons. For example:
> ${ }^{\text {"He is tall like his father, }}$
> "He is as tall as his father."
> He is like his.father; he is rill."
> "He is not as tall es his fether."
> "He is so tall that he cari play baskectall. ${ }^{n}$
> "Héts not tall enough to play basketball:"

These examples should cleariy flustrateinow a substantial part of the character of adjectival comparisons was left unexplained. The presence of the word "tall" in those above sentences gives a host of possibilities with regard to comparisons. Comparisons are of their veiy nature syitactic -that is, they inyolve a good deal of grammer. You cannot compere without at least two nouns and an adjective; ard the farm of the adjective in comparisons is not simple. There are many types of comparative adjectites. .

This brief excursion into the histoxy and thè plofalls of traditional grammar with regurd to its trcatiment of the comparative degree is toprepare the rénder to approach the following discussion with an open mind. The comparioon of adjectives is a more complex thing than it used to be some ycirs ago.

5a. EXTERNAL COMPARISONS, When we compare twe things that are different we are, of necessity, comparing things whichare outside of each other's group. They axe defined by the very nature of the comparison to be different. There are three basic types of external comprisons, and each type las a noo-fold mibdyaica-positive and rigative.
$5_{a, 1}$. COMPARISONS OF EQUALITY Show the similarities of tro differen groups. In Akle: non such statements can be made in twa ways:
(1) The most frequent way to make a comparison of equality is to state the adjective along with the phrase "kamana ku..." or "parehas ku..." ("as....as; like; sjmilar"). The phanse "kamañ ku. . " is considered to be "pure Aklonon", while parehas ku... ${ }^{n}$ is obvously borrowed from the Spanish. "Both are is current use today:
(a) Mataz̀s ımíw, kamana menkuanang añon."
("He is tall; jusit like-his father.") ("Hé is as tall as his father:.)
(b). "Pareho ai Carlos kay Jose:" ("Carl is ilke Jose.")
(c) "Rondayang eambong paretio it kimahée ku rindanhang eambong:" ("This shiti is just as expensive as that shirt:")

Note in example (b) that the kay marker is used with personal names. This is generally. true for pronours and delctics'also; the Referent formis used fin place of the ku-marker: Note this in the following:.
(d) "Raya parehas karató." •.
("Ihis is the same as that.")

Note in example (c) that when the object of comparison is stated, the it-marker is used. Note this in the following:
(e) TRo caki ngare hay parchas it katas ku de bai ngardn." ("The" r - $a$ is the same in hejght as that woman."):
=The NEGATVB of these statements is generally given ky the adjoctue "eafn ku..."

(2) A second way of showing comparisons of equality in Aklanon is through the prefix kasin(g)=:
(a) "Rondayang baróng kasingmahteiku randatóng baidng:" ("Ihis barong is fust as expensive as that one. 7 )
(b) "Kasimtaas imáw kuanang lnd m ("He is just as tall as his mother."

- The NBGATIVE in this case is likabos ku..." [for linear measurement] and "kucang ixu. . "n [for quantitative and qualitative measurementy
(c) "Kabós rondayang eambong ku s̀a hustong sukat." ("This shirt is not the sameas the proper cut.")
$-\therefore$
(d) "Kueang ro bugás ngará ku sà rondanhá"." ("Thla rice is not the same as that.").

5a, 2. SCALBR COMPARISONS generally consist of what the traditional grammars: called "the comparative degrec". Altogether, Athanm has four different otateinent types to make ecaler comparisons:

- 177 -
(1) The most friequent way to make a scaler comparison is to put the particle mas fbor rowed from the Spanish] before an adjective in the positive degree. The marker sa is used on common nouns, otherwise a Referent form is used on personal names; pronouns and delc tics:
(a) "Nlas maküsog imáw sa anwanğ:"
$\therefore \quad$ ("He is stronger than a carabao.")
(b) "Mas matáas sijose kay Pedro."
("Joscph is taller than Peter.")
(2) Another comrnon way of comparing is with the enclitic pa:
(a).: "Makusog pa imáw sa"anwang."
("fle is stronger than a carabao:")
(b) "Matam-is pa ta ro dülsi ngarón sa asukar." ("That candy is sweeter than sugar")
(c) "Si Maria mangaranon pa kay Lita."
("Maria is richer than Lita;")
(3). Full reduplication of the adjective root can show çomparison to sume degré when followed by a Referent pluase:
(a) "Níataas tans ro amon ngáBaeáy sa ratóng eskuylahán." ("Our house is [slightly] higher than that school.")
(b) "Miảisót-isót ro ákóng ayàm ku sa imo :" ("My dog is [somewhat] smaller than yours.").
(4) More or lessarchaic Aklanon, still used in formal speches, uses the painticle cabing, along with a-Referent phrase, tō show šcaler comparison:
(a) "Ró saèsàé-on hay eabíng mabug-at sa kăhoy." ("Iron is hèvier than wood."):
(b) "Imáw eàbíng mabuot, eabíng dyosnon katon-tanán:" ("He was much kinder and much more godly than all of us.")
= THE NEGÄTIVE of scaler con:parisons in Akilañon is generally given by bukon[it]. $\because$
(c) "Bukón imáw it mas maacam kanda:"
("He-is not smarter than they:").
((i) "Bukón gid imáw it nagasto pa kākon."
(He is notat all nore extravagant than $I$.")
Another forn: of the NEGATIVE makés an adjectivalphrase with minus and a noninal coñ,struction:
(c) "Mifinus imáw sa ábiliciád kay Juán."
-("Ile has less ability tian John.")
(i) "lnảáw ro kaminusán it utok. "'
, "He is the least intelligent.")
This last example ( $n$ siows a use of minus in a superlative comparison.

$$
-178-\because
$$

5a, 3: COMPARISONS OF CONSEQUENCE are accomplished by linking ádjectival clauscs, together with the linking marker nga:
(a) "Mäsyádong kagin̄öt nga matsà maeùmós ako." "("It is so damp [liumid] that l could drowin. ")
(b) "Kainut nga panabon daya ng̣a matsa mamatáy akós: ("The weather is so hot that could die.")
(c) "Husto ro kataas nị jose nga makahampang it básketholy"
("Joseph is tall cnough to play bàskethall. ").
[Litaraly: "The height of loseph is good enoughto play basketuall."]:
(d) "Má syade imåiv nga kusog nga sobrang mäkaguod it karosa ngaroon." ("He is so stiong that he can easily pull that cart.")

Note how, complex and involved these adjectival comparisons can be. Note how a diagram nf one of them is constructed:
(c)."Bastañifi imáw ngà hibakáe nanáring kabubi"."

"wealthy" "he
("He is so wealthy that he could afford to buy your life:")
Note in the diagram that the linking marker is used hare to show the consequence of what the adjective implies.

The NEGATIVE of these comparisons of consequence is simply put with the negative particle indif:
(f) Masyadong kainaliác čọn nga indíakómakasàráng." ("That is so expensive that l cannot afford [it].")
(g) è"Sobrang kamaháe ngá indi masařangắn do presyo."

| sobrang | kamahác-/ rige / indi | \% masarangan \% do presyo |
| :---: | :---: | :---: |
| Adj-Lm | Nom , Lm Neg. | gRF-A/futu . Tm Nom |
| A.det | modfer. cousa futr. | verb *ind.g |
| too" | "expensive"'that" "not" | "afford" • "price" |

("It is too expensive to be bought.")
Sb. INTERNAL COMPARISONS: When we compare to things that are defined to be the same or at least similar, that is, when ve compare things that we consider to be in the same group, we are making gn internal comparison. Such internal comparisonis whit the traditional grammars treated under "the superlative degree of adjectives". We already mentioned the supe iative degree when it is used outside of comparative statements. We will now discuss it when it involves more complex grammatical structures than the inere statement of an adjective;
5b, 1. THE SUPERLATIVE DEGREE inAklanon can be used inany one of tiurce comparative statements.
(1) Tine most frequent way to make an internal, comparison in Aklanion is to use the kaprefix and the -an suffix on an adjective root; a feferent phase will show the group inside
which the comparisonoccurs:
(a) "Käbahoćn ko nga tawo sá Pilipinäs giato -."
("You must be the biggest fellow in the Philippinces.")
(b) "Kaaeamán inux sa tanán ngà anang isigkaklasi."
("He is the smartest ofifall his classmates:")
(2) Another frequent way is to use the prefix pinka- to stress that it is believed that the quality is' superlative in a certain group:
(a) UPinakàmatambok nga bayi rà saskalibotan. "
("This is probably the fattest woman in the world. iit)
(b) "Rondató rö pinakabulós sa tanán nga akong ginhimo:" ("That was the worst thing of all I've done:")
(c) "pinàkamãkusog rondàya sátanánga mga, anwafig." ("This is recorded to be the strongest of all the carabaos:")
(3) Gencrally, the phrase "saitanan" is sufficient to carry the notion of superiority, particularily if it is reinforced by the particles eabfigor pa gid:
(a) "Nasàligan pa gid si Rogelio sa tanán nga akong kabulig." ("Roger is the most trustworthy of all my helpers:")
(b) "Eabing mayad don satanañonga mga ibá, ("Thit is the best of all the others:").

