## ABSTRACT

Budgeting for instructional equipment at California's public colleges and universities is considered. Information is provided on how the University of California and the California State University budget the replacement of existing instructional equipment as well as instructional equipment in new or altered facilities. Methods used by the community colleges for budgeting instructional equipment in existing or new/altered facilities are also covered. Observations are offered regarding the appropriateness of support and capital outlay portions of the state's budget for the two types of equipment funds, as well as the use of other state and extramural funds. Conclusions and recommendations of the California Postsecondary Education Commission are offeres on the methods and funds for instructional equipment budgeting in California public higher education. Appendices include: equipment price indices, University of California policy on gifts-in-kind, California State University Preliminary Report on Instructional Equipment Replacement, University of California Policy Guidelines for Requesting State Capital Outlay Funds to Equip New or Altered s,ace, and Caiifornia Community College Guidelines for Instructional Equipment Purchases from State Allocation. ## Introduction

ITEM 6420-001-001 of the 1985-86 Budget Act contained the following Supplemental Language regarding the California Postsecondary Education Commission:
5. Equipment Study. The CPEC shall report to the Legislature concerning appropriate state policies for funding new equipment in the public segments of higher education. This review shall consider the adequacy of current measures of need for new equipment and for replacemens of existing equipment and procedures for determining the need for equipment in newly constructed or remodeled facilities. The report will also recommend whether the support or capital outlay portions of the state's budget are appropriate for the varivus types of equipment funds. The report shall be submitted to the legislative fiscal committees and the Joint Legislative Budget Committce by December 1,1985.

To help the Commission fulfill this responsibility, officials of the University of California, the California State U'niversity, and the Chancellor's Office of the California Community Coll?ges provided Commission staff with written statements and descriptions of their respective policies and procedures for budgeting instructional equipment. The staff then held formal discussions with officials of each segment and with staff of the Office of the Legislative Analyst to identify $k$. policy issues regarding funding for instructiona' equipment

In this report, the Commission seeks to provide an overview of each segment's approach to funding instructional equipment, comment on the major policy issues involved, and recommend appropriate State action on them. The report is divided into five sections:

- Chapter One explains how the University of Callfornia and the California State University buciget the replacement of existing instructional equipment;
- Chapter Two describes how the University and State University budget for instructional equipment in new or altered facilities;
- Chapter Three examines the m?thods used by the Community Colleges for budgeting instructional equipment in existing as well as new or altered facilities.
- C'...pter Four offers observations regarding the appropriateness of support and capital outlay portions of the State's budget for the two types of equipmer.t funds as well as the use of other State and extramural funds
- And Chapter Five presents the Commission's conclusions and recommendations on the methods and funds for instructional equipment budgeting in California public higher education

The Commission wishes to acknowledge the assıstance of the segments and the Office of the Legislative Analyst in providing needed information for this report

# Budgeting for the Replacement of Instructional Equipment at California's Public Universities 

IN 1983, the Legislature directed the University of California, the California State University, the Department of Finance, and the Legislative Analyst's office to jointly develop a model for funding the pur chase of high-technology instructional equipment. In complying with this cirective, representatives of theje segments and agencies conducted a thorough review of the two segments' processes for determining the need to replace instructional equipment as well as the historical relation between this determined need and the available funds.
On the basis of this review, the Legislative Analyst concluded that the model used by the University since 1976-77 to estimate its instructional equipment replacement needs was "a reasonable methodology for estimating yearly depraciatinn." Although the Analyst concluded that this model might unavoidably understate the need to replace some higt. technology equipment, this underestimation would be compensated for by the possible overestimation of the need for other equipment. Since the State University had been determining its need for instructional equipment replacement largely on the basis of ad hoc adjustments to formula price increases, the Analyst recommended that it also use the University's model. In Supplemental Language to the 198485 Budget Act, the Legislature directed the State University to do so. Recently, the State University completed ihis task, and its estimated equipment replacement reeds based on the medel will be reflected in its 1986-87 Budget Report. Officials of both segments agree that the model, which uses estimated depreciation os schedule an orderly replacement of instructional equipment, results in good budgetary practice

## Elements of the Instructional <br> Equipment Replacement Model

The model used by the two segmerts derives its depreciation estimates for equipment that still has a useful life by means of a computerized inventory
manage ment system that calculates ' 1 ) the price-adjusted value of equipment; (2) its average useful life; (3) salvage value; and (4) its annual depreciation rate.

## Price adjusted value

The segments annually adjust the price index schedules used in the model in order to reflect the imp.act of inflation by using the Annual Average Producer Price Index published by the U.S. Department of L.abor. These price index schedules, identified by letter codes $A$ to $Z$ cover the following 26 functional groups of inventorial equipment.
A. Wood products
B. Norferrous metals
c. Metal containers

D Hardware
E. Plumbing fixtures
F. Heating equipment
G. Fabricated metal products
H. Miscellaneous metal products
I. Agricultural machinery and equipment
J. Construction machinery and equipment
K. Metalworking machinery and equipment
L. General purpose machinery and equipment
m. Special industry machinery and equipment
N. Electrical machinery and equipmert

0 Miscellaneous machinery and equipment
P. Household furniture
Q. Commercial furmture
R. Floor coverings
s. Household appliances
r Home electrical equipment
$\cup$ Other household durables
$\checkmark$ Motor vehicles and equipment
w. Sporting goods and small arms
x. Photographic equipment
Y. Other miscellaneous products

2 All industrial machinery and equipment
In the event that certain equipment does not correspond to a specific schedule, it is assigned to Schedule Z, "tall Industrial Machinery and Equipment." Ap-
pendix A explains the detailed proce-dures used by the segments to adjust the price of equipment

## Average useful life

The University and State University define the "average useful life" of instructional equipment as the time period during which the equipment retains its ability to serve its intended purpose. To assign useful life values to instructionai equipment groups, they rely primarily on data from the federal Internal Revenue Service, the American Hospital Association, and the California State Board of Equalization. Where differences exist between estimates for the same type of equipment, they are resoived in favor of the modal estimate or, it no medal estimate occurs, the highest estimate.

## Salvage vaiue

The salvage value of equipment is the estimated price for which it can be sold at the end of its estimated useful life, as obtained from the Marshall and Swift Publication Company. The computerized inventory management system is designed to depreciatp equipment no lower than its salvage value, which is expressed in the system as a percent of the price-adjusced value of each equipment item.

