## ABSTRACT

This menu planning guide for school lunches and breakfasts contains: (1) lunch requirements, recommendations, and policies; (2) the basics of menu planning; (3) how to vary portions for various age/grade groups; (4) planning breakfasts; (5) merchandising school lunches and breakfasts; and (6) nutrition education and menu planning; Appendixes include recommended dietary allowances, menu planning worksheet, USDA fact sheet on moderating fat, sugar, and salt, and information materials. 03 Index

This menu planning guide is to help you in school food service plan and serve acceptable school meals that meet food needs. It is in tune with today's challenges to serve nutritious food, give a good Image, provide choices, consider the likes and dislikes of those served, and decrease plate waste. The publication covers the philosophy and principles of good menu planning; Federal requirements, recommendations, and policies; methods of menu planning; and merchandising techniques for promoting good nutrition.

The National School Lunch Act of 1946 established the National School Lunch Program to safeguard the health and well-being of our Nation's children. The program is designed by Congress as a means of (1) providing nutritious, reasonably priced lunches to school children and children in residential chlid care institutions, (2) contributing to a better understandIng of good nutrition, and (3) fostering good food habits. School food service has become a basic part of the nutrition and education program of the Nation's schools. The growing School Breakfast Program has further expanded this role.

School food service is a unique and important market for food. It reflects advances in knowledge of food, nutrition, and food service management and is full of opportunities to try new ideas. It presents an exciting challenge to maintain and improve the quality of school meals.

When planning menus, keep in mind the following general points:

- The menu is the focal point of the ; ;hool lunch and breakfast programs. It is the basis for all activity in these programs from planning to purchasing, to production, to service and cleanup, and to the ultimate satisfaction of students' appetites.
- The monu is a management tool. Successful management of the school lunch and breakfast programs starts with menu planning. The quality of the meal and success of the programs depend on the knowledge and skill of the menu planner. The menu planning activity also provides an opportunity for nutrition education and for involving students, parents, and school per. sonnel in the school lunch and breakfast programs.

The menu is a management tool which has a major role in controlling . . .

- compliance with Federal regulations
- nutrient content
- meal acceptablility
- food and labor cost
- food purchasing
- food production
- work schedulling
- equipment use and needs
- employee training needs
- Successful menu planning regulras knowledge. Several areas of knowledge are necessary:
- the lunch and breakfast programs' purpose and goais, requirements, and recommendations
- students' food preferences so that the menu can refiect those preferences
- food costs and the amount of money avallable
- what foods are avalir ve for the period for which menus are being planned
- the avallability and experience of personnel
- kitchen layout and capacity of equipment
- food preparation and work scheduling
- food merchandising so that the meal will be well accepted by the schoolage customer being served

This Menu Planning Guide for School Food Service will be periodically reviewed and individual pages or entire sections will be reissued to keep the publication current.

# Lunch Requirements, Recommendations, and Policies 

2 Background of the Meal Patterns and Recommendations
4 Requirements and Recommendations
12 Specific Requirements and Policies by Component

## Chaptor 1. LUNCH REQUIREMENTS, MECOMMENDATIONS, AND POLICIES

## Eackground of the Meal Pattorns and Recommondations

Nutritional Goal The nutritional goal for school lunches is to provide approximately onethird of the Recommended Dietary Allowances (RDA) as specified by the National Research Council/National Academy of Sclences as shown by age categories in appendix I. It is not expected that each lunch each day wi.l provide one-third of the RDA for all nutrients, but that, when averaged over a period of time-in which a wide variety of foods are served-the goal will be met.

In developing the meal requirements, amounts of food energy (calories) and all nutrients for which adequate reliable food composition data are available were considered. Additionally, since the meal requirements allow for a variety of foods, it is assumed that other nutrients for which no RDA have been established or for which inadequate food composition data are avallable will also be supplied.

Important considerations used in destgning meal requirements and recommendations included the "Dietary Guidelines for Americans," issued in Nutrition and Your Heath, February 1880, by the U.S. Department of Agriculture (USDA) and the U.S. Department of Health and Human Services (formerly Department of Health, Education, and Weffare). In the 1980 edition of Recommended Dietary Allowances, as well as in the "Dietary Guidelines for Americans," Lasues were liemifled concerning the consumption of fat, refined sugar, and sodium (salt). Theri is still debate as to whether recommendations should be made to the publiz on the intake of fat, saturated fat, and chofesterol. However, it is generally agreed that liffoing moderation in these constituente, as well as in total intake of calories, satt, and sugar, is consistont with good health. Therefore, it is desirable for you to keep fat. sugar, and salt in school lunches and breaktasts at a moderate lovel. Consistent with this recommendation, the lunch requirements specify that you must offer an unflavored form of fluid lowfat milk, skim milk, or buttermilk to reduce fat. Note that the meal requirements are designed to pr.ovide for a lower level of fat than that found in diets of many individuals.

## Nutrition and Your Health <br> Dietory Guidelines for Americans

Maintain ideal
Wetght

Avold Too Much Fat, Seturated Fot, and Cholesterol

Ent Foods with Adequate Starch and fiber
Avold Too Much Sugar

Avoid Too Much Sodium

Nutrients Provided by Components

Food should provide the following nutrients children need for good health and normal growth:

VITAMNS and minerals for growth and proper body functioning.
PROT EnN for growth and for bullding and repair of the body.
FATS and CARBOHYDRATES for energy.

No one food contalns all of the nutrients in the amounts needed.
Therefore, a wise selection of a variety of foods that together will supply these nutriants is very important. Below is a summary of the major nutrient contributions expected to be provided by each component of the lunch or broakfast.

MAJOR NUTRIENTS SUPPLIED BY SCHOOL MEALS

| Moat and Meat Alternates protein Iron | Vegotables and Frulte vitamin $A$ vitamin C |
| :---: | :---: |
| ```B vitamins~thiamin, riboflavin, nlacin, }\mp@subsup{\textrm{B}}{6}{},\mp@subsup{\textrm{B}}{12}{ magneslum calories``` |  |
|  | vitamin $B_{6}$ magnesium |
|  | fotacin |

|  | calcium |
|  | protein |
|  | vitamin A |
|  | vitamin D (if forified) |
|  | vitamin $\mathrm{B}_{12}$ |
|  | magnesium |
|  | phosphorus |
|  | nibohtavin |
|  | calorles |

## Requiroments and Reoommendations

The school lunch meal requiroments are designed to provide a simple and enay-to-follow framework for planning nutritious and well-balanced lunches. They provide for broad food cholces that can include local food preferences and cultural, ethnic, and religlous food practices.

# Basic Requirements 

The meal requirements are specified according to kinds and amounts of food for each of the four food components. However, you must serve a minimum of five food items, as shown below:

| Components | Foed Items |
| :--- | :--- |
|  |  |
| 1. Meat/Meat Alternate | 1. Meat/Meat Alternate |
| 2. Vegetable/Frult | 2. Vegetable/Fruit |
| 3. Bread/Bread Alternate | 3. Vegetable/Frult |
| 4. Milk | 4. Bread/Bread Alternate |
|  | 5. Milk |

When foods from these four components are properly combined, the lunches will supply needed nutrients.

As specified in the National School Lunch Program regulations, a school lunch must contain a specified quantity of each of the food components. Chant 1 on page 6 spacifies quantities by agelgrade group. Groups I and II are_for preschool children; Group III, IV, and V are for students in grades K-12.

Note that Groups I through IV are minimum requirements, but the quantities specif!'d in Group V are recemmendations. Schools are encouraged, not required, to vary portion sizes to better meet the food and nutritional needs of students by age. If a school chooses not to vary portion sizes, it is important to assure that the oldest group of students being served is receiving the minimum requirements for that age group. In other words, for a given age group of students, you may serve more than the minimum quantity, but not less.

Remember that the quantifies specifled in Group V for students age 12 and over are recommendations, not requirements, and that the minimum requirements for that group are the quantities specified in Group IV for students age 9 and over. Further explanation of the recommendations to vary portion sizes according to age/grade group is in chapter 3.

In addition to the foods specified in chart 1, other foods may be served at all meals to heip improve acceptability, to satisfy students' appetites, to provide additional energy, and, if chosen wisely, to increase the nutritional quality of the lunch.

Exceptions to the Basic Meal Requirements

Other Requirements
to Consider in
Planning Menus

Medical or Special Dletary Needs
Reguiations allow for substitutions in the food components of the basic meal requirements if individual children are unable to consume the required foods because of medical or other special dietary needs. An example would be substituting for milk in the case of a chlid with lactose in. tolerance. Such an exception must be supported by a statement from a recognized medical authority which includes recommended substitute foods. The statemant should be maintained on file in the school.

Ethnic, Religious, Economic, or Physical Needs
Regulations allow for certain other variations in the food components of the basic meal requirements on an experimental or continuing basis in schools where there is specific evidence that such variations are nutritionally sound and are necessary to meet ethnic, rellgious, economic, or physical needs. However, these exceptions must be granted by the Food and Nutrition Service, USDA, Washington, D.C.
"Offer versus Serve" Provision
The "ofter versus serve" provision is the regulation that allows senior high school atudente, and, when approved by the local school food authority, students in any other grade, to choose fower than all of the food thems within the lunch pattorn. The regulation requires that etudents be offierod all five food Homs of the lunch. Studentie must chooee at least three (or four) of thees thems for their lunch to be reimbursable. Decining one or two thems does not relieve nonneedy studente from paying the full price for the schoof lunch, or further reduce the charge pald by students determined eligibte for reduced-price lunches.
$\rightarrow$
Senlor Migh Sehool studentis. Schools are required to implement the "offor vereus earve" provision for senior high school studentis. "Senior high school students" are students (1) of a high school grade lovel aid determined by State and bocal ediseational agencies aind (2) onroled in a sentor high school which is recognized ase a part of the education syetem within a Stato. Senior high school studente muet chooes at least three full portions of the five food itoms offereci for their lunch to be reimbursabie. When a student has e fined a full portion of an item, you may offer a smalier portion of the item. The offering of smaller portions is not mandatory and is a local decision.

Eiementery, midedie, and sunior High school students. The Implementation of the offer veraus serve" provision in schools below the sentor high school lovel Is leit to the dacretion of local sehool food authorities. School food authorities declding to implement "offer vereus sarve" In thece schools must aleo decide to what extent it will be implementiod. They muat detiermine whether students may dectine up to two food thems, as in senlor high setroots, or only one ftem. Thoy must alao decide whether smaller portions will be offiersed when a student hae decilined a full portion of an fem.

For additional information on implementing the "offer veraus serve" provision rufor to the USDA quidance matorial on that aubject (eee appendix $M$ ).

National Sctiool Lur ;h Program regulations require school food authorities to promote activities to involve students and parents in the school lunch program. Such activities inay Include menu planning, entancement of the eating environment, program promotion, and related student community support activities. The establishment of parent and student school food service committees to assist in menu pla.ining and other activities may greatly improve the overall acceptability of school lunches. For additional information on ways of involving students and parents in menu planning and other activities related to the school lunch program refer to the USDA fact shoet, Planning and Carrying Out a Program of Student and Parent Involvement. (See appendix IV.)

Planning Lunches for Various Age/Grade Groups
To better meet the food and nutritional needs of students according to their ages and to minimize food waste among younger students, school lunch regulations recommend that schools vary portion sizes.

## If a school chooses to vary portion slzes, the reguiations:

Require that preschool children (ages 1-4) be served no less than the minimum quanities specified for Groups I and II of chart 1 in this chapter.

Require that students in grades kindergarten-3 (ages $5-8$ ) be served no less than the minimum quantities specifled in Group III.

Require that students in grades 4.12 (age 9 and over) be served no less than the minimum quantities specifled in Group IV.

Recommond that students in grades 7.12 (age 12 years and older) be served quantities specifled in Group V. These older students may be provided the choice of the smaller quantities as specified in Group IV.

Instructions on how to plan menus for various age/grade groups are in chapter 3 of this guide.

## Offering Choices

To give greater emphasis to the need for serving a varioty of foods and to encourage food consumption and participation in the program, it is recom. mended that:

- choices be provided whenever possible. Offer a selection of foods and types of milk from which students may make choices.
- in schools that do not offer choices of meat/meat alternates each day, no one meat alternate or form of meat be served more than three times a wook.

In the latter recommendation, "form of maat" refers to ground, sliced, pleces, etc. For example, this recommendation means that four items made with ground beef, such as tacos, spaghettl with meat \& auce, hamburgers, and chili-con-carne should not be served in a single week. "Meat alternate" refers to cheese, peanut butter, cuoked dry beans or peas, and eggs. For example, toasted cheese sandwiches, macaronl and cheese, pizza with cheese, and cheeseburgers should not all be served in a single weak. Schools that to offor choices of meat/meat alteinates each day may serve ari; one meat alternate or form of meat e.s freque!tly as good menu planning practices allow.

## Moderating Fat, Sugar, and Salt

Schools are encouraged to keep the amouri of fat, sugar, and salt in school meale at a moderpte level by limiting, as feasible: (1) the frequency of servics of foods that contain relatively high levels and (2) the quantities used in tood proparation. To accomplish these object'rise, you should examine and modify tour major areas as rif 9ded:

- Menu Planning
- Food Purchasing
- Quantity Recloe Selection
- Food Production Techniṇues

Apmondix III, Moderating Fat, Sugar, and Salt in Schoot Lunchos anci Braakrats. provides detalled ways of carrying out these objectives.

Food rich in Viternins A and C and Iror,
TC 'n $p$ assure that al! school lunchus meet the nutritional goal, it is recon mended that lenches inc!?:-14:

- a VITAMIN A vegetabij or i; vit pit least iwice a week
- a VITAMIN C vegetable rffult at least 2 or 3 imes a week - ssveral foods for IRON each day

Lists of foods which are good rources of these niatients are in chart 2 on the following pages.

Chesse
Cheddar
Cottige
Swiss
Dry beans
Dry peas
Eggs - dried, whote
frozen. whols shell
Fish and shellish
Meat - canned, dried, fresh and frozen
Beef
Lamb
Pork
Veal
Variety meats
Bologna
Frankfurters
Livers and
other orgen meats
Knockwurs!
Pganul butter
Pouliry - canned,
fresh ant frozen
Chicken

Rutabegas
Sauerkraut
Spinach ${ }^{4}$
Sweot potatoes' (except those canned in syrup)
Tangelos
Tomatoes
Tomato juice or reconstituted paste or puree
Turnip greens
Turnips:
'Vitarnin A Vegetmbies and Frulta. The vegetables and fruits listed below will supply at leat 750 International Units of vitemin $A$ per $1 / 4-$ or $1 / 2$-cup serving. When these vegotables and fruits are served at tenst twice a week in recommended mounts along with a variefy of additional vegetisties and fruits used to moet the vequisble and fruit requirement, the vitamin A content of the lunch will generally meet one-third of the Recommended Dtatary Alowance for each mge/grade group.
TVimmin C Vegrabies and Frotta. The vogotables and fruits listed betow will supply about 8 milingrams of more vitamin C (ascorbic acid) per $1 / 4$-cup serving. Whon these vegotabtes and fruits are served at least two or inree times a weok in recommended amouncs along with a variety of additional vegotables and fruits to meof the vegetable and fruls requirtment, the witamin C content of the funch will geseraliy meet one-third of the Recommended Dietiry Allowance for each age/grade group.

