TITLE Vocational Education Sex Equity Report: Secondary 1986.

INSTITUTION Minnesota State Commission on the Economic Status of Women, St. Paul.

SPONS AGENCY Minnesota State Dept. of Education, St. Paul. Div. of Vocational and Technical Education.

PUB DATE 86

CONTRACT 10-SE-II-A-CPA-84

NOTE 35p.

PUB TYPE Reports - Research/Technical (143) -- Statistical Data (110)

EDRS PRICE MF01/PC02 Plus Postage.

DESCRIPTORS Agricultural Education; Allied Health Occupations Education; Business Education; Distributive Education; *Enrollment; Equal Education; High Schools; Home Economics; Nondiscriminatory Education; *Nontraditional Occupations; Office Occupations Education; Personnel Data; *Personnel Integration; *Sex Fairness; Statistics; Technical Education; Trade and Industrial Education; *Vocational Education; Vocational Followup

IDENTIFIERS *Minnesota

ABSTRACT This report provides information about the status of male and female students and staff in Minnesota high school vocational courses during the 1984-85 school year. The information is intended to enhance equity efforts by measuring progress and indicating areas needing attention. Narrative and tables or charts illustrate vocational enrollment, enrollments by program type (traditional, nontraditional, segregated), enrollments by curriculum area (agriculture, distributive education, health occupations, home economics, office occupations, technical education, trade and industrial), high school follow-up for the class of 1984, and vocational staff patterns. Eleven additional tables depict enrollments by grade level and sex, race and sex, and minority status; number of programs by type; enrollments by program type and sex; traditional and nontraditional enrollments; vocational enrollments by course (agriculture, distributive education, health occupations, home economics, business and office, technical occupations, trade and industrial); occupations of graduates, one year later; hourly wages of vocational graduates; and vocational staff by curriculum area. Introduction

Occupational choices, aspirations, expectations and future roles of young people are shaped by a number of societal forces, especially within family and school. A 1983 study of students in Minnesota found that they tend to choose occupations that reinforce cultural stereotypes about the proper jobs for males and females. These trends begin at an early age, with 65 percent of girls indicating by age 10 that they wanted to be in a women's occupation such as nursing, teaching and clerical work. While a majority of girls in junior and senior high still wanted to be in typical women's jobs, the proportion declined to 53 percent, while 38 percent aspired to typical male occupations. This trend is even more pronounced in males, with 87 percent of male high school seniors choosing typical male jobs and only 9 percent choosing jobs typically held by females.

Women are in the labor force in greater numbers than ever before and they are spending more of their adult years in the paid labor force. In 1984, 64 percent of women ages 18 to 64 were in the labor force and nearly 70 percent of women of prime working age (25 to 54) were in the labor force. Over half of mothers with children under 6 are in the labor force and nearly two-thirds of mothers with children 6 to 17 are employed outside the home. A 20 year old woman today can expect to spend over 30 years in the labor force. Nearly two-thirds of women work out of economic necessity.

In the past decade, vocational educators have become aware of the need for sex equity. Two major laws have been enacted to address these needs. Title II of the federal Vocational Amendments of 1976 explicitly identified sex equity as a priority for the vocational education system. The overall goal of sex equity embodied in Title II is to expand career options for women and men and to eliminate sex bias and sex-role stereotyping. In 1984, the Carl D. Perkins Vocational Education Act of 1984 was passed. It provides encouragement to states to support programs and strategies dealing with sex equity issues and provides a large set-aside of vocational training dollars targeted to programs for female students.

These two laws have given vocational education the tools to take the lead in assuring full utilization of the resources that women represent and that society cannot afford to waste.

* * * * *

This report provides information about the status of male and female students and staff in high school vocational courses during the 1984-85 school year. The information in this report is intended to enhance equity efforts by measuring progress and indicating areas needing attention.

Data on student enrollments and staffing are from reports submitted by school districts to the Department of Education. Student enrollment data are from the Minnesota Civil Rights Information System (MINCRIS). Student follow-up data are from a report on high school students from the class of 1984 one year after graduation. Staff data are from the fall staff report. This report is funded through a grant from the Department of Vocational Education.

Enrollments are included only for those students enrolled in grades nine through twelve. This report contains greater detail by minority status than previous reports. No data were available for wages of technical occupations graduates.

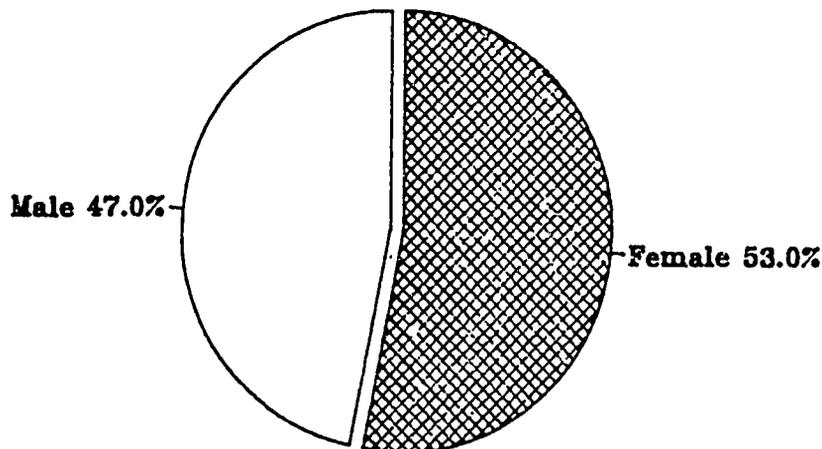

Vocational Enrollments, 1984-85

In October 1984, there were 95,595 enrollments in high school vocational programs statewide. Of these, 21 percent were ninth and tenth graders and the other 79 percent were eleventh and twelfth graders.