## Annual depreciation rates

Annual depreciation rates are incorporated into the inventory management system to yield an estimate of the adjusted value of equipment depreciation expected to accrue across functional equipment categories during the next reported fiscal year. These rates are calculated using "straight-line" depreciation, whereby the amcint of depreciation is estimated to be the same in each year of the equipment's useful life The rates are also adjusted for salvage value. For example, an item purchased for $\$ 1,000$ with a salvage value of 10 percent and a useful life of five years has an annual depreciation rate of 18 percent. Thus its value depreciates 18 percent of its annually adjusted price value each year for five years, at which point it will have been totally depreciated down to its salvage value.

The U'niversity and State University use this method for determining replacement equipment needs for all equipment costing over $\$ 500$-- some 88 percent of their instructional equipment inventories They use
a separate depreciation schedule for the remaining 12 percent, based on the actual useful life ( 10 years) and salvage value ( 7 percent) of items that cost under $\$ 500$, in order to manage the large volume of items in this classification.

## Relation of replacement need to replacement funding

The Stat? first recognized the University's need for instructional equipment replacement in 1976-77 but did not prowide full funding of its estimated annual need until 1984-85. As a result of the underfunding in that eight-year period, the University's backlog of obsolete instructional equipment grew dramatically - to an estimated $\$ 65.8$ million that year, according to the Legislative Analyst Over these eight years, the backlog of the State University grew to $\$ 56.5$ million in 1984 dollars.

The consequences of this delay in full funding are made clear in the University's 1986-87 budget statement (p. 44):

> The past lack of equipment funds has had a negative effect on the instructional program. Departments across the University have redesigned courses around less effective and outmoded equipment, eliminating experiments and exercises from laboratory sessions, reducing laboratory class size because of equipment shortages and then reducing the length of laboratory sessions in order to offer more sections to meet student demand, and limiting enrollments in some majors. The lack of up-to-date equipment for inst-uction and research also affects the University's ability to recruit and retain faculty.

Reductions in the University's backlog were made in 1985-86 through a $\$ 10$ million appropriation designated for this purpose. The University has requested another $\$ 10$ million for 1986-87 to further reduce the backlog, and it anticipates similar subsequent requests in order eventually to fully eliminate the backlog The State University has begun similar efforts, but so far it has not received any funds for this purpose

It is in the State's interest to establish an ongoing support level for funding instructional equipment
replacement that will lead to the systematic reduction and $\epsilon$ ventual elimination of this backlog of obsolete equipment in need of replacement.

## The unresolved issue <br> of equipment donations

The major unresolved policy issue regarding equip-
 equipment. At issue is whether the segments should be officially authorized to add equipment donations to their equipment inventories for maintenance and replacement through State funds. This legislative concern has stemmed from a possibility that the seg. ments would thereby excessively expand their Statefunded equipment inventories.

Clearly, there are two sides to allowing the inclusion of donations to the State inventory. For example, obvious educational benefits may be gained by students having "hands-on" experience with even an older though expensive laser donated by an electronics corporation. On the other hand, the laser might be very costly to repair let aione replace, and these resources might be used to provide somparable educational benefits to a greater number of students in other areas. Similarly, gifts of computer hardware may encourage faculty and students to develop instructional software, thereby expediting the dissemination and incorporation of computer technology into higher education. The disadvantage of including such donations in the State-funded inventory is that the universities may come to rely excessively on one-time donatiors from manufacturers as part of the manufacturers' advertising, promotion, and taxreduction strategies.

In actuality, donated equipment currently constitutes only a small portion of the University's and State University's total equipment inventory, since
manufacturers prefer to give the institutions substantial price discounts rather than nutright donations Moreover, University and State University officials claim that many disincentives exist to using donations solely for the purpose of expanding their State in ventory, such as scarce space and the inability to furnish compelling justification for old and cost-ly-to-repair equipment. They contend that since donated equipment has generally not been part of the University's or State University's equ:ipment inventory base, while meeting the instructional needs of the segments, its omission has resulted in an underestimation of their need for replacement funds. In response, the Legislative Analyst statec in his 1985-86 budget analysis (p. i248):

If denated equipment meets the University's need, it should be credited as an offset toward any gap between desired levels of equipments and current inventories. The counterpart to doing so, however, is that the IER [instructional equipment replacement] model should aiso depreciate the donation, because the need to replace equipment is independent of its original fund source.

For example, the University is requesting a $\$ 3.05$ million augmentation to the $\$ 25.2$ million currently provided for instructional equipment replacement. Of this augmentation, $\$ 1.737$ million is related to the addition of donated equipment to the instructional equipment replacement base.
The Legislatu. 9 directed both segments to report in October 1985 their respective policies for accepting donations and the criteria they currently use for determining what equipment donations will be added to the State funded equipmert inventory. The University's policy statement on gifts-in-kind is reproduced in Appendix B on page 21, and the State University's appears in Appendix C on pages 23-29.

## 2

## Budgeting for Instructional Equipment in New or Altered Facilities at California's Public Universities

## The University of California approach

The University of California estimates the cost of equipping capital facilities and documents its funding requests in two phases -- early planning, and funding justification.

The first phase occurs when a new capita! project is proposed and a cost estimate is prepared. In this phase, the cost estimate is calculated on a dollar-persauare foot basis Capital outlay funding can be requested both fo: built-in equipment that is permanently affixed to a building, such as laboratory benches, and movable equipment such as office furniture and custodial equipment needed io operate the facility. In addition, capital outlay funding requests can include funds to cover "miscellaneous costs" related to equipment procurement. These miscellaneous costs, which are estimated on the basis of 3 percent of the total costs of equipment to be purchased, include those associated with the relocation of existing equipment, consultant costs, and other special fees (Appendix $D$ on page 31 reproduces the University's policy guidelines for the initial request of State capital outlay funds to equip new or altered space.)

The second phase of the estimation and documentation process occurs when the University prepares an itemized equipment list and funding justification for the budget year in which the equipment procurement and installation will actually take place. This phase involves four key steps.

