ABSTRACT
               The current interaction among federal libraries and
information centers was examined and assessed to determine ways to
improve the coordination of resources and services among federal
libraries and to increase cooperation between federal and non-federal
libraries in order to meet national, state, and local information
needs. The more than 400 federal libraries of various types in three
federal regions--Midwest, Southeast, and Arizona, California, Nevada,
and the Pacific--were studied through meetings and questionnaires,
and visits were made to the directors of library and information
service programs of Washington, D.C. area federal agencies. Results
support the development and establishment of a full-service,
multitype federal library network, based on existing resources and
services, to improve accessibility to federal library resources, and
to contribute toward greater library operations efficiency. The
proposed plan of action presented in this report indicates goals,
purposes, objectives, and tasks, and provides suggestions for
implementation. Appendices include the survey questionnaire and
specific responses, a list of federal libraries in the regions
surveyed and Washington, D.C. area agencies visited, and selected
resolutions from the White House Conference on Library and
Information Services (1979) and from the Federal Libraries and
Information Services Pre-White House Conference (1979). (LMM)

Foreword

This report deserves careful reading; its recommendations should be fully considered and acted upon, for they suggest a federal library and information services network that can provide more and improved services to the government and to the nation-at-large.

The study, conducted by Alphonse F. Trezza, Director of the Intergovernmental Library Cooperation Project, was funded by the National Commission on Libraries and Information Science (NCLIS) with the Library of Congress (LC) providing full administrative support.

The LC with the cooperation of the Bureau of the Budget on March 11,1965 established the Federal Library Committee (FLC) to improve coordination and planning among research libraries in the federal government so that common problems may be identified, common solutions sought. Since then the FLC Secretariat has been located at LC. The Library has strongly supported the Committee by providing administrative services from its Financial Management Office, Procurement and Supply, General Counsel and Personnel Office. It has also provided office space for the full FLC operation including the Committee's Federal Library and Information Network (FEDLINK). In 1977 the Librarian of Congress designated me chair of FLC, a privilege I appreciate, a responsibility I take seriously.

In June, 1972 the FLC, recognizing the need for continued cooperation and concerted action, reorganized and redefined its functions stressing the consideration of policies and problems relating to federal libraries. How? By evaluating programs and resources, determining priorities requiring attention among library issues, examining procedures and policies for acquiring, preserving and making information available. FLC studies the need for and potential of technological innovation in library practices, library budgeting and staffing problems, including the recruiting, education and training of librarians. Within these functional areas the FLC was asked to recommend policies and other measures to assure the best utilization of federal library resources, to provide more effective planning, development and operation of federal libraries and to promote more effective service to the nation-at-large.[1]

Enabling legislation for the NCLIS states as a matter of policy what the Congress has affirmed, "that library and information services adequate to meet the needs of the people of the United States is essential to achieve national goals." The federal government, the law reads, "will cooperate with state and local governments and public and private agencies in assuring optimum provision of library and information services."[2] In its national program document NCLIS cites as a barrier to cooperative action the failure of the federal libraries and information centers to adopt "a fully open policy toward serving the gen-

eral public and the failure to form among themselves a federal
network."[3] Improved coordination of federal programs of li-
brary and information services is called for. Delegates to the
1979 White House Conference on Library and Information Services,
two-thirds of whom represented the lay public, called on federal
libraries to make their resources available to all to the maximum
extent possible.

Following a review of the current status of cooperation a-
mong federal libraries and between federal and non-federal li-
braries, recommendations are made for a more effective and active
role by the federal library sector in providing more cost-effec-
tive and efficient library and information services for the fed-
eral library community and the community-at-large. An active
leadership role for the Fededal Library Committe in the imple-
mentation of the various tasks is urged.

    Toward A National Program for Library and Information
    Services: Goals for Action. Washington, D.C.: 1975 p.37

Preface

The major objectives of this study were to examine and assess the current interaction among federal libraries and information centers and to identify the sharing of resources and services among federal libraries and non-federal libraries. The recommendations look ahead to a more effective system to help assure that each part of the federal library community meets its appropriate responsibility in efforts to achieve the nationwide goal of equal opportunity of access to information for all individuals.

In an information-oriented society equal opportunity of access to information is essential if we are to reduce or close the gap between the information poor and the information rich. The National Commission on Libraries and Information Science (NCLIS) set as its overall goal the eventual provision for every individual of "equal opportunity of access to that part of the total information resource which will satisfy the individual's educational, working, cultural and leisure-time needs and interests, regardless of the individual's location, social or physical condition or level of intellectual achievement."[1]

In 1979 federal librarians meeting at a pre-White House Conference in preparation for the national White House Conference on Library and Information Services resolved that "people have the right to access to information produced or collected by the federal government at public expense except for limitations imposed by legal requirements of national security, privacy and proprietary rights."[2] In 1981 the NCLIS Public/Private Sector Task Force reported that "...information is essential to a democratic society and the well-being of both society as a whole and the individual personally."[3]

Federal librarians are cooperating today and are willing to participate more fully at the local, state and national level in developing a nationwide network of libraries and information centers. Resource sharing must become more cost-effective, timely and useful if it is to meet the needs of tomorrow's society. To do so requires a planned and expanded program utilizing the best of the new technological and communications developments. Federal libraries are mission-oriented and must justify any expansion of services they plan to provide to either federal or non-federal users. This is especially true in light of the current emphasis in Washington on "new" federalism. A true sharing at the local, state and federal level with each level carrying its appropriate share of the financial responsibility and receiving its appropriate share of the benefits is federalism, both traditional or "new", at its best.

Our information-oriented society has an insatiable appetite that can be satisfied only by sharing resources, both material and human, among all types of libraries, at all levels of govern-

ment. The sharing of resources between federal and non-federal libraries holds the promise of more efficient and effective services to the primary users of all libraries. Crucial to the success of a system designed to meet these goals is a commitment by and the strong support of library directors, managers and staff.

Executive Summary

In the Spring of 1980, a study was initiated by the National Commission on Libraries and Information Science and the Library of Congress to determine ways to improve the coordination of resources and services among federal libraries and to increase cooperation between federal and non-federal libraries, in order to meet national, state and local needs. The commitment to sharing resources is in the best interests of mission-oriented federal libraries. No library can be entirely self-sufficient. Resource sharing and participation in network services provide cost savings, so important with the tightening of federal budgets. In addition, changes mandated by new administrations have been ever more extensive and frequent in recent years. Resource sharing and cooperation provide continuity of services as well as more cost effective operations.

Federal libraries in three federal regions - Region V (Midwest), Region VI (Southwest) and Region IX (Arizona, California, Nevada and the Pacific) - were studied through meetings and questionnaires. There are over 400 libraries in these three regions, representing all types: health, medical, technical, other special libraries, academic, school, and general libraries.

Visits were also made to the directors of library and information services programs of major federal agencies in the Washington area, so as to bring to bear the perspectives of both parent agencies and field libraries in the development of meaningful recommendations for the study.

Findings from the field visits and questionnaires indicate that federal libraries tend to look to non-federal libraries for cooperation and support for library and information services, and in turn are prepared to share their collections and services with their non-federal library counterparts. There are no regulatory or legal constraints on participation of federal libraries in local/regional/state or multi-state networking.

Cooperation, resource sharing, and document delivery services between the field libraries and their parent agencies in Washington vary widely, from tight administrative control through a variety of centralized services and consultative support, to little or no technical or administrative interactions.

Some of the problems facing all federal libraries are peculiar to the federal establishment: implementation of the contracting-out provisions of the Office of Management and

Budget Circular A-76, especially for total library operations; inconsistencies in interpretation of federal procurement regulations affecting subscriptions, binding, and database services, delay in the revision of personnel classification standards; and the implications of implementation of the Paperwork Reduction Act.

It became apparent during the study that interactions between and among federal libraries are generally not as frequent or as effective as those between federal and non-federal libraries. If the resources of federal libraries are to be shared more effectively, than a more deliberate and planned approach is needed for making those resources more accessible. The federal community needs to rethink traditional and current practices, and to look for cooperative solutions and the provision of improved interactive and linked communication facilities.

The study therefore concludes with one overall recommendation: the development and establishment of a full service, multitype federal library network, based on a federal database comprised of the holdings of federal libraries, records of federal documents processed by the Government Printing Office and the National Technical Information Service, and other in-house files of federal libraries and information centers. That is, the proposed network would be based on existing resources and services, and would be important to federal and non-federal libraries alike in improving accessibility to federal library resources. It would make possible increased and improved services to the primary users of federal libraries and contribute significantly toward the development of greater efficiency of library operations.

The plan of action proposed indicates goals, purposes, objectives, tasks, and implementation suggestions which the federal library community can use as a guide. Responsibility for further action depends on the Federal Library Committee. It has the experience and expertise to provide the leadership in the development of a federal library and information services network. The initial action necessary is the development of more specific steps towards implementation of the recommendations.

I

INTRODUCTION

Purpose

In the spring of 1980 the National Commission on Libraries and Information Science (NCLIS) and the Library of Congress (LC) agreed to a joint undertaking--a study of existing governmental library resources and services throughout the country. The purpose of the study was to determine ways to improve the coordination of resources and services among federal libraries and between federal and non-federal libraries to meet national, state and local needs. The Federal Library Committee (FLC) assumed the responsibility for overseeing the study and Alphonse F. Trezza, former Executive Director of NCLIS, agreed to serve as Director.

The NCLIS National Program Document, Toward a National Program for Library and Information Services: Goals for Action, calls for the planning, development, and implementation of a nationwide network for the purpose of providing equal opportunity of access to information. A major component of such a network is the community of federal libraries and information centers, which comprises extensive collections of materials distributed among 2,000 libraries and information centers across the country. The issue of the role of federal libraries and information centers in a nationwide network was addressed in a number of resolutions adopted by the delegates to the White House Conference on Library and Information Services (1979). The important contributions federal libraries and information centers could make was strongly emphasized. Both the need to avoid overlapping and duplication of collections and services as well as the need to remove barriers to access were identified. In their discussion of national information policy, the delegates at the White House Conference also stated that government agencies at all levels must work together to make information services available to the maximum extent possible.

The coordination of federal library resources and services, not only within the federal structure (as called for in the NCLIS National Program Document) but with the public-at-large at the local, state, and regional levels--is essential if a nationwide program is to be effective. In order to provide services to all segments of society and guarantee a right of access to publicly-held information for all citizens, effective coordination of the resources and services available through federal library and information centers is critical.

-1-

The long-range national goals as described in the National Commission's program document and expressed at the Federal Libraries and Information Services Pre-White House Conference are: (1) to achieve, through careful planning and coordination, the integration of federal libraries and information centers in the developing nationwide library and information network, and (2) to work toward ensuring, through cooperative activity, the sharing of resources and services of federal and non-federal libraries and information centers to meet the information and educational needs of the community. To work toward meeting these goals in the NCLIS/LC study the following objectives were set:

1. Study and assess the current interaction among federal libraries and information centers;

2. Identify and recommend approaches for the sharing of resources and services among federal libraries and non-federal libraries and information centers;

3. Review the development of multitype library and information networks in the public sector and in both the profit and not-for-profit private sectors as they relate to federal libraries and information centers;

4. Explore the relationships between federal libraries and information centers, and state and local libraries.

The study officially started July 7, 1980. Early activities included the organization of the office, a review of the study goals and objectives and the determination of the initial steps to be undertaken. At the suggestion of the Director, and with the concurrence of the FLC Executive Director, it was decided that an advisory committee consisting of FLC members representing the various types of federal libraries would be appropriate and helpful. A thirteen member advisory committee was established in November of 1980 (see inside back cover).

Study Methodology

A review of the Survey of Federal Libraries, Fiscal Year 1972 and the preliminary summary tables of the 1978 Survey determined that federal libraries in three of the ten federal regions would be studied through meetings and questionnaires. Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin), Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas) and Region IX (Arizona, California, Guam, Hawaii and Nevada) were selected. There are over 400 libraries in these three regions. Approximately half of them are military, but all types of libraries are represented--health, medical

-2-

technical, other special libraries, academic, school and general libraries.

Field trips to Indianapolis, Chicago, and Minneapolis were scheduled in September of 1980. Invitations were sent to the federal librarians in those areas and to the state librarians and state network directors. Fourteen federal libraries were represented in the Region V meetings in those states.

The meeting for Region VI was held in San Antonio, Texas, in October in conjunction with the Southwestern Library Association Biennial Conference. The association includes all the states in Region VI plus Arizona which is in Region IX. Federal librarians in the six states were invited.

A meeting for Region IX was held in San Francisco in November. Fourteen federal librarians and the state librarian from California participated in the discussions.

In addition to the meetings, questionnaires were sent to the federal libraries in the three regions soliciting information of a non-statistical nature. This provided another source of data for the study.

The Advisory Committee held its first meeting on November 20, 1980. The agenda included a review of the goals and objectives of the project, activity to date and a discussion of some of the initial problems identified during the field meetings. The Advisory Committee supported the Director's recommendation that the next phase of the project include visits with directors of the library and information services programs of major federal agencies in Washington. This would provide the opportunity for the Director to become more fully acquainted with the structure, current activities and plans of the various agencies. An understanding of the federal library program from the perspective of both Washington and the field would be essential to the development of meaningful recommendations.

During the months of December, January and February, the Director met nine federal agency directors of library and information services. Visits were planned with at least another dozen agencies. In mid-December he met with Dr. Toni Carbo Bearman, Executive Director of NCLIS, and in February with the staff of the Federal Library Committee/ Federal Library and Information Network (FLC/FEDLINK).

The second meeting of the Project Advisory Committee was held on February 24, 1981. The Project Director reported on his visits with federal library directors in the Washington, D.C., area. The balance of the visits to federal agencies had been completed. A total of thirty-one agencies was visited.

At the Advisory Committee meeting discussion focused on some of the problems and issues raised by and with agency library and information services directors.

There was also agreement that a follow-up letter to field libraries in Regions V, VI, and IX that had not responded to the initial solicitation was necessary if a sufficient number of returns were to be obtained. There had been a 25 percent return of questionnaires; as a result of the follow-up, the percentage of returns rose to 41 percent.

The third meeting of the Project Advisory Committee was held on May 28, 1981. Discussions centered on information contained in the materials sent to the Advisory Committee members the first part of May. These included reports on the field and agency visits and copies of all the questionnaires received. It was suggested that the responses from the questionnaires be included as general comments in the final report and that an inventory of successful cooperative activities be prepared.

The fourth meeting of the Advisory Committee was held August 18, 1981. The major item of discussion was the draft project report, primarily the data analysis, issues and conclusions. Suggestions for revision, clarification and organization of the report were offered.

The fifth and final meeting of the Advisory Committee was held November 10, 1981. The committee reviewed the near final draft of the report with special attention given to the conclusions and recommendations. The project director agreed to provide the Advisory Committee members with the opportunity to review the final draft of all six chapters. These were mailed during December, 1981 and January 1982. Comments and suggestions were accepted through the end of January and are reflected in the final manuscript.

Overview of Findings, Issues and Conclusions

The reports on the regional meetings were reviewed for identification of issues raised by those attending. The records of the visits to the agencies in the Washington area were studied for details of current programs and the relationships between parent agencies and field libraries. The questionnaires were analyzed for data on existing cooperative activities and for comments on problems as perceived by the librarians in the field.

Findings from both the field visits and the questionnaires indicate that federal libraries throughout the country tend to look to non-federal libraries at the local and state level for

14

cooperation and support for library and information services. One notable exception is in the case of medical libraries, where inter-agency cooperation locally is very strong. Federal libraries are prepared to share their collections and services with their non-federal library counterparts. In many states participation by federal libraries in existing statewide systems and networks is commonplace.

There appear to be no legal or regulatory barriers to prevent cooperation between federal and non-federal libraries. The degree of cooperation and the enthusiasm with which they participate depend largely upon the attitudes of the people involved. In the main, federal libraries are special libraries with important collections strong in their areas of specialization. They can usually satisfy the requirements of their primary clientele; however, there are times when the use of collections and services of other federal or non-federal libraries is necessary. Through their participation in networking, systems, or cooperatives at the local and state level, federal libraries make use of interlibrary borrowing and lending and cooperative reference and information services. Direct access by the public to federal libraries is provided through on-site use.

A variety of issues and problems were discussed in meetings with parent agencies. These included organization, budgeting, contracting, user services and relationships between the parent agency and their field libraries. In addition, consideration and possible implementation of the contracting out provisions of the Office of Management and Budget (OMB) Circular A-76 was of concern, as were inconsistencies of interpretation of procurement regulations, the delay in the revision of personnel classification schedules 1410, 1411 and 1412, and the present level of use of automation as well as short-term plans for automating library operations.

Cooperation, resource sharing and document delivery between the federal libraries in the field and their parent agencies in Washington vary widely. With rare exceptions funding of the field library operation is not from the parent agency but from the local or regional federal office. The role and influence of the parent agency on the field library's program depends upon the support offered. For example, many field libraries participate in the Online Computer Library Center, Inc., (OCLC), formerly the Ohio College Library Center, through FLC. The charges for the OCLC service or the initial hardware costs are often paid for by the parent agency. Some agencies have developed a union list of periodicals, some offer centralized purchasing services, training, and consultant services. Some examples of the range of relationships and services between parent agencies and field libraries follow.

-5-

15

The Veterans Administration (VA) has its own network - VALNET (Veterans Administration Library Network). It offers the field libraries in the VA health care system union lists of journals, audiovisual materials, and monographs. This system also offers interlibrary loan, reference services, centralized cataloging, centralized procurement of periodicals, and consultant services.

Another example of a federal network is that provided by the U.S. Courts System Administrative Office in Washington. Each U.S. circuit court has a library that is basically funded by the Court System. It provides centralized purchasing, participates in the selection of the librarian, provides continuing consultant services, etc.