Include the we vegetrabte and frulte as needed

Apples
Applesance
Avocados
Bananas
Beans, green or wax
Banse, lime, green
Bean sprouts
Beots
Borries (black, blue, ofc.)
Colery
Chinese cabbage

## Corn

Cranberries
Cranberry sauce
Cucumbers
Datos
Eggplant
Figs
Fruit cocktail
Fruits for salads
Grapes
Lettuce
Mushreoms
Olives
Onions
Parsley
Parsnips
Peaches (canned)
Peare
Peas and carrots (canned)
Cowpeas, immature seod
Pimientos
Pineapple
Plums
Potatoes (mashed, fried, etc.)
Radishes
Ralsins
Rhubarb
Squash, summer
Watercress
Watermelon
Fruit juices (apple, grape.
pineapple, etc.)

CHART 2. Foods for setpoel Lugctes and Erevidenio (Continued)

## Specific Requirements and Polleles by Component

There are a number of specific requirements and policies interpreting each component of the meal pattern. You must consider these when planning menus.

Specific
Requirements and Policies

| Weatmeat Alternate Component |  |  |
| :---: | :---: | :---: |
| Minimum quantilios for students, grades K-12: |  |  |
| One of the following or a combination to give an equivalent quantity: | Grades K-3 ages 5-8 <br> (Group III) | Grades 4-12 age 9 and over (Group IV) |
| Lean meat, poultry, or fish. | .11/20z | 202 |
| Cheese.. | .11/2 Oz | 20 O |
| Large eggs. |  | 1 |
| Cooked dry beans or peas. | $.3 / \mathrm{cup}$ | $1 / 2$ cup |
| Peanut butter. | $.3 \text { Tbsp }$ | 4 Tbsp |

- The meat/meat alternate must be served in the main dish or the main dish and one other menu item. This means that two menu items are the maximum number which may be used to meet the meat/meat alternate requirement.

Some examples of combinations for meeting the $11 / 2-0 z$ meatmeat alter. nate requirement are as follows:
$10 z$ cooked lean meat $+1 / 202$ cheese
1 oz cooked fish + $1 / 4$ egg
$10 z$ cooked lean meat $+1 / \mathrm{s}$ cup cooked dry beans
$1 / 4$ cup cottage cheese $+1 / 4$ egg
1 oz cooked poultry + 1 Tosp peanut butter
$1 / 4$ cup cooked dry peas $+1 / 2$ oz cheese
2 Tbsp peanut butter + $1 / 202$ cheese
Some examples of combinations for meeting the $\mathbf{2 . 0 2}$ meat/meat alternate requirement are as follows:
$10 z$ cooked lean meat $+10 z$ cheese
$10 z$ cooked fish + $1 / 2$ egg
$10 z$ cooked lean meat $+1 / 4$ cup cooked dry beans
$1 / 4$ cup cottage cheese $+1 / 2$ egg
$1-1 / 2$ oz cooked poultry +1 Tbsp peanut butter
$1-1 / 20 z$ cooked lean meat $+1 / 2$ oz cheese
$1 / 4$ cup cooked dry peas +1 oz ch rese
2 Tbsp peanut butter +1 oz cheese

- Small amounts of meat or meat alternate used as garnishes, seasoning, or in breadings should not be counted toward meeting the meat/meat alternate requirement of the meal. Examples are grated parmesan cheese used as a garnish over spaghetti or egg used in breading. Although use of such
garnishes is encouraged to make the lunch more appealing, the amounts are not sufficient to make a real nutritional contribution to the lunch.
- Cheese foods and cheese spreads may be used to mest the meat/meat alternate requirement. However, twice as much is needed. That is, a 2-ounce serving of cheese food or cheese spread is equivalent to only 1 ounce of meat/meat alternate.
- Cooked dry beans or peas may be used to meet the meat/meat alternate requirement or the vegetable/fruit requirement, but not botio in the same meal.
- Nuts, such as peanuts, almonds, pecans, and walnuts, are traditionally considered snack foods and may not be used to meet the meat/meat alternate requirement.
- Three additional "alternate foods" are authorized by USDA to meet part of the meat/meat alternate requirement when made and used according to USDA's directions. They are:

1. Cheese alternate products. These are cheese substitutes used as extenders for cheese and are usually made from hydrogenated vegetable oil and a form of mlik protein. They have the texture, consistency, and appearance of cheese. Cheese alternates are fortified with vitamins and minerals and are nutritionally comparable to cheese.

## Stipulations for Using Cheese Alternates

The cheese alternate must be combined with natural or processed cheese.

The cheese alternate may meet no more than 50 percent of the meat/meat alternate requirement.

The cheese alternate and cheese may only be used in cooked menu items, zuch as macaroni and cheese, cheeseburgers, grilled cheese sandwiches, pizza, etc.

Only cheese alternates that appear on the USDA "Listing of Acceptable Cheese Alternate Products" and have substantially the following statement on the label may be used: "This product meets USDA-FNS specifications for cheese alternate products."

You will find more detalls for using these products on the USDA fact sheet, The What's, Why's, and How's of Cheese Alternate Products. (See appendix IV.)
2. Vegetable protein products. These are processed from soy or other vegetable protein sources and are usualh' in dehydrated granule, particle, or flake form. The product may be colored or uncolored, sessoned or unseasoned, but must be fortified with vitamins and minerals. When mixed with meat, poultry, or fish, vegetable protein products will resemble cooked meat, poultry, or fish, and are being used successfully as subetitutes for these foods.

Vegetable protein products must be combined with meat, poultry, or fish. They may be used if the fully hydrated, partially hydrated, or dry form.

Fully aydrated vegetable proteln products may be used to meet no more than Forcent of the meatmeat atternate requirement-a maximum ratio of 30 parts hydrated vegotable protein product to 70 parts uncooked meat, poultry, or fish.

Only products that have the following statement on the label may be used as an alternate food: "This product meets USDA-FNS requirements for use in meeting a portion of the meat/meat altemate requirement of the child nutrition programs." This statement must appear on the principal display ares of the package.

For more guidance on identifying acceptable products, hydration procedures, and using these products, refer to guidance material on this subject provided by USDA (see appendix IV).
3. Enriched macaroni products with fortified protein. These are enriched macaroni products which have been fortified with a source of protein. They are not the same as regular enriched macaroni that you normally purchase. The words "with fortified protein" must be part of the name on the label. Only these protein-rich products are eligible to meet part of the meat/meat alternate requirement of the school lunch. Macaroni products include various forms of macaroni, spaghetti, ravioli, and lasagna.

Stipulations for Using Enriched Macaroni with Fortified Protein
Dry enriched macaroni with fortified proteir. must be combined with meat, poultry, fish, or cheese.

Dry enriched macaroni with fortified protein may be used to meet no more than 50 percent of the meat/meat alternate requirement-a maximum ratio of one part enriched macaroni to one part cooked meat, poultry, fish. or cheese.

Enriched macaroni with fortified protein may be counted as a meat alternate, or as a bread alternate, but not as both in the same meal.

Only products that appear on the USDA "Listing of Acceptable Enriched Macaroni Products with Fortified Protein" and that have substantially the following statement on the label may be used: "One ounce dry weight of this product meets one-half of the meat or meat alternate requirements of lunch or supper of the USDA child nutrition programs when served in combination with one or more ounces of cooked meat, poultry, fish, or cheese."

You will find more details for using this product on the USDA fact sheet, Information on Using Protein Fortified, Enriched Macaroni-Type Products in Child Nutrition Programs. (See appendix IV.)

(Group III)
Two or more servings of vegetables or fruits or both to total. . . . . . . . . . . . . . . . . . . $1 / 2$ cup

Grades 4.12 age 9 and over (Group IV)

- The required $1 / 2$ or $3 /$ cup must consist of two or more servings. Menu items such as fruit cocktall and mixed vegetables are considered as only one item. Large combination vegetable and/or fruit salads, containing at least $3 / 4$ cup of two or more vegetables and/or fruits in combination with meat or meat alternates intended to fulfill the role of an entree, such as a chef's salad or a fruit plate with cottage cheese, are considered as two or more servings and will meet the full requirement.

Some examples of combinations for meeting the $1 / 2 \cdot$ cap vegetable/frult requirement are as follows:
$3 / 8$ cup vegetable $+1 / 8$ cup fruit
$1 / 4$ cup vegetable $+1 / 4$ cup vegetable
$1 / 4$ cup vegetable $+1 / 4$ cup fruit
$1 / 4$ cup fruit $+1 / 4$ cup fruit
$1 / 4$ cup juice (full-strength) $+1 / 4$ cup vegetable
$1 / 8$ cup vegetable $+1 / 8$ cup vegetable $+1 / 4$ cup frult
Some examples of combinations for meeting the $1 / 2$-cup vegetable/fruit requirement are as follows:
$3 / 8$ cup vegetable $+3 / 8$ cup fruit
$1 / 4$ cup vegetable $+1 / 4$ cup vegetable $+1 / 4$ cup frult
$3 / 8$ cup vegetable $+1 / 4$ cup vegetable $+1 / 8$ cup fruit
$3 / 8$ cup juice (full-strength) $+3 / 8$ cup vegetable
$1 / 4$ cup juice (full-strength) $+1 / 2$ cup vegetable
You cannot count full-strength frult or vegetable juice to meet more than one-half of the vegetable/fruit requirement. Any product-either liquid or frozen—labeled "juice," "full-strength juice," "single strength juice," or "reconstituted juice" is considered full-strength juice.
"Julce drinks" served either in liquid or frozen form may contain only a small amount of full-strength juice. The product label may indicate the percentage of full-strength juice in the product. This information is needed to determine the contribution of the product to the meal. To be used in meeting a part of the vogetablefiruit requirement, the product must contain a minimum of 50 percent full-strength juice. Only the full-strength juice portion may be counted to meet the vegetabiefruit requirement.

## Examples:

3 ounces of full-strength juice will provide $3 / 8$ cup of vegetable/fruit (onehalf of the requirement for students in grades $\mathbf{4 - 1 2}$ [Group IV, age 9 and over).

2 ounces of full-strength juice will provide $1 / 4$ cup of vegetable/fruit (onethird of the requirement for students in grades 4-12 [Group IV, age 9 and over] or one-half of the requirement for students in grades K-3 [Group II, ages 5-81).

- Cooked dry beans or peas may be used as a meat alternate or as a vegetable but not as both in the same meal.
- Small amounts (less than 1/8 cup) of vegetables and fruits used for flavoring or an optional ingredient, such as a garnish, should not be counted to meet the vegetable/fruit requirement. These small amounts are generally not controlled and no determination can be made of the contribu. tion to the lunch.
- Potato chips, corn chips, and other similar chips which are considered snack foods may not be counted as a vegetable to meet the vegetable/fruit requirement.
- Vegetable and fruit concentrates may be credited on a single-strength reconstituted basis rather than on the actual volume as served, regardless of the concentration or dilution.

## 23

Minimum quantitos for students, grades K-12:

|  | Grades K-3 | Grades 4-12 |
| :--- | :--- | :--- |
|  | ages 5-8 | age 9 and over |
|  | (Group III) | (Group IV) |

A serving is:

- One slice of whole-grain or enriched bread
- A biscuit, roll, muffin, etc., whole-grain or enriched
- $1 / 2$ cup of cooked whole-grain or enriched rice
- 1/2 cup of macaroni, noodles, other whole-grain or enriched pasta products, or other cereal grains such as bulgur or corn grits - A combination of any of the above.

Speciflc
Requirements and Policies

- Only breads or bread alternates that are whole-grain or enriched may be used to meet the bread requirement.
- The dally minimum lunch requirements of bread or bread alternate by group are as follows: Group I, one-half serving; Groups II-IV, one serving. Over a 5-day week, the total requirements are: Group I, 5 servings of bread or bread alternate; Groups II-IV, 8 servings. Schools serving lunch 6 or 7 days per week should increase this specified quantity for the 5 -day period by approximately 20 percent (one-fifth) for each edditional day. Accordingly, for each day less than a 5 -day week, the school should decrease the quantity by approximately 20 percent (one-fifth).
- In order for an lte $n$ to be counted toward meeting the bread requirement, it should be at leas c one-fourth of a serving.
- Only bread/bread alternates that are customarily served as an accompariment to or a recognizabte integral part of the main dish may be used to meet the bread requirement. You may not use dessert and snack-type foods, such as cakes, cookies, dessert pie crust, hard thin pretzels, and corn chips, to meet the bread requirement.
- Minimum weights of a serving of various breads and bread alternates must be met. These minimum weights are given in the Food Buying Guide for Child Nutrition Programe.
- Enriched macaroni products with fortified protein may be used to meet a part of the meat/meat alternate requirement or to meet the bread/bread alternate requirement, but not both in the same meal.

MIIk Component

| Minimum quantitios for students, grades K-12: |  |  |
| :---: | :---: | :---: |
|  | Grades K.3 <br> ages 5-8 <br> (Group III) | Grades 4-12 age 9 and over (Group IV) |
| A sorving of fluid milk | $\begin{aligned} & 1 / 2 \text { pint } \\ & (8 \mathrm{fl} \mathrm{oz}) \end{aligned}$ | $\begin{aligned} & 1 / 2 \text { pint } \\ & (8 \mathrm{fl} \text { oz }) \end{aligned}$ |

At least one of the following forms of milk must be offered:
Unflavored lowfat milk
Unflavored skim milk
Unflavored buttermilk
Note: This requirement does not prohibit offering other milks, such as whole milk or flavored milk, along with one or more of the above.

- Milk must be served as a beverage in lunches.
- Milkshakes containing $1 / 2$ pint of fluid milk meeting State or local standards for fluid milk may be served as a choice to meet the milk require. ment.
- It is recognized that some schools may not be able to obtain a supply of unflavored fluid lowfat milk, skim milk, or buttermilk on a continuing basis due to local conditions. In such cases, the State agency, or Food and Nutrition Service Regional Office, where applicable, may approve the service of another type of fluid milk. It is recommended that you seek ap. proval of available fluid milk with the lowest fat and sugar content as an alternate.

