ABSTRACT

In 1989, a study was conducted at Ocean County College (OCC) to determine the feasibility of establishing a branch campus in southern Ocean County, New Jersey. Specific factors examined in the study included Ocean County's demographic characteristics (e.g., land area and dispersion, population trends, public transportation, and economic trends); elementary, secondary, and postsecondary education; the history and future of OCC; and public opinion. Conclusions about public opinion were drawn from surveys of junior and senior public high school students, business firms, and a representative sample of 384 adult residents. Major study findings included the following: (1) 33% of the junior high school students and 39% of the high school students thought that they would definitely or probably attend the proposed branch campus; (2) without the branch campus, 21% of the junior high students and 29% of the high school students thought they would attend OCC anyway; (3) approximately 84% of the high school students favored the establishment of the branch campus; (4) business firms were highly supportive of the branch campus, indicating that approximately 10 employees per firm could improve their job-related skills by taking courses at a southern Ocean County branch; and (5) the percentage of the community survey respondents who indicated that they would probably or definitely enroll in an OCC course jumped from 40% without the branch campus to 60% with the branch campus. Based on study findings, it was recommended that a branch campus of 27,000 square feet be established to accommodate an enrollment of 1,000 students, on a 40- to 50-acre site directly behind the existing Southern Regional High School. The survey instruments, curriculum outlines, and data tables showing enrollment and population projections are attached. (JMC)

## ABSTRACT

The feasibility of establishing a branch campus of Ocean County College in southern Ocean County was the focus of this research study. The study was initiated in direct response to the following College long-range strategic initiative, "The College will broaden higher education opportunities for the citizens of Ocean County, especially those living in the southern part of the County, by expanding its off-campus credit offerings." In the context of this study, southern Ocean County was defined to include all municipalities in the County from Lacey Township south to Little Egg Harbor Township. This study expanded upon a preliminary research effort completed in Fall 1986.

Specific factors examined in the study included: Ocean County demographic characteristics (land area and dispersion, population trends, public transportation, and economic trends); education (elementary, secondary, and postsecondary); history and future of Ocean County College; and public opinion drawn from three distinct samples of the southern Ocean County population. These samples included junior and senior public high school students, business firms, and a representative group of the general public 18 years of age or older. High school students and business firms were surveyed in late Fall 1985 and 1988. The general public was surveyed in late Fall 1985.

Ocean County has been the fastest growing county in New Jersey for the past several decades and population projections completed by both the State and County indicate a continuous growth well into the future. Within Ocean County, the population growth has been and will continue to be uneven. According to recent Ocean County Planning Board projections, the southern part of the County is expected to experience a growth approximately two to three times as heavy as that of the northern County area during the 1990's. By the year 2000, southern Ocean County population is projected at 121,650, a figure only slightly less than the entire County population when Ocean County College was first conceived in a 1963 feasibility study.

Research findings indicate strong support for the establishment of a southern branch campus of Ocean County College. In Fall 1985 and Fall 1988, 33 and 39 percent of the junior and senior southern Ocean County high school students, respectively, thought they would definitely or probably attend OCC at the proposed branch campus. Without the branch campus, 21 and 29 percent of the students in the samples thought they would attend OCC. Approximately 84 percent of the high school students thought the branch campus should be established.

Southern Ocean County business firms were highly supportive of establishing a branch campus. Employers reported having difficulty in finding qualified personnel and indicated that approximately 10 employees per firm could improve their job-related skills by taking college courses at a southern Ocean County branch campus.

Almost all of the 384 interviewed southern Ocean County area residents 18 years of age or older were familiar with Ocean County College in general. Fifteen percent of the interviewees had enrolled in an OCC course and 30 percent had been to the college's Fine Arts Center or the planetarium. When asked, "Do you think you may enroll in an OCC course?" the respondents were divided with 40 percent answering definitely or probably yes. However, with a branch campus established in the Manahawkin area, 60 percent would definitely or probably attend the college.

The results of this study support the need for a southern branch campus of Ocean County College. Based on population data, public transportation patterns, land availability, and potential for cooperative educational agreements with a major local school system, the southern branch campus should be located on a site within close proximity to Southern Regional High School. The survey research findings support the operation of a branch campus during both day and evening hours.

Based on the current enrollment in OCC's southern Ocean County off-campus sites, student projections for southern Ocean County high schools, the college-going rates of graduating seniors, OCC's capture rates of graduating seniors, and population projections of southern Ocean County municipalities, it is proposed that a branch campus facility be constructed to accommodate an enrollment of 1,000 students. An estimated 500 students (175 full-time and 325 part-time) will enroll in the first year of operation, growing to 1000 students (400 full-time and 600 part-time) by the end of the 1990's.

Survey research findings from both the 1985 and 1988 studies supported the following currently approved degree programs, concentrations and certificates for the southern branch campus:

All degree/certificate requirements will be able to be met in these programs

- Basic Skills Curriculum - nondegree
- Business Administration - AS degree
- Business Administration - AAS degree
- Banking-Finance concentration
- Business Administration concentration
- Marketing concentration
- Criminal Justice - AS degree
- General Education - AA degree
- General Education - AS degree
- Liberal Arts - AA degree
- Elementary Education concentration

History concentration  
Political Science/Government concentration  
Psychology concentration  
Sociology concentration  
Criminal Justice - certificate  
Real Estate - certificate

Most degree/certificate requirements will be able to be met in these programs

Business Administration - AAS degree  
Accounting concentration  
Community Services Technician - AS degree  
Computer Science - AS degree  
Computer Science - AAS degree  
Liberal Arts - AA degree  
English concentration  
Mathematics concentration  
Teacher of Social Studies concentration  
Nursing - AAS degree (first year only)  
Accounting - certificate

As of the Fall 1988 semester approximately 85% of the college's degree-seeking or certificate students were enrolled in one of the above curricular areas. Therefore, by making these programs available at the proposed southern branch campus, very few southern Ocean County residents will have to travel to Toms River to enroll in their preferred degree program. Furthermore, the small number of students that would have to travel to Toms River for their desired major courses, e.g., Engineering (AS degree), could still take most of their general education course requirements at the southern branch campus.

In order to accommodate 400 full-time and 600 part-time students enrolling in one of the above program areas, a facility of 27,000 gross square feet should be constructed. The facility should contain seven classrooms, a computer laboratory, biology/physics laboratory, nursing laboratory, supporting laboratory storage space, office facilities, library space, indoor physical education space, student activity and lounge space, a student health office, physical plant maintenance and storage space, and a media equipment storage area. Additionally, the facility should have approximately 500 parking spaces with lighting and access to Route 9. Site development should be kept in the natural state in order to keep down maintenance costs. The natural pines of the area will provide a beautiful college setting. In order to convey the image of Ocean County College, it is proposed that a small replica of the college sign be created at the main entrance to the branch campus.

It is concluded that the southern branch campus should be constructed in Stafford Township on approximately a 40 to 50 acre site. Based upon a site analysis study, the most suitable location for the branch campus is directly behind the existing Southern Regional High School.

## ACKNOWLEDGEMENTS

This study spanned a period of three years due to the inclusion of two research efforts completed three years apart. The first research effort resulted in the completion of a Fall 1986 preliminary Branch Campus Needs Assessment Report. Major contributors to this report were David Harris, Research Associate, and Anna Booth and Barbara Delaney, Secretaries. Also, the following individuals were involved as interviewers in the community survey component of the preliminary study:

Anna Booth	Mary Lee Keller	Don Schulze
Calvin Davis	Beverly Kelly	Nate Shaffran
Alice Ducore	Lynn Kenney	Debra Speaker
Alliene Edson	Elvira Larsen	Carl Van Thulin
Mary Evans	Stephanie Miller	Kathleen Van Thulin
Mary Lou Giacchi	Geraldine Moore	Carol Velardi
Pat Hall	Josette Peterson	Ron Velardi
Irene Harris	John Riismandel	Rebecca Wells
Cindy Kane	Peter Schneli	Erma Williams

In the Fall semesters of 1985 and 1988, personnel from the Guidance Offices of Southern Regional, Lacey Township, and Pinelands Regional High Schools cooperated in the administration of the student survey instrument.

Staff from the Southern Ocean County Chamber of Commerce assisted in the business survey in both survey administrations. The Lacey Beacon staff is acknowledged for its cooperation in the mailing of the business survey in Winter 1989.

The following individuals are noted for their contributions to Chapter V of this study.

Alex Garelick, Coordinator of Library Services  
 Kenneth Kerr, Dean of Students  
 Donald Schulze, Director of Counseling  
 John Kane, Dean of Business and Financial Affairs

Members of the Academic Advisory Committee are acknowledged for their thoughtful contributions to this study effort. They are:

James P. Doran	Janet Hubbs	Nathaniel Shaffran
Theodore Faraklas	James McGinty	Peter H. Smith
Deborah Fuller	Francis Polk	John P. Stauff

Lastly, Alice C. Ducore and Connie Cogle are acknowledged for their editorial assistance and Emelene Loyalio for her clerical assistance in the production of the study.

Richard M. Parrish,  
 Branch Campus Study Director

## CHAPTER I

### INTRODUCTION

Ocean County, the second largest county in New Jersey in land area is located in the east central part of the state along the Atlantic Ocean. The county has 45 miles of ocean front and more than 150 miles of bay shore and estuaries. Toms River, the county seat, is located in the northern area of the county approximately 70 miles from New York City, 60 miles from downtown Philadelphia and 50 miles north of Atlantic city. Ocean County is accessible from major urban areas via the Garden State Parkway and other major roadways.

For the past three decades, Ocean has been the fastest growing county in New Jersey. From 1950 to 1960 Ocean County's population grew by 91 percent. During the next decade, the population grew by 93 percent and in the most recent complete decade of the 1970's by yet another 66 percent. According to the most recent estimate provided by the Ocean County Planning Board, the County population is projected to be 471,100 in 1990 and 560,400 by the turn of the century (Ocean County Planning Board, 1988a).

Southern Ocean County, defined to be the 13 municipalities from Lacey Township south to Tuckerton, has grown at even a more rapid pace than the northern areas of the County. During the 1970's, southern Ocean grew by 130 percent as compared with 57 percent for northern Ocean County. Between 1970 and the turn of the century, it has been projected by the Ocean County Planning Board that southern Ocean County will have increased in population nearly fourfold as compared with a 140 percent increase for northern Ocean County. The southern County population is estimated at 121,650 by the year 2000.

The impact of this most recent population surge and the projected growth of southern Ocean County through the year 2000 has prompted Ocean County College officials to examine the need for a southern branch campus. During the 1985-86 academic year, a preliminary needs assessment was completed supporting the creation of a southern branch campus. At that time the college was moving ahead on so many new initiatives, including its Phase IV building program on the Toms River campus, that a decision was made to delay further movement on the branch campus question. Now nearly three years later, this second study has been completed to reassess the need for a branch campus as supported in the 1986 study and to refine the programmatic, facility, and operational requirements.

Phase I of this current study (feasibility research) drew upon the work of the FY 86 study and included a repeat of two separate surveys for two sample populations: 1) southern Ocean County high school students and 2) local area business firms. A telephone survey of the general public 18 years of age or older was completed in the FY 86 study but was not repeated in this second assessment. In order to complete Phase II of this current study which included a

thorough assessment of the academic requirements for the proposed branch campus, leaders from five of the college's academic departments and several academic administrators were asked to serve on an Academic Advisory Committee. The committee members included:

Dr. James Doran, Assistant Dean of Humanities  
Mr. Theodore Faraklas, Chairperson of Mathematics Department  
Mrs. Deborah Fuller, Assistant Dean of Nursing & Health Tech.  
Mrs. Janet Hubbs, Coordinator of English  
Dr. James McGinty, Associate Dean of Instruction  
Mr. Francis Polk, Assistant Dean for Business & Computer Science  
Mr. Nathaniel Shaffran, Coordinator of Off-Campus Programs  
Dr. Peter Smith, Chairperson of Social Sciences Department  
Mr. John P. Stauff, Assistant Deans for Health & Physical Education  
Dr. Richard Parrish, Director of Institutional Research and  
Branch Campus Study Director

Research questions incorporated in this study were presented to the southern Ocean County community in survey and interview formats. Specific concerns included: college aspirations of high school students; potential enrollment in a branch campus; business firms' opinions toward the establishment of a branch campus and their educational needs for trained workers; program and/or course preferences to be offered at the new site; and other issues such as preferred attendance time. Where possible, the results from the first preliminary research effort have been incorporated in this report to show changes in opinion over time.

In addition to the survey research information, the Academic Advisory Committee analyzed a wide variety of quantitative data. The committee had access to data about current and projected high school and OCC student enrollment, academic programs, number of graduates by high school and for OCC, and student enrollment capture rates from the graduating classes of the area high schools. The Ocean County Comprehensive Master Plan, December, 1988 edition, compiled by the Ocean County Planning Board staff, provided the Advisory Committee members with necessary background information on the demographic and economic characteristics and trends of the county. This information was supplemented by 1980 US Census data.

The project director made several trips to southern Ocean County high schools, various local government officials, and employers in the County to informally interview individuals concerning the proposed branch campus. Members of the Executive Committee of the Southern Ocean County Chamber of Commerce provided insight on issues relevant to the success of the study.

The Academic Advisory Committee members thoroughly examined the results of the FY 86 study and the survey research completed in FY 89 before recommending the academic programs and attendant facility requirements included in this report. Based on the data and information compiled and the committee members' knowledge of educational systems and economic development activities in the County, operational considerations such as staffing needs and effective means of maintaining academic quality have also been included in this report.

## CHAPTER II

### THE AREA SERVED - OCEAN COUNTY AND SPECIFICALLY SOUTHERN OCEAN COUNTY

A critical element in a strategic planning process for any college is an "environmental scan" of the external environment for emerging issues that pose threats or opportunities to the college (Morrison, Renfro, and Boucher, 1984). The issues usually examined involve demographic, economic, and educational concerns. Although the focus of this research study was not specifically to conduct such an environmental scan, it was necessary to understand these forces in order to complete an objective assessment of need for a branch campus. In this chapter, those elements of the external environment which are considered to be critical factors in future planning for the College are presented.

While the basic data and information provided will not be new to most readers, it is hoped that its presentation and accompanying observations will provide a common understanding of the important factors that helped shape the final recommendations included in this report.

#### Demographic Issues

As a county college, Ocean County College's primary mission is to serve the citizens of Ocean County, and, therefore, the scope of its activities is dependent upon the nature of the population base in Ocean County, New Jersey. In support of this mission, the college enrolled 6,214 students in the fall of 1988 in credit courses. Of this total, only 363 (5.8%) were not residents of Ocean County.

