TITLE IEEE Validation of the Continuing Education Achievement of Engineers Registry System. Procedures for Use with a CPT 8000 Word Processor and Communications Package.

INSTITUTION Institute of Electrical and Electronics Engineers, Inc., New York, N.Y.

SPONS AGENCY National Science Foundation, Washington, D.C.

PUB DATE 1 Mar 82

GRANT NSF/SED-82005; SED-79-18989

NOTE . 178 p.

EDRS PRICE MF01/PC09 Plus Postage.

DESCRIPTORS *Academic Achievement; Educational Attainment; Educational Certificates; *Electronics; *Engineering Education; Higher Education; *Information Services; Postsecondary Education; *Professional Continuing Education; *Student Participation

IDENTIFIERS *Electrical Engineering

ABSTRACT

The Institute of Electrical and Electronics Engineers (IEEE) validation program is designed to motivate persons practicing in electrical and electronics engineering to pursue quality technical continuing education courses offered by any responsible sponsor. The rapid acceptance of the validation program necessitated the additional development of a system to handle course attendance and participant information data. This system (1) records course registrations, attendances, credit accumulations, and participant evaluations and sponsors' course status; (2) confirms participants' acceptable performances and course attendance for non-IEEE courses; (3) monitors IEEE's technical interest evaluations of course offerings, participants' course evaluation, and participation statistics; and (4) generates mailing labels and other items such as transcripts and Course Credit Award Certificates. Included in this document are registry system procedures and related materials (sample input cards, questionnaires, award certificates, transcripts). Supporting documentation, including a system description of the IEEE Continuing Education Registry (samples of computer generated letters, enclosures and data processing plans), explanatory notes and statistical tables relating to an IEEE mail survey, and IEEE Continuing Education Registry course evaluation questionnaire results are included in each of three appendices. (Author/JN)

VALIDATION OF THE CONTINUING EDUCATION ACHIEVEMENT OF ENGINEERS

Purpose

The basic purpose of the IEEE validation program is to motivate persons practicing electrical and electronics engineering to pursue quality technical continuing education courses offered by any responsible sponsor.

Quality

The quality of each IEEE course is assured through two levels of evaluation. peer evaluation by appropriate representation of IEEE's Technical Interest and course participant evaluation upon completion of each continuing education achievement. In addition, each course participant's learning accomplishment must be evaluated.

Recognition

Recognition of acceptable participant performance in an IEEE evaluated and accepted course is given by granting IEEE Continuing Education Achievement Units (CEAU's). Courses completed without an evaluation of a participant's learning accomplishment or completed with an unacceptable performance will be awarded an IEEE Certificate of Merit or the Sponsor's credit units.

The IEEE Validation program also provides additional recognition by maintaining a permanent continuing education record for each participant in the "Validation of the Continuing Education Achievement of Engineers Registry."

All program participants may request transcripts of their continuing education record.

Motivation

Many practitioners need the information available in senior college elective technical courses, but they do not receive recognition for acceptable performance unless they are seeking an advanced degree.

This program has been initiated to provide:

- IEEE recognition of acceptable participant performance in an IEEE evaluated and accepted course.
- IEEE recognition of quality courses within the scope of the Institute's technical expertise.
- An up-to-date transcript of each participant's completed continuing education courses from any responsible sponsor using any educational media.
- An aid to Career Planning.

PREFACE

The National Science Foundation, through the Science Education Development and Research Division of the Science Education Directorate, provided a two-year Grant to the Institute of Electrical and Electronics Engineers, IEEE, to establish a model system for the Validation of the Continuing Education Achievement of Engineers. The Grant was effective 15 September 1979 with Dr. Roy H. Mattson, University of Arizona, as the Project Director.

IEEE had designed, developed and initiated the dissemination of a fully operational model system by 1 March 1980. The rapid acceptance of the model system necessitated the additional development of a cost effective input processing scheme to handle the exponential growth of course attendance and participant information data. At the end of the two-year Grant period, 15 September 1981, all input data was being processed via a CPT-8000 Word Processor and a Telecommunication link to an off-site Data Base that is being maintained on an IBM 3033 Central Processing Unit by Neshaminy Valley Information Processing located in Trevoze, Pennsylvania.

The IEEE Validation & Registry System is a modification of the NSF funded Model to meet the specific requirements of the IEEE Educational Activities Board's Continuing Education Program.

Many colleagues and organizations have contributed to the development of this IEEE Validation & Registry System, in particular, John F. Wilhelm, IEEE Staff Director Educational Services, Fern E. Katronetsky, IEEE New York staff, Marion P. Branagan, Carolyn A. Yankoski, Robert G. Wlezien, IEEE Piscataway staff, Philip R. Bagley and Frank J. Zigman, Context, Inc.

J. E Casey, P.E.
Project Manager

1 March 1982

WHAT THE SYSTEM DOES

- RECORDS:

- Course Registrations.
- Course Attendances and Credit Accumulations.
- Course Participant Evaluations.
- Sponsors' Course Status.

- CONFIRMS:

- Participant's Acceptable Performances.
- Course Attendances for Non-IEEE Courses.

- MONITORS:

- IEEE's Technical Interest Evaluations of Course Offerings.
- Participant's Evaluation of Completed Courses.
- Participation Statistics.

- GENERATES:

- Stationery, Transmittal Letters, Authorized Signatures, Transcripts, Course Credit Award Labels, and all documents that are necessary for each input transaction.
- Selective Mailing Labels.

DATA AVAILABLE TO PARTICIPANTS

* *

- Current Transcript of completed Continuing Education Courses.
- Certificate of Achievement and Course Credit Award Label for acceptable performance in completed IEEE peer evaluated and other accepted courses.
- Certificate of Merit for completion of an IEEE course without an evaluation of performance.
- Additional Transcripts available to the participant upon request.
- List of courses started but not completed.

* * * *

DATA AVAILABLE TO SPONSORS

* *

- Rosters of Course Registrations.
- Course Participants' Evaluations of completed course offerings.
- Listing of course offerings attended and completed by Registry participants.
- Listing of course offerings evaluated and accepted by an IEEE Technical Interest Review.
- Trends of Course Participant Evaluations.

NOTES

CPT PROCESSING OF IEEE
VALIDATION & REGISTRY INPUTS

Introduction

The IEEE Validation & Registry System permits the entry of all IEEE Course Registration, payment, completion, change and deletion transactions that meet the specific needs of IEEE's Educational Activities Board.

The IEEE criteria for awarding CEAU's and IEEE Certificates is assumed as the modus operandi for IEEE-EAB or any IEEE entity that will award IEEE Certificates and/or IEEE Course Credit Award Labels prepared by the IEEE Educational Services Department, New York, N.Y.

Processing IEEE Participant and/or IEEE Course Attendance Information.

The IEEE Validation & Registry System has been designed to accept CPT Data Transmission System Format inputs that meet the needs of IEEE-EAB Short, Video and Home Study Course offerings.

There are 4 types of records in the IEEE Validation & Registry System....

- (1) Participant Information Records.
- (2) Participant Course Attendance Records.
- (3) Sponsor Records.
- (4) Course Description Records.

IEEE COURSE REGISTRATION PROCEDURE

When the IEEE course participant's information is initially entered into the System any one of seven (7) transaction letters can be requested to document the unique characteristics of the IEEE course participant's registration.

THE SPECIAL REQUEST FIELD OF THE SYSTEM FORMAT IS USED TO INITIATE THE APPROPRIATE REGISTRATION TRANSACTION LETTER. IF NO TRANSACTION LETTER IS REQUIRED, ENTER 99 IN THE SPECIAL REQUEST FIELD 0 .

REQUEST ONLY ONE TRANSACTION LETTER EACH TIME AN IEEE COURSE PARTICIPANT'S REGISTRATION INFORMATION IS ENTERED INTO THE SYSTEM.

The seven (7) transaction letters are attached and constitute letters CE:15, CE:16, CE:17, CE:18, CE:19, CE:20, CE:21.

FOR IEEE SHORT COURSE REGISTRATIONS, ONE OF THESE TWO (2) LETTERS WOULD BE GENERATED:

- CE:15 "Short Course Registration Reply - NOT PAID."
- CE:16 "Short Course Registration Reply - ADVANCED PAYMENT PURCHASE ORDERS."

FOR IEEE HOME STUDY COURSE REGISTRATIONS EXCEPT TECHNICALLY WRITE!, THE LETTER GENERATED WOULD BE:

CE:17 "Home Study Course Registration Reply-ADVANCED
PAYMENT/PURCHASE ORDER (EXCEPT HS9001 TECHNICALLY WRITE!)."

FOR TECHNICALLY WRITE! A SELECTION FROM THESE FOUR (4) LETTERS WOULD BE GENERATED:

CE:18 "Home Study Registration Reply-ADVANCED PAYMENT/PURCHASE
ORDER for HOME STUDY HS9001 TECHNICALLY WRITE! ONLY."
CE:19 "Home Study Course HS9001 TECHNICALLY WRITE! INSTRUCTOR'S
ASSIGNMENT (U.S. AND CANADA)."
CE:20 "Home Study Course HS9001 TECHNICALLY WRITE! INSTRUCTOR'S
ASSIGNMENT FOR FOREIGN STUDENTS ONLY (CANADA NOT INCLUDED)."
CE:21 "Home Study Instructor Packet Transmittal Letter."

EXAMPLES COVERING METHOD OF PAYMENT FOR ALL IEEE COURSE REGISTRATIONS (SHORT COURSE, HOME STUDY, VIDEO).

Typical line insertion covering method of payment - (examples)....

Payment by check would appear as:

CK#1234 \$150 10-26-81

Payment by Credit Card would appear as:

CC#2109-876-129-542 \$150 10-26-81

Payment by Purchase Order would appear as:

PO#01114 \$150 10-26-81

IEEE COURSE COMPLETION PROCEDURE

Having initiated the IEEE Course Registration Procedure, the IEEE Validation & Registry System now contains all pertinent IEEE course registration, participant and payment information except for the completion date, earned credit, units and evaluation.

Therefore, to implement the IEEE Course Completion Procedure and the automatic selection of the appropriate IEEE certificate and/or course credit award label, transmittal letter and transcript, the ADDITIONAL information which must be entered into the System is transaction code !cc. Be sure to include:

- Participant Number
- Sponsor Code
- Course Number
- Completion Date
- Number of Credits
- Credit Units
- Confirmation Code "i"
- Evaluation (when available)

CAUTION:

An !pi transaction code MUST be used for a course completion when the participant is NOT presently in the Data Base.

NOTE:

The confirmation Code "i" MUST BE implemented at the time of entering the course completion information to automatically initiate the appropriate IEEE course completion letters. The "i" officially confirms that the completion procedure is for an IEEE-EAB Course. NO SPECIAL LETTER REQUEST IS NECESSARY.

See attached transmittal letters CE:01, CE:02, CE:03, CE:04, CE:09.

- CE:01 "IEEE Sponsored Course Initial IEEE Certificate of Achievement and Course Credit Award Label - CEAU Transaction."
- CE:02 "IEEE Sponsored Course Credit Award Label - CEAU Transaction."
- CE:03 "IEEE Sponsored Course An Additional Certificate of Achievement and Course Credit Award Label - CEAU Transaction."
- CE:04 "IEEE Sponsored Course IEEE Certificate of Merit Transaction." (Course without CEAs.)
- CE:14 "Transcript Transaction." (Includes CE:09 Transcript.)

IEEE CRITERIA FOR AWARDING CEAU'S AND IEEE CERTIFICATES

MODUS OPERANDI:

The IEEE Validation & Registry System requires that all course sponsors recognize and implement the built-in system criteria for granting CEAU's and awarding IEEE Certificates.

Granting CEAU's:

CEAU's will be granted to continuing education participants who have successfully completed and passed an achievement testing of course content sponsored by--

- IEEE-EAB or any IEEE entity that implements an IEEE peer evaluated course offering.
- An ABET accredited department; for regular courses taken as non-credit.