## The Basics of Menu Planning

Food Production Record

## Chapter 2-THE BASICS OF MENU PLANNING

As Menus Are Planneă, Consider the Points that Follow:

## Qeneral Principles

Creative menu planning calls ! fr originality, imagination, and a spirit of adventure. Those responsible for planning menus must have as their goal to plan appealing and Interesting lunch and breakfast menus that keep within the budget. Lunches can vary fron the simplef box lunch to the lunch with many choices. Advances in food technology make it possible to select foods from many forms, such as frozen or chilled, partially or totally prepared, elther preportioned or in buli, or food prepared from "scratch."

## Plan for Variety

You must consider varlety when combining the components of a lunch menu in order to provide meals that are acceptable and that will meet the nutritional goal of one-third RDA over a period of time. Acceptability, of course, determines how frequently a food can be repeated before it becomes monotoncus.

Therefore, when planning meals . . .

- Include a wide variety of foods from day to day. Unless you provide choices, avoid planning the same form of food on consecutive days, such as meathalls with spaghetti on Monday and beef patties on Tuesday.
(
- Plan for variation in types of lunch menus. For example, plan lunches around casseroles, soup and sandwichies, or main-dish salads.
- Include different forins of foods propared in different ways. You clan use vegetables raw or csoked, peeled or unpeeled, buttered, creamed, or scalloped with different sauces or seasonings, but be sure the "different way" of serving is as good or better than the "usual way."
- Include the food combinations most acceptable to students in your school. The lower the acceptability of the menu item, the less freouently you should serve it.
- Include a surprise item or a small amount of a new or unfamiliar food periodically. For example, add a small amount of an unfamiliar or possibly less popular food, such as raw cauliflower to a sáad.

## Plan for Cholce:

Food service personnel must recognize the importance of serving a variety of choices amons high-quality foods at reasonable prices and in attractive settings. Plan to include choices, elther in all four food components or within one or two food components for both elementary and secondarv students. Any school food service program, regaidless of size, can offer cholces in the menu. Offering choices in schools implementing the "offer vereus senve" provision will not only ancourage these stu'sents to select foods they intend to eat but will also increase the chances of these students selecting the full lunch.

A limited number of choices may be offered within a fow food components. For example, the vegetable/fruit can be a serving of fruit and a choice between two vegetables. On the other hand, where you can, do offer several choices within the total framework of the school lunch. Decide on the number of choices in each category of tood that you can offer in your operation, and plan menus accordingly. With careful planning and efficlent management nffering choices need not increase your operating costs.

## Plan for Contrast

Strive for variety in terms of texture, flavor, methods of preparation, etc.
Therefore, when planning meals . . .

- Use some crisp, firm fooc's with soft creamy ones. For example, a green salad, raw vegetable sticks, a hard roll, or a slice of whole-grain bread could provide crispness to a meal with macaroni and cheese.
- Plan for balance. Include both light and heavy foods in each meal. For example, serve a hearty casserole main dish with a light vegetable or a light dessert such as fresh fruit. A lunch with too many starches, too many fried foods, or too many sweet foods lacks balance.
- Plan ior flavor-balanced menus. For example, use a combination of mild and strong filavored foods, such as cranberry sauce with turkey. Avoid using too many foods with strong fiavors such as broccoll and cole slaw in the same meal.
- Use a pleasing combination of different sizes and shapes of foods. Within a meal, present foods in several different shapes, such as mounds, cubes, shredded bits, strips, etc. A lunch containing meatballs, steamed whole potatoes, whole beets, and muffins, or cubed meat, diced potatoes, mixed vegetables, and fruit cocktail neeeds more contrast in sizes and shapes of foods.

## Plan for Eye Appeal

Use combinations of colors that blend well. Consider the color of the dishes, plates, or trays to be used as well as the colors of the foods.

Therefore, when planning meals ..

- Strive for contrast and maximum coler presentation. Avold using too many foods of the same cotor in the same lunch, such as turkey and rice, caullfower, sliced bread, and pears. Instead, try turkey and cranberry sauce, green peas, whole wheat bread, and pears.
- Use at least one or two colorful foods in each menu. The natural red, green, and orange colors of frults and vegetables add eye appeal.
- Use colorful foods in combination with those of little or no color. For example, use broccoli spears with whipf $3 d$ potatoes, or pimento or green pepper in corn.
- Use garnishes to brighten food naturally lacking in color. For example, add a silce of radish or cucumber, a tomato wedge, a piece of brightly colored frult, a sprig of parsley, or a dash of paprika.
- Plan the way you will place the menu items on the tray or plate. Visualize how the food will look when served and decide on the most attractive arrangement. Before serving the funch, portion a sample plate, so that all servers can see how it should look with regard to serving size, arrangement on plate or tray, and garnish.

Other Areas to Consider

## Food Mabits

Plan lunches that cater to the regional, cultural, and personal food preferences of students. However, include "new" or less popular foods with well-liked or familiar ones as choices and encourage students to try the new food.

- Introduce as "new foods" those which are good sources of vitamins A and C and iron.
- Be sure menus do not reflect your personal food prejudices.

## Special Occasions

Plan lunches which have a festive air for school and national holidays, special school activities, children's birthdays, parents' visiting days, National School Lunch Week, and National Nutrition Month in March.

## Climate or Seasons

Include more hot foods in cold weather, and more cold foods and salads in warm weather.

## Avallability of Foods

Use foods in season. Serve fresh foods when they are plentiful and at the peak of quality.

## Delivery Schedules

Consider the avallability of foods from local suppliers. Reduce the number of deliveries you need. For example, plan menus that include fresh produce or commercially baked breads that you can serve on consecutive days.

## Food Cost

- Operate within a budget.
- Precost your menu. Keep records of the approximate cost per serving of each menu item in order to determine what each lunch will cost, and the average lunch cost per month. You can make substitutions if the average cost of the menu runs too high. For information on precosting menus, see A Guide for Precosting Food for School Food Service.
- Keep abreast of price trends and the market availability of various foods. Identify extremes-items which are very high-priced or those which are very low-priced-with a view to minimizing and maximizing, respectively, in the menu.
- Use USDA-donated foods when availabie. Use them as efficiently and creatively as you would if you had purchased the food.
- Keep records of food purchased and used, and food available in inventories.
- Use standardized recipes for food preparation and portion control.
- Postcost menus and compare with precost. Use this information to make menu adjustments and pinpoint possible problem areas.
- Plan carefully to receive maximum benefits from facilities and personnel.
- Keep participation records about your customers and production records which note menu acceptability.

## Food Purchasing

Foods you serve can only be as good as the quality of the foods you pur. chase. Careful use of competitive buying will not only help control your food cost but will help upgrade the quality of your meals.

- Be familiar with sources of supply and buy from suppliers that provide the best quality food at the most reasonable prices.
- Buy according to how you will use a product. Consider grade, style, type, size, count, container, and packing medium.
- Develop purchase specifications to ensure the purchase of quality foods at competitive prices.
- Inspect upon delivery to assure specitications are met. Whenever possible, buy foods that are Federally graded and inspected.
- For commercially prepared foods, determine the quantities of foods needed and portion sizes according to the age/grade group to be served. Be sure the purchase specifications include that information.
- Femember storage facilities. Decide when to buy each type of food, keeping in mind perishability and storage space.
- Keep records of food purchases.
- Refer to Food Purchasing Pointers for School Food Service for additional information in purchasing quality foods. (See appendix IV.)

## Facilities and Equipment

Plan lunches that you can prepare and serve with the facilities and equip. ment available.

- Consider kind and size of ovens, kettles, steamers, and other equipment, as well as freezer and refrigeration space.
- Consider sheet and baking pans, steamtable inserts, and other equipment used in meal preparation.
- Consider the numbers and kinds of serving tools and dishes or compartments in a compartment tray needed to serve each lunch.

## Personnel

Plan lunches and breakfasts that employees can prepare in the time available.

- Consider the amount of hand preparation required for each menu.
- Schedule employees' time so that their particular skills can be used to best advantage.
- Balance the worklead each day-from day to day and from week to wee'

Plan for the Total Job

## A Bystem for Monu Planning

Planning menus thar satisfy and nourish preschoolers, elementary-age children, and teenagers is a challenging and complex task. From a management standpoint, however, menu planning is probably the most important phase of school food service operations. The wise supervisor or manager will organize the efforts and capitalize on the imagination and talents of many individuals and student groups, thereby assuring food acceptability as well as nutiitional adequacy.

Keep in mind, though, that menus must reflect the capabilities of your food service system. Foilowing are some guidelines that may make the job easier and more efficient:

- Checkllst for evaluating menus (at the end of this chapter)
- Previous menus
- Inventories of USDA-donated foods and purchased foods
- Current price lists and market reports
- Menu item lists-popular foods, unpopular foods
- Past food production records
- School calendar-which will identify the days on which special occasions, holidays, or other circumstances of local significance will influence the menu to be served.
- Publications, such as:

Menu Planning Guide for School Food Service
A Guide for Precosting Food for School Food Service
Food Buying Guide for Chlld Nuttition Programs
Food Purchasing Pointers for School Food Service
Quantity Recipes for Type A School Lunches
Other recipes
Fact sheets on USDA-donated foods.

- Plan menus for at least 1 month at a time. See section on cycle menus in this chapter.
- Consider your purchasing and delivery schedules.
- Plen menus at least 2 weeks, preferably a month, ahead of the time they are to be served.
- Allow enough time to (1) study food inventories, current market and price reports, previous menus, and food production records; (2) review menu item lists; (3) select recipes; and (4) plan and check the resulting menus.
- Allow time to involve students, parents, and other interested parties in the planning.

Good menu planning goes beyond the listing of specific foods to be in. cluded in daily lunches. A menu planning worksheet can help organize the total job:

- Record the planned menus on a worksheet which meets your school's needs. (See appendix II for sample worksheet.)
- Determine the serving sizes and record them beside the menu item on your worksheet.

Cycle Menus Are an Effective Management Tool
C. Ie Menus Have Many Advantages

- Select the specific recipes to be used in preparing the different menu Items. Refer to Qusntity Recipes for Type A School Lunches or Quantity Recipes for Child Care Centers, or other standardized recipes.
- Evaluate the menus for meeting lunch requirements by food components and quantities, as well as for good menu planning practices.
- Calculate the cost of the lunches. Refer to A Guide for Precosting Food for School Food Service. (See appendix IV.)
- Forecast the number of lunches and the number of servings of each menu liem you prepare for varlous age/grade groups by using past food production records.
- Adjust the recipes you select so that they provide the necessary number of servings for the age/grade groups you serve.
- Develop production records by listing the menu ltems, portion sizes, and quantities of foods you need to serve the forecasted number of meals to students and adults. Use the recipes and the Food Buying Guide for Child Nutrition Programs for quantities.
- Determine food inventorles and then prepare purchase orders.
- Develop work schedules.

## Cyole Monus

Cycle menus are a series of carefully pianned menus, used for a definite cycle of time, and then repeated.

They give you an excellent overview of the meals to be served over a period of time as well as ald in menu evaluation and improvement. They save time and give you an opportunity to improve menus. The cycle menus can help you have the best, most economical, and most nutritious meals possible.

Determine a cycle menu pattern far in advance. If you don't want the menus to be repeated on the same day in consecutive weeks, plan menus for an odd number of days not divisible by five, such as 11, 13, or 21 days.

Time required for monu planning is reduced. After the Initial planning of a cycle menu has been completed, the planner has time to revise and make changes to meet special needs, such as for holidays and vacations. This not only avoids last-minute decisions on Just what items you should include, but also provides an opportunity to improve menus in the cycie.

Forecasting is more accurate. Since items on a cycle menu appear in the same grouping each time they are produced, it is easy to determine the relative popularity of each item and forecast production needs. This is particularly useful when offering choices and in schools implementing the "offer versus serve" provision.

Food preparation can become more efficioni. Repetition of the same or nearly the same menu helps standardize preparation procedures and gives the employees a chance to become more efficient through repeated use of familiar recipes.

Costs can be better controlled. Repetition of menu fiems helps to forecast costs more accurately and detect cost problems.

## Cycle Menus Can Have Disadvantages

## Purchasing and Inventory can be streamilined.

Time required to plan work echedules is reduced. You can reuse work schedules. Workloads become constant and evenly distributed so that you can determine labor requirements more accurately.

Monus can become monotonous and repettious if not carulully planned. This is something that needs to be evaluated continually. The more choices that are planned, the less likely the menus are to become monotonous.

Foods In sesson may not be used to the best advantage. This can be avoided through flexibility, such as using general descriptive terms-"fresh fruit"-rather than specific ones-apples, for example. Or, three sets of cycle menus may be planned, one for éach season-fall (September, October, November), winter (December, January, February), and spring (March, Aprll, May).

Holldays and special school activities may go unrecognized. To keep this from happening, you will need to designate that on specific days a special ment: is to be substituted for the one in the cycle.

USDA-donated foods that you recelve de:Ing the year may not it in. The cycle may need adjusting as you receive such foods. Use of general descriptive terms, as described above, can help solve this problem, too.

Leftovers may be difficult to use. If you can add choices when you need to work leftovers into the menus, food waste can be lessened.

Decide on the types of lunches and breakfasts you will be planning. For example, determine the number of choices to be offered in each food component or between types of meals such as hot or cold entrees.

Determine the length of the cycle- 2 weeks, 4 weeks, etc.
Select the lunch patterns appropriate for the age/grade groups to be served.

Remember that flexibility is the keynote-you should review menus frequently to make adjustments for changes in availability of USDA-donated foods; to take advantage of an especially good buy or a seasonal food; and to allow for a holiday or special celebration. Also, a good practice is to keep a list of substitute items to use in the event of an emergency or a changing situation.

CAREFUL SYSTEMATIC PLANNING OF MENUS-WELL IN ADVANCE-IS A KEY TO GOOD MANAGEMENT.

## Stops In Planning Monus

Both the meal requirements and considerations in menu planning have been outlined. Now we are ready to put them together and choose foods that make good menus.

First select the school lunch patterns appropriate for the age/grade groups you will be serving and the period of time these menus cover. Then follow the steps below, using a menu planning worksheet, such as in appendix II.

