ABSTRACT

Presented are measures of teacher interest and attitude toward science teaching. A sheet is attached which describes how the instruments should be used and results analyzed. Part I includes a Teaching Preference Scale for predicting effective inquiry model use for self-contained classrooms in grades 1-6. Part II is a Semantic Differential Instrument for Science Teaching involving attitudes expressed toward the three concepts of (1) nature, (2) a student learning about science in school, and (3) myself teaching science in the classroom. User Information  
for  
Affective Measures for Science Teaching

Part A The Teaching Preference Scale is a strong predictor of effective inquiry model use for self contained classrooms in grades 1-6. For analysis, items 2, 4, 5, may only be used, throwing out items 1, 3, 6. Reverse value of item 5 for this analysis. All items can be used to get overall preference of teaching interest in content areas and mathematics. Reverse values 1, 3, 5, and 6 for this analysis.

Part B The Semantic Differential Instrument for Science Teaching involves attitudes expressed toward three concepts

nature

a student learning about science in school

myself teaching science in the classroom

This instrument is used in a pre-post format to detect change in attitude in these three areas. The covered time period may include a semester course, a unit, or a field experience. For analysis reverse 1/2 of the item values. Those items which are to be reversed in value (0=4, 1=3, 2=2, 3=1, 4=0) include

nature 7, 10, 12, 15, 17, 18, 20, 21, 24

a student 25, 28, 30, 33, 35, 36, 38, 39, 42

myself 43, 46, 48, 51, 53, 54, 56, 57, 60

## Teaching Preference Scale

For teachers in self contained and integrated  
Subject Settings

Below are six pairs of subjects which are covered in most schools, including some or all grades K-8. Look at the pairs one at a time and indicate on the answer sheet the subject you personally would find teaching the more interesting of the two. Mark either A or B for each Pair 1-6.

Mark the appropriate space in the computer answer sheet. Please use a number 2 pencil and fill in spaces completely.

A	B
1. Math	Language Arts
2. Social Studies	Science
3. Math	Social Studies
4. Language Arts	Science
5. Science	Math
6. Social Studies	Language Arts

## Semantic Differential Instrument for Science Teaching

### DIRECTIONS:

Below you will be asked to describe your feelings toward different ideas. There are no "right" or "wrong" answers. In each group of questions you will find a heading printed like this

### MATH

Below you will find pairs of words that you will use to describe your image of the heading. Each pair of words will be answered on a scale which looks like this:

QUICK            (A)            (B)            (C)            (D)            (E)            SLOW

You are to fill in the computer answer sheet box which best represents how you feel that word pair describes the heading at the top of the page. For example, you might check the "QUICK-SLOW" scale this way for "MATH".

If you feel that "MATH" is very closely connected with "QUICK," check the scale like this:

QUICK                        (B)            (C)            (D)            (E)            SLOW

If you feel that "MATH" is only somewhat connected with "QUICK," check the scale like this:

QUICK            (A)                        (C)            (D)            (E)            SLOW

If you feel that "MATH" is equally connected with "QUICK" and "SLOW" or not connected with either, check the scale like this:

QUICK            (A)            (B)                        (D)            (E)            SLOW

If you feel that "MATH" is somewhat connected with "SLOW" or very closely connected with "SLOW," you would check one of the boxes next to "SLOW."

Look at the heading at the top of the page; get an impression of it in your mind, and then work down the page checking the scale as quickly as you can. We are interested in your first impressions, so work rapidly and do not go back and change any marks.

Be sure to check every scale and make only one check on each Scale, A B C D or E. Begin with 7 on the Computer Answer Sheet.