Awarding IEEE Certificates:

IEEE Certificates will be awarded to continuing education participants who complete a course sponsored by IEEE-EAB or any IEEE entity as directed by IEEE's Educational Activities Board.

- An IEEE Certificate of Achievement and/or an appropriate course credit award label will be awarded to the continuing education participant who completes an IEEE peer evaluated course offering and successfully passes an achievement testing of the course content.
- An IEEE Certificate of Merit will be awarded to the continuing education participant who completes the IEEE peer evaluated course offering and elects not to take or does not pass an achievement testing of the course content.

ABET Exception: - To maintain the security of the IEEE Validation & Registry System and the awarding of CEAU's by an ABET Accredited Department requires a special flag to confirm participant and course attendance information. The flag that connotes confirmed ABET accredited department regular course attendances that have been taken by a participant as non-credit appears in the data bank as "a". Therefore, the confirmation code "a", participant number, sponsor code, course number, course completion date, non-degree credits, type of units, evaluation (when available), and a successfully completed/passed participant performance must be entered into the System to implement a CEAU credit transaction for ABET Accredited Department non-degree course offerings.

AN ABET CEAU TRANSACTION DOES NOT GENERATE THE IEEE LETTER LOGIC AND IS SEPARATE FROM IEEE CEAU STATISTICS.

NOTE:

Non-IEEE-EAB course participant and course attendance information can be processed as tentative and will appear as **course attendance and credits not confirmed. Non-IEEE-EAB System inputs will require confirmation action by the course sponsor/coordinator/instructor before the information is noted as official. The flag that connotes Non-IEEE-EAB course sponsor/coordinator/instructor confirmed information appears in the data bank as "c".

CPT - DATA PROCESSING, LETTER GENERATION AND DISTRIBUTION PROCEDURE

The processing of all data and letters relating to the IEEE Validation & Registry System's transactions are implemented through a CPT-8000 Word Processor, a Racal Vadic VA3455 Modem via a telecommunications link to an IBM 3033 Central Processing Unit, programmed in PL1, and an IBM 3800 Laser Printer at the Heshaminy Valley Information Processing, located in Trevoze, Pennsylvania.

When signaled by IEEE Educational Services in NEW YORK, N.Y., or PISCATAWAY, N.J., this automated system will generate all of the appropriate IEEE transactions or transmittal letters, and deliver them to Context, Inc., Philadelphia, Pa., where the materials are given a quality control check, collated and distributed as follows:

- All Non-IEEE transaction or confirmation request letters and IEEE transcript requests will be mailed direct through the satellite facilities of Context, Inc.
- All IEEE transaction and transmittal letters, will be collated and distributed as follows...
 - ° IEEE Short Course Registrations using letter 15 or 16 will be delivered to IEEE Educational Services, Piscataway, N.J.
 - ° All IEEE Home Study or Video Course Registrations and Instructor transmittals using letters 17, 18, 19, 20, or 21, will be delivered to IEEE Educational Services, New York, N.Y.
 - ° All IEEE Course Completion Transmittal letters CE:01, 02, 03, 04, with 09, and when appropriate Course Credit Award Labels, will be delivered to IEEE Educational Services, New York, N.Y.

PRIMARY SYSTEM IDENTIFICATION FOR PARTICIPANT RECORDS

The primary system identification for a Participant Record in the IEEE Continuing Education Validation & Registry System is the IEEE Member Number or the Participant's Non-Member Number as assigned by IEEE Education Services' staff.

- ° If the transaction is an IEEE Home Study or Video Course, send to IEEE Educational Services, New York, N.Y.
- ° If the transaction is an IEEE Short Course, send to IEEE Educational Services, Piscataway, N.J.
- ° If the transaction is a Non-IEEE Course, send to IEEE Special Projects, Piscataway, N.J.

Before entering an addition, change or deletion transaction into the IEEE Validation & Registry System, please observe the following:

TO DETERMINE A PARTICIPANT'S IEEE MEMBER OR NON-MEMBER NUMBER, CHECK THE CURRENT REGISTRY PRINT-OUTS OR DATA BASE EDITORIAL LISTS TO SEE IF THE PARTICIPANT IS ALREADY IN THE SYSTEM; IF FOUND, USE THE SAME NUMBER.

WHEN THE COURSE PARTICIPANT IS AN IEEE MEMBER, scan all the alphabetized and numerical listings that are presently recorded in the IEEE Validation & Registry System. IF NOT FOUND, then interrogate the IEEE Membership Data Base for the IEEE Member's Number.

WHEN THE COURSE PARTICIPANT IS A NON-MEMBER, scan all the alphabetized and numerical listings that are presently recorded in the IEEE Validation & Registry System. IF FOUND in the IEEE Validation & Registry System, use the Non-Member Participant Number that has already been recorded in the IEEE Validation & Registry System.

WHEN YOU CANNOT LOCATE A NON-MEMBER PARTICIPANT'S NUMBER, scan all the non-member numerical listings, note the last assigned non-member number and CREATE a new non-member number from the following series:

- For an IEEE Home Study or Video Course, assign non-member numbers in the N06XXXX series.
- For an IEEE Short Course, assign non-member numbers in the N04XXXX series.
- For a Non-IEEE Course, assign non-member numbers in the N02XXXX series.

BEFORE ANY CPT TRANSMISSION, assuming the information is on a CPT disk, PRINT OUT AN IEEE FILE RECORD OF THE INFORMATION that will be transmitted. Date the IEEE file copy and note on the copy the time of the transmission.

PROCEDURE FOR INITIATING A CPT TRANSMISSION TO THE DATA PROCESSING CENTER:

- A communications program disk is used to program the CPT8000 for communicating with the Computer at the Data Processing Center. A check of the program recorded on the Communications Disk F4 can be made on the CPT keyboard by keying in label IBM (if PISCATAWAY) -or- C-Test (if New York). The following information should appear on the CPT screen.

COMMUNICATIONS.

RATE: 1200

TRANSMISSION CODE SET: 1 C-ASCII.T1 C-ASCII.T2

RECEPTION CODE SET: 1 C-ASCII.R

EVEN PARITY

LINE PAUSE: 99

C-Test will also show:

LINES PER PAGE 70

END OF PAGE CODE

FULL DUPLEX

- BEFORE TRANSMISSION THE CPT MUST BE PROGRAMMED AS FOLLOWS:
 1. Reset the CPT.
 2. Load the Communications Disk F4 into CPT Station 1, wait a few seconds for the screen to light up.
 3. Depress CODE Key and letter I Key, the screen will read CONTROL 1, type in IBM (if PISCATAWAY) -or- C-TEST (if NEW YORK), wait a few seconds and TTY COMMUNICATIONS ENABLED will appear on the screen. At this point, depress CODE Key and letter K Key.. the screen will read SELECT.. then Key carriage return, the screen will read TRANSMISSION.. then Key carriage return, the screen will read KB+SCREEN..then Key carriage return, the screen will read TTY COMMUNICATIONS ENABLED.
 4. Remove the Communications Disk F4 from the CPT Station 1.
 5. Then place into the CPT Station 1, the CPT Disk that has recorded on it the information to be transmitted.

TRANSMISSION OF IEEE COURSE REGISTRATIONS OR IEEE COURSE COMPLETIONS FROM IEEE EDUCATIONAL SERVICES, PISCATAWAY, N.J.

Assuming that the appropriate IEEE Course Participant and Attendance Information has been previously recorded on a CPT-8000 Word Processor disk using the System Format, the following applies:

After the CPT-8000 has been programmed and is in the "Communications Enabled" mode, a call on the Modem 'phone should be placed to (212-683-6325); when the communication signal (a steady tone) is received depress the Modem Phone's white hook switch half way (a double steady tone is heard) then begin typing TRETSO and Key carriage return. When the message on the CPT screen reads:

WELCOME TO NVIP
PLEASE SIGN ON

For Short Courses

TYPE...

LOGON(space)E776/PASSWORD(space)ACCT(*CYNJ) and key carriage return.

For Non-IEEE Courses

TYPE...

LOGON(space)E776/PASSWORD(space)ACCT(*MPB1) and key carriage return.

After several lines of acknowledged messages from the computer, the CPT screen will then read: READY (This means you have logged onto the Computer.)

TYPE....

QED SYSB.Nkk.text new Line(80) and key carriage return.

(Nkk is a Sequence number assigned by IEEE Educational Services,
Piscataway, N.J.)

The computer will continue with a Computer-generated INPUT number (line number). You are now ready to transmit information from a pre-recorded CPT disk. Then Key IN, type page label and key carriage return. Then depress LINE, CODE and UP keys. A cursor/pointer will run across each line as it transmits information putting a series of numbers before each line.

After every five (5) INPUTS, key carriage return. The Computer will respond with...QED. Type... save. The Computer will respond with... SAVED. Key carriage return and the Computer will respond with INPUT and a line number,

i.e., INPUT
00010

TO TRANSMIT RECORDINGS, THE SYSTEM MUST BE IN THE INPUT MODE.

When the screen is full, page down and skip; call in next record and continue your transmission, repeating page down and skip at the end of each full page until completed.

At the end of the QED transmission, key carriage return and type save.

The Computer will display on the CPT screen.... SAVED

Type END SAVE and the Computer will display on the CPT screen ... SAVED
READY

TYPE....

Printoff (followed by the assigned text sequence number) SYSB.Nkk.text and key carriage return. The Computer will acknowledge and print the contents of the transmission at the Data Processing Center. (READ CAREFULLY AND IF THERE IS AN ERROR MESSAGE, RE-ENTER PRINTOFF.) The Computer will then display on CPT screen...

READY

TYPE....

LOGOFF and key carriage return to get off the Computer.

At the end of the transmission, the CPT screen will read....

LAST STEP COMPLETION CODE WAS USER 0

TRANSMISSION OF IEEE COURSE REGISTRATIONS OR IEEE COURSE COMPLETIONS FROM IEEE EDUCATIONAL SERVICES, NEW YORK, N.Y.

Assuming that the appropriate IEEE Course Participant and Attendance Information has been previously recorded on a CPT-8000 Word Processor disk using the System Format, the following applies:
After the CPT-8000 has been programmed and is in the "Communications Enabled" mode, a call on the Modem 'phone should be placed to (212-683-6325); when the communication signal (a steady tone) is received depress the Modem Phone's white hook switch half way (a double steady tone is heard) then begin typing TRETSO and key carriage return. COURSE EVALUATION QUESTIONNAIRE

PLEASE respond to each statement.

NOTE: WHEN ENTERING COURSE EVALUATION IN FIELD CODE 7,
USE VALUES: 4 for AS, 3 for A, 2 for D, 1 for DS.

MARKING INSTRUCTIONS

AS - If you **agree strongly** with the item
A - If you **agree moderately** with the item
D - If you **disagree moderately** with the item
DS - If you **disagree strongly** with the item

EXAMPLE..... (4) (3) (2) (1)

- | | |
|---|----------------|
| 1. It was a very worthwhile course. | AS__A__D__DS__ |
| 2. I would take another course that was taught this way. | AS__A__D__DS__ |
| 3. The course material was present in logical content units. | AS__A__D__DS__ |
| 4. The course material was too difficult. | AS__A__D__DS__ |
| 5. The course content was appropriate to the aims and objectives of the course. | AS__A__D__DS__ |
| 6. The course was quite interesting. | AS__A__D__DS__ |
| 7. It was not clear why certain things were being taught. | AS__A__D__DS__ |
| 8. NOT much was gained by taking this course. | AS__A__D__DS__ |
| 9. I would have preferred another method of teaching this course. | AS__A__D__DS__ |
| 10. Course concepts were related in a systematic manner. | AS__A__D__DS__ |
| 11. The course material seemed worthwhile. | AS__A__D__DS__ |
| 12. The course was quite boring. | AS__A__D__DS__ |
| 13. I have learned basic information in this course which I will be able to relate to other situations. | AS__A__D__DS__ |
| 14. Overall the course was quite good. | AS__A__D__DS__ |
| 15. I learn more when other teaching methods are used. | AS__A__D__DS__ |
| 16. For the time allotted, topic coverage was exhaustive. | AS__A__D__DS__ |
| 17. Some things were NOT explained very well. | AS__A__D__DS__ |
| 18. I now feel able to communicate course material to others. | AS__A__D__DS__ |
| 19. I have become more confident in this area because of this course. | AS__A__D__DS__ |
| 20. The course was well organized. | AS__A__D__DS__ |
| 21. I think that the course was taught quite well. | AS__A__D__DS__ |
| 22. The course content was excellent. | AS__A__D__DS__ |
| 23. Too much material was covered in this course. | AS__A__D__DS__ |
| 24. The course was helpful in developing new skills. | AS__A__D__DS__ |
| 25. I developed an ability to evaluate work in this field. | AS__A__D__DS__ |

Dear Lt. Beau:

Thank you for your Home Study order and payment transaction for:

Course Number: E20
Course Name: Understanding Micros thru Software Design

Please be advised that when your materials are shipped, delivery will be made by United Parcel Service (U.P.S.). In the event that course materials cannot be delivered by U.P.S., delivery will be made by Parcel Post.