As shown in the chart below, female students represent a majority of those enrolled in vocational courses. The ratio of female to male students is the same as last year. Overall enrollments are fairly balanced at both grade levels. (See Table 1.)

Minority students represent about six percent of those enrolled in one or more vocational courses. Minority female students are more likely than minority male students to be enrolled in vocational courses, with females accounting for 54 percent of all minority enrollments. (See Tables 2 and 3.)

SECONDARY VOCATIONAL ENROLLMENTS 1984-85

95,595 Enrollments

Enrollments by Program Type, 1984-85

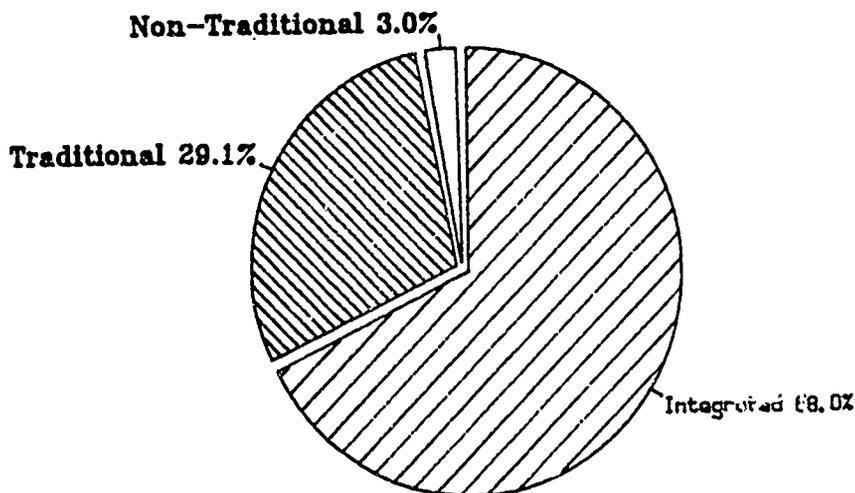

Vocational programs can be described as "segregated" or "integrated," depending on the balance of male and female enrollments. By definition, a segregated program is one in which more than 80 percent of students are of the same sex. All other programs are defined as integrated.

For example, Auto Body Repair is a segregated "male" program, with male students accounting for 97 percent of enrollments. Grooming Service Occupations is a segregated "female" program, with female students accounting for 99 percent of enrollments. General Merchandise Retailing, in which 43 percent of the students are male and 58 percent of the students are female, is an integrated program.

Enrollments in segregated programs are either "traditional" or "non-traditional." Traditional students are those in programs where the total enrollments exceeds 80 percent of their own sex. Non-traditional students are those enrolled in a program where over 80 percent of the students are of the other sex. Female students in Auto Body Repair and male students in Grooming Services Occupations are non-traditional students.

There are 57 courses offered statewide. Of these, 23 are "male" courses, six are "female" courses and 28 are integrated courses. Sixty-eight percent of vocational students are enrolled in integrated courses, while only 3 percent of students are enrolled in a course which is non-traditional for their sex. (See Tables 4,5 and 6.)