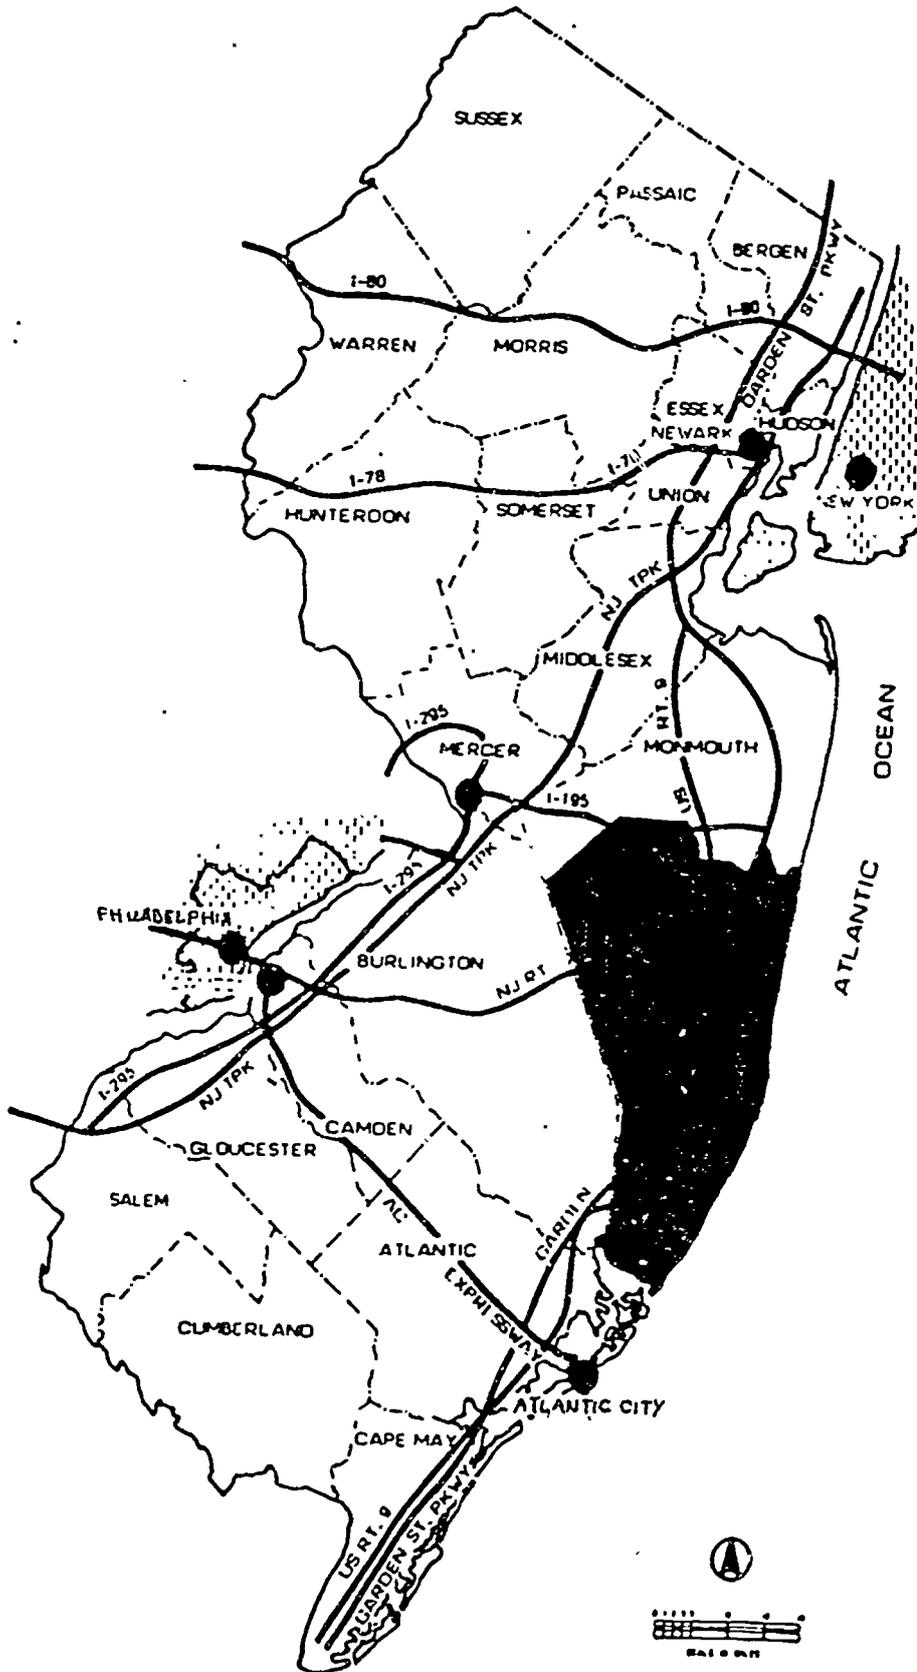

Several characteristics of the County population are worthy of note given the context of the study to document the need for a branch campus in the southern part of Ocean County.

#### Land Area and Dispersion

As shown in Figure 1, Ocean County is situated in the east central portion of the state, bordered on the north by Monmouth County, on the west by Burlington County, and on the south by Atlantic County. Ocean is the second largest county in the state in land area (638 square miles) and ranked 10th of 21 counties in population according to the most recent official state population estimates (N.J. State Department of Labor & Industry, 1988).

The County of Ocean is composed of 33 municipalities ranging in land area from .35 square miles for Seaside Heights Borough to 100.3 square miles for Jackson Township and ranging in population from 455 for Mantoloking Borough to 76,870 for Dover Township (Ocean County Planning Board, 1989). Land development and population dispersion are characteristics of the County which deserve discussion.

Figure 1 - Location of Ocean County in New Jersey

Southern Ocean County as previously defined in Chapter I, and as shown in Figure 2, includes all municipalities from Lacey Township south to Tuckerton. Although the land area of northern Ocean County is only slightly larger than southern Ocean County, the current population of the northern area is about 4.5 times as large as the southern area. Furthermore, approximately 45 percent of the population, according to the 1980 census, is located in the three contiguous municipalities of Dover Township, Lakewood Township, and Brick Township. While the balance of the population is scattered throughout the County, there are no major urban centers of population. There are small towns such as Lakewood and downtown Toms River. The County population is truly dispersed into many small towns, senior citizen developments, suburban developments, rural areas, and coastal communities that swell ten-fold in population with summer visitors.

Although for this study the County has been divided into northern and southern areas, the development of the County may also be examined according to regional corridors, see Figure 3. First, the coastal beach region extends from Point Pleasant south to Long Beach Township. It is comprised of the two barrier beaches: the Island Beach peninsula and Long Beach Island. These areas are developed extensively, interrupted only by Island Beach State Park. A noteworthy population characteristic of this region is the summer tourist crowds, whereby the population can increase ten-fold on a pleasant summer day.

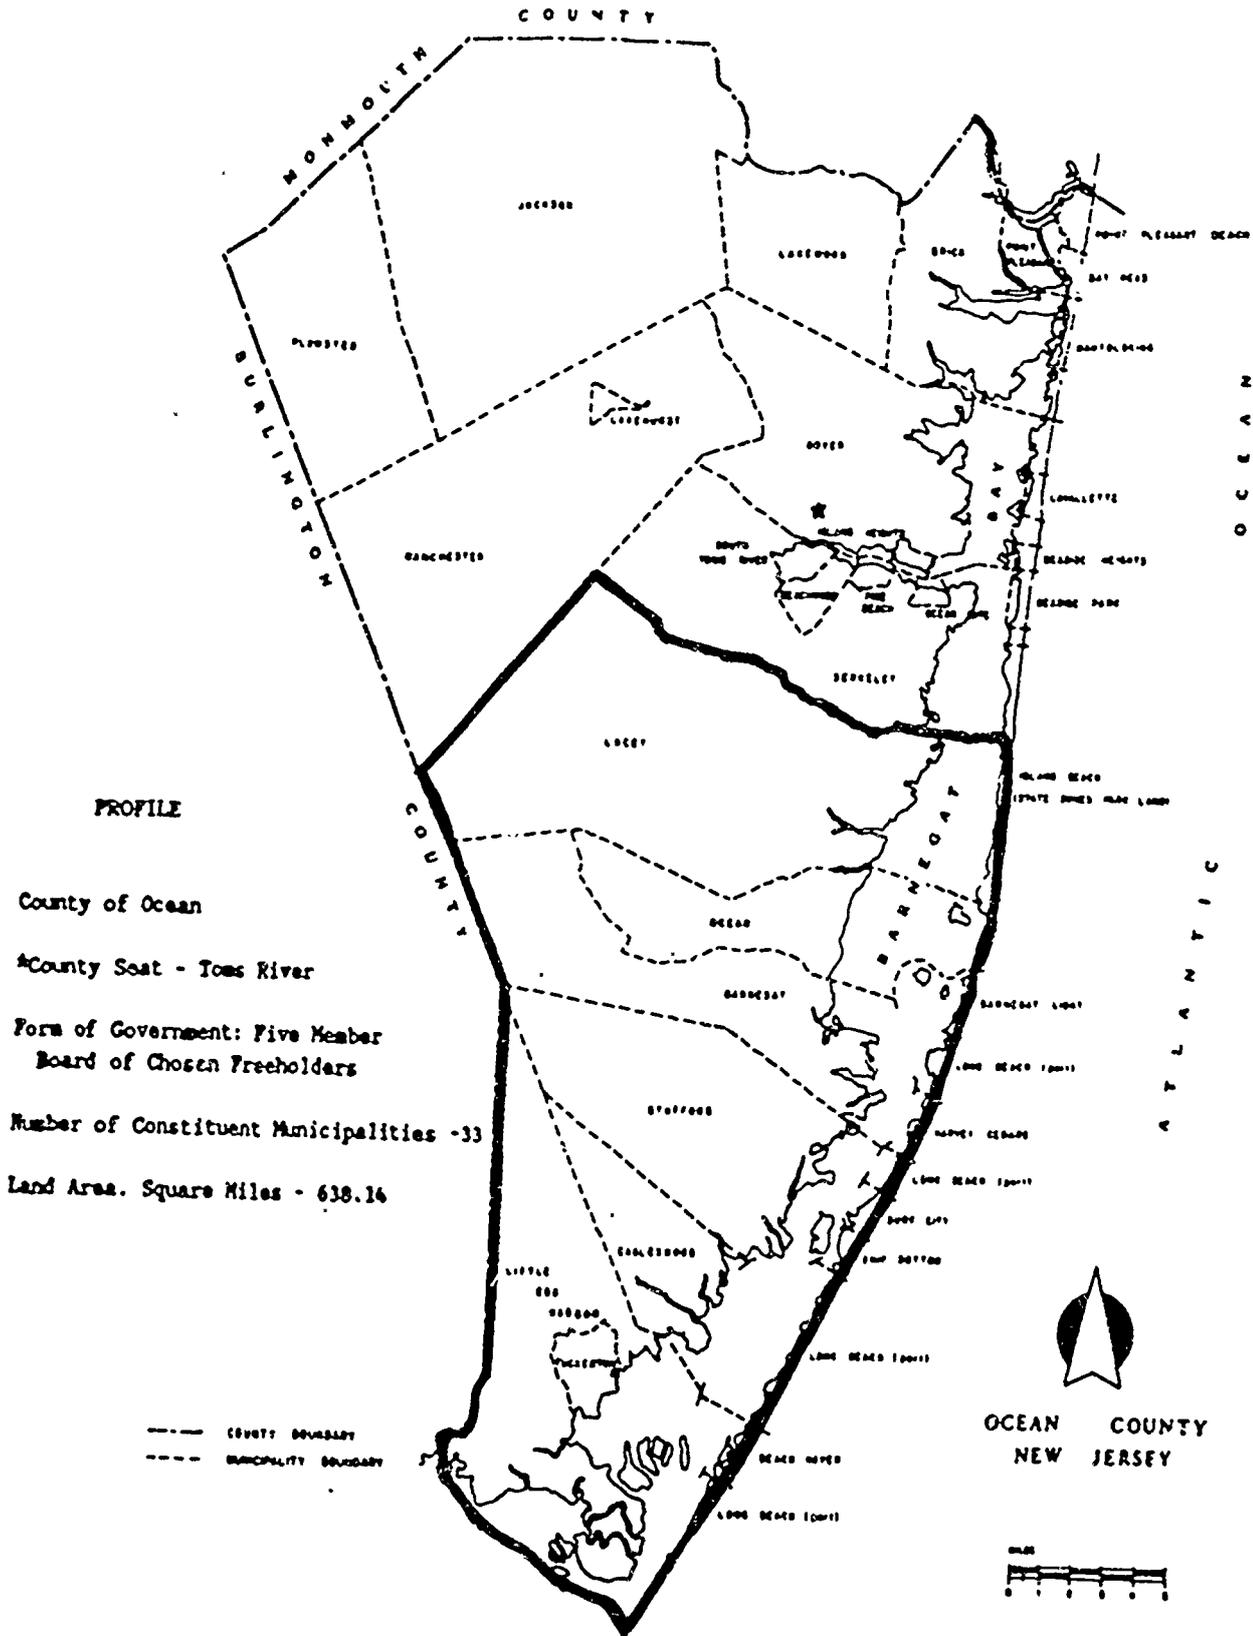

The second region is labeled the bay corridor which extends the length of the County and consists of the mainland area bordered on the east by Barnegat Bay and on the west by the Garden State Parkway. Suburbanization of Ocean County during the 1960's and 1970's extended principally along the route of the Garden State Parkway and the connecting east-west interchanges. Initially, development in this region was focused at bridge crossings to the barrier beaches. This later extended west to the Garden State Parkway and now extends north and south along secondary roads.

The third region is labeled the western inlands and contains all land west of the Garden State Parkway. This area includes huge tracts of vacant land, a major portion of which is known as the New Jersey Pine Barrens and significant acreages of publicly owned land. Several major federal installations are situated in the region, specifically the Lakehurst Naval Air Engineering Center and large parts of McGuire Air Force Base and the army's Fort Dix. Major development types in this area include housing, agriculture and the mining industry for the extraction of sand and gravel.