- First, the University prepares a detailed equipment list by (1) defining the specific program activities that will be conducted in each room of the facilicy, and (2) identifying both the existing equipment to be used and the new equipment to be purchased (a cost estimate is required only for the new equipment).
- Second it reconciles the existing facility and equipment inventories with the space and equipment to be provided by the project
- Third, it summarizes the proposed equipment list and funding request, which includes both the existing equipment retained for the project and the proposed new equipment purchases, by discipline and by type of equipment.
- Fourth and finally, it compares this summary to the equipment allowance initially derived by formula in the first phase and adds supplemental costs of custodial equipment and miscellareous expenses in order to develop its total equipment funding request.

## The California State University approach

The California State University approach to budgeting for instructional equipment in new or altered facilities, which is considerably similar to that used by the University, is based on two cost indexes -- the Engineering News-Record Construction Index and the Ecu:pment Price Index -- both of which are set by the Department of Finance. Display 1 on the next page shuws the application of the Cost Guide for the State University's 1986-87 capital outlay program, and its five-year capital improvement program for 1986-87 through 1990-91.
As Display 1 shows, the State University determines the cost of built-in equipment (Column 3) by reference to the gross square footage of the building unit involved. It budgets movable equipment (Column 4), on the other hand, on the basis of a cost factor per assignable square feet, and it adjusts this latter parameter by subtracting existing equipment that will be moved from the old to the new facility.

## Policy issues under discussion

While there is general agreement that the approaches of the University and State University to budgeting for instructional equipment in new or altered buildings are sound, the Legislative Analyst has

Source Office of the Chancellor, The California State University
raised two policy issues regarding them. The first concerns the extent to which the University and State University recognize used instructional equipment as usable in new or altered facilities, because of their apparent lack of clearly defined criteria for recognizing usable equipm?nt that should be moved to these new structures.

The second issue, which has engendered some debate, involves the possibility of unnecessary , onstr'sction of new buildings or alterations of existing buildings for the primary purpose of obtaining new instructional equip nent. Officials of the University and State University contest the existence of this issu2, at ieast as it has been articulated thus far. They believe that substantial evidence exists to show that such "bootlegging" of instructional equipment is not only contrary to their explicit poiicies and institutional integrity but is also literally impossible to do, since detailed justification for each equipment item is required in any capital program funding request For example, according to the University's policy guidelines reproduced in Appendix D:
A. Requests for funding movable equipment as a part of the capital outlay budget require detailed justification The need and apprupriateness for Stace
funding of equipment is not justified by formula, but rather by itemization and supporting information. It is essential that a funding request for movable equipment for a project involving remodeling of existing space be justified in an especiolly compelling manner, on the basis of the need to make the facility operable for changes in function or program.
B. Office furniture is not funded routinely through the capital outlay budget. Requests for office furniture can be justified only on the bausi of need to provide initial complements of equipment for adcitioral or new FTEs to be housed in a new building, or for new FTEs involved in secondary or tertiary moves. Such requests require convincing justification that initial complements of office furniture for newly approved FTEs have not been provided otherwise through the support budget. General office furniture (dpsks, chairs, tables, credenzas, bookcases, file cabinets) should be relocated by departments from the old to the new location.

# Budgeting for Instructional Equipment in the Califc"nia Community Colleges 

' adgeting for the replacement of existing ins:iuctional equipment

Currently, nó syztematic process exists for deriving an annual statewide estimate of the need by California's 106 Community Colleges to replace instructional equipment. District estimates are derived by varied methodologies, just as the share of total operating budget funds allocated to equipment remains a aistrict decision. In the absence of uniformly derived data from all 70 districts on their needed instructional equipment, it is difficult to assess the historical relation between their need for equipment replacement and the funds "available."

Nonetheless, two recent studies conducted by the Chancellor's Office of the Community Colleges have served to document the extent of their need for new instructional equipment. One study sur"eyed the districts' need tc replace obsolete occupational program equipment as well as their need to upgrade and expand the dimensions of their many occupational piograms to meet the needs of industry. According to that study, $\$ 120,256,946$ is required to eliminate their current backlog of needed occupational prog:am equipment, including installation and maintenance costs, and an additional $\$ 18$ to $\$ 20$ million would be needed to annually thereafter replace obsolete equipment o. 11 an ongoing basis (Chancelior's Office, 1585a).
The second study was more comprehensive: It surveyed all Community College district business managers regarding their districts' total pquipment status and needs, both instructional and noninstructonal. Based on district inventories, appraisals. and fiscal audits, it established the current value of all this equipment ai $\$ 790$ million, with $\$ 500$ million, or 63 percent, of this being the value of instructional equipment. This survey also showed that, over three year cycles, the following cost estimates could be derived (Chancellor's Office, 1985b):
c For replacing and upgrading existing instructional equipment.
$\$ 36,425,461$ over the next three years;
$\$ 42,719,131$ from tr : fcurth through the sixth year; and
$\$ 49,506,753$ from the seventh througn the ninth year.

- For maintaining and repairing existing instructional equipment:
\$78,94, 118 over the next three years;
$\$ 75,142,248$ from the fourth through the sixth year; and
$\$ 94,397,977$ from the seventh through the ninth year.

The 1985-86 Budget Act authorized a $\$ 26.1$ millinn one-time allocation to Community College districts $i, r$ the purchase of instructional equipment, with the money allocated to the districts by the Chancellor on the basis of average daily attendance. The guidelines for instructional equipment purchases from this State allocation are reproduced in Appendix E on page 33. These guidelines seek to standardize the use and accountability of the money by the districts as well as satisf the State as to its use and future needs.

Community College officials argue that the $\$ 26.1$ million appropriation falls far short of the documented need. Thus, the Chancellor's Office is currently designing a survey that will permit the districts to (1) explain how their share of the $\$ 26.1$ million was spent, and (2) make a compelling case for additional funding. Responses to the survey are expected by early 1986.

## Budgeting for instructional equipment in capital projects

Each Community College district is required to develop a continuing five-year plan for capital construction, and in order to coordinate statewide plan-
sing, the Chancellor's Office annually reviews and evaluates these plans.