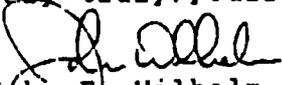

In addition, IEEE's suppliers will honor a 90-day warranty period beginning with IEEE's placement of your order. Should warranty service be required, please contact the IEEE supplier direct and present this letter.

IEEE will enter your course participation in a computer-based, record-keeping system that validates the Technical Continuing Education Achievement of Engineers. Enclosed is a description of this program.

When you have finished the course, COMPLETE AND RETURN the enclosed form to the New York address given below. All questions should be directed to the New York address and telephone number.

Thank you for your interest in IEEE quality education programs.

17 December 1981

Mr. Wai-Ki Yip
1319 Pawtucket Blvd, Apt 34
Lowell, MA 01854

Your Participant No. 7021165

Dear Mr. Yip:

You have now received all the materials necessary for:

Course Number: HS9001
Course Name: Technically Write!

We have selected as your INSTRUCTOR:

Mr. Craig Harkins
27 Heath Road
Fishkill, NY 12524

As we feel that you will benefit from your association with your assigned instructor, a brief biography is enclosed for your reference.

The date of this letter has been entered on your files as your OFFICIAL START DATE. You have 3-1/2 months from this date to complete the course. If for some reason you cannot maintain this time schedule, please notify your course instructor. Please retain this letter for your records.

Should you encounter any problems or find that you have questions regarding course procedures, please contact IEEE at the New York address given below. Thank you for enrolling in "Technically Write!" and I hope that the course proves beneficial to your needs.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

SUBJECT: INSTRUCTOR PACKET

Dear Instructor:

Enclosed are the materials comprising your Instructor Packet for:

Course Number: HS9001
Course Name: Technically Write!

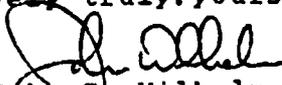

A check list is included so that you can be sure all proper materials have been received. In addition to the complete "Technically Write!" course, your Instructor's Packet should include the following:

- _____ 2 Summary of Writing Capability sheets.
- _____ 2 Record of Assignment sheets.
- _____ 25 Sheets of white bond paper.
- _____ 25 White envelopes.
- _____ 6 Manilla envelopes.
- _____ 1 Set "Technically Write!" answer sheets.
- _____ 1 Expense form.

Your new student's name and complete address can be found below. Please inform IEEE at the New York address given below if any item has not been enclosed.

If you find, as an instructor, that you require any materials not included in our current packet, please let IEEE know as we may be able to revise future Instructor's Packets. Thank you for your cooperation.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

IEEE SPONSORED COURSE INITIAL IEEE CERTIFICATE OF ACHIEVEMENT AND
COURSE CREDIT AWARD LABEL - CEAU TRANSACTION

0009

THE INSTITUTE OF
ELECTRICAL AND
ELECTRONICS
ENGINEERS, INC.

17 December 1981

Mr. Richard S. Davis
737 Butternut Street, NW
Washington, DC 20012

Your Participant No. 6852842

Dear Mr. Davis:

This is to acknowledge receipt of a report of your having completed the following course:

Sponsor Name: IEEE-E.A.B.
Course Number: E20
Course Name: Understanding Microprocessors Thru Software Design
Completion Date: 04-79
Non-Degree Credits: 6.0 CEAU

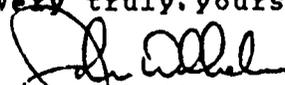

In recognition of this achievement, we are enclosing a Course Credit Award Label to be placed on your Certificate of Educational Achievement.

Our records indicate that this is your first course earning Continuing Education Achievement Units (CEAUs), so we are also enclosing your first Certificate of Achievement. When you have earned eight labels needed to fill this Certificate, we will automatically send you another Certificate. Also enclosed is a transcript which shows your continuing education record for the period 1 January 1979 to date.

For your convenience in reporting your next course attendance, we enclose a blank Course Attendance and Participant Information Form. It will help us if you will include your participant number, shown above, on your future Information Forms and on all correspondence.

Congratulations on your achievement. We hope that you will find it rewarding to continue your professional education.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

CERTIFICATE OF EDUCATIONAL ACHIEVEMENT

This certificate is presented to

RICHARD S. DAVIS

for successfully completing the courses
sponsored by the IEEE Educational Activities Board

John W. Ernst
VICE PRESIDENT, EDUCATIONAL ACTIVITIES

Herrell D. Jones
CHAIRPERSON, IEEE CONTINUING EDUCATION COMMITTEE

John F. Wilhelm
STAFF DIRECTOR, IEEE EDUCATIONAL SERVICES

The program you have completed is just one of the many top-quality educational courses amassed by IEEE Continuing Education. So that you and your colleagues can obtain the information so vital to continued professional growth the programs include "live" and video-tape short courses and a variety of home study offerings. All are designed to add new skills or sharpen old ones.

THE INSTITUTE OF
ELECTRICAL AND
ELECTRONICS
ENGINEERS, INC.

J. F. Wilhelm, Staff Director
Educational Services

PLEASE PLACE YOUR ADDRESS LABEL HERE

- I am interested in scheduling IEEE Short courses for my:
 IEEE Section Company, University.

Please send me information regarding your:

- Home study programs
 Video-tape programs

 Fold and detach along dotted line - return top portion

So that we may continue to serve your education needs, please complete the above card and return it to us today. No stamp is required. For identification, we ask that you remove your address label below and affix it on the card above in the space provided.

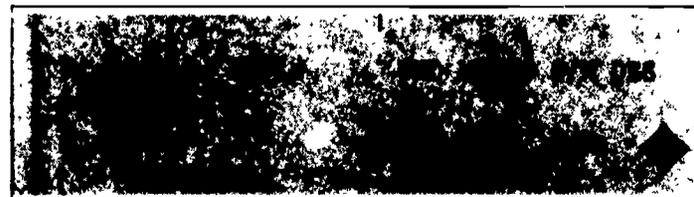

This is your personal CEAU record and should only be affixed on your Certificate. It also identifies the specific IEEE Continuing Education Program you've successfully completed.

We ask that you remove the label below and affix it to the left margin of the Certificate of Achievement.

The self-stick label has been designed so that the right portion of the label (from mid-point to right edge) will be on the front of the Certificate. Bend the remainder of the label around the left edge onto the back of your Certificate.

A new Certificate will be issued when:

- 1- you complete your first IEEE Continuing Education Program after January 1, 1979.
- 2- you have affixed 8 labels to a Certificate and qualify for an additional award.

(COURSE CREDIT - AWARD LABEL - PLEASE AFFIX ON YOUR CERTIFICATE)

Mr. Michael E. Thuot
Los Alamos Scientific Lab
Group 2-10, Mail Stop 764
P.O. Box 1663
Los Alamos, NM 87545

Your Participant No. 6853394

Dear Mr. Thuot:

This is to acknowledge receipt of a report of your having completed the following course:

Sponsor Name: IEEE-E.A.B.
Course Number: 1027
Course Name: Practical Application Sym. Comp.
Completion Date: 08-81
Non-Degree Credits: 1.2 CEAU

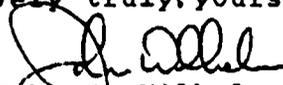

In recognition of this achievement, we are enclosing a Course Credit Award Label to be placed on your Certificate of Educational Achievement.

Also enclosed is a transcript which shows your continuing education record for the period 1 January 1979 to date.

For your convenience in reporting your next course attendance, we enclose a blank Course Attendance and Participant Information Form. It will help us if you will include your participant number, shown above, on your future Information Forms and on all correspondence.

Congratulations on your achievement. We hope that you will find it rewarding to continue your professional education.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

Your Participant No. 6884035

Dear Mr. Greene:

This is to acknowledge receipt of a report of your having completed the following course:

Sponsor Name: IEEE-E.A.B.
Course Number: 1096
Course Name: Digital Signal Processing
Completion Date: 10-80
Non-Degree Credits: 1.0 CEAU

In recognition of this achievement, we are enclosing a Course Credit Award Label to be placed on your Certificate of Educational Achievement.

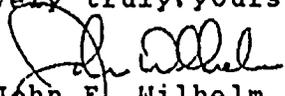

Our records show that your current Certificate is already filled with Labels. Accordingly we are enclosing a new Certificate.

Also enclosed is a transcript which shows your continuing education record for the period 1 January 1979 to date.

For your convenience in reporting your next course attendance, we enclose a blank Course Attendance and Participant Information Form. It will help us if you will include your participant number, shown above, on your future Information Forms and on all correspondence.

Congratulations on your achievement. We hope that you will find it rewarding to continue your professional education.

TRANSACTION PRECAUTIONS, SPECIAL PROCEDURES, RECORD FORMATS AND EXAMPLES

3-01-82

- 49 -

85

CPT DISK FORMAT

Transmissions should be recorded on CPT disk using the System record format and characters for the information to be transmitted. The Computer is programmed not to accept certain characters in the transmission information-identification.

- ° Do not use the dash or space in the absence of a number, letter, etc.
- ° Be sure to use the number "0" and not the capital "O" in your transmission sequence.
- ° 0000(zeros) in Field Code y will remove participant from a Non-Completed Course list without having completed the course.

CANADIAN, FOREIGN OR MISSING DOMESTIC ADDRESSES

The last character of the last line (Field Code f) of any foreign or missing domestic address must be concluded with the characters * or @ as shown in the following examples. This suppresses the missing zip code warning message on the error listing Internal Format Field Code 05.

For example:

Foreign Address: Mr. Graham J. Bell
(Canada only) 2-1183 Ambrose Avenue
Prince Rupert, B.C.
Canada V8J 2C5*

Foreign Address: Mr. Ahmad M. Abdelmoety
(Canada NOT in- P.O. Box 6372 Riyadh
cluded) Saudi Arabia @

Domestic Address: Mr. James B. Smith
1234 Main Street
New York, NY*

No Address: Mr. James B. Smith
* (Must be entered in Field Code f.)

LOGON PASSWORD

Contact IEEE Educational Services, New York, N.Y., or Piscataway, N.J., for the appropriate LOGON PASSWORD.

TO PLAY BACK ALL THE INFORMATION IMMEDIATELY AFTER A CPT DATA TRANSMISSION
type L and key carriage return... HOWEVER, before asking the Computer to
play back you must set a line limit = Code "OUT" and note status line; type
in number 66, or the number of lines that are on the page to be played back
and key carriage return. This will eliminate the CPT screen from becoming
full and locking up.* Press "OUT" key, back space once and type the number
0. This will remove the system from Station 1. Type label test and key
carriage return. Type L and key carriage return.

The Computer will respond and display the entire transmitted data set
information.

When the test (or playback) is completed, Key Code "OUT" again and change
line limit to 0. Key carriage return. (VERY IMPORTANT - THIS OPERATION
RETURNS THE SYSTEM BACK TO STATION 1.)

At the end of the QED transmission, key carriage return and type...save .
The Computer will display on the CPT screen...SAVED .