- Plan the meat or mest alternate for the entire length of time for which menus are being served. Use a variety of meats or meat alternates - in the main dish, such as casseroies, stews, or patties or in the main dish and one other menu item, such as sandwich and soup or sandwich and salad.
- Plan reasonable serving sizes of meat altemates. In order to avoid overly large servings, it may be desirable to serve some meat alternates, such as dry beans and peas, peanut butter, and eggs, in combination with meats or other meat alternates, for example: frankfurter and baked beans, fish sandwich and peanut butter-stuffed celery, or egg salad sandwich and cheese chunk.
- Plan a different meat or meat alternate or a different combination of meat or meat alternates for each day in the week.
- Follow a plan for providing a good variety of meats and meat alternates in the main dishes. For example, in a 4 -week period, your plan to meet the meat and meat alternate requirement could be like the example that follows:

> Meat, alone or supplemented with cheese or peanut butter. . . . 8 to 8 times Poultry, fish, or cheese alone or supplemented with eggs or peanut butter.

> 6 to 8 times Dry beans or dry peas combined with meat or cheese.......... 4 times Other meat and meat alternate or any combination of meat and meat alternate foods................................................ 2 times

- Include meats and meat alternates that are good sources of iron as frequently as possible.
- If you repeat the same main dish during a 2-week period, consider varying the vegetables and fruits used.
- If you do not offer a choice of meat/meat alternate, serve no one meat alternate or form of meat (ground, sliced, pleces, etc.) more than three times in a single week.
- Counterbalance expensive meat or meat alternate items with some that are less expensive.
- In "offer versus serve" situations, it may be wise to plan the meat/meat alternate component in only one menu item. Otherwise, If the meat is served in the main dish and in one other menu item, a student would have to select both items to meet the component requirement.

Choose the Vecelables and Frults

Include two or more servings of vegetables and/or fruits.

- Plan to use vegetabies raw or cooked - alone or combined in salads, casseroles, and stews.
- Plan to use fruits raw or cooked - alone or combined in salads, fruit cups, and desserts.
- Plan vegetables and fruits that complement each main dish and each other. Use a different combination of two or more servings of vegetables and fruits each day. Include all forms of vegetables and fruits: fresh, canned, frozen, and dried.
- Include vegetables and fruits that are sources of:

```
Vitamin A..... at least twice a week
Vitamin C .... at least two or three times a week
Iron .......... as frequently as possible
```

- See Chart 2, Foods for School Lunches and Breakfasts (chapter 1) for a list of vegetables and fruits that are sources of vitamins $A$ and $C$ and iron.
- Include fresh vegetables and fruits frequently.
- Plan a reasonable and appropriate serving size. Plan a larger serving of fruits and popular vegetables and a smaller serving of new and less accepted vegetables.
- Plan for variety. Try to iniroduce students to new vegetables and fruits as often as possible.
- In "offer versus serve" situations, any two or more servings of vegetables and/or fruit must at least equal the quantity specitied in the meal recuirements. Therefore, you may be wise to standardize the serving size to two $3 / 8$-cup servings or two $1 / 2$-cup servings to assure that iwo servings will meet the full requirement.

Include Milk

- Plan to serve fluid milk as a beverage. Offer an unflavored form of fluid low!at milk, skim milk, or buttermilk. Any form of fluid flevored milk or whole milk may be offered as a beverage choice. Schools are not required to offer a choice if lowfat milk, skim milk, or buttermilk is served.
- Remember that nonfat dry milk and fluid milk used in food preparation may not be counted toward meeting the milk requirement.

## Include

Other Foods
ms Needed

- Include other foods that make a contribution to the meal to help meet the students' needs for calories and other nutrients, especially iron.
- Use heavier foods with the lighter lunches. On the other hand, serve light desserts with the more hearty lunches.
- Plan a choice of desserts, including a low-calorie item such as a piece of fresh fruit when heavy desserts are offered.
- Limit the use of sweer desserts such as cakes and cookies, especially cakes with frostings and rich desserts. Whenever possible, replace these items with fresh or canned fruits or try a cool treat of frozen fruit juice. When cakes or cookies are planned, consider such items as oatmeal cookies, molasses cookies, peanut burter cookies, applesauce cake, and carrot cake. When you offer a sweet dessert, plan smaller portions as a choice, if possible. Consider leaving the frosting off the cake or spread it thinly.
- Make foods that do not contribute to meeting a specific meal requirement optional. You should not require students to take these foods.

## Menu Evaluation

After you have planned the menu items and serving sizes for the various age/grade groups, use the checklist below.

Yos No
Requirements - Have you included all components of the meal?

- Have you planned serving sizes that provide the minimum required quantity of:
Meat or meat alternate?
Two or more vegetables and/or fruits?
Whole-grain or enriched bread or bread alternate?
Fluid milk?
- Have you included an unflavored form of fluid lowfat milk, skim milk, or buttermilk?

Recommendations - Have you included a vitamin A vegetable or fruit at least twice a week?

- Have you included a vitamin C vegetable or fruit at least 2 or 3 times a week?
- Have you included several food's for iron each day?
- Have you kept concentrated sweets and sugars to a minimum?
- Have you kept calories from fat to a moderate level?
- Have you kept foods high in salt to a moderate level?
- If ynu have not planned choices, have you avoided serving any one meat alternate or form of meat more than 3 times per week?
- Do your lunches include a good balance of:

Color-in the foods themselves and in garnishes?
Texture-soft and crisp or firm textured foods?
-starchy and other type foods?
Shape-different sized pieces and shapes of foods?
Flavor-bland and tart or mild and strong flavored foods?
Temperature-hot and cold foods?

- Have you included whole.grain bread and cereal products?
- Have you included fresh fruits and vegetables?
- Are most of the foods and food combinations ones your students have learned to eatr?
- Have you considered students' cultural, ethnic, and religious food practices?
- Have you included a popular frod in a lunch which includes a "new" or lesp popular food?
- Do you have a plan to introduce new foods?
- Have you planned festive foods for holidays, birthdays, and school activitles?
- Have you included different kinds or forms of foods (fresh, canned, frozen, dried)?
- Have you included seasonal foods?
- Have you included less familiar toods or new methods of preparation occasionally?

Good Management Practices

- have you planned lunches so that some preparation can be done ahead?
- Have you balanced the workload among employees from day to day?
- Is oven, surface-cooking, or steam-cooking space adequate for ltems planned for each lunch?
- Are proper-sized cooking and serving utensils available?
- Can you easily serve foods planned for each meal?
- Will foods "fit" on dishes or compartment trays?
- Have you taken advantage of USDA-donated foods?
- Have you used foods in inventory to the extent possible?
- Do high and low-cost foods and meals balance?

## Pood Production Record

After planning menus with the foods and portion sizes needed to meet meal requirements, you are ready to prepare a food production record for each day's menu. This record is your pianning tool for the food preparation stage of the meal. It will give those who will prepare the meal the information they need to know to meet meal requirements. It is your record that the meals indeed meet meal requirements and are thus reimbursable.

The fond production record also be somes a written dally history of the number of portions planned and prepared and served of each menu item. The record can also be used to ald in forecasting quantitles of food to plan for in future menus.

A food production record may be very simple or very detalled. However, at a minimum, it should contaln the following information for each dally menu:

- The menu
- Foods used to meet requirements
- Quantity of foods used
- Allowable servings per unit
- Number of planned and prepared portions
- Size of planned and served portions
- Number of leftover portions

Depending on the use you want to make of your record, you may want to add additional information, such as precosting and postcosting, recipe source, and comments about acceptance of the foods. But, regardless of the degree of complexity, the purposes of the food production record are twofold: 1) to direct production and 2) to record production information.

As a written record, it is especially valuable for planning in "offer versus serve" situations. Forecasting how much to prepare when several choices are avallable, or when the number you will serve fluctuates, is at best an "educated guess." However, good records of how many portions of each food item were served in the past can help eliminate some of the guesswork.

Keep in mind while filling out the form to direct food production that you will only partially complete the form. It will bis completed on the day the meal is prepared, thus verifying the number of portions prepared and left over. It then becomes a valuable record of quantities of foods actually used to prepare reimbursable mesis.

# How to Vary Portion Sizes for Various Age/Grade Groups 

## 40 Determining Portion Sizes

41 Planning Lunches for Preschool Children, Ages 1, 2, 3, and 4 (Groups I and II)
43 Planning Lunches for Students in Grades K-3. Ages 5, 6, 7, and 8 (Group III)
45 Planning Lunches for Students in Grades 4-6, Ages 9, 10, and 11 (Group IV)
46 Planning Lunches for Students in Grades 7-12. Age 12 and over (Group V)
43 Planning Lunches for More than One Age/Grade Group in a School
48 Sample Menus for 2 Weeks for Three Age Groups (Groups III-V)

## Chaptor 3. HOW TO VARY PORTIONS FOR VARIOUS agMarade anoups

## Determining Portion Slaes

Schools and institutions are encouraged to serve quantities of foods based on students' nutritional needs, which vary with age. Chart 1 in chapter 1 specifies such quantities of foods for various age/grade groups.

In Determining Which Portion Sizes Are Most Appropriate to Serve:

- Review the ages and grade levels of the students in your school.

Remember that the ages of some students may not necessarlly correspond to the grades as outlined in chart 1.

- Determine the predominant age/grade groups of students in your school. For instance, the predominant ages in a junior high school (grades 7-9) may be 12, 13, and 14, aithough there may be a fow 11-year-olds. Therefore, Group IV and V portion sizes would be the most appropriate to serve, providing the students the choice of the minimum portions or recommended larger portions. In an elementary school with grades K-4, the predominant ages would be $5,6,7,8$, and 9 . Thus, the school should serve Group III and Group IV portioi; sizes, if possible. If not, Group IV portion sizes would be necessary.

If you elect to vary portion sizes, see the following chart suggesting meal patterns appropriate for various age/grade group combinations.

Determining Meal Patterns to Serve*
Suggested Meal

| Ages/Grades in School | Patterns |
| :--- | :--- |
| Preschool (ages 1-4) | Groups I and II |
| Elementary school |  |
| Grades K-3 (ages 5-8) | Group III |

Elementary school
Grades K-4 (ages 5-9) Groups III and IV
Elementary school
Grades K-6 (ages 5-11) Groups III and iV

Middie school
Grades 6-8 (ages 11.13) Groups IV and V

Elementary/junior high school
Grades K-8 (ages 5-13) Groups III, IV, and V
Junior/senior high school
Grades 7 -12 (age 12 and oven) Groups IV and V
-Refer to chart I, School Lunch Patterns for Various Age/Grade Groups, in chapter 1.

## Pianning Lumehos for Preschool Children, Ages 1, 2, 3, and 4 (Oroups I and II)

Keep In Mind the Following:

Children of this age group like simply prepared and very lightly seasoned foods which they can easily recognize. Bite-sized pieces and finger foods are easy for the preschool child to manage. You may cut meat into small pleces, vegetables into strips or chunks, and fruits into small wedges or sections. Offer children a variety of foods, gradually introducing each new food.

| Minimum Quantiles for Proschool Children |  |  |
| :---: | :---: | :---: |
|  | ages $1-2$ (Group I) | hool ages $3-4$ (Group II) |
| Meat or Meat Alternate |  |  |
| A serving of one of the following or a combination to give an equivalent quantity: |  |  |
| Lean meat, poultry, or fish (edible portion as served) | 102 | $11 / 202$ |
| Cheese | 102 | $11 / 202$ |
| Large egg. | 1/2 | $3 / 4$ |
| Cooked dry beans or peas. | 1/4 cup | 3/9 cup |
| Peanut butter | 2 Tbsp | 3 Tbsp |
| Vegetable andlor Fruit |  |  |
| Two or more servings of vegetables or fruit or |  |  |
| Bread or Bread Alternata |  |  |
| Servings of bread and bread alternate. | 5 per week | 8 per week |
| A serving is: |  |  |
| - A biscuit, roll, muffin, etc., whole-grain or enriched |  |  |
| - $1 / 2$ cup of cooked whole-grain or enriched rice, macaroni, noodles, other whole-grain or enriched pasta products, or other cereal grains such as bulgur or corn grits <br> - A combination of any of the above. |  |  |
| Milk |  |  |
| A serving of fluid milk. | $\begin{aligned} & 3 / 4 \operatorname{cup} \\ & (6 \mathrm{fl} \mathrm{oz}) \end{aligned}$ | 3/4 cup |
| At least one of the following forms of milk must be |  | offered: |
| Unflavored lowfat milk |  |  |
| Unflavored skim milk |  |  |
| Unflavored buttermilk |  |  |

- The quantifies of foods for Groups I and II are MINIMUMS. Schools CAN. NOT serve LESS than these MINIMUM quantities to preschool children.
- Since children of this age group can only manage small quantities of food at one time, schools serving preschool children are encouraged to offer lunch at two serving periods which, when combined, will meet the total minimum quantities. For example, at 10 a.m. you could serve juice and toast, and the meat, vegetable, and milk at noon.

Pointers to Follow for Serving Smallor Sizes

Smaller servings of the meatmeat alternate and the vegetable/fruit components may require that you adjust recipe portions and redevelop your purchase specifications.

## Adjusting Recipe Portions

When using USDA Quantity Recipes for Type A School Lunches (1971), you will need to adjust portion sizes, as follows:

## Meathmeat Alternate

The recipes yleld 1002 -ounce equivalent or 2001 -ounce portions of meat/meat alternate, or $13311 / 2$-ounce portions.

## Vegotablea/Frults

The recipes are in 100 servings with some $1 / 1$-cup portions and some $1 / 2$-cup portions. In the latter case when you cut the portion size to $1 / 4$ cup, the recipes will yield $2001 / 4$-cup portions for both Groups I and II.

Redeveioping Purchase Specifications
You may write purchase specifications for preportioned commercial meat products to provide a 1 -ounce equivalent serving of meat/meat alternate for Group I and a $11 / 2$-ounce equivalent serving for Group II. Additionally, in your specifications, you can request smaller hamburger rolls and 6 -ounce cartons of milk. Carefully evaluate the cost of specially portioned iood items.

## Planning Lunches for Students in Grades K-3, Ages 6, 6, 7, and 8 (aroup III)

Keep In Mind the Following

Children of this age group like plain foods which they can easily identify and which are simply prepared and lightly seasoned. Finger foods are particularly popular.

Minimum Quantities for Grades K-3, Ages 5-8 (Group III)

Meat or Mat Altemate
A serving of one of the following or a combination to give an equivalent quantity:
Lean meat, poultry, or fish. (edible portion as served) 1-1/2 0z
Cheese . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1-1/2 oz
Large egg . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 3/
Cooked dry beans or peas . . . . . . . . . . . . . . . . . . . . . . . . . . \% $1 / 8$ cup
Peanut butter . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 3 Tbsp
Vogetable and/or Frult
Two or more servings of vegetables or fruit, or both to total . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $1 / 2$ cup

Brend or Bread Altemate
Servings of bread or bread alternate . . . . . . . . . . . . . . 8 per week
A serving is:

- 1 slice of whole-grain or enriched bread
- A biscuit, roll, muffin, etc., whole-grain or enriched
- 1/2 cup of cooked whole-grain or enriched rice, macaroni, noodles, other whole-grain or enriched pasta products, or other cereal grains such as bulgur or corn grits
- A combination of any of the above.