The National Aeronautics and Space Administration (NASA) uses a completely different structure. Their field libraries are almost completely independent but all fourteen participate in NALNET (NASA Library Network). Some of them are operated under contract--two examples are the Dryden Flight Research Center at Edwards AFB in California, and the Kennedy Space Center in Florida. NASA Headquarters does provide some services and coordination of others, such as issuing a union list of journals. The network also participates in the centralized updating and maintenance of a NASA-wide inventory of holdings in machine readable files accessible for search and retrieval on the NASA/RECON system.

Another example is the United States Department of Agriculture (USDA) Regional Document Delivery System. It includes 29 states grouped in 6 regions. The USDA also has a Western Forest Information Network (WESTFORNET) and a Southeastern Forest Information Network (SOUTHFORNET) which serve scientists and wildland managers in the western and southeastern states. Participation in the networks makes possible direct borrowing from selected libraries, computerized searches through the WESTFORNET and SOUTHFORNET offices and backup resources from the National Agricultural Library (NAL).

The National Oceanic and Atmospheric Administration's (NOAA) Library and Information Services Division (LISD) includes, in addition to the Central facility, four information centers in the Washington area, two libraries in Florida, and one in Seattle, Washington. LISD has administrative responsibility for these eight centers and libraries. In addition it provides technical assistance and consultative services to five additional information resource facilities in the Washington area and to 30 other libraries located at centers, laboratories and regional headquarters throughout the United States. Approximately 40 percent of LISD service is provided to users outside NOAA. A microcomputer-based system is being developed

-6-

16

to support the network; in complement to OCLC and the information retrieval databases currently in use.

The Library and Information Division of the Housing and Urban Development Department (HUD) provides general policy and procedural guidelines and technical and management assistance to the libraries of the 10 HUD regional and 39 area offices throughout the nation.

The Environmental Protection Agency's (EPA) library system consists of an Office of Library Systems and Services (OLSS) in Washington, 10 regional libraries and 18 laboratory and field libraries. OLSS provides technical direction and is responsible for the coordination of library automated data processing systems support.

The National Library of Medicine (NLM) has, of course, a number of online data bases such as MEDLINE, CATLINE, TOXLINE, RTECS, TDB, AVLINE, CANCERLIT, and CHEMLINE. In addition, its regional medical library program involving 11 regional libraries (with NLM functioning as one), more than 100 resource libraries and approximately 3,000 basic units (e.g., hospital libraries) is a regional network providing access to information in support of health services delivery, education and research. Network libraries share their resources through document delivery, bibliographic access to journals and monograph information, and cooperative acquisition and cataloging. Almost 2 million interlibrary loans are provided annually.

The range of relationships and services between parent agencies and federal libraries are summarized in Chart I. (See page 9).

Defense Technical Information Center (DTIC) is a central depository within the Department of Defense (DOD) for the interchange of defense related scientific and technical research information collections. These collections are related to proposed, current and completed projects. DTIC provides an online system, known as DROLS, to information on defense research, development, test and evaluation programs. The online system consists of a network of remote terminal stations connected to the computer equipment at DTIC. It provides immediate access to research data needed by DOD users. Included are over 1 million records containing bibliographic data related to technical reports of completed research.

Two agencies, Government Printing Office (GPO) and the National Technical Information Service (NTIS), provide bibliographic and document delivery services to federal and non-federal libraries. GPO distributes government publications through its depository program and its sales program.

It now prepares and issues the Monthly Catalog of U.S. Government Publications from the bibliographic entries input into MARC (Machine Readable Cataloging) through OCLC. Publications are offered in print, non-print, and microform formats.
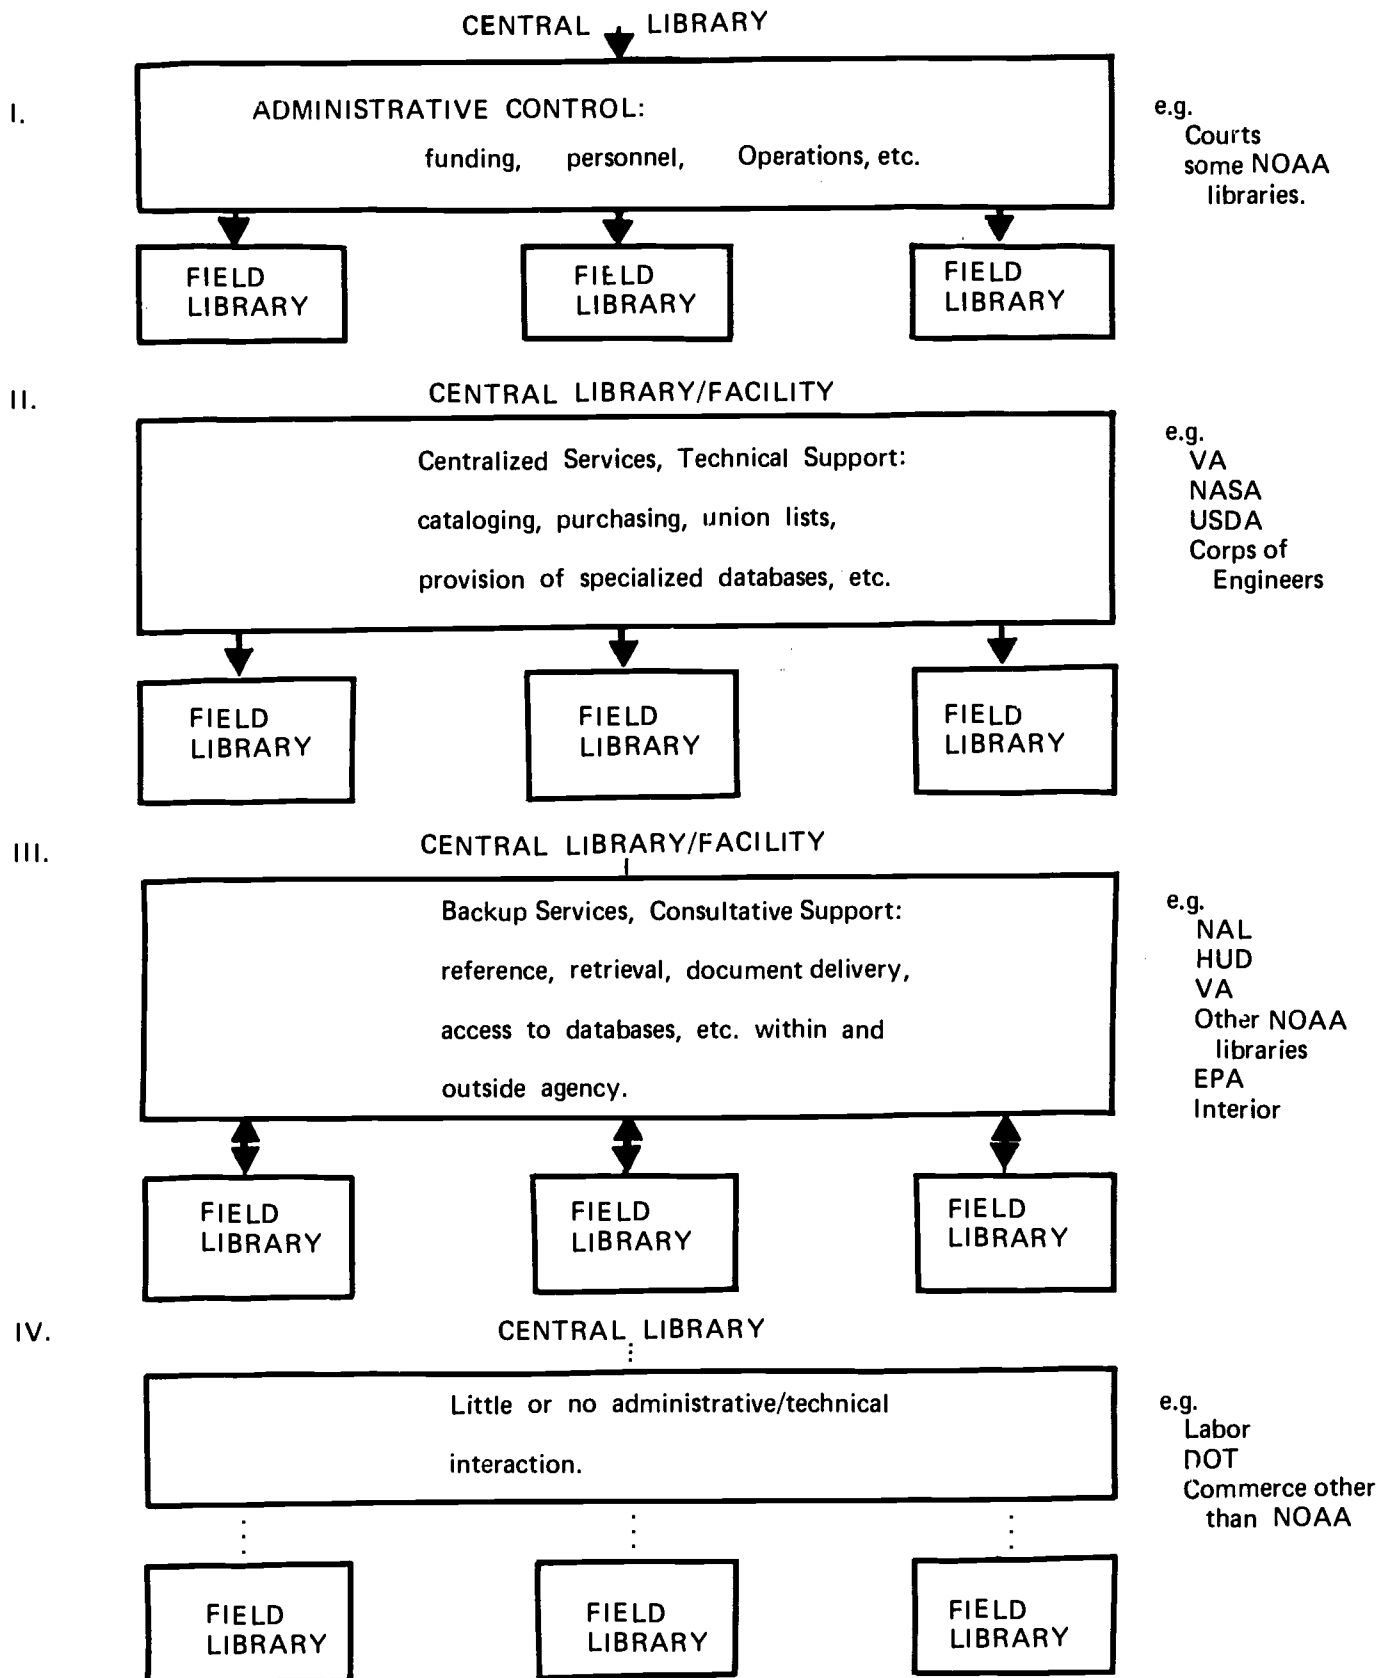

NTIS provides federal research and technical information in paper, film and machine-readable formats. NTIS is the central source for the public sale of U.S. Government-sponsored research, development, and engineering reports, as well as for foreign technical reports and other analyses prepared by national and local government agencies, their contractors, or grantees. It is the central source for federally-generated machine processable data files and manages the Federal Software Exchange Center for intragovernmental distribution. NTIS provides an online bibliographic database through contractual relationships with service organizations that maintain the database for public use.

FLC provides access to the Washington (State) Library Network (WLN) and the Research Libraries Information Network (RLIN) in addition to OCLC as noted above. FLC also provides for federal libraries access to various databases, including the NTIS database, through contractual arrangements with vendors of information retrieval services. The FLC staff provides training in the use of the above as required by its members and conducts workshops which address special problem areas such as the implementation of AACR2 (Anglo-American Cataloging Rules). Their work with federal libraries throughout the United States gives the staff an opportunity to view problems of field libraries from a unique perspective.

Some of the problems facing federal libraries are peculiar to the federal establishment. These include the issues discussed above such as adherence to OMB circular A-76, which requires consideration of a cost study to determine the feasibility and cost effectiveness of contracting for library services either in part or totally; the complexity of government procurement regulations; the effects of the delay in the revision of federal personnel classification schedules; the lack of timeliness and quality in the Federal Personnel Register; the unique problems of budgeting and planning created by the field library's responsibility to the federal agency in its region; the field library's relationship with the parent agency in Washington; and the implications of the Paperwork Reduction Act which has as its aim the improvement of federal information management. In addition, federal libraries, especially those in the field, are generally inadequately funded and staffed. Funds available for books, serials, and database services are modest.

A growing problem for federal libraries, especially in the field, is the tendency for non-federal libraries to

charge fees for interlibrary loans. Federal libraries have difficulty paying or collecting fees for interlibrary borrowing and lending. Unless federal libraries are exempted from such charges or are a part of a state/regional system that covers costs, they will turn to other federal or governmental libraries. This will limit their resource sharing with non-federal libraries and restrict their ability to serve effectively the needs of their agency. Meeting the objective of providing access to collections for resource sharing by both federal and non-federal libraries will require a commitment, fiscal as well as philosophic, not only by federal libraries but by their parent agencies, the U.S. Congress, and the Administration.

This commitment to sharing resources is in the best interests of federal libraries which are mission oriented. No library, regardless of size or specialization, can be self sufficient. Resource sharing is essential if federal libraries are to fulfill their responsibilities to their agencies adequately and effectively. The ever increasing number of books, journals, reports, documents and information retrieval databases requires cooperation, coordination and sharing if access is to be assured. The prudent use of new technology for internal services and participating in network (FLC/FEDLINK) services such as shared cataloging, interlibrary loan, and the use of bibliographic databases provide cost savings,which is especially important with the tightening of federal budgets. Federal library managers must continue to undertake periodic reassessment of their services, performance and techniques especially in light of changes mandated by new administrations. These changes have been more extensive and more frequent in recent years. Resource sharing and cooperation provide continuity of services as well as more cost effective operation.

In this era of multitype library and information service networks and cooperatives at the local, state, and regional levels, it is essential that federal libraries be full partners in the sharing of resources and services and that they be meaningfully involved in the planning and development of these networks. As the federal librarians at the Federal Libraries and Information Services Pre-White House Conference stated, "...the people of the U.S. have the right to access to infor-mation produced or collected by the federal government at public expense..." The enormous federal investment in library and information services and other data collections now yield only a small part of their potential value to the public. Agencies should seek to assess latent and unmet information needs of citizens. In addition, federal librarians should participate in educational campaigns on the national, state, and local levels to increase public awareness and to promote the effective use of library and information resources and services.

20

The complexity of today's economic and business problems, the issues of growth and development and their effect on the environment, and the need for a strengthened defense posture all require that an informed public be capable of understanding the issues and making decisions. Central to the decision-making process, not only for those in positions of responsibility but also for those who vote for them (the public), is information effectively organized and efficiently disseminated: the role and responsibility of libraries in providing such information is paramount. What is needed at the federal level is a federal library and information services network that will coordinate federal library activity and interface with a national information and referral network designed to serve informational, educational and recreational needs at the local, state, regional and national levels.

STATISTICAL INFORMATION ON FEDERAL LIBRARY ACTIVITY

The Survey of Federal Libraries, Fiscal Year 1978,[1]
provides basic data on federal library collections, services
and expenditures. Federal libraries are located throughout
the United States and in most areas of the world. They serve
the Senate, House of Representatives, Courts of the Judicial
Branch, the Office of the President, 11 civilian and 3 military
departments and 43 other federal organizations including 42
independent agencies. A total of 2,141 libraries of all types
and in all locations were identified for inclusion in the sur-
vey. Responses were received from 1,389 libraries. In addi-
tion, substantial data were supplied for another 491 libraries
by parent agencies, headquarters libraries and system
headquarters. As a result significant data are included in
the survey for 1,880 libraries representing 88 percent of the
survey universe. Unless otherwise noted, all statistical
tables and information cited in this chapter and in the other
parts of this report are taken from the 1978 survey.

Of special importance to this study are the statistics and
information on federal library collections and services. This
includes the number of volumes and titles, the number of
service contacts including interlibrary lending and borrowing,
expenditures, personnel, activities in the area of cooperation
and the use of automation. Of the libraries participating
in the survey, 1858 of them reported collection holdings in
excess of 190,000,000 items, expenditures of over a half of
a billion dollars and an estimated total of 60,000,000
individual service contacts. Circulation of materials was
the primary type of service provided in federal libraries,
comprising almost three-quarters of the estimated total service
contacts (See Table I).

In the areas of expenditures and staff the Survey shows
that 58 percent of total expenditures was for salaries and
wages, with materials accounting for another 19 percent. A
total of 20,526 full-time equivalent employees staff the 1858
reporting libraries. Of these less than one-third of the total
employees were classified in the library series and about
half of these were library professionals (1410 series).

The three national libraries reported more than two-fifths
of total collection items and one-third of current periodical
titles held, 37 percent of total expenditures, 27 percent of
total staff and eight percent of estimated total service
contacts. A summary of key data items for national libraries
and libraries reporting individually is included in Table I.

TABLE I

Summary of Key Data Items for All Respondents, Survey of Federal Libraries, FY 1978[2]

	National Libraries (n=3)		Libraries Reporting Individual Data (n=1414)		Libraries Reporting Aggregate Data (n=463)		Total (n=1,880)

[a] Percent of libraries in category responding to item.
[b] Thirteen systems headquarters had no collections; another nine libraries did not report this data.
[c] Estimated data.   [d] Only cost data reported for the Library of Congress.
[e] No information is available concerning automation in the 383 AV libraries.
[f] Includes binding and materials for other libraries.