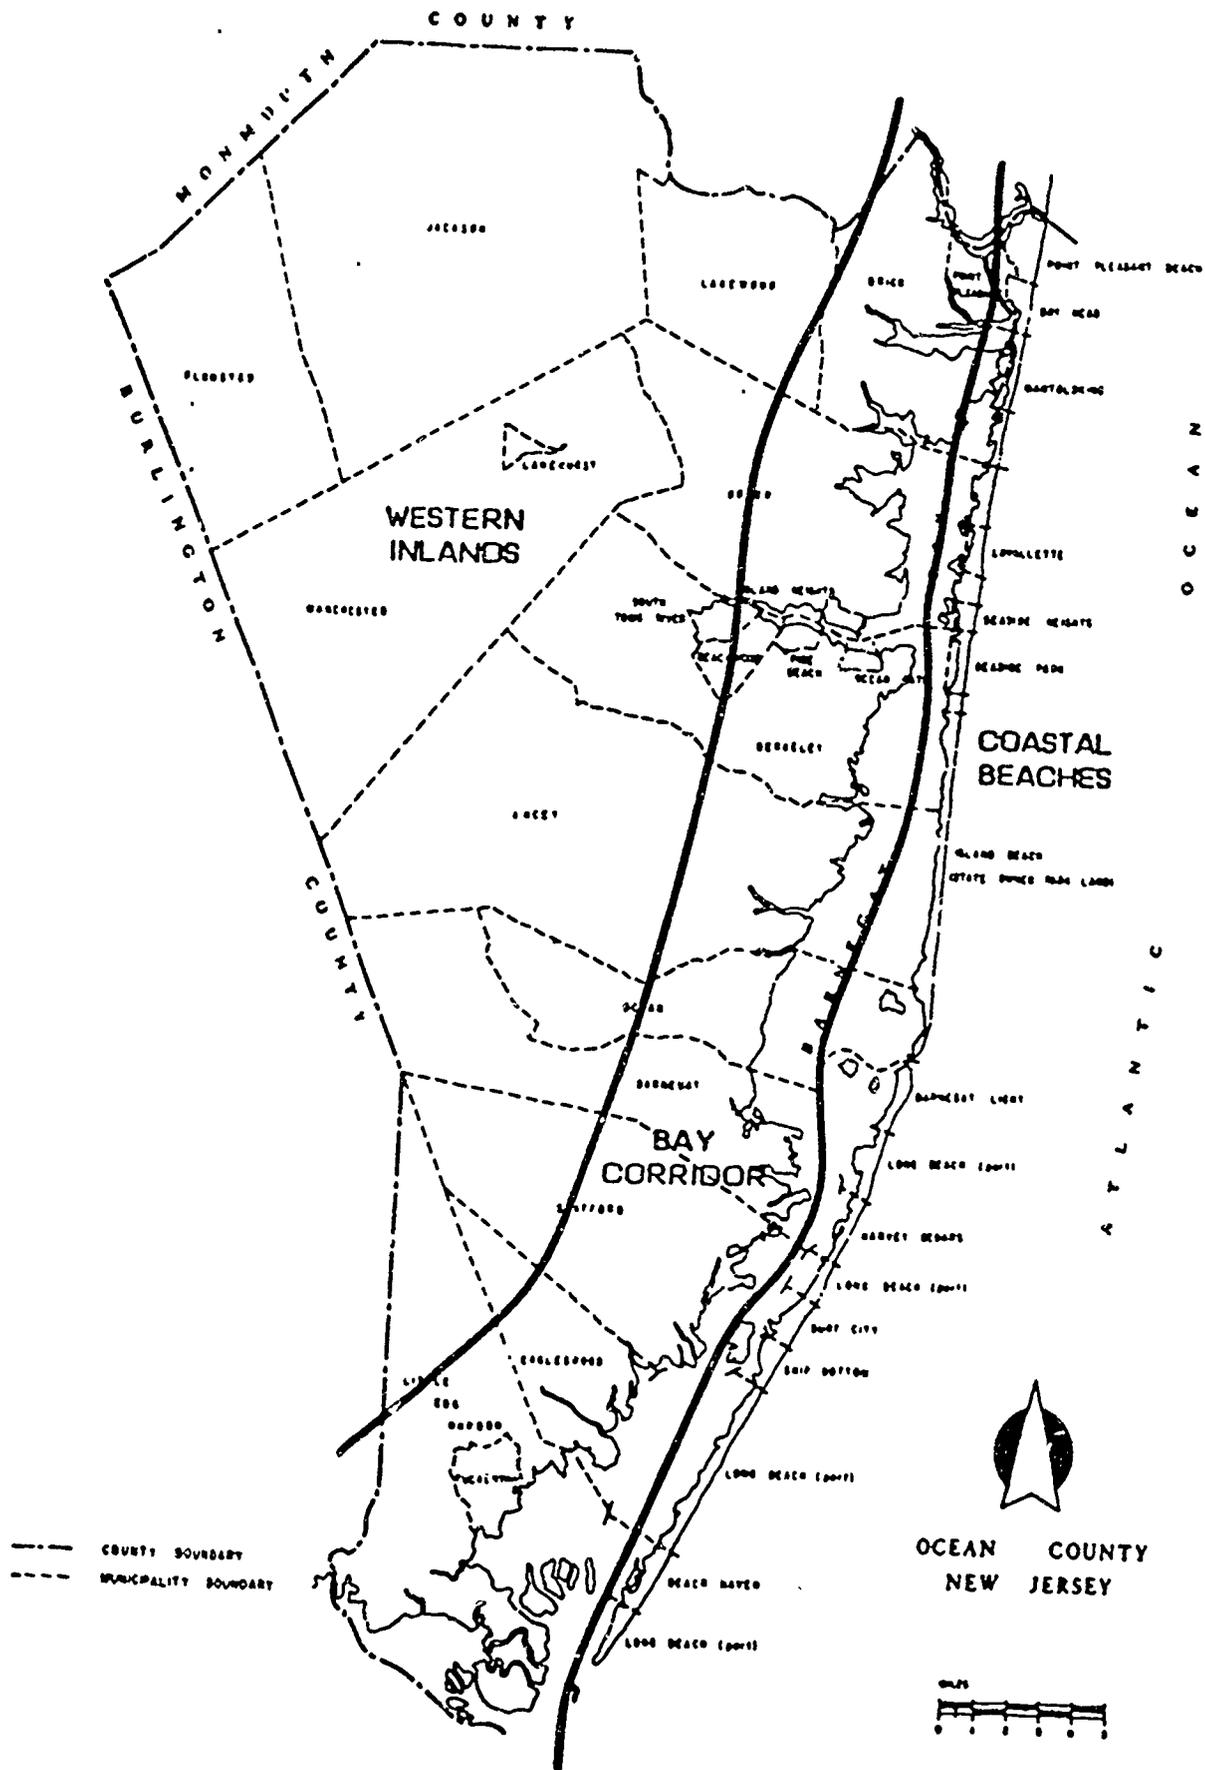

### Population Growth

For the past several decades, Ocean County has experienced the largest growth of any county in New Jersey. While the 1980 population was counted in the census at 346,038, the most recent estimates (December 31, 1987), prepared by the Ocean County Planning Board (1989), show the population to be 431,155. During the 1970's, Ocean County grew by 66 percent as compared with a 2.7 percent overall growth for the entire State of New Jersey.

**Figure 2 - Map Depicting Southern Ocean County**

**Figure 3 - Ocean County Regional Development Areas**

As shown in Table 1, the growth of Ocean County during the 1980's has continued at a very high rate of 36 percent as estimated by the Ocean County Planning Board. Although this growth is anticipated to slow in the 1990's, a large population increase is still expected.

Table 2 shows the 1970 and 1980 census data by municipality with projections for 1990 and the year 2000. From the data provided in the table, it is very clear that the past and projected growth has been and will continue to be felt very unevenly across the County. When grouped into northern and southern areas, the southern part of the County is expected to experience a growth approximately three times as heavy as that of the northern county area over the 30-year period 1970-2000. Figure 4 clearly shows the County's population dispersion graphically. Each dot on the map of Ocean County represents 200 people based on 1980 census data. Shown as an "X" toward the upper right hand corner of the County is the location of Ocean County College. The map clearly reveals that while the location of the college in Toms River could be considered the population center of the County, it also shows how far the Toms River campus is removed from the southern citizens of Ocean County.

### Minority Populations

Racially, the Ocean County population is primarily Caucasian. According to 1980 census data 95.9 percent of the population was white. The primary minority groups are black and persons of Spanish origin. Blacks constituted 2.7 percent of the population. The black population is heavily concentrated in Lakewood and to a lesser extent South Toms River Borough and parts of Manchester Township. The 1980 census identified 8,444 persons of Spanish origin or 2.4 percent of the population. This portion of the County's population, to a large extent, also resides in Lakewood (8.5 percent of its population). Table 3 lists the 1980 census population for each municipality in the County by race and Spanish origin. The table also shows the racial population distributions according to the southern and northern geographical study areas.

### Transportation

Ocean County College is a completely commuter-oriented institution. Therefore, the types of service and the location of where these services may be provided are predicated upon the convenience of students. Inasmuch as public transportation is somewhat limited and does not provide the convenient access that potential students seek, heavy dependence is placed on automobiles and the network of roads which these vehicles travel.

Rail transportation is provided in Ocean County by the NJ Transit Rail System; however, it is severely limited. The southern end of one route, North Jersey Coast Line, terminates in Bay Head. This route transports a small number of commuters from Bay Head and Point Pleasant Beach to northern New Jersey and New York City. Bus transportation is available but is also limited. NJ Transit provides a route in northern Ocean County which stops at Ocean County College and with proper planning and transfers a student can commute to the college from some areas in the county.

A major advantage in Ocean County is the Garden State Parkway, a limited access, high speed expressway which runs the entire length of the county from north to south. Interconnecting principal arterial roads provide students with the major means of access to the college campus. However, these roads and their connecting points do more than provide a means of transportation; they create areas that foster future development.

The college has recognized the importance of transportation, accessibility, and the convenience of students by providing an array of off-campus educational centers at various sites throughout the County. With the continuous growth of the County and the resulting transportation congestion, the off-campus sites have become increasingly popular in recent years.

### Economic Issues

The economy of Ocean County has been in transition over the last two decades. For years, the resort and tourism industry dominated the economic scene; and while this is still the most important industry in the County, industrial and commercial operations are expanding at a very rapid pace. Economic agencies such as the Monmouth/Ocean Development Council, Toms River Chamber of Commerce, Lakewood Chamber of Commerce, Brick Township Chamber of Commerce, and the Southern Ocean County Chamber of Commerce have encouraged the development of industrial parks and commercial service operations.

According to the Ocean County Office of Economic and Industrial Development, almost 3,000 acres are devoted to industrial parks in Ocean County. Most noteworthy is the Lakewood Industrial Park located on Route 70 near Interchange 88 on the Garden State Parkway. The parks are intended to attract clean, light industrial companies, offices, and research companies that are compatible with the area's resort character. The rapid expansion of the County's economy may be illustrated by examining the increases in the labor force. The Ocean County Planning Board (1988b) reports that the County labor force increased from 73,100 in 1970 to 132,600 in 1980, an 82 percent increase. During the next four years, the labor force increased to 172,300 persons representing a 30 percent gain. Actual employment in the County increased by 78 percent from 42,500 jobs in 1970 to 75,121 jobs in 1980. Total employment in the County (Seneca, 1988) has risen to 85,149 in 1987.

These figures indicate that despite the economy's expansion there are still many more workers in the County's labor force than there are employment opportunities. Thus, thousands of Ocean County residents commute to employment locations outside of Ocean County. Most of the commuters have found employment in nearby Monmouth County; however, many residents still commute long distances by car and bus to northern New Jersey urban cities, New York City, and Atlantic City to the south. The development of County's industrial parks will help to decrease the number of commuters in future years.

How does the recent employment growth in Ocean County compare with other New Jersey counties? According to Seneca (1988), Ocean County total employment increased by 43.7 percent during the 1982-1987

period. This compares favorably with a statewide growth of 19.5 percent. The highest growth by major sector of employment for Ocean County occurred in the construction industry with a 115 percent increase during the 1982-1987 period and wholesale trade sector with a 57 percent increase, see Table 4. Unemployment has remained relatively low for the last three years. A recent report prepared by the N.J. Department of Labor, Office of Demographic and Economic Analysis (1988b), indicated an Ocean County unemployment rate of 3.6 percent for 1987 as compared with the state average of 4.2 percent.

Ocean County has historically been an area of low incomes. Per capita income in 1983 was \$12,085, ranking 18th among the 21 counties in New Jersey, well below the state average of \$14,122 (Ocean County Planning Board, 1988b). An estimate of the 1985 median family income was \$23,619 which placed Ocean County 19th in the State.

According to Serraino (1988), Commissioner, New Jersey Department of Labor, the two counties of Monmouth and Ocean will continue to have employment growth through the end of 1988 and into 1989. This job growth will exceed the state average and will be greatest in the trade and service industries, as most segments of the non-manufacturing sector should advance. Overall, the area's economy is expected to remain strong, although increasing shortages of skilled employees will continue to emerge. Labor shortages experienced by retail establishments, previously associated with the summer resort and Christmas seasons, are now year-round problems for area employers.

Table 5 prepared from information provided by the NJ Department of Labor and Industry in its Atlantic Coastal Region Report, Serraino (1988), includes jobs that are primarily located within the area of Atlantic, Cape May, Monmouth, and Ocean counties and available during the third quarter of 1988. Unfortunately, the number of job openings was not included in this publication. Although many of the available jobs are so-called "unskilled" or "semi-skilled," there are numerous opportunities for persons graduating from a two-year community college, e.g., accountant, accounting clerk, computer programmer, electronics technician, retail manager, nurse, social worker, and physical therapist.

#### Educational Issues

According to the 1970 US Census, approximately 8 percent of the adult population of Ocean County (persons 24 years old and over) had attended one or more years of college. Ten years later, the proportion completing one or more years of college had grown to 13 percent. In 1970, 49.2 percent of the persons 25 years and over had completed high school as compared with 65.2 percent in 1980 (Ocean County Planning Board, 1988a). This section describes the current public elementary and secondary educational facilities available in Ocean County. Also included is a description of the postsecondary college opportunities for Ocean County residents. Projections of public high school enrollments are of extreme interest in an examination of need for new college facilities and have been provided herein.

Table 4  
 Employment Patterns in Ocean County, 1982-1987  
 by Major Employment Type

## Elementary and Secondary Education

Elementary and secondary education in Ocean County is primarily provided by the public schools although there are numerous very small, private, church-related elementary grade schools scattered throughout the County. There are two private secondary schools in Ocean County: Monsignor Donovan and Admiral Farragut Academy. Monsignor Donovan, a parochial high school located in Toms River, enrolls approximately 900 students in grades 9-12. Admiral Farragut Academy, a private preparatory school for boys located in Pine Beach, enrolls approximately 200 students in grades 7-12. As of September 30, 1988, 60,715 pupils enrolled in 28 different school districts comprised of 58 elementary schools, 11 middle schools, and 14 high schools. These school districts range in size from 84 pupils in the Bay Head District with one elementary school to 16,230 pupils in the large Toms River Regional School District with 16 schools.

During the decade of the 1980's, the total number of public school pupils in Ocean County has remained relatively stable with small increases and decreases on a year-by-year basis. However, there are striking differences among the 28 school districts and between the southern and northern regions as a whole. The largest percentage increase for a single school district was experienced by Lacey Township with an 84.3 percent growth. Some of this growth can be attributed to the redistricting between Lacey Township and Central Regional in the early 1980's. On the lower end of the spectrum, Bay Head Borough, Central Regional (redistricting contributed to the decrease), Long Beach Island, Point Pleasant Borough, and Point Pleasant Beach school districts experienced pupil declines of more than 15 percent during the 1980's.

Of critical importance to this study is the significant difference in growth between the northern and southern schools in Ocean County. In 1980, the southern schools enrolled 10,418 pupils; and by 1988, the enrollment had grown to 13,093, a 25.7 percent increase. In contrast, the northern schools experienced a decline from 51,176 pupils in 1980 to 47,622 in 1988, a 6.9 percent decrease. It is evident that the schools in southern Ocean County have grown larger each year for the past 8 years. See Table 6 for further details.