ENROLLMENTS BY PROGRAM TYPE 1984-85

95,595 Enrollments

Enrollments by Program Type, continued

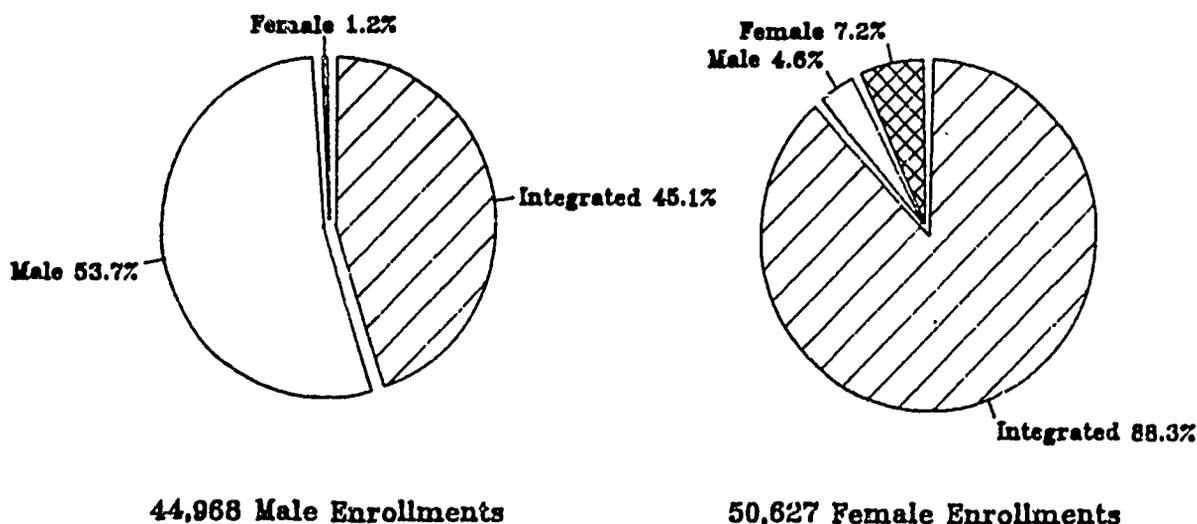

Female students are more likely than male students to be enrolled in integrated programs -- 88 percent of female students and 45 percent of male students. Distributive education, home economics and business and office courses are more likely than others to be integrated. In fact, all office students and nearly all distributive education students are enrolled in integrated courses.

There are now integrated courses preparing students for jobs which have historically been considered "men's work" or "women's work." These include, for example, Food Occupations, Radio/Television Production, General Merchandise Retailing and Graphic Arts Occupations.

Very few students are enrolled in non-traditional programs. Such programs account for only 1 in 22 female students and 1 in 86 male students. Agriculture and health courses have the largest proportion of non-traditional students, accounting for about 10 percent of agriculture students and 15 percent of health students.

Of the 57 programs offered statewide only 2 are all-male and no programs are all-female. Only 123 students are enrolled in the all male program areas. (See Table 7.)

ENROLLMENTS BY PROGRAM TYPE 1984-85

Enrollments by Curriculum Area, 1984-85

There are significant differences in enrollment patterns among the vocational curriculum areas. The chart below summarizes these differences, and the following pages present more detailed information for each curriculum area.

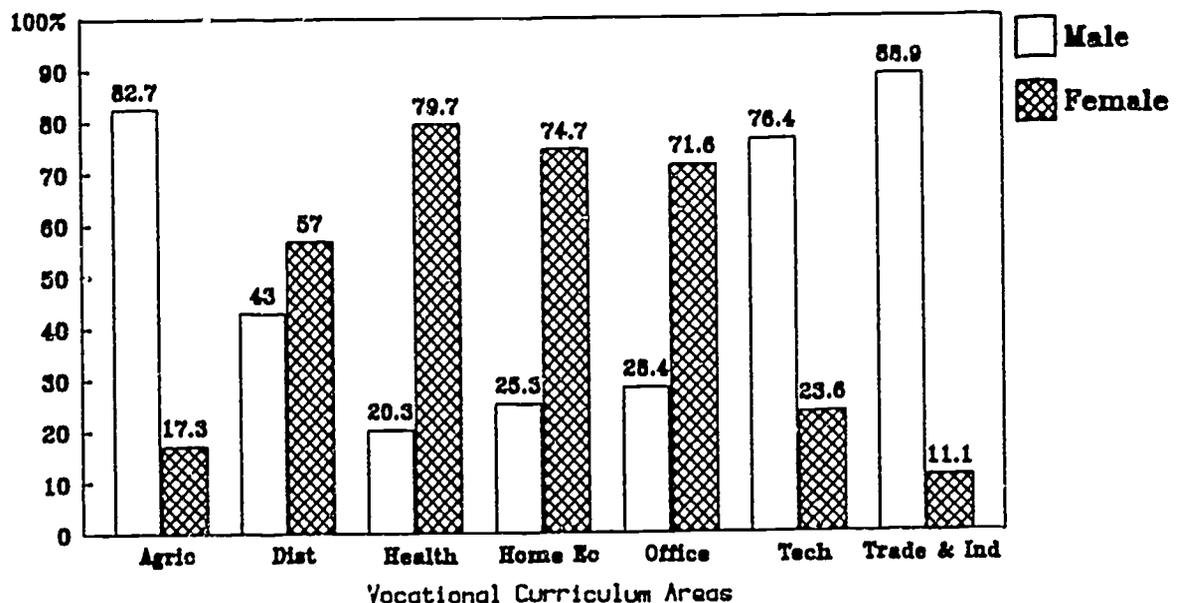

Home economics has the largest number of students, followed by office, trade-industrial and agriculture. Distribution, health and technical enrollments combined account for only 7 percent of vocational enrollments.

Female students are most likely to be enrolled in home economics, representing over half of all female enrollees. An additional 27 percent of female students are enrolled in office programs. Thirty-four percent of male students are enrolled in these two areas.

Male students are most likely to be enrolled in trade-industrial programs. This area combined with agriculture accounts for just over 60 percent of all male enrollments. By contrast, less than 9 percent of female students are enrolled in trade-industrial and agriculture programs. (See Table 8.)

Enrollment patterns of minority students also vary by sex. Home economics accounts for 58 percent of all minority female enrollees but for only 23 percent of minority male enrollees. Trade-industrial courses account for nearly half of enrollments among minority men, but for only 6 percent of minority females. (See Table 3.)