To request funding for construction, includirg instructional equipment, a district must next prepare "preliminary plans" that detail the scope of work and include cost estimates for all parts of the project, such as utility connections, site development and improvement, building construction, and furniture and movable equipment. It submits this total set of plans, as the "Preliminary Plan Package," to the Chancellor's Office by September 15, and the Chancellor's Office staff reviews and evaluates it to determine costs, efficiencies, utilization, and, subsequently, the anount of federal, State, and district cost shares. The Preliminary Plan Package establishes the final scope of the project as to budget, assignable square footage, gross area, equipment to be purchased relating to the scope and intent of program, and other parameters. The Depa:tment of Finance then reviews the package and the proposed State and district shares, and, if it approves them, it includes the State share in the subsequent capital outlay program of the Governor's Budget. The construction project must then await legislative approval.

The process for estimating the funding needs for both built-in and movable instructional equipment occurs as the Preliminary Plan Package is developed, but the process differs for the two types of equipment. Budgeting for built in instructional equipment appears to be a nonprescriptive activity carried out early in the planning phase, with instructors and department heads typically specifying the builtin equipment that they need for their educational program. Their specificatio .. are hen reviewed bv district officials in preparation or architectur.
plans and detailed cost estimates of tiee construction project. Fein explicit criteria are used either at the district level or statewide level for estimating the funding needs for this equipment.

By contrast, the budgeting process for movable instructional equipment is clearly defined and empirical. The Department of Finance requires a formuiaderived "calculation of estımated equipment cost" in the Preliminary Plan Package, and this calculation is derived using a "cost per assignable-square-foot" index for each type of space, as shown in Display 2 on the next page.
The two recent surveys conducted by the Chancellor's Office served to derive one-time estimates of the Community Colleges' statewide need for new instructional equipment, but these estimates are based largely on district perceptions of the need for new equipment, and the assumption that, on average, the State's total Community College inventory of instructional equipment becomes obsolete every ten years. A more empirical, accurate, and uniform methodology for estimating their need for instructional equipment zeplacement seems necessary if the estimates are to have greater credibility with the Legislature and Governor.

A formula-derived funding allowance for built-in equipment, such as that used by the four-year segments, would have several advantages: (1) Community College leaders could establ'sh criteria for assignir.s priorities among competing programs and campuses, whereas monies are now allocated on the ba is of who provides the most compelling justification for funding; (2) accountability for the use of nds could be improved; and (3) a safeguard would eated against over-funding built-in equipment.

## Support Versus Capital Outlay Funds to Budget Instructional Equipment

SUPPLEMENTAL Language to the 1985-86 Budget Act directed the Commission to "recommend whether the support or capital outlay portions of the State's budget are sippropriate for the various cypes of equipment funds." Based on the eviderce gatheied for this report, the Commission concludes that the use of support budget appropriations to furd the replacement of insiructional equipment in existing facilities and the use of capital outlay funds to finance equipment in new or altered facilities is clearly appropriate. This practice is followed censistently throughout the nation, and California's me'hods for doing so at the University and State University are widely considered to be ameng the best in the country.

Two issues involving the use of support funds warrant attention, however, and continuing discussions between staff of the Office of the Legislative Analyst and officials of the segments may be required to resolve these issues.

- One is limitations on the use of support funds to purchase new instructional equipmen ${ }^{+}$apart from the regular instructional equipmest replacement process. Currently, the University and State University are allowed to allocate a small portion of support funds under the Institutional Support category for the purchase of new instructional equipment, but officials of both segments contend that this portion is too limited and that more flexibility is needed in the support budget for this purpose.
- Tt.e second issue involves the use of support and extramural funds to finance the replacement of donated equipment that is added to the instructional equipment replacement inventory. As noted in Chapter One above, this issue involves the role of funding from extramural sources.

The role of non-instructional equipment replacement and extramural funds

Both the University and State University have available other State and extramural funds that may be used to purchase instructional equipment.

As noted above, currently the University and State Ur:iversity are allowed to allocate a small portion of support funds under the Institutional Support category for the purchase of new instructional equipment, although officials of both segments stress the need for an increase in this portion. In 1982-83, the University and State University added $\$ 9.7$ million and $\$ 7.3$ million, respectively, to their instructional equipment inventory from non-instructional equipment replacement State funds. In that year, the University's intructional equipment replacement purchases from extramural sources totaled $\$ 3.8$ million, and the State University's totaled $\$ 4.4$ million. However, both non-instructional equipment replacement State funds and extramural funds were budgeted to meet new, rather than replacement, needs.
Legislative concerns over the use of these funds involve (1) the substantiai flexibility of the University and State University as to how much to epend on equipment purchuses, and (2) the disincentives for the segments to seek extramural funds caused by the large increase in State support for instructional equipment replacement beginning in 1985. This is clear from the following statement of the Legislative Analyst's Analysts of the Budget Bill for the Fiscal Year July 1, 1984 to June 30. 1985 (p. 1676).

Neither the UC nor the CSU are required to spend a specific sum on equipment purchases. With the substantial increase in state support for IER [instructional equipment replacement proposed for 1984-85, it is possible that individual campuses within CC or CSC might redirect the non-iER state
funds to other budget items. It is also possible that extramural funds will not be sought as aggressively as in past years.

## The role of Lottery funds

To date, Lottery funds have not been designated for use in the instructional equipment replacement program. Yet, for the 1985-86 budget year the University budgeted $\$ 6,000,000$ from Lottery funds for instructional computing to increase student access to computers and maintain the quality of instructional rrograms. Budgeting for instructional use of computers has been a separate process from budgeting for instructional equi .ment replacement. However, as noted in the University's 19£6-87 budget statement (p. 40):

With the movement away from large mainframe computers and toward decentralized aepartmental instructional wicrocomputing laboraiories, the prohibition against using instructional equip-
ment replacement .unds to purchase computers, and the exclusion of computers from the instructional equipment inventory, is no longer practicai or desirable.
As a result, in the University's future requests, minicomputers and microcomputers used for instructional purfoses will be added to the instructional equipment inventory and funds to replace them as they depreciate will be generated through the instructional equipment replacement program. A key issue here is whether Lottery funds will "follow" the computers as they are incorporated into the instructional equipment inventory, but the University and State University are not precluded from using Lottery funds to replace instructional equipment.

The Office of the Legislative Analyst has requested the University to distinguish the instructional equipment replacement inventory associated with computers from the ncn-computer instructional equipment replacement inventory. This will make it possible to monitor the impact on State obligations caused by the purchase, donation, and depreciation of computers.