### Secondary Schools

Within Ocean County are 14 high schools (excluding Monsignor Donovan) that serve as potential feeder schools for Ocean County College. As can be seen from Table 7, the proportion of June, 1988 graduates that attend college varies considerably from a low of 46.5 percent for Manchester High School to a high of 80.5 percent for Point Pleasant Beach High School. Overall, the college-going rate for Ocean County public high school graduates has increased over the five year period 1983-1988 from 54.6 percent to 58.1 percent.

Noteworthy are the data that consistently indicate over the last five years a smaller proportion of graduates from southern Ocean County high schools go on to college than do graduates from northern Ocean County high schools.

NOTES: Number of high school graduates found in the Consolidated Graduate Report: Follow-up Of High School Graduates filed in the Office of the Ocean County Superintendent of Schools.

Table 8 provides the reader with data showing the number of Ocean County public high school graduates who attended OCC the year following graduation from high school. In 1984, OCC enrolled 21.4 percent of the graduates as compared with 24.3 percent in 1987. There are significant variations in "capture rates" among the 15 high schools, from a low of 5.6 percent of Pineland's graduates to a high of 34.4 percent of Toms River North's graduates. Similar to Table 7, and partially a function of college-going rates, the OCC capture rate for northern schools is higher than that for southern schools. The relatively lower college participation rates of southern Ocean County high school graduates represent a potential opportunity for Ocean County College.

Another important factor to consider is the potential growth of the southern Ocean County high schools. Previously shown in Table 2 were population projections for the various county municipalities to the year 2000. Both southern and northern Ocean municipalities were expected to grow but at different rates. The rate of growth in the south is expected to be nearly 2.5 times larger than the northern communities. With these projected increases in total population, what is the effect upon the public school enrollments?

Using a well-accepted method for projecting enrollments (grade-to-grade cohort survival ratios), the enrollments for the three southern Ocean County high schools have been projected for the next ten years, 1989 through 1998, see Table 9. As of September 30, 1988 the total high school enrollment (grades 9 through 12) was 1,135 for Lacey Township, 796 for Pinelands Regional, and 1,793 for Southern Regional. During the next ten years, it is estimated that Lacey High School will grow to 1,636 students (+44%), Pinelands will grow to 1,145 (+43.8%), and Southern Regional will grow to 2,698 students (+50.5%). The number of seniors is expected to increase by 31 percent from 927 in 1988 to 1,215 in 1998. The data supporting Table 9 are included as Appendices A through D to this report.

### Postsecondary Education Environment

Ocean County College has relatively little direct competition with other postsecondary institutions within its geographic service area. Only one other college, Georgian Court College, is located in Ocean County. As a four-year, private liberal arts college for women, Georgian Court is considerably different from OCC in both programs and costs to the student. Georgian Court currently enrolls approximately 1,950 students with an undergraduate tuition and fee charge of approximately \$5,700. This is substantially higher than the current charge of \$1,081 for a full-time OCC student.

As previously shown in Table 7, approximately 58 percent of the County high school graduates go on to college the following year. Furthermore, OCC attracts nearly 41 percent of those that do go on to college. The other 59 percent of the college-going students choose to attend other N.J. colleges or out-of-state colleges.

With the assistance of staff from the N.J. Department of Higher Education, Office of Policy Planning, Research, and Information Systems (Francis, 1989), a special examination was made of southern

Source: NJ Department of Education, Sept. 30th, Pupils on Roll Reports for actual 1988 data. Projections made using grade succession ratio methodology, see Appendices A through D.

Ocean County high school students who, in the fall semester of 1987, chose to attend one of the four colleges in nearby areas. These colleges are Atlantic County College, Burlington County College, Glassboro State College, and Stockton State College.

Of extreme interest to this study are the programmatic interests of the southern Ocean County students who attended nearby colleges. Table 10 provides this information cross tabulated by major, college and class level, i.e., freshman, sophomore, or unclassified. The closest in distance to the southern County residents is Stockton State College; and, not unexpectedly, Stockton enrolls the largest number of residents in comparison with the other three colleges. In 1987, 71 freshmen, 48 sophomores and 63 unclassified students from southern Ocean County enrolled in Stockton. Junior, senior and graduate level enrollment patterns were excluded from this examination for obvious reasons. The large majority of those students attending Stockton had no major program identified.

Glassboro State College enrolled 18 freshmen, 8 sophomores and 10 unclassified students from southern Ocean County with a wide variety of program interests. The two nearby county colleges, Atlantic and Burlington, enrolled relatively few southern Ocean County residents in 1987. Twenty students enrolled at Atlantic County College and 18 students enrolled at Burlington County College.

The data in Table 10 seem to indicate that the majority of southern Ocean County residents attending nearby colleges do not have a focused career in mind. A relatively small proportion enroll in specific programs and many of these programs are not currently offered by Ocean County College. Examples of these programs are architecture, chef/cook, child care management, occupational therapy, and physical education. Some programs, however, are currently offered at Ocean County College. Examples of these programs are business administration, communications, criminology, engineering-general, information sciences, liberal arts, political science, and psychology.

The creation of a southern Ocean County College campus would appear to have the greatest potential effect upon Stockton State College. It is possible that a portion of the potential southern Ocean County freshman college students, who heretofore have elected to attend Stockton, may opt to attend a less expensive and closer southern Ocean County College branch campus.

## Demographic Summary

Ocean County has been the fastest growing county in New Jersey and population projections both at the state and county levels indicate a continuous growth well into the future. Within Ocean County, growth has been uneven. Southern Ocean County municipalities have grown and are projected to continue the population growth at a faster rate than the northern County municipalities. The school districts providing elementary and secondary education for the County residents have also grown in a similar pattern.

The economic conditions in the County are in transition, transition from being an economy almost totally dependent upon the tourism industry to one which supports a variety of employment opportunities in the construction, manufacturing, wholesale and retail trade, and service industries. Tourism for the foreseeable future will still rank number one in terms of dollars generated; however, the Ocean County Planning Board envisions a more diversified economic future, not so totally dependent upon tourism.

From a demographic perspective it would appear that a southern branch campus of Ocean County College is justified for the following reasons.

1. The County population has grown significantly in the last two decades and is projected to continue to grow, if at a somewhat slower rate through the end of the century. Furthermore, the population growth in southern Ocean County (Lacey Township south) has been, and is expected to continue to be, higher than northern Ocean County.
2. Student enrollments in southern Ocean County public school districts have also been growing at a much faster rate than schools in northern Ocean County. The southern Ocean County public high schools are projected to continue their growth well into the next decade. Projections show a 49.8 percent increase from the actual fall, 1988 9th-12th grade enrollment of 3,724 to 5,580 ten years later.
3. As one of only two colleges in the County, OCC enjoys an enviable position of having little direct competition for students. Notwithstanding, many students do decide to go out-of-county to attend college. A migration study of southern Ocean County students attending four southern New Jersey colleges has shown another potential pool of students for a new southern OCC branch campus.
4. College-going rates for graduating seniors in southern Ocean County high schools have historically been lower than the ones in the northern County schools. The creation of a southern campus would provide an opportunity to increase the college-going rates in the south.
5. The distance to Toms River, the traffic congestion, and limited public transportation have probably deterred southern Ocean County residents from attending OCC.

## CHAPTER III

### OCEAN COUNTY COLLEGE PAST, PRESENT, AND FUTURE

The previous chapter summarizes many of the external factors that are important considerations in the development of future plans for the college in southern Ocean County. Before proceeding with a discussion of the research findings and recommendations, it is appropriate to note several characteristics of the college that have influenced those recommendations.

#### History of Ocean County College

As documented in the 1989 Ocean County College catalog, the interest in establishing a facility for higher education in Ocean County dates back to 1957 when the Ocean County Board of Chosen Freeholders went on record favoring a study of the need for such a facility in the county. In accordance with the provisions of the New Jersey State Law of 1962, which enabled counties to establish and operate colleges, the Board of Freeholders authorized the completion of a feasibility study to determine the need for a two-year community college. The research indicated a need for postsecondary facilities and recommended that a two-year college for 900 students be established. Subsequently, a study by the State Department of Education supported these findings, and shortly thereafter, the State Board of Education officially approved Ocean County's request to establish a two-year college and substantiated the ability of the county to support it financially.

On November 5, 1963, the citizens of the county approved the establishment of a college in Ocean County by public referendum. Immediately thereafter, on January 15, 1964, the Board of Chosen Freeholders adopted a resolution that established in Ocean County the first county college in the State of New Jersey, and on March 4, 1964, the nine members of the original Board of Trustees were appointed.

The selection of the college president, the architect and the campus site in the fall of 1964 enabled the Board of Trustees and the administration to plan for the educational programs and the facilities to accommodate the projected 900 full-time students. Key members of the administrative staff were appointed in September of 1965 to engage in the detailed planning necessary for the opening of the college in the fall of 1966 (Ocean County College Catalog 1989-90).

The college opened its doors in temporary facilities to 579 full-time and 400 part-time students in the fall semester of 1966. The following spring semester (1967), the existing Toms River site was opened with the enrollment growing to 1,159. By the second year of

operation, the student enrollment grew to 1,965 and continued an upward climb for the next 15 years. In the early 1980's, student enrollment reached a peak and then declined slightly until the later half of the decade.

By Fall 1988 the college had a total enrollment of 6,214 students. In recent years a large portion of the growth in the total student enrollment may be attributed to the growth of the part-time student population which, in turn, has been affected by the increase in the number of women in their early 30's who have decided to attend college. Additionally, the part-time student enrollment increase has been significantly affected by the college's effort in expanding the off-campus course offerings. In the fall semester of 1981, the enrollment in off-campus credit courses was 122 as compared with 857 for the fall 1988 semester. The continued success of off-campus courses has contributed, in large part, toward the college's effort in reviewing the need for a branch campus in the southern part of the county.

### Ocean County College - The Present

#### Organization

Under a Board of Trustees, President, and the administrative offices supporting the President, the college is organized into three major divisions: the Instructional Division, the Division of Business and Financial Affairs, and the Division of Student Affairs. Each division is headed by a dean who reports directly to the President. Appendix E, Ocean County College Table of Organization, shows all administrative positions in the college from the President through positions that report to a dean level officer.

#### Board of Trustees

The governing Board of Trustees of Ocean County College in accordance with N.J. State law consists of the Ocean County Superintendent of Schools and ten persons. Eight of the trustees are appointed by the Ocean County Board of Chosen Freeholders, and two are appointed by the State Board of Higher Education. The college President serves as an exofficial member of the Board of Trustees without vote. In addition, the student body elects, each year, a representative from the graduating class to serve for one year as a non-voting member of the board. The ethnic makeup of the board is as follows: 8 white males, 1 Hispanic male, 1 white female, and 1 black female.

#### President and Supporting Offices

Reporting directly to the President within this administrative unit are the Dean of Personnel, the Director of Institutional Research, the Director of Community Affairs, and the Administrative Assistant to the President. Additionally, for a three year period beginning in Fall 1988, special minority, English as a second language, and off-campus career counseling programs have developed in response to a state challenge grant initiative. The Project Director of this multi-faceted program reports directly to the President.

## The Instructional Division and the Faculty

Reporting directly to the Dean of Instruction are currently two Associate Deans of Instruction, the Director of Community Educator, the Coordinator of Off-Campus Programs, the Coordinator of the Early Intervention Program, and six academic department heads.

One of the Associate Deans of Instruction supervises staff responsible for the Planetarium, academic scheduling, and the cultural aspects of the Fine Arts Center. The other Associate Dean supervises staff responsible for the college library (known as the Learning Resources Center), the Basic Skills Program, the Learning Disabilities Center, the Testing Center, the Media Services Center, and the International Education Office. The six academic departments are as follows: Business and Computer Science; Engineering, Mathematics and Science; Health and Physical Education; Humanities; Nursing and Allied Health; and Social Sciences. As of the Fall 1988 semester, the faculty number 100 full-time and 161 part-time. The size of the departments range from a low of 7 in the Health and Physical Education Department to a high of 76 in the Humanities Department (See Appendix F). In the last five years, the number of full-time faculty has increased by six and the part-time faculty has increased by 13. As of January 1989, the academic division was reorganized by combining the departments of Engineering, Mathematics and Science into one larger department.

## The College Library

The Learning Resources Center is a hub of academic life providing resources for all faculty and students. The holdings of the library in printed material currently include approximately 70,000 volumes, 600 periodical subscriptions and 7,000 government documents. In the non-print area, the holdings include 1,500 records, 1,200 filmstrips, 150 video tapes, 55 data disks, and 5,500 reels of microfilmed periodical backfiles.

## The Division of Student Affairs

Under the leadership of the Dean of Students, this division includes the following offices: Admissions and Records, Financial Aid, Counseling, the Educational Opportunity Fund, Student Life, the College Nurse, and Athletics.

## The Business & Financial Affairs Division

The Dean of Business and Financial Affairs administers a major supporting branch of the college. Included within this division are the following offices: Accounting, Physical Plant, the College Bookstore, Purchasing & Support Services, and the Computer Center.

## Total Personnel

As of the Fall 1988 semester, in addition to the 100 full-time and 161 part-time faculty, the college employed 51 full-time and two

part-time executive/administrative managers, 15 full-time and 9 part-time professional non-faculty, 59 full-time and 27 part-time clerical, 35 full-time and 9 part-time tech./paraprofessional, 7 full-time skill craftworkers, and 30 full-time and 6 part-time service/maintenance workers. Altogether, the college employed 297 full-time and 214 part-time individuals for a total workforce of 511. (See Appendix G for further details.) The full-time employees are almost equally divided by gender, 146 males versus 151 females. In the part-time employee category, the college employs a total of 122 males and 92 females.

Of the 100 full-time faculty, 56 are male, and 74 are tenured. There are 2 full-time black faculty and 2 Asian faculty. There are no Hispanic full-time teaching faculty. Of the part-time teaching faculty, 105 are male (65.2%) and 6 are minorities (3.7%). The full-time professional employees (faculty, administrative, and professional/non-faculty) include 97 males (58.4%) and 7 minorities (4.2%).

### Academic Programs

Ocean County College offers three degrees: the Associate in Arts degree, the Associate in Science degree and the Associate in Applied Science degree.

Currently there are two Associate in Arts degree programs, six Associate in Science programs and nine Associate in Applied Science programs. Since the majority of the college's students have traditionally enrolled in transfer-oriented programs, numerous options and concentrations have been developed for them (Appendix H).

In addition to degree programs, the college currently offers 11 certificate programs of at least 30 credits or one full year of academic study. These certificate programs are in the fields of Accounting, Building Construction Technology, Criminal Justice, Fashion Merchandising, Fire Science, Food Service Management, Legal Assisting, Microcomputer Technology, Plant Science, Real Estate, and Word Processing. Many of the recent changes in the college's programmatic offerings have resulted from state mandates concerning degree designations. The business administration, computer science and engineering programs which recently were Associate in Arts degree programs were changed to Associate in Science degree programs. The Computer Science A.S. and A.A.S. programs also underwent major curricular review by program faculty with input from community advisory committee members. As a result, revitalized programs showed a marked increase in student enrollment.

