DESCRIPTORS \*Academic Rank (Professional); \*College Faculty; Comparative Analysis; Females; \*Fringe Benefits; Full Time Faculty; Higher Education; Males; National Surveys; Private Colleges; Salary Wage Differentials; State Colleges; \*Teacher Salaries; \*Tenure; Trend Analysis; \*Women Faculty

ABSTRACT

Results of a national survey of salaries, tenure, and fringe benefits of full-time college instructional faculty are presented. The survey was part of the Higher Education General Information Survey. Overall, the number of full-time instructional faculty increased slightly from 1976-77 to 1977-78. While the number of men remained approximately the same, the number of women increased by 2.3 percent. The largest increase for women came in the lecturer category, the lowest rank. The percentage changes for women exceeded those for men in all ranks, and although tenured men far outnumbered tenured women, women scored higher percentage gains in tenure than men during this period. Mean salaries of men were higher than those of women, whatever the academic rank, at all institutional levels. Salaries by rank for different types of institutions are compared, and fringe benefits for public and private institutions are contrasted. Charts and tables illustrate the short narrative description. (SW)

## Women outpaced men in faculty and tenure increases between 1976-77 and 1977-78.

The number of full-time women faculty rose significantly from 1976-77 to 1977-78, according to Marie D. Eldridge, Administrator of the National Center for Education Statistics (NCES). The percentage changes for women exceeded those for men in all ranks. Women also scored higher percentage gains in tenure than men during this period.

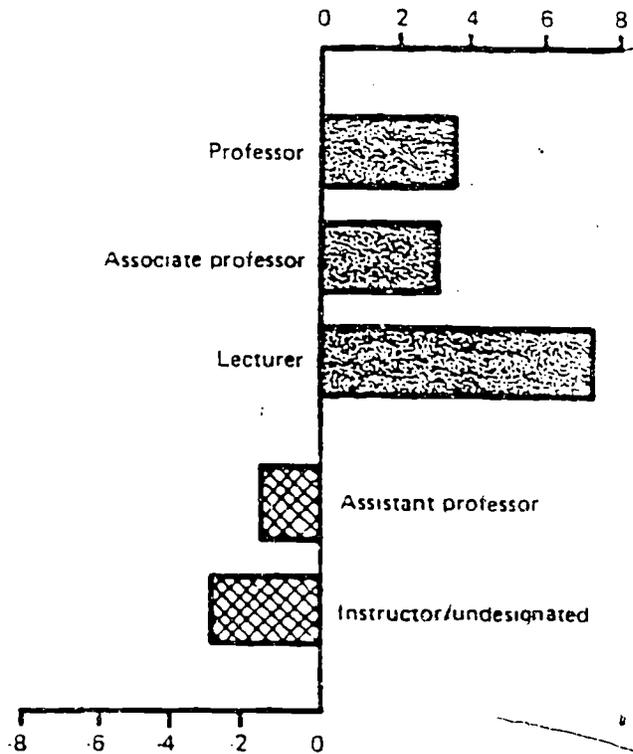

These are among the major findings of a survey of salaries, tenure, and fringe benefits of full-time instructional faculty in institutions of higher education across the country. The survey is part of the Higher Education General Information Survey (HEGIS) conducted yearly by NCES.

### Full-time Instructional Faculty

Overall, the number of full-time instructional faculty increased slightly—from 386,878 in the 1976-77 academic year to 389,033 in 1977-78 (table 1). While the number of men remained approximately the same (290,289 in 1976-77 and 290,264 in 1977-78), the number of women increased by 2.3 percent (from 96,589 to 98,769). The largest increase for women came in the lecturer category, the lowest rank, where they registered an increase of 11.0 percent—three times the increase for men.