## Conclusions and Recommendations

## Conclusions

1. The University and State University are currently using an instructional equipment :eplacement model to estimate their need to replace instructional equipment. Overall, this model, which uses estimated equipment depreciation to schedule an orderly replacement of equipinent, has resulted in good budgetary practices for both segments. The Community Colleges, on the other hand, do not have a systematic methodology for deriving an annual staiewide estimate of their need to replace instructional equipment. Because district estimates are derived using varied methodologies, it is difficult to assess the extert to which the instructional equipment replacement needs in the Cominunity College system have been met.
2. Concern about the inclusion of equipment donations to the State-funded equipment inventory ras led the Legislature to direct the University and State University to report their respective policies for accepting donations and the criteria currently used for determining those equipment donations to be added to the State-funced equipment inventsry. The twe reports are reproduced in Appendices B and C .
3 Budgeting for instructional equipment in new or altered facilities at California's public universities and Communitv Colleges, which requires considerable planning and funding justification, is done in a sound manner. Yet, regarding the University and State University, the Legislature has raised its concern about (1) the apparent lack of clearly defined criteria for recognizing "usable" equipment that should be moved to new structures, and (2) the possibility of unnecessary construction of new buildings or alterations of existing buildings for the primary purpose of obtaining new instructional equipment. Concerning the Community Colleges, few explicit criteria are used either at the district level or statewide level for estimating the funding needs for built-in instructional equipment in capital outlay projects.
3. In California higher education, the use of "support" budget appropriations to fund the "replacement" of instructional equipment in existing facilities and the use of "capital outlay" funds to finance equipment in "new" or "altered" facilities is clearly appropriate. This practice is followed consistently nationwide, and the methods of the University and State University for doing so are sound.
4. The University and State University have used non-instructional equipment replacement State funds as well as extramural funds to purchase instructional equipment. These funds, however, have been budgeted to meet new, rather than replacement, needs.

## Recommendations

1. It is in the State's best interest that the future effectiveness of the instructional equipment replacement model, as used currently by the University and State University, be monitored. Otherwise, major problems which might be inherent in the model will not be detected in a timely fashion. For example, it would be useful for the Legislature to know (1) if the institutions' voluntary ust of instructional equipment that the model has declared obsolete and for which State funds are provided has resulted in major overestimations of backlog funding needs, (2) when there is no need to replace obsolete equipment -- primarily because the very purpose of that equipment is itself obsolete, and (3) if the model is insensitive to special needs of the institutions, such as those caused by major changes in enrollments or instructional processes.

2 The Chancellor's Office of the California Community Colleges should investigate the feasibility of implementing a model to estimate the annual statewide need to replace instructional equipment. One option would be adopt the model currently used by the University and State University, or one similar but tailored to
the specific needs of the Community Colleges. Other options would be to develop a new model or one based on experiences elsewhere in the courtry. Regardless of the option chosen, it appears that the Community Colleges need an empirical approach to estimating their annual statewide need to replace instructional equipment. Uniformly derived data from all 70 districts on their needed instructior al equipment and the allocation of resources on the basis of a systematic and scientific process may result in a more equitable treatment of the individual institutions, and would enhance their credibility with State officials.
3. The Legislature should obtain an annual report from each segment showing what portion of the State-funded instructional equipment inventory is related to the additi»n of donated equipment to the inventory. The size of this portion may have major public policy implications. That is, while a portion equaling 2 percent of the total inventory is consistent with past practices and is negligible, a portion equaling from 10 to 50 percent would raise serious questions about the commitment of State funds. The reports address-
ed herein, therefore, should provide the Legislature with a clear presentation of how equipment donations are handled ty the segments. For the same reasons noted above, the report should indicate what portion of the inventory is funded from extramural sources, so as to ensure "maintenance of effort" by the institutions to obtain such funds.
4. Future capital outlay funding requests from the universities as well as the Community Colleges should include a clearly defined criteria for resognizing used equipment as usable in new or altered facilities.
5. Regarding capital outlay projects, the Chancellor's Office of the California Community Colleges should consider using a formula-derived funding allowance for built-in equipment, such as that used by the four-year segments. This would have several advantages: (1) Community College leaders could establish criteria for assigning priorities among competing programs and campuses; (2) accountability for the use of funds could be improved; and (3) a safeguard would be created against over-funding built-in equipment.

## APPENDIX <br> Equipment Price Indices

NOTE: The following material is reproduced from "Description of the Current Procedures for Estimating the University's Annual Instructional Equipment Needs" of the University of California.

## Use of the schedules

These price index scheduies enable the user to adjust the acquisition value of equipment purchased during a speeific year for the effect of inflation. Present value is determined in the following manner:

1 Specify a year and acquisition value of equipmer.t purchased during that year.

2 Construct a "multiplier" with which to multiply the acquisition value of equipment purchased during the specified year
A. Select a price index schedule which most closely approximates the type of equipment purchased during the specified year.
B. Usii.g that price index schedule, construct a multiplier by dividing the price index factor which correspunds to the current year by the price index factor which corresponds to the specified year. The formula for the multiplier is multiplier = current year factor specified year factor
3. Multiply the acquisition value of equipment purchased during the specified year by the multiplier The product is the present value of equipment purchased during the specinied year.

## Example

The user desires to adjust an acquisition value of $\$ 1,000$ of electrical equipment acquired during 1954 for the effect of inflation.

1. The acquisition value $(\$ 1,000)$, year of acquisition (1954), and price index schedule (Schedule N , Electrical Equipment and Machinery) are specified.
2. The price index factor for the current year (137.5) is divided by the price index factor for the specified year (100.0) The result (1.375) is the multiplier.

3 The acquisition value of equipment purchased during the specified year $(\$ 1,000)$ is multiplied by the multiplier. The product ( $\$ 1,375$ ) is the present value of $\$ 1,000$ of electrical equipment purchased during 1954

# APPENDIX B <br> <br> University of California Policy on Gifts-in-Kind 

 <br> <br> University of California Policy on Gifts-in-Kind}

NOTE: The following statement on "Gifts-in-Kind" was adopted by the University of California in March 1982. It is reproduced from Attachment B of the University's "Annual Instructional Equipment Replacement Program Report" of October 1985.