Then type... end save. The Computer will display on the CPT screen ..

SAVE
READY

TO PRINTOFF THE INFORMATION THAT HAS BEEN TRANSMITTED type PRINTOFF and
assigned text sequence (SYSB.Nkk.text - if PISCATAWAY, or SYSY.Nkk.text if
NEW YORK) and key carriage return. The Computer will display an acknowledge-
ment line on the CPT screen "DATA SET SYSB.Nkk COMPLETED" or "DATA SET
SYSY.Nkk COMPLETED" and will print the contents of the transmitted data set
at the Data Processing Center. This completes the PRINTOFF transaction.
(READ CAREFULLY AND IF THERE IS AN ERROR MESSAGE, RE-ENTER PRINTOFF.)
The Computer will then display on the CPT screen... READY

Type...
LOGOFF and key carriage return to get off the Computer.

TESTING FOR TRANSMISSION INTERFERENCE

There may develop spurious transmissions of Data Set information when
standard (non-data) telephone lines are used for communication to the
Computer Center.

To test for transmission line interference, immediately play back all
the information that was a part of the suspect Data Set. If an error
exists in the play-back information, cancel the Data Set, Logoff and
contact Context, Inc., 215-386-7100 (F.Zigman or P.Bagley).

*(A continuous display of information on the last CPT screen line.)

TO PLAY BACK ALL THE INFORMATION FROM A SPECIFIC PREVIOUS TRANSMISSION

Begin in the same manner as for transmitting a new Data Set as follows:

Program CPT.

Call 212-683-6325 on the Modem Phone.

Type... TRETSO and key carriage return.

...after the Welcome signal,

Type...

LOGON E776/PASSWORD ACCT(*FKNY) (*CYNJ) or (*MPB1) and key carriage return.

Type...

QED (type in this space the Text or Data Set desired, omitting the words ...New Line(80), i.e., QED SYSY.Nkk.Text) and BEFORE key carriage return, you must set a line limit = Code "OUT" and note status line; type in number 66, or the number of lines that are on the page to be played back and key carriage return. This will eliminate the CPT screen from becoming full and locking up.* Press "OUT" key, back space once and type the number 0. This will remove the system from Station 1. Type label test and key carriage return. Type L and key carriage return.

To display a particular line or lines, type L or the word List(space) give the line number or numbers as per the following example:

L 00010 99999 (or actual line numbers)

Note: The lines are listed by 10's .. type on CPT the range of lines desired always adding more lines than the lines that had been transmitted and key carriage return.

The Computer will respond and display the entire previously transmitted data set information.

When the test (or playback) is completed, Key Code "OUT" again and change line limit to 0. Key carriage return. (VERY IMPORTANT - THIS OPERATION RETURNS THE SYSTEM BACK TO STATION 1.)

At the end of the QED transmission, key carriage return and type...save . The Computer will display on the CPT screen...SAVED .

Then type... end save. The Computer will display on the CPT screen ..

SAVED
READY

Type... LOGOFF and key carriage return to get off the Computer.

A specific previous transmission can be played back at any time prior to the execution of a command for an IEEE production run that included the specific transmission. Forty-eight (48) hours after the execution of an IEEE production run, all transmissions used in that production run go into the Data Base Archival System and are NOT AVAILABLE as a CPT display.

TO PLAY BACK THE DATA SET IDENTIFICATION FOR ALL TRANSMISSIONS THAT HAVE BEEN ENTERED INTO THE SYSTEM DATA BASE FROM A SPECIFIC IEEE EDUCATIONAL SERVICES LOCATION (NEW YORK, N.Y., OR PISCATAWAY, N.J.).

Begin in the same manner as for transmitting a new Data Set as follows:

Program CPT.

Call 212-683-6325 on the Modem Phone.

Type... TRETSO and key carriage return.

...after the Welcome signal,

Type...

LOGON E776/PASSWORD ACCT(*FKNY) (*CYNJ) or (*MPB1) and key carriage return.

The Computer will respond...READY

Before playback, you must set a line limit = Code "OUT" and note status line; type in number 66, or the number of lines that are on the page to be played back and key carriage return. This will eliminate the CPT screen from becoming full and locking up.* Press "OUT" key, back space once and type the number 0. This will remove the system from Station 1. Type label test and key carriage return.

Type...LISTC(space)L(E776.SYSY) and key carriage return (from NEW YORK)

LISTC(space)L(E776.SYSB) and key carriage return (from PISCATAWAY)

The Computer will take a few minutes to respond.

This transaction will list the Data Set Identification for all transmissions that have been entered into the System Data Base from a specific IEEE Educational Services location. (THIS IS ONLY THE DATA SET IDENTIFICATION. THE INFORMATION THAT IS PART OF A DATA SET IS LIMITED TO BEING AVAILABLE ONLY FOR THE 48 HOURS AFTER THE EXECUTION OF AN IEEE PRODUCTION RUN THAT INCLUDED THE DATA SET INFORMATION.)

When the test (or playback) is completed, Key Code "OUT" again and change line limit to 0. Key carriage return. (VERY IMPORTANT - THIS OPERATION RETURNS THE SYSTEM BACK TO STATION 1.)

At the end of the QED transmission, key carriage return and type...save . The Computer will display on the CPT screen...SAVED .

Then type... end save. The Computer will display on the CPT screen ..

SAVED

READY

Type... LOGOFF and key carriage return to get off the Computer.

All the Identified Data Sets that have been previously transmitted from a specific IEEE Educational Services location can be played back at any time prior to the execution of a command for an IEEE production run that included transmissions from the specific IEEE Educational Services location. Forty-eight (48) hours after the execution of an IEEE production run all transmissions used in that production run go into the Data Base Archival System and are NOT AVAILABLE as a CPT display.

CANCELLATION OF A TRANSMISSION

At the end of QED transmission, type... END (instead of SAVE) and key carriage return.

The Computer response will be ... Nothing Saved
Enter End or Save

Type... END again and key carriage return.

The Computer response will be ... READY

Type... LOGOFF and key carriage return.

(This will void the transmission just completed.)

TO DELETE A PARTICIPANT'S NON-MEMBER OR INCORRECT IEEE MEMBER NUMBER OR TWO PARTICIPANT NUMBERS FOR THE SAME PARTICIPANT RECORD

If a participant is in the Validation & Registry System with both an IEEE member number and a non-member number, or an incorrect number, a deletion transaction !pd of the incorrect or unwanted number must be exercised. Any course attendances that had been listed under the participant's incorrect number must be transferred to the participant's correct IEEE or non-member number, that will be in the Validation & Registry System Data Base. An !pi or !pc transaction with 99 in Field Code 0 (zero) should be used.

CAUTION - When transferring each course attendance to the participant's correct member or non-member number file, CHECK FOR ACCURACY THE:

- .. Course Sponsor ID;
- .. Course ID; Course Sequence Number, (if any).
Make certain the IEEE course ID is the current nomenclature, i.e., old course ID: ETS3400,
new ID: HS9012;
- .. Course Title;
- .. Course Short Title (if any);
- .. Non-Degree Credits (if any);
- .. Type of Units (if any);
- .. Evaluation (if any).

CORRECTIONS TO A PARTICIPANT INFORMATION/COURSE ATTENDANCE RECORD (ADDITIONS OR DELETIONS)

If a participant information/course attendance record must be changed, then the incorrect participant's course attendances must be deleted !ad and then re-entered as new transactions !pc that include all participant information and all course attendances.

CAUTION - The System Format !pc transaction should be used for all additions or corrections for a participant record that is already in the Data Base.

RECORD FORMAT FOR A COURSE CREDIT AWARD LABEL TITLE

The short form of the course title is found on an Output Listing "Award Label Titles"

The Record Format is 28 characters:

Positions 1 through 10 are the course ID.
Positions 11 through 28 are for the course short title.

(NOTE: Limit 18 characters/numbers for the course short title.)

Example: Course ID# E20
Understanding Microprocessors Through Software Design
should be entered as E20(7 spaces)UND MICRO S/W DES)
(28 characters in length)

INSTRUCTIONS FOR ENTERING A NEW COURSE CREDIT AWARD LABEL TITLE

Begin in the same manner as for transmitting a new Data Set.

After Logon (The following is a dialog between the CPT operator and the Data Processing Center.)

At the READY on the CPT screen ..

CPT Operator type: QED(space)IEEE.LABELS (carriage return)

CPT Screen reads: Dataset not line-numbered no-num assumed

CPT Operator type: (carriage return)

CPT Screen reads: INPUT (NVIP will not prompt you with a line number.)
At this point, type the IEEE course ID code (leaving enough blanks after the ID to fill out the 10 spaces allowed for the course ID), then type the IEEE course short title (maximum 18 spaces). When adding the title is finished, proceed ..

CPT Operator type: (carriage return) This will get you out of the INPUT mode.

CPT Screen reads: QED

CPT Operator type: L (This will print out the file as it now stands.)

SPECIAL LETTER-LOGIC REQUESTS

A letter appropriate to each specific INPUT transaction is generated through programmed letter-logic when the first or each additional course attendance record is entered into the IEEE Validation & Registry System.

A LETTER IS NOT GENERATED WHEN A CHANGE OR DELETION IS MADE TO A PARTICIPANT/COURSE ATTENDANCE RECORD.

To force the generation of a specific letter and bypass the System letter-logic, when entering either an addition, change or deletion to an existing record, designate the desired letter-logic using the 2-digit letter number in the special letter request Field Code 0 (zero) of the System format.

TO DISABLE THE PROGRAMMED LETTER-LOGIC and prevent ANY letter from being generated, specify 99 in the special letter request line field 0 of the System Format.

A participant transaction with 99 in Field Code 0 (zero) MUST NOT be in a Production Run that includes other transactions for the same participant number.

PARTICIPANT INFORMATION RECORDED PRIOR TO 1 DECEMBER 1981 in the manual IEEE CPT Format can be used to initiate course completions without re-recording in the System Format. However, to implement the transmission of this data, A SPECIAL LOGON SEQUENCE is required as follows:

QED IEEE.Nkk.text new

PRECAUTION

DO NOT TRANSMIT AN !cc TRANSACTION WITH ANY OTHER TRANSACTION FOR THE SAME PARTICIPANT NUMBER, i.e., the same transmission to the Data Processing Center. WAIT until the !pi, !pc, etc., information appears in the Editorial Lists. Then transmit the !cc completion entry transaction for the participant.

CRITERIA FOR ENTERING NON-IEEE-EAB SPONSORED COURSE ATTENDANCE AND PARTICIPANT INFORMATION INTO THE IEEE VALIDATION & REGISTRY DATA BASE

- ° IEEE Member or Non-Member Participant's Registration in and completion of an IEEE-EAB Sponsored Home Study, Short or Video Course will be automatically entered into the IEEE Validation & Registry Data Base.
- ° IEEE Member or Non-Member Participant's completion of an ABET Accredited Department Non-degree Credit Course will be entered into the IEEE Validation & Registry Data Base when the ABET Accredited Department arranges such a transaction with the Staff Director, IEEE Educational Services.
- ° All other requests for participation or entry into the IEEE Validation & Registry Data Base will be returned to the sender.

IEEE SUGGESTED CODE OF GOOD PRACTICE
for
CONTINUING EDUCATION NON-DEGREE CREDIT COURSE OFFERINGS

CONSIDERATIONS:

COURSES must have stated:

- ° Prerequisite
- ° Objectives/Materials Covered
- ° Instructor - Qualifications
- Rules for Substitution

FEEES must be clear with all options spelled out:

- ° What is included in the fee must be clear;
- ° Any extras must be stated;
- ° Notes/Texts/Other Materials Covered.

If there is a lab, is the fee all inclusive?

LOCATION for course must be stated and held there or equivalent -- any changes in location must be covered in proper timely notice.

COURSE SPONSOR must provide assurance of financial responsibility including insurance.

- ° File original acceptance of the code with ABET or equivalent.
- ° Change in Policy requires new signature with ABET or equivalent.