SECONDARY VOCATIONAL ENROLLMENTS 1984-85

Agriculture

Total enrollment statewide in secondary agriculture courses is 13,160 accounting for 14 percent of all secondary vocational students.

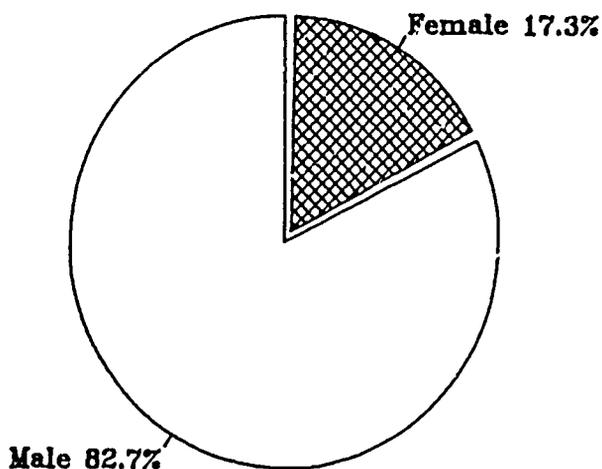

Agriculture courses are predominately male, with male students out-numbering female student by about five to one at all grade levels. Of the eight courses offered statewide, six are "male" and two are integrated. No courses are "female." Seventeen percent of students are enrolled in integrated courses. Ten percent of agriculture students are non-traditional students, all of these are females in "male" courses. This is the second highest percentage of non-traditional students of any curriculum area.

The largest course is Production Agriculture Occupations, with 65 percent of all male agriculture students and 46 percent of all female agriculture students. The second largest course for male students is Agriculture Mechanics, while the second largest course for female students is Horticulture Occupations.

Fifteen percent of white vocational students, but only 3 percent of their minority counterparts, are enrolled in agriculture. Minority enrollments in this area reflect the lower representation of minorities in Minnesota's farm population.

Minority female students are even less likely than minority male students to be enrolled in agriculture courses. This curriculum area accounts for one percent of minority females, five percent of white females, five percent of minority males and 25 percent of white males.

AGRICULTURE ENROLLMENTS 1984-85

13,160 Enrollments

Distributive Education

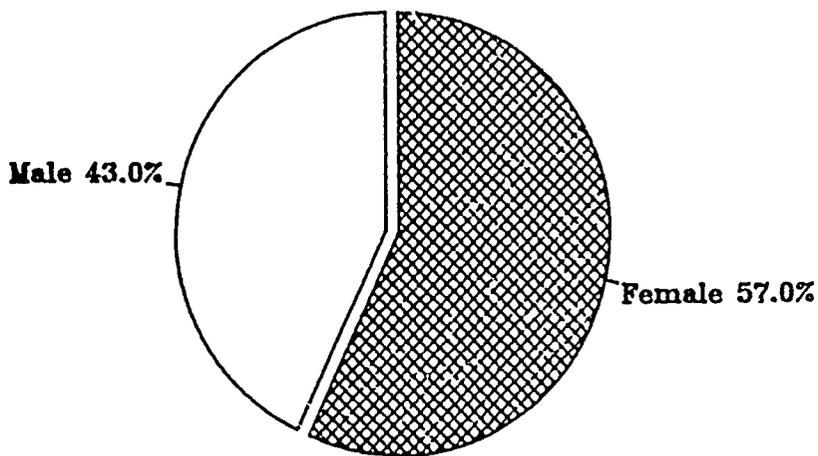

Total enrollment statewide in distributive education courses is 4,602, representing five percent of secondary vocational students.

Although female students have higher enrollments than males, distributive education is the most evenly balanced by sex of all of the curriculum areas. As in other curriculum areas, most distributive education students are in the eleventh and twelfth grades.

Six courses are offered statewide. Of these, one is "male", five are integrated and none are "female." The integrated courses account for 99 percent of the distributive education students. Seventy-nine percent of male students and 83 percent of female students are enrolled in just two courses: General Merchandise Retailing and General Marketing Occupations.

About 7 percent of all distributive education students are minorities. Minority enrollments are nearly balanced by sex in this curriculum area.

DISTRIBUTIVE EDUCATION ENROLLMENTS 1984-85

4,602 Enrollments

Health Occupations

Total enrollment statewide in health occupations programs is 1,611, accounting for less than two percent of all vocational enrollments. Health courses have a lower percentage of male students than any other curriculum area.

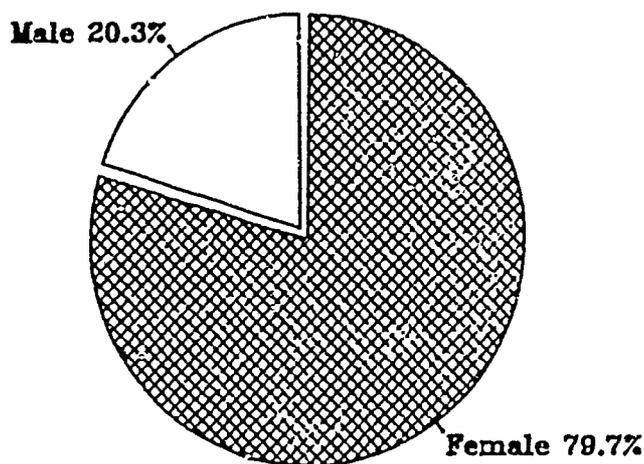

These programs are predominately female, with female students outnumbering male students by about 4 to 1. Although male students are in the minority in 2 of the 3 secondary health occupations courses, this pattern is most apparent among eleventh and twelfth graders.