- NEGATIVES of these superlatives are made mint the phrase "bukonit...", as is the case for all basic adjectives:
(c) "Bukón it pinaka maláe ronduyon sà àkong mga eambong."
("That is not the most expensive of niy dresses.")

6. ADJECTIVALS can be made from SUBSTANIIVES by simply prefixing a Referent form with the prefix ma-: This applies to proger names, pronouns and deletics:
(a) "Makay-Tatay gid nnna inaw it kataas."
$1, \quad \therefore$ ("He is just as tall as his Father. ${ }^{\circ}$ ):
(b) "Matsд,makakönga edád man ìmáw:"
("She is just about the same age as me.")
(c) "May ana man nga mákimo nga hitsura." ("Ile has a face quite similar to yours. "):
(id) "Malàrà man kunta' ro imong obra ". -
("Hopefully, your woyk would be like this. ").
(c) "Maknrón ro öras sa pagangamúyós:" ("This is the time for prayer:")
(1) "Makato ngaklasi ró akon nga naila-an." (EThat is the type which I like..'").

## F. ADVERBS AND ADVERBLALS.

1. THEORY. When we come to the definition of just exactly what an adverb is or might be, we are faced with exceptions on almost every count, and the task is not an easy one.

1,1. NOTIONAL DEFINITION-~NATURAL ADVERBS. Perhaps the simplest, although the most facetious; definition or description of the Adverb is to say that it does what the other parts of speech - nouns; vérbs and adjectives-do not do. Verbs-cán be said to do, nouns name, and adjectives describe: Adverbsianswer the remaining questions; they do what is necessary inthe sentence beyond the functions of vorbs, nouns and adjectives:

Notionally, they can be defined as "words which answer thequestions: when?; where?; how and how much?". This is good enough on an elementary level sincétit accounts for such words as:
(1) The WัHEN? adverbs:

|  | kabi-i- | ight |
| :---: | :---: | :---: |
|  | kahapon | ("yesterday") |
| , - | hin-aga | ("tomorrow") |
|  | hinduna' | ("later on") |
|  | maeak ${ }^{\text {a }}$ | ("seldom") |
|  | täeagsà | ("rarely") |
|  | makaron | ( nnow" $^{\prime \prime}$ ) |

| sa: Lunes | ("on Monday") |
| :---: | :---: |
| sa Mayo | ("in May') |
| ku Hwebes | f"last Thưrsiday"): |
| ku is isááng àdlaw | ("the day beloré yester day |
| sa umabót inga buea | ("in the coming month") |
| kainang agahon | ("carlier this morning") |
| kató ánay | ("once upon a time"). |

(2) The WHERET advébs:

| iya | ("herè" [near me]) |
| :---: | :---: |
| una | ("there". [near you, not far from me]) |
| ina' | ("there" [near you, but far fromme]). |
| idto | - ('theree [fareaway from us]) |
| sà inyo | ("at your plàce") |
| sa plasa | ("at the plasa") |
| sa-pihá | ("on the other side of the moun |

(3) The HOW?-type adverbs:

| madal!- | ("quicki") | it mayäd | ("well") |
| :--- | :--- | :--- | :--- |
| mahinay | ("ulowly") | it mahipos | ("quictly") |
| malipay | ("happily") | it duto | ("very mưch") |

(4) The HOW MUCH? adverbs:'

| ywa | ("two by twoo") | - it ab6' | ("a lot; very much') |
| :---: | :---: | :---: | :---: |
| tiglimá | ("five by five") | it sàngkurort | ("- ${ }^{\text {a }}$ lttle; slightly? |

Another distinction that can be noted about adverbs is that they are NON-FOCUSABLE, They can describe situations better and with more precision that focusable constructions. A single adverb is generally more compact and more to the yoint than, for example, a noun. phrase used as an adverb. "Tomorrow" is a single word with a definite meaning, while "the day following today" is a noun phrase describing the same situation. It is evident that the adverb is much easier to hande and understand.
1,2. A FORMAL DEFINTION brings us a bit closer to the nature of adverbis. In most cases, many adjective forms are used adveribially. Adverbs, like adjectives, in some cases admit degrees of comparison. However, adverbs have a special slot ox position in the sentence, which inakes it casy to distinguish then fromadjectives. Adjectives, we noted, are linked to the nouns they reinforce or modify by the particle ngi.

(c) "Gaestár baeá imáw riná sa inyo?"
("Doesn't he live over there at your place?")
(d) "Siín ditō ro andang baeay?"
("Where over there is their house?")
3,2. AN EMPHATIC FORM of the deictics is made up of two prefixes ri-enddi- combined with the Referent class of nominal delictics (sce page 163):

These forms are uséd to emphasize a positioñor place, particularily when motion or demonstration is involyed. They may occur in any slot in the, sentence available for adverbs, ; usually nitially or finally:
(a) "Ma-agl kitá dikat6."
""Let s pasis that way."?
(b) "Rikaron kamí mahueát kinyo?"
("Wil we wait for you over-thiere?")
(c) "Rikatá cang akó máhapit." ".
("I'lijust drop in over here: \#)
3,3. THE ORIENTATIONOF-FHE DEICTICS. It should be stressed that the deictics. are not onlyusectwith regard to distance or space. Theycan'refer, also to the nearness ordistance of psychologicdl or social relationships. They can point out conversational distance, as well as point dut time.

They obviously referred to space in our previous examples in sections 3, 1, ind 3, 2. Butu thes can be used to show conversationałdistance as seen in the following sketch of a conversation:
(ai) "Sín do opisina it prensipal?"" ("Where is the frincipal's office?")
( $a_{2}$ ) "Itto pang, sa pihsk." " ("Just over there, "on the other side.")
( $a_{3}$ ) " $A$, dikaron:' Unai con imaw?" ("Ahe over there. Is he there nơw") Note how, the form idto $\left[\right.$ in $\left.\left(a_{2}\right)\right]$ is transformed to dikaron and unat [in ( $a_{3}$ )]. Since the person asking the question realizes that the person to whom he is speaking knows the whereabouts of the principal's office, he doos not have to refer to actual or itcoral distance any more. He may now refer to a conversational distance, implying "over theremit, iwn by both you and me". Both are aware of what'is being "speken about and the actual location of the place, sớ-even if the actual distance may be far-the idea is actually near at hand. This is what-we mean when we refer to conversational or psychological distance.

Psychological distance can be shown quite subtly. If Iram complinenting or talking abouty, a person close by, I could show approval or appreciation with:

But, I could subtly imply dissatisfaction or dislike of the person by saying:

$\left(\mathrm{b}_{3}\right)$ " $\Lambda y$, si Marde ngató... ${ }^{\prime \prime}$.
Granting that the person is physically close at hand, by using deictics which refer to things that are generally distant, 1 can ingly 2 scrious psychological gap or distance. This is a digtinct and subtle way the speakers of Aklanon cail show dissatisfaction or dislike through the deictics.
3, 4. DEICTIC USED AS VARAMSO'THER PARTS OF SPEECH. AIthough we have dis:cussed the deictic forms properito eaich part of speech in each individual section involvad). it would be good to rèview them all here, in order to see their extent and their importance. in the Aklan dialect:
(1) AS VERBS (Śce page 116)-

## 2. OIHBR BASIC FUNCTION MARKERS USBD WITH NOUNS.

2.1. mange: is the PLURAL MARKBR. We have discuseed it function and use on page 131. Note that $m g$ [as it is spelled in the vernaculary pluralizes the préceding mairker, sot the following noun; though its effect is obvously to pluralite the foum as well.