In 1986, the college added its newest degree program, Medical Laboratory Technician. This program was developed in cooperation with Community Medical Center, a major hospital in the Toms River area. Classroom instruction occurs on campus, while the laboratory instruction is completed in the hospital.

Other recent curricular reviews have resulted in the development of a photography option for the Visual Communications Technology

program, a word processing option for the Office Systems Technology program, a gerontology concentration for the Community Services Technician program, an evening nursing option for the Nursing Program, and a career mobility option for the Nursing Program (allowing licensed practical nurse-registered nurse transfer).

Shifts in student enrollment and changes in community needs have prompted the college not only to add and modify programs, but also to discontinue programs, options and certificates as appropriate. In the last few years, the Automotive Management A.A.S. Program and its accompanying certificate were discontinued, the A.S. Business Education with its Secretarial and Accounting options were discontinued, the Criminal Justice Diploma Program was discontinued, and the A.A. Business Program was discontinued. In place of the A.A. Business Education Program, an A.A.S. in Office Systems Technology was added. This program provides a broad academic background, basic business training, and specific training (based on choice of electives) for preparation of the successful secretary, administrative assistant, word processing specialist, or supervisor.

#### Student Enrollment and Graduation Data

As previously stated, the college opened its doors to students in Fall 1966 as one of the first county colleges in New Jersey. In this initial semester, 579 full-time and 400 part-time students took classes in temporary facilities. The college grew rapidly in its early years, reaching a total enrollment of 2,815 students in 1970 and 5,587 a decade later. In Fall 1988, the college reached its peak total enrollment of 6,214 students.

As shown in Table 11, the most recent growth in total enrollment can be attributed to the rise in the college's part-time student body. The Fall 1988 semester saw the largest part-time enrollment in the history of the college and, furthermore, the largest number of female students. The total student enrollment is now 60.3 percent female, which is a significant change from the early college years during which the male population accounted for approximately 60 percent of the total.

Table 12 shows the number and percent of full-time and part-time students by racial/ethnic category. During the last 5 years the number of full-time minority students has increased from 81 to 172. The black and Hispanic full-time student enrollment has increased from 64 to 122. The part-time minority student enrollment has also increased significantly in the last 5 years from a Fall 1984 count of 88 to the most recent fall enrollment of 182. Black and Hispanic part-time minorities numbered 123 this past fall semester. Figure 5 displays visually the growth in the minority student population over the last ten years. The drop this year in Hispanic students is due, in part, to identification problems.

As shown in Figure 6, the average age of all students currently enrolled as of Fall 1988 was 26.5 years. This average age has remained relatively constant during the past ten years. The full-time students are considerably younger than the part-time students and generally attend classes in the day, in contrast with the part-

time students, who primarily attend evening classes between 6:00 and 10:00 p.m. Female students, both full-time and part-time, tend to be slightly older than the male students. The current part-time female average age is 31.8 years as compared with the part-time male of 28.4 years. The current full-time female is 21.3 years of age as compared with the full-time average male age of 20.2 years.

Approximately 70 percent of the current full-time students enroll in one of the following six academic programs: General Education (A.A.), Liberal Arts General, Business Administration, Criminal Justice, General Education (A.S.), or Nursing.

Several programmatic enrollment shifts have occurred over the last 5 years. In Fall 1983, the college had 231 full-time students enrolled in its two computer science curricula. By Fall 1988 the number of full-time computer science majors had declined to 56, a decline much more precipitous than the overall decline of the full-time student enrollment. Computer science faculty restructured the entire program and course content during the 1986-87 academic year. It is hoped that with these curricular revisions, supported by new equipment and a change in degree designation, computer science enrollments will increase in the future.

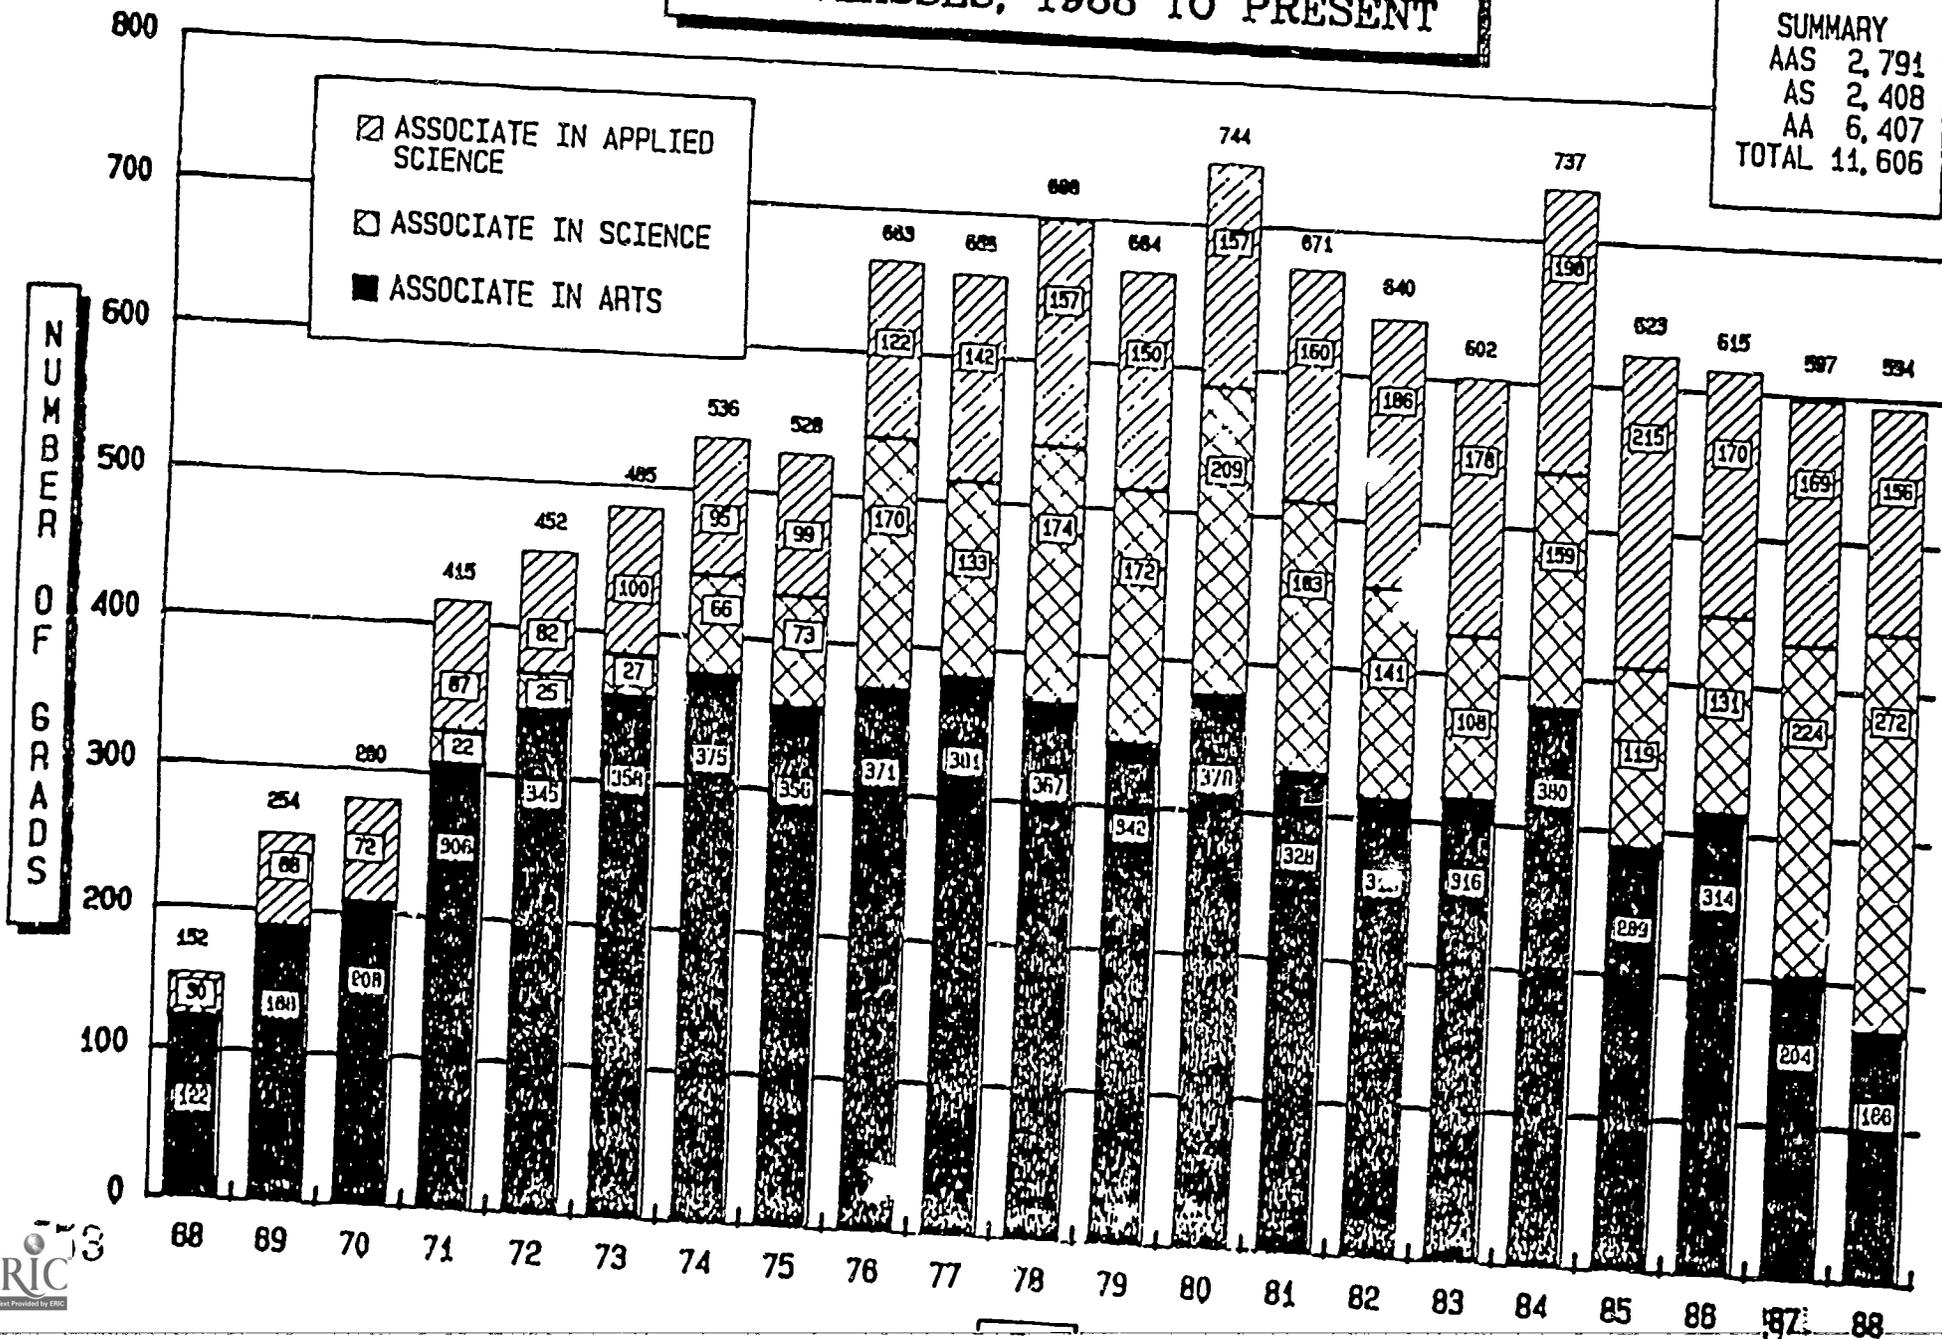

The number of students enrolled in the college's General Education (A.A.) Program dropped from 378 to 232 over the five year period. However, this was counterbalanced by the growth in the General Education (A.S.) Program from 138 students in 1984 to 290 in 1988.

The college, with 21 graduating classes, has 11,606 alumni. As shown in Figure 7, the largest graduating class was 744 in 1980, with the number averaging approximating 600 over the last four years. Most notable is the drop in the number of A.A. degrees awarded. This decline is directly linked with a decision to reclassify the degree designation for several transfer programs from A.A. to A.S.

Of importance to this study is the growth in the off-campus enrollments. The college has for many years cooperated with local school districts to provide credit courses in the evening. However, with the appointment of a Coordinator of Off-Campus Programs in 1984, the number of sites offered by the college and the number of students taking advantage of these credit courses have increased significantly. As evidenced by the data provided in Table 13, the number of credit hours taken by students in FY 85 was 2,132. Five years later, the number had increased to 5,303. The most notable growth fact with regard to this needs assessment is the huge increase in the southern county sites--480 credit hours in FY 85 to 2,034 credit hours in FY 89.

## Finances

### Current Revenue

Ocean County College's current operating funds are provided by three principal sources: the County of Ocean, the State of New Jersey, and student tuition and fees. A fourth source of funds is the miscellaneous category, which primarily includes grants and contracts, and earnings on short-term investments. As shown in Figure 8, the proportion of the operating budget supported by the State has gradually eroded over the last ten years from a high of 34.2 percent in FY 80 to 27.1 percent anticipated for FY 90. The County of Ocean will contribute the largest share (36.8%) of the college's operating budget in this coming fiscal year. The proportion of the operating budget supported by student tuition and fees gradually increased from a low of 26.4 percent in FY 80 to a high of 36.2 percent in FY 84. Since this time the proportion has declined to the current estimate of 32.0 percent for FY 90.

OCC's tuition is low as compared with private colleges in the state and somewhat lower than the public state colleges. The current \$940 per year maximum for full-time county residents is expected to remain the same for FY 90. The part-time resident tuition rate is \$39 per credit. In addition to tuition, students are assessed laboratory fees as appropriate and a general college fee charged on a per credit basis to a maximum of \$141 per year. Other charges are made in accordance with specific circumstances, e.g., late registration fee, application fee, and transcript fee.