Within the various ranks, important changes occurred. The number of professors increased by 3,332, associate professors by 2,850 and lecturers by 356. The number of assistant professors decreased by 1,764 and instructors/undesigned by 2,619. The increases represent percentage changes of 3.7 for professors, 3.1 for associate professors and 6.7

Chart 1.—Percent change in full-time instructional faculty, 1976-77 to 1977-78

undesigned, the decreases were 1.7 and 2.7 percents respectively. The declines seem to indicate that colleges are promoting individuals and leaving lower positions unfilled—or hiring fewer full-time faculty for these positions.

### Status of Women Faculty

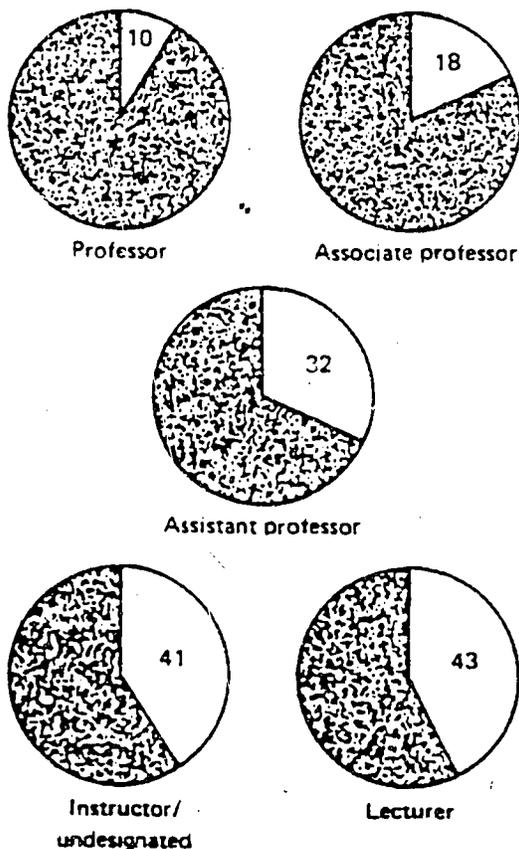

Whether the increase in women faculty indicates the beginning of a trend is, of course, unknown. Actually, over a longer period, women have not fared as well as men. Between 1975-76 and 1977-78, for example, the percentage of men holding the rank of professor increased 1.4

44 3 297

percent while the percent of women with that rank decreased 0.2 percent (table 2). Men in the associate professor category increased 1.0 percent; women, 0.8 percent. Overall, these percentages show a development similar to the one-year figures -- slight increases in the professor and associate professor ranks and a decrease in the assistant professor rank.

In 1975-76, 9.6 percent of all professors were women; in 1977-78, that percentage was almost the same -- 9.5 (table 3). While there were some slight increases in the middle ranks (associate professor and assistant professor), women continued to be grouped in the lower ranks (instructor/undesigned and lecturer). In 1975-76, 39.2 percent of all instructors/undesigned and 41.4 percent of all lecturers were women. In 1977-78, the percentages were 40.6 and 43.4 respectively. The figures may mean that the institutions have sought to hire more women as faculty members during the past few years. Since most of this growth is occurring in the lower ranks, future increases in the higher ranks should indicate just how quickly women are moving upward.

Chart 2.—Women as a percent of total full-time instructional faculty, 1977-78

Women also were less likely to be employed in universities than in 2-year and other 4-year institutions. For example, in public 2-year institutions, of those faculty members with 9-month contracts, 34.5 percent were women (table 4). In universities, the percentage of women was 19.2. In private institutions, the comparable figures were even more striking -- 45.3 percent in 2-year institutions and 18.0 percent in universities.

### Mean Salaries

Except for universities, public institutions paid all ranks of faculty on 9-month contracts more than their private counterparts. In private universities, on the other hand, mean salaries, except for those of the lecturer, were much higher than in public universities. The mean salary of professors in private universities was \$1,560 more than that of professors in public universities. In public other 4-year institutions, the mean salary of professors was \$3,260 more than that of professors in private other 4-year institutions. The mean salary of lecturers in public institutions exceeded those in private at all institutional levels. In universities, the difference was \$540; in other 4-year institutions, \$2,050; and in other 2-year institutions, \$4,000 (table 5).