-13-

23

Library Collections

The number of titles in print, microform and AV materials totalled 70,871,924, of which 58 percent were in print materials and 37 percent in microforms. Most of the microforms (83 percent), were for documents or reports. The distribution of titles by types of materials is shown in Table II:

TABLE II

Distribution of Titles by Types of Materials
Federal Library Survey, FY 1978[3]

Item	Print	Microform	Other	Total	Percent of all Titles	Percent of Titles Microforms
Bookstock	31,028,978	2,882,918		33,911,896	48	9
Periodicals	968,747	507,606		1,476,353	2	34

Total	41,307,981	26,511,831				

---

* Less than 1 percent
a Includes periodicals and documents/reports

National libraries held more than two-fifths of the total items and less than 20 percent of the total titles. The science libraries hold one-quarter of all the titles. Current periodical subscriptions totalled 597,183 at the end of FY 1978. Of these more than one-third were held by National libraries. In FY 1978, 49,128 new periodical titles were added. Table III[4] shows a detailed breakdown by type of library and type of material. The definitions[5] of type of library used in the survey are:

National libraries - Government-wide responsibilities and missions, including concern for both national and international matters.

Presidential libraries - specialize in the official records, memorabilia, literature, and other materials of a specific former President of the United States.

Systems Headquarters - provide administrative and/or technical services to autonomous or semi-autonomous libraries. The headquarters may or may not operate service outlets of its own.

TABLE III

Titles in Federal Library Collections at End of FY 1978, by Type of Library

Survey of Federal Libraries, FY 1978[4]

[a]Includes all LC A-V holdings.
[b]Does not include book titles for NLM; data not available.
*Less than one percent

Audio-Visual (AV) libraries - support a variety of missions but are distinguished by collections consisting primarily of non-print materials.

Science libraries - collections devoted primarily to engineering and/or the sciences, except the health sciences.

Medical libraries - collections devoted primarily to medicine and the health sciences.

Law libraries - collections devoted primarily to legal materials.

Special libraries - support specific special or technical mission plans, but whose collections do not fall into any of the types noted above.

General (quasi-public) libraries - serve the general library needs of personnel assigned to a location or facility, e.g. base libraries.

Patient libraries - meet the general library needs of persons in federal hospitals.

Penal libraries - provide general materials and services to inmates of federal correctional institutions.

Academic libraries - serve the educational mission of federal colleges, universities, graduate, and post graduate schools, and of such non-degree granting programs as enable students to derive college credit for course offerings.

School (Elementary, Intermediate, and/or Secondary School) libraries - provide curriculum support to students and faculty at military dependent schools and schools at this level on Indian reservations.

Technical School (Training Center and/or Instructional School) libraries - support vocational and/or technical non-degree granting courses or training schools.

Medical-Patient libraries - serve hospitals and medical centers, providing both professional medical collections and services and patient general collections and services.

Other libraries - include administrative combinations of two or more types of libraries other than medical-patient.

Basic Library Services

The service units[6] reported in the Survey include:

-16-

Circulation of materials - the number of materials checked for outside use, except for the Library of Congress and the National Library of Medicine where figures represent materials checked out for use within the library.

Interlibrary transactions - include the lending and borrowing of materials both in the original and in photocopies. A substantial proportion of the materials which federal libraries lend or borrow in interlibrary loan is in the form of photocopies rather than original materials. At least 80-90 percent of the materials copied are periodical articles. This varies substantially by type of library; law libraries, for example, copy a higher proportion of materials other than periodical articles for loan.

Information transactions - reports requests made in person, by telephone or through correspondence. Included are reference transactions requiring professional skills in locating and supplying information, analyzing or interpreting literature, selecting or assembling materials and acting as a clearing-house; directional transactions requiring location answers only; and online reference transactions, which provide information via a terminal from a computerized data base.

Photocopies made for patrons - includes photocopying of materials in lieu of hand copying or circulation. These figures only include those photocopies made by the library staff for patrons. Photocopying for patrons shows a different pattern from photocopying for ILL (both lending and borrowing). Patrons request about an equal number of periodical and non-periodical materials.

All libraries did not provide data concerning levels of service in all categories. The numbers of individual service contacts reported, by category of service, are shown in Table IV Page 18.

Circulation was highest in general, patient and school libraries (66 to 84 percent). In national, academic, science, medical and other special libraries circulation represented between 56 and 59 percent of service contacts. (See Table V).

The ratio of interlibrary transactions to total service contacts varies from 2 percent for federal libraries overall to 9 percent for medical libraries. In general, the libraries located on military bases and in patient libraries in VA hospitals library transactions represented less than 1 percent of their service contacts; however, in special, medical, system (agency) headquarters, and national libraries inter-library transactions represent 3 to 8 percent of their service contacts. A check of interlibrary activity for FY 1981 for the LC, NLM, NAL and VA reveals a slight decrease for the first

two libraries and a modest increase for NAL and the VA medical and hospital libraries. The LC and the NLM accounted for 44 percent of all materials loaned. The NAL is a net lender for journals and reports. Information transactions made up more than one-fifth of total service contacts. The volume was highest in general, special, science and national libraries. General libraries reported the highest number of reference and directional transactions, science libraries the highest total volume of online reference services and national libraries accounted for about 20 percent of the reference transactions. (See Table VI, VII, VIII).

Photocopies for patrons made up an estimated six percent of all service contacts (see Table IV). There was a substantial level of activity by Presidential libraries providing, most frequently, manuscript pages. In addition to providing photocopies for library patrons 27 percent of federal libraries reported providing photocopies in lieu of original materials in interlibrary loan while 34 percent reported that they had received photocopies in ILL borrowing.

TABLE IV

Individual Service Contacts, by Category of Service
Survey of Federal Libraries, FY 1978[7]

Type of Service	Percent of Respondents Reporting	Total Number of Service Contacts Reported FY 1978	Median Number of Service Contacts Reported

[a] Includes circulation, interlibrary lending and borrowing, estimated annual information transactions, and the estimated number of photocopies made for patrons annually. Information and photocopy transactions were reported for a typical week; annual projections are based on multiplication by 52, except for school libraries, where typical week figures are multiplied by 38. Since estimated photocopy data are based on analysis of substantially revised data, no breakdowns by type of library are provided here.

[b] Circulation for the Library of Congress and National Library of Medicine represents materials checked-out for in-library use.

[a]Includes circulation, interlibrary lending and borrowing, estimated annual information transactions, and the estimated number of photocopies made for patrons annually. Information and photocopy transactions were reported for a typical week; annual projections are based on multiplication by 52, except for school libraries, where typical week figures are multiplied by 38. Since estimated photocopy data are based on analysis of substantially revised data, no breakdowns by governmental organization are provided here.

In the Survey report the following cautionary statement is offered:

"Both information and photocopy transaction data are based on a special data collection during a typical week. Annual data are estimated by multiplying weekly data by 52, except for school libraries, where typical week figures were multiplied by 38 weeks. Unfortunately, photocopy data provided in the survey proved to be unreliable and inconsistent. In some cases data covered a period other than a typical week (e.g., monthly or annual data). In other cases, pages photocopied, rather than items photocopied, were supplied. Data were re-checked, and in some instances, requeried. The substantial level of error uncovered and data changed (about one-third of all reports) makes findings suggestive rather than defini-tive in nature, and the estimated data presented here merely suggests the relative volume of such activity."[12]

Other Library Services

Many federal libraries also provide a variety of other services, including coordination of group activities (principally from agency headquarters), serving as depositories and collecting agency federal documents, preparing bibliograph-ies and providing other special products and services. The service least frequently offered is the translation of materials for users outside the agency. Approximately 75 percent of the libraries (n=1,417) responding to the survey provided indivi-dual data on these services, as shown in Table IX:

Prepare translations	6	2

Cooperative Arrangements

The success of a federal library and information services
network depends, to a large extent, on the level and intensity
of participation by federal libraries in cooperative arrange-
ments that are mutually beneficial. The sharing of resources
through interlibrary lending, shared reference services, the
development of cooperative collection policies and procedures
designed to curtail unnecessary duplication and the sharing
of experiences and expertise all contribute toward the provision
of a more cost-effective, service oriented federal library
system.

Data collected in the 1978 survey indicated that "one-
quarter of all federal library respondents reported that they
participated in a network or other cooperative arrangement.
(See Table X). Most of these arrangements are designed to
improve the flow of materials between libraries (interlibrary
loan), although cataloging data, technical processing services,
centralized procurement, and bibliographic tools are also
provided.

"Through FLC, a number of federal libraries have access to
OCLC for cataloging data and locations of materials needed in
interlibrary loan. Other resource sharing arrangements include
the Regional Medical Library Network supported by the NLM, which
channels borrowing for all medical libraries throughout the
country, and agency resource sharing networks such as those in
the USDA, EPA, NOAA and VA. Formal and informal inter-agency
regional or topical networks also provide for resource sharing
among libraries in a particular area or with a particular
discipline of interest.

"Arrangements or networks may include only federal
libraries within an agency, department, division, or region,
or may include a wide variety of federal and non-federal
libraries within a local jurisdiction, county, state, or region.
Some libraries also have informal arrangements or contracts
with research libraries (usually in academic institutions) for
the supply of materials not held by the library, or with film
or audio-visual materials centers for little used non-print
materials."[14]

"Overall, 471 libraries reported membership in an average
of 2.2 cooperative groups, although this would appear to be
only a part of total federal library involvement in cooperative
activities. Many libraries did not report their affiliations
with organizational networks such as the VA's VALNET or USDA's
ALIN (Agricultural Libraries Information Network)."[15]

"National, medical-patient, medical, and academic

[a]No data are available for A-V libraries.

libraries are the types of libraries most likely to have report-
ed involvement in cooperative arrangements, with academic
libraries reporting participation in the highest average
number of groups (2.7). Law libraries, school libraries and
special libraries are the types least likely to have reported
organized cooperation with other libraries."[17]

Automation in Federal Libraries

Only 27 percent of all federal libraries reported the use
of automation, either in the form of automated technical services
or in the use of online databases. The National libraries
accounted for about four-fifths (79.6 percent) of total expendi-
tures for automated data processing, with special and technical
libraries (11.2 percent of totals) and System Headquarters
libraries (5.6 percent of totals) ranking second and third.
Total automation expenditures for the 260 libraries reporting
were $30,171,467: 35 percent or $10,619,467 was for 259
libraries and 65 percent or $19,552,000 was for the Library
of Congress.

As might be expected, the use of automation was most pre-
valent for federal libraries in the Washington Metropolitan
area - 47 percent of the libraries in the area reported 93
percent of the total automation expenditures.

Almost 61 percent of those libraries reporting some
automation had on the average of 1.7 technical services
systems already automated, while 14 percent reported that their
acquisitions, serials control and circulation systems were
being developed. Types of technical support systems currently
automated and those under development are indicated in the
following Tables.

TABLE XI

Types of Technical Support Systems Currently Automated
Federal Library Survey FY 1978[18]

Automated System	Percent of All Respondents Reporting (n=1,880)	Percent of Total Systems Reported (n=523)	Percent of Systems In-House	Purchased
Acquisitions	1.8	6.5	62	38
Cataloging	13.5	48.6	16	84
Serials Control	1.6	6.3	73	27

All Systems	16.5	100.0	41	59

26

TABLE XII

Percentage of Different Types of Systems Under Development Federal Library Survey FY 1978[19]

Automated System	Percent of All Respondents Reporting (n=1,880)	Percent of Total Systems Reported (n=523)	Percent of Systems In-House	Pur
Acquisitions	1.1	16.8	50	50
Cataloging	1.5	24.4	24	76
Serials Control	1.1	16.8	70	30
Serials List	1.3	21.0	72	28
Circulation	0.8	12.6	60	40
Other	0.5	8.4	20	80
All Systems	3.9	100.0	50	50

The cataloging operation is the most frequently automated service, accounting for almost half of all currently automated technical support systems. Approximately 84 percent of automated cataloging systems are purchased (primarily OCLC), while 6 percent have been developed in-house. Among other types of automated systems, in-house development has accounted for 63 percent of those currently in use and 50 percent of those under development.

The use of online databases was reported by 71 percent of the libraries reporting any automated retrieval services. Data files available through commercial vendors comprised 96 percent of all data files used, except in National libraries which reported that more than half of the online data files were prepared in-house.

III

DATA ANALYSIS

Data gathering and analysis for the study were derived from five sources:

1. **Survey of Federal Libraries, Fiscal Year 1978**
   A review and analysis of the data that impinge on this study are included in Chapter II.

2. Regional meetings
   Five meetings were held in three federal regions (V, VI, IX) selected for the study. A brief statement on these meetings is included in Chapter 1. A further review and analysis of the discussions held at those meetings is included in this chapter.

3. Washington area visits
   Thirty one agencies were visited. A brief review and analysis of these visits and a description of some of the cooperative services provided by these agencies are included in this chapter.

4. Questionnaire returns
   All of the federal libraries in the three regions visited received a questionnaire (see Appendix 1). Forty one percent of the libraries responded. An overall analysis of the responses received is given in the last portion of this chapter. A detailed inventory of the comments made by the respondents is included in Appendix 2.

5. Literature
   Many materials, reports, publications, manuals, policy statements, etc. were supplied by the various agencies. These, along with literature from other sources, were studied and served to confirm, clarify and supplement what was learned from the visits.

Regional Meetings

An analysis of the notes of the field visit meetings in the three regions studied confirms an initial assumption, i.e., federal libraries tend to be special libraries, with problems very similar to non-federal special libraries—staffing, budgetary, collection development, etc. The librarians are generally willing to cooperate. In the Midwest, for example,

opinions about the importance of federal library participation at the local/state level ranged from its being helpful in avoiding professional isolationism to its making possible more effective service to the clientele. Some of the areas of possible cooperation mentioned were participation in continuing education activities, sharing utilization of technology, resource sharing through participation in interlibrary loan, reciprocal borrowing, and holdings listings in union lists. These same areas were mentioned and/or discussed in the Southwest and Far West meetings.

In the three regions studied, it became clear that there are no legal or regulatory constraints at the local or state level on the participation of federal libraries in local/regional/state/multi-state networking. In Illinois, for example, many of the federal libraries are members of the regional multitype library systems. This was also true of some libraries in Indiana and Minnesota. Opportunities for formal participation were not possible in most of the other states in the three regions visited, as the states are still in the developmental stages of multitype library networking. All states, however, provided opportunities for participation in cooperative programs such as statewide interlibrary loan, reference and information services, and continuing education.

The State Librarians, State Network Directors and the regional service center (AMIGOS) in the fifteen states in the three federal regions studied all requested a list of federal libraries, indicating those involved in FLC/FEDLINK activities, i.e., OCLC, database services, etc. The State Librarians were very much interested in informing and involving federal librarians in their overall activity especially in the areas of resource sharing, reference and training. The one regional service center in the regions studied, AMIGOS Region VI, raised questions about closer coordination between the service centers and FLC/FEDLINK in the areas of cooperative cataloging (OCLC), database sharing and training.

The use of automation in the field libraries in all three regions was limited. Some used OCLC through FLC/FEDLINK, but many of the libraries were unaware of the various services offered through FLC/FEDLINK. In both the Southwest and the Far West, there was a suggestion that direct communication between FLC/FEDLINK and field libraries would be useful.

The sharing of resources, mainly through interlibrary loan, was heavily one-sided: field libraries are net borrowers. There are some exceptions, such as NASA's Ames Research Center in California. The amount of net borrowing for any one library for one year is generally below five or six hundred items. Field libraries tend to try local sources first, both federal and non-federal, and then the parent agency.

42

One reason that can be advanced for the net borrower pattern is that field libraries have highly specialized collections, limited in size and scope but strong in their area of specialization. In Illinois and Indiana, some field libraries were parts of state/regional systems and, therefore, agreeable to direct public use of their collections. Experience, however, showed little or no demand, probably due to the limitations and specialization described above. Exceptions to this experience were two research laboratories in the Midwest and the Far West--NASA's Ames Research Center and its relations with Stanford; the Department of Energy's Argonne Laboratory and its relations with the University of Chicago.

One topic of conversation in all three regions was OMB circular A-76 on contracting for services. It was one of more concern to those in the Midwest and the Southwest. Because of NASA's prior contracting experience and a sharing of that experience with federal librarians in California, there was less worry about A-76 in that region. In the Southwest discussions, and to some extent in the Far West, it was suggested that FLC provide assistance, such as acting as a clearinghouse for sample RFP's and developing some model RFP's or elements for RFP's. As might be expected, the level of concern was dependent on management's pressure relative to implementation of the contracting out provisions of A-76.

A second area of concern in the field was the problem of procurement. In the Far West emphasis was on inconsistency of interpretation of procurement rules and regulations between the national agency level and the field level. There are also great variations in agency interpretations--for example, in NASA contracts for three years or more are the rule; USDA says they must be for only one year. The feeling is that most local procurement officers are not as well versed in library problems and do not consider them important enough to seek help or exceptions. Military libraries spend time at their annual training sessions on procurement problems and seem to have more consistency in practice and interpretation. In many instances parent agencies can accomplish procurements for field libraries more effectively.

A third area mentioned was related to personnel problems. The lack of movement in the revision of the position classification series 1410, 1411, 1412 was considered a serious problem in both the Southwest and Far West meetings. In the latter area there was a desire to see final drafts for comment before adoption. The Federal Library Register came under attack in the Far West and to some extent in the Southwest. The computer match between position vacancies and available candidates is poor. The lists of candidates are out of date. Part of the problem is the procedure OPM has of opening and closing the lists and it is felt by many that the lists should remain open.

Washington Area Visits

Thirty-one parent agencies were visited. The variation in mission, size of collection, staff and depth and breadth of services provided are significant. At one end of the spectrum are the three National Libraries, of which one, NAL, supports USDA field libraries through a variety of services; the second, NLM, supports a national network through non-federal regional libraries; and the third, LC, provides not only tape subscription service of its machine readable cataloging (MARC) for the nation, and a highly specialized research service for Congress, but also a National Library Service for the Blind and Physically Handicapped which coordinates services of 160 regional and subregional libraries throughout the country. In addition, LC serves as the basic resource support service for federal libraries. The extent of the reliance by federal libraries on the collections of the Library of Congress is most evident by the fact that a dozen major federal agencies assign full-time staff to search the collections daily for interlibrary borrowing.