Of the three courses offered statewide, one is "female", two are integrated and none are "male." Eighty-six percent of the female students are in Health Care Occupations, a "female" course. Seventy-one percent of the male students are also in this course.

About 11 percent of health students are minorities. Three percent of minority females, 3 percent of white females, 3 percent of minority males and less than 1 percent of white males are enrolled in this curriculum area.

HEALTH OCCUPATIONS ENROLLMENTS

1984-85

1,611 Enrollments

Home Economics

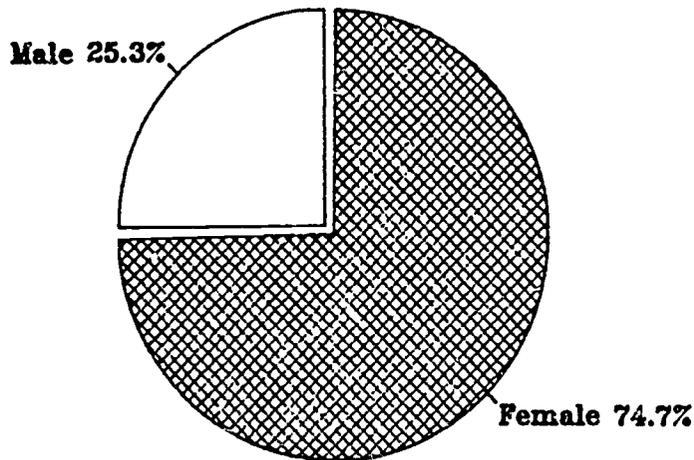

Total statewide enrollment in home economics courses is 38,290, accounting for 40 percent of all secondary vocational enrollments. Home Economics has the largest number of female students and the largest number of students of all curriculum areas. Female students outnumber male students 3 to 1 overall in this curriculum area.

Twelve courses are offered statewide. Of these 5 are "female", 7 are integrated and none are "male". The integrated courses account for 93 percent of home economics students. Less than one percent of home economics students are in courses that are non-traditional for their sex.

Two-thirds of home economics enrollees are in Consumer Homemaking Occupations -- 67 percent of male students and 56 percent of female students.

Minority students and white students are about equally likely to be enrolled in home economics. However, for each racial group there are more female enrollees than male enrollees.

HOME ECONOMICS ENROLLMENTS 1984-85

38,290 Enrollments.

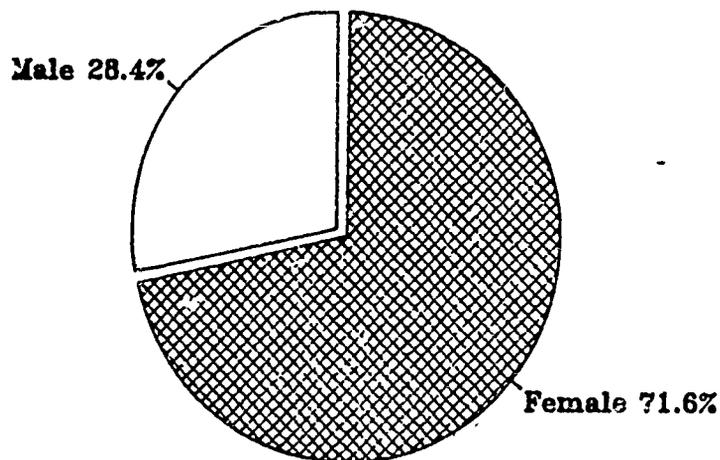

Office Occupations

Total enrollment statewide in business and office occupations programs is 19,183, accounting for one-fifth of all secondary vocational enrollments. This curriculum area has more female students than any other except home economics. Females outnumber males by over 2 to 1.

All 6 courses offered are integrated. Sixty-nine percent of all business and office students are enrolled in Secretarial -- 70 percent of male students and 68 percent of female students. Another 16 percent of business and office students are enrolled in General Office Typist.

Overall, minority students are slightly more likely than white students to be enrolled in office programs. Among both white and minority students, females are more likely than males to be enrolled in this curriculum area. Office programs include 27 percent of both minority and white female students, 17 percent of minority male students and 12 percent of white male students.

OFFICE OCCUPATIONS ENROLLMENTS 1984-85

19,183 Enrollments

Technical Education

Total enrollment statewide in secondary technical education programs is 309, less than one percent of all secondary vocational enrollments. This curriculum area has fewer students than any other, and the smallest number of male and female students of all curriculum areas. Seventy-six percent of technical enrollees are male.