"They ate trie:jacifruibs.")
(b) Mibeligya sanda ku mga baboy:"

(Fhey are going to seli the plgs.i)
2,2. ta is añ ENUMERATIVB MARKBR used atier any number enumerating a nôun or nominol, or after the inferrogative pili ("how many"). The use of pis not obligatory in this cáse, though the plunal merkor mga-is not and can not be used. Howeper, the ke marker is generally used and helps clarify the nature of the enumeration:

(b) ? daywang ka ungen
daywang ke ungáe
FNC-LI Bm: Nom
Nom. . comp
"two: "child ${ }^{n}$
("two children")
(c) "tritiong ka kabeyo in
("three hoxses")
(d) "napueo' ka baedy"
("ten hoqses")
(c) "ap-at ki manok"
("four chickens")
Note that the nga linking marker can be used or omitted with ka. However, if ki were to be left out, the nga marker is obligatory.

2,3. ng is a LIGATURE OT a LNKER fusiog any two senfence elements together particularily nominals to adjectives or other iominals. It is used in the same way that arelative Is us̃ed in English, such as "who, which, that". If the word preceding nga ends in any of the vowel sounds; $/ \mathrm{h} /$, glottal $\mathrm{C} / \mathrm{/a}$ or $/ \mathrm{n} /$, the pga may be reduced to ong and suffixed on to that preceding word:
(a) "tawong mabuot"
("good person")
(b) "batang eaeaki"
("young mann)
N.B. "bata" nga eacak""
(c) "maistang ungá""
("smàl child")

N!B. "malstan nga unga"!
(d) Kinyong tanán ${ }^{n}$ ("to all of. you")
N.B. "kinyo nga tanan"

After all other consonants, the form nga must be used without contraction. Of course, it may be used without contraction in the case of the above-mentioned vowels:
(c) "Mayadayad nga agahon."
(f) "maisơtnga ungá"
(Good morning. ${ }^{\text {M }}$ )
(g) "ro tawongabag ong magabot" ("he man who just airrived")

The abbreviation for this ligature is "Lm" and a dagram would read as follows:
(h) Mayadayäd nga hapon kinyong tanán in

2, 4. it as a LINKER is homophonous to the it object maxker. Although it shares cortap similarities when used as a linker or anobject maxker, its function varies sufficientiy to. warrant its being treated as a separate morpheme. The it in this case is used as another ligature, but generally in different situatlons than the above mentioned nga igature
(1) We shall see dit used with "NEGATIVES":
(a) "Aร́w it inóm karon."
("Do not drink that. ")
(b) "Bukòn imáw it manggarànon."
("He its not rich"M)
(2) We have already seen. it used parenthetically with pronouns (see page 168):
(c) "Indis tang megpuric."
(d) "Owá ting magsakky?"
(II won't lle.")
("You did not get on?")

(3) It is also usied to mark out and fuse an adverb' a relationship to a verb in the case where an adverb is not put fintially in the clause:
(e) "Tuóa' it mayád." "
("Study. hard: ${ }^{\text {( }}$ )
(4) It can also link words or phrases that stand in complanentary reiationshp to the verb:
(f) "Nakualàn ka it eamifg."
(Youare shivering with cold. ")
(g) "Nasatean ak6 it duro."

## C. INIERROGATIVE ORQUESTION PARTXCLES: *

The interrogative particles are portmanteaü in character since they have both lexical meaning (referring to something in the real world) and also functional meaning (asking a question). They do two things, they state and they ask. After the basic function markers. these particles rank as the most important of the function words, sincequestions on most basic part of everyday Life-are impossible without them. Thesequestion particles represent the various parts of speech: nominals, verbals, adjectivals and adverbials, and will be discussed separately under each part of speech represented.

1. NOMINALINTERROGATORS are of twotypes, those which ask after personalinames (and the refore related to si/sanday), and those which ask about common thing (and therefore related to ro/do).
1,1. THE PERSONALNAME INTERROGATORS are used in the same circumstances as: the si, ayy ni and kaymarkers:

| -0 | Topic personal interirogative] |
| :---: | :---: |
| nanjo. | [Associate (postpositive) personal inter ogative] |
| anyo | [Associate (prepositive) personal interrogative]. |
| kenyo | IReforent personalinterroy tuez |

Note that they aretratad to the personal pronouns (see pages 157-60). It should be noted that these interrogators used wherever name is expected in response to a question. Therefore, the true Akanon dom for-
(a) "Sinoo ro imong aga ean?"
("Whät is your name? ?
uses the farticle "sin-o" (who"), rather than the particle "ano ("what"). Since the answer expected includes the simarker; the form is personal. Some forejgners, blandy impating the Westem way o asking, put it ranoro imong naean?" which is not idomatto to Aklanon. However, such a literal translan has become accepted through foreign influence in the dialect, and can be heard on occasion throughout the province Either ferm is currently accept-able-Other examples of the proper name interrogators are:
(b) "Ginta eo nanyo raye?"
("By whom was this given?
(c) "Anyo nga kahita duyon?" (Whose wallet is that?")
(d) Manyo rakon'sta oóro kwarta?" ("To whom should I give the money?")
The quotative prefix sine and the verbilprefix maging are also possible with anyo:
(e) "Sinanyo?" (Who said [that]?!
(f) "Maginganyo raya koṇ mamatáy imáw?" ("Whose will this be if he should die?")
1,2. THE COMMON NOUNINTERROGATORS serve in only two slots:
an8 ( ${ }^{\text {anhnt") } \text { [Topic nombal"nterrogative }] ~}$
nano ("what") [Associate nominal interrogative]

As was already mentioned, these forms are used to ask questions where io or a common noun would be used fin the responsé.
(a) "Anó ron?"
(What lis that?
(b) "Nano ro imong ginabasa?"
(What: are four reading?

The quotative morpheme kun- he beenfused with ano toform/thenclitic küno
(c) "Añ:kun $\sigma$ ?"
(d) "Manakáw kuño imáw, "
("wello wat was sàid?")
(intisbeleved that he is a thief
2. VERBAL INTERROGATORS. There are two alternate verb roots, that besides having the meaning of "to do", also ha e question morpheme included ("what?". The roots are. "onlin"; which is basic to the Aklanon dialect, and "ano " borrowed from Hiligaynon, but in active use also. These roots can be made into either cegularior stative verbs, in all modes and focuses:
(a) "Ga alif ke?"
(b) "Nağalín sañda Kăhapoṇ"
(What are you dolug? ) (Whet did they do yesterday? ?
"What are you going to do with this?")

$$
\begin{aligned}
& \text { (c) "Alins mo:raya?" } \\
& \text { alinon } \% \text { mo } \% \text { raya } \\
& \text { gOFSS/suby } \Lambda / \mathrm{pro} \text { - T/dèc } \\
& \text { Qp-verb: actor goal } \\
& \text { "do what" "you" "thiss" }
\end{aligned}
$$

(e) "Náalifr ikiw?"

N:B. Stativéverb use.
(i) "Pa-alín ro pagdáá?" N.B. Causative quality use.
(g) Maka =and ka dikarí? N.B. Aptative or ability mode use.

How do you feel? (How do [you] carry [it]m)
("What cani you do here?").

* 3. ADVERBLAL INTERROGATORS. The gaverblal class of interrogatives represents an extrèmely versatile set, covering questions of time, place and manner.
3, 1. THE TIME INTERROGATORS. There are two time Interrogatives, one representing the past-"kan-o" ("when [in the past]?"), and one representing the future-" "hin-uno" (when [in the future] $7^{\prime \prime}$ ]. Each of them requires/a conditioned form of the verb, though hin-uno is - often used alternately winh either the future or the subjunctive verb form.
(a) "Kan=oimáw magabét?"
(b) "Hin uno sanda ma adeo?"
("When did he arive?")
(c) "Hin-molinadwargpukawon?" ("When is he to be awakened?") N.B. لve of the future condtiloned aspect, Object Foeus.

3,2. THE PLACEINTERROGATOR is "silin" ("where") [or "which" in some idioms),

## D. NEGATIVEPARTICLES.

These negatives also rank high on the list of important function words, even if they are only four in number. Each of them has its own unique character and use.

1. THE USES OF owá :

1, 1. PAST TIME. When owa' is used with verbs, it generally signifies the past tense, and is used with the past conditioned form:
(a) "Owá' pa ako măgilabass."
("Ihaven't caten lunch yet.")
(b) "Owá' kamímagsimba kahapon," (Me did not go to church yesterday."")
(c) "Owá nakou pagakeáro isda':" (Y didnot buy the fish ?

For the sake of practice, it should be noted that the a spect changes from positive question to a negative answer:
(dı) "Ginhibàygan mo akto" ("Did́ youllaugh at me?").
(d ${ }_{2}$ ) "Owá' nàkon ikáw paghibaygi.:" ("No, I did not laugh at you.")