## Milk

A serving of fluid milk . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 1/2 pint
( 8 fl oz )
At least one of the following forms of milk must be
offered:
Unilavored lowfat milk
Unflavored skim milk
Unflavored buttermilk

Pointers to Follow for Impiementing Smaller Serv 19 Sizes

- The quantities of foods specified for Group III are MINIMUMS. Schools CANNOT serve LESS than these MINIMUM quantitios to students in grades K-3.
- On any given day, schools MAY elect to serve MORE than the MINIMUM quantities of foods specified for Group III. It may not be administratively feaslble, for example, for a school with grades K. 6 to serve two portion sizes for the two age/grade groups in the school. In this situation, the larger portions specified for Group IV (grades 4.12, age 9 and over) should be served to all students.
- Schools serving kindergarten students are encouraged to offer lunch at two serving periods which, when combined, will meet the total minimum quantities specified.

Smaller servings of the meat/meat alternate and vegetable/fruit components may require that you adjust recipe portions and redevelop your purchase specifications.

## Adjusting Recipe Portions

When using USDA Quantify Recipes for Type A School Lunches (1971), you will need to adjust portion sizes, as follows:

## MeavMeat Alternate

The recipes yield 1002 -ounce equivalent or $13311 / 2$-ounce portions.
Vegotables/Fruits
The recipes are in 100 servings with some $1 / 4$.cup portions and some $1 / 2$-cup portions. In the latter case when you cut the portion size to $1 / 4$ cup. the recipes will yield $2001 / 4$.cup portions.

Redeveloping Purchase Specifications
You may write purchase specifications for preportioned commercial meat products to provide a $1 / \%$-ounce equivalent serving of meat/meat alternate. Carefully evaluate the cost of specially portioned food items.

## Planning Lunches for Btudents in Arades 4-6, Ages 0, 10 and 11 (aroup IV)

Although students of this age group still tend to prefer plain foods, many will accept naw foods when properly introduced and prepared in tastetempting ways. Choices of items within the food components will encourage food consumption.

Keep in mind the following:

Minimum Quanthles for Grades 4-6, Ages 0-11 (Group IV)
Meat or Meat Alternate
A serving of one of the fe.:owing or combination to give an equivalent quantity:
Lean meat, pouitry, or fish (edible portion as served) 2 oz
Cheese................................................. 20 Oz
Large egg ................................................ 1
Cooked dry beans or peas .............................. 1/2 cup
Peanut butter ............................................... 4 Tbsp
Vogetable and/or Frult
Two or more servings of vegetables or fruit, or
both to total ........................................... 3/4 cup
Bread or Bread Altornate
Servings of bread or bread alternate ................. 8 per week
A serving is:

- 1 silice of whole-grain or enriched bread
- A biscuit, roll, muffin, etc., whole-grain or enriched
- $1 / 2$ cup of cooked whole-grain or erriched rice, macaroni, noadles, other whole-grain or enriched pasta products, or other cereal grains such as bulgur or corn grits
- A combination of any of the above.

Milk
A serving of fluid milk .................................. 1/2 pint
( 8 fl oz )

At least one of the following forms of milk must be offered:
Unflavored lowfat milk
Unflavored skim milk
Unflavored buttermilk

- The quantities of foods specifled for Group IV are MINIMUMS. Schools CANNOT serve LESS than these MINIMUM quantities to stiments in grades $4-6$.
- Since most quantity recipes for school food service, including Quantify Recipes for Type A School Lunches (1971), and your present purchase specifications already may be geared for the quantity requirements specified for Group IV, you will not need to adjust recipe portions or redevelop purchase specifications.

Keep in mind the following:

## Pianning Lennehes for Students in Orades 7-12, Age 12 and Over (Oroup V)

Students of this age group, often conscious of their appearance, may be concerned about their weight, and hence the calories they consume. Fresh fruits and vegetables, salads, and special diet plates that are reiatively low in calorles but high in other nutrients are appealing to teenagers and help them meet their nutritional needs as well as their desire for weight control. Some teenagers, on the other hand, have greatly increasing appetites and an increasing requirement for calories. Heartier meals appeal to these teenagers, and they will consume much larger quantities of food than they did in previous years.

Minimum and Recommended Quantitles for Grades 7.12, Age 12 and Over (Group V)

|  | Minimum Quantities | Recommended Quantities |
| :---: | :---: | :---: |
| Mont or Meat Altemate |  |  |
| A serving of one of the following or combination to give an equivalent quantity: |  |  |
| Lean meat, poultry, or fish (edible portion as served) | 202 | 3 oz |
| Cheese | 202 | 302 |
| Large egg | 1 | 112 |
| Cooked dry beans or peas | 1/2 cup | $3 / 4$ cup |
| Peanut butter | 4 Tbsp | 6 Tbsp |
| Vegotable and/or Fruit |  |  |
| Two or more servings of vegetables or fruit, or both to total | 3/4 cup | $3 / 4$ cup |
| Bread or Bread Altemate |  |  |
| Servings of bread or bread alternate | 8 per week | 10 per wook |
| A serving is: |  |  |
| - 1 slice of whole-grain or enriched bread | - A biscuit, roll, muffin, etc., whole-grain or enriched |  |
| - 1/2 cup of cooked whole-grain or enriched rice, macaroni, noodles, other whole-grain or enriched pasta products, or other cereal grains such as bulgur or corn grits |  |  |
| - A combination of any of the above. |  |  |
| Milk |  |  |
| A serving of fluid milk | 1/2 pint <br> ( 8 f\| oz) | 1/2 pint <br> ( 8 f oz) |
| At least one of the following forms of milk must be offered: |  |  |
| Unilavored lowtat milk |  |  |
| Unfiavored skim milk |  |  |
| Unflavored buttermilk |  |  |

Pointers to Follow in Implementing Larger Serving Sizes

- Note that recommended amounts are specified. Schools may at any time serve less than the recommended quantities so long as the quantities served are NO LESS than the MINIMUMS specified above (which are the same minimums as for Group IV). For instance, it may be desirable to serve less than 3 ounces of meat/meat alternate, but at least 2 ounces must be served.
- Larger servings of the meat/meat alternate component and the number of bread/bread alternates served per week could be achieved through menu modification, recipe portion-size adjustment, and redevelopment of purchase specifications.

## Mariu Modification

To provide a 3-ounce serving of meat/meat alternate, complement planned menu items with acceptable meat/meat alternate items.

| Examples: | Amount of Meat/Meat |  |  |
| :---: | :---: | :---: | :---: |
| Planned Menu | Alternato | Additional |  |
|  |  | Menu Item | Serving Size |
| Commercial beef |  |  |  |
| patiy | 202 | Slice of cheose | 102 |
| Meat taco(s) | 202 | Refried beans | 1/4 cup (1 02 |
| Fisthburger | 202 | Slice of cheese. | 1 oz |

Increase the serving size for bread/bread alternates, such as spaghetti any noodies-plan $3 /$-cup servings instead of $1 / 2$-cup, or supplement the meat with another bread or bread alternate, such as crackers with soup and sandwich, or a slice of french bread with a pasta dish.

## Adjusting Recipe Portions

When using USDA Quantity Recipes for Type A School Lunches (1971), you will need to adjust portions for the meat/meat alternate. The recipes yieid 1 CO 2 -ounce equivalent or 663 -ounce poritons.

## Redeveloping Purchase Specifications

You may write purchase specifications for preportioned commercial meat p.oducts to provide a 3 -ounce equivalent serving of meat/meat alternate. You may want to adjust bread specifications to provide a larger portion. Refer to the Food Buying Guide for Child Nutrition Programs (1983) for bread serving equivalents. Carefully evaluate the cost of specially portioned food items.

## Cost Considerations

Serving larger portions to students in Group $V$ will usually increase costs. Listed below are some pointers to assist in offsetting these higher costs.

Suggested Pointers for Determining How Much to Prepare and/or Serve:

- If feasible and consistent with the local school district policy, charge higher prices for paid lunches in high schools to reflect the cost of the larger serving sizes.
- Two sizes of lunches may be served. Where feasible, offer two portion sizes-one the recommended and the other the minimum students can elect.

## Planning Lunches for More Than One AgelOrade Group In a Bohool

Many schools or institutions have students in more than one age/grade group. If they elect to vary pertion sizes, they will need to serve two or more meal patterns as outlined in chart 1 in chapter 1.

1. Advance sale of ineal tickets by grade level may assist in planning production needs. Color-coding the tickets by age/grade group will make it easier to identify the portion size students should be served.
2. If feasible. arrange for students to enter the cafeteria for lunch by grade level.
3. A management and recordkeeping system, including detalled food production records with how many meals and menu items were served previously by ageigrade group, may assist you in planning future needs when the menu is repeated at a later date.

## Sample Monus for 2 Weoks for Throe Age Qroups (III, IV, and V)

The sample menus on the followirig pages illustrate the concept of how the menu can incorporate the princlpies of good menu planning as well as be adaptable to the three school age groups.

Since menus often reflect the preferences and experiences of the menu planner, these menus were developed not to show acceptable foods for all regions, localities, and ethnic groups, but rather to show the concepts in menu planning:

- A choice of food ltems is frequently planned for students in all three groups.
- Good menu planning principles for color, flavor, texture, and temperature are followed.
- A variety of fresh frults and whole-grain breads are planned in the lunches.
- USDA-donated foods are used wisely.

## 37aVIIVAV AdOO 153:

## Planning Breakfasts

52 Background
52 Breakfast Meal Requirements
53 Planning Guidelines
54 Sample Breakfast Menus
55 Coordinating Breakfast and Lunch Menus
57 Breakfast Menu Evaluation

## Chapter 4-PLANNING BREAKFASTS

## Enckground

Since its inception in 1966, the School Breakfast Program has grown to serve a morning meal to an average of over 3 million students each day. The value of this program is that it provides a breakfast to students who do not eat breakfast at home. A student who has eaten breakfast is more alert and less fatigued, and is thought to have a better chance of doing well in school. Also, there are fewer discipline problems among some students who start the day with a good breakfast.

School breakfasts provide a good start toward meeting a child's daily nutritional needs of food energy, protein, vitamins, and minerals. The breakfast meal pattern is a simple, easy-to-follow guide in three components.

## Breakfant Meal Requirements

Fluid Milk
As a beverage or on cereal or both................... $\quad$ i/2 pint
Recommendations To help meet children's nutritional needs, breakfast should also contain as often as possible:
Meat or meat altemate-a 1 -ounce serving (edible portion as served) of meat, poultry, or fish, or 1 ounce of cheese; or 1 egg; or 2 tablespoons of peanut butter; or an equivalent amount of any combination of these foods.

Also, plan to include:

- Vitamin C foods frequently.
- Foods for iron each day.

## Pianning Guldellnes

The general principles of menu planning discussed in chapter 2 apply when planning breakfasts. Planning appetizing breakfast menus that students will enjoy requires originality and imagination. You should try to plan breakfasts that consider students' regional, cultural, and personal food preferences. Be sure to include well-liked and familiar foods. Offer "new" and less popular ones as choices ai first until they have higher acceptability. Plan for contrast in texture, flavor, size, and shape of foods applying the principles of good menu planning. For example:

Fruits and Vegetables You can use fresh, canned, frozen, and dried fruits interchangeably. Try combining fruits with cereal for variety.

Bread and Bread Alternates

Meat and Meat Alternates

Bread offers many different menu ideas. L'se a variety of hot breads, such as cornbread, and different kinds of mufins and biscults. Or you might try breakfast rolls made with bulgur, rolled wheat, or oats. Sandwiches (openfaced or closed), pancakes, waffles, and trench toast are often weil accepted.

Cereals can give you a light or hearty breakfast and require little labor. You can serve cereals hot or use prepackaged preportioned dry cereals, including wheat, corn, rice, and oats.

Use a variety of meat or meat alternates-egos, sausage, canned meat, ground beef, ham, choese, peanut butter, fish, or poultry. Atemate egg dishes with other maln dishes. Serve the egg alone or in combination with different meats or cheese. Look for variety in preparing eggs-scrambled, hard-cooked, soft-cooked, poached, or in omelats or french toast.

Keep in mind the age groups you are serving. The way food is served to young chlidren will affect whether or not it is eaten. For instance, it may be necessary to serve hard-cooked eggs peeled and cut in halves, whereas with older students hard-cooked eggs can be served in the shell. With smaller children, serve finger sandwiches, apple wedges, sectioned oranges and grapefruits, and meat cut into bite-sized pieces. Serve small portions of additional foods. Untraditional foods at breakfast may make breakfast more appealing to students in the upper grades. Since appetites may vary greatly among students, you may wish to consider two different breakfast menus-a "Hearty Breakfast" and a lighter "Eye Opener", For example:

## Hearty Breakfast Eye Opener

Scrambled Eggs Dry Cereal
Cinnamon Toast Fresh Fruit
Fresh Fruit Milk
Milk

## Breakfant Smmple Menus

When you are planning the breakfast menu, it is also important to consider the lunch menu that has been planned for the day.

- Avold repeating at lunch the same food served at breakfast. For example, don't serve orange fuice at breakfast and again at lunch.
- Be sure the equipment you use for the preparation of breakfast will not interfere with what you need to prepare for lunch.
- Schedule personnel carefully so they can be effective.

Sample Breakfast and Lunch Menus

The following are samples of breakfast and lunch menus planned for a week's time. The menus are for an elementary school, grades i6. In this example, the school didn't vary portions by age/grade groups at lunch, because the students' ages couldn't be identified at serving times. Therefore, the quantities planned for lunch for all students were the quantities specified in Group IV of chart 1, assuring that the students in grades 4,5 , and 6 were being served the m!nimum requirements !or that age group.

Follow through on the total job of planning menus: Determine not only what foods you will serve, but also the total amounts of food you will need, recording this infonnation on food production records, estimating costs, and preparing market orders and work schedules.

| $\begin{aligned} & \text { Pronition } \\ & \text { Prethens } \end{aligned}$ | Mondery | $\begin{aligned} & \text { Por- } \\ & \text { tion } \end{aligned}$ | Tuesday | Portion | Wednesday | Por- | Thurscay | $\begin{aligned} & \text { Por- } \\ & \text { tion } \end{aligned}$ | Friday | Porthon |

## Ghapter 8. MEDGHANDISIMG THE SCHOOL LUNCH AND EREAKPABT

Seeing Students as Customers

Dealing with
Competition

Menu Presentation

In school food service, merchardising means making eating at school an enjoyable experlence. Employees can help do this by being friendly and courteous while serving attractive, good-quality food at a reasonable price, in a pleasant atmosphere.