Most of the other federal libraries in Washington have field libraries but here too the extent and level of responsibility varies greatly. The U.S. Court system has a headquarters library in each of its twelve circuits with 47 branches (60 planned for 1982) throughout the nation. Funds are provided centrally for salaries, materials, database services, rental, furniture and equipment. The Departments of Labor and Transportation, on the other hand, have no direct responsibility for other libraries in those departments, for example, Occupational Safety and Health Administration (OSHA) and the Coast Guard. Other agencies such as Corps of Engineers, EPA, HUD, Interior, NOAA and VA provide services such as access to OCLC and to information retrieval databases, union lists, training, consultative services, and some central purchasing.

All federal libraries--parent agency and field--participate in some cooperative programs and activities. These cooperative involvements are with both federal and non-federal libraries and at national, state and local levels. The major resource sharing service is interlibrary loan. As indicated earlier, federal libraries in the Washington area rely heavily on LC. Federal medical and health libraries throughout the country participate in NLM's Regional Medical Library Network.

The Government Printing Office and the National Technical Information Service provide bibliographic and document delivery service to federal and non-federal libraries. GPO provides information on approximately 30,000 government publications per year through its input into OCLC and the publication of the Monthly Catalog of U.S. Government Publications. NTIS makes its information available as an

44

online database accessible through Lockheed and through its publication Government Reports Announcements and Index (GR&I).

Some additional examples of specific parent agency programs and services to their field installations and clients follow.

NASA Headquarters provides some coordination of services. The network, as described earlier, maintains a NASA-wide inventory of holdings in machine readable files accessible for search and retrieval via NASA/RECON, providing multiple access to a computerized database of books, technical documents, reports and journal citations. Services include current awareness lists, catalog cards, union findings lists, and book and journal lists. The data bank includes bibliographic records for post-1968 books and journals held by the various NASA libraries, together with the MARC records of selected classes in the area of scientific and technical books procured by LC. NASA plans call for accessing OCLC for shared cataloging and ILL.

The NASA information system is accessed by some 21 government libraries and over 60 contractors in addition to NASA installations. The contractor-operated NASA scientific and Technical Information Facility maintains the system and also produces continuing bibliographies and Scientific and Technical Aerospace Report (STAR), one of two NASA abstracting and indexing journals. The other journal is International Aerospace Abstracts (IAA), issued under contract with the Technical Information Service of the American Institute of Aeronautics and Astronautics in New York. Both facilities make initial distribution of microfiche to the NASA and contractor libraries.

To promote technology transfer, NASA operates a network of dissemination centers whose job is to provide information retrieval services and technical assistance to industrial and government clients. The network's principal resource is the data bank described above, a vast storehouse of accumulated technical knowledge, computerized for ready retrieval. Almost two million documents are contained in the NASA data bank, which includes reports covering every field of aerospace-related activity plus the continually updated contents of 15,000 scientific and technical journals.

USDA's WESTFORNET, mentioned earlier, includes four service centers; they are located in Berkeley, Fort Collins, Ogden and Seattle. SOUTHFORNET was established in 1980 to serve the Forest Service in Southeastern U.S. These networks provide document delivery, a literature alerting service, reference services including a hot-line for statistics or specific facts, as well as information on research specialists who can provide assistance.

The USDA Regional Document Delivery System, in conjunction with land grant college libraries, receives 50,000 requests with a 75 percent (37,131) fill rate in the field. Approximately 95 percent of the requests are filled by photocopies. The system is supported by USDA at a level of $170,000 a year (FY 1981). About 25 percent of the requests are referred to NAL in Washington for completion.

USDA has a number of information services such as AGRICOLA (Agricultural Online Access), consisting of a family of databases that include indexes to worldwide journals and monographic literature and U.S. government reports on general agriculture, food and nutrition, agricultural economics and many related scientific and sociological subject fields; and AGRISTARS (Agricultural Resource Inventory through Aerospace Remote Sensing).

An example of cooperation between federal and non-federal libraries is the longstanding work between NAL and the land-grant colleges and universities. In addition to document delivery, there are shared cost or grant programs concerned with archival filming, introduction of online search services and publication support. In 1978 the Black land-grant college libraries and Tuskegee Institute organized into an 1890 Land Grant Library Director's Association. Its primary purposes are to promote cooperation between the member land-grant college and university libraries, to assist the agricultural directors and research staff of the land-grant institutions, and to maintain high standards of operation.

The Department of Energy Technical Information Center (TIC) is the central point for collecting, processing and disseminating energy-related scientific and technical information. Located in Oak Ridge Tennessee, TIC has created and maintains on a current basis the world's largest and most comprehensive bibliographic databases on energy. Covering all scientific and technical energy areas, the databases include more than 1,200,000 items and serve the needs of the Department of Energy (DOE) for current and retrospective information.

The DOE databases can be assessed by the DOE/RECON system, an interactive online retrieval system operated for DOE by Union Carbide Nuclear Division at the Oak Ridge National Laboratory. The RECON system consists of 40 dedicated terminals on three telephone circuits, east coast, west coast, and local. In addition, there are approximately 180 dial-up terminals accessing the RECON system. The system permits users to carry on a dialog with the computer, allowing them to browse through large databases.

One of the primary objectives of TIC is to ensure that

DOE-sponsored research is reported promptly and that reports are distributed within DOE and to its contractors and, when suitable, made available to the general public. Copies of all DOE reports issued come to TIC to be printed, distributed, cataloged, abstracted, and indexed, added to the TIC bibliographic databases, made available for public purchases, and announced in TIC abstracting and indexing journals.

NOAA is responsible for providing a national environmental database through the Environemental Data and Information Service (EDIS). EDIS acquires, manages, and disseminates global environmental data and information in the atmospheric, marine, solid earth, solar-terrestrial, and related sciences. It provides products and services to meet the needs of users in commerce, industry, agriculture, science and engineering, the general public, and federal, state and local governments. The products and services are used as a basis for decisions concerning the national economy, national defense, the productivity of American industry, energy development and distribution, world food supplies, public health, safety, and welfare, the development and preservation of natural resources, and the understanding and effective use of the environment.

The National Library of Medicine online databases and its regional medical library program were described in Chapter I. The NLM online services network has 1,243 online centers in the U.S. as well as centers in 12 foreign countries. MEDLARS contains references to journal articles and books in the health sciences published after 1965. Most of these are available through Index Medicus or in other provided NLM indexes and bibliographies. There are a number of online databases available through the online network. MEDLINE is the largest and most frequently used. NLM is nearing completion of its project to convert the entire shelf list to machine-readable form and to make the entire NLM catalog, back to 1801, accessible online.

Defense Technical Information Center (DTIC), the central depository within DOD for the interchange of scientific and technical research information collections, jointly funds and administers defense information analysis centers (IAC). There are 20: 9 are contractor-operated and are administratively managed and funded by the Defense Logistics Agency (DLA) and the Defense Technical Information Center, and all others are managed by other DOD activities. A tenth contractor-operated center is anticipated--Manufacturing Technology Information Analysis Center (MTIAC).

These centers receive technical management from DOD laboratories and agencies with leading competence in the field of science and technology within which the particular centers function. Technical expertise is provided by practicing

scientists and engineers associated with the research and development facility.

IAC's are basically similar in operation but dissimilar in subject matter. Each center collects, reviews, analyzes, appraises, summarizes and stores available information on subjects of highly specialized technical areas of concern. The collections are computerized and synthesized and include the most current international research information.

The centers offer a variety of services and products such as abstracts and indexes, technical inquiry services, bibliographic inquiry services, scientific and engineering reference works, state-of-the-art reports, critical reviews and technology assessments, current awareness, special studies/tasks, technical conference/interagency committee organization and administration.

Access to the IAC research information services and products is available to DOD, other government organizations, government contractors and grantees, and within security and priority limitations, to the private sector.

Paperwork Reduction Act of 1980, PL 96-511

In the view of some federal information managers the Paperwork Reduction Act is providing an impetus for better agency management information systems and organization. The Act provides guidelines and permits the use of a variety of approaches and solutions.

The Department of the Army is using a "life cycle management concept" which calls for a six-step method for controlling information: requirements definition, programing (what to do and how to do it), data collection and update, processing, use, and final disposition.

The Department of Interior is developing a departmental data resources directory to comply with the Act's requirement for a federal information locator system. Evaluation, long-range planning, better use of information resources and integration of the information process are areas of focus by Interior.

At the Department of Commerce an executive directorate for information resources management has been created. Plans call for an operationally-oriented, (not just policy-oriented) approach. They will manage functions and offer services to a number of bureaus in the Department. They expect to operate more efficiently because of the economics-of-scale and they anticipate providing centrally, specific functions and services common to all or a number of bureaus.

48

Federal Library Committee

Since 1965 the FLC has concentrated on ways to achieve better utilization of federal resources and facilities. Forty federal agencies comprise the Committee which has served effectively not only as a forum for the communication of information among federal libraries and their users, but as the coordinator and catalyst for the planning, development and operation of federal libraries, and reviewing priorities, policies and technological innovation in library practices.

In 1973 a group of librarians in the District of Columbia area, under the leadership of Dr. Russell Shank (then of Smithsonian Institution), Margrett Zenich of the Army Corps of Engineers, Mary Shaffer of the Army Library, Mary Huffer of the Department of Interior, Madeline Henderson of the National Bureau of Standards, and Kurt Cylke, then Executive Secretary of FLC, organized a Federal Library Experiment in Cooperative Cataloging (FLECC). It originally started as a one-year experiment in cooperative cataloging with OCLC, but by early 1976 nearly 50 federal libraries were participating. The experiment was such an outstanding success that it resulted in the formation of the Federal Library and Information Network (FEDLINK).

The expansion of services and growth in membership in FLC/FEDLINK attests to both the need and the dedication of federal librarians for better service through cooperation and coordination. In addition to online cataloging through OCLC, federal libraries can interface with RLIN and WLN when desirable and appropriate. FLC/FEDLINK members have access to online reference and retrieval services such as Lockheed's DIALOG Information Service, Bibliographic Retrieval Services, Mead Data Central's LEXIS and NEXIS, New York Times INFO Bank, System Development Corporation's ORBIT, West Publishing Co.'s WESTLAW, Dow Jones News/Retrieval, Legislator Inc's LEGI-SLATE, and Participation Systems, Inc', POLITECHS/EIES.

Some other important examples of cooperation initiated by FLC are the coordination between the Government Printing Office and OCLC for cataloging and generating the records for producing the Monthly Catalog of U.S. Government Publications, the development of a MARC technical report format and an online union list of serial publications (USERLINE) by three agencies-National Agricultural Library, Environmental Protection Agency and National Oceanic and Atmospheric Administration.

Today over 365 federal libraries participate in the many services available to them through FLC/FEDLINK membership.

Questionnaires

The questionnaires were analyzed and data compiled under

a number of headings indicative of the information provided: resource sharing through interlibrary loan, reference services, and participation in union lists; problems raised by cooperative activities; and types of assurances, legislation, or regulations considered desirable by the respondents.

The data for Region V respondents show:

o <u>Resource Sharing</u>

In this region there are many library cooperatives, at the local level, and as regional, statewide, and multi-state arrangements. About one-third of the respondents participate in local cooperatives, one-third in area (within-the-state) systems, one-fourth in statewide cooperatives, and one-fourth in multi-state systems. Libraries in the medical/health sciences category participate in cooperative activities more than those in other subject areas. The main uses for cooperative arrangements by all libraries are interlibrary loan and reference services. (The specific cooperative systems are listed in Appendix 2 .)

More than half of the libraries responding to the questionnaire described cooperative arrangements with national organizations, including parent agencies, particularly for ILL services; another one-third reported arrangements with national organizations for other services such as shared cataloging, information retrieval, document delivery, etc.

o <u>Problems</u>

More than half the respondents reported no problems with cooperative activities; rather, they spoke of improved service to clientele and borrowing more than they lent. Of the twelve respondents who did describe problems, a major complaint had to do with increased workloads on small staffs. Another concern was that libraries in cooperative systems tend to access and borrow from the collections of free lenders; as more large libraries make service charges, the resources of smaller libraries will be more in demand.

o <u>Comments, Suggestions, Requests</u>

The respondents asked for such assurances from their parent organizations and the FLC as support for and interest in the field libraries, the establishment of field libraries coordinators or liaison officers, and realistic guidelines for funding and staffing levels. In addition, respondents asked for support for online cataloging and database searching, encouragement to enter into cooperative agreements, increase in resource sharing from larger libraries, and guidelines to help local consortia develop self sufficiency and more equitable

-38-

sharing of the ILL burden. Some specific assurances requested include that federal librarians "not be contracted out of existence," that DTIC searches, with agency support, continue, and that VA update its union lists of serials.

In the area of legislation, funding, or regulations that the respondents would like to see developed, a wide range of suggestions were offered: funding to establish a federal information network, legislation to establish a national periodicals center or clearinghouse for hard-to-secure publications, funding for development of union lists and for information retrieval equipment for small libraries. More specific requests were for library classification standards (probably for personnel and funding levels) "to conform to true state of affairs in field libraries", and change in federal regulations so libraries can purchase "peculiar" library furniture and equipment directly.

The questionnaire provided for additional comments, which perhaps one-fourth of the respondents offered. These included the suggestion that the FLC establish a program for training and implementation of automation for field libraries, or provide someone to contact for comparative information or advice on available databases, etc. Another librarian noted that although federal libraries have a responsibility to provide services to all citizens, requests for service are "becoming greater than the staff time available...."

The data for Region VI respondents show:

o <u>Resource Sharing</u>

There seemed to be fewer cooperatives in the Southwest and therefore fewer opportunities for federal libraries to participate in such arrangements. Only about one-sixth of the responding libraries belong to local cooperatives, one-tenth in area (within-a-state) systems, one-eighth in statewide and one-fourth in multistate systems. Again, medical/health sciences libraries are most active in these cooperatives, and the primary uses are for resource sharing through ILL and the provision of reference services.

Percentages for national cooperative arrangements are similar to those for Region V. More than one-half of the responding libraries have cooperative arrangements with parent agencies or other national organizations, principally for ILL, and about one-third participate in other national organizations, e.g., FLC/FEDLINK, OCLC.

o <u>Problems</u>

Again, about a half of the respondents reported no

problems with the cooperative arrangements in which they participated, citing benefits to agency patrons resulting from such activities. But the other half of respondents expressed concern about increasing workloads, lending of materials needed for local patrons, and the question of charges by other (private) organizations. One library reported that the loss of books is a problem.

● Comments, Suggestions, Requests

More communication from the FLC would be helpful, said one respondent, and another requested FLC action to plan and implement "key policies." More explicitly, respondents sought assurance that the value of cooperation among libraries of all types will be recognized, and that libraries will be given support "regardless of budget and personnel cuts." A more concrete request asked for access by telephone to a central location that would provide computer search for reference questions and for aid in locating materials (which may be considered similar to the request for a federal information network expressed in Region V). Another specific plea was for assurance that collections will not be "lost" in the event a facility closes and materials must be transferred; those who integrate such a collection must be supported also.

Legislation, funding, or regulations suggested by res- pondents include provision of increased funding; e.g., funds independent of formula funding for Bureau of Indian Affairs libraries would be beneficial in disseminating knowledge to both children and adults, one respondent said. Another pointed out that basic funding of staff should be maintained outside the facility budget so that, in spite of fluctuations in the latter, the collection (often unduplicated and irreplaceable) will be maintained. Funding to support networking requirements and for sharing tools such as databases and union lists was also requested. One respondent believes that when the non- federal public starts using federal libraries, some accounta- bility system must be established. Several medical/health sciences libraries asked for more finding for NLM Regional Libraries so that the basic unit libraries do not have to be charged for services--"it's not a fair situation," according to one librarian. Another request was for standardization of information for cataloging of audio-visuals.

Of those respondents who offered comments, several spoke to the need for union lists for serials, periodicals, continua- tions, and monographs. Others commented on the ideal of making federal library resources available to the public--more funding is needed but security aspects can prevent such access.

The data for Region IX respondents show:

o <u>Resource Sharing</u>

As was true in Region VI, there do not seem to be as
many opportunities in this region for cooperative arrangements
as was found in Region V. Many respondents note informal
arrangements with federal and especially non-federal local
libraries, but only one-fifth participate in local cooperatives
and one-fifth in area (within-a-state) arrangements. The
percentage was one-sixth of respondents participating in
statewide systems and still fewer, about one-tenth, in regional
(multi-state) cooperatives; interlibrary loan and reference
services were the principal benefits derived. One library,
however, reported donating "duplicate, unneeded, surplus
publications/documents" to other libraries via cooperative
systems at local, state, and regional levels.

The percentages reporting cooperative arrangements at the
national level were similar to those found in Regions V and
VI: about one-half described ILL arrangements with parent
agencies and other national organizations, and about one-fourth
interact with those national organizations for serials lists,
information retrieval, shared cataloging, etc.

o <u>Problems</u>

More than one-half of the respondents to the question
about problems reported none; the rest were mainly concerned
about effects on staff, in particular increased workloads
on already small staffs. One librarian reported too much time
required in reports, surveys, etc., required by the cooperative
systems; another noted that each ILL request filled for another
library takes away "from the very limited staff time available
to us." However, still another librarian said that duties
have been shifted and increased "free" short-time help acquired
for the library to meet the increased workloads. Several
respondents expressed concern with the impact of being free
lenders, and therefore being used more as larger and non-federal
libraries charge for ILL services.

o <u>Comments, Suggestions, Requests</u>

Perhaps because there were more respondents from Region
IX (89) than from Region V (39) or VI (64) and because the
Region covers a vast area (responses came from Hawaii and Guam,
for example), there were many and varied answers to the
questions about assurances desired, legislation/regulations
needed, and additional comments proffered. They ranged from
the request for assurance that the library will retain autonomy
to participate only as much as it determines is beneficial, to

the suggestion that FLC secure the participation of representative field libraries during the planning stage of any proposed federal library network. There were pleas for continued support for field libraries and for training in new technologies. The FLC was urged to publicize its function and services to field libraries.