( $\mathrm{e}_{2}$ ) "owá imá千 magblík:" ("No, he has not come back.")
1,2. PRESENT TME. When owa' is used with verbs in the imperfective, it generally, signifies the present time, particularily for habitual actions:
$\checkmark$
(a) "Owá" kamí gabaligya" it maís." ("we do not sell conn.")
(b) "Nagasimba ka T... Owá'.
("Are you going to church?. . No.' ${ }^{\text {N }}$ )

1,3. LACK OF POSSESSION Owa "do(es) not lave" or "be without": "
(a) "Owa' ako it reló."
(b) "Owá kamíit ayam."
("I do not have a wristwatch.")
("We don't have a dog.!').

## 2. THE USESOF indi':

2, 1. FUTURE TIME. Indi' is used with verbs in the future conditioned aspect to denote the-idea of future time:
(a) "Indi" akó maghapon dikaŗâ.". ("I will not eat supper herc.")
"Indínaton masayran ro Dyos it mayád, kon iya kitá sa ibabaw
("We caniot get to know God well while we arèe heré upon the earth.")
(c) Undi nimo igsugid raya." "r (Dốnit tell this [tọ anyonc].")
(d) "Indi kä mactiom kañot", ("Donit drink that:")

Note that in this future use, indi canalso give commands, as in examples (c) and (d) above. 2,2. COMPARISON OF indi and owa . Note how the future meaning of indi can stand out as opposed to the past meaning of owa in otherwise identical statements:
(ai) "Indít tang magadto sa Ibajáy," ("İ will not go to Ibajay.")
$\left(2_{2}\right)$ "Owá' tang maçadto.sa Iliajáy." ("I did not gó to Ibajay.").
3. THE USE OF ayáw:

3,1. WITH VERB FORMS FOR NEGA/IVE COMMANDS: Ayaw is used with the past conditioned form for negative commands:
(a) "Ayáw magtubako'"
(b) "Ayáw pagtueoka/akb:
(c) "Ayaw paguna ro lapad."
(Dont smoke (V)
(Donit stare att me.".
(Dont drink the liquor.!

3; 2. WITH it AND VERB ROOTS FORNEGATIVE COMMANDS Ayaw can álṣobeused. with the it marker and the simple statement of the verb root to give a negative command:
(a) "Ayáw it singgit."
("Don't shout:")
(b) "Ayaw it fibayag."
(Donttlaugh:")
(c) "Ayawitlinahóg "
(Don't be naughiy.?
4. THE USE OF bukon Bukon is limited to negatiggadjective or other descriptiye statements or modifiers. It is also used tó negate a substantive when possession is not mplied but description (particulariyy as Topic) a involved. Note the following.
(a) Bukón imáw it màhugod: i'
("He is not industriouse?)
(b) Maskin rong mangganon hay bukón mañ dayon t mabuot." (Even theerich are not negessarily generous (i)
(c) "Imáw rónagháoóy it bàtó?" (Was he the one who threw a stone?").

Bukon:"
("No, [he wasñ't]:")
(d) "Tkáwicro nakabuóe it hwarta?"
(Were you the one who got the money?
"Buk6n."
(No."):
Note in examples (c) and (d) how bukon is used to negate the descriptive nominal phrase fol lowing the ropic marker ro. Compare those two examples with their alternates and negations:
(ç) "Naghabóy inàw it batớ?"
("Dinithe throw a stone?")
"Owá màn."
(:
(d1) "Nakabuóc ka it kwarta ingarón?" $=$
("Did you take that money?")
"Owá' gid:"
("Not-at all."')
5. COMPARISON OF THE DIFFERENTNGGTIVE PARTICLES: Note the differences in meaning between the following related sentence s:
(ai) "Ơwáá eona': ("No more:").
N.B. In the sense "There is no more [left]."
( $\mathrm{a}_{2}$ ) "Indi' eon."
("No morèe.")
N.B. In the comiand: Don't do that any more., Stop.." $\because$
(a3) "Ayáw eon."
("'Not now."')
N.B. In a-strong command: "Don't do that now:"
(ai4) "Bukóñeon,".
("Nō longer.")
N.B. In the sense: "It is no longer true" or it no longer applics.in

## E. TRANSEOKMATION PRODUCTS.

Only two in number, the transformation products weigh heavily in the structure and order of Aklanon sentences. Transformation products are little particles that allow us to transfer the order or impact of a misic sentence muttern, either to simplify or to emphasize certain sentence elcinents. There are two very different uses invalved for each of these particles:

1. hay is a particle allowing us to put eny besic sentence element into the initia position of a clause in order to give it emphesis. In this regard, there are two types of transformation:
1,1 SIMPLE TRANSFORMATION invoives the reversal of the basic topic and predicate positions. Noxmally (see page 151) the original word ordir of Aklanon put the predicate or "news" of the sentence first, and the Topic ar subject second. By using hay, this original: word order can be reversed, as in the following paired examples:
$\left(a_{1}\right)$ "Ray2 ro akong ungá ${ }^{2}$ " "
("This is my child. ")
( $a_{2}$ ) "Ro akong unga! hay rondeya in ( (This is my child:")
( $b_{1}$ ) "Mahie rọ singsing." , $\because$ ("The ring is expensive.")
$\left(\mathrm{b}_{2}\right)$ "Ro singsing hay mahise:" ("The ring is expensive; "i)
( $c_{1}$ ) "Gwapo ka." ("You are handsomé"")
( $c_{2}$ ). "Ikáw hay gwapo."'
("You are handsome.")
( $\mathrm{d}_{1}$ ) "Ginbaligya! nana ro anwang." ("He sold the carabao.") :-
( $\mathrm{d}_{2}$ ) "Ro auwang hay ginhaliguanana." ("İe sold tiae carabao.")

1,2. EMPHASIS DERIVATION intuolves the puting of any element in initial position of the clause or sentence which normaly could notoccur jnitially. Oftentimes, such a change involves grammatical changes as well:
(a) "Mataäs ro mǵ breáy sa Manila":"
("Thẹ Sulldings in Manila are high:"):
( $a_{2}$ ) "SGa Manila' hay mataas ro inga bacíny" "In-Manila, well the bulldings are high.") ("In Manila, welr the bulldings are high.")
( $b_{1}$ ) "Ginballigya" so anwang sa Kalibo:" ("The carabao was sold in kialibo.")
$\left(\mathrm{b}_{2}\right)$ "Ro anwang, hay ginbaligora' ron sa Kalibo." ("The cerabao, well it was sold in Kajibo."')
( $c_{1}$ ) "Hin-aga ma-acto kice, ("We will go tomoriow.")
( $c_{2}$ ) "Hilnaga hay ma-adio kiáa." ("Tomorrow, well we will go [then].")
(d) "Akó hay bata' pa ngani".". ("Well mer-1'm still young.")
Note that this second use of hay is somewhat equivalent to the conjunctive "well" in english.
$x \cdot$
-
2. may is a particle which generally transforms benciactive (Referent) slots intó Topic slots, or benefactive statements into existential statements. Theoretically it transforms the positions of the ro and sa phrases:

$$
\begin{aligned}
& \text { "Ro ayam sa ungá' . ("The dog is to the child.") } \\
& \text { "May ayam ro ungá'." } \\
& \text { ("The child bas a dog.") }
\end{aligned}
$$

Of course, this refers to a theoretical or etymological model which is no longer in use; yet the statement type given above shows the generas nature and use of may. Today, may has three distinct uses:
2,1. EXISTENTIAL STATEMENTS are constructed with may in initial position, with the meaning "there is" or "there was":
(b) "Máy patáy sa datag.".
("Ihere is a dead man' in the field.")
2,2. INDEFINITE STATEMENTS. Aklanon does not have indefinite nouns or pronouns like the English "someone" or "something", "anyone" or "anything". However, the may construction is used to derote such indefinite conditions:
(a) "May tawo runa' 2 " :
("Is someone therere?").
(b) "May iyá nga doktor kaina."
('There'was some doctor here a while ago.")
(c) "May akon nga gustong makipagkita' 'kima."
("I would like to show you something.")
2,3. STATEMENTS OF POSSESSION can be constructed in'Aklanon with two basic focus or emphasis types:
(1) FOCUS ON THE POSSESSOR is shown/ by putting may before the object possessed, and making the possessor the Topic of the sentence:
(a) "May bàcáy ro akong tiyo." ("My, uncle has a house.")
(b) "May manók si Nanaý." ("Mother has a chicken.")
(c) "May kapuslanan ro anan'g ginhambae." ("What he said has worth.")
(c) "May tinun ${ }^{\text {ang }}$ giato, pero" owá" man imáw it batasan." ("He may have an education, but he doesn't have any manners.")
(2) FOCUS ON THE RELATIONSHIP OF POSSESSION is shown by putting may before a prepositive Associate (describing the possessor), and linking the resulting phrase to the object of possession with the nga-ligature:
(2) "May a mọn nga bacáy." ("We have a house.")
(b) "May ana hu ungá' nga torumpo."
(c) "May ay Maria nga cagnát."
("The child has a top.")
("Maria has a fever.")
Please refer to page 144 for the various types of prepositive Associate slots and finction markers or words.

