ABSTRACT

000

The student performance standards of excellence in mathematics, science, social studies, and writing for Florida schools were developed cooperatively by the Florida Department of Education, local school district personnel and representatives of institutions of higher education. These standards and skills were reviewed by teachers and supervisors throughout the state. A second revision was sent to superintendents in each district for review by appropriate persons with subject area expertise. In put from reviews was used to prepare the final document for State Board of Education approval. The standards represent general and higher-level competencies at grades 3, 5, 8, and 12. Written in broad general terms, the standards are intended to communicate with the general public. The skill statements provide teachers and curriculum specialists with more specific information concerning the performance expected of high-achieving students at specific grade levels. These skills will form the basis for a state assessment program in each of the areas of mathematics, science, social studies and writing. Tables summarize the number of applicable standards and skills for each grade level. A listing by subject area of standards and skills and the grade levels to which they apply, comprises the balance of the document. Upon the authority of the Educational Reform Act of 1983 the Florida State Board of Education approved these standards of excellence on September 20, 1983 and required each district school board to adopt by July 1, 1984, rules which provide for appropriate instruction based upon these standards. Commissioner's Message

Florida's major tarust in education, as indicated by our state's current goal to become a state of educational distinction, is focused upon higher achievement in all academic areas. The students in Florida's public schools have been demonstrating continuous progress as reflected through improved scores on the State Student Assessment Tests based on the state adopted minimum student performance standards.

The educational leadership throughout this state has provided the knowledge and resources that account for this improvement, and I am sure that the strong support of students, parents and the general public for our educational programs will ensure continued improvement in student achievement.

In keeping with our success and our goal to make Florida a state of educational distinction, the Division of Public Schools has developed student performance standards of excellence in mathematics, science, social studies and writing. These standards were developed and reviewed statewide through the cooperative efforts of teachers, district supervisors and administrators, community college and university personnel, department of education personnel and lay citizens.

These standards represent a broad spectrum of higher-level competencies expected of those students who demonstrate progress toward academic excellence in specified fields of study in our public schools. The skills will form the basis for a state assessment program in each of the areas of mathematics, science, social studies and writing. Information obtained through assessment will be used to evaluate the effectiveness of programs in helping students obtain these competencies.

The Florida Legislature passed the Educational Reform Act of 1983, which requires the State Board of Education to approve student performance standards of excellence in mathematics and science and other areas which the Commissioner of Education determines shall best indicate the status of the state system of public education. Upon the authority of this Act, the State Board of Education, on September 20, 1983, approved the standards of excellence contained herein and adopted State Board of Education Rule 6A-1.9411 which requires each district school board to adopt by July 1, 1984, rules which provide for appropriate instruction based upon these student performance standards of excellence.

We are proud of Florida's role in providing a new dimension to the competency movement, as Florida continues its thrust to the upper quartile.

Sincerely,

Galph D. Tulington

Ralph D. Turlington

Preparation of the Student Performance Standards of Excellence

The student performance standards of excellence for Florida schools were developed cooperatively by the Florida Department of Education, local school district personnel and representatives of institutions of higher education. The development of these standards was initiated in 1982 by the Division of Public Schools with the Performance Standards Section of the Bureau of Program Support Services coordinating this development in cooperation with the Program Assistance Section of the Bureau of Curriculum Services. These standards and skills were reviewed by teachers and supervisors in school districts throughout the state. A second revision was mailed to each district superintendent for a final review by appropriate persons with expertise in the subject area being reviewed. More than four thousand persons (mathematics, science, social studics and writing) from over fifty districts and all regions, representing elementary, midd: junior high and senior high schools were involved in the reviews. The input received through all of the reviews was used to prepare the final document for State Board of Education approval.

Organization of the Student Performance Standards of Excellence

As these standards are incorporated into each district's program of studies, it should be noted that the standards represent general and higher-level competencies at grades 3, 5, 8 and 12. The standards developed in each academic area are written in broad general terms and are intended to communicate with the general public. The skill statements provide teachers and curriculum specialists with more specific information concerning the performance expected of high-achieving students at specified grade levels.

The following table summarizes the number of applicable standards and skills for each grade level.

	GRADE 1	HL.SE	GRADE	FIVE	GRADE EIGHT		GRADE TWELVE		TOTAL	
SUBJECT	Standards	Skills	Standards	Skills	Standards	Skills	Standards	Skills	Standards	Skills
MATHEMATICS	10	45	10	68	10	53	8	52	10	218
SCIENCE	11	97	11	148	12	191	12	226	12	662
SOCIAL STUDIES	8	22	8	50	8	69	8	44	8	185
WRITING	5	25	5	34	5	34	5	34	5	127

STANDARDS OF EXCELLENCE IN MATHEMATICS, SCIENCE, SOCIAL STUDIES AND WRITING

Questions concerning the performance standards of excellence may be directed to the Performance Standards Section, Bureau of Program Support Services, or the Program Assistance Section, Bureau of Curriculum Services, Department of Education, Knctt Building, Tallahassee, Florida 32301.