As for legislation and regulations, the answers were wide-ranging again, and included requests for improved procurement procedures and personnel standards. A couple of libraries asked for special low postal rates for libraries and special expediting of library materials to overseas libraries. One librarian requested that libraries not be treated like clerical operations but be given recruiting, purchasing authority, and contract freedoms as university libraries. Several respondents asked for some sort of mechanism for recovering the costs of services to other libraries and, especially, the costs of ILL from Regional Medical Libraries in the national system.

The comments included one that it would be helpful to have an interlocking computerized information retrieval system for government databases. Two respondents asked to be told what will become of the data collected in this survey; another respondent commended the effort to further cooperative efforts between federal and non-federal libraries.

IV

IDENTIFICATION OF ISSUES

It has become apparent throughout the study that federal libraries both in the field and in Washington, in considering their relations with each other and with non-federal libraries and their roles in emerging nationwide networks, are concerned with both external cooperative arrangements and internal operational problems. In the first instance, the major areas cf concern are resource sharing, shared processing, the use of automation in other library functions such as acquisitions, serials and circulation, and collection development. In the case of internal operations, some of the problems include procurement, contracting out, personnel, and training.

Resource Sharing

Major services necessary for meaningful resource sharing are interlibrary lending, reciprocal borrowing, reference and information services including the use of databases, and participating in union list development. Federal library experiences with cooperative activities in these areas point to some of the issues facing the community in considering its role in today's environment and future developments.

Interlibrary lending is a major element of resource sharing. A review of the extent of interlibrary lending activity by federal libraries, their overall patron circulation and the size of their collections provide the opportunity for speculation on the impact and importance of interlibrary lending. The issue is, of course, a complex one and requires more than an analysis of statistics. The problems of out-of-print, lost, misplaced or difficult to locate materials, problems of timeliness and a comparison of acquiring, processing and storage costs to ILL costs must be considered. The data indicate that with some exceptions--in the medical/health areas and in aerospace (NASA Laboratories)--federal libraries are net borrowers and largely dependent, in the field, on non-federal libraries. In Washington the federal agencies are heavily dependent on the Library of Congress. (Approximately one dozen agencies assign staff on a full-time basis to work in the Library of Congress searching for the items needed and then arranging through interlibrary loan to borrow them.) ILL is the cooperative service most used and offered by federal libraries.

The increasing tendency of non-federal libraries to charge fees for interlibrary loan is creating a problem for most federal libraries. In those states where state funds support resource sharing, federal library members of the

statewide network receive ILL services at no cost, as do non-federal library members.

The 1978 Federal Library Survey reveals that total interlibrary activity, both lending and borrowing, in originals and photocopying, amounts to 1,294,335, representing 2 percent of the total federal library circulation of 42,144,891. (See Table IV, page 18). This seems to indicate a degree of self-sufficiency, highly specialized collections, and a highly specialized clientele utilizing resources in a limited area of knowledge. Federal libraries are mainly special purpose libraries, i.e., science, health, medicine, technology, etc.,; they tenc to have highly specialized and limited collections (73 percent have less than 30,000 items and 90 percent less than 100,000; the median size is 13,500). For the period July 1980 - June 1981, the OCLC-ILL subsystem showed a total of 940,691 requests nationwide,with FLC/FEDLINK requesting 40,480 items. This later figure represents 6.5 percent of the total number of items borrowed by federal libraries in 1978. The figures indicate the high level of federal library ILL from the Washington area federal libraries and major science, technical and medical collections in the field. (See Chapter II, pages 21,22). It would appear from these statistics that resource sharing through ILL between federal and non-federal libraries is modest and as was stated in the Federal Libraries and Information Science Pre-White House Conference, "...now vield only a small part of their potential value to the public " (See Appendix 6). Until there is a better knowledge of the contents of federal library collections, as through coordinated databases and union lists, little increased use of federal library collections is likely.

Only 35 percent of all libraries reported photocopying materials for their patrons, usually in lieu of circulation; such photocopies made up only 6 percent of total service contacts reported. Presidential libraries provided the largest average number of photocopies for patrons (mainly letters and manuscripts); in academic libraries, having the second highest average for copying, periodical items accounted for 80-90 percent of total photocopies made for patrons. In addition to photocopies made for patrons, photocopies are also used in lieu of original materials in interlibrary loan. Thirty-six percent of the libraries providing individual data supplies photocopies for interlibrary loan, while more than 34 percent of these libraries received photocopies in lieu of the loan of the original material. Periodical items were most frequently copied for interlibrary exchanges, although other items were copied more frequently for library patrons.

For federal libraries, reciprocal borrowing, i.e., direct circulation, is the most difficult service to offer, mainly because of space limitations and the small size of staff.

Most libraries responding to the question of policies for making resources and services available to the public noted that the library is open to the public but borrowing is restricted: only to federal employees, only to base personnel, only to those referred by other federal libraries, etc. Some means for insuring equitable sharing of the burdens of reciprocal borrowing were suggested and need to be studied.

In the area of reference and information services, queries received by all federal libraries were in excess of 10 million, traditional and online reference services comprising 60 percent and directional inquiries 40 percent. As indicated in Chapters I and III, a number of federal agencies, primarily in the Washington area, have developed and maintain specialized information retrieval databases. The importance of the role and the service provided by these agencies, in sharing with both the public and private sectors an invaluable information resource, cannot be minimized. These databases were initially developed (in-house or by contract) for the use of the agency in meeting the agency's responsibilities in the areas of research, development and operations. Many of them have been made available to other federal agencies, the non-federal public sector and the private sector directly from the agency or from commercial vendors.

Cooperative efforts in periodical union lists is a little more successful. NASA through its NALNET (NASA Library Network) has issued for eight years an annual list of journal holdings of its major library facilities and laboratories throughout the country. The National Bureau of Standards has issued a list of its serial holdings for five years, the Department of Transportation has a 1977 list. The Departments of Interior and Labor, The Environmental Protection Agency and National Oceanic and Atmospheric Agency participate in JOURNALINK, a union list of approximately 23,000 unique titles representing 79 libraries and produced on computer output microfilm (COM). The VA has issued journal union lists for VALNET since the 1950's. In 1981 the Navy completed a union list of approximately 9000 unique titles, 26,000 entries representing 52 libraries. When you consider the totality of over 2000 federal libraries, with more than 597,000 current titles among them, these union list efforts are modest indeed.

Shared Processing

Another problem that needs attention is easy and timely access to collections of other libraries, both federal and non-federal, especially those materials recently acquired. Access to such materials, through normal channels such as local acquisition lists, local union lists, and interlibrary loan, tends to be slow and outdated. Considering the limited resources of both budget and personnel, the benefit to federal

libraries from sharing costs and improving the timeliness
of the technical processing of library materials would be
considerable. Most Washington area libraries already enjoy
these benefits through participation in OCLC, but the number
of field libraries with the same advantages is very small.
A few have developed arrangements for sharing access to OCLC
terminals. However, the majority of federal libraries in the
field need encouragement, information and assistance in moving
toward participation in shared processing systems.

Use of Automation

The use of information technology by most federal
libraries in the field, with few exceptions, has been almost
non-existent, in contrast to the experience of the parent
agencies. Many of the latter have in-house systems for acquisi-
tions, serials and circulation and many others are now develop-
ing such systems. (See Chapter II, page 26,27). Shared cata-
loging and online information retrieval systems, on the other
hand, have been acquired from outside sources. The difference
came about because of the availability of OCLC, online databases
and the services of FLC, through which contracting, consultation,
access, and training were made available. In other areas, each
agency has gone its own way. For example, the three National
libraries have developed extensive and sophisticated systems.

In mid-1978 the Computer Technology Branch of the NLM
developed an Integrated Library System (ILS) designed to
address the needs of NLM and other health science libraries.
It was also available for use by other libraries. The system
has a number of design objectives; modular integration of
functions and files, software responsive to varying demands;
transportability of programs, multilevel user interfaces,
system network access and compatability with NLM's MEDLARS III
system. In addition, the system was designed for operation
on a range of hardware affordable even by small libraries. In
the initial phase of ILS (Version 1.0), the basic capabilities
provided were a master bibliographic file, a circulation system,
a serials check-in, and online catalog access. In August
1981 NLM released version 2.0 with the additional features of
public catalog access, generalized patron registration, auth-
ority file creation and maintenance, batch load of the
master bibliographic file and an ADD/EDIT capability for
cataloging and acquisition including online retrospective
conversion. The ILS versions 1.0 and 2.0 are obtainable
through NTIS for a licensing fee. The Army library at the
Pentagon has installed version 1.0 starting with the circula-
tion module. The Naval Research Library and Army RADCOM are
in the process of installing version 2.0

NOAA, in early 1981, awarded a contract for the develop-
ment of an Automated Library and Information System (ALIS).

NOAA felt its immediate and long-range needs for a communication system to service the NOAA network of libraries could not be met through existing systems such as NLM's ILS system, which is designed to serve a single library. The functions that are to be automated in the next five years, in implementation order, are cataloging, authority control, information retrieval, acquisitions, serials, circulation, and management information. Projections call for the use of 48 terminals in the fifth year of operation. ALIS will interface with the OCLC system.

The level of interagency coordination in the use of technology for the improvement in both services and management efficiencies is at best very limited. The FLC staff does include a chief program analyst who has provided technical assistance to agencies in defining their needs, drafting RFP's, assessing the submissions, etc. A recent example was the NOAA contract referred to above. There is hope that the NOAA system when developed, installed and operational could serve as a model for other agencies. The RFP, however, was developed independently of other government agencies and the system, like NLM's ILS, may not be flexible enough to meet the particular needs of other agencies. A coordinated planning effort could result in a wider sharing of efforts among federal agencies to develop systems which would lessen further fragmentation. However, this consideration must be balanced with an agency's need to proceed in system development.

Collection Development

Active and effective cooperative collection development among federal libraries is insignificant, with some exception in the fields of health and medicine. In the legal and governmental area the independent development of collections and resulting duplication is considerable. The large number of small federal libraries, scattered through the D.C. area and the nation, makes duplication of material inevitable. Cooperative collection development across agency lines is at best extremely difficult, but more could be accomplished within agencies.

Procurement

Internal operational problems, while not directly related to resource sharing, do have a major impact on the libraries' ability to provide effective library and information services, both to their primary clientele and to the various cooperative arrangements in which they participate. Some of the problems referred to by many field librarians and parent agencies can be briefly reviewed here. The problems relating to procurement rules and regulations include difficulty in current procurement practices as they affect subscriptions, binding and data

base services. Inconsistency of interpretation and lack of
familiarity and understanding by local procurement personnel
contributes to the seriousness of the problem. Another
contributing factor is the need for training of library
personnel by agencies, other than the military, in procurement
practices and problems as they relate to libraries.

Contracting Out

Cost studies to determine the feasibility and cost
effectiveness of contracting for library services, either
in part or totally, present certain problems to some federal
libraries. In the latter case, for example, it is difficult
to estimate the value of the ongoing interactions between
library staff and agency personnel, based on mutual understand-
ing of agency mission and library resources. Such interactions
are essential to continual effective service; contracting out
contains the possibility for frequent changes in contracts and
personnel.

The OMB A-76 Cost Comparison Handbook is basic, but does
not provide the interpretative and judgmental assistance needed
by federal librarians if they are to meet the A-76 requirements
for total contracting out, especially realistically and
effectively. Some method for sharing experiences among those
agencies with success in this area and those that are just
starting to cope is needed. Some federal agencies have long
been involved in contracting for specific services from
commercial vendors. They have, for example, contracted for
compilation of union lists of journals, retrospective biblio-
graphic conversion to machine readable formats, the acquisition
of journal articles from database services etc. Most of this
activity is in the Washington area, for major agencies, and not
in the field; NASA is an exception to the general pattern.

Personnel

The inadequacy of staff, both in qualifications and
numbers, is another serious problem for federal libraries.
The long delay in the revision, review and approval of position
classification standards series 1410, 1411, 1412 has resulted
in personnel recruitment difficulties. A draft was released
in early December, 1981 by the Office of Personnel Management
(OPM). It was sent to FLC for review by its members. It
is also being reviewed by the American Library Association,
the Special Library Association and others. Initial reaction
to the draft has generally been negative. Detailed revisions
and suggested changes have been forwarded to OPM.

Another contributing factor to the personnel problems
is the Federal Personnel Register. It is out-of-date, does
not contain qualified individuals, and is generally unsatis-

factory. Part of the problem is the procedure OPM has of keeping the register of professional library personnel (1410) closed for long periods of time.

Training

The need and desire for training was evident, especially in the field. The training by FLC/FEDLINK in the use of OCLC and AACR 2 is generally praised, but what is needed are training opportunities in the areas of library automation, management, planning, research and evaluation, as well as training in the areas of procurement and A-76, mentioned above.

Paperwork Reduction Act

The implementation of the information resources management aspects of this Act is a source of concern to some library managers. The concept of a single centralized management in an agency, of all information resources, broadly defined, has both favorable and unfavorable implications for federal libraries and information centers. The current practice is to staff this operation with systems, ADP or administrative personnel rather than librarians or information specialists. The creation of an information resources management program also adds another level of bureaucracy between the librarians and the agency decision makers.

V

CONCLUSIONS

Federal libraries represent a diverse universe, a microcosm of the nation's libraries--academic, scientific, technical, other special libraries, general and school. Cooperation between them is voluntary--in many cases even in the same agency of government. Because federal libraries in the field are basically supported by the field agency, they tend to be independent in funding and services. Parent agencies influence them only to the extent they provide services or additional funding. In fact, few governmental departments or agencies designate a single authority for coordinating and/ or supporting library facilities within the organization. In most cases federal libraries are responsible only to the specific office or agency which they serve. Some facilities providing library resources are not designated as libraries because of the limitation of staffing and clientele served. As a result there is limited planning, coordination and cooperation.

If the resources of federal libraries are to be shared more effectively among federal and non-federal libraries, then a more deliberate and planned approach is needed. The development and utilization of a federal database would provide the opportunity for such sharing of resources on a relatively equal basis. The database of federal collection holdings can become a reality, if the perceived need is agreed to by the major federal agencies.

A federal database could include the OCLC tapes which contain the holdings input by the federal libraries that utilize OCLC's cataloging service, and also identification of federal documents input by GPO. The database could also include federal library and information services in-house tapes, as well as those prepared by NTIS to identify technical reports emanating from federal scientific and technical activities.

The FLC/FEDLINK office has copies of the OCLC tapes which contain the holdings for more than seven years of over 3 million logical records input by the federal libraries that utilize OCLC's cataloging service. The merging of these tapes could provide a database of federal library holdings that would serve as a logical first point of reference for federal libraries. The OCLC database does present some problems for federal libraries that could be alleviated by the development of a federal database. Two examples are the lack of subject searching capability for the OCLC database and the lack of inclusion of local call numbers as part of the online

database. Both of these elements could be considered in the development of a federal bibliographic database. With these added elements provision of interlibrary lending on a timely basis would improve immeasureably and staff costs for searching and fulfillment would be appreciably reduced.

Such a database would provide easy identification of titles held by others, provide subject searching capability and could reduce the heavy reliance of federal libraries, especially in the Washington area, on LC's collections by providing alternate sources for interlibrary lending. It would also enhance the coordination and the efforts toward cooperative collection development and indepth reference service. The development and utilization of a federal database would lessen federal library reliance on non-federal libraries.

The projected federal database would not provide a shared cataloging function--OCLC, RLIN or WLN provide that service effectively. The database, as indicated earlier, would serve as an efficient reference and interlibrary loan tool, because as a subset of the larger databases it would be more easily searchable and timely. For example, a federal library union list of serials might start from the data input into OCLC by federal libraries. It would provide an established format and could be expanded and updated on a phased and systematic basis. A federal database could also provide offline products such as special purpose COM listings, or other products required by individual or groups of libraries.

The federal database would not only be important to federal libraries, it would serve as a major resource for non-federal libraries also. By continuing to participate in non-federal services such as OCLC, RLIN and WLN, federal libraries will continue their contribution to the growth of those bibliographic databases. (Over 60,000 logical records a month are added by federal libraries). The federal database would serve as an additional resource--not a replacement--and its development would be evolutionary.

In the area of services, federal libraries have been willing to share their resources through interlibrary lending, the provision of reference and information services, including information retrieval services, and the distribution and delivery of resources both generated and collected by federal agencies. The Library of Congress, the National Library of Medicine, The National Agricultural Library, the Government Printing Office, and National Technical Information Service all provide data and information about these resources in a variety of formats and in a variety of delivery modes. At present bibliographic information and document availability of government publications is the primary responsibility of the latter two agencies.

The problem of accessibility by the public to federal library resources would benefit by the proposed federal database development. If federal documents are entered into the GPO and/or NTIS files on a timely basis, then information about most government publications would be widely available through the federal database for anyone, with access to GPO's database through OCLC and the NTIS database through commercial sources such as SDC, BRS, and Lockheed. In-house use by students, researchers and scholars of federal library collections has always been honored. Experience indicates that use by the general public, especially of specialized libraries with unique resources, will always be limited. But by declaring as a matter of principle that information about and access to federal publications and federal library collections is easily available, federal libraries will be expressing the spirit of the ideal of resource sharing by all libraries for all users.

To help resolve the problems of procurement created by lack of consistency of interpretation and practice and the inability by many federal libraries to cope with procurement complexities, a training program needs to be developed and offered on a regularly scheduled basis. Immediate help is needed in the areas of periodical subscriptions, binding, and database services; GSA needs to establish provisions for accepting such services on a GSA schedule. In addition, a meeting of procurement personnel from 4-5 major agencies with the same number of federal librarians and some legal staff, to review present rules and regulations as they pertain to libraries and to recommend changes, could provide an effective start toward improving the procurement situation. Centralized procurement through FLC, as is presently done for database services, should be encouraged.