### Revenue Projection Assumptions for FY 90

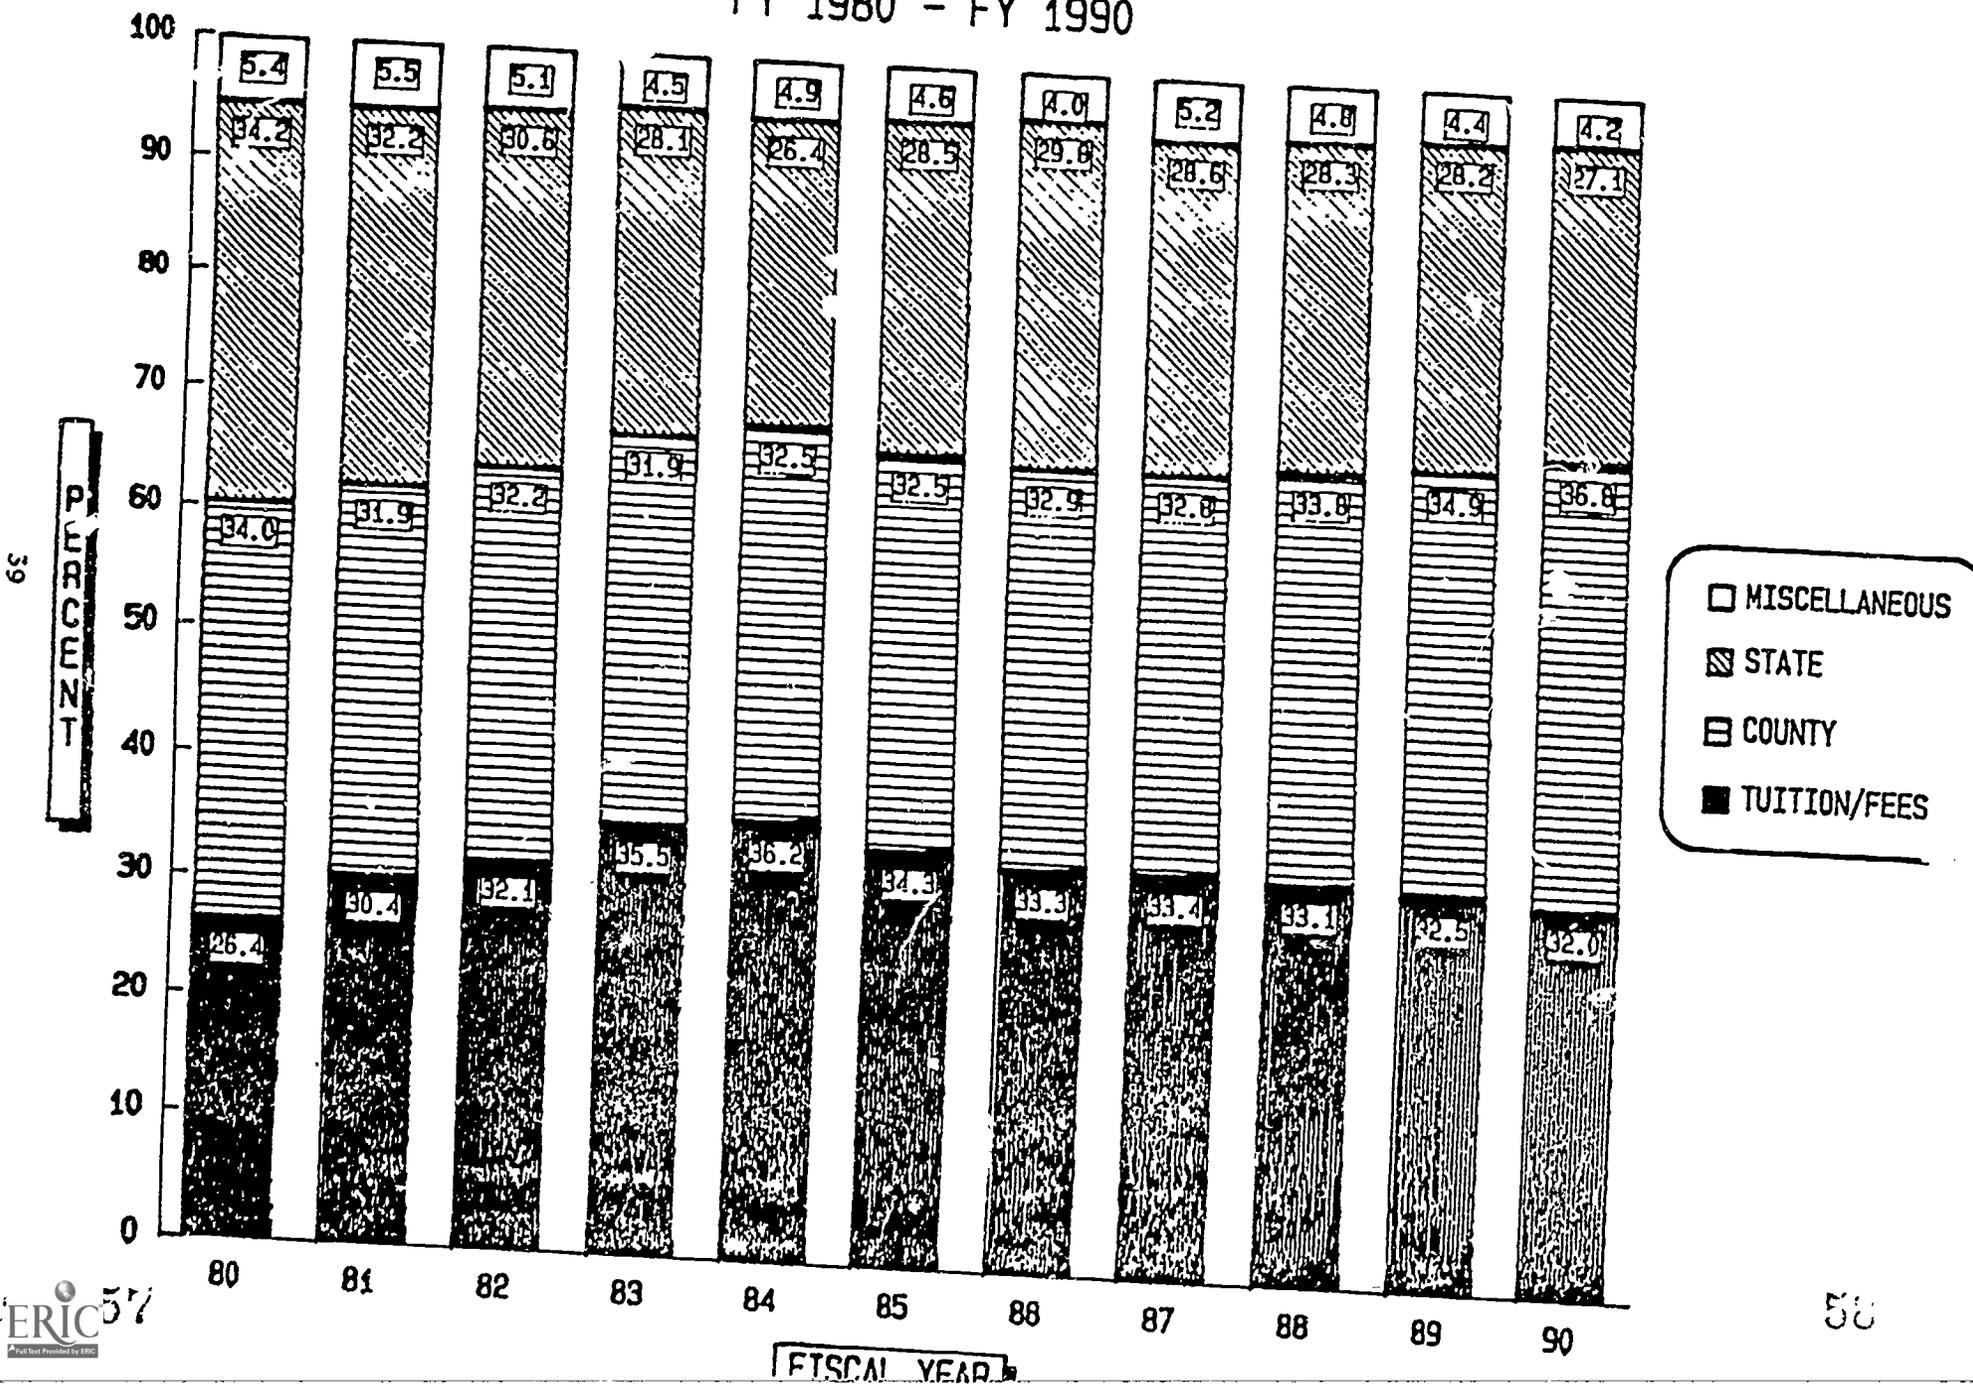

- a 2.9% increase in full-time equated enrollment
- a 0.0% increase in state funding
- a 2.8% increase in tuition revenues (higher enrollment)
- a 10.6% increase in county funding

### Current Expenditures

Numerous internal hearings were held in the late Fall 1988 with conclusions reached that the college could only honor the contractual commitments made to the various labor units, as well as increases in fringe benefits, utilities and insurance. In addition, some funding was allocated to support new faculty positions and the college's Challenge Grant from the state. As in prior years no provision was made for other operating expense increases due to inflationary costs or increased requirements. The total budget estimate of \$17,752,384 represents a 4.67% increase over the FY 89 amended budget.

The minor capital request to the county is \$450,000 for the much needed equipment to carry out the college's mission. For years the State of New Jersey did not fund minor capital in the county college budgets. In this current year the college received \$56,635, which is the amount anticipated for FY 90.

FIGURE 8  
 PERCENT OF REVENUE BY MAJOR SOURCE  
 FY 1980 - FY 1990

As shown in Table 14, the largest proportion of the college's operating budget is allocated for instruction, 42.6%, with an additional 11.1% allocated for academic support functions such as the library. Scholarships and fellowships account for .1%. The student services part of the budget totals 7.8% and 25.3% is for institutional support. The operation and maintenance of the physical plant accounts for 13.1% of the operating budget.

### Chapter 12, Capital Funding

The State of New Jersey passed a law which allows individual counties to provide capital building funds to their local county colleges. Projects supported were originally restricted to new building construction. However, in recent years, the legislation was expanded to provide for renewal and replacement capital projects. In practice, the local county government passes a resolution of support for each project, and if the project meets with state approval, the county provides all of the project costs directly to the college. The state, in turn, reimburses the local county for its 50 percent share of the principal and the interest for each approved project.

Ocean County College has participated in the Chapter 12 funding program for both renewal and replacement projects and new construction. Under the renewal and replacement category, the college has completed four major projects for a total of \$690,952. In addition, seven other major projects have met with all county and state approvals and are currently in progress. These seven projects total \$1,607,297, as itemized below:

A. Completed:	
1. Handicap access improvements	\$ 200,181
2. Replacement roofing systems (5)	223,715
3. Boiler replacement-Instructional Bldg.	142,336
4. Absorber/cooling tower-Admin. Bldg.	<u>124,720</u>
	\$ 690,952
B. In process and approved:	
1. Fire alarm system	\$ 150,000
2. Electrical panels - pool/gym	100,000
3. Electrical panel replacement collegewide	190,000
4. LRC cooling tower replacement	102,455
5. Walkways and stairwell repair	89,040
6. Replacement of unit ventilators	800,902
7. Neutralization of effluent from labs.	<u>174,900</u>
	\$1,607,297

Chapter 12 funding for new construction projects has also been approved for the college's Phase IV building program. This construction program of \$4,520,000 is composed of two major parts and one minor part. The first major part is the construction of a new academic building (27,720 gross square feet).

TABLE 14 .

OCEAN COUNTY COLLEGE FY 89 AND 90 BUDGETS  
EXPENDITURE PROGRAM BY FUNCTION AND CATEGORY

EXPENDITURE PROGRAM	AMENDED BUDGET FY 1988-89	BUDGET REQUEST FY 1989-90	PCT. CHG.	PCT. OF BUDGET
<u>FUNCTION</u>				
Instruction	\$ 7,119,408	\$ 7,339,004	3.1%	42.6%
Academic Support	1,913,081	1,917,352	0.2%	11.1%
Student Services	1,303,102	1,343,461	3.1%	7.8%
Institutional Support	4,309,509	4,363,485	1.3%	25.3%
Operation & Maintenance of Physical Plant	2,293,755	2,257,447	-1.6%	13.1%
Scholarships and Fellowships	21,000	24,000	14.3%	0.1%
TOTAL	\$16,959,855	\$17,245,749	1.7%	100.0%
<u>CATEGORY</u>				
Personnel	\$10,254,747	\$10,873,057	6.0%	61.2%
Operating	6,273,473	6,372,692	1.6%	35.9%
Minor Capital	431,635	506,635	17.4%	2.9%
TOTAL	\$16,959,855	\$17,752,384	4.7%	100.0%

NOTE: Minor capital for the 1988-89 budget is shown by category but is allocated by function. For this reason the two total figures do not agree. The percentage figures will also change after minor capital funds have been allocated to the various departments.

The second major part involves the renovation of selected areas in the existing Nursing Arts and Instructional Buildings. The third part of the program includes the construction of a small structure (1,700 gross square feet), designed to accommodate the changing needs of the existing Civil Engineering/Building Construction Technology degree program.

The new academic building, named the W. Kable Russell Academic Center after the college's first Chairman of the Board of Trustees, will house the Humanities and Mathematics Departments. The building is designed to include seven 35 seat classrooms, nine 28 seat classrooms, a writing laboratory, two reading laboratories, a language laboratory, two computer laboratories, seminar rooms, media storage space, and faculty offices. This new academic space has been justified by the large increase in the college enrollment since the early 1970's when the last building program was completed. This Phase III building program was completed in 1974 and since that time the college student enrollment has grown from 3,658 to 6,214, a 70 percent increase.

### Future Financial Support

The future state financial support is uncertain. For years, the state has not provided its full share of support to the county colleges in accordance with state law. In calendar year 1988, a plan was developed by N.J. Department of Higher Education officials and members of the Council of County Colleges that provided for significant increases in the level of state financial support over a period of several years. Included in this plan, the county colleges agreed to implement a series of long-range goals in collaboration with the state. In response to these efforts, the state agreed to increase its financial support of the county college sector to a level equal to that provided by the counties.

Unfortunately, since the financial plan was developed, state officials recently saw a downturn in revenue estimates and as a result, the Governor proposed a FY 90 budget that actually provided for a decrease in state support to the county college operating budgets.

Ocean County residents are proud of their local county college and this sense of pride is continually expressed by the Ocean County Board of Chosen Freeholders. The Freeholders have generously supported the college since its founding and college officials anticipate future financial contributions will enable the college to accomplish its long-range strategic goals.

## Future Directions

Guided by its philosophy and mission the college has established a series of 16 strategic initiatives toward which significant effort will be directed for the next several years. These initiatives are as follows:

1. The college will continue its process of academic program evaluation and strengthen it by focusing on student outcomes.
2. The college will provide a program of professional development for its staff that includes opportunities for updating and refreshing skills, as well as for sensitizing the entire college community to the changing needs of the community we serve.
3. The college will provide increased educational opportunities in the fields of allied health, business, and new emerging technology programs and provide for the upgrade of its existing curricula to maintain technological excellence.
4. The college will broaden higher education opportunities for the citizens of Ocean County, especially those living in the southern part of the county, by expanding its off-campus credit offerings.
5. The college will address the problem of student retention by strengthening student academic advisement and personal counseling programs, academic developmental programs, and by making a strong effort to involve a larger proportion of the student body in co-curricular programs and activities.
6. The college will broaden and expand student recruitment efforts, especially in the minority communities, and develop an overall marketing plan for all of its services.
7. The college will expand its program articulation arrangements with New Jersey colleges and universities.
8. The college will develop articulation agreements with Ocean County high schools and the vocational school for the purpose of developing 2+2 tech-prep/associate degree programs and strengthening the high school/college connections.
9. The college will strengthen its relationship with Ocean County business and industrial groups through active advisory committees, the provision of training seminars and short-term courses where appropriate, and the establishment of communication networks.
10. The college will make life-long learning opportunities available to an increasingly larger percentage of the county population through its community education program.