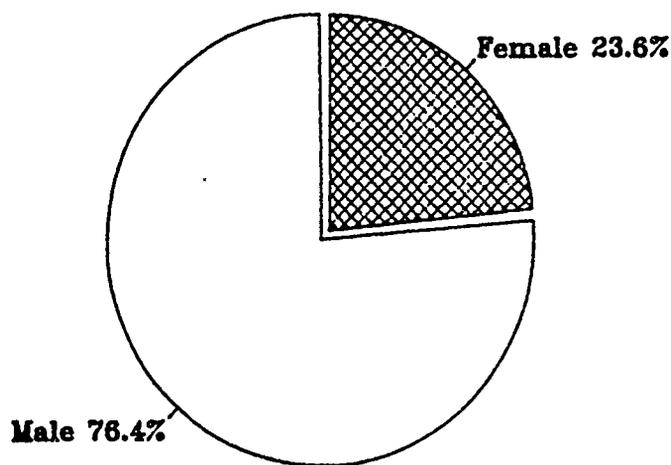

Of the 5 technical courses offered statewide, two are "male", three are integrated and none are "female." Four percent of technical students are enrolled in non-traditional courses. Sixty-five percent of technical students are enrolled in integrated courses.

Two courses, Mechanical Drafting and Radio/TV Production, account for 69 percent of students enrolled in the technical area. Thirty-eight percent of males are enrolled in Mechanical Drafting. Forty-eight percent of females are enrolled in Radio/TV Production.

About one-fifth of the students in this area are racial minorities. Minority male and female students are slightly more likely than their white counterparts to be enrolled in this course area.

TECHNICAL OCCUPATIONS ENROLLMENTS

1984-85

309 Enrollments

Trade & Industrial

Total enrollment statewide in secondary trade-industrial courses is 18,440, accounting for 19 percent of all secondary vocational enrollments. More male students are enrolled in this area than in any other.

Male trade-industrial students outnumber their female counterparts by 8 to 1 overall. Female students are about 11 percent of students at both grade levels.

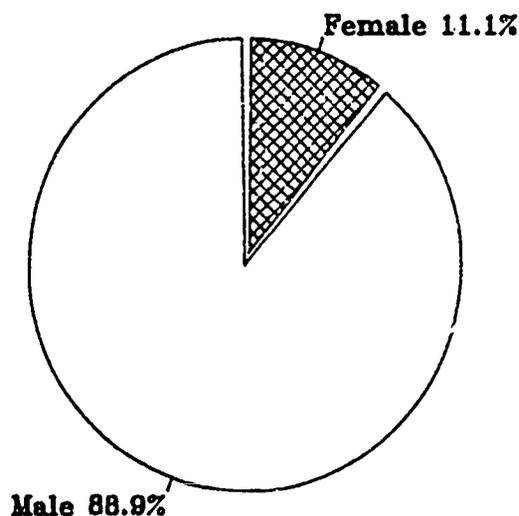

There are 17 trade-industrial courses offered statewide, the largest number for any curriculum area. Of these 14 are "male", 3 are integrated and none are "female." Female students make up less than 5 percent of the enrollees in 8 courses. Five percent of trade-industrial enrollees are non-traditional students, and all of these are female students in "male" courses.

Female students are most likely to be enrolled in Graphic Arts, although they are outnumbered by their male counterparts almost 2 to 1. Male students are most likely to be involved in Auto Mechanics, where they outnumber female students by 20 to 1.

Although more than four-fifths of trade-industrial students are white males, minority students of both sexes have higher enrollment rates than their white counterparts. Four percent of white females, 6 percent of minority females, 36 percent of white males and 45 percent minority males are enrolled in trade-industrial courses.