There is a need to provide in one location information and copies of RFP's issued by government agencies for the contracting out of library services. It would also be most useful to develop guidelines to assist in the preparation of RFP's of various levels of complexity.

It is obvious that the present OPM procedure of keeping the 1410 register open for only short periods of time is unnecessarily restrictive and results in the register becoming obsolete. Efforts need to be made to change this condition.

Equally important, is the concerted effort currently underway by federal libraries and the library community to assure the timely completion of the revision of the tentative personnel classification standards (1409,1410,1411). These revisions must reflect the needs and conditions of actual practice in federal libraries and must have the support of the federal library community and the library community generally. The December 1981 draft currently being reviewed

is seriously flawed and shows a lack of understanding of the high level and breadth of knowledge, skills and abilities needed to perform library and information services.

Another problem, continuing education, must be addressed on an overall basis, taking into consideration immediate and long-range needs. As a priority, training in the areas of the management of libraries and information centers, the political process, procurement and adherence to A-76 must be provided through FLC as soon as feasible.

This study also documents the extent of cooperative activities among federal libraries and between federal and non-federal libraries. Although much of this activity centers on resource sharing and interlibrary lending, some meaningful activity involves shared processing, especially cataloging as through the OCLC, and some cooperative collection development, although on a very small scale. To extend this kind of activity in order to improve operations and services in the face of continuing restrictions in budgets and personnel calls for a rethinking of traditional and current practices, a look for cooperative solutions and the provision of improved interactive and linked communications facilities.

Participation in shared processing, in cooperative collection development, in the sharing of resources through interlibrary lending and the development of union lists are activities that produce cost savings as well as improved services in a number of ways. First, savings in the cost of purchasing important but infrequently used materials can be realized. Resource sharing based on improved location information results in the better utilization of professional personnel. Libraries are staff intensive operations and the use of technology and cooperative activities help reduce staff time needed to perform the many repetitive tasks necessary to the collection, organization and dissemination of information resources. Lastly, these cooperative activities contribute to peripheral cost savings in improved service to the agency's clientele in fulfilling their mission responsibility.

There is need to develop on a planned basis and within a realistic time frame--perhaps five years--a federal library and information services network. Such a network should be based on existing strengths and organization--it should not be a "re-invention of the wheel" but needs to be a full service network based on user needs and not a technology driven (dominated) network. Service is the goal and technology is one of the mechanisms. The most important element is the human factor. This, of course, is not meant to diminish the important and vital role of information technology (automation and communication) in a federal network. To achieve more effective resource sharing requires greater sharing and/or interfacing

of automated systems. As was noted earlier in the area of shared cataloging and access to information retrieval databases, federal libraries have participated in cooperative activity through FLC/FEDLINK and with commercial services. Not very much has been accomplished in the areas of acquisitions, circulation, serials and union lists between and among federal agencies. In fact, many agencies have not achieved coordinated automated systems between libraries in their own agencies. The development of prototype systems for government-wide applications is essential. The technology exists in most cases or will be available shortly. (NLM and NOAA are developing systems presently.) The time for planning, priority setting, scheduling and implementation is long overdue.

The network must serve not only the needs of the federal establishment, but should play a major role in the developing nationwide library and information services network. A nationwide network will be pluralistic and voluntary; it must be user-sensitive, not process-oriented, using the latest in technology as its tools. Some of the current pieces or elements in this developing nationwide network are such utility/ service centers, national and state libraries, and regional organizations as OCLC, RLIN, WLN, the Library of Congress, the National Library of Medicine, the National Agricultural Library, and the many state (ILLINET, NYSILL, etc.) and multi-state (AMIGOS, SOLINET, etc.) agencies.

Properly planned and operated, a federal library and information services activity could serve as a model for a nationwide library and information services network. It would be involved in developing standards, protocols, common responsibilities, government-wide information technology applications, planning and evaluation, suggestions for research, etc. The development of a coordinated cooperative federal network will provide the opportunity to identify and resolve many problems that would be of importance and interest to nationwide network development. As publicly funded agencies, the activities and actions of a federal library and information services network would be scrutinized by the library community as a whole--and serve as an experiment and an example in the areas of services, resource sharing, and even governance. The federal library community could provide leadership to the nation's library community--a responsibility it has previously exercised with caution, hesitation, or in the view of some, not at all.

To improve the coordination of resources and services among federal libraries and information centers and with and between federal and non-federal libraries to meet local, state and national needs, and to work toward the integration of federal libraries in the developing nationwide library and information services network, requires a belief in and support of the philosophy of cooperation and the sharing of resources

and services. It requires an understanding of and a commit-
ment to the concept of interdependence for our information
needs.

71

RECOMMENDATIONS

If federal libraries are to meet their responsibilities, and truly serve the needs not only of their primary clientele, as spelled out in their mission statements, but the needs of society, then a more active rather than reactive approach is called for. In undertaking this study, one goal was to "determine ways to improve the coordination of resources among federal libraries to meet national, state and local needs." One of the objectives was to "identify and recommend approaches for sharing resources and services among federal libraries and non-federal libraries and information centers."

The White House Conference on Library and Information Services, held in the fall of 1979, adopted a number of resolutions concerned with national information policy, a national library and information services act, networking, resource sharing, etc. In the resolution on National Information Policy (A-2), it states that such a policy should "(1) guarantee all citizens equal and full access to publicly funded library and information services; and (2) ensure government agencies at all levels work together to make available all new and existing library and information services to the maximum extent possible." (The full text of the relevant resolutions are included in Appendix 5).

At the Federal Libraries and Information Services Pre-White House Conference in July 1979, comprehensive resolutions aimed at improving public access to the libraries and information services of federal agencies were passed. In the resolution on the Right to Access to Information, it states that "the people of the United States have the right to access to information produced or collected by the Federal Government at Public expense except for limitations imposed by legal requirements of national security, privacy, and proprietary rights". (The full text of the six resolutions adopted at the conference are included in Appendix 6).

The NCLIS Public Sector/Private Sector Task Force in its recently completed report states that there is "an increasing awareness of information as something of economic value..."[2] as well as "...the historical recognition that information is essential to a democratic society and the well-being of both the society as a whole and the individual personally." It further states that libraries are to be society's means for assuring access to government information by the general public. It is important to remember that most current access mechanisms favor institutional and organizational users as well as the educated and the wealthy. In an information-oriented society equal opportunity of access is essential if

we are to minimize the gap between the information poor and the information rich. Superior ability to gain access to information can become the ultimate advantage.

Mindful of the purpose of the study, the challenge of the White House Conference, the reminder by the NCLIS Task Force of the importance of information to people in a democratic society, the data gathered both in the field and in the Washington area, the project director offers one overall recommendation--the development and establishment of a full service, multitype federal library network to serve more effectively government and the people of the nation.

What follows is a plan of action indicating the overall goal, purposes and objectives, tasks, organization and structure, financial support and implementation suggestions. The recommended plan is a beginning--revisions, addition of objectives and tasks, variations in funding suggestions, re-finements and expansion in areas such as information technology are anticipated--in fact, necessary.

The federal library community can use the suggested plan as a discussion guide but the responsibility for further action depends on the Federal Library Committee developing steps toward implementation in concert with the federal library community as a whole. It is worth noting that the draft of the first five chapters was reviewed by the Advisory Committee at its August 18, 1981 meeting. The Project Director, working with the FLC Executive Director, had developed draft recommendations in June and July. Their distribution to the Advisory Committee was delayed pending the Committee's reactions and suggestions to the chapters on issues and conclusions. At the meeting some Advisory Committee members commented on the similarities between the study conclusions and the thrust of a FLC/FEDLINK Mission Statement completed on July 9, 1981, approved by the membership on July 29, 1981 but not as yet publicly distributed. On August 19, 1981, the Project Director received and reviewed a copy of the FLC/FEDLINK Mission Statement. In his opinion the similarities in goals and objectives serve to strengthen the validity of the project conclusions and the timeliness of the recommendations.

The role of the national libraries is crucial--their involvement and full participation is essential if the plan is to succeed. The NCLIS can play a supportive role by its interest and participation in the evolutionary process of the organization and operation of a federal library and information services network.

TOWARD A FEDERAL LIBRARY AND INFORMAION SERVICES NETWORK: A PROPOSAL

A. ## GOAL

To develop and establish a full service, multitype federal library and information services network to serve, more effectively, government and the people of the nation.

B. ## PURPOSES/OBJECTIVES

- To coordinate efforts for more effective sharing of resources and services among federal libraries and specialized/technical information centers at both the field and national levels.

- To improve resource sharing and cooperation between federal and non-federal libraries at the local, state and national level.

- To interact with cooperatives state and regional networks and organizations, and national utilities, agencies and organizations.

- To provide improved access to collections in federal libraries through the development of a database of federal library holdings and government publications, in cooperation with GPO, NTIS, and federal agencies generally.

- To provide coordination and consultant assistance to federal libraries in the selection, installation and use of the most efficient information technologies.

- To develop guidelines for ongoing evaluation of federal library and information centers activities, projects, services, programs, and plans.

- To provide for educational programs designed to encourage and support professional development in areas related to network concerns.

C. ## TASKS

1. Develop a network services awareness program.

- Develop an awareness program of federal library interaction with executive branch management, administrative and congressional offices.

- Establish a communications program for federal network members.

74

C.   TASKS (Cont'd)

- Develop means of informing the non-federal library community of programs, activities and services available through cooperative arrangements.

2. Develop an improved system of ILL for the federal level.

- Review ILL procedures and problems in light of the availability of a database of federal library holdings.

- Explore a government-wide solution to ILL fees, both to and from federal and non-federal libraries.

- Review current delivery systems, their timeliness, costs, etc.

3. Develop a more effective reference and information service government-wide.

- Review LC and NLM services as backup resources for federal libraries.

- Review role and effectiveness of federal technical information centers throughout the nation.

4. Establish an official working relationship with the chief officers of the state library agencies and with regional service organizations such as Amigos, BCR, CLASS, NELINET, SOLINET, etc.

- Develop and/or improve cooperative relationships among federal libraries in the field and the various state libraries and regional service organizations in the areas of resource sharing, shared processing, development of union lists, use of technology and communications in improving library operations, etc.

- Plan for training and continuing education activity for federal libraries in the field through cooperative arrangements with state libraries and regional organizations.

5. Develop a database of resources in federal libraries and specialized/technical information centers.

- Determine plan for merging of OCLC tapes of federal library holdings.

- Review agency databases for possible merging or access by electronic means.

- Determine the need and feasibility for retrospective conversion of holdings not in OCLC.

- Develop a plan for online sharing of the database first among federal libraries and later with non-federal libraries.

6. Develop a federal library and information services periodical/serials union list/database.

   - Review existing efforts of individual agencies, and of commercial services for multiple agencies, e.g., JOURNALINK, for possible further applications.

   - Develop plans for establishing a single federal union list of periodicals/serials holdings.

   - Review federal library periodicals/serials input into OCLC and determine the feasibility of its use as a base for the government union list.

7. Develop a plan for a government publications database.

   - Review current methods of access to GPO and NTIS databases and explore broadening, improving and publicizing access to federal and non-federal libraries.

   - Explore mechanism for interfacing GPO and NTIS databases.

   - Review status of GPO/OCLC cataloging effort.

   - Determine possibility of GPO identifying for a computer database all items on its weekly shipping list to depository libraries.

   - Explore feasibility of shared cataloging of federal publications among federal agencies.

8. Develop a computer and telecommunications capability to support the objectives and tasks of the proposed network.

   - Develop a plan for providing capability to interface databases and computer systems.

C.   TASKS (Cont'd)

- Develop capability for providing additional products and services to federal libraries and information services to federal libraries and information centers.

- Determine and establish a cost effective tele-conference and electronic mail capability.

9. Develop recommendations for in-house processing systems such as acquisitions, serials control, circulation, etc.

- Review existing systems and their applicability.

- Develop guidelines for implementation of existing systems in new environments.

- Identify areas where existing systems are not widely applicable and define needed improvements.

10. Develop a more meaningful statistical program providing for improved collection and dissemination.

- Review current statistical information gathered-- data items requested, frequency, definitions.

- Determine statistical measures that will provide information on library services.

- Develop ways to improve collection of statistical data.

11. Develop a plan for professional development.

- Determine basic and continuing areas of need for federal libraries.

- Organize and provide training sessions on a planned and scheduled basis for "standard" needs, i.e., OCLC, database searching, etc.

- Provide seminars, conference on topics of current interest, areas of new technology, etc.

12. Develop recommendations on staffing standards and patterns.

- Work with OPM to complete revision of the Tentative Standards issued in December 1981 for the 1409,1410 1411 classification series[3] (this will replace the current 1410, 1411, 1412 series).

C. TASKS (Cont'd)

- Work with OPM to develop a more effective Federal Personnel Register.

13. Monitor the implementation of the information resources management aspect of the Paperwork Reduction Act.

- Review the implications and long-term effects on libraries, of recent actions by federal agencies (e.g., Departments of the Army, Commerce, and Interior) establishing strong, coordinated management of information through a central source.

D. ORGANIZATION AND STRUCTURE

The Federal Library Committee is the organization that exists and has not only the legal basis but also the experience and expertise to assume the responsibility and provide the leadership in the development of a federal library and information services network. FLC has already achieved meaningful cost savings for individual agencies and the federal government as a whole through its coordination operations in providing cooperative services, contractual arrangements and consultation. Its current mandate is, on a government-wide basis, to (1) consider policies and problems relating to federal libraries, (2) evaluate existing federal library programs and resources, (3) determine priorities among library issues requiring attention, (4) examine the organization and policies for acquiring, preserving and making information available, (5) study the need for and potential of technological innovation in library practices, (6) study library budgeting and staffing problems, including the recruiting, education, training, and remuneration of librarians.

The governance structure of the FLC consists of: The permanent members--the Librarian of Congress, the Director of the National Agricultural Library, the Director of the National Library of Medicine, representatives from each of the other executive departments, and delegates from the National Aeronautics and Space Administration, the National Science Foundation, the Smithsonian Institution, the Supreme Court of the United States, the International Communications Agency, the Veterans Administration, and the Office of Presidential Libraries. Six members are selected on a rotation basis by the permanent members of the committee from independent agencies, boards, committees, and commissions. These rotating members serve 2-year terms. Ten regional members are selected on a rotating basis by the permanent members of the committee to represent federal libraries following the geographic pattern developed

by the Federal Regional Councils. These rotating regional members serve 2-year terms. In addition to the permanent representative from the Department of Defense, one non-voting member is selected from each of the three services (Army, Navy, Air Force). A representative of the Office of Management and Budget, designated by the Budget Director, meets with the committee as an observer.

Some changes in the governance structure will be necessary. For example, the ten regional members representing the Federal Regional Councils may have been valid in the past, but at present the regional councils are not playing an active role. These ten seats should be reassigned--perhaps two or three regions having the most federal libraries (REGIONS IV, VI, IX), could represent all of the regions. In addition, a review of the current permanent members and rotating members should be undertaken to determine if every major segment of the federal library community is represented.

In considering the organizational structure, provision for working committees, as is presently the case, must be included. The FLC/FEDLINK Executive Advisory Council is a good example of an important and effective FLC committee. It is important to remember that one must not confuse governance with management or communications. Participation in the governance and management must involve the whole federal library community in order to get the official and financial support of all agencies in the organization, development and operation of a federal library and information services network. The decision-making framework must be uniformly understood by all of the participants. They must recognize the distinction between organizational independence and functional inter-dependence. The network cannot be all things to all people. A clear delineation needs to be made of those services that need to be centralized and those that are best offered on a decentralized basis. What is required is a delicate balance.

It is equally essential that the FLC not only continue its present working relationships with OMB, GAO and GSA but increase them significantly to help assure a better understanding of the role and importance of federal libraries to the efficiency, effectiveness and improvement of government and its activities.

E.   FINANCIAL SUPPORT

The present basic financial arrangements would continue to provide the core staffing of the FLC. The Library of Congress now provides in its budget for the salaries of the executive director, a chief program analyst, and an administrative secretary. The staff of FLC/FEDLINK is paid out of funds received by FLC from federal agencies that utilize FLC/FEDLINK

services. In addition, the LC provides administrative support including services of the Financial Management Office, Procurement and Supply, General Counsel, Personnel Office, and office space for the full FLC/FEDLINK operation.

Not all federal agencies will or are required to participate in every network service or task. There will be, however, some basic activity such as the federal libraries collection database that will need the participation of all agencies if the federal network is to be effective. Funding, therefore, would consist of a basic annual amount from every federal library member, plus a proportionate share of the costs necessary to implement and receive a specific service or task.

F.   IMPLEMENTATION SUGGESTIONS

Some of the steps necessary to establish a federal library and information services network are:

1. Elect an organizing committee; elect officers.
2. Develop and adopt a long-range plan; start by reviewing goals, objectives, tasks recommended in project report. Revise, add, etc., including priorities for tasks adopted.
3. Estimate costs of first priority.
4. Seek official approval of plan by potential members.
5. Determine participants and proportionate sharing of costs.
6. Set up working committee to implement task.
7. Propose a realistic, but specific timetable for the task.
8. Repeat steps 4 to 7 for each task adopted and funded for implementation.
9. Plan for a biennial evaluation process including a working timetable.
10. Determine areas that require research, prepare RFP's, and seek approval and funds.
11. Review the long-range-plan--revise, amend, rewrite, etc. every two or three years.

