IDENTIFIERS *Michigan

ABSTRACT

Follow-up data on 1984-1985 graduates of 15 Michigan public and private institutions are reported for the bachelor's, master's, and doctoral levels. For each field of study, data are provided on the number of degrees conferred by public and private institutions. The survey data are compared with data from the Michigan Department of Education. For each of degree level and field of study, data are provided on the percent that are: employed full-time, employed in Michigan, employed in other states, unemployed, and in graduate school. Additional tables cover: average monthly and yearly starting salary for graduates by degree and field of study. It was found that the percentage of graduates in full-time employment and graduate school varied widely across and within major curriculum areas. Engineering, computer science, health services, and special education majors were among the areas where the highest percentage of graduates found full-time employment. Bachelors's graduates from specialized fields such as veterinary medicine, audiology, physiology, and biochemistry were more likely to continue their education in graduate school. Technical, health services, and profession (e.g., law) areas commanded the highest starting salaries. (SW)

3

FOREWARD

This report contains aggregate follow-up data on 1984-85 graduates of Michigan public and independent institutions. For the first time, follow-up data have been collected for bachelor's, master's and doctoral degrees. Graduates from the participating institutions account for approximately 62% of the degrees conferred in 1984-85. Particular attention has been given to validating the information provided to the Institute. Any special circumstances surrounding its utilization have been explicitly noted in the summary.

This report represents the second follow-up report prepared by the Institute. The support and encouragement of numerous placement directors and their staffs have been deeply appreciated. Their continued participation is needed for the uninterrupted success of these follow-up reports. To Michigan institutions that have not participated in the past, we ask them to join us for the next follow-up report in the Winter of 1987.

John D. Shingleton Director of Placement

L. Patrick Scheetz, Ph. D. Director of the Institute

Special thanks for extraordinary assistance is extended to personnel at these institutions:

Adrian College
Alma College
Albion College
Central Michigan University
Eastern Michigan University
Ferris State College
Hillsdale College

Michigan State University
Michigan Technological University
Northern Michigan University
Olivet College
Saginaw Valley State
University of Michigan-Dearborn
Wayne State University
Western Michigan University

The results in this report are based upon data received from fifteen public and independent 4-year colleges and universities in Michigan. These institutions account for approximately 64% of the bachelor's and 55% of the master's degrees conferred by Michigan higher education institutions, based on statistics provided by the Michigan Department of Education.

For doctoral degrees, there are several major discrepencies, particularly in education and health sciences, between statistics reported for degrees conferred by the State of Michigan and graduates reported by participating institutions. In the case of health sciences, the State apparently placed medical degree recipients in a separate classification. When the education and health sciences curriculums are not considered, the reporting institutions account for 50% of the doctoral degrees conferred.

Discrepencies with State figures were also experienced in four other curriculum areas (renewable natural resources, marketing and distribution, law, and precision and production) at the bachelor's level and two areas (marketing and distribution and interdisciplinary studies) at the master's level. These differences were attributed to variations in classifying graduates by different administrative units; one which reports to the State and another participating in this study.

Tables 1, 6, and 10 compare the State reported degrees conferred with graduates reported by participating institutions for bachelor's, master's and doctoral degrees, respectively. A comparison is also made between degrees conferred and graduates responding to their institution's follow-up study. Respondents represent 45% and 34% of the total bachelor's and master's degrees conferred, respectively. The follow-up response rates are a very respectable 69%, 61%, and 49% for bachelor's, master's and doctoral degree levels, respectively.

Initial destination of graduates is presented in Tables 2, 7, and 11 for bachelor's, master's and doctoral levels, respectively. Three categories have been utilized: full-time employment, graduate school, and unemployed. If these three columns do not total 100% (consider rounding error), the remaining graduates have been placed in an "other" category which does not appear in the tables. The "other" group consists of foreign students who return to their home countries, individuals who are unemployed but not seeking work, and persons who are working part-time, for example.

The percentage of graduates in full-time employment and graduate school varies widely across and within major curriculum areas. Engineering, computer science, health services, and special education majors are among the areas where the highest percentage of graduates found full-time employment. Bachelor's graduates from specialized fields such as veterinary medicine, audiology, physiology, and biochemistry, are more likely to continue their education in graduate school.

The job location for full-time employed graduates is also provided in Tables 2, 7, and 11. A distinction has been made between those working in Michigan and those working in other states. There appears to be some variation within and between curriculum areas. When the two columns marked "Employed in Michigan" and "Employed in other states" do not total 100%, the residual percentage reflects individuals whose job location was not known by their respective institutions.

Yearly average starting salary, as reported in Tables 3, 8, and 12, is found to range from \$6,000 to \$37,000, \$6,000 to \$40,000, and approximately \$15,000 to \$40,000 for bachelor's, master's and doctoral graduates, respectively. Technical, health services, and professional (e.g. law) areas command the highest starting salaries. Low starting salaries may reflect poor job markets, but in several cases, consideration needs to be given to graduates involved in internships and training programs before gaining full-time employment status. There are several discrepancies, such as financial administration at the doctoral level, that cannot be accounted for based on the data provided. Salary figures have not been adjusted for less that full-time employment, start-up time for private consulting practices, or short-term training programs.

In Tables 4 and 9 the curriculum areas have been sorted by full-time employment from highest (100%) to lowest (0%) for curriculum areas with five or more respondents. Within similar percentage groups, the curriculum areas have been listed from the lowest to highest percent in graduate school. These tables provide a quick reference for placement rates by curriculum area.

An often asked question is how many graduates remain in Michigan to work, especially at the bachelor's level. As a quick reference, Table 5 lists, for bachelor's degree recipients only, curriculum areas by the percentage employed in Michigan from highest (100%) to lowest (0%).

The figures presented in this report serve as useful references in discussions on the placement of college graduates. Absolute inferences should not be drawn from these results. Several data limitations exist that need to be taken into account in any interpretation. The graduates not accounted for, approximately 40% in this study, could influence results for particular curriculum areas, particularly average salary. Several of the majors have very few individuals responding, less than five, which can lead to skewed results. Circumstances that may explain why some salaries are lower than expected are not known, especially conditions of training programs, additional benefit packages, and type of job. It is important when using this report that the reader carefully compare results for the curriculum area of interest in each table; for instance, compare numbers responding with numbers reporting salary before drawing any conclusions.

^{*&}quot;Other" catagory which includes foreign students returning home part-time employment, and unemployed not seeking work accounts for the remaining percentage after accounting for employed full-time, unemployed and graduate school. Several schools did not know where their graduates were working which accounts for the missing percentage with regards to employed in Michigan and in other states.

*"Other" catagory which includes foreign students returning home, part-time employment, and unemployed not seeking work accounts for the remaining percentage after accounting for employed full-time, unemployed and graduate school. Several schools did not know where their graduates were working which accounts for the missing percentages with regards to employed in Michigan and in other states.

*"Other" catagory which includes foreign students returning home, part-time employment, and unemployed not seeking work accounts for the remaining percentage after accounting for employed full-time, unemployed and graduate school. Several schools did not know where their graduates were working which accounts for the missing percentages with regards to employed in Michigan and in other states.