## F. DISCOURSE PARTICLES

Discourse particles, including the enclitic adverbs (so-called because of theposition they occupy i. heir clauses), are crucial to meaningful and idiomatic Aklanon speech. For the forelgn learner, they present quite a problem. They are often extremely difficult to translate into English or to handle in Aklanon, because they are idiomatic to the dialect, and are not found in English. In most cases they take months of practice to handle properly.

Markers; we observed, precede the words or phrases they go with, and they give function. Discourse particles, on the other hand, generaily follow the words or phrases they go with, and they give color-without at all interfering with function. To the extent that they add meaning or color; they are somewhat adverbial. Those that follow the word or phrase they color are called enclitics or postpositive particles. However, not all of the discourse particles follow the word or phrase they influence; some go before the word, and some come at the very end of the clause. What is common to them all-is that they are particles and not really distinct parts of speech (in the same way, for example, that a noun or adverb is). They also color the speech of a person, however each particle with its own shade of meaning.

1. THE ENCLITIC OR POSTPOSITİVE DISCOURSE PARTICLES. The largest class of Liscour e particles is the enclitics. Their distribution in terms of function and meaning is quite varied, but all of them follow the same type of word order-they must follow the word or phrase they, color immediately. In our following discussion, many of the translations are idiomatic to the situation in English, rather than literal or even.accurate transla. tions of the enclitics..
1,1. THE QUESTION AND ANSWER PARTICLES are as follows:

| baces | [question farticle meaning "indeed?, .really? |
| :---: | :---: |
| -a | [question suffix, meaning "might it be?"] |
| man | [general response'particle: "also, too, so, thus"] |
| abi | [answer particle: "but, take it from me", giving excuse or reason] |

(1) EMPHASIS IN QUESTIONS is given by the particle baea. Unlike Tagalog and Ccbuano, Aklanon does not ordinarily use a particle to identify every question. However, a speaker gan put emphasis or surprise into hls question with this particular enclitic:
(a) "Siín bacá imáw?"
('Where in the world is he?')
(b) "Ikáw bacá ro among maestra?" ("Are you rcally golng to be our teacher?")
(c) "Ham-an baed?" ("Well, why then?") "
(2) OBLIGATORY SUFFIX AFTER slin.AND ano. The particle -a is most often suffixed onto roots connected to the question paxtictes sing and ano. "There is not a literal equivalent in English, and this construction defies any idiomatic translation:
(a) "And. $\delta$ adláwa màkarón?" ("What ra'y is it today?")
(b) "Siíng latalıa ron?" ("Which can is that?")
(c) "Siing plaggana fing nailaman?" ("Which plate is the one you like?")
(d) "Siíng tubi-a ditto, ucán ukón mawasa?" ", " Note: NAWASA is the Philippine National Water and Sewerage Authority, the-local waterworksi.
(3) THE GENERAL ANSWER PARTICLE is extremely Idiomatic to Atlanom and has na :ègular English equivalent. Althougti man can sometimes mean "also" or "topon'; it is used far more often. Almost every question is responded to with this particle. Look at the following cross-section of a dialogue to sce the idiom of Aklanon:
(aj) "Mayadnyad nga hapon."
( $a_{2}$ ) "Mayadayad nga hapon man.".
$\left(a_{3}\right)$ :"Kumosta ka?"
(a, "Mayßd.man, 'Sifn ka ga-adto?" ("Fine. Whereare you golog?'):
$\left(a_{5}\right)$ "Sa sine. Naila' ka man magmundt?" ("To the movie. Wouild yodis
like to come along too?")
$-. \quad\left(2_{5}\right) \quad \begin{array}{r}\text { Sa sinc. Naila ka man mag } \\ \text { like to come along too?") }\end{array}$
("Owcde man. Mabagtas kith o màsakáy sa traysikel2" ("O.K. Shall we walk or ride a tricycle?")":
(27) "Macapit man lang, Mabagtas langikith." ("It's just nearby, so let's walk.")
$\left(2_{8}\right)$ "Sige man.".
("Good afternoion.")
('Good atternoon [too].")
("How are yoú?")
( $\quad \therefore$ (O.K. ! )
Note that in the eight lines of dialogue, the responsid particle is used on five occasions, each dme indicating some sort of answer: response or agxcement with what was sald by the other part,'. This is the idiom of the dialect, literally meaning: "This if my answer or feeling to what you just said."
(4) THE EXCUSE PARTICLE, abi, is also used in answering, but with more force than man. Oftentimes its meaning amounts to an excuse in the. sense of "but, on the other hiand" or "but, belicve me". Sometimes its meaning escapes any equivalent English'idiom:
( $a_{1}$ ) "Ham-an owát ka nuna" kabi-i?"' .f"Why weren't you there last nigteri")
( $a_{2}$ ) "Masakit abi ak6.:"
("But [because] I was sick.")
(b) " "Owá' abi akb kasayod." ("Well, I just don't know:")
(c) "Daywaing oras eon ro akong pagipahueát kimo; sin-o ka gid abi?" ("I've been kept waiting for you twa hourse; well, who do you think you are?")
(d) "Parchạs abl sànda." " ("But they"are the sañc.")
(5) THE APOLOGETIC PARTICLE, gang or ugang, is a commaction of the conjunctive ugaling, meaning "unfortunately". Using gang is a highly colloquial, and sonictime impolite, way of responding:
$\left(\mathrm{a}_{1}\right)$ "Obrahá ánay raya."
( 2.2 ) "Hu"o gany."
("Do this first.")
N.B. This response denctes reluctance.
( $\mathrm{b}_{1}$ ) "Panindahan ainay." ("Go to the market now.").
$\left(\mathrm{B}_{2}\right)$ "Hindurn? gang."
N.B. R'cluctãnce in the response.
( $c_{1}$ ) "Nagsacá' ka?" ('Did you make a mistake?")
( $c_{2}$ ) "Hu-O, indi" egáng akó magumán." ("Yes, but I won't do it again.") N.B. Here the particle denotes apology.
(6) DIRECTT ANSWER PARTICLE. The enclitic ron is used in brief, direct answers. It comes from the enclitic ruyon, and literally means "that" or "to that":
(a) "Ma-2dto ka sa slnc?" "fu-o ron."
(b) "Sinmo ro nakadaóg?" "Ako ron."
" ("Are you going to the movie?") ('Yes, I am.")
("Who was the.one to win?")
('I was.') .• \&

Like gang, this form is highly colloquial. In the case of (B), such an answar would be considered proud due to its extreme brevity. Formal Aklanon would not use this particle.

## 1,2. THE TIME RELATED PARTICLES:

DURẢTIVE ENCLITICS

(1) con [a niorphophonemic variani of karon] or nin [borrowed from Tagalog or illongo] is often translated "now, just, already". Actualiy; it simply shows REAL ASPECT, that the action has already begur. It could also mean "then, at.that time" or even "by that time". It forms a class of durative particles along with pa since they are mutually exclusive. A clause containing con, cainot colitair pa.
(a) "Husto con."
("That's all right for now.")
(b) "Nakakaoa ka con?"
("Have you already eaten?")
(c) "Limáng ka dag-on con akó riya.". ('I've been herc for ilve years now.'")
(d) "Tapús con don." . $\quad$ ("It's just been finished.")
(2) pa is a sustaining particle, often transiated as "still" or "yet" in English. It denotes that the action is not finished:
(a) "Owá' pa nàtiapús."
("Not yet finished.")
(b) "Una' pa imáw?"
('Is he still there?')
(c) "Tatlo pang oras."
("Three more hours.")

As was mentioned, pa and con are mutially exclusive, they cannot be used together in the same clausê. Yet they are often used in response to each other:
$\left(\mathrm{d}_{1}\right)$ "Tapús ka con?"
$\left(\mathrm{d}_{2}\right)$ "OwS', pa."."
("Are you finished now?")
('Not yct,")
( $e_{1}$ ) "Piá con ríng edâd?"
("How old are you now?")
( $e_{2}$ ) "Biycnte e syete pa taḳon."
("I'm still twenty-seven.')
(3) rayon [or its allomorph dayon] means "conscquently, subscquently" or "therefore":
(a) "Pagabót mana, mapanaw rayon kitá sa bajy ${ }^{\text {may }}$." ("Once he arrives, we will [subsequently] leave for the beach.")