FEDERAL LIBRARY QUESTIONNAIRE

(1) What cooperative arrangements--formal and/or informal--do you have with:

(a) Local libraries--Federal _____

(b) Local libraries--non-Federal (specify type of library) _____

(c) Local cooperatives or organizations _____

(d) Area (regional within state) library systems _____

(e) Statewide library systems _____

(f) State library agency/agencies _____

(g) Regional (multistate) organizations _____

(h) National organizations, including your parent agency _____
_____

(2) Has your library developed any policies or procedures for making your
     resources and services accessible to others? Please include a copy if
     you have. _____
_____
_____
_____

(3) How are your non-Federal potential users made aware of your resources and
     services? _____
_____
_____
_____

(4) What do you contribute in fees, services, resource sharing, etc., in your
     cooperative arrangements? _____
_____
_____
_____

(5) Do you find the various cooperative arrangements useful, supportive, cost
     effective? What benefits do you receive or have potential for receiving?
_____
_____
_____
_____

(over)

(6) Has your cooperative activity and sharing of resources created problems in staff, space, funding or management? Has there been any affect on the service you provide to your primary clientele? _____

_____

_____

_____

_____

_____

(7) What kind of assurance would you like to have from national--both your parent organization and the Federal Library Committee? _____

_____

_____

_____

_____

_____

(8) What kind of legislation, funding, regulations, etc., would you like to see developed? _____

_____

_____

_____

_____

_____

(9) Other Comments. _____

_____

THE LIBRARY OF CONGRESS

WASHINGTON, D. C. 20540

Dear

The Library of Congress and the National Commission on Libraries
and Information Science are sponsoring a joint project on the
role of Federal libraries and information centers in the develop-
ing nationwide library and information services network. The
study proposes to examine and assess the current interaction
among Federal libraries and information centers and to identify
and recommend approaches for the sharing of resources and ser-
vices among Federal libraries and non-Federal libraries and
information centers. The role and relationships between Federal
libraries and information centers and local and state govern-
ments and the Federal Regional Councils will also be explored.

There are over 2,000 Federal libraries throughout the country.
It is not feasible or possible within the limits of this project
to study all of them. Plans call for a study of libraries in
three Federal regions--V, VI, and IX. There are approximately
404 Federal libraries in the 15 states in these three regions.
Of these libraries about 187 are military--by type--general,
science, health, special and academic. The remaining 217
libraries are mainly in the Departments of Agriculture, Commerce,
Housing and Urban Development, Interior, and Justice, the
Veterans Administration, Environmental Protection Agency, and
the National Aeronautics and Space Administration. The types
of libraries represented are special, science, health, hospital,
penal and school.

The recently completed, as yet unpublished, 1978 Federal Library
Survey provides some basic data elements. However, there are a
number of non-statistical questions which need to be answered.
Inasmuch as your library is in one of the regions being studied,
it would be very much appreciated if you would be willing to
answer these questions. Give your reactions and views as brief-
ly or as detailed as you feel necessary. I would also like to
receive any ideas or comments which you wish to make about the
project in general.

85

The success of the effort to determine how best to integrate Federal libraries in the developing nationwide library and information services network depends in large measure on your cooperation. We are all, I trust, committed to the goal that "the people of the United States have the right to access to information produced or collected by the Federal Government at public expense, except for limitations imposed by legal requirements of national security, privacy and proprietary rights." (Federal library and Information Services, Pre-White House Conference, resolution, adopted July 1979.) Hopefully, this project will help us move toward achieving that goal.

Please make every effort to respond to the attached list of questions within the next three weeks. Thank you for your cooperation.

Sincerely,

Alphonse F. Trezza
Director
Intergovernmental Library
  Cooperation Project
Federal Library Committee

Enclosure

86

SPECIFIC QUESTIONNAIRE RESPONSES

Specific answers recorded on the questionnaire are listed here, arranged by region and the headings given in Chapter III.

REGION V

Resource Sharing

- About one-half of libraries have cooperative arrangements with local federal libraries for interlibrary lending (ILL). If not: "not many in local area," "no libraries."

- About three-fourths of libraries have cooperative arrangements with local non-federal libraries, public, special, and academic, all for ILL. One exception: "donate historical foreign trade directories."

- About one-third of libraries participate in local cooperatives, again all for ILL:

  METRONET--St Paul, Minnesota (USDA)
  Madison Area Library Council (USDA)
  Macomb County Library Network (Army)
  Dayton Miami Valley Consortium (AF,VA)
  Cleveland Health Sciences Library
    Association (VA)
  Central Indiana Health Science Library
  Danville Area Library Council--Illinois (VA)
  Mid-Peninsula Library Cooperative (VA)
  South Central Wisconsin Health Planning
    Area Cooperative (VA)
  L brary Council of Metropolitan Milwaukee (VA)

- About one-third of libraries participate in area cooperatives for ILL:

  Wisconsin ILL Service (USDA)
  Wisconsin Library Consortium (USDA)
  North Suburban Library System--Illinois
    (Army, VA)
  River Bend Library System--Illinois (COE, Army)
  Lincoln Trail--Illinois (AF,VA)
  Kaskaskia Library System--Illinois (AF)
  Superiorland Cooperative Library System--
    Michigan (AF)

ALSA--Indiana (Navy,VA)
Central Indiana Area Library Services
  Authority (VA)
Central Minnesota Library Exchange (VA)
Michigan Health Sciences Library Consortium
  for Upper Peninsula (VA)
SE Wisconsin Medical Library Consortium (VA)
Illinois Health Sciences Libraries (VA)
MELSA (Interior)

- About one-fourth of libraries participate in
  statewide systems:

  ILLINET (eight respondents)
  MHSLA (Health Sciences)
  WHSLA (Health Sciences)
  MINITEX*

- About one-fourth of libraries participate in
  multi-state systems:

  MINITEX* (three respondents)
  Midwest Health Science Library System
    (seven respondents)
  Medical District 15 Library Service
    Subcouncil (ILL + cooperative acquisitions
    program)

  Kentucky-Ohio-Michigan Regional Library System

*MINITEX is considered both a statewide and multi-state
 system by its participants.

- About one-half of libraries have cooperative
  arrangements with national organizations, including
  parent agencies, for ILL

  Eighth Circuit Library
  USDA Forest Service
  FEDLINK (e.g., OCLC for ILL)
  Federal Reserve
  Defense Logistics Agency
  Interior
  Army
  Corps of Engineers
  Air Force
  Navy
  VA (VALNET)

- About one-third have cooperative arrangements with
  "national organizations" for other services:

```
DTIC
FEDLINK (e.g., OCLC for shared cataloging, BRS)
Network
NTIS
OCLC
VALNET (centralized cataloging)
JOURNALINK
LEXIS
GIDEP
```

Problems

- Of twenty-eight respondents to this question, sixteen reported no problems with cooperative activities:

   "We borrow much more than we lend. Service to our primary clientele has been improved."
   "Cooperative activity has been beneficial."
   "...increased work is offset by overall benefits."

- But twelve reported problems:

   "...necessary to limit number of requests... per institution per day."
   "As more large libraries make service charges for loans...our resources will be demanded more and more...."
   "Staff is small and we have little space for people to come in to use our resources... primary clientele has been bothered too."
   "Our connection to JOURNALINK [means] more staff time to process requests...from other libraries...also once-a-year update[required]."
   "AV lending...workload has risen."
   "...potential [to create a problem] unless additional position is funded."
   "Libraries are accessing collections of 'free lenders'...."
   "...participating in cooperative arrangements will have to be terminated unless the benefits justify the time expended."

Comments, Suggestions, Requests

- Assurances field libraries would like to have from parent agencies and/or the FLC:

   More support for and interest in the field libraries (including "instead of leaving them to 'whim' of current commander").

Guidelines, direction...a field libraries'
coordinator or liaison officer...leadership,
particularly in the area of automation
(Forest Service/USDA)
Support for progress in library service,
online cataloging and database searching.
That federal librarians will not be contracted
out of existence.
Encouragement to enter into cooperative agree-
ments.
Increase in resource sharing from larger libraries
so smaller libraries can stretch budgets farther.
Training or guidelines on various types, kinds,
services of the various federal libraries and
information centers.
That DTIC searches will continue.
That VA will produce and update union lists
of serials, monographs and audiovisuals.
Model programs and guidelines to help small local
consortia develop self-sufficiency and more
equitable sharing of the ILL burden.
Realistic guidelines for funding and staffing
levels.

⊙ Legislation, funding, regulations field libraries
would like to see developed:

Funding to establish a federal information net-
work...for bibliographic referral and source.
Legislation to establish a national periodicals
center...a national clearinghouse for hard-top
secure publications.
National funding for development of union lists
(journal, audiovisual, monographs).
Federal and state support for regional cooperation.
"Desperately need to provide service without
fees"--greater financial support for libraries
in lending materials.
Librarian classification standards to conform to
true state of affairs in field libraries.
Legislation outlining importance of libraries'
missions and services.
Funding for information retrieval equipment for
small libraries.
Federal regulations changed so libraries can
go directly to companies for "peculiar" library
furniture and equipment.
Some loophole in the contract process such that
a new bid [is not needed for] an update in a
computerized national union list (VA).

● Other comments:

> Possibly the FLC could establish a program
> for training and implementation of automation....
> for federal field libraries.
> Help to access computer databases or someone to
> contact for comparative information or advice.
> Appreciate assistance we get from NAL.
> Importance of networks is recognized by Corps
> of Engineers.
> Just acquiring computer terminal which
> hopefully will open new areas for sharing
> Need system for ordering commercial-technical
> publications that will narrrow time lag and
> reduce red tape.
> Nationwide network...a reality as very small
> libraries are hampered now in providing com-
> plete service.

REGION VI

Resource Sharing

● About one half of libraries have cooperative arrange-
ments with local federal libraries, for ILL. If
not: "not many in local area," "no libraries."

● About two-thirds of libraries have cooperative
arrangements with local non-federal libraries,
public special and academic, all for ILL

● About one-sixth of libraries participate in local
cooperatives:

> SEALLINC--New Orleans (USDA)
> DALL-Dallas (EPA)
> CORAL--Texas (AF)
> HOLSA--San Antonio (AF)
> Green Gold Library System--NW Louisiana (VA)
> Dallas-Tarrant County Consortia--Dallas (VA)
> Texas Medical Center Libraries--Houston (VA)

● Only one-tenth of libraries participate in area
cooperatives, all for ILL.

> Bell County Library Assoc.--Texas (Army)
> LA OCLC Database Users

● About one-tenth of libraries participate in state-
wide systems.

Health Sciences Library Assoc. of Louisiana--
New Orleans (VA)
TELNET
Louisiana Interlibrary Loan

- But about one-fourth of libraries participate in
  multi-state systems.

  SOUTHFORNET (USDA)
  Center for Research Libraries (AF)
  TALON (VA)
  AMIGOS
  So. Central Regional Medical Library Program--
  Texas (AF)
  Medical District 20--(VA)
  Medical District 19--(VA)

- More than one half of libraries have cooperative
  arrangements with national organizations, including
  parent agencies for ILL:

  Circuit Courts of Appeals
  USDA (Forest Service)
  FEDLINK
  NOAA
  (VA) VALNET
  EPA
  Interior
  NASA
  Army/TRADOC
  DOT/FAA
  Air Force

- About one-third have cooperative arrangements with
  "national organizations" for other services:

  VA
  Interior
  FEDLINK (e.g., BRS)
  JOURNALINK
  OCLC
  DTIC
  NTIS
  NLM Network

Problems

- Of twenty-three respondents to this question, twelve
  reported no problems with cooperative activities:

  "We provide better service to our patrons..."
  "...1-2 day delivery on documents not in our

-82-

library...."
"...faster research service and obscure
references are made available."
"Our clientele appreciates our efforts
on their behalf."

- But eleven reported problems:

  "...potential for pressure on the limited
  staff time available.
  "An increase in requests on ILL...need for
  another person to administer the ILL function
  on a...timely basis."
  "...time spent in supplying other institutions
  and occasionally an item we have loaned to
  another library is needed here."
  "...small amount of space and small staff..
  cannot staff the...library outside of regular
  hours."
  "...we do not charge for our copy services...
  whereas private institutions frequently charge
  us...."
  "Loss of books is the only problem...."
  "...lack both the funding and the extra staff
  to serve...."

Comments, Suggestions, Requests

- Assurances field libraries would like to have
  from parent agencies and/or the FLC:

  More communication from the FLC...helpful.
  Agency, Committee support in all cooperative
  arrangements.
  Access by telephone to a central location that
  would provide computer search for reference
  questions and for aid in locating materials (AF).
  Committee action to plan, implement key policies.
  That libraries will be given support regardless
  of budget and personnel cuts.
  Recognize the value of cooperation among...
  libraries of all types to achieve the mission
  of our agency (USDA).
  Advice, assistance in continued development.
  That collections will not be "lost" in the
  event a facility closes and materials must be
  transferred...support given to those who inte-
  grate such collections.
  More educational opportunities.
  That DARCOM develop an acquisitions program for
  ADP equipment.
  FLC should advertise its services more thoroughly...
  GAO informed me of FEDLINK's existence.

Do not establish a "fee for service" system.

● Legislation, funding, regulations field libraries
  would like to see developed:

Funds, independent of formula funding, for at
least a part-time librarian for all BIA
libraries with over 2500 volumes, would be
extremely beneficial in disseminating knowledge
to both children and adults alike.
Basic funding of staff for any library of a
determined minimum size should be maintained
outside the facility budget. The facility...
fund only materials and services...maintenance
of the valuable collection (many times undupli-
cated and irreplaceable) will continue...and is
assured of being saved.
More funding for libraries with large resources
so can continue to support small libraries with
services.
More funding into computer handling of data and
more libraries need to go on the system to
identify sources.
Cooperative funding (of existing facility) to
develop a regional resource center for agencies
concentrated in mid-Rio Grande area.
Technologic support (staff and funds) for sharing
tools, i.e., databases, union lists, subject-
emphasis library lists.
When non-federal public starts using federal
libraries, some accountability system be
established.
Continuous (not interrupted) funding for journal
collection development in Regional Libraries (RMLS).
Standardization of information for cataloging
on audiovisuals.
Further development of a National Periodicals
Center.
Directives and waivers for unusual procurement
actions.
Centralized funding for ILL fees charged by
RMLS...basic units are charged, the academic
libraries receive federal and state funding
and "free" ILL....."it is not a fair situation."
Better personnel qualifications standards.
Changes in procurement regulations to permit
librarians to be named as purchasing agents
for books, magazines, etc.

● Other Comments:

   More training from FEDLINK on OCLC.
   Federal agency libraries need union lists
   of periodicals and continuations...and monographs.
   Greater access by the public sector is to be
   encouraged but an impossible goal without
   adequate staffing and facilities.
   Opening to the public...impossible...because
   of security aspects
   If all federal libraries could become members
   of OCLC, there would be means of closer cooper-
   ation within the federal environment.
   Informal cooperation as needs arise seems best.
   ...hope that federal military libraries would
   someday have a union list of serial holdings
   and would exchange materials free-of-charge
   (medical library).
   Should address ourselves to abuses of the inter-
   library loan.

REGION IX

Resource Sharing

● About one-half of the libraries have cooperative
  arrangements with local federal libraries, for ILL.
  If not: "no other federal libraries in area."

● About two-thirds of libraries have cooperative
  arrangements with local non-federal libraries,
  public, special and academic, all for ILL.

● About one-fifth of libraries participate in local
  cooperatives:

   Energy Librarians of the Bay Area--San Francisco
   49-99 Cooperative
   San Francisco Biomedical Library Network
   Bay Area Reference Center (BARC) -- San Francisco
   LOCNET (Libraries of Orange County Network)
   MOBAC (Monterey Bay Area Cooperative)
   METRO (Greater Metropolitan Area Library
   Council of San Diego and Imperial Counties)
   SERRA--San Diego and Imperial Counties
   Guam Interlibrary Loan Network
   MABL (Mariocopa Biomedical Librarians Association)--
   Phoenix
   Fresno Area Library Council
   VA Medical Centers of Bay Area (6-Pak)

- About one-fifth of libraries participate in area cooperatives, all for ILL

    CIN (Cooperative Information Network)--five counties
    Black Gold/TIE (Total Interlibrary Exchange)
    SIRCULS (San Bernardino, Inyo, Riverside United
    Library Systems)
    North Bay Cooperative Library System
    SCAN (Southern California Answering Service)
    SCILL (Southern California Interlibrary Loans)
    AWLNET (Area Wide Library Network)--five counties
    Central Coast Health Sciences Consortium

- About one-sixth of libraries participate in state-wide systems:

    CLASS (California Library Authority for Systems
              and Services)
    CULP (California Union List of Periodicals--
    a service of CLASS

- About one-fifth of libraries participate in multi-state systems:

    Intermountain Union List of Serials
    Military Medical Libraries of the West
    Southwest Regional Medical Library Service
    Medical Library Group of Southern California
    and Arizona
    Pacific Southwest Regional Medical Library System
    InterWest RMEC (Regional Medical Education Center)
    Library Network
    WESTFORNET
    OCLC West

- Nearly one-half of libraries have cooperative arrangements with national organizations, including parent agencies, all for ILL:

    Ninth Circuit Court of Appeals
    Judicial Center Administrative Office--Washington
    TRALINET (TRADOC Library and Information Network)
    USDA National Library
    NOAA
    EPA
    DOE
    U.S. Geological Survey
    Interior/U.S. Water and Power Resources Service
    NASA/NALNET (NASA Library Network)
    DOT
    Air Force
    Army
    Navy
    VA/VALNET (VA Library Network)

● About one-fourth have cooperative arrangements with "national organizations" for other services:

    OCLC
    JOURNALINK
    DOE/TIC (Technical Information Center)--Oak Ridge, Tennessee
    NTIS
    DTIC
    GPO
    RLIN
    NALNET (union Lists)
    DIALOG
    FEDLINK
    Naval Education Training Support (Book purchase)
    VALNET (centralized cataloging)

Problems

● Of 61 respondents to this question, 31 reported no problems with cooperative activities:

    "Service to primary clientele has been enhanced by reducing costs and manpower in obtaining required materials."
    "Patrons have been very appreciative of our efforts and pleased with the material received."