It is not enough to plan and prepare good food, though that is extremely important in promoting a meal. The appearance and aroma of the meals, as well as the attractiveness of the cafeteria, can tempt the eye and the appeite. The total atmosphere can make a difference in how well the student likes the food. There are many things that you can do to make school lunch and breakfast more popular. You can spice up a meal through presentation with a garnish or two, or spruce up the cafeteria with bri, colors and lively decorations. The aroma of freshly baked bread can bring customers to the cafeteria.

Today, student eating habits are being influenced by developments unthought of a generation ago. Social factors such as family mobility, inothers working outside the home, and modern communicationsespecially television-are affecting what students eat.

Therefore, it you want to "sell" good nutritious foods, you may have to take a modern-day approach. Be aware that increasing mobility and freedoms have led to students wanting more choices as well as more input into what they eat. In this sense, students have become "customers," and competition has entered as a factor.

School food service has to compete with snacks from vending trucks and a whole host of off-campus eating establishments. Therefore, you should take a close look at the presentation, atmosphere, service, and foods at the eating places that are popular with your students. Remember that the successful commercial restaurant knows its customers. Ask yourself what makes these places so successful. You might find that attractive, convenient, and appealing food and service are main reasons.

The following pages of this section will give ideas on merchandising school meals to help make eating the school lunch and breakfast an enjoyable experience.

The written menu is : major communication and marketing device. Thus, it is important for you to ask yourself a few questions. Does the menu sound appealing and offer sufficient variety and choices to interest the students? When planning good, nutritious menus, you should consider the following:

- Menu terminology can turn appetites on or off. Use fresh, new, accurate, and descriptive words to describe menu items that will tempt students' appetites. Some suggestions are: Crisp Vegetable Sticks, Fluffy Rice, and Ruby Red Tomato Slices. Read commercial menus to get ideas of how to interestingly describe the foods you serve.
- Plan menus around holidays and special occaslons. Let students know In advance when these menus will be served. Name menu items aiter school activities, such as a football team or a current school play.
- Offer choices of either individual menu items or an éntire lunch. Avoid monotony by trying new and different service approaches, such as a salad bar, soup and sandwich bar, or a box or bag funch for gating outside on the school grounds. Publicize that these options are avallable. Cause anticipation with announcements and publicity leading up to a planned event.
- Advertise the lunch or breakfast. Telling students what will be on the menu, including what choices are avallable, can be very important. Sending menus home with students will not only help promote the program, but will also inform parents what their children are having for lunch.
- "Display the "menu for the day" or the "special for the day" attractively and in an area where it will attract student attention.
- Use terms like "coming soon," "featuring," "the best in town," "all you can eat," "do your ewn thing," "home of $\qquad$ ," "special of the day," "super sack" (to describe bag lunch), etc.
- Publicize menus in advasice through local newspapers, radio, and the school paper. Also, read the menu-with enthusiam-over the schnol public address system with other announcements.
- Consider descriptive adjectives and presentation when designing the menu format. Remember that presentation includes the order in which menu items are stated as well as the style. The traditional order is: main dish (meat/meat alternate), accompaniment, vegetables, salads, bread (except when part of the main dish), dessert, and milik. You may choose a block style or a balanced arrangement capitalizing each word such as shown on the following page. But be sure to include all parts of the menu.

# Tender Sliced Roast Turkey <br> Cranberry Sauce <br> Fluffy Mashed Potatoes or <br> Southern Candied Yams* <br> Poppy Seed Roll/Butter or Muffin* <br> Fresh Fruit Cup <br> Lowfat Milk or Whole Milk* 

# Thinly Sliced Turkey on Poppy Seed Roll <br> or <br> Sliced Baked Ham on Poppy Seed Roll* <br> Tiny Green Peas or Southern Candied Yams* <br> or <br> Fresh Sliced Tomato on Lettuce Leaf* <br> Hot Apple Crisp or Fresh Orange Slices* Lowfat Milk or Whole Milk* 

## *Student's Chofce

Food Quality Good food is an essential ingredient to continued successful "sellirg" of meals. To "capture" flavor and serve quality food, you should:

- Cook vegetables in batches and avoid holding for more than 15 to 20 minutes before serving. Prepared and served in this manner, vegetables keep their fresh flavor and color and lose a minimum of nutrients.
- Preserve natural food flavors. Contrast or blend flavors carefully.
- Season foods according to standardized recipes. Always taste food before serving to assure that it has been prepared correctly.
- Do not overcook. If an accident does happen and food burns or is a very poor product, avoid the second mistake of serving that food.

You may have heard the following description of a meal: "The food may be good, but it sure doesn't look it." Let's face it. We all "eat with our eyes."

The first step to good food presentation is having menus planned with complementary foods that have pleasing color combinations and variety of shapes, tastes, and textures. The final important step is the actual serving of the food.

When displaying the food, make sure that you have used the proper size pans which fit into the steamtable wells. Use pans and utensils on the serving llne that look good and are clean and free of unappetizing baked-on foods.

Keep and serve hot foods hot and cold foods cold. Crushed ice is a good merchandising medium to accomplish the latter. Attractively display preportioned foods.

You should group choices so that students can make decisions easily. Use neatly printed signs that students understand and will not cause them to ask questions. Notice: Do students understand them? Do they take only one food as directed?

You should carefully place food and other items that students are to pick up alcing the serving line, so that the line moves evenly and students are not waiting to pick up several items grouped at one spot.

## Before the serving line begins, check the following:

1. How does the food display look from the customer's side of the line?
2. How much food will you be serving and with what portioning tool? Do all the people serving the food know what to do? Give clear instructions.
3. Set up a sample plate for each serving area. Make sure that each server knows the portion size that is planned and the correct serving tool to use.
4. Are preportioned items on the serving line in appropriate quantities for the age/grade group you are serving?

Garnishes, that extra touch, should generally be edible and complement the flavor, color, and texture of the food.

Keeping in mind that the garnish cannot require much in time or money, here are some ideas:

- Carrot strips, curls, or pennies for any meal that needs color
- Celery curls or tops placed around the steamtable pan or on a salad plate
- Cucumber, peeled, unpeeled, or scored with the tines of a fork, to add contrast and texture to many meals
- Lemon weoige or silice on fish
- Lime nedge or slice on melons, lime gelatin desserts, or salads
- Orange wedge. slice, or section, on salads or desserts or for color in any meal
- Green and/or red bell pepper rings, strips, or chopped pieces for color and crispness in many differunt dishes, such as salads, main dishes, and vegetables (corn or peas)
- Pineappie cubes, slices, or chunks i. sweet-and-sour dishes or in rice, salads, desserts, and many meats
- Red cabbage to add color to an otherwise bland-colored salad
- Other ideas: a sprinkle of paprika on mashed potatoes, whole potatoes, tuna or chicken salad, or a sprinkle of cinnamon or allspice on applesauce.

Think of all that can be done with the following:

## Parsley sprig, mint leaf, or watercress

Peach slice, chunk, or half
Apple (with or without peel) slice, chunk, or ring
(Prevent darkening by dipping in lemon juice)
Coconut, nuts of all kinds, raisins, grapes, or berries
Bread crumbs and croutons
Cherry tomato, wedge of tomato, or slice
Hard cooked egg, grated, sliced, or wedge

Use of Equipment

- Use the decorative tip on the pastry bag for stuffing eggs and celery, or potatoes; for whipped topping on salads and desserts; and for mayonnaise on salad. Using the pastry bag can be faster, and the results more attractive than using a spoon.
- Cut sandwiches, breads, cakes, and cookies in different shapes for interest.
- Cut sandwich meat, such as turkey and ham, paper-thin and stack high on a bun.
- Cut designs in pastry. For better appearance, bake the pastry crust separately from the cobbler and put on after portioning the cobbler.
- Add a candle to birthday cupcakes for those celebrating birthdays that month.
- Color eggs for display as spring breaks through.
- Choose dishes, cups, and bowls carefully to portion the food. If disposables are used, purchase the correct size. Use clear plastic when appropriate to show off the food. in most cases, food merchandises itself.
- Use logos or nutritional information on cups and milk cartons when possible to add interest.

Use your employees' talents. Together a staff can think of exciting ways to make food look good and make eating at school an exciting and fun adven. ture.

Service with a Smile The service should be fast and efficient, with as short a wait as possible. Polite well-gromed people should provide pleasant service. Consider the following:

- Be ready for students when the breakfast or lunch periods begin.
- Keep employees informed so they can answer student questions.
- Those serving the food can "sell" the program. A smile, a pleasant answer or hello, and a good attitude on the pa:t of those serving the food are all important.
- Have a checklist of what should be on the line or at the service area before service begins, such as napkins, scraws, forks, spoons, knives, condiments, and signs communicating what the customer needs or might want to know. Be sure sufficient quantities are available.
- Colored aprons or specially coordinated uniforms can add much to the atmosphere Soiled uniforms and aprons do not belong on the serving line.
- Employees could ear name tags for a personal touch.
- Calling students by name is the added personal touch.

Cafeteria Atmosphere Keep the cafeteria and the serving line spotlessly clean and attractive.

## Consider:

- Using bright colors in painting the walls. Soft pastels and neutrals may not be the best.
- Maintaining good lighting, especially over the serving area.
- Decorating with nutrition posters and mobiles, murals, art class pictures, or seasonal displays. Invite classes to decorate with artwork or class projects in the cafeteria.
- Hanging plants in the dining room and using carefuliy selected music to create an interesting atmosphere. However, do not put plants on tables where you serve or prepare food.
- Having students name the cafeteria. A good name can help create a good image.
- Arranging tables in interesting groupings, when possible. Note from observation how students prefer sitting. Elementary students may prefer sitting with their class or in large groups. However, tables can be arranged in ways other than stralght lines to accommodate this. Intermediate or junior high school students often like 6 to 10 in their group; high school students may like small groups of 2 to 4, but on occasion may want to have larger groups. You may need combinations of small and large groupings.

Involving Students and Parents

Student and parent involvement is required by Federal regulation for the National School Lunch Program. Experiences across the country have shown that such involvement in the school lunch program has a positive effect on achieving better communication and understanding of program objectives. The involvement has also improved overall acceptability of the school lunch and breakfast and increased participation at all levels.

Follow Through

Innovative ldeas Tradtionally, we think of school meals being served cafeteria-style with someone dishing up the food items. In recent years, many innovative schools have ventured away from the customary-not only in service but menu, as well. Some of these ideas are related in this section.

Keep in mind, though, that with any new service approach, you must ensure the nutritional integrity of the meal and accountability for it. You should plan ways to assure that (1) all components of the meal are available in proper quantities to each student and (2) you can accurately count all meals toward reimbursement in accordance with the State agency's procedures.

Salad, Sandwich, and Breakfast Bars

The job does not stop when you serve the food. If you circulate throughout the serving and dining areas during the lunch period, you can determine what the students are eating and why. This can help you evaluate menu planning, food quality, production, service, and merchandising. Also good public relations are enhanced when the manager and staff answer student questions and listen to their comments. Students need io know that you are interested in them and their comments on the food.

The self-service food bar, which boomed during the seventies in commercial resiaurants, continues to be popular into the eighties. Schools are

To this end, USDA is requiring school food authorities to promote activities at their own discretion to involve students and parents in school lunch programs. Such activities include menu planning, enhancement of the eating environment, program promotion, and related student-community support activities. See the USDA fact sheet, Planning and Carrying Out a Program of Student and Parent Involvement, for detalled instructions. (See appendix IV.) finding the concept of allowing students to build their own salads, sand. wiches, and breakfasts highly successful.

You need littie basic equipment, although it is desirable to have a serving area where you can keep food cold. (Remember that ciushed ice is a great merchandiser.) Portable or moblle-type equipment that you can set up in the kitchen and move to the area where you will serve the meal is desirable. However, many schools have converted serving lines and tables of all kinds to make attractive display areas. Note: you must consider local sanitation requirements when planning self-service areas in the school cafeteria.

In order to assure that you have met Federal requirements and can be accountable for your meals, you may have to preportion several parts of the menu. For example, you could preportion meat/meat alternates, bread, and milk. A cashler stationed at the end of the area can check each tray to determine that all required components are in the meal.

Salad Bars. You can use the salad bar for an accompaniment to the regular lunch or the entire meal. With the varlety of foods on the salad bar and lis "self-service" approach, students may try foods they may not otherwise eat.

The list of foods that you can serve on a salad bar is endiess, but here are a low:

#### Abstract

Meathieat Altemate-cheese of all kind; cheeseballs rolled in peanut granules; egg, tuna, chicken, turkey, and ham salad; bean salad using cooked dry beans or kidney beans; luncheon meat and cheese (alternately stacked silces of meat and cheese, cut in strips for a ribbon effect), shredded, sliced, grated, cubed meats, poultry and cheese; or hard-cooked eggs. Bread/Bread Alternie-croutons made with left-over breads and bread ends, variety of breads, macaroni salad, crackers, bread sticks. VegefablefFruit-raw vegetables, such as cabbage, cauliflower, broccoll, green peppers, cucumbers, mushrooms, tomatoes, carrots, celery, radishes, onions; pickled vegetables, such as beets, cucumbers, beans, and corn relish; cooked cold green peas; chickpeas; melons in season; and fresh and canned fruits of all kinds.

Serve with $1 / 2$ pint of milk, salad dressings (aiways a choice of at least two dressings with one being low-calorie), and other foods such as peanut granules, chow mein noodles, and parmesan cheese for interest and for their nutritive contributions. During the cold months, add hot soups for a nice change.

Soup and Sandwich Bar. This bar can lead to a "build your own sandwich" approach with preportioning of some items. You can try a variety of breads quite well, as well as emphasize the whole-grain breads. The pita (pocket) bread has grown in popularity and is fun to use for holding a taco filling or any combination of fillings, making a "kangaroo sandwich" or pocket sand. wich. Display the pita bread in the salad bowl with the other Ingredients to be added "as you like it" or to "scoop ' $n$ ' serve" for a fresh approach. The fillings are endless, but could include scrambled eggs, cheddar cheese, tomato, mushrooms, onions, avocado, cucumbers, green pepper, beans, and alfalfa sprouts.

A key to the success of the self-service approach is communicating to the students how much food they should take. Even placing the ounce scale for students to weigh out their own combinations of meats and cheese has worked well for some situations. Students will diligently carry out the weighing of their meat/meat alternate or filling a cup or half-cup with the vegetables and/or frults if instructions are clear.