Your Participant No. 7434202

Dear Mr. Takach:

This is to acknowledge receipt of a report of your having completed the following course:

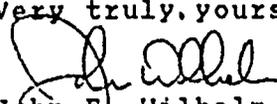

Sponsor Name:	IEEE Computer Society
Course Number:	XXDFSP
Course Name:	Digital Filter & Signal Processing
Completion Date:	02-80

Enclosed is a transcript which shows your continuing education record for the period 1 January 1979 to date.

For your convenience in reporting your next course attendance, we enclose a blank Course Attendance and Participant Information Form. It will help us if you will include your participant number, shown above, on your future Information Forms and on all correspondence.

Congratulations on your achievement. We hope that you will find it rewarding to continue your professional education.

Very truly, yours,

John F. Wilhelm
Staff Director, Educational Services

Dear EE:

IEEE invites you to participate in a voluntary, computer-based, record-keeping system for Validating the Technical Continuing Education Achievement of Engineers. Enclosed is a description of this new program.

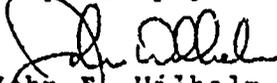

This system will:

- RECORD the non-degree credits and your evaluation, via questionnaire, for each continuing education course that you have completed after January 1, 1979.
- CONFIRM your course completion and performance with each sponsor of a continuing education course that you have recorded be entered into the validation program.
- ACKNOWLEDGE each continuing education completion that has been added to your computer-based record by promptly returning to you an updated transcript of your file.

To initiate your participation or intention to enter this IEEE voluntary validation program:

- COMPLETE the Continuing Education Course Attendance/Participation Information Form that is enclosed with this letter. A separate form should be submitted for each course completion to be entered into the system. Additional forms are available upon request. If you intend to participate in the IEEE Validation Program, but do not have a continuing education completion to record, write NONE in the Course Attendance portion of the enclosed form.
- RETURN the completed Continuing Education Course Attendance and Participation Information Form in the enclosed self-addressed envelope.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

Boeing Company
Att.: Mr. P. J. Beasley
M/S 87-84
P.O. Box 3707
Seattle, WA 98124

Dear Course Sponsor/Coordinator/Instructor:

IEEE invites you to participate in a voluntary, computer-based; record-keeping system for Validating the Technical Continuing Education Achievement of Engineers.

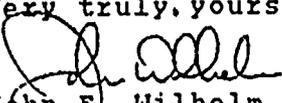

The purpose of the IEEE validation program is to motivate practicing electrical/electronics engineers to pursue quality continuing education from any responsible sponsor. Enclosed is a description of this new program.

To initiate an IEEE Educational Activities Board (EAB) review of your courses, PLEASE:

- COMPLETE the enclosed questionnaire for each course to be reviewed. Courses taken as part of an awarded degree will not be considered as a part of the validation program.
- INCLUDE appropriate descriptions of course goals, activities, materials and representative tests of participant's attainments. RETURN in the enclosed reply envelope.

When accepted, the course will be assigned Continuing Education Achievement Units (CEAUs) by IEEE's Educational Activities Board (EAB). The term CEAU is defined as ten contact hours of acceptable participation in an organized continuing education experience taken under responsible sponsorship, capable direction, qualified instruction and an examination testing the learning accomplishment.

Very truly yours,

John F. Wilhelm
Staff Director, Educational Services

Encls.

ENGINEERS, INC.

20 January 1980

Department of Electrical Engineering
Att.: Dr. Raymond K. Jones
Moore School
University of Pennsylvania
Philadelphia, PA 19104

Dear Course Sponsor /Coordinator:

This is to call your attention to the fact that an IEEE validation program participant has attended the following course sponsored by your organization.

Course Number: CS200
Course Name: Switching Circuits
Where Held: Philadelphia, PA
Completion Date: 01-12-80
Non-Degree Credits: 3.0 PDH

For attendees of this course to accumulate Continuing Education Achievement Units (CEAUs) on their IEEE Validation Program transcripts, we suggest you invite an IEEE Educational Activities Board (EAB) review of this course. The term CEAU is defined as ten contact hours of acceptable participation in an organized continuing education experience taken under responsible sponsorship, capable direction, qualified instruction and an examination testing the learning accomplishment. Enclosed is a description of this new IEEE program.

To initiate an IEEE EAB review, PLEASE:

- COMPLETE the enclosed questionnaire for each course to be reviewed. Courses taken as part of an awarded degree will not be considered as a part of the validation program.
- INCLUDE appropriate descriptions of course goals, activities, materials and representative tests of participant's attainments. RETURN in the enclosed reply envelope.

Sincerely,

John F. Wilhelm
Staff Director,
Educational Services

VALIDATION OF THE CONTINUING EDUCATION ACHIEVEMENT OF ENGINEERS

Purpose

The basic purpose of the IEEE validation program is to motivate persons practicing electrical and electronics engineering to pursue quality technical continuing education courses offered by any responsible sponsor.

Quality

The quality of each sponsor's courses is assured through two levels of evaluation: peer evaluation by the appropriate Group or Society of the IEEE Technical Activities Board, and course participant evaluation upon completion of each continuing education achievement. In addition, each course participant's learning accomplishment must be evaluated by the course sponsor.

Recognition

Recognition of acceptable participant performance in an IEEE evaluated and accepted course is given by granting IEEE Continuing Education Achievement Units (CEAU's). Courses not evaluated or accepted by IEEE will be recognized with the sponsor's credit units.

The IEEE Validation program also provides additional recognition by maintaining a permanent continuing education record for each participant in the "Validation of the Education Achievement of Engineers" program.

All program participants may request transcripts of their continuing education record.

Motivation

Many practitioners need the information available in senior college elective technical courses, but they do not receive recognition for acceptable performance unless they are seeking an advanced degree.

This program has been initiated to provide:

- IEEE recognition of acceptable participant performance in an IEEE evaluated and accepted course.
- IEEE recognition of quality courses within the scope of the Institute's technical expertise.
- An up-to-date transcript of each participant's completed continuing education courses from any responsible sponsor using any educational media.
- An aid to Career Planning.

Participation

The IEEE Validation program is available to practitioners and responsible sponsors of technical continuing education courses.

Courses from ABET (ECPD) accredited curricula will be accepted into the program without an initial evaluation by the appropriate Group or Society of the IEEE Technical Activities Board.

Additional Information

This voluntary computer-based registry for technical continuing education non-degree credits is presently available at no charge to practitioners. This new service is made possible through a two-year NSF Grant No. SED-7918989 that has been awarded to the IEEE Educational Activities Board. The purpose is to develop a model system that will validate practicing engineers' achievement in electrical and electronics continuing education courses.

COURSE EVALUATION QUESTIONNAIRE

PLEASE respond to each statement.

NOTE: WHEN ENTERING COURSE EVALUATION IN FIELD CODE 7,
USE VALUES: 4 for AS, 3 for A, 2 for D, 1 for DS.

MARKING INSTRUCTIONS

AS - If you **agree** strongly with the item

A - If you **agree** moderately with the item

D - If you **disagree** moderately with the item

DS - If you **disagree** strongly with the item

EXAMPLE..... (4) (3) (2) (1)
AS__A__D__DS__

- | | |
|---|----------------|
| 1. It was a very worthwhile course. | AS__A__D__DS__ |
| 2. I would take another course that was taught this way. | AS__A__D__DS__ |
| 3. The course material was present in logical content units. | AS__A__D__DS__ |
| 4. The course material was too difficult. | AS__A__D__DS__ |
| 5. The course content was appropriate to the aims and objectives of the course. | AS__A__D__DS__ |
| 6. The course was quite interesting. | AS__A__D__DS__ |
| 7. It was not clear why certain things were being taught. | AS__A__D__DS__ |
| 8. NOT much was gained by taking this course. | AS__A__D__DS__ |
| 9. I would have preferred another method of teaching this course. | AS__A__D__DS__ |
| 10. Course concepts were related in a systematic manner. | AS__A__D__DS__ |
| 11. The course material seemed worthwhile. | AS__A__D__DS__ |
| 12. The course was quite boring. | AS__A__D__DS__ |
| 13. I have learned basic information in this course which I will be able to relate to other situations. | AS__A__D__DS__ |
| 14. Overall the course was quite good. | AS__A__D__DS__ |
| 15. I learn more when other teaching methods are used. | AS__A__D__DS__ |
| 16. For the time allotted, topic coverage was exhaustive. | AS__A__D__DS__ |
| 17. Some things were NOT explained very well. | AS__A__D__DS__ |
| 18. I now feel able to communicate course material to others. | AS__A__D__DS__ |
| 19. I have become more confident in this area because of this course. | AS__A__D__DS__ |
| 20. The course was well organized. | AS__A__D__DS__ |
| 21. I think that the course was taught quite well. | AS__A__D__DS__ |
| 22. The course content was excellent. | AS__A__D__DS__ |
| 23. Too much material was covered in this course. | AS__A__D__DS__ |
| 24. The course was helpful in developing new skills. | AS__A__D__DS__ |
| 25. I developed an ability to evaluate work in this field. | AS__A__D__DS__ |

The Family Educational Rights and Privacy Act of 1974, effective January 1, 1975 provides for the release of Course Attendance and Participant Performance Information only upon receipt by the course sponsor of a written consent by the individual concerned

FINAL REPORT

NSF Grant No. SED 7918989

VALIDATION OF THE CONTINUING EDUCATION ACHIEVEMENT OF ENGINEERS

Submitted by

Dr. Roy H. Mattson

Project Director

I INTRODUCTION

Funds granted by the National Science Foundation (SED 7918989) to the Institute of Electrical and Electronic Engineers (IEEE) were to be used for the purposes stated in the grant document dated September 11, 1979.

"The Institute for Electrical and Electronics Engineers (IEEE) proposes to design, develop and disseminate a model system for validating educational achievement in the area of the continuing education of engineers.

This system, which would be applicable to any continuing education system, will consist of the following steps; 1) Any institution may submit a course evaluation package to the IEEE Technical Advisory Board for review by professional engineers; 2) If accepted, the course will be assigned Continuing Education Achievement Units (CEAUs); 3) Any interested electrical engineer (EE) may inform the IEEE of his or her intent to participate in the program and be entered into a computer-based record keeping system; 4) The participating EE will then take an acceptable course and his or her learning accomplishment will be evaluated by the course instructor; 5) The results will be transmitted to the IEEE for recording; 6) The participating EE will evaluate each course, upon completion, for quality and usefulness and inform the IEEE, and 7) The IEEE will send to the participant a dated coupon upon successful course completion indicating the number of CEAUs earned.

After earning a specified number of CEAUs, the engineer will receive a Certificate of Achievement. The long range goal of the project will be to base these Certificates on the actual attainment of engineering competencies and examine the extent to which this type of a system might be compatible with the goals of various bodies currently involved with the recertification of engineers."

The program, essentially items 1 through 7, is now functioning as explained in detail below.

Item 1. This portion of the program still needs more development effort. The IEEE was willing to accept course evaluation packages from any continuing education course sponsor to determine the acceptability of the course for CEAU credit. An unexpected problem developed in that the number of requests exceeded the processing ability of the IEEE. Presently a different system is being developed which will accredit course sponsors rather than individual courses. This system should be functioning by 1983.

Items 2 through 7 are all in place and functioning well. The IEEE is still working on the development of sequences of courses appropriate to serve the critical manpower needs of the nation.

Other technical Societies, especially the American Society of Mechanical Engineers, are studying the Validation Program with the thought of using it to serve the needs of their members. The Accrediting Board for Engineering and Technology is cooperating with the IEEE in developing the course sponsor accreditation system. Thus, the Validation Program is expanding beyond the IEEE initiation effort.

The registry system now has of 5,000 participants reporting over 10,000 course participations. The results of a mail survey of participants demonstrate that they believe the Program is such a worthy project that they are willing to pay for the service. The IEEE is continuing the program with a \$3. fee associated with each participation. Thus, the IEEE and the Project Director consider the program a success.

