AUTHOR McCormick, Donald W.
TITLE Bibliography of Literature on Neuro-Linguistic Programming.
PUB DATE 23 Apr 87
NOTE 17p.
PUB TYPE Reference Materials - Bibliographies (131)

EDRS PRICE MF01/PC01 Plus Postage.
DESCRIPTORS Audiotape Recordings; Books; Doctoral Dissertations; *Information Sources; *Language Research; *Linguistic Theory; *Neurolinguistics; Research Reports; Scholarly Journals; Videotape Recordings

IDENTIFIERS *Neurolinguistic Programming

ABSTRACT

Two bibliographies on neurolinguistic programming are updates of an earlier literature review by the same compiler. The two lists contain citations of over 160 books, research reports, dissertations, journal articles, audio and video recordings, and research projects in progress on aspects of neurolinguistic programming. Appended notes suggest additional sources for related literature and a sample letter to a Neuro-Linguistic Programming (NLP) researcher gives recommendations for evaluating research design in the field. FL017379

In January of 1984, I published "Neurolinguistic Programming: A Resource Guide and Review of the Research" in The 1984 Annual: Developing Human Resources (L.D. Goodstein and J. W. Pfeiffer (eds), University Associates: San Diego CA, pp. 267-281). I still believe this is a good literature review, but the literature on NLP expanded so quickly that it became dated very quickly. Therefore, in an attempt to maintain a more current list, I compiled two updates. The other update is a companion to this from the days when I used a different personal computer. A combination of my article and these updates provide a relatively current bibliography. If you have any additions or corrections, they would be appreciated. Please send them to: Don McCormick Ph.D, 1535 Veteran Avenue, L.A., CA 90024 or call me at (213) 477-5034. (P.S. If you are publishing research, publishing an article, or your NLP dissertation will some day show up in Dissertation Abstracts International, please put the words "Neuro-linguistic Programming" in the title. It makes it easier to find NLP research when other scholars (and I) search the literature.) The lists on these pages were last updated April 23, 1987.

Vander Zyl, E.L.. The effect of meta-model questioning and empathic responding on concreteness in client statements and client ratings of anxiety and counselor attractiveness, expertness, and trustworthiness. Dissertation Abstracts International, 44(12), 3600-3601-A.

1985

Coe, W. C., & Scharcoff, J. A. An empirical evaluation of the neurolinguistic programming model. The International Journal of Clinical and Experimental Hypnosis, 33(4), 310-318. Using an antique research design, the authors naturally failed to find support for what they considered to be NLP's concepts.

Elich, M., Thompson, R.W., & Miller, L. Mental imagery as revealed by eye movements and spoken predicates: A test of Neurolinguistic programming. Journal of Counseling Psychology, 32(4), 622-625.

Einspruch, E.L. & Forman, B.D. Observations concerning research literature on Neuro-Linguistic Programming. Journal of Counseling Psychology, 32(4), 589-596. They criticize 39 statistical studies of NLP for errors in design.

Faulkender, N. Primary Representational systems and task performance: Empirical assessment in prison and normal populations. Dissertation Abstracts International, Vol. 45, No. 12, p. 3937-B.

Graunke, B. & Roberts, K. Neurolinguistic Programming: The impact of imagery tasks on sensory predicate usage. Journal of Counseling Psychology, 32(4), 525-530.

Krugman, M. et. al.. Neuro-Linguistic Programming treatment for anxiety: Magic or Myth? Journal of Consulting and Clinical Psychology, 53(4), 526-530. "Overall, the findings of this study indicate that the NLP single-session treatment for phobias was no more effective in reducing public speaking anxiety than a self-control desensitization intervention of equal duration or a waiting-list control condition, as measured by self-report and behavioral ratings. The fact that subjects in each of the three conditions demonstrated significant decrements in public speaking anxiety indicates the danger of drawing conclusions about treatment effectiveness without appropriate statistical comparisons with changes obtained in control conditions. It is possible, for example, that the perceived rapid effectiveness of NLP that has been reported by Bandler and Grinder (1979) is an artifact of changes that would have been observed without the interventions that they describe." Later the authors say that "... any credible procedure appears to be capable of reducing irrational fears..."

Lucas, B.A. & McIvaine, J.R. Comparison of Feedback Modalities in Biofeedback Temperature Training. Psychological Reports, 56, 47-51. They expected that the group that received both auditory and visual feedback would be better at biofeedback "because Bandler and Grinder (1975) suggest that, while people synthesize environmental information through all feedback modalities, preference is usually given to one modality over the others." This did not prove to be true.