Mean salaries of men were higher than those of women, whatever the academic rank, at all institutional levels. The differences were greatest at the university level, where the mean salaries ranged from \$27,430 for men and \$24,780 for women with the rank of professor to \$12,860 for men and \$12,630 for women with the rank of instructor (table 6).

### Tenure

The number of women faculty with tenure rose by 3.4 percent (from 40,445 to 41,829). This almost doubled the 1.8 percent rise among men (from 177,947 to 181,192). Still, tenured men far outnumbered tenured women (table 7).

Overall, the number of full-time instructional faculty with tenure increased from 218,392 to 223,021. Although this change represented an increase of 2.1 percent, faculty with the ranks of assistant professor, instructor,

lecturer and those with undesignated rank decreased. The decreases were reflected mainly in the overall change for men and in the changes for both men and women in private institutions. Except for the rank of lecturer, where the small numbers result in a relatively high percentage of decrease, the largest decreases were in the rank of instructor. There, the number of men decreased 12.5 percent and women 4.8 percent in public institutions, while men decreased 21.6 percent and women 6.8 percent in private institutions.

#### Fringe Benefits

Public institutions spent more on retirement plans for faculty on 12-month contracts than on other fringe benefits. In fact, this was the highest expenditure by either public or private institutions on any fringe benefit (table 8). The next highest expenditure was for tuition plans for faculty on 9-month contracts in private institutions.

Expenditures in public institutions exceeded those in private for all benefit plans except