II PROGRAM MOTIVATION AND BACKGROUND

The engineering profession and its practitioners face numerous problems in the area of continuing education (C.E.). These include: 1) motivating practitioners to pursue C.E. opportunities, 2) evaluating and improving the quality of C.E. offerings, 3) providing career guidance to practitioners, 4) avoiding obsolescence via C.E. courses, 5) providing participants with records of their C.E. activities, 6) providing Iowa registered engineers with documented C.E. information so they can meet mandatory C.E. requirements needed yearly for re-licensing, 7) meeting the anticipated crisis in high technology engineering manpower, and 8) bringing the technical competences of appropriate technical societies into the C.E. picture to evaluate and improve C.E. courses.

The Validation Program is an innovative and effective solution to these problems which uses existing organizations instead of establishing new ones. It has been suggested by some that a new government agency be formed to evaluate and accredit C.E. courses and course sponsors, or that a large government funded national engineering university be created to grant master's degrees for C.E. activities. However, the Institute of Electrical and Electronic Engineers (IEEE) Validation of Educational Achievement Program addressed the problems by: 1) providing practitioners with a record of their achievements and certificates for acceptable performance, 2) having peer evaluation of C.E. course offerings and then allowing the acceptable high quality courses to grant Continuing Education Achievement Units (CEAUs) to those who pass the course and its instructor administered examination, 3) identifying and developing appropriate sequences of C.E. courses to allow practitioners to move into new high demand technical areas, 4) assuring high quality and appropriate material in C.E. courses not only through peer evaluation, but also through student evaluation of the courses, 5) having a computer based registry system

operated by the technical society to record C.E. participation, 6) providing participants with their records, 7) providing a documented mechanism of access to appropriate C.E. courses for a talented person, with any type of preparation, so that he or she can develop needed skills, and 8) using the Technical Activities Board of the IEEE as a source of peer level course reviewers.

The Institute of Electrical and Electronics Engineers is a 200,000 member international technical society organized to serve the needs of its members. About 145,000 of these members are in the United States. One of the most important services of the IEEE is technical education, and an important part of technical education is continuing education.

The IEEE wants to keep its members current technically and to help them pursue planned career development. Many individual Institute members believe these goals can be partially attained through continuing education; however, IEEE members often underutilize continuing education opportunities for a number of reasons. These include: no discernable reward for their efforts; no assurance that continuing education course is current and of high quality; and no assurance that a course fits into a pattern leading to a desired career development goal.

Studies have shown that electrical engineers in practice tend to become less productive after their mid-thirties. This phenomenon has been related to technical obsolescence. Continuing education provides a possible means of retaining a high level of productivity on the part of IEEE members.

Because of these and related problems, in 1972 the Education Activities Board of the IEEE established an Ad Hoc Committee to study the situation and make recommendations concerning appropriate actions. One of their actions was the 1973 formation of the IEEE Committee on the Validation of Educational Achievement, with Dr. Mattson as chairman.

In addition to the above considerations, there are a number of national pressures and needs affecting practicing electrical engineers which may force them to pursue continuing education. For example, there are pressures from consumer groups regarding exemption clauses resulting in legislation concerning professional registration and the legal liability of practicing engineers. It appears that all electrical engineers may some day have to be registered professional engineers --- regardless of their employment --- since they may be legally responsible for their engineering designs. A validated continuing education program will be needed to verify a continuous updating of this registration.

Other professions have developed programs to motivate and reward a member's continuing education efforts. The Physician's Recognition Award is now required in some states before the state will relicense physicians

for continued practice. The Minnesota Bar Association requires 45 hours of formal C.E. course work every three years before relicensing. The Minnesota dentists have had a statutory C.E. requirement since 1969. The legislatures of Ohio, Iowa, and California are requiring all licensed professionals to develop programs, including C.E. activities, that will provide proof of up-to-date technical competence by each practitioner before relicensing. The IEEE Validation of Educational Achievement Program may provide practicing engineers with the ability to respond to these legal requirements for practicing their profession.

Virtually all technical societies are concerned with motivating the continuing activities of their members and rewarding their efforts. The American Society of Quality Control certifies quality engineers and reliability engineers based on an examination and other requirements including C.E. efforts.

Over 10,000 members of the 40,000 member Society of Manufacturing Engineers (SME) have become certified in various areas, based on a variety of criteria including C.E. Of the engineering founder societies --- the American Society of Civil Engineers, the American Society of Mechanical Engineers, the American Institute of Chemical Engineers, the American Institute of Mining, Metallurgical and Petroleum Engineers, and Institute of Electrical and Electronics Engineers --- only the IEEE has formulated a specific program responsive to the previously mentioned needs.

THE PROGRAM

This program has been initiated to provide:

- IEEE recognition of acceptable participant performance in an IEEE evaluated and accepted course by a certificate and entry into the registry system.
- IEEE recognition of quality courses within the scope of the Institute's technical expertise by allowing CEAs to be granted.
- An up-to-date transcript of each participant's completed continuing education courses from any responsible sponsor using any educational media is available from the registry.
- An aid to career planning is available via acceptable C.E. courses.

The quality of each sponsor's courses is assured through two levels of evaluation: peer evaluation by the appropriate Group or Society of the IEEE Technical Activities Board, and student evaluation upon completion of

each continuing education course. In addition, each course participant's learning accomplishment is evaluated by the course sponsor.

Recognition of acceptable participant performance in an IEEE evaluated and accepted course is given by granting IEEE CEAs. Courses not evaluated or accepted by IEEE will be recognized with the sponsor's credit units.

The IEEE Validation Program provides additional recognition by maintaining a permanent continuing education record for each participant in the Validation of the Education Achievement of Engineers program via the computer based registry system. As of April 30, 1981 the registry system was fully operational using an IBM 3033 CPU connected by Racal Vadic 3455 modems to an IEEE CPT 8000 word processor. The voluntary system contained 4037 participant records, of which 1626 were not IEEE members. This, of course, indicated a high level of interest by non members. The participants submitted 3863 attendances, 162 in non IEEE courses. Of these attendances 3061 were awarded CEAs for attendance at IEEE pre-evaluated courses. Another 540 IEEE course attendances were awarded Merit Certificates. Thus, between attendances and participants, 7900 records were stored in the system at that time.

Additional analysis shows that of the 4037 participants 335 had degrees with 219 degrees from ABET accredited programs. The 3863 attendances involved 189 courses, 58 IEEE sponsored, from 80 sponsors. The 189 courses were in the 72 IEEE technical interest areas within the scope of the 25 IEEE Societies and Groups.

The registry service was initiated March 1980, and had 699 records by June 1980, 3731 by September 1980, 5071 by December 1980 and 6081 by March 1981. Now, over 5000 participants have reported over 10,000 course participations, and the number of records continues to grow.

THE REGISTRY SYSTEM

The system consists of 11 different computer generated laser printed mailings, 7 different enclosures and a variety of information flow diagrams with associated computer programs. Appendix A provides a rather complete description of the registry system. All computer programs and system information is available to anyone interested in implementing a similar system.

PROGRAM EVALUATION

In August of 1981 an evaluation questionnaire was prepared and transmitted all participants, about 4,000. The 737 valid responses gave a very clear picture of support of the program. The raw data shown below.

Question	No Response	Strongly Disagree	Disagree	Agree	Strongly Agree
This is a worthy project	10	19	38	336	334
Prefer central registration	72	32	193	336	104

Question	No Response	Strongly Disagree	Disagree	Agree	Strongly Agree
Want certificate of achievement	108	24	140	308	157
Want course credit label	162	32	211	252	80
Want certificate of merit	169	46	291	196	35
Want transcript of achievement	108	14	87	313	215
Want permanent achievement registration	67	16	52	297	305
Rewarding personal experience	29	4	36	373	295
Expect employer recognition	32	49	225	332	99
Should be free to society member	70	35	177	298	157
Should be free to participants	77	40	178	304	138
Willing to pay	22	87	241	330	57
Fee amount should be \$3.	149	78	145	240	125
Fee amount should be \$5.	212	115	240	153	27
Fee should be less than \$10.	186	131	153	137	130

Appendix B provides additional data and analysis of the survey.

COURSE EVALUATIONS AND DISSEMINATION

Appendix C shows the Course Evaluation Questionnaire which is filled out by participants. It also includes the results of evaluating a course which is sent to the instructor and will be used to weed out poor courses.

Information about the Validation Program has been made available to IEEE members via mailings, presentations, and articles. Figure 1 entitled "IEEE Focus on Education" describes the Program. It appeared in the January 1982 issue of the Institute, a newsletter which is sent to all IEEE members.

CONCLUSIONS

The NSF grant allowed the IEEE to establish a Validation of the Continuing Education Achievement of Engineers Program. The Program has been accepted and evaluated as being useful and appropriate. Other technical societies are investigating the Program with the objective of establishing a similar program.

Additional work is needed in two areas. First, a system for accrediting course sponsors should be established. Accredited sponsors will be allowed to grant CEAs in appropriate courses. Student evaluations will be used to check on the quality of all CEAs quality courses.

Second, sequences of CEAs quality courses have to be developed in specific specialty areas to serve the needs of society. The IEEE should be a leader in this endeavor. The Validation Program provides the base needed to pursue this effort.

 FLYER DESCRIBING PURPOSE OF VALIDATION PROJECT

IEEE

VALIDATION OF THE CONTINUING EDUCATION ACHIEVEMENT OF ENGINEERS

Purpose: The basic purpose of the IEEE validation program is to motivate those persons practicing electrical and electronics engineering to pursue quality technical continuing education courses from any responsible sponsor.

Quality: The quality of each sponsor's courses is assured through two levels of evaluation; Peer evaluation by the appropriate Group or Society of the IEEE Technical Activities Board and course participant evaluation upon completion of each continuing education achievement. In addition, each course participant's learning accomplishment must be evaluated by the course sponsor.

Recognition: Recognition of the academic achievement of acceptable participant performance in an IEEE evaluated and accepted course is given by the granting of IEEE Continuing Education Achievement Units (CEAU's). Courses not evaluated or accepted by IEEE will be recognized with the Sponsor's credit units.