Breakfast Bar. A salad bar can easily be cor verted to make breakfast fun. The large salad bowl is filled with bulk, loose cereal for portioning in the individual bowls. Students serve themselves fruits and berries and/or melons, and top it off with a carton of milk.

Some junior and senior high schools with more than one serving line have had good results using one line to serve "fast food" sandwich-type menus.

Family-Style Service

Smorgasbord or Buffet Style

Continual Service
Some of the schools have wrapped and color-coded sandwiches so several choices can be served. They have also preportioned several parts of the menu so that several choices can be offered and to help speed service in a self-service arrangement. Or, some schools prefer the short-order approach of filling the order student by student. The facilities and amount of staff avallable helps determine which works best. By carefully planning the vegetables and frults to complement the sandwich-type menus, schools can offer nutritious meals of popular foods.

Recently, some elementary schools have had a lot of success with familystyle service. Family-style service, where a group is served at a table from bowls or platters of food, is frequently used at residential child care institutions. A teacher or monitor shows those at the table how much they should serve themselves when the bowl is passed the first time. In many cases, this approach has encouraged students to try new foods and has resulted in less plate waste. This method of service, however, does not erase waste, as the food left in the bowl cannot be reused (in accordance with health department sanitation standards). The system used must assure that enough food is in the bowl for all students to have the proper quantliy of all foods.

This type of service makes occasions like Thanksgiving especially festive. Special table settings and decorations add to the atmosphere.

Modified famlly-style service may be more workable where contro.ling portions is a problem. Serve some food items onto the plate or tray; allow students to serve themselves other food items. For example, you can set up a vegetable or fruit table where you can give choices to students, or the students can pass the bowl or platter containing the foods at the table. you should give directions on how much food comprises a serving.

With smorgasbord or buffet-style service, customers serve themselves or pick up preportioned foods, generally from a large selection. Controlling food cost and assuring that each stud t's lunch meets the meal requirements requires special planning and control. Self-service will take less labor to serve large numbers and can be more efficient. If you space items to be picked up properly, you can serve as many as 25 students per minute. Preportioning of some items and good instructions on quantities the students are to select are very important.

The employees will be replenishing the line and greeting customers, with a cashier taking the money or tickets and accounting for meals served. Accounting methods should have the State agency's approval.

In some cases, the regular serving line has been altered slightly. However, you should follow sanitation rules, such as having a sneeze guard over foods. Make sure to meet local health codes.

Serving food during much of the school day-beyond normal lunch periods -has been successful for some schools. Many high schools have started continual service to meet needs of students on work programs or unusual schedules of classes, such as split shifts, or to alleviate overcrowded conditions in the dining areas. Also, students will drop in the cafeteria for
socializing during free periods or as a study hall. In most cases, participation has increased when service has been made available over extended periods of time.

In these situations, the schools serve breakfast until midmorning, and lunch, milk, and a la carte food items over several hours.

Restaurant With Table The regular school lunch served with a flair can best describe this apService

Bag or Box Lunch

Vegetarian Menu
proach. Because of labor cost constraints, the restaurant with table service approach has worked more successfully where students are used to serve and bus tables as part of vocational training. In most cases, the restaurant is in addition to the regular cafeteria service and is separate from regular dining room. Interesting decor, logo, and themes are necessary.

Advance reservations have worked well and usually are necessary because of the popularity of this special service. Schools must avoid discrimination between paying students and those receiving free or reduced-price meals. Vocational classes working with the food service manager have been able to turn the operation of the restaurant into a real learning experience in customer reiations, proper serving of meals, correct table setting, etc.

The surprise of seeing what is in the bag or box, speeding up the service, and allowing service to be offered in many different parts of the school have been a few of the reasons scho ils have had success with a bag or box lunch. Although the approach is not new, its convenience has made it work at many schools. It is a good solution for the field trip group, working students, or those students generally "on the go." On a pretty spring day, sitting on the school lawn is just the thing many students want to do. The bag or box lunch can provide change and help break menu monotony. Since you can prepare and preportion many of the foods going into the bag or box lunch ahead of time, you can lighten the workload during peak production and service hours.

Instead of a plain brown bag, try using a colortul bag with special information printed on it that will help promote the lunch. Provide the additional image of a good name, like "super sack" or "nutrition to go."

```
A menu example:
Sandwich (hot or cold, depending on serving arrangements)
Vegetable sticks or cold salads
Fresh fruit
Package of peanuts or "trail mix" of peanuts and raisins or other dried
    fruits
Milk
```

It is possible to serve vegetarians, who eat plant foods, dalry products and eggs, within USDA meal requirements.

Many schools have received requests for vegetarian lunches. Depending on the interests of your students, you may want to offer a vegetarian menu as
an occasional "special of the day" or choice. Care in menu planning is essential, with particular attention to the quality of protein in a vegetarian menu. The best way to assure this is io have a variety of sources of vegetable protein in a meal. Combine legumes and cereals, such as beans with corn, beans with rice, and peanuts with wheat. Serving milk with school lunches and including other dairy products such as cheese and eggs will also help assure the needed quality of protein provided by school lunches.

Some examples of vegetarian menulare:

> Peanut Butter Sandwich with Jelly on Whole-Grain Bread School-Made Veretable Bean Soup Fresh Fruit M11k

> Cottage Cheese Salad with Raisins and Fresh Vegetables (cucumber and carrot sticks)

> Sliced Tomato on Lettuce Whole Wheat Roll M11k

> Bean and Rice Salad (kidney beans, 1 ima beans, corn, and rice on lettuce)

> Cheese and Fruit Cup Molasses Cookie (optional)

> Milk
> Bean Burritos
> (pinto beans, frated cheese, diced tomato, lettuce, tortillas)

> Yellow Corn
> M11k
> Lentil Stew
> (lentils, tomatoes, potatoes. carrots, and celery)

> Orange Silces
> Cheese-Peanut Butter Crackers
> Rice rudding with Raisins Milk

Energy.Saver Menu Consider conserving energy in meal preparation. Highlight your conservation efforts by planning one menu every 2 to 4 weeks that requirnc: little or no cooking. Using disposables (paper supplles) to avoid dishwashing may be considered. Also, a clever name for an energy-saving meal will promote the idea.

# Nutrition Education and Menu Planning 

72 Nutrition Education - its Role
72 The Menu - An Educational Tool
72 The Education Triangle
73 Student Involvement
74 Classroom-Cafeteria Ccordination
75 Getting Parents Involved

## Nutrition Education-Its Role

With good planning, school lunch and breakfast service can be an important teaching tool. It can help students expand their knowledge of nutrition as well as develop useful consumer skilis for making wise food choices throughout their lives. It offers practical experience in adjusting food choices to a constantly changing food supply.

The educational impact is greatest when the food that students get in the cafeteria reflects the nutrition training they get in the classroom along wlith the guidance they get at home.

Well-coordinated nutrition education activities often lead to greater food acceptability, increased interest in cafeteria activities, and higher participation in the school lunch and breakfast programs.

## The Menu-An Educational Tool

The menu is an ongoing, continuous message to the community. It telis a lot about the importance of nutrition education at your school.

It can be both challenging and rewarding to strike a balance between the limited range of foods preferred by many of today's students and the virtually unlimited range of nutritious food choices avallable.

## The Educatlon Triangle

A student's reaction to the menu served at school is the product of many forces. Factors like food costs, other foods sold on campus and off, and your food service setup, all play a part. But most important is the triangle of home, classroom, and cafeteria diagrammed here. Together they exert a powertul and long-range influence over a student's likes and dislikes and attitudes towards food. In this case the cafeteria is the focal point of the triangle, because it is one place where students are in control of their own food choices; where they decide whether or not to eat what is on the menu.

Thus, if a student is never served broccoli at home, there's a good chance he or she will turn it down at school. On the other hand, if that student learns about broccoll through a special study unit in the classroom and gets an opportunity to try It at a tasting party, the student may be more inclined to choose broccoll from the menu.

Collectively, these decisions by individual students-backed by educational influences of those of you in the triangle-determine their level of participation in school lunch and breakfast programs. That, in turn, determines how well the programs succeed in contributing to students' health and well-being.

## Stugent Involvernent

One of the best ways for students to expand their nutrition knowledge is to Pelf plan cafeteria menus. Investigate the possibility of forming a Youth Ad'isory Committee (YAC) at your school, or organize a "menu advisory r urnmittee." Your student advisors can be elther students from one classroom, one grade level, or a committes cf 8-10 students solicited from interested members of the student council or other groups. Rotate commit. tee members on a regular basis to give more students a chance to par. ticipate Initially, provide the committee with information and guidelines about school lunch end breakiast requirement ..

The me;iu advisory committee could conduct a food preference survey to determine the ford lik 33 and dislikes of the students. Using the survey resuits along witt knowledge of nutrition obtained in the classroom and cafeteria-students could plan menus for several days. Try them out in the cafeteria. The cominitteg could then do a followup survey, including a look at food waste, to test student reaction and determine where further improvements are needed.

- Another way you might involve students is investigating the possibility of providing music during the lunch hour. A student might use popular melodies and write nutrition-related lyrics. Thirty-second-spot broadcasts on the school intercom, $\lrcorner$ sing a soap-opera format, are also well received.
- Decorate the cafeteria with student artwork on food and nutrition topics. Sponsor a contest for ne most original poster drawn to advertise school lunch or breakfast. Publicize the contest and offer prizes consistent with the goal of educating the students in making wise food choices.
- Use blackboards to provide a , lace for recording daily tallies of lunches sold. Student aids can compare the nutrient content of the most and least popular of the school lunch menus and post the results on the board for all to see.
- Provide bulletin boards to show curreni topics of interest. Post informa tio rabout weight control and selection of low-calorie items from the school lunch and breakfast. Get student input.
- A modified buffet-style or smorgasbord service could spark new interest in vegetables among the students. Portion the meat, bread, and dessert as usual. At a separate table, highlight a variety of hot and cold attractively displayed vegetables. You might also consider offering the vegetables in bowls-family-style_for students to spoon out their own portions.

A day or two prior to the vegetable buffet, visit the classrooms to explain it to the students. Enccurage them to choose as much of a vegetable or as many different kinds of vegetables ds they want.

Ask student volunteers to draw charts or posters to display in the cafeteria. The posters can illustrate and identify the vegetables offered in the buffet service.

## Clasaroom-Cafotorle Coordination

It's important that lunch and bre...fast menus and cafeteriq functions reflect what is happening in the classroom. Stay informed about classroom activities through regl.. staff meetings or written communications. Serve foods which have been , ighlighted in the class lessons, and remain open to minor modifications in caleteria operations which may help to reinforce an educational concent.

There are several ways that menu plans and classroom a:tivities can be linked:

- Foreign language students can assist in planning ethnic menus and introducing them to other students. Offer assistance in selecting ethnic foors, such as pastas and special vegetables, for any special presenta. tions.
- Take a practical problem to the math class. Ask the students to calculate the cost of various lunch and breakfast menus at school and away from school. Make comparisons and explain the differences.
- Set up a food-drying experiment in the science laboratory for fresh fruits, such as apples. Ask studenis to plan how the dried fruit can be incorporated into the breakfast menu.
- When the health class covers weight control, ask the students to suggest low-calorie foods for breakfast and lunch. Incorporate them into cafeteria menus while the subject is current and ask the students to post signs or cards identifying the low-calorie choices.
- Provide a list of USDA-donated foods to the home economics class to inyestigate how farm policy and food markets affect what is distributed to the school lunch and breakfast programs. Ask them to prepare menus using USDA-donated foods.
- Plan special tasting parties of "new" foods to be introduced in the menu.

## Getting Paronts Invoir.ed

Parents and other family members consciously and unconsciously influence what students eat. Students begin developing values and attitudes about food in infancy and continue to develop them through observing others and modeling their behavior a'ter what they've seen. The ultimate success of any nutrition education program comes when students carry their enthusiasm home.

Invite parents to participate in food activities at school. Offer them an opportunity to learn more about good nutrition and see what their children are doing. A PTA meeting can be designed around a "school lunch sampier" party. Freeze several portions of a variety of lunch menus 2 or 3 weeks in adiznce of the meeting. Heat and display these "samplers" as the refreshment poition of a program devoted to informing the parents about the school food service.

You might also prepare menus a, id school lunch and breakfast information sheets for students tc take home to their parents. Include small quantity recipes based on the school lunch or breakfast menus.

To learn more about food preferences, consider asking the parents to help in filling out a food recall questionnaire.

Seek parent help with cafeteria astivities such as prmparing materials, improving the cafeteria environment, planning special menus, and participating in educational programs. For example, $\varepsilon$ jlist their aid in placing a colorful bulletin board in the cafetaria for nutrition information displays. Or have parents help prepare table talkers or table tents containing nutrition information or answers to nutrition myths.

## Consider the following questions as you plan your menus:

1. Does the menu make a nutrition education statement in which you can take pride?
2. Do the students know that certain foods are included in the menu because they are sources of nutrients their bodies need to be healthy?
3. Does the menu demonstrate ways students may make choices regarding foods in their own lives?
4. Are the physical environment, the social environment, and the way the meal is served conduclve to a pleasant mealtime?
5. Are students and teachers encouraged to be involved in cafeteria activities?
6. Are parents informed and involved in menu planning and in other types of nutrition education activities?

To obtain help in developing these activities, you might contact the follow. ing sources:

1. Your State may be able to help you implement your program, and identify other resources in your area.
2. Your State may already have an audio-visual clearinghouse in operation Materials available through it could help support a nuirition education program.
3. The Food and Nutrition Information Center (FNIC) is a USDA information center that lends books and audinvisual materials dealing with human nutrition, food service management, and food science. For more information you can write to:

## Appendix III <br> Moderating Fat, Bugar, and Bait in Sohool Lunches and Areakfasie

While scientists continue to debate what the optimal dietary level of fat, sugar, and salt ought to be, they generally agree that iffeiong moderation of intake is consistent with gooci health in the general population. The school has a responsibility to safeguard the health of today's children, who are tomorrow's adults. This discussion presents recommendations to help schools address that responsibility. These are not requirements for schools.

The USDA recommendation to moderate fat, sugar, and salt is responsive to current dietary concerns. For some time, research has shown that excessive amounts of these food components in the diet may have health implications. Overconsumption of certain forms of fat has been associated with heart disease in susceptible persons. Sugar has been shown to contribute to tooth decay. Excess sodium in the diet is believed to contribute to highi blood pressure, particularly among people who are susceptible for genetic reasons. The major sources of sodium in the diet are salt, salty foods, and sodiumcontaining food additives and ingredients.