11. The college will strengthen its community service activities by making increased efforts to reach out into the existing county communities as well as continue to provide fine arts, cultural, and planetarium programs and facilities for public use.
12. The college will improve its management information system through the acquisition of appropriate computer hardware and software and the training of college staff members in their use.
13. The college will update, modernize, and/or construct new facilities to serve the needs of students.
14. The college will seek increases in state and county appropriations in order to implement the objectives established in this long-range plan.
15. The college will actively seek grants and gifts from both public and private sources to assist the college in achieving objectives established in its long-range plan.
16. The college will promote an atmosphere which recognizes the changes that American society has undergone which necessitate unique affirmative actions to increase the hiring of minorities at all levels within the college and to achieve equality of educational opportunities for all minority citizens of the county.

The college has committed itself to determine whether or not the goals are being achieved. To this end, the college has created a process for a regular yearly review of the implementation of strategic initiatives. The process includes a means of effectively linking the yearly ongoing planning and budgeting efforts. The process also includes appropriate communications with the various constituencies served by the college regarding its outcome and its status (Ocean County College catalog, 1989-90).

## CHAPTER IV

### COLLEGE NEEDS OF SOUTHERN OCEAN COUNTY HIGH SCHOOL STUDENTS, AREA RESIDENTS, AND LOCAL BUSINESSES

This chapter will present evidence of the need for a southern branch campus from findings gathered in two major research efforts. The first research effort occurred in late 1985 and resulted in the completion of the preliminary needs assessment (Parrish and Harris, 1986). The second research conducted in Fall 1988 was an integral component of this study. The findings from both research efforts are reported in this chapter.

#### Survey Procedures and Sample Selection

The potential students who would avail themselves of a new branch campus in southern Ocean County would come from one of three areas; current high school seniors, local businesses, and area residents not currently in high school. The research design used in the 1986 preliminary study included the surveying of current high school students and local area businesses with 15 or more employees. In addition, a telephone interview of selected area residents 18 years of age or older was chosen as a second method of collecting data. This FY 89 research effort also included the surveying of current high school students and area businesses but excluded the telephone interview of area residents.

#### High School Student Sample

The high school sample consisted of 1078 pupils in their junior or senior years surveyed in late Fall 1985 and 1292 juniors and seniors surveyed in late Fall 1988. The schools in the sample were: 1) Lacey Township High School; 2) Pinelands Regional High School; and 3) Southern Regional High School. The student survey instrument (see Appendix I) was designed in the Office of Research, Planning and Grants and pretested in an OCC statistics course. The same survey instrument was used in both 1985 and 1988. The student surveys were delivered to all three schools wherein the actual administration of the survey was done either in the homeroom period or in English classes.

Approximately 70 percent of the juniors and seniors enrolled in the schools completed the survey in both administrations. Since the survey was conducted only once at each school in both 1985 and 1988, factors such as absenteeism and tardiness contributed to a response rate below 100 percent. The sample sizes are large enough to be considered representative of the entire population of students.

#### Business Sample

In the 1985-86 preliminary study, business firms were selected from

the Southern Ocean County 1985-86 Guidebook and Business Directory produced by the Long Beach Chamber of Commerce. Businesses which employed 15 or more employees, as identified by a staff member of the Chamber, were selected from the directory. A survey instrument was developed for the business respondents (see Appendix J). The surveys were mailed to an original selection of 116 organizations, of which 70 responded (60 percent response rate).

The survey research method was changed for this most recent study. With this second administration, all business firms which were members of the Southern Ocean County Chamber of Commerce and also subscribed to one or more of the local newspapers were forwarded a survey instrument. The surveys were mailed in early January, 1989 with a cover letter from Mr. Rick Reynolds, current President of the Chamber. The surveys were included as part of the regular monthly billing cycle for The Times Beacon, a parent company for five local newspapers (Beach Haven Times, The Beacon, Lacey Beacon, Tuckerton Beacon, and the Summer Times). Approximately 500 firms were contacted through this billing. With this survey administration, only 59 responses were received--a low response rate of 12 percent.

#### Southern Ocean County Resident Sample

The general southern Ocean County public was surveyed in early 1986 using a structured telephone interview technique. A copy of the interview schedule is included as Appendix K. Using a mathematical formula cited by Christensen, 1980, it was determined that, based upon the population data for southern Ocean County, a sample size of at least 382 subjects was needed to support (by theory) a randomly distributed selection with less than a five percent chance of sample bias with a 90 percent confidence level. This means the chances should be 9 in 10 that the answers reported by the telephone respondents do not vary more than five percentage points from the true opinion of the general public.

Telephone exchanges within the municipalities were used in concert with the municipal population data to obtain the percentages of the sample needed to evolve a systematic stratification of the respondent sample. This process was used to assure equal representation of the entire southern Ocean County population.

Interviews were conducted between the hours of 6:30 p.m. and 9:30 p.m. in January, 1986. A structured procedure was followed by each interviewer during telephone contact, outlined in a direction package distributed to the 25 interviewers. A computer-generated list of random phone numbers was provided to each interviewer. Each interviewer was to contact at least 16 respondents. A total of 384 interviews were conducted.

#### Survey Results

In order to systematically research the need for a branch campus, various questions were asked of the entire sample (all three subgroups). These questions were repeated in the 1988 second research effort.

The 1985-86 data were coded and entered into OCC's Univac 90/80 mainframe computer and statistical routines were performed using a statistical software package known as SPSS, Statistical Package for the Social Sciences (Nie et al, 1981). The 1988 data collected in the second research effort were coded and entered into a personal computer in the Office of Research, Planning and Grants. Again the data was analyzed using SPSS, except this time the personal computer software package known as SPSSPC was used (Norusis, 1986).

### High School Student Survey

A high degree of optimism was shown in the students' plans to continue their education beyond high school. In the 1985 survey, 45 percent of the students indicated they definitely had plans to attend college following graduation from high school with another 30 percent of the students indicating they probably would attend college--a total of 75 percent. With the most recent Fall 1988 survey, the number who indicated they would definitely or probably attend college was 82 percent. When compared with the actual college-going rate data as previously shown in Table 7, the aspirations of the students are somewhat higher than what actually occurs. Of the 1988 graduates, 58 percent attended college the following fall semester. It is quite possible, however, that a large portion of the remaining 42 percent would attend college at a later date.

The students were also asked their intentions concerning attending Ocean County College. In Fall 1985, 21 percent of the students indicated they definitely or probably would attend OCC. In Fall 1988, the comparable figure had changed to 29 percent. Of importance to the branch campus research were the students' intentions concerning attending OCC at a branch campus in the Manahawkin area. In Fall 1985, 33 percent of the students thought they definitely or probably would attend college at the branch campus as compared with 39 percent of the students surveyed in Fall 1988. These significant increases (21 to 29 percent and 33 to 39 percent) reveal a much stronger interest in Ocean County College and also with the establishment of a southern branch campus.

Students were asked, "Do you feel there should be a branch campus of Ocean County College established in southern Ocean County within the next one or two years?" Responses to this question were extremely supportive with 79 percent of the 1985 respondents and 84 percent of the 1988 respondents indicating either definitely or probably yes. Table 15 shows the students' inclinations toward college, OCC, and opinions concerning a new branch campus for both the 1985 and 1988 survey administrations by high school.

If students responded that they would either definitely or probably enroll in OCC at the proposed branch campus, they were asked to indicate what type of program or course they would like to see offered at the new campus. The responses to this question were very similar between the 1985 and 1988 survey administrations. Because of this similarity, the results by program area are shown in Table 16 only for the Fall 1988 survey administration. The student responses were coded according to the National Center for Education

Table 15

Southern Ocean County High School Students' College Aspirations,

Note: The responses were derived from the Fall 1988 survey. Students who indicated responded definitely yes or probably yes to attending a proposed branch campus were asked to select a program or course. The resulting responses from 403 juniors and seniors have been included in this table.

Statistics classification structure (Eldridge, 1981).

The top ten program areas in order of student preference are:

1. business administration
2. liberal arts, general
3. criminal justice administration
4. communications, general
5. elementary education
6. psychology
7. fine arts, general
8. nursing
9. food service
10. biology

The high school students indicated a preference for early morning classes--78 percent chose the 8 a.m.-noon time slot versus 14 percent for the afternoon and 8 percent for the evening.

### Business Firm Survey

The types of business firms responding to the branch campus survey in both the Fall 1985 and Fall 1988 administrations varied in size, measured by the number of employees and by type of business. As a group, the 70 employers responding from the Fall 1985 survey and the 59 employers from the Fall 1988 survey may be considered a representative sample of the employers for southern Ocean County. While the average number of employees was approximately 40 per business firm, the actual firms ranged in size from a small business employing less than five persons to a large nursing convalescent center employing over 150 persons. As examples, the business firms included real estate offices, food stores, restaurants, construction contractors, building suppliers, liquor stores, nursing convalescent centers, automobile dealerships, independent physicians, furniture stores, banks, and churches.

Overall, responses from the business firms in both survey administrations were very supportive of establishing a Southern Branch Campus of Ocean County College. Analysis indicated many of the southern Ocean County businesses contain positions requiring specialized or practical training acquired through community college education. On the average approximately 10 positions per firm needed this training. The employers reported many of their personnel presently employed could improve their job-related skills by taking college courses on a part-time basis. In the 1985 survey, the average number requiring this training was 13 as compared with 9 persons per firm indicated in the 1988 survey.

Approximately two-thirds of the employers in both survey administrations indicated having special problems in finding qualified personnel. In most instances, the explanation offered for specific employment problems related to a lack of proper training for the position advertized. In the 1988 survey, the lack of qualified personnel was more pronounced. One specific training weakness cited by numerous employers was computer literacy.

The number of job openings anticipated by the business firms was

directly proportional to the size of the firm ranging from 1 to as many as 50 openings per year. There seemed to be a high turnover rate in the supportive employee category.

When asked if a branch campus of Ocean County College should be established in or near the Manahawkin area within the next one or two years, the business firms were extremely supportive. Approximately 97 percent of the respondents in both the 1985 and 1988 survey administrations responded either "definitely yes" or "probably yes" to this question.

The business respondents were asked what programs or courses they would consider desirable for the proposed branch campus. The top program areas in order of preference are:

1. business administration
2. computer science
3. accounting
4. secretarial skill training
5. nursing
6. real estate
7. medical assisting
8. food service management

In the 1988 survey administration, employers were asked, "What time of day would you think your employees would attend classes at the proposed branch campus?" Four out of five employers thought the evening time slot from 6:00 p.m. to 10:00 p.m. would be the best time. The remaining employers selected the morning time slot from 8:00 a.m. to noon.

The employers were asked to comment or offer their suggestions concerning the proposed branch campus. They were also encouraged to comment about Ocean County College in general. Appendix L contains selected typical employer responses to this question.

In summary, the employers who participated in the survey (both in the 1985 and 1988 administration) were very supportive of a southern branch campus for Ocean County College.

### Community Survey

The 384 southern Ocean County residents interviewed in January, 1985 were first questioned concerning their familiarity with Ocean County College in general. Only three percent of the residents had not heard of Ocean County College. Fifteen percent of the interviewees had enrolled in an Ocean County College course and 30 percent had been to the college's Fine Arts Center or the Robert J. Novins Planetarium.

The residents were asked, "Do you think you may enroll in an Ocean County College course?" The responses were mixed with 41 percent answering "definitely yes" or "probably yes" and 59 percent answering "definitely no" or "probably no". Immediately following this question in the interview process, the residents were asked, "If a branch campus of Ocean County College were established in or near the Manahawkin area, would you consider attending the college

at this new site?" Although still somewhat mixed, the proportion of residents that would be interested in attending OCC at this new site was 59 percent as compared with 41 percent without the southern campus.

If the respondent answered "definitely yes" or "probably yes" about enrolling at this new site, they were asked to indicate what type of program or course they would like to see offered. A total of 184 area residents provided the interviewer with their preferred program area. A complete list of the first program choice indicated by the residents is provided in Table 17. The top preferred program areas were:

1. business administration
2. computer operations
3. accounting
4. fine art
5. nursing

The residents were asked "What time of day would you prefer to attend classes at the proposed branch campus?" The large majority (71 percent) preferred evening classes versus 18 percent for the morning and 11 percent for the afternoon class times.

Regardless of how the interviewees answered previous questions, they were asked in a final question, "Do you feel there should be a branch campus of Ocean County College established in southern Ocean County within the next one or two years?" Seventy-three percent responded "definitely yes," 19 percent "probably yes," five percent "probably no," and only 3 percent "definitely no."

### Results Summary

This project was conducted to determine if a need existed for a branch campus of Ocean County College in southern Ocean County. Descriptive analysis of the five different survey groups (three groups in the 1985 and two in the 1988 research phases) has shown strong support for the establishment of a branch campus. A total of 2,370 high school students, 384 southern Ocean County residents, and 129 business firms were surveyed in this research effort.

Results have provided evidence that a higher percentage of the southern Ocean County population will attend Ocean County College if a branch campus is established. Classes should be scheduled primarily during the morning (8:00 a.m. - noon) and evening hours (6:00 p.m. to 10:00 p.m.). Finally, the programs and courses that have the strongest potential drawing power are:

- |                            |                            |
|----------------------------|----------------------------|
| 1. business administration | 6. liberal arts            |
| 2. computer science        | 7. real estate             |
| 3. criminal justice        | 8. accounting              |
| 4. nursing                 | 9. food service management |
| 5. secretarial training    | 10. psychology             |

## CHAPTER V

### PROPOSED SOUTHERN BRANCH CAMPUS OF OCEAN COUNTY COLLEGE LOCATION, STUDENTS, PROGRAMS, STAFF, FACILITIES, AND COST

Evidence supporting the need for a Southern Branch Campus of Ocean County College has been shown in Chapters II and IV. Population projections for southern Ocean County indicate a continuous growth pattern over the next decade. The 1980 U.S. Census showed a county population of 346,038. Of this total 58,125 resided in southern Ocean County municipalities, 16.8 percent of the total county population. The county population is estimated to be 471,100 in 1990. Southern Ocean County contributes 90,100 persons to this total (19.1 percent). By the end of the century, Ocean County population has been projected at 560,400 persons with southern Ocean contributing 121,650 persons (21.7 percent). Projections of public high school enrollments (grades 9-12) for the three southern Ocean County high schools also portray a pattern of continuous growth for the next decade.

As previously described in Chapter IV, surveys completed by juniors and seniors in the three southern Ocean County high schools in both 1985 and 1988 have shown a strong interest in the establishment of a southern branch campus. Southern Ocean County businesses have also shown a strong interest in a branch campus as evidenced in two separate surveys conducted in 1985 and 1988. Finally, the results summarized from a statistically valid sample of the general public residing in southern Ocean County have also supported the idea of a southern branch campus for Ocean County College.