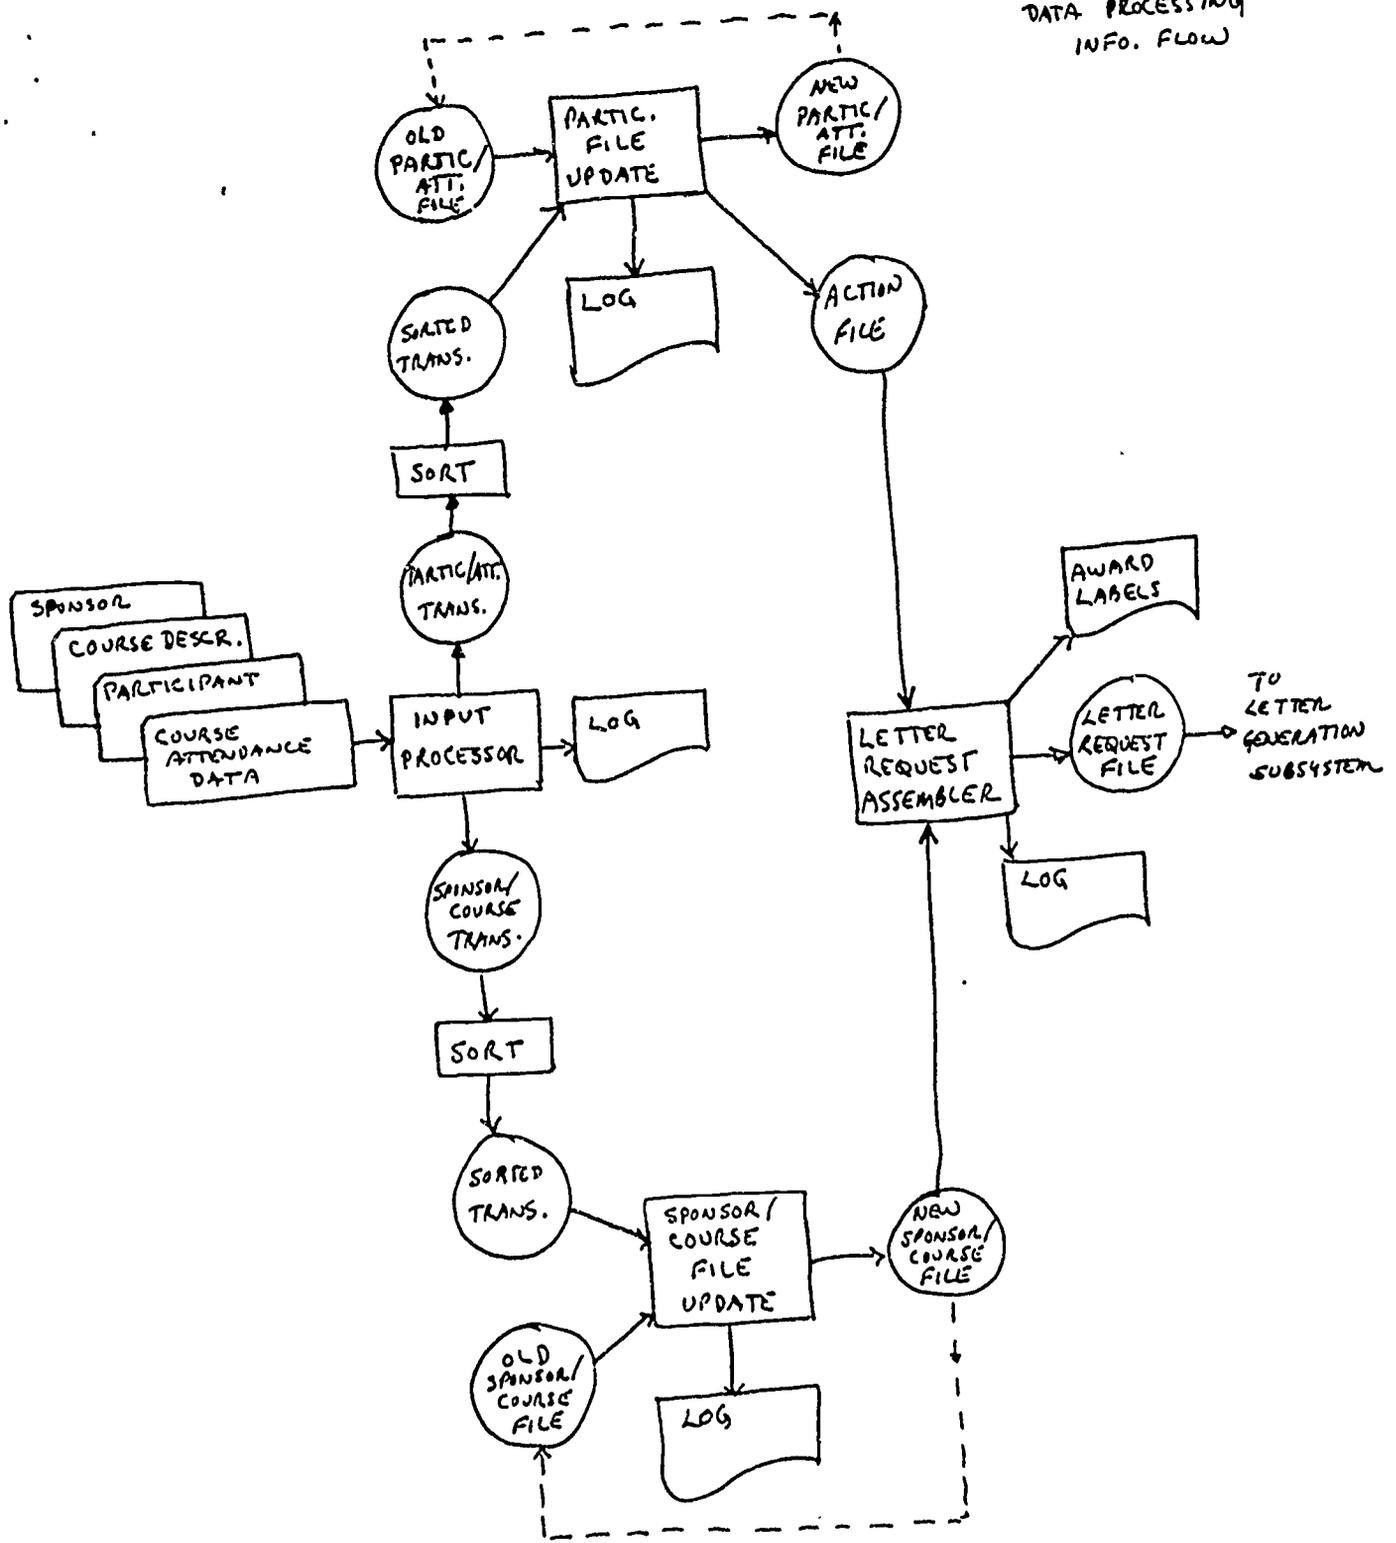

The IEEE Validation program also provides additional recognition by maintaining a permanent continuing education record for each participant in the "Validation of the Education Achievement of Engineers" program.

Each program participant may request transcripts of their IEEE continuing education record.

ACTION FILE DESCRIPTION

Each record of Action File causes one letter and associated enclosures to be generated. Action is determined by examination of the Control Data portion of the record, in accordance with the following rules:

If Action Flag=C, a new course has been reported in the last course record included in the Action Record. Letters to be generated depend on whether this is first CEAU course, or some multiple of eight.

If Action Flag=T and number of course records is zero, then a sample transcript is to be generated.

If Action Flag=T and number of course records is greater than zero, then just a transcript has been requested, which will list all the course records given in this Action Record.

Control Data

1ch Action Flag: C = new course reported
T = transcript only
2n Number of course records included in this Action Record

Participant Data

8ch Participant Ident Number
36ch Participant Name String suitable for address
4cv Prefix

Appendix B

The IEEE mail survey is a data base with 737 valid returns. Approximately two-thirds of the returns were by third-class mail. Overall, responses to the individual items run heavily to the "agree" side of the scale. (Future surveys might want to reverse some item directions to test and/or correct for response bias.) The only items where over half of the respondees are on the disagree end of the scale are the third component of the third item "Want certificate of merit" and the second and third components of the last item "Fee should be \$5" and "Fee should be less than \$10." The non-response rate for the survey is very good except for items #3 and #8. The multiple response mode may not have been clear to the respondents on these items.

The matrix of correlation coefficients contains a great deal of useful information about the survey data. About forty percent of the correlations (all those over 0.08) can be regarded as a fairly accurate reflection of how people similar to the respondents would respond to these or related questions. (Significance determined at .05 level). Out of the 240 possible item inter-correlations, seventeen are .30 or higher, five are in the .40's and two are in the .50's (See starred items in annotated output.) Six of the seventeen high correlations are among the various multiple responses to items #3 and #8, while three more are between these responses and other items. The one item which does not correlate significantly with any other items is "Mail-class". In fact, none of the mail-class item correlations are large enough for one to state with confidence that they are different from zero.

The cross-tabulation or two-way frequency tables compare mail-class and item #1 ("worthy project") to a selection of items, including four composite indices. The first two composite indices were derived from the multiple responses to item #3. One, "WNTAWRDS", is a sum of all the awards a person checked at the "Agree" or "Agree Strongly" levels. The second, "DSLKAWS", is a sum of all the awards checked by a person at "Disagree" or "Strongly disagree" levels. The third (FEEOK) and fourth (DSLKFEE) indices were formed by the same process with item #8. As in the correlation matrix, mail-class shows no dependable relationship to anything. The relationship of mail-class to the two indices from item #8 is almost significant at the .05 level. If the same proportions of responses held for a larger sample, then the results would be significant. If the results had reached statistical significance, they would have indicated that third-class mailers approved fewer separate fee structures than first-class mailers.

On the other hand, for item #1, "Worthy project", six out of a possible seven relationships show up as significant. Only mail-class has a non-significant relationship to "Worthy project". Respondents who agreed to the "worthy project" item also tended to agree with the other items except for the two indices DSLKAWDS and DSLKFEE. Response consistency is maintained here as well with the relationship between "worthy project" and fewer mentions of dislikes either on the awards or fee level items.

The differences between the item means for first-class mailers as against those of third-class mailers were tested by a T^2 for overall significance and a series of t-tests on each item individually. Neither the overall T^2 nor any of the individual T-tests are statistically significant, a result consistent with the results of the correlation matrix and the cross-tabulations.

Bivariate plots originally had been planned but these were not produced due to the inappropriate distributional pattern of the data. Because of the relatively narrow range of responses by the majority of respondents on most items, higher level (polynomial) relationships among the data seem unlikely.

Possible further analyses would depend on whether or not these preliminary results generate further questions. It certainly would be possible to examine the relationship of the entire survey or some subset of it to any one item (as was done with Item #1 here). It also would be possible to take a group of items (all of which relate to some particular item) and assess which items have a more powerful effect than others. The relationship between any two items of interest can be examined, as well, to determine how much of that relationship really comes only from those two items and how much is shared with other items. It is possible also to take any two chi-square statistics or any two correlation coefficients and determine if the difference between them is significant; that is, if one relationship is dependably stronger or more important (statistically) than another.

The most productive course of action at this point would appear to be:

- 1) client examine preliminary analysis results and raise any unanswered questions;
- 2) client communicate questions of interest, if any, for further analysis;
- 3) DAC Associates submit proposal for design and estimated costs of requested further analysis.

IEEE Continuing Education Registry
Course Evaluation Questionnaire Results

The tabulated results for the course evaluation questionnaire data gathered from January, 1979 through October, 1980 are presented in Table 1. The values under each response category (AS, A, D, DS) are proportions of the 95 students selecting each response. The mean was calculated on the basis of a 4, 3, 2, 1 weighting of the most positive to the least positive response. The column labeled "BEST" indicates the most positive response to each item. Thirteen of the 25 items were taken from the Arizona Course/Instructor Evaluation Questionnaire (CIEQ) which has extensive normative data. Using the normative data on the CIEQ items will help in interpreting the results on the other 12 items.

The normative data (deciles) for the 13 CIEQ items and the two subscales that could be formed from eight of those 13 items are presented in Table 2. The decile columns labeled "U of A" and "Overall" present a comparison of this group's MEAN responses with those obtained in other courses at the University of Arizona and in the 100 colleges and universities that have used the CIEQ throughout the United States. The additional decile column in the subscale area labeled "Level" presents a comparison of this group's MEAN responses to all University of Arizona and nationwide courses at the graduate level. The deciles range from a low of 0 to a high of 9 and may be interpreted as follows:

- 0 indicates that the group MEAN falls in the lowest 10% of the norm group,
 - 1 indicates that there are 10 to 19% of the norm group who received lower means,
 - 2 indicates that there are 20 to 29% of the norm group who received lower means,
- and so on through 9.

The following categories have been established to interpret the deciles:

- deciles in the 0-2 range are considered "poor",
- deciles in the 3-6 range are considered "average" and
- deciles in the 7-9 range are considered "good".

The subscale data presented in Table 2 indicates that this group feels that the method of instruction and the course content are above average in comparison to the normative data base. In fact the deciles indicate that the ratings on these two scales place the content and method of instruction in the upper 40% of the normative data base.

Using the pattern of responses on the CIEQ items as a reasonable standard for the other items, one can see that there were only six items that reflect below average ratings. These items are numbers 7, 15, 16, 18, 23 and 25.

SE 038247

page 2

If one were to plan improvements in this instruction, those six items should be used to pin-point the area of weakness. For example, the low deciles for those items might indicate that the students are not confident that they have met the desired instructional objectives of the course and instructors.

Table 1

Item Results for the IEEE Continuing Education
Registry Course Evaluation Questionnaire

Items	Responses				BEST	MEAN	S.D.
	AS	A	D	DS

Dear Validation Registry Participant:

Thank you for participating in the NSF-Funded IEEE Computer-based Registry for Technical Continuing Education non-degree credits.