## Legal transfer

In order to consummate a fully effective legal tran: Ser of a gift-in-kind for tax purposes, the property must be placed under the control or in the physical possession of a duly authorized representative of the University other than the donor.

## Accaptance

Units within the University that are to have custody of gifts-in-kind should be consulted before such gifts are accepted, and proposals should be reviewed with special care to ensure that acceptance will not involve firtancial commitments in excess of funds available, or other obligations disproportionate to the usefulness of the gift. Consideration should be given to the cost and feasibility of maintenance, cataloging, crating, delivery, insurance, or display, as well as to space requirement for exhibition or storage. The U.aiversity should decline gifts-in-kind that cannot be used, housed, or displayed appropriately and in accordance with any conditions specitied by the donor.

The terms of gitts of commercial materials should be reviewed carefully to assure their conformity with the pertinent section of University Regulation No. 4, as Sollows: "University laboratories, bureaus and facilities are not to be used for tests, studies, or investigations of a purely commercial character, such as mineral as zays, determination of properties of materials, the performance of efficiencies of machines, analyses of soils, water, insecticides, fertilizers, feeds, fuels, and other materials, statistical calsulations, etc., except when it is shown conclusively
that satisfactory facilities for such services do not exist elsewhere."

## Valuation

Most donors are interested in securing an income tax deduction for their gifts to the University. In order to substantiate the amount of a claimed deduction for gifts-in-kind, the donor may wish to secure a professional appraisal. Decause the appraisal is used solely for the benefit of the donor, the University deems the securing of such an appraisal to be the donor's personal responsibility. However, if an appraisal is desired but the donor does not wish to incur its cost (which is also tax deductible) in addition to making the gift, or if the donor is not rinancially able to co so, it would be appropriate fc. the University to reimburse the donor for the cost of an appraisal, assuming funds for such purposes are available. Direct involvement of the University in secu-ing appraisals could result in their accuracy and objectivity being challenged by the Internal Revenue Service. Thus it is in the donor's best interest that the University neither provide directly nor be responsible for securing the services of an appraiser. In addition, correspondence with the donor shall not indicate the value of a gift-in-kind in any way that could be construed as endorsement of that value for tax purposes.

For internal administrative purposes only, it is appropriate to have a qualified member of the University staff estimate a gift's value. Such an estimate should approximate the market value, and is a use¢!! guide in establishing inventory control and determining appropriate reporting, handling, custody, and insurance.

## Reporting

Gift-in-kind shall be documented on a UDEV 100 , with the estimated value shown in the appropriate box.

# APPENDIX <br> California State University Preliminary Report <br> on Irstructional Equipment Replacement 

October 31, 1985

The Ronorable Walter Stiern
Chair, Joint Legislative Budget Comittee
State Capitol, Room 306
sacramento, California 95814
Dear Senator Stiern:
The Supplemental Report of the 1984 Budget Act. 1984-85 in Iten 6610-001-001, number 1 , staled:

1. Instructional Equipnent Punding Model. California state University (CSO) is directe' 50 prepare ${ }^{\prime \prime}$ il annual report on instructional equipment replacement (IER) needs that identifles (l) the yearly acquisition cost and price-adjusted value of its instructional equipment inventory, (2) the yearly cumulatye percentage value of its inventories, and (3) the estimated depreciation loss that will occur during the budget year. The latter estimate will be the basis for the cSo's IER budget request for the following budget year. The format of this report shall be the same for jniversity of California (UC) and CSD. The report format sinall be deyeloped by the OC, CSO, the Department of Pinance, and the Legislative Analyst' office. These reports shall be subaitted annually to the Joint Legislative Budget Comittee (JLAC) and the legislative fiscal comaittees by October 1 .

It is further the intent of the Legislature that CSU continue its current efforts to fund instructiona: equiprent purchases from its base budget appropitations and extramusal sources. To ensure a maintenance of the cSU's current effort, cSu hall include in its firgt annual IER report information showing the amount of instructional equipment purchases tunded by these sources in the last three fiscal years (1981-82, 1982-83, and 1983-84). cso is directad to maintain in 1984-85 (1) the average level of expenditures for iastructional equifnent made with non-IER state funds during the past thice years and (2) to the maximum extent possible, the average value of equipment added to the iaventory using extramural funding sources during this period. In future years, this maintenance of effort provision shall continue at a price-adjusted level.

The supplemental Report of the 1985 Budget Act in Item 6610-001-001, number 3, further gtaied:
3. Instructional Equipment. It is the intent of the Legislature that Ene CSO submit with its 1985/86 Instructional Equipment Replacement (IER) report (I) the criferia and procedures used systemwide in order to determine whether CSU should accept donated instructional equipment and ( 2 ) an estimate of the annual depreciation of acceptable donations.

This letter constitutes our preliminary response to these requests. ndditional information on cystem and campus policiag regarding the acceptance of donated equipment and data on instructional equipment acquisition from extramural sources ia currently being compled and wili be available by Decembet 1, 1985.

We have implemented procedures that allow us to estimate the annual depreciation losa associated with the CSU instructional equipment. ouz estimation and price-adjustment methods are consistent with those employed by the oniversity of Califoraia. attachnent 1 shows the reported yearly acquisition cost, the price-adjusted value, and the cumulative percentage value of the CSU instructional equipment inventory. Attachment 2 displays the estimated annual depreciation associated with State-funded instructional equipment and with instructional equipment ot: ained from extramural sources.

We note that basic policy governing the acceptance of gifts
is codified in section 89720 of the California education Code and ir Sections $\mathbf{4} 3300$ and 42301 of Title 5 of the California Administrative code (reproduced in Attachment 3).

As indicated above, we havi requested from the campuses the information necessary to complete the report and shall assemble and forvard it by Decenber 1, 1985. please feel free to refer questions to Dr. Anthony $J$. Moye of my staff (ATSS 8-635-5527).
sincerely,

W. Aan Reynolds

Chancellor

## Education Code

## § 89720. Gifts; reports

The trustees may accept on behalr of the state any gift, bequest, devise, or donation of real or personal property whenever such gift and the terms and conditions thererf will aid in carrying out the primary functions of the state coll'ges as specified in Section 66608. Neither Section 11005 of the Government Code nor any other provision of lav requiring approval by a state officer of gifts, bequests, devises, or donations shall apply to such gifts, bequests, devises, or donations. Such gifts, bequests, devises, or drnations, and the disposition thereof, shall be annually reported to the California Postsecondary Education Commission, the Joint Legislative Budget Committee and the Department of Finance by January 5 of each year.
(Stats.1976, c. 1010, § 2, operative April 30, 1977.)