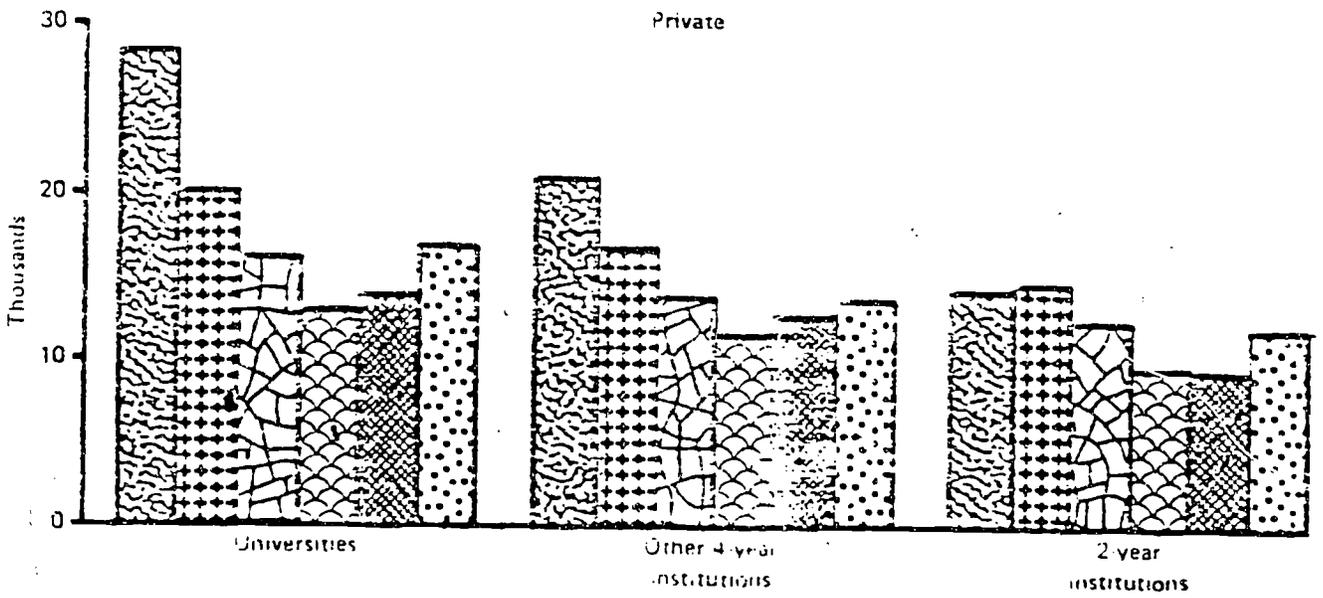

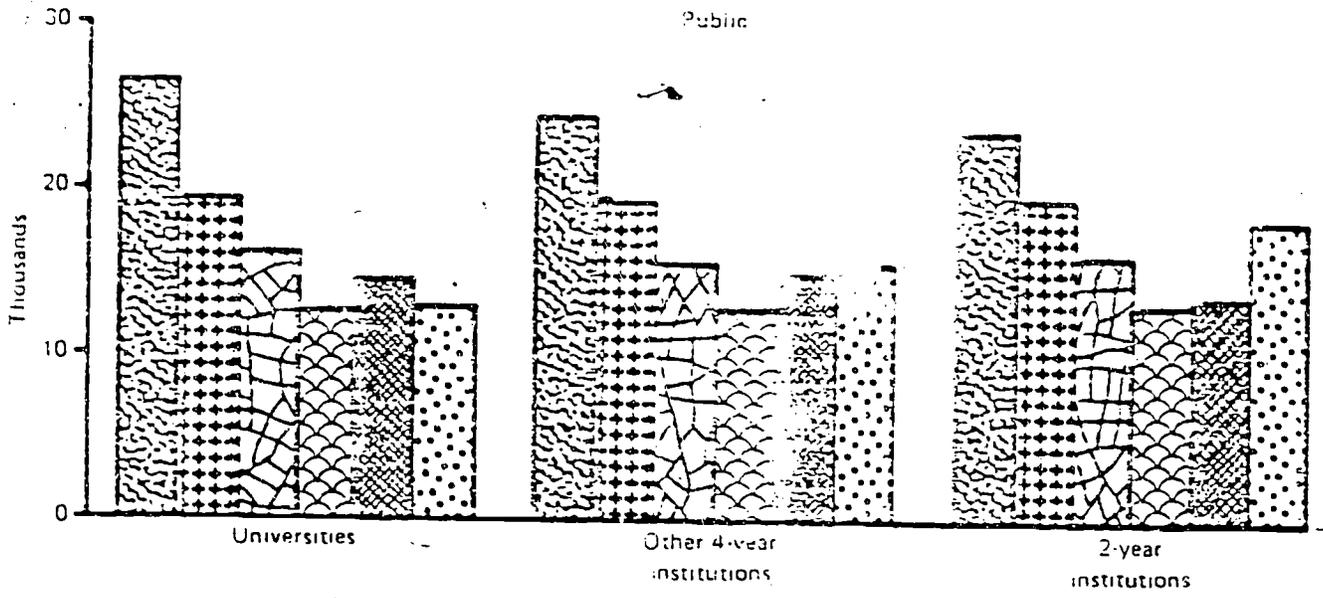

tuition and unemployment compensation. For tuition plans, the mean fringe benefit expenditures were \$1,594 more for faculty on 9-month contracts and \$640 more for faculty on 12-month contracts in private institutions. The differences were not so great for unemployment compensation, where the expenditures were \$31 more for faculty on 9-month contracts and \$42 more for faculty on 12-month contracts in private institutions.

Inquiries for survey forms and related computer tapes may be obtained from the Data Systems Branch, National Center for Education Statistics, (1001 Presidential Building), 400 Maryland Avenue SW., Washington, D.C. 20202, telephone (301) 436-7944.

Information about the Center's statistical program and a catalog of NCES publications may be obtained from the Statistical Information Office, National Center for Education Statistics, (1001 Presidential Building), 400 Maryland Avenue SW., Washington, D.C. 20202, telephone (301) 436-7900.