● But 30 reported problems:

    "Too great service expansion without funding and staff increases to maintain adequate service."
    "Any cooperative activity decreases time available for regular duties...."
    "Staffing and funding are always problems... service to our clientele has tripled...."
    "We tend to be givers rather than receivers... one library draws upon our resources in an excessively heavy way...a review of this support might well become necessary."
    "Occasionally, our sharing will run us short of a (needed document)."
    "Union lists which do not include free reprints are not of much use, since we have no quick or easy way of paying for them."
    "Organizing and coding of union list data is time consuming...."
    "So far have been more trouble than worth (reports, surveys, etc.)...problem has been my (librarian's) time."

Comments, Suggestions, Requests

- Assurances field libraries would like to have from parent agencies and/or the FLC:

  Arrange for LEXIS computer-based system for Hawaii.

  Continued support, encouragement of the work accomplished by field library personnel.

  A person or committee to whom (one) might look for assistance with local problems of funding, library development, and staffing.

  Reduction and elimination of...regulations on ADP, acquisitions, contracts, etc.

  Keep technical personnel abreast of new technology...supplied with up-to-date technology publications.

  FLC secure the participation of representative field libraries during the planning stages of any proposed federal library network.

  Mandate that requires each of the U.S. Department of Energy Regional Offices to support a library and information center.

  That current and additional library cooperative activities...will be encouraged and developed

  If public access...need greater number of staff and other support...huge increase in use.

  Clarification of the copyright law applied to... government libraries.

  An official OK on spending money on cooperative ventures with local libraries.

  That library will retain autonomy to participate only as much as we balance out with benefits.

  Privilege of receiving new materials from some sort of cooperative. Most cooperatives and networks will not loan new books...the majority of our requests.

- Legislation, funding, regulations libraries would like to see developed:

  Core fund contributed by parent organization for the most basic books (in our specialty).

  Libraries...not like other federal clerical operations...should have kind of recruiting, purchasing authority and contract freedoms as university libraries....

  Access to...nationally developed information systems...national reference service; simplification of copyright regulations...better mechanism for NTIS document delivery...and faster journal article delivery.

-88-

99

Legislation...or whatever it takes to provide
general energy information centers for the
public...cover basic fields of alternative
energies.
...promote inter- and intra-regional networks
and cooperation in order to effect cost
reductions....
...procurement regulations revised so that
federal libraries can pay for photocopy charges...
with a more economic form...than use of
purchase orders.
Stafffing standards.
Source to use for funding cooperative ventures.
Legislation that would provide special low
postal rates for libraries that cover not only
the cost of postage but insuring the materials
sent from one library to another.
Increased funding for (resource) centers would
extend and improve services.
Some sort of simple mechanism for recovering the
cost of service to non-federal entities.
(1) The need for a review of existing procurement
regulations and the many interpretations to which
they are subject; (2) the inadequacies of the
Federal Librarians' Register...both source of
constant frustration...effect much-needed and
long-overdue reforms...widely appreciated.
Legislation that would limit contracting...
helpful not to have the threat of contracting
hanging over us....
Union list of journals from federal libraries;
regulations which permit libraries to set up
deposit accounts with nongovernment agencies
like ERIC...and at large university libraries;
regional federal centers which could locate
and borrow nonlocal items repidly (perhaps via
an online system).
Funds to provide items essential to a library,
such as copy machines, terminals, AV....
Funding to support regional medical libraries
to benefit libraries with smaller collections
and fewer resources.

● Comments offered by respondents:

Common key word index of the holdings among
DOE regional libraries...and libraries in other
government libraries in our region.
An interlocking computerized information re-
trieval system for searching all governmental
databases....
Recognition (funding, etc.) for library support
of education programs on base.

Your efforts in furthering cooperative activities
between federal and non-federal libraries are
appreciated.
It seems that for East Coast libraries/information
centers, there is plenty of information exchanged.
For those of us in the West, it is difficult
to keep up with the national picture/trends.
Like to know something will be done with these
surveys...this represents a major investment
for a grossly understaffed library....

The White House Conference on Library and Information Services 1979

Resolutions

National Information Policy

A-2

WHEREAS, a free democratic society depends on a fully informed citizenry, and

WHEREAS, all citizens must be provided information which is objective, timely and reliable, and

WHEREAS, no citizen should be restricted from access to information by the imposition of fees,

THEREFORE BE IT RESOLVED, that a National Information Policy be studied and implemented which would:

1) guarantee all citizens equal and full access to publicly funded library and information services; and

2) ensure that government agencies at all levels work together to make available all new and existing library and information services to the maximum extent possible; and

3) protect the privacy of all segments of our society including personal privacy, economic privacy and national security; and

4) reaffirm the tradition of local control over the selection and purchase of library materials.

National Policy for Free Access

A-3

WHEREAS, information in a free society is a basic right of any individual, essential for all persons, at all age levels and all economic and social levels, and

WHEREAS, publicly supported libraries are institutions of education for democratic living and exist to provide information for all,

THEREFORE BE IT RESOLVED, that the White House Conference on Library and Information Services hereby affirms that all persons should have free access, without charge or fee to the individual, to information in public and publicly supported libraries, and

BE IT FURTHER RESOLVED, that the White House Conference on Library and Information Services advocates the formation of a National Information Policy to ensure the right of access without charge or fee to the individual to all public and publicly supported libraries for all persons.

Access to Library and Information Services

A-5

WHEREAS, libraries and information services are obligated to reach out to all persons, and

WHEREAS, access to accurate and timely information is essential to personal needs, and

WHEREAS, libraries often do not reach out to persons who require their services, and

WHEREAS, special populations such as children and youth, the aged, home-bound, institutionalized (including correctional institutions), racial and ethnic minorities, those in divergent geographic areas, the deaf, blind, and other physically handicapped, the emotionally disturbed, the mentally retarded, the multiple handicapped, those gifted, illiterate and semi-literate, non-English speaking groups and other groups are not now adequately served, and

WHEREAS, in-service training, training standards for library professionals, job retraining for users and potential users should be made adequate, and

WHEREAS, Federal regulations frequently restrict the right of access to library materials purchased with Federal funds, and

WHEREAS, such restrictions hinder the sharing of resources of various types, and

WHEREAS, current funding is not cost-effective and promotes the overlapping and duplication of services,

THEREFORE BE IT RESOLVED, that barriers to such services whether legal, fiscal, technical, attitudinal, environmental, cultural, geographic or other, must be eliminated, and that physical facilities and staff must be capable of providing services to all segments of society, and

BE IT FURTHER RESOLVED, that Federal legislation be enacted to guarantee the right of equal access to all publicly-held information for all citizens, and

BE IT FURTHER RESOLVED, that institutions educating library and informational services practitioners assume responsibility to address the needs of said consumers through their training and education, and that guidelines by appropriate governmental leaders establish standards of in-service training and that training standards for library professionals be implemented without delay, and

BE IT FURTHER RESOLVED, that a national public policy to promote universal library and information services be adopted, and

BE IT FURTHER RESOLVED, that access restrictions be removed from library materials purchased with Federal funds, and

BE IT FURTHER RESOLVED, that all learners, regardless of age, residence (including institutions), race, disability, ethnic or cultural background, should have continuing access to the information and material necessary to cope with the increasing complexity of our changing social, economic, and technological environment, and

BE IT FURTHER RESOLVED, that assistance be provided to establish or sustain libraries and other information centers in the United States and all States that wish to provide service at centers for independent learning bringing such services to those not now served, all with the cooperation of agencies, libraries and centers, and

---

Access to Information

A-10

WHEREAS, individuals, organizations and professions should have convenient access to the periodical literature of the entire world,

THEREFORE BE IT RESOLVED, that the system should fully utilize existing national and international library strengths, that the financial viability of the document delivery system of net-lending libraries must be protected, and that mechanisms should be developed to ensure that financial incentives for publishing are preserved, and

BE IT FURTHER RESOLVED, that responsibility for developing and implementing this policy should include the coordinated efforts of the National Library of Medicine, the National Agricultural Library, and the Library of Congress.

Access to Public Agency Information

A-11

WHEREAS, the Government produces a large amount of information at taxpayers' expense and makes it available in a passive manner, and

WHEREAS, people do not know how or are unable to take advantage of government information, and

WHEREAS, currently Government agencies, utilizing public funds are required to collect, disseminate, or provide information to citizens, and

WHEREAS, resources are wasted in duplication and time lost due to the difficulty in locating pertinent information, contributing to decline in citizen participation in government and wasting government resources at a time when they are scarce, and

WHEREAS, through better coordination, more cooperation (pooling of information), and aggressive dissemination, these problems can be addressed, and we foresee the library, with its technical and professional expertise, playing a central (supportive) role,

THEREFORE BE IT RESOLVED, that at every level of government —
local, State, and Federal — where agencies agree to pool
information, there be enabling legislation permitting funds for
mandated information services/functions to be pooled so that
information on a certain subject or of a given type can be
located in a publicly acknowledged public location, and

BE IT FURTHER RESOLVED, that the Federal Government provide
incentive grants to match cooperative pooling efforts to enable
libraries and information services to provide services in
coordinating and processing information, and require that upon
receipt of Federal funds aggressive outreach be done by libraries
in the community to stimulate use, and

BE IT FURTHER RESOLVED, that all pooled information shall be
readily available to the public except for limitations imposed by
legal protections for national security, privacy and proprietary
rights.

Technology and Uniform Standards

C-1

WHEREAS, recent advances in computer technology for the creation
and reproduction of documents can provide substantial reduction
in cost, and

WHEREAS, many emerging technologies are now available in the
public domain and could be instrumental in supplementing the
flow of and access to information, and

WHEREAS, development and use of technical and procedural
standards can improve effectiveness and reduce cost and extend
the use of library and information services, and

WHEREAS, effective standards facilitate the exchange of information
between public and private sectors and that this exchange of
information is needed to better support organizational,
professional, and personal activities, and

WHEREAS, economical media conversion capabilities are very
important,

THEREFORE BE IT RESOLVED, that individuals, organizations, and
agencies creating documents and books and generating other
information be encouraged to create these materials in
machine-readable form in order to decrease the load of
retrospective conversion, and

BE IT FURTHER RESOLVED, that the Federal Government direct all
federally supported libraries and information services and other
appropriate Federal agencies to support the development,
review, and adoption of national and international standards for
publishing, producing, organizing, storing, and transmitting
information, using established and recognized procedures and
institutions, and

BE IT FURTHER RESOLVED, that high priority be given to establishing or extending standards which address hardware and software compatibility, computer and communications network protocols, and machine-readable information, and

BE IT FURTHER RESOLVED, that the private sector be encouraged to participate and to support the development of such standards, and

BE IT FURTHER RESOLVED, that research be funded to develop new technologies that permit convenient and economical media conversion from and to appropriate media.

Networking
C-2

WHEREAS, library and information services contribute significantly to information resources, and

WHEREAS, access to information and library resources available in all types of libraries is needed and must be equally available to all citizens, and

WHEREAS, all types of library and information centers have resources which can contribute to library and information services, networks, and programs at all geographic levels, and

WHEREAS, resource sharing is now mandated by the information explosion, the advance of modern technology, the rapidly escalating costs of needed resources, and the wide disparity between resources available to individuals by reason of geographic location or socio-economic position,

THEREFORE BE IT RESOLVED, that a comprehensive approach be taken to the planning and development of multi-type library and information networks, including both profit and not-for-profit libraries from the public and private sector, and

BE IT FURTHER RESOLVED, that such plans be developed at the national, regional, and local level to include specific plans for a national periodicals system and the concept of a national lending library for print and nonprint materials, and

BE IT FURTHER RESOLVED, that plans be developed for the coordination of library and information networks and programs which would identify the responsibility for such coordination in the United States Department of Education's Office of Library and Learning Resources (or its successor) and the State library agencies, and such other agencies, organizations, or libraries as are involved in such networks, and

BE IT FURTHER RESOLVED, that control of such networks remain at the State or regional level, and

BE IT FURTHER RESOLVED, that mechanisms be developed to ensure access by all individuals to such networks and programs, and

BE IT FURTHER RESOLVED, that Federal and State funds be made available to continue to support and interconnect existing networks, as well as to develop new networks, and that such funds be designated for network operations and for grants in support of local cooperative action, and

BE IT FURTHER RESOLVED, that all agencies and institutions that provide education and continuing education for library practitioners should offer training in the skills, knowledge, and abilities which will heip ensure that practitioners are competent to provide access through these networks in a most effective manner.

Technology and Federal Programs

C-7

WHEREAS, national standards for library and information services must be developed in consultation with the national library community in order that technology compatible in hardware, language, and format can be developed to allow networks to interact effectively, and

WHEREAS, existing incompatible networks must be encouraged to develop the technology that would provide access to their multiple data bases,

THEREFORE BE IT RESOLVED, that Federal programs for development and utilization of technology for information storage and retrieval be coordinated. The public should have access to Federal data bases except when personal privacy or national security are in jeopardy. The library and information industry professionals should assume the responsibility for coordination of the Federal and public interest in information technology, and

BE IT FURTHER RESOLVED, that the increased application of technological advances should be balanced with an increased awareness of the necessity to humanize such efforts. All plans for future services should review those services both from the technological and the human effect point of view. Information in existing national centers or national data bases, not subject to restricted access, should be made available to all libraries on an equal and mutually beneficial basis. The application of existing or future technology should be considered in planning library services to implement effective methods for obtaining information in order to eliminate inequities caused by inadequate resources, geographic and architectural barriers, and economic deprivation.

Interagency Cooperation

C-10

WHEREAS, rules and regulations covering various federally funded programs sometimes discourage interagency cooperation and prohibit access to library and information resources,

THEREFORE BE IT RESOLVED, that all future Federal rules and regulations encourage interagency cooperation and access to federally purchased library and information resources.

FEDERAL LIBRARIES and INFORMATION SERVICES
PRE-WHITE HOUSE CONFERENCE, 1979

Comprehensive resolutions aimed at improving the public's access to the libraries and information services of federal agencies were passed at the Federal Libraries and Information Services Pre-White House Conference, held July 19-20, 1979, at the National Defense University, Ft. McNair, Washington, D.C. The federal pre-conference was held under the auspices of the Federal Library Committee. The National Commission on Libraries and Information Science provided staff advice and administrative support.

The resolutions are as follows:

I. Right to Access to Information

Whereas, the people of the United States have the right to access to information produced or collected by the Federal Government at public expense except for limitations imposed by legal requirements of national security, privacy, and proprietary rights; and

Whereas, there is an enormous federal investment in libraries, information services, and other data collections, which now yield only a small part of their potential value to the public;

Therefore, be it resolved that Congress enact legislation:

1. obligating federal libraries and information services to serve citizens, within the limitations imposed by national security, privacy, and proprietary rights;

2. providing the resources to carry out this responsibility;

3. directing the Federal Government to develop a rational and cohesive framework of policies to address the matter of access to and exchange of information; and

4. establishing a national information and referral network in order to provide services to the public, these services to bechanneled in such a way as to support local community information resources.

II. Establishing Federal Policy on Information

Whereas, there is no federal policy for the production and use of information; and

Whereas, no overall federal body is charged with policy-making and coordination of library and information activities;

Therefore, be it resolved that:

1. there be a federal policy or policies for production and use of information;

2. there be a policy that information programs are an integral part of missions and functions of all agencies;

3. top management set forth, in regulations and directives, requirements that there be line items dealing with information and library operations; and

4. there be established a federal office for the coordination of library and information activities to ensure the implementation of a federal policy for production and use of information, to be responsible for the visibility and preservation of resources, and to ensure the research and development of new and improved federal information systems.

III. Funding and Resource Allocation

Whereas, insufficient resources are being allocated by the Federal Government to manage and disseminate information; and

Whereas, costs of providing information have increased; and

Whereas, taxpayers are demanding lowered government expenditures;

Therefore, be it resolved that;

1. legislation for all federal agencies should mandate provision of adequate resources for the management and dissemination of program-related information;

2. these resources should be expressed as a percentage of total program budgets;

3. the Government should price its information to recover at least its reproduction and distribution costs; and

Further, be it resolved that high priority should be given to resource allocation for analysis of data and information to make it more useable.

IV. Needs Assessment and Public Awareness

Whereas, there is very limited public awareness of the availability and potential value of federal library and

Whereas, even within the federal community, there exists no comprehensive strategy for realizing this potential value;

Therefore, be it resolved that:

1. user needs assessments be conducted by the agenies to determine latent and unmet information needs of citizens. Such assessment should emphasize access to information by groups with special needs, where their conditions may militate against their access to information sources;

2. the agencies conduct educational campaigns on the national, state, and local levels to increase awareness about and to promote the effective use of available federal library and information resources and services; and

3. all new federal library and information activities, which include the creation of new databases, be constructed in ways that facilitate access by the public and citizens groups.

V. Research and Development

Whereas, information and library services are being changed most rapidly by developing technology; and

Whereas, information processing is becoming a significant occupation of the labor force;

Therefore, be it resolved that:

1. a greatly expanded research and development (R&D) program for libraries and information services be developed, with substantial federal participation;

2. an R&D element be established in the Library of Congress with an explicit mission responsible to the total U.S. library community;

3. the National Science Foundation's efforts to establish an R&D consortium of universities and government be encouraged and accelerated; and

4. the proposed legislation for a national library agency include an R&D responsibility for the new agency.

VI Future White House Conferences

Be it resolved that:

1. a White House or a federal conference on library and information services be held every decade to establish the

national information goals and priorities for the next decade,
to assure effective transfer of knowledge to the citizenry
and to accomplish this goal in light of the accelerated
changes in information technology and practices; and

2. an interim conference be held every five years under
the aegis of the National Commission on Libraries and Information
Science to assess the national progress made in implementation
of the recommendations of the preceding national conference,
and the progress in providing library and information services
to the citizenry, and to project further improved services in
the light of national needs.