TRADE & INDUSTRIAL ENROLLMENTS

1984-85

18,440 Enrollments

High School Follow-up, Class of 1984

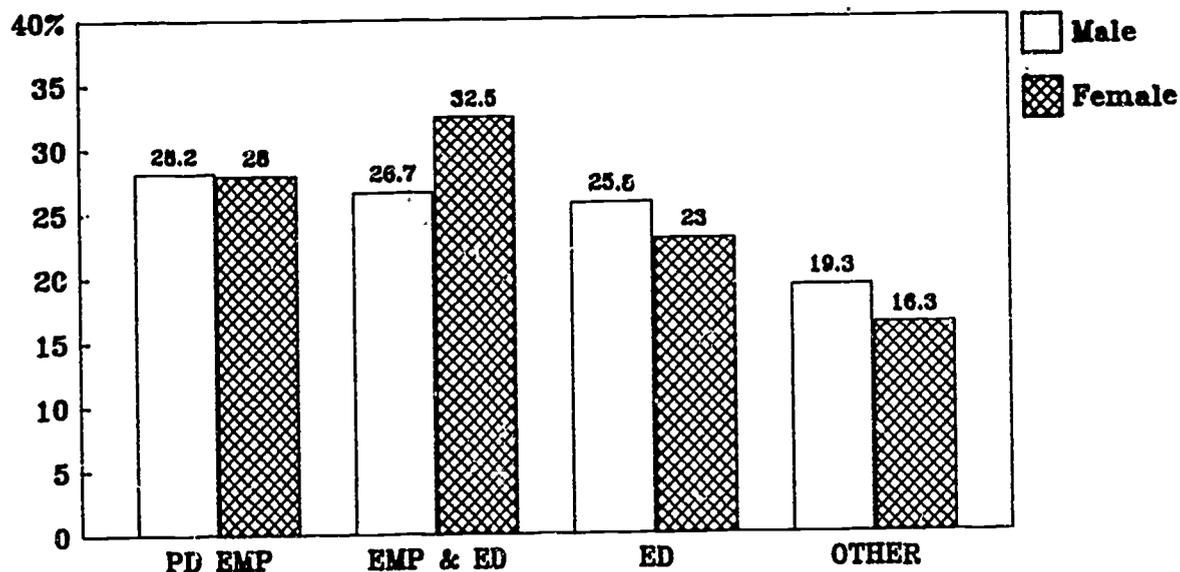

The Minnesota Vocational Follow-Up System reports information about students one year after graduation.* This information was reported in 1985 by 115 schools for 22,955 students of the Class of 1984. Data on this page refer to all graduates in the sample, whether they had been enrolled in a vocational course or not.

Over three-fifths of graduates continue their education in the following year. The women are slightly more likely than the men to continue their education, and are slightly more likely to have paid employment.

Twenty percent of those attending a post-secondary institution were enrolled in a vocational school, usually one of the AVTIs. The women are more likely than the men to attend a private vocational school, 8 percent compared with 5 percent.

The majority of both male and female graduates hold paid employment one year after leaving high school. Fifty-seven percent of the employed male graduates and 47 percent of the employed female graduates have full-time jobs. Over one-fourth of male and nearly one-third of female graduates combine paid employment with further education.

HIGH SCHOOL CLASS OF 1984 ONE YEAR LATER

*Although all former students in the sample are referred to as "graduates" for purposes of this report, about six percent left high school without receiving a diploma.

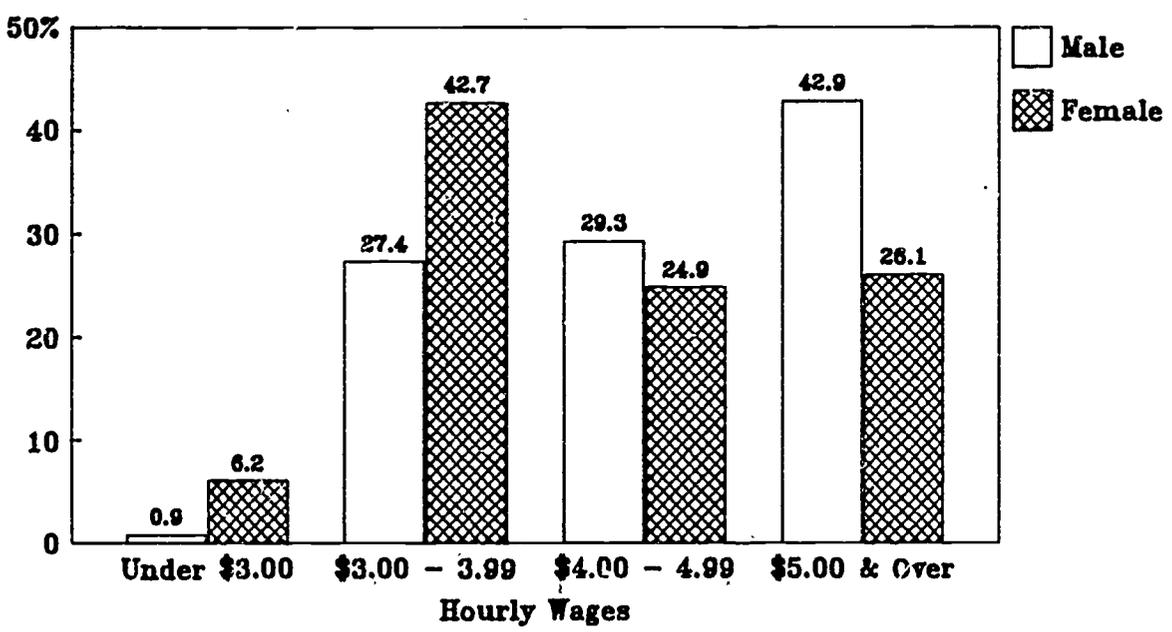

Vocational Student Follow-Up, Class of 1984

Follow-up information is also available for students who were enrolled in one or more vocational programs during high school. In this report, such students are called "vocational graduates," although they may have taken only one vocational course.

Male vocational graduates are more evenly distributed among all occupational groups. Female vocational graduates are heavily concentrated in clerical and service jobs, which together account for 64 percent of the women but only 37 percent of the men. In fact, 90 percent of females are employed in just three areas: marketing and sales, clerical, and service. This compares to 50 percent for males in these areas. The women are least likely to be employed in technical, agriculture, construction, transportation and mechanical jobs. These jobs account for slightly less than two percent of the women, but for nearly 23 percent of the men. (See Table 9.)

Female graduates have lower earnings than their male counterparts, regardless of the high school curriculum area in which they were enrolled. Average earnings for male graduates are \$4.73 per hour, compared with \$4.03 per hour for female graduates. (See Table 10.)