The intent of this recommendation is to maintain the amount of fat, sugar, and salt in school meals at a moderate level by limiting-to the extent that's prac-ficat-(1) the frequency of service of food items that contain relativeiy large amounts of these food components and (2) the quantities of these food components or items containing them that you use in ford preparation. To accomplish this objective, you may wish to exam'ne and modify four major areas within quantity food production.

These are:

1. Menu planning
2. Food purchasing
3. Selection of quantity recipes
4. Techniques of food production
[^1]This discussion is divided into the following sections:
Major Sources of Fat, Sugar, and Salt
Suggestions for Evaluating and Modifying Menu Planning
Suggestions for Purchasing Foods
Suggestions for Madifying Quantify Recipes
Suggestions on Techniquos of Food Production

Major Sources of Fat, Sugar, and Salt

Before examining the areas within quantl . sod production that lend themselves to the goal of moderating the amount of fat, sugar, and salt in school meals, you must be able to ldentify major sources of these food components.

FAT. Various types of fat and olls are frequently used in food preparation. Fat is also a natural component of varlous foods and an ingredient in many commerclally prepared food items.
suen. Varlous types of sugar or sweeteners are frequently used in food preparation. Sugar and sweeteners are also widely used in many commerclally prepared food items.
BALT. Salt contains sodium; sodium is added to foods whenever plain or seasoned sait, or seasoning mixes, are used. Commercially prepared foods sometimes contain a large amount of salt and other sodium compounds added during processing.
irie table below lists types of fat and oils, sugar or "sweeteners," and salt- or sodium-containing ingredients commonly used in food preparation.

Common Ingredienty, Used in Food Preparation

| Fat | Suanh | BALT <br> (Sodium-Contalning |
| :--- | :--- | :--- |
|  |  | Ingredients) |
| Beef fat or tallow | Brown sugar, dark | Meat tenderizers |
| Bufter | Brown sugar, light | Monosodium glutamate |
| Lard | Brown sugar, liquid | Seasoning mixes, such |
| Margarine | Corn syrup | as: |
| Pork fat | Granulated sugar | Salad seasoning |
| Shortening | Honey | Taco seasoning |
| Vegetable oils, | Maple sugar and syrup | Seasoning salts, such as: |
| such as: | Molasses | Onion salt |
| Corn oil | Powdered sugar | Garlic salt |
| Peanut oil | Sugar syrups | Soy sauce |
| Safflower oil |  | Table salt |
| Soybean oil |  | Worcestershire sauce |

Suggestions for Evaluating and Modifying Menu Planning

Menu Evaluation

Menu Modification

Revised Agriculture Handbook No. 8, "Composition of Foods: Raw, Processed, Prepared," and Home and Garden Bulletin No. 233, "Sodium Content of Your Foods," are sources of data on fat and sodium content of foods in frequently used measures. Handbook 8 is being revised in sections. For fat content of foods not yet listed in Handbook 8 sections, an older publication, Agriculture Handbook No. 456, "Nutritive Value of American Foods in Common Units," may be used as a source. Although these sources do not provide values for sugars in foods, they do list the grams of fat and milligrams of sodium. Salt (sodium chioride) is composed of approximately 40 percent sodium. Therefore 1 gram ( 1,000 mililgrams) of salt contains approximately 400 milligrams of sodum and 1 teaspoon of salt ( $\mathbf{5 . 5}$ grams) contains approxImately 2,200 milligrams of sodium. The abeve publications will enable you to make a relative comparison of the amounts r' 'at and sait present in foods available in school meals and make substitutions accordingly.

Your county's Public Health nutritionist and Extension Service home economist should also be able to provide you with sources of information on the composition of foods. They can also help you to calculate the amounts of fat and salt your menus provide before and after you modify them.

The menu determines to a great extent the amount fat, sugar, and salt in school lunches and breakfasts. Therefore, you shculd examine menu planning first. Once you design menus to moderate the use of foods containing relatively large amounts of fat, sugar, or salt, you can review and modify quantity recipes and purchasing specifications. In addition, you can begin to prepare foods in a different way.

The first step in revising the menu is to review your customary menus and identify those foods that contain relatively large amounts of fat, sugar, or salt, and then to note how frequently they are served.

Do you serve foods containing relatively large arrsunts of fat, sugar, or salt dally, several times weekly, once a week, less than once a week, or only occasiorially? Do you serve two or more of these foods in the same meal?

The ertent to which you will need to modify your menu to maintain the amount nt tat, sugar, and salt at a moderate level depends on what you are now serving. If foods that contain relatively large amounts of fat, sugar, or salt appear frequently on the menu, you may need to gradually make several revisions. On the other hand, few changes may be needed if the items on the menu confain oniy moderate amounts of fat, sugar, and salt.

In modifying your menus you should strive for overall balance and moderation of tat, sugar, and salt content for the meal. or even day to day. For example, if you wish to serve a popular food item which contains a relatively large amount of salt, balance the meal by selecting for the other components food items which contain relatively less salt, or plan a meal of lower total salt content for the next day.

When making substitutions for those foods which contain substantial amounts of fat, sugar, or salt, be sure to replace them with items which are acceptable to students. If students participate in this review process and share in deciding which foods to serve, they aie more likely to accept the changes.

To maintain acceptability of the lunch or breakfast, you should modify the menu on a gradual taeis. You can do this by:

1. Making one major modification at a time (for example, leaving the frosting off cake m; be the major modification in a particular menu).
2. Gradually ciscrasaling the number of times you serve a food ltem that is a major source of fat, sugar, or salt (for example, from three to four times per month to one to two ilmes per month).
3. Replacing some relatively high-level sources of fat, sugar, or salt with mocérats ones ifor example, changing from fruited gelatin to canned frult In light syrup cr natural juice, or fresh frult, over a period of several months).

Rovising MenusGeneral Pointers

In nodifying menus, remember that you need not entirely eliminate items containing fat, sugar, and salt. The goals are variety, balance, and moderatil: Listed below are some suggestions:

## FAT

- Serve lower fat meats and meat alternates most of the time-such as fresh or frozen lean meat, poultry, or fish, or cooked dry beans or peas.
- Serve desserts such as fresh fruit or canned fruit in light syrup, sponge cake, angelfood cake, and plain cake without frosting.
- Serve meats and potatoes without gravy. This uill also reduce salt.
- Try introducing ice milk or frozen lowfat yogurt in place of ice cream for a change.

## suaan

- Whenever possible, serve fresh frult or canned 'ruit packed in natural juices, light syrup, or water, and unsweetened natural frult julces. Try a cool treat of frozen frult julce as an occasional dessert.
- When you serve cakes or cor kles use such items as vanilla wafers, girigersnaps, graham crakers, plain cake, or muffins. Go easy on especially sweet desserts like cakes with frosting or rich desserts.
- As an occasional change, try serving unsweetened, cooked fruit-served hot for fulleat flavor. Buke apples without sugar or fill centers of cored apples with ralsins. Add spices like cinnamon, nutmeg, cioves, or allsplce to enhance the flavor of the frult.
- Make unsweetened cereals available at breakfast.
- Serve peanut butter sandwiches without the jelly once in a while or try peanut butter with sliced bananas. Serve frult without the flavored gelatin.

Suggestions for Purchasing Foods

## Bat

- Serve fresh vegetables frequently, plther raw, such as celery sticks and colestaw, or cooked. Only occasio nally serve foods prepared in brine, such as slckles and saserkraut.
- Watch how often you serve foods prepared with barbecue or soy sauce. Serve them only once in a whille.
- Carefully control the amount of condiments such as catsup and mustard you serve with foods.
- Only occasionally serve salted snack items such as potato chips and corn chips as "other foods."
- The amount of salt can be controlled when you prepare foods in your school. If practical, only occasionally serve commercially prepared, ready-io-serve foods such as canned pcirk and beans in sauce, canned or frozen entrees with gravy or tomato sauce, and canned or dehydrated soups.

Through careful purchasing of foods, you can moderate the amount of fat, sugar, and sait in school meals. Some suggestions to follow when purchasing foods include:

1. Check the ingredient statement on a label. It must list Ingredients in the order by welght in which they appear in the product. Therefore, a label's ingredient statement can tell you about the relative amounts of fat, sugar, and salt in the product. If some type of fet, sugar, or salt appears high on the list, it is a major Ingredient.

To use a label's ingredient statement effectively, you must be able to recognize the different names for different forms of fat, sugar, and salt. Here are some common names to look for:

- Fat-the word "oil' or "shortening" in names such as corn oil, coconut oll, palm oll, soybean oll, cottonseed oll, peanut oil, safflower oll, hydrogenated soybean oll, partially hydrogenated corn oll, and vegetable shortening.
- Sugar-sugar, sucrose, glucose, dextrose, fructose, corn syrups, corn sweeteners, natural sweeteners, invert sugar, honey, and molasses.
- Salt-the word "sode'" or "sodlum'" in names such as sodlum bicarbonate, monosodium glutamate, disodlum phosphate, sodium alginate, sodium benzoate, and sodium sulfate.

2. Request nutrition information about a product. flutition labeling is volunLary for most foods and is not required on food products shipped in bulk for use solelv in the manufacture of other foods. Therefore, many foods you use in srhool meals will not have nutrition labeling. However, many companies furnish this Information on request. For those foods on which you can obtain nutrition information, it is useful to compare ine amount of fat and sodium in different brands.
3. Review food purchase specifications to see where you can reduce the amount of fat, sugar, and salt in various foods. You may be able to specify canned frults in light syrups or natural juices, water rather the.n oil pack for tuna, or a lower percentage of fat in grourd beef than you are presently using.

Suggestions for Modifying Quantity Reclpes

Moderating the amount of fat, sugar, and salt in school lunches and breakfasts by altering quantity recipes must be done carefully. In view of all of the functions of fat, sugar, and salt in foods, substituting ingredients or reducing specified amounts of ingredients in recipes should be undertaken systematically. For example, drastically reducing the amount of sugar in a cake or of fat in biscuits may result in an unsatisfactory procuct. Generally, if you reduce fat or sugar in a recipe for baked goods you will have to change the amount of liquid you use. Although reducing the amount of fat, sugar, or salt in recipes must be done carefully, it is not impossibie. Baked products are more of a problem, but generally it is not as difficult to change the amount of fat, sugar, and salt in casseroles and soups. Review all recipes in your file and select those that use largs amounts of fat, sugar, or salt that you consider to be candidates for experimentation. Start with a recipe in a smaller quantity first-riot mere than 25 servings. Make one modification in the recipe at a time. Reduce the amount of the target ingredient between 5 and 10 percent. Prepare the revised reclpe and evaluate lts acceptability. Try additional modification if you ferl it is warranted.

There are some substitutions and modifications that you can generaliy make in a recipe or its manner of preparation without mishap. You must keep in mind how praotical the changes are and how mecoptable the end product will be.

## EXAMPLES:

## FAT

- If acceptable, use dairy products that are luw in fat in your recipes. For example. in p:sparing cream soups or cooked puddings, try using lowfat milk or reconstituted nonfat dry mik.
- Where appropriate, try using cheese made from skim milk, such as mozzarella or cottage cheese (creamed or dry card). For example, you can make pizza with mozzarella and you can use lowfat creamed or dry curd cottage cheese in lasagna.
- Use lean ground begf or port: in recipes such as spaghetti sauce or pizza.
- If practical, prepare your own salad dressing and cut down slightly on the amount of oll used. Or, reduce the amount of salad dressing you use on tossed salad. Thls also reduces salt.
- Replace a portion of the mayonnalse with mayonnalse-type salad dressing or lowfat, plain yogurt in preparing items such as chicken salad and potato selad.
- When tuna is called for in a recipe, use tuna packed in water.

## suan

- Try serving unflavored gelatin sweetened with fruit juices.
- Occasionally sprinkle cakes with powdered sugar or serve with frult. This will reduce the sugar and fat that would come from icings.

## 3ALT

- You may find it acceptable to replace a portion of the salt in a recipe with spices and herbs. Try some of these flavor ideas (remember to test for acceptablily):

Beef dishes: bay leaf, dry mustard, green pepper, marjoram, oregano, basll, nutmeg, onion, pepper, sage, thyme, garlic powder, chill powder, curry.

Chicken dishes: paprika, paisiey, poultry seasoning, sage, thyme, curry, garlic.

Fish dishes: bay leaf, dry mustard, green pepper, lemon juice, paprika.
Vegetables: pepper, lemon Juice, onion, curry, garlic.

- If practical, make your own salad dressing so that you can control the amount of salt and possibly replace some of the salt with seasonings such as dry mustard, basll, thyme, garlic powder, etc.

Suggestions on Techniques of Food Production

After careful menu planning, food purchasing, and recipe revision, you should also lcok at food production techniques.

- Instruct food service employees to follow recipes exactly. This includes not only which ingredients are to be used in a recipe but also the exact amounts of each Ingredient. Many cooks add their personal touch to a recipe by seasoning products with more salt than required in the recipe, adding that extra pound of butter or bacon fat for flavor, sweetening vegetables with just a bit of sugar, or tossing salads with more dressing than is really needed. Although these may seem to be small amounts, each cook incorporating his or her own creative fiair me; hisve an effect on the total amount of fat, sugar, and salt in a school lunch or breakfast.
- Whenever possible, bake or oven-fry such foods as chicken, fish, or french fries instead of frying in deep fat.
- Maintain portion control for all food ltems. This is especially important when adding extra seasonings or flavorings after cooking, such as in buttering breads and salting french fries.
- Trim visible fat from meat such as roasts.
- After cooking meats such as ground beef, drain fat before adding other ingredients.
- Place canned meat in the refrigerator so that the fat will congeal for easy removal.
- Place meats on racks for roasting or baiking so fat can drain off.

Your key to Success

Moderating the amounts of fat, sugar, and salt in school meals without reducIng student acceptability is a challenge. Remember to make modifications gradually, informing your student customers of what you are doing and why. Do not make drastic changes-"moderation" is the word. Then always ask yourself whether the change is practical and acceptable.

[^1]:    SPECIAL NOTE: In making modifications in school meals. keep these thoughts in mind-

    The way in which you approach making changes is important to the 3uccess of the changes. INFORM STULENTS AND TEACHERS THAT MODIFICATIONS IN SCHOOL MEALS ARE BEING MADE AND WHY. IDEALLY, INTERESTED STUDENTS SHOULD BE GIVEN AN OPPORTUNITY TO PARTICIPATE IN THE DECISIONS ON HOW TO MODIFY MEALS. THIS WILL HELP ASSURE STUDENT ACCEPTABILITY. Then, when making modifications, do so grad-ually-nobody likes drastic changes in their foods. The best source of adequaie nutrition is a wide variety of foods with all things taken in moderation.