California Admınistrative Code, Title 5
$\$ 42300$
CAl.IFORNIA STATE UNIVL:RSITY
TITLE 5
(p. 522.2)
(Regiat:
No. 35-0-25-92!
Artcle 8. Cifts, Donations, and Bequests to California State University
42300. Determination of B Bneficial Nature of Gift and Acceptance.
(a) The Board of Trustees, pursuant to Education Code Section 89720 has determined that the fellowing gifts, donations, or bequests to the California State University will aid in carrying out the prinarry functions of the California State University as specified in Education Code Section 66608, regardless of the date of proffer and regardless of the amount, if money, and regarclless of the kind, if personal property other than money:
(1) Unconditional gifts of money.
(2) Gifts of money granted upon a condition that it be expended for the purchase of property described in subparagraph (3) hereof or for personal services not to exceed $\$ 500$.
(3) Personal prope a, other than an automobile, truck, or bus when all of the following facts pertain to the gift:
(A) The property is not subject to any trust, condition, reservation, or restriction of any kind.
(B) The property will not require more than $10 n$ square feet of floor space for housing or the construction of specialized faci' es.
(C) The property will not require amounts of state funds for operation, repair, or maintenance that are unreasonable in relation to the item received.
(D) The president having jus adiction of the campus to which the gift, donation, or bequest is made transmits to the Board of Tructees two copies of the notice of acceptance required by Section 42301.
(b) The Board of Trustees, therefore, pursuant to Education Code Section 89720, accepts on behalf of, and in the name o. . a State, any gift, donation or bequest described in subsection (a) which may hereafter be proffered.
(c) The Chancellor may refer any other gift, donation or bequest which may hereafter be proffered, to the Board of Trustees for acceptance; or may, on behalf of the Board of Trustees, accept, on behalf of, and in the name of the State, any such other gift, donation or bequest upon a determination that the same will aid in carrying out the primary functions of the California State University as specified in Education Code Section 66608. The Chancellor shall report to the Board of Trustees all gifts : ccepted by the Chancellor, on behalf of the Board of Trus!ees, pursuant to this subdivision.
(d) Each campus shall report to the Board of Trustees all gifts received pursuant to this section.
NOTE: Authority cited: Sections 66600. 89030 and 63035 , Education Code Reference: Scetion 89720, Education Code.

3. Amendment of NOTE filed 9-20-82; effective thirtieth day thereafter (Register 82, No. 39).

## APPENDIX D

# University of Californio Policy Guidelines for Requesting State Capital Outlay Funds to Equip New or Altered Space 

NOTE: The following material is reproduced from: pages 6-7 of Instructions for Budgeting Equipment: Capital Improvement Program. University of California, 1985.
A. Requests for funding movable equipment as a part of the capital outlay budget require detailed justification. The need and appropriateness for State funding of equipment is not justified by formula, but rather by itemization and supporting information. It is essential that a funding request for movable equipment for a project involving remodeling of existing space be justified in an especially compelling manner, on the basis of the need to make the facility operable for changes in function or program.
B. Office furniture is not funded routinely through the capital outlay budget. quests for office furniture can be justified only on the basis of need to provide initial complements of equipment for additional or new FTEs to be housed in a new building, or for new FTEs involved in secondary or tertiary - oves. Such requests require convincing jus scation that initial complements of office .... niture for newly approved FTE; have not been provided otherwise through the
support budget. General office furniture (desks, chairs, tables, credenzas, bookcases, file cabinets) should be relocated by departments from the old to the new location.
C. Existing instructional and research equipment in departmental laboratories and other facilities is considered to be in operable condition. Funds to repair, restore, or replace equipment are provided annually in departmental support budgets and in an annual State appropriation of operating funds for "Instructional Equipment Replacement" and will not normally be provided from capital equipment appropriations. If, however, there is an especially pressing need to replace an obsolete or nonusable item in conjunction with a move, a request for funding through the capital outlay budget will be considered if accompanied by a rompelling justification.

D State funds for equipping new space are requested for the fiscal year in which the funds can actually be obligated and/or expended. Construction completion dates are sometimes subject to uncertainties which make precise timing of equipment purchases difficult and, in addition, some equipment items require a long lead time for ordering. For these reasons, equipment procurement can be scheduled to overlap with the final months of the construction phase.

## California Community College Guidelines

 for Instructional Equipment Purchases from State AllocationNOTE: The following material is reproduced from "California Community Colleges Guidelines for Instructional Equipment Purchases from State Alloca tion" of the Chancellor's Office, California Commuaity Colleges.

The 1985 Budget Act (SB 150, Chapter 111) contains in item 6870-101-036, provisicn 1: $\$ 25$ million and item 6870-101-146, provision 2 : $\$ 1.1$ million (as reduced by the Governor) for a total of $\$ 26.1$ million for one-time allocation to Community College districts for purchases of instructional equipment. This money is to be allocated to districts by the Chancelior, California Community Colieges, on a per ada basis.

The following guidelines are for the purpose of standardizing the accountability and use of the money by districts and to satisfy the State as to use anlu iurther needs.