**HIGH SCHOOL CLASS OF 1984
EARNINGS ONE YEAR LATER**

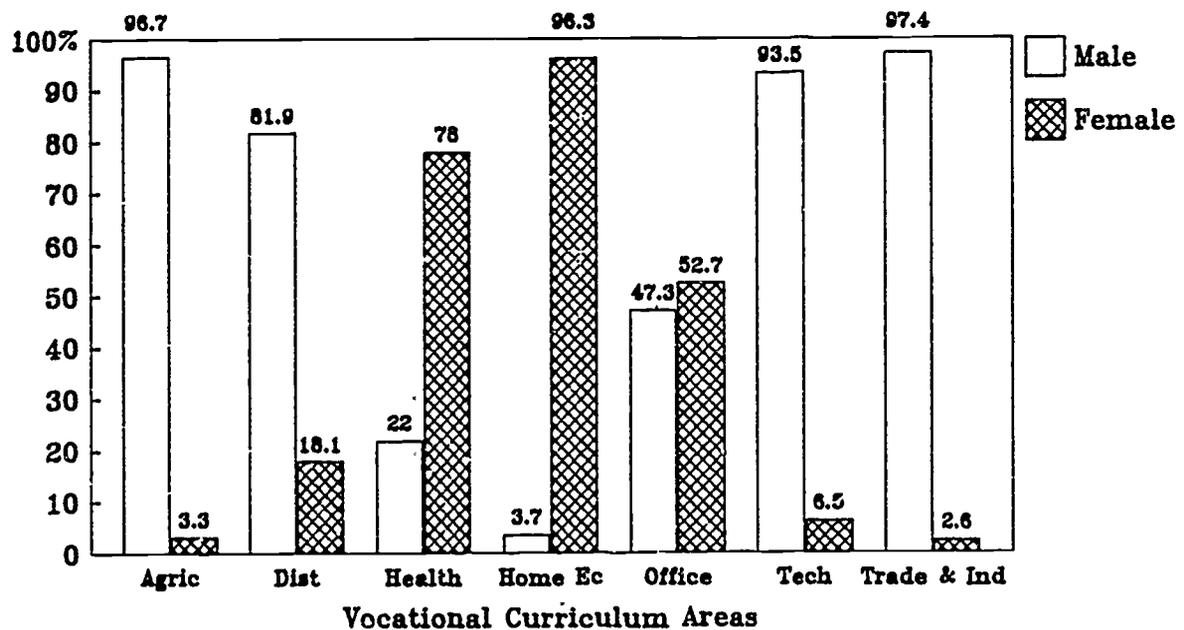

Vocational Staff Patterns, 1984-85

There are 1,604 secondary full-time and part-time vocational teachers statewide. Fifty-six percent are men, while 44 percent are women. Twenty-five percent of the women and 15 percent of the men teach part-time.

The proportion of teachers who are female is lower than the proportion of students who are female in all areas except home economics courses. For example, 11 percent of trade-industrial students, but only three percent of trade-industrial teachers, are female. Similarly, in home economics, males represent 25 percent of the students but only 4 percent of the teachers.

Minorities are also underrepresented among vocational teachers, accounting for only 2 percent of the teachers compared with 6 percent of vocational students.

Definitions

Enrollment. In this report, enrollment figures represent an unduplicated count of students. All enrollment data in this report are statewide.

Curriculum Area or Program Area. These terms refer to groupings of programs into seven areas: Agriculture, Distributive Education, Health Occupations, Home Economics (including both Consumer Homemaking and Occupational Home Economics), Business and Office Occupations, Technical Occupations and Trade & Industrial. Follow-up data contain additional curriculum areas: Service Occupations, Business and Industrial Arts. There is no Technical area in the follow-up data.

Racial Minorities. Minority student data reported by school districts to the Minnesota Civil Rights Information System represent racial/ethnic data. No person is counted in more than one racial/ethnic category. Minorities identified by this system are: American Indian or Alaskan Native; Asian or Pacific Islander; Hispanic, referring to country of origin or culture, not race; Black, not of Hispanic origin; and White, not of Hispanic origin.

Course or Program. These terms refer to individual course offerings within curriculum areas. All course or program data in this report represent statewide enrollments by subject or grade level, not by individual school district.

Segregated. A segregated program or course is one in which more than 80 percent of the students are of one sex. A segregated "male" program has enrollments which are more than 80 percent male, while a segregated "female" program has enrollments which are more than 80 percent female.

Integrated. All programs which are not segregated by sex are considered integrated.

Traditional. Students enrolled in programs where the total enrollment exceeds 80 percent of their own sex are defined as traditional students.

Non-Traditional. Students enrolled in segregated programs dominated by students of the other sex are defined as non-traditional students.

Vocational Teachers. Vocational teachers are staff members assigned the professional activities of instructing pupils in vocationally reimbursed programs. In this report, this term refers to teachers in secondary cooperative vocational centers as well as high school vocational teachers.

Program Support Services Staff. This refers to individuals employed for the primary purpose of assuring that students benefit from their vocational education programs, such as teacher aides, remedial teachers and interpreters for deaf students.

Vocational Administrators and Supervisors. This refers to professional staff other than teachers and support services staff who are assigned to the supervision of vocational education programs. This does not include general administrative staff, superintendents, principals or guidance counselors.