You will recall that the purpose of this two-year grant has been:

- To motivate persons practicing electrical and electronics engineering to pursue quality technical continuing education courses offered by any responsible sponsor.
- To develop a model system that will validate practicing engineers' achievements in electrical and electronics continuing education courses.
- An aid to career planning.

As this program approaches its initial evaluation, we need your guidance for future planning.

Please complete the attached questionnaire and return **before 1 August 1981.**

Thank you for your help.

Very truly yours,

Roy H. Mattson

Roy H. Mattson
Program Director

PROGRAM EVALUATION QUESTIONNAIRE

Please respond to each statement.

MARKING INSTRUCTIONS

AS - You agree strongly

A - You agree

D - You disagree

DS - You disagree strongly

1. This is a worthwhile IEEE Project. AS__ A__ D__ DS__

2. I would prefer that the Validation and Registry be administered by a centralized organization for all Engineering Continuing Education, such as ABET (Accreditation Board for Engineering and Technology). AS__ A__ D__ DS__

3. Recognition of participation in an evaluated Continuing Engineering Education course should result in a

— Certificate of Achievement AS__ A__ D__ DS__

— Course Credit Award Label AS__ A__ D__ DS__

— Certificate of Merit AS__ A__ D__ DS__

— Transcript of all Achievements AS__ A__ D__ DS__

— Permanent Registry of all Achievements. AS__ A__ D__ DS__

4. My Continuing Engineering Education Achievements have been a rewarding personal experience. AS__ A__ D__ DS__

5. I expect my employer to recognize or reward me for my Continuing Engineering Education Achievements. AS__ A__ D__ DS__

6. As a Continuing Education Course Participant, I expect a Validation and Registry system to be available
- as a free professional society member service AS__ A__ D__ DS__
- as a free service for course participants AS__ A__ D__ DS__

7. I would pay for a centralized Continuing Engineering Education Validation & Registry System that would maintain a permanent registry of my achievements and supply transcripts at my personal request. AS__ A__ D__ DS__

8. The fee for the registration of each Continuing Education Course Attendance and Transcript should be:

\$3. AS__ A__ D__ DS__

\$5. AS__ A__ D__ DS__

Less than \$10. AS__ A__ D__ DS__

175

Please Detach - Staple and return your completed questionnaire.

COURSE EVALUATION QUESTIONNAIRE

PLEASE respond to each statement.

MARKING INSTRUCTIONS

- AS - If you agree strongly with the item
- A - If you agree moderately with the item
- D - If you disagree moderately with the item
- DS - If you disagree strongly with the item

- | | |
|---|-------------------|
| 1. It was a very worthwhile course. | AS__ A__ D__ DS__ |
| 2. I would take another course that was taught this way. | AS__ A__ D__ DS__ |
| 3. The course material was present in logical content units. | AS__ A__ D__ DS__ |
| 4. The course material was too difficult. | AS__ A__ D__ DS__ |
| 5. The course content was appropriate to the aims and objectives of the course. | AS__ A__ D__ DS__ |
| 6. The course was quite interesting. | AS__ A__ D__ DS__ |
| 7. It was not clear why certain things were being taught. | AS__ A__ D__ DS__ |
| 8. NOT much was gained by taking this course. | AS__ A__ D__ DS__ |

IEEE FOCUS ON EDUCATION

A supplement provided by the IEEE Educational Activities Board*

THE SYSTEM

The IEEE Educational Activities Board (EAB) is offering a new service—a system to validate and record the continuing achievements of engineers who choose to participate. The computer based registry will also offer the following services:

- It will print an up-to-date transcript of each user's completed continuing education courses
- It will validate the courses that a user enters into the system—that is, it will confirm with the course sponsor that the course was taken.
- It will help monitor the quality of continuing education courses by reassigning the contents of those who take them.
- Interest in formal registries for tracking continuing education courses has been high among professional societies—evident in the rapid growth in the past few years of such courses and in the number of engineers tak-

'The IEEE will automatically enter into the IEEE Validation and Registry System course attendance and participant information for all IEEE members and nonmembers who complete a short course, home study course, or video course sponsored by the IEEE Educational Activities Board.'

—Edward W. Ernst,
IEEE Vice President,
Educational Affairs

ing them. Surveys have also documented a desire for such a registry among the engineers who would use it. As a result, the IEEE began setting one up in 1979.

Since September 1979, the IEEE's Validation and Registry System has been available at no cost to all course sponsors and participants through the financial support of the two-year \$124 000 National Science Founda-

'Cost should be reflected in course fees rather than membership dues.'

—Survey respondent

'Transcripts of all achievements should be available on demand.'

—Survey respondent

'My motivations are personal satisfaction of self-improvement, pleasure of satisfying curiosity, and having continuing education credits.'

—Survey respondent

tion grant awarded to the IEEE Educational Activities Board. The grant helped build the system.

Now the grant has run out, but the IEEE has completed the design and development of a system for validating and recording continuing education achievements. The system has been available since Dec. 31, 1981, only to those taking IEEE continuing education courses and the cost of the system has been factored into the cost of IEEE/EAB courses.

The system became fully operational in March 1980. By the end of 1981, the data base contained 10 000 records. Of the participants, 40 percent are non-IEEE members and 72 percent of the recorded courses are offered by organizations other than the IEEE.

This centralized system is now available to IEEE members and others taking IEEE courses. All data supplied by system users in IEEE course-attendance and participant-information forms are processed via a CPT-8000 word processor and an IBM 3033 central processing unit.

An IBM laser printer can produce letters to course sponsors and course participants, record payments, send transcripts, and produce all the necessary statutory and forms for any of 20 different responses, among them:

- Appropriate letters confirming course registrations and payment transactions
- Transmittal letters for a Certificate of Achievement, course credit award label, Certificate of Merit, Continuing Education Achievement Units, or transcript
- Requests to course sponsors of attendance

'This is a unique member service that responds to the career needs of the practicing engineer.'

—Eric Hartz,
IEEE General Manager

and student performance or peer review of course offerings.

In July 1981, a survey of the Validation and Registry System's participants indicated that the project meets the needs of the practicing engineer. Of the survey respondents, 92 percent said that the Validation and Registry System is a worthwhile project and 54 percent of the program participants said that they would pay for the service if they had to. In addition, more than 90 percent acknowledge that their continuing education achievements have been personally rewarding and 58 percent expect employer recognition.

The basic purpose of the program is to motivate electrical and electronics engineers to pursue quality technical courses offered by any responsible sponsor. The July 1981 survey results show that this purpose is being achieved:

- 74 percent of the respondents pursue courses that award them "quality" credit recognition in the form of Continuing Education Achievement Units (CEAUs).
- 82 percent are motivated by the availability of a permanent registry for their courses and credit recognition.

In August 1978, concern over the quality of continuing education course offerings prompted the IEEE Board of Directors, on the recommendation of the IEEE Educational Activities Board, to adopt a policy that defines the CEAU as a measure of quality course-credit recognition.

Though the IEEE recognizes that there is a need for informal, nonvalued course offerings, the CEAU will be awarded for satisfactory student performance in an IEEE-evaluated and accepted course.

The quality of sponsored courses that grant the awarding of the CEAU is ensured through two levels of evaluation: (1) evaluation of the course done by the IEEE's own technical peer experts, and (2) evaluations done by each participant upon completion of the course. In addition, each course participant's learning accomplishment must be evaluated.

The IEEE's anxiety over the quality of continuing education offerings is also reflected

in national organizations, such as the Accreditation Board for Engineering and Technology and the American Society for Engineering Education, that are trying to set up systems to monitor and control the quality of continuing education courses.

The long-range goal of the IEEE is to develop more sophisticated course-evaluation techniques and to broaden the number of continuing education course offerings eligible for CEAU credits.

At present, 30 sponsors of continuing education courses have requested the IEEE's technical reviews in order to get the CEAU-credit standing. The immediate problem in meeting these requests is finding properly qualified IEEE members willing to volunteer their time for the evaluation. This work load does not include courses from ABET-

'The program will lead to improved quality of continuing education courses.'

—Roy H. Mattson,
Principal Investigator,
NSF Validation
and Registry grant

accredited college curricula taken not for credit. Members interested in helping review courses should contact John Wilhelm, staff director, IEEE Educational Services, 345 E. 47th St., New York, N.Y. 10017.

The immediate objective of the IEEE/EAB is to develop an experimental mechanism to accredit continuing education sponsors and thus ensure the quality of their courses. The IEEE Validation and Registry System would in turn monitor the quality of these CEAU courses through recorded participant evaluations. Should a course's quality decline, as measured by its participants' evaluations, appropriate administrative actions would be taken to either improve the course or withdraw its CEAU status.

Demonstrating the rapidly growing interest in this type of system, the National Society

'Plan now to be a part of this program.'

—John F. Wilhelm,
staff director,
IEEE Educational Services

of Professional Engineers and several other professional associations are now using the American College Testing Service's National Registry. In addition, the Educational Testing Service has begun to develop a continuing education registry of its own. Actions like the following by other engineering societies, have

been accelerating.

• The Accreditation Board for Engineering and Technology is actively exploring the accreditation of and a centralized registry for

'A centralized continuing education reporting system is in concept a necessary supporting service for the practicing engineer.'

—Patrick J. Sheridan,
Engineering Manpower
Commission

Engineering and Technology Continuing Education

• The American Association of Engineering Societies Engineering Affairs Council has expressed support for the concept of a centralized continuing engineering education registry as a necessary supporting service for the practicing engineer.

• The American Society of Mechanical Engineers is actively planning the lectures, service, and cost-benefit review of a centralized registry system as a supporting activity for members' professional development.

• The Society of Manufacturing Engineers continues pilot studies to evaluate continuing education achievements.

Other technical societies actively explor-

'Responsible quality control of continuing education course offerings and a readily accessible record of continuing education participants are a must for the engineering profession. The IEEE project is a pioneer in the field.'

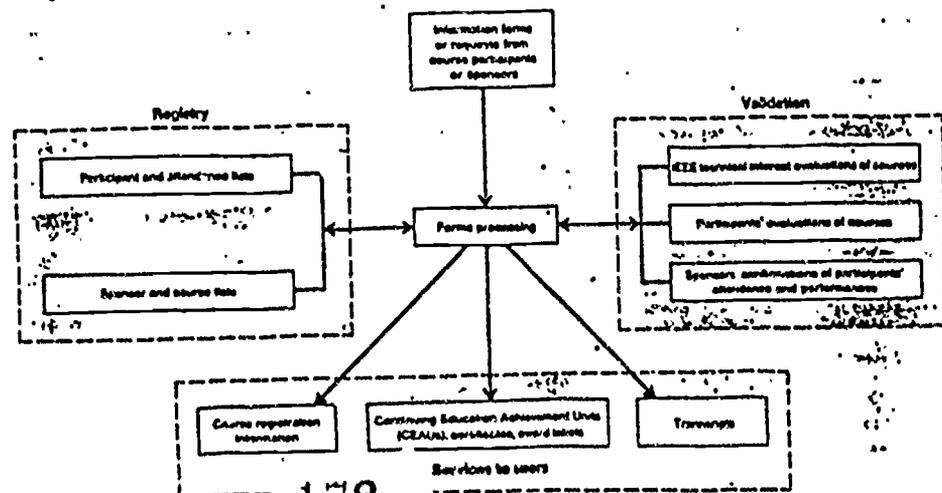

—David Reyes-Oviera,
executive director,
Accreditation Board for
Engineering and Technology

ing the validation and registration of quality continuing education include:

- Instrument Society of America
- American Society for Quality Control
- American Institute of Industrial Engineers
- American Chemical Society
- American Society of Association Executive
- American Society of Plastic Engineers
- American Institute of Aeronautics and Astronautics
- National Society of Professional Engineers

For additional information, those who wish to be part of this program should write to: IEEE Validation of the Continuing Education Achievement of Engineers Registry, 445 West Lane, Passaicway, N.J. 06854.

The IEEE Validation and Registry System records courses and participation and validates that a given individual in fact took a particular course. The system offers a number of services to the participants, including issuing transcripts on demand and awarding certificates of continuing education achievement.