## Definitions

(a) "ADA" shall mean the 1985-86 base ADA (1984-85 Funded Annual Average Daily Attendance) for State funding purposes.
(b) "Allocation Rate" shall mean the rate derived by dividing the total State money appropriated for onetime purchases of instructional equipment by the total statewide base ADA.
(c) "Change Dimensions" shall mean the new equipment purchased has changed the emphasis or objective of the instructional program i i anme \%ay (bring a program to state-of-the-art quality).
(d) "Equipment" shall mean tangible property (excluding land and/or buildings and improvements thereon, library books, licensed notor vehicles and, general furniture, i.e., student desks chairs, etc.) of a
more or less permanent nature which cannot be easily lost, stolen, or destroyed and that has material value. (Furniture and computer software which are in integral and necessary component for the use of other specific instructional equipment may be inc!uded.)
(e) "Expansion" shall mean the new equipment purchased makes it possible to sorve addition al students in the instructional program.
(f) "Instructional" shall mean equipnient purchased for in-class instructional and/or Learning Resource Center activities involving presentations, and/or demonstrations as well as student use to enhance learning and skills development.
(g) "Purchase" shall mean acquisition of equipment through outright purchase or lease-purchase (contractual agreements which are termed "leases," "but which in substance and governing bord intent amount to purchase contracts"). Only legal obligations for equipment received on or after July 1, 1985, shai! qualify. Where the equipment purchased is not exclusively for class instructional activities, the cost must be prorated, with applicable cost to instructional activities adequately documented and justified. Where the equipment purchased is funded from roore than one source, the cost must be prorated.
(h) "Replacement" shall mean the equipment purchased has replaced old similar equipment but does not upgrade the instructional program, expand it to serve additional students, or change its emphasis.
(i) "Upgrade" shall mean the equipment purchased is more modern or up-to-date thar. equipment formerly being used, but does not expand the instructional prograin or change its emphasis.

## Allocation

Districts shall be allocated State funds by the Chancellor based on their ADA multiplied by the allocation rate Payment shall be made in two installments,
the first being August and the second being December.

## Accountability

State funds allocated for the purchases of instructional equipment shall be deposited into a separate account in the district's General Fund, Part B-Restricted. This revenue shall be separately accounted for and expended only for instructional equipment. The revenue shall be recorded as State Revenue, Categorical Program Allowances (Controlling Account 8650 , subordinate classification Other Categorical Program Allowances: Instructional Equipment). The disbursement of this money shall be recorded in accordance with the California Community Colleges Budget and Accounting Manuals, Classification of Expenditures by Activity, Instructional Activity Codes 0100 through 4990 and Administrative and Support Activity Code 6100, subsidiary activity categories: "Learning Center" and "Media," and Classification of Expenditures by Object, Capital Outlay, subordinate classification: Equipment (Controlling Account 6400).

The proceeds from any sale or lease of cquipment originally purchased within a five year period with State instructional equipment moneys shall be deposited inte the separate account and available only for purchases of instructional equipment.
Any balanse in the account shall be carried over to the next fiscal year and continues to be restricted for purchases of instructional equipment.

## Report

Districts shall report by February 1, 1986 on forms as prescribed by the Chancellor's Office on the actual and planned disbursements for purchases of instructional equipment. 1985-86 actual and planned disbursement and cost of 1986-87 instructional equipment needs shall be reported and aggregated by the Budget and Accounting Manuals' Classification of Expenditures-Activity and-amounts-ider. fied for most closely meeting the definition of "Replacement." "Upgrade," "Expansion," or "Change Dimensions," -and "Total." In addition, an item by item listing of equipment purchased as of that date shall be included with the report as supplemental information.

The report and supplemental information are required as a condition for the receipt and expenditure of the State allocated instructional tyuipment moneys.

## Audit

Districts' disbursements of the State moneys for purchases of instructional equipment shall be reviewed as part of their contracted audits (ECS 84040) and include testing to determine the equipment was for instructional purposes. This will be developed into one of the standardized "State Compliance Requirements" included in the State Department of Finance's "Standards and Procedures for Audits of California Local Educational Agencies."

## CALIFORNIA POSTSECONDARY EDUCATION COMMISSION

THE California Postsecondary Education Commission is a citizen board established in 1974 by the Legislature and Governor to coordinate the efforts of California's colleges and universities and to provide independent, non-partisan policy analysis and recommendations to the Covernor and Legislature.

## Members of the Commission

The Commission consists of 15 members. Nine represent the general public, with three each appointed for six-year terms by the Covernor, the Senate Rules Committee, and the Speaker of the Assembly. The other six represent the major segments of postsecondary education in California.

As of 1985, the Commissioners representing the general public are:

Seth P. Brunner, Sacramento, Chäirperson
C. Thomas Dean, Long Beach

Seymour M. Farber, M.D., San Francisco
Patricia Gandara, Sacramento
Ralph J. Kaplan, Los Angeles
Roger C. Pettitt, Los Angeles
Sharon N. Skog, Mountain View
Thomas E. Stang, Los Angeles, Vice Chairperson
Stephen P. Teale, M.D., Modesto
Representatives of the segments are:

Sheidon W. Andelson, Los Angeles; representing the Regents of the C-niversity of California

Claudia H. Hampton, Los Angeles; representing the Trustees of the California State University

Peter M. Finnegan, San Francisco; representing the Board of Covernorg of the California Community Colleges

Jean M. Leonard, San Mateo; representing California's independent colleges and universities
Darlene M. Laval, Fresno; representing the Council for Private Postsecondary Educational Institutions

Angie Papadakis, Palos Verdes: representing the California State Board of Education

## Functions of the Commission

The Commission is charged by the Legislature and Governor to "assure the effective utilization of public postsecondary education resources, thereby eliminating waste and unnecessar.' duplication, and to promote diversity, innovation, a.ad responsiveness to student and societal needs."
To this end, the Commission conducts independent reviews of matters affecting the 2,600 institutions of postsecondary education is California, including Community Colleges, four-year colleges, universities, and professional and occupational schools.
As an advisory planning and coordinating body, the Commission does not administer or govern any institutions, nor does it appr e. authorize, or accredit any of them. Instead, it c uperates with other state agencies and non-governmental groups that perform these functions, while operating as an independent board with its own staff and its own specific duties of evaluation, coordination, and planning,

## Operation of the Commission

The Commission holds regular meetings throughout the year at which it debates and takes action on staff studies and takes positions on proposed legislation affecting education beyond the high school in California. By law, the Commission's meetings are open to the public. Requests to address the Commission may be made by writing the Commission in advance or by submitting a request prior to the start of a meeting.
The Commission's day-to-day work is carried out by its staff in Sacramento, under the guidance of its director, Patrick M. Callan, who is appointed by the Commission.
The Commission issues some 30 to 40 reports each year on major issues confronting California postsecondary education. Recent reports are listed on the back cover.

Further information about the Commission, its meetings, its staff, and its publications may $t$ obtained from the Commission offices ai 1020 Twelfth Street, Second Floor, Sacramento, CA 98514; telephone (916) 445-7933.