## (b) "Daif Lang, ag tapús eon dayon." "Tust a ittle while, and then it will be finished:" 7 :o

(4) anay, which could be called the "patience particle", indicates that the action or time it refers to precedes or should precede another action or time. Its trayslation to English dependš very much or the situation involved, since it could meann "please, first, for a while":
(a) "Linghod anay:"
("Please sit down.")
(b) "Taw'à moanay ro kwarta kakon."
("First, give me the moriey.")
(c) "Hueat anny:"
("Wait a momext:")
(5) eagi, which might be called the "Impatience particle", Indicater that the action should occur or will occur mmediately. It is inapinlated into kngish by "quickily, right away; from the very beginining":
(a) "Xilaea naton eagi si Danilo. " ("We will quicky recognize Danilo.")
(b) "Kinahaigen eag - nimo raya?". (Do you reed this right away?")
(c) "Mapanaw eagitita?"
("wil we leave immediately?"
(d) "Bulók eagi ro kodak ngará." very beginning:")
("This camera was lousy from the

## 1,3. THE QUOTATIVE PARTICLES are ùsed in quoting direct speech of people.

(1). kumo is a reduction of the quotative kun- and the particle ano, meaning "it is delieved, it is said":
(a) "Mayád gid kùnó to andang obra." ("They siay tbat their work is very good.") Literally: "It is said that their work is very good."
(b). "Ro ean's kuns hay an'a." ("It is said that the rice, field is theirs.")
(2) makon is used to quate one's own words or thoughts:
(a) "Daî́ lang makon 2 g umabór imáw." ("I said that he would be arriving very soon.")
(b) "Makō" ta nga patáay ka eo'ting." (Thought thet you were dead.") N.B: Parenthetical for: "Makon it ana nga patay ka eon it imo."
(3) maton is used in making corrections in a polite way, altheugh it litcrally means "we should say":
(a) "Gond morning". ."Good afternoon, maton."
("Good morning". . . [you should say] "Goód afternoon."
Note how the second person corrected the mistake of the first one by giving the áctual correction and then adding the.particle mataron.
(b) "Matsa naakig imáw, anó?" - ("He is somewhat angry, isn't he?") "Matsa? Naakig nga mayád maton imáxt’’ ("Somewhat? You mean he is extremely angry:")
(4) mana is used in quoting the wörds of another person, meaning "he/she said":
(a) "Maeam mana ikáw."
("He said that you were smart.")
(b) "Masakít mana imáw:"
("He, said that he was sick.")
(c) "Parchas abi mana sanda kul se-mga abogado.": ("Well, it could be siid that they are similar to lawyers.")

1,4. THE LIMITING PARTICLES are used to restrict an action or concept in some way or another.
(1) eang [or its longer form eamang; together with lang or lamang, as borrowed from Hiligaynon or Tagalog] generally means "just". or "only", but is used more often than its English counterparts:
(a) "Sangkurót eang ro habisín." ("Just a litcle is left:")
(b) "Nakauhi' eamang ikáw sa baryo, mako"ta nagadto ka sa Manila' ." ("You"only went back to the barrio?. I thought you went to Manila.")
(c) "Sige éang."
("Just go on.")"
(d) "Ikáw eang ro makahimo kara." ("Only you can do this.")
(2) mismo is a particle making 2 reflexive of a nominal:
(a) "Akó mismo ma-adto ritó." ("l myself will go there.")
(b) "Owá ikáw it kaibähan? Ikáw mismo nakapanaw kabi-i?" (rYou did net have a companion? You-left by yoursclf last night?")
(3) bees is a particle meaning "almost, just about, barely". It can be used as an enclitic postpositively; "but it also can precede the word it colors:
(a) "Owá' haeoos it habilín:"
("There is just'abolt niothing left.")
(b) "Haeos humán eon don."
('It is almost ready.")
(c) "Haeos ngani' kueang kamon ro anang sweldo." ("Indeed, his salary his just about insufficient for us.")
(4) hingan is a.paricle meaning "likely" or "almost, closely":
(a) "Owá' hingan giato it tawo sa plasa, ay nagucán." ("I here are probably almost no people at the plaza since it rained.")
(b) "Makará hingan do anang pagkanta."
("Her singing was something like this.")
N.B. Then the speaker would attempt to imitate the singing.
(c) "Owh" hingan it suebd do taeagbasán."
("There is likely to be nothing in the rice basket.")
1,5. THE EMPHATIC OR AFFIRMATIVE PARTICLES emplaside a concept in one way or another. Each of them has its own particular color:
(1) gid is a particle used quite frequently in expression an action or a state of affairs as deliberate or intensive:

$$
\vdots \quad-203 \ldots
$$

(a) "Duyon gid ro kabantogán nga batẹ̀l riya sa banwa." ("That is definitely the most famoud hotel here in town:")
(b) "Manamit gid do pagkaon sa restoranténgare."
("The food at this restaurant is really delicious:")
(c) "Imaw gld ro nagbube it anang rele."
("He was definitely the one who took his wristwatch.")
(d) "Mayád gid imáw." ("He is very good.").
(2) kd is a particle used to call attention to a point.or to assert something with some degree of emphasis. An English translation of it js not always possible:
(a) "Si Anterio ta ki."
("Now that is Antero.")
N.B. The speaking is calling attention to a very xevealing characteristic of the person in question.
(b) "Gwapo ta ki imáw." $\because \quad \therefore \quad$ ("Notice he is quite handsome.")
(c) "Ayáuw ki pageagsa no mga ungá.."
("Now, don't go chasing thee children.")
N.B. The "now" in English calls attention to the command much like the ki does in Akjanon.
(d) "Taw-i, ki it abón' nga sabód ro manók."
("Now be sure to 8 ive lots of feed to the chickens.")
N:B. The phrase "now be sure to" emphasizes the command much like the ki does in Aklanon.
(3) galf' is an interjectional particle expressing surprise, generally used in responses, implying that the "speaker has just been reminded of something:
(a) "Basi' indi' pwede kimo...Ah, pwede galh'."
("Maybe it isn't right for you...Ah, Hiy. goodness, it is all right,")
(b) "Duyon galít ro husto gid nga saoất."
("Ah, that was the right answer after all.")
(4) ngani' -is used as an interjectory particle, eipressing the certainty or truthfulness of a statement. It occurs immediately after the word verified as.true. It can also be used in irritation when reminded of something which is already obvious or known:
(a) "Ta=́d ngani"
("I just don't kñ̈w.")
(b) "Owá' pa si Henry nakapanaw...Hu-o; ngani'•" ("Henry hasn't been able to leave yet. . Yes, I know.")
(c) "Sin-o ro ginpaabót maghimo kat 67 . . Akó ngani'." ("Who was the one expected to do thatt?...I was the one.")
(d) "Owa' gid ņani' th habilín." ("There's nothing at all left ovër: :")

1,6. NOTES ON THE POSITION OR WORD ORDER OF ENCLITICS. Althougl each of the enclitics is said to follow the word it colors', a problem is introduced when more than one enclitic might be used. Which sort of enclitic takes-pieference? The following is an arrangement by slot of the different enclitic particlés. Those enclitics written in the same column are considered mutually exclusive, and two of them cannot be used in the same clause:

Note that the pronoun enclitic forms take precedence over all others. Beginning with the discourse particles, the time particles pa or eon take precedence over all the others. All others follow in the order as listed.