Matthews, W. J. , I. Kirsch & D. Mosher. Double hypnotic induction: An initial empirical test. Journal of Abnormal Psychology, 94(1), 92-5. "...when presented on audiotape, the double hypnotic induction described by Bandler and Grinder (1975) is not more effective than a traditional induction." "It is possible the double induction, utilizing cues from the subject, would produce the powerful effects that Bandler and Grinder, and Lankton and Lankton (1983) reported, but this hypothesis remains to be experimentally tested."

O'Leary, R. Perceptual accuracy of affect identification and the relationship to representational system and personality type. Dissertation Abstracts International, 45(7), 2043-A.

1986

Carbonell, D. A. Representational Systems: An Empirical Approach to Neuro-Linguistic Programming. Dissertation Abstracts International, 46(08), Feb., 2798-B.

APPENDIX A: A Letter to an NLP Researcher

Dear Researcher;

On the pages marked "Bibliography of research on NLP" you will find mostly dissertation research. The abstracts of these dissertations are printed in Dissertation Abstracts International (except for Andreas') and copies of the dissertations themselves are available from University Microfilms in Ann Arbor.

The "Bibliography of research on NLP" list was compiled at the end of 1983. These studies are reviewed in my article "Neurolinguistic Programming: A Resource Guide and Review of the Research". This article also contains a list of every article, tape, NLP center or book on NLP that I could find. The article appears in The 1984 Annual: Developing Human Resources, edited by Pfeiffer and Goodstein, University Associates, 8517 Production Ave., San Diego, CA 92126. This book is available at most college libraries. In my university, it is in the Management and Social Work libraries.

Most of the research on NLP is cited in the enclosed lists. If you wish to do a more extensive or up to the minute search, I recommend that you check the Dissertation Abstracts International, which is available at most college libraries. The book is organized according to key words in the dissertation title. Key words to check are "Neurolinguistic", "Linguistic", "Representation", "Representational", "Predicate", "Submodalities", "Swish", "Sensory", "Rapport", "Pacing", "Empathy", "Empathic", "Trust", "Trustworthiness", "Meta-Model", "Grinder", "Bandler", "Precision", and "Anchor". Check both the Psychology and Education sections at a minimum. If you are writing your dissertation on NLP, please include the word "Neuro-Linguistic" in your title so that other researchers interested in NLP can find your work. Schmedlen, Liggett, Macroy, Moine, Rebstock, Brengle, Beale, and Palubeckas' dissertations are all examples of studies that could escape a diligent scholar's notice because they do not have key words in the title that are easy for the NLP researcher to find.

You may also wish to check the Social Science Citation index and see who cites Bandler, Grinder, Cameron-Bandler, Dilts, LaBorde

or Gordon. If you really want to make a thorough search you may see who has cited secondary NLP authors such as Byron Lewis, R. Frank Pucelik, J. Richardson, etc..

I think it is useful to have a central person keeping track of NLP research who can act as a resource for other modelers, researchers and writers. So if you discover a book, article, a study or book review that is not included in this list (and I am sure there are a great deal I have missed), please send me a copy of it or a complete reference so that I can help others. I would also appreciate a note about work in progress you are conducting or know of.

A warning about research on NLP. There are a couple of mistakes that often show up in NLP research.

1. Many researchers don't test NLP models. Because of their unfamiliarity with the NLP models, they wind up testing something that resembles NLP but is not quite on the mark. For example, some researchers had subjects observe a therapist who matches predicates with a client and a therapist who mismatches predicates. Although NLP models would predict that the client would perceive the matching therapist as having established better rapport, I can find nothing in the literature that says that someone observing this would necessarily rate the matching therapist as better.

2. Many researchers test ancient concepts that are of little relevance to NLP practitioners. NLP technology evolves at a mind bogglingly rapid rate and some of what was written in the 70's is obsolete. It serves little purpose to spend many hours testing models that practitioners no longer use.

The best way to avoid these two mistakes is by talking about your research design with someone who is up on current NLP technology (preferably a trainer) and also is familiar with research design. Connierae Andreas [(303)442-1102] would be an excellent choice. She has graciously offered to make herself available to talk with researchers about design. If you wish to talk with me about your work, I would also enjoy talking with you.

I should also mention that I would appreciate it a great deal if you cited my article in your publications.

NLP is damn hard to research well, but don't give up. Good luck, and keep "in touch".

Warmly,

Don McCormick
Don McCormick Ph.D.