It should be noted that some of the particles are used in conjunction with each other; they are as follows:
eonlang, gidlang, manlang, nalang, palang
The following examples are to illustrate the various positions of the enclitics:
(a) "Owé" pa ngani" naila' akó."
("But I still don't like [it].")
(b) "Maeagko' gid hingan ro isda",",
("The fish is likely to be very large. ').
(c) "Ginbakáe rio maniang abi ro sapatos?"
("But you only bought the shoes.")
(d) "Posta "an ta man anay mana.""
("First," "he sald, ${ }^{n}$ we will bet[on it].")"
The use of enclitics is a common everyday thing in Aklanon. They add flavor and color to a conversacion, and carry with them the moods ind feelings of a whole culture and a way of life. The overuse of them can be humorous. Nonetheless, the following example-momic as it may bemillustrates a child's wa; of explaining his procrastination in getting his chores done to an angry parent. At the same'time, this example shows a foreign lexrner the use and position of several enclitics:
"Owá' fa eang gid abi anay ngani' makon naha 0 , had:"
N.B. This example defies literal translation, but might be taken to
mean: "SO, all right already, I said I. wasn't finished, but if you will wait a second...O.K?..
1.7. COMPARISON CHART CONTRASTING THE MEANING OF SEVERAL ENCLITICS. Although given out of contert here, the Idiomatic English translations should hint at the true color of each expression:

AKLANON

Hu-o.
Humo, abi. Hu-0, anay. Humo, laeá? Hum, kufó. Hum, mation. Hu-j, maton. Hu-a, ean. Hu-c, man.

| ENGLISḢ TRAINSLATION |  |
| :---: | :---: |
| ("Yes,") |  |
| ("But, of course, yes.") |  |
| (ryes, but just a minute please."). |  |
| ("Yes, isn't that right?") |  |
| ('They said 'yes'.") |  |
| ('I said, 'yes'.') |  |
| ('What you mean to say, of course, is 'yes'.") |  |
| ("Yes, for the present.") |  |
| ('Yes again.")' |  |

- 205 -

2. VARIOUS PREPOSITIVE DISCOURSE PARTICLES. Thene particles share one feature in common, they come generaliy at the very beginning of their clauses [except for some of the modal particles listed below].
2,1. THE VERBAL PARTICLES are used somewhat uke yerbs in that they express a cextalin quality of action or condition.
(1) tex-a is homophonous to the verb "to give", but means "I do not know":
(a) " $\mathrm{Ta}-6$ kon $\sin -0$ imáw."
("i don't know who he is.'.)
(b) "Ta-ónganl'." ("I just don't know.")
(c) "Ta-6 kön slín sanda nagadto."
("I don't know where they went.")
(2) abi is homophonous to the enclitic form discusised on page 200, but means in this case "give":
(à) "Ab1 anay ro kwarta."
(b) "Abi ron."
("Give [me] the money, please."),
("Give [me] that.")

Another form of this is ambil:
(c) "Ambl anñy ro kandela."
("First, give [me] the candié.")
(3) sige is a particle meaning "go on", "go ahead", "do tt":
(a) "Sige na."
("Ah, goon.")
(b) "Sige, agod makta' ta rayon,"
("Go on, so that we'll see.")
(c) "Sige, putlan mo.pa."
("Go ahead, cut some more.")
(4) pwede; sarang and mahimo are particles meaning "cas do", "may be permitited", or "is possible". They are gencrally permission getters or givers.
(a) "Pwede nakon mabilín riya ro akong mga dinaeá?" ("Is it all right-if I will leave my things here?")
(b) "Fwede man."
("Sure, go right ahead.")
(c) "Sarang mahambae ron sa Bisaya'?" ("Can that be said in Visqyan?")
(d) "Mahimo nga akong mahucám raya?" ("May I borrow this?")

2,2. THE MODAL PARTICLES. This class of particles, consistlig of prcpositive and postpositive members, is used to express in Aklanon various modes that are nor expressed in the varb. They are used in desicribing actions, and therefore have an adverbial character about them.
(1) basi ${ }^{*}$ is used prepositively. It is a modal particle expressing strong doubt or warning on the one hand, but indicating that the statement of which it is a part will most probably be untrue:
(a) "Basil' mahueog ka." ('You mightr fäll.")
(b) "Basi' maucán hinduna"."
("It might rain later on.")
(c) "Basi' ind'' nakon maislan don."
("I may not be able to exchenge thst.")
(2) siguro and sigurado are used prepositively, Bach of theni is a modal particle expressing that an action will most probably come true:
(a) "Siguro indl' imáw makapanaw." ("He probebly can not leave.")
(b) "Sigurado gid nga ma -abot rong cheld sa petsa biente."
("The checks most certainly will arrive by the twentieth.")
(3) Kunta' is a modal particle expressing a wish or hope that something particular might come to pass:
(a) "Najla' kunta'. ako magpariserba it sambatong kwarto sa hotél." ("I would like to reserve one room at the hotel.")
(b) "Tapús eon kunta' ro akong obra,". ("Hopefully my work were finished lby now].")
(c) "Sangkuide kunta' ro amird́e sa.saewae." ("I would like] just a little starch on the trousers.")
(4) glato' is a modal'particle expressing that the statement of which it is a part will most probably be untrue. However, unlike basi ${ }^{i}$ [its counterpart], glato indicates total ignorance. of the real outcome of the siatement, though it does express strong doubt:
(a) "Dimalas gid giato kitá." ('We may really have bad luck.") N.B. There is definite uncertainty as to whether it will be good luck or bad luck.
(b) 'indi' giatc â:. nakabuóe it eksám."

(c) "Maeņó' pa gato fon.". ("It still might be far away.")
(5) sabon is homophonous to the word for "soap" in Akianon, but as a modal particle it is used to express mild uncertainty. It is somewhat similar to inasi ${ }^{1}$, but is used encliticiy; and usually occurs in response utterances.
(a) "Ano sabón.ro hitab6": idto?" ("What might happen there?")
 - ("He ma speak about his father's death.")

2,3. THE QUALIFYING PARTICLES. This class of particles is used to modify, limit or otherwise qualify a statement:
(i) syempre means "of course" or "naturally":
(a) "Syempre-naila' ako kana." ("Of course I luke. her.")
(b) "Syempre malipay akó." $\quad$ " ("Naturaily, I am happy.")
(2) matse is a qualifying particle expressing some doubt about the statement it precedes, but as the same time expressing strong sentiment that the gtatement is or will prove true:
(a) "Matsz imáw rató."
(b) "Matsa temprano pa, aub?"
(c) "Matsa mauén pa."
('It seems as if that's hica [over there].")
("It must still be early yet, isn't it?")
("It might still rain.")
(3) maskin is a particle meaning "even" or "no matter what":
(a) "Maskin ikaw makahimo karón:" ("Byen you can do that.")
(b) "Pwede nga iya ákó màeubog, maskin sa saebg cang." ("May I please spend the night here; even if Just on the floor.").
(4) medyo is a particle meaning: "somewhat, close to" or "ryight"-0
(a) "Medyo matuebp'imáw kakōn."
("He is close to hitting me.")
(b) "Medyo mabahóe katon ro bieky." ("The house is gomewhat large for us.")
(c) "M̌dyo nawad-án kamí It sueá" :". ("We are almost without any food for our meal.")
(5) manga is a particle homophonous to the plural marker mga, but in this fumction it means "about, approximately", limited to counting or telling time:
(a) "Manga alas says ro among miting." " ("Our meeting will be at approximately six $0^{\prime}$ clock.")
(b) "Manga alas tres makaron;", ...('It-lis about three o' clock now.")
(c) "Manga lima kanda nacumósr". "About five of them drowned.")
3. THE TAG PARTICLES cocur at the very end of the clause or sentence in which they stand. Like other particles, they sometimes are difficult to translate imo Engilst.
3,1. ano is à question tag particle with the meaning "isnit that sol": -
(a) "Mahugod nga mayád imáw, anठ?"
('He is very industrious, is ${ }^{\top} \mathrm{t} \mathrm{th}$ ? ')
(b) "Bukón it.maeayó' $3 \Omega$ bukid, anv́?"
("It isn't very far to the mounten, is it?")
3,2. ha is a question tag particle used to urge a response for another person:
(a) "Husto eon, ha?"
("Correct now, huh?")
(b) "Mamunót man akó, hà?" ("I'll go along too, O.K?")
(c) "Sige, ha?" ("Come on, all right?")

3,3. ho is a particle used at the end of a sentence to attract another's attention. In a way, it is an exhortatory particle asserting the wish ta comply with or be complied with:
(a) "Idto imáw, ho."
(b) "Abl anay, ho."
(c) "Antigo eon akó, ho."
("There he is, see.")
("Here, give it [to mè].")

## ("See, I know how to do it. '")

. 3, 4. al' [sometimes spelléed 'ay'] is a particle expresiolog disbellef or dià̀ppolntment at hearing something:
(a) "Nakspanaw con imáw, al'?"
(b) "Naducá' ron, al'?"
("Oh no, the left already?")
("What? $1 t$ was lost?")

3,5. a is a particle ussed at the ond of a sentence to express annoyance:
(a) "Lint' kam6, a." ("Oh, "darp you:")"
(b) "Ауа́н, "a."
("Don't, aw.")
(c) "Indi' takon, a."
(II won't do that.")
4. DISCOURSE PARTICLES IN PILIPINO. As ${ }^{7}$ a slight diversion from our usual dism ccussion, we are going to compare sereral of the Aklanon particles to those of Pilipino, the national language. Our purpose in doing this is two-fold to show to the non-Filipino howcruclal these particles ane to' all Philippine languages, and to show to other Filipinos how Aklanons express these same idioms, 'since most Filipinos aré acquainted with the national language.

PILPINO FORM:

| kasí numa |  |
| :---: | :---: |
| kayi |  |
| cais ${ }^{-}$ | r |
| sàna |  |
| daw/íraw |  |
|  |  |
| talaga |  |
| yata ${ }^{\text {a }}$ |  |
| agad |  |
| lamang |  |
|  |  |
| balos |  |
| .din/rị, man, inamán |  |
| tila |  |
| nga' |  |
| pa |  |
| yata' | ---- |
| sige |  |
| aywan |  |
| maari', | pwede |

## . CONUNCTIVES.

Conjunctives are linkers of a sort, but instead of-linking sianple words together in modiiier iashion (such as nouns and adjective, verbs and adverbs), they link'together elements fords; phrases or clauses) in a way and with a meaning all their own. There are two types of conjunctives: coordinating and subordinating.

1. COORDINATING CONJUNCTIONS are normally used to connect sentence elements of the same grammatical class; for example, nouns with noung, adverbs "ith adverbs, clauses with clauses, and so on.

The most conmon forms are:

| ag | ("and") |
| :--- | :--- |
| $o^{\prime}$ | ("or'") |
| ukón | ("or"), |
| kundi' | ("nor'; if not") |

| apang | ("but") |
| :--- | :--- |
| pero | ("but", |
| ugaling |  |
| ay | ("but, on the other hand") |
| ("since, for, because") |  |

All of these forms siare one similarity not shared by the subordinating conjunctions or the previous', treated enclitics or discourse pafticles: they must always stand between the elements they join together. Subordinating conjunctions, we shall see, must always stand at the beginning of the element with which they occur; and discourse particles stand either immediately before or immediately after the element with which they occur. Examples of the coordinating conjunctions are:

## 亿.

(a) "Si Pedro ag si Carlos nakatuón sa Manila'."
("Peter and Carl were able to study in Manila.")
(b) "Naila' akó magibá kinyo, pero may akon man nga obra."
("I would like'to accompany you, but I also have my own work.')
(c) "May abó' gid.nga mga bisaea' sa Inakeanon nga hambae nga halín sa Hiligaynon, Tinagaeóg ukon Kinastila' nga hambae."
("There are many words in Aklanon which come from Hiligaynon, Tagalog or Spanish. ")
(d) "Indi' si Mario kundi si Perning makasunód kinyyo." ("Neither Mario nor Perring can follow you.")
2. SUBORDINATING CONJUNCTIONS occur at the beginning of nominal or adverbial * clauses and fuse such clauses vith the rest of the sentence. All clauses built up around a subordinating conjunction are dependent, on the rest of the sentence for completion; alone they do not make complete sense: Sone of the most common forms are:

Some examples of these are:
(a) "Abér maaeam ka, nagasacai ka man kon amát." ("Even if you are intelligent, you do make mistakes sometimes,")
(b) "Magobra it mayád agód pamayád ro imong kinabuhi"." ("Work hard so that your ife will improve.")
(c) "Basta $i k \underset{\text { áw, masugót akó." }}{ }$ ("So long as it is you, r 'l give permilssion.")
(d) "Akon darig obrabón basta hin"ağa bulligán mo man akd." ("T'il do that provided that you'll help mè tomorrow.")
(e) "Bisán matgyaranon ins'w, mapainubsanon ag mabuot linaw gihapon." "Even if he's reft, he is still humble and kind just the same.").
(f) "Ro mabugod'Indl' paggutomion, busá' ktáa tanán hay magmahugod man." ("The industrious will never hunifer') hence we should ali be industrious,
(g) "Ta-ókon hen-umo Imasw maggulf sa anda." ("I don't know when be will xcalirn to their place.")
(h) "pwede man nga ikéw magpamug-at," mask"n mayád ka con.if". ("You might still relapse, eyen if you feel weill now.")
(1) "Matuman ro imong pagbude tlya sa eugta', patrin nan sa kecangitan. © ("Your will be dope bere"oif/earth, ns well as in Heaven."):-
(j) "Samtang si David nagasucít, si Beato hay nagabasa."

(k) "Tanhn pwera ikév ro hadacahig sa imong mga pagkasacé". "t" "Ryeryone excluding you were the ones involved in your mistaléesti')

With thir, we come to an end of our hiscussion about the grammar of Aklanm. If we axe to take an over-all view of the purpose of thisthock, it has beento find the structure of Aklanon speech. To discuss how the dialect allows the people to talk about the world. In thes grammar we have obviously not discussed every word or every situation; but we bare diecussed all of the slots. A grammari is not, of necessity; a word book; but rather a book on the gtructure, the siots-the tagmemes (as linguists call them)-af a langrage. It will Be the purpose of a succeeding volume, a dictionary, to discuss the words currently. in use in Aklanon today. At that time we will discuss what words, which for brevity's sake, were omitted hare.

APPENDLX $1-m$ COMPLETE LIST OF ALL EVIATIONS USED IN THIS BOOK. For, the reader's convenience, this page is made to $f$... out bo that it will he handy as you read the text. Just fold the pagc outward so that all the abbreviations will be to the right of the book.

| A/ | Assoclate function; or Aptative or Abllity Mode. | mann. modal | fadicates manner. a modal or mode form. |
| :---: | :---: | :---: | :---: |
| actor | an actor. | modi. | functioning as`a modifier. |
| A.det | an Adjective determircr. | N.det | a Noun determiner. |
| Adj | an Adjective. | Neg | a Negative Particle. |
| $\boldsymbol{A d v}$. | an Adverb or adverbial. | Nom | 2 Nominal or Substantive. |
| AF | Actor Pocus. | numb | Indicates number. |
| 2gent | agent of the action.: | O/ | Object or Goal function. |
| hm | the assoclate marker. | Oding | Odiongan dialect of Tablas. |
| 2inswr. | functioning as an answer-. | OF | Object nocus. |
| assoc | functioning as an associate. | Om | Object. marker: |
| BECOM/ | member of the maging- verbs. | $\text { par. } g$ past | a partitive goal or object. having a past time furction. |
| c | Causative Quálity. | verf | Perfective Aspect. |
| cause | catise or reas | persn | monng |
| causr | cause | Pra | marker jndiceting plurality. |
| comm | Command Aspect. | posb. | denotes a possibility. |
| co | stating a certain condition . | p | denotes possession. |
| conf | Future-Conditioned Aspect. | pres | having a present time value. |
| con. g | conveyed object or goal. | pre | a Pronoun form. |
| Cond | Conjunction or conjunctive. | Q | a Question Particle: |
| comp | Past-Codditioned Aspect. | qualf | 2 Qualifiex. |
| consq | a consequenće. | i/ | Referent function. |
| d | Distributive Quality. | res | functionlig as't reason ox caus |
| dec | a deictic form. | RECIP/ | member of the inakig- verb clas3. |
| depn | Dependent Aspect | REL/ | member of the mag-verb clas |
| DISTR/ | Distributive Verb Conjugation. | RF- | Referent Focus. |
| Dp. | a discourse particle. | Rm | Referent marking particle. |
| Em | cnumerative particle. | S/ | Simple Mode. |
| emph. | having an emphasis function. | ST1 | Stative Verb, Class 1 |
| exist | an existential. | ST2 | Stative Verb, Class 2 [and socn] |
| expt | Expected or Immediate $\Lambda$ spect. | ST-Q | Stative Verb Quality. |
| futr | Future Aspect or time. | subj | Subjunctive or Hortatory Aspect. |
| 8 | General Quallty. | surpr | expressing surprise. |
| gral | gave or object of the action. | T/ | Tople Function. |
| H/ - | Happenstance or Accidental Mode. | Tm | Toplc marking particle. |
| Hil | Hiligaynon or llongo dialect. | Tp | Transformation Prorluct. |
| 1/* | Imperative or Commiand Mode. | unrl | - Unreal Aspect. |
| IF | Instrumental Focus. | v.comp, | 2 verb complementing another part |
| impf: | Imperfective Aspect. |  | of specch. |
| ind.fr | an indirect object or goal. | V.det | a Verb Determinar. |
| $K$ in | Kinaray-a dialect. | verb | a yerbal center. |
| Hmit | loving a limiting function. | -"- | Denotes position |
| 1 ln 2 | functionlog as a lunker. | \# | Zero allomorph [see page 94]. |
| Lm | the Hgature or linking marker. | * | Arulitial or copsoructed form. |
| locat | the location of the action. | - | Final glotal stop. |