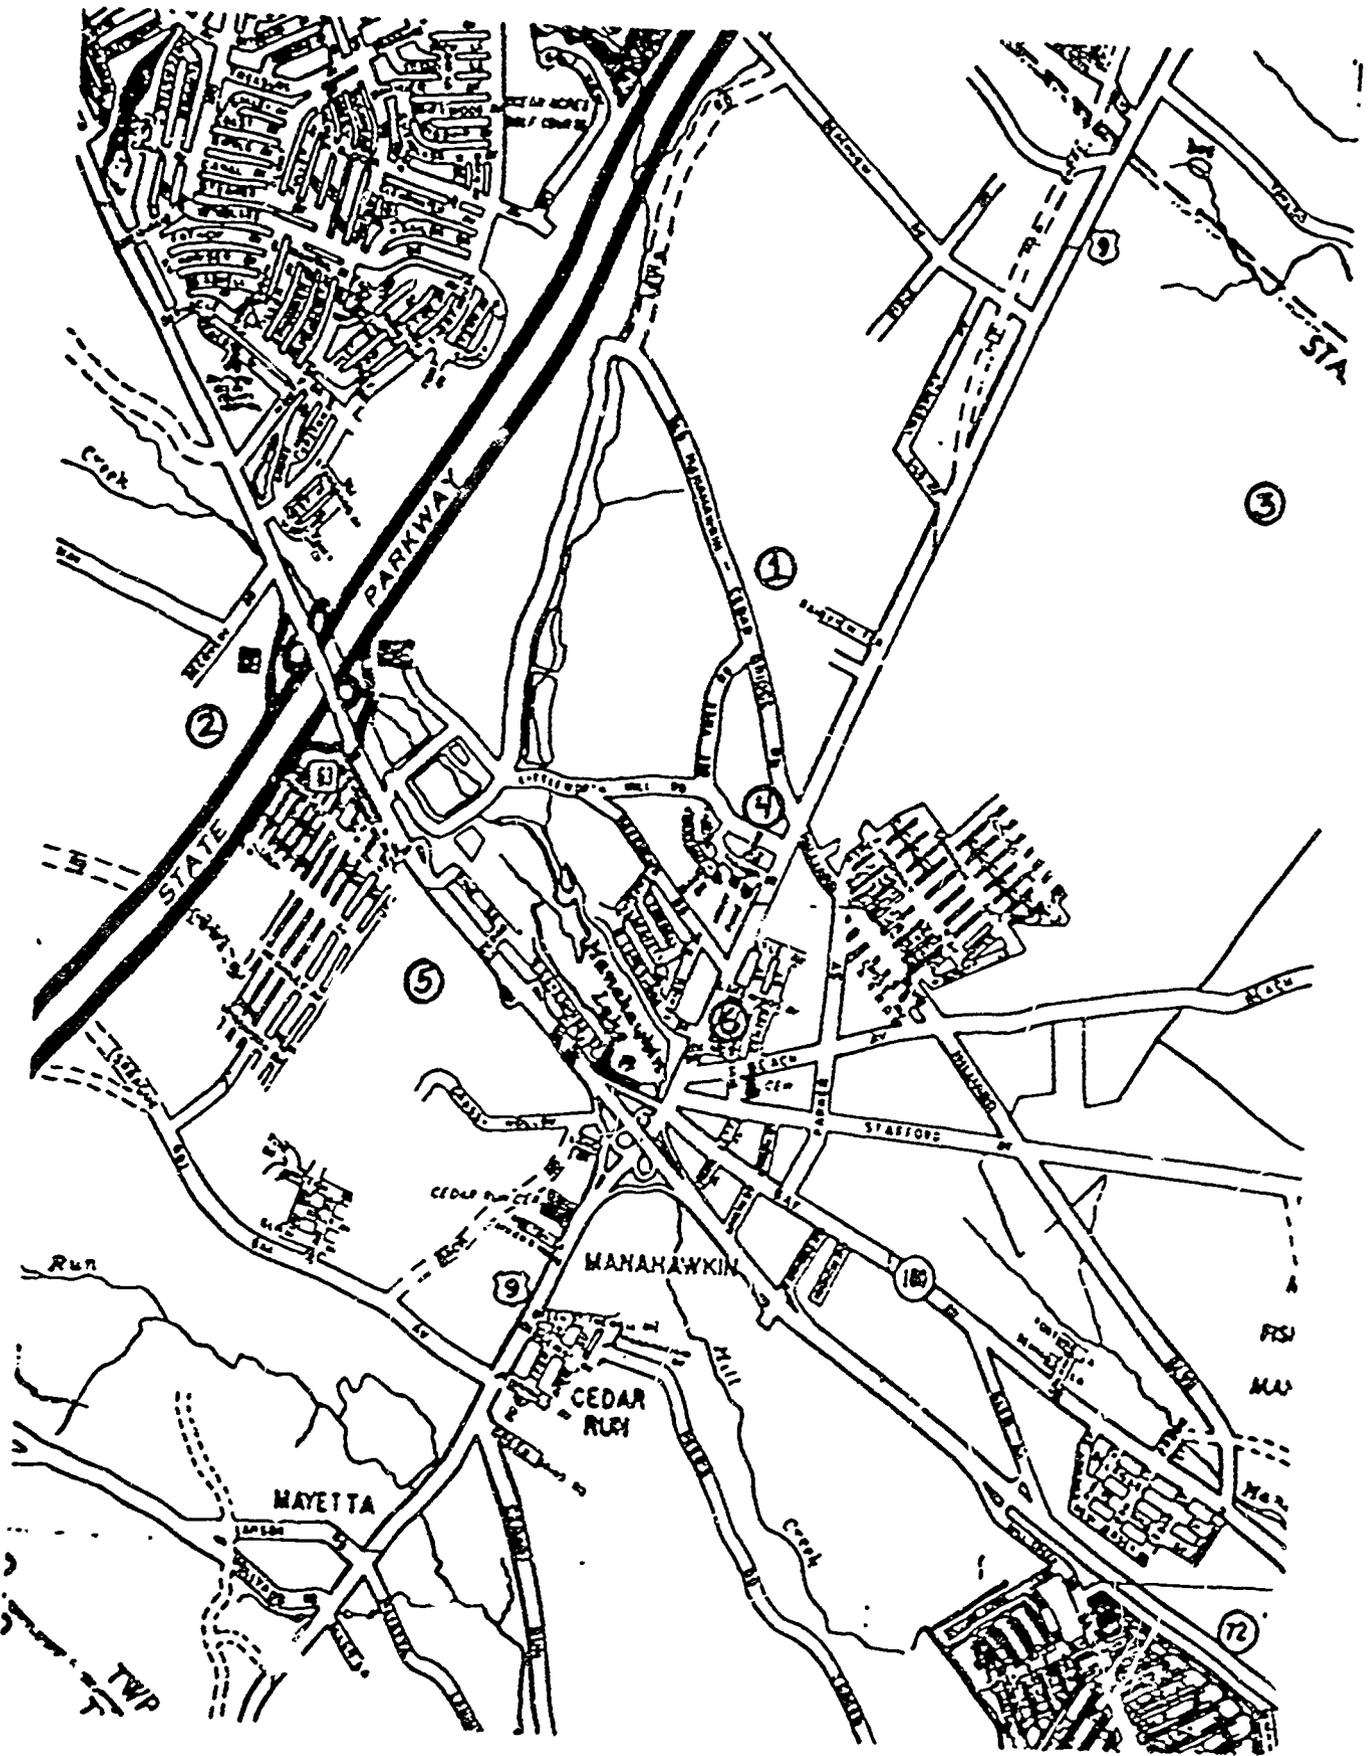

Based on population projections, survey research, road networks, the availability of public transportation, and geography, the preferred location for a southern branch campus of Ocean County College is within a three to five mile radius of the Route 9 and Route 72 intersection in Stafford Township.

#### Branch Campus Site

Six alternative branch campus sites were examined which met the criteria of being within a three to five mile radius of the Route 9 and Route 72 intersection in Stafford Township. The six alternative sites are shown in Figure 9 and have been named as follows:

1. Southern Regional Board of Education site
2. Southern Resource Center site
3. Alden Corporation site
4. Cedar Bridge Plaza site
5. Stafford Square site
6. Lighthouse Christian Academy site

Figure 9 - Map Depicting Possible Sites for Southern Ocean County College Branch Campus

The first three of the alternative sites listed on page 54 required the construction of a building to house the necessary classrooms, laboratories, offices, student service space, library, health service space, and storage space. The other three alternative sites involved either leasing or purchasing pre-existing structures.

The Southern Regional Board of Education site is recommended as the best site for the following reasons:

1. Location is good for public access by car. The facility could be constructed within walking distance from Route 9 which is currently serviced by N.J. Transit public buses on a regularly scheduled basis. Connections can be made between the Route 9 N.J. Transit buses and the Ocean County mini buses. Bus schedules are available for the Lacey #5 and Tuckerton #6 routes which provide daily service to residents in the southern parts of the county (Ocean County Transportation Department, 1988).
2. The potential for cooperative educational agreements with the Southern Regional Board of Education is very strong. For many years, the college has been using the Southern Regional Middle School and Southern Regional High School as off-campus facilities for credit courses. As previously shown in Table 13, page 37, Southern Regional is the largest off-campus site of the 14 used by the college in FY 89. In addition, the college is currently developing, in cooperation with the Southern Regional High School administration, a program wherein the college will offer credit courses to high school seniors in the high school during the day.  
  
Dr. Robert Daria, Southern Regional Superintendent of Schools, has expressed strong interest in establishing mutually beneficial agreements between the college and the Southern Regional Board of Education on such matters as a shared security force, OCC student use of Southern's athletic fields, cooperative staff development programs, and college use of Southern's chemistry laboratories.
3. In 1987, the Southern Regional Board of Education successfully received voter approval to acquire approximately 275 acres of land adjacent to the current Middle and High School sites. The Board of Education is willing to sell approximately 45 acres of this recent land acquisition to the college for a branch campus, see Appendix M.
4. The potential exists to establish an educational facility for the Ocean County Vocational-Technical School on property owned by the Southern Regional Board of Education. The positioning of an elementary school, middle school, high school, vocational-technical school, and two-year community college within two miles of each other presents Ocean County with unique possibilities. With proper program development, e.g., multi-faceted career ladder programs, faculty and counselor exchange, shared cultural awareness programs, and offering college courses for high school seniors, Ocean County

could gain a national reputation for being a leader in the field of education.

5. Construction of a new facility provides the optimum flexibility from a planning perspective to meet the postsecondary educational needs of future students.

Student Enrollment Projections Including Estimated Impact on Existing Toms River Campus

The southern Ocean County College facility is being proposed as a branch campus offering one or more complete programs leading to a credit bearing certificate, degree or diploma. The educational programs of Ocean County College are designed to meet the needs of students who desire to transfer to upper division colleges, who desire to gain employment through learning technical skills, who desire general education, who wish to enhance their opportunities for advancement/promotion in their present employment position, who generally desire to continue their education, and who desire personal enrichment by enrolling in both credit courses and credit-free community education courses. It is anticipated that the southern branch campus will support the above student needs but not be able to offer the full array of programs and courses currently available at the main campus in Toms River.

Before enrollment projections are made for the branch campus it is important to examine the enrollment patterns of current southern Ocean County residents who attend Ocean County College. Table 18 shows the number of full-time and part-time students categorized by zip codes who attended the college in Fall 1988. As can be seen, the largest portion of southern Ocean County residents live in Lacey Township, 42.6% of the full-time students and 42.1% of the part-time students. Overall, as of the Fall 1988 semester, approximately 13% of the college's students resided in southern Ocean County. This is a fairly significant increase over the approximate 10% recorded in 1985. The establishment of a southern branch campus should prompt yet further increases in this proportion.

Projecting college enrollments usually consist of relating several factors which are the driving forces in a set of linear equations. For the proposed Southern Branch Campus of Ocean County College these factors include the propensity of local high school seniors to enroll in college, the relationship between part-time college enrollment and the southern Ocean County population, the relationship between new and returning students, estimates of average student credit loads, the relationship between the new student population directly out of high school and those students one or more years out of high school, and estimates of summer sessions enrollments.

The enrollment projections are estimates of the number of students who may be served by the programs and courses offered at the proposed branch campus. In effect, the enrollment projection is a statement of the college's experience and its reasonable expectation to serve the citizens of southern Ocean County within the constraining forces of money and space.

## Full-time Enrollment Projections

Traditionally, much attention has been given to the number of students entering college immediately after graduation from high school. Although a large number of students do enter college immediately following graduation, many delay their entrance one, two, three, or more years. Beside immediate high school graduates, the full-time fall student population is composed of students one to three years out of high school, senior citizens, transfers from other colleges, current high school students in an early placement program, and readmitted students. Projections of such a heterogeneous group can be complex.

The OCC full-time student projections for the branch campus use the projected number of high school seniors from the local feeder high schools. In the case of southern Ocean County, these include Lacey, Pinelands, and Southern Regional High Schools. As previously shown in Table 8, p.22, the actual number of high school seniors in the three schools was 927 in Fall 1988. The number of seniors is projected to be 872 in Fall 1990, 948 in 1992, 1045 in 1994, 1146 in 1996 and 1232 in 1998.

The model used by Ocean County College to project the full-time student enrollment (Parrish, 1988) includes a ratio of new OCC full-time students to high school seniors of 223 per 1000. This ratio does not include transfers and readmitted students. The actual capture rate of the 1987 high school seniors was 24.3 percent (see Table 8, p.21); however this included students who attended either in the fall or spring semesters.

Since the branch campus will not be able to offer the full array of programs and courses that are available to those who attend the Toms River campus, it is unlikely that a capture rate of 223 new full-time students per 1000 southern Ocean County high school graduates could be attained. Furthermore, the capture rates have varied significantly by high school. In fiscal year 1987, only 5.6 percent of the graduating seniors from Pinelands Regional enrolled at OCC, versus 16.1 percent for Southern Regional, and 32.5 percent for Lacey Township. With the creation of a branch campus in close proximity to Southern Regional High School, the capture rate for that school and the capture rate for Pinelands Regional will increase significantly as larger numbers of students choose to go on to college and fewer students choose to attend other N.J. southern colleges such as Stockton State College. The college-going rate for Lacey Township seniors and the OCC capture rate from this school are not predicted to change. Instead, a portion of Lacey High School seniors will choose to attend the southern branch campus.

Table 19 shows the projected number of full-time students that would attend the proposed southern branch campus from the Fall 1991 through Fall 1998. These projections are based on the following assumptions:

- i. The number of graduates from the three southern Ocean County high schools is consistent with the projections made in Table 8 on page 22.

Table 19

Projected Number of Full-time Students for the Proposed  
Southern Ocean County College Branch Campus  
1991 through 1998

<sup>1</sup> Est. number of seniors has been extracted from Appendices A - C

<sup>2</sup> OCC capture rates have been estimated based on actual capture rates as shown in Table 8, p.21, and the assumption that the establishment of the southern branch will increase the capture rates for Southern and Pinelands High Schools as shown above

<sup>3</sup> Since the southern branch will not offer all degree programs and courses available at the Toms River campus, it is estimated that only a portion of the graduating seniors will attend the branch. The proportions are shown above. Due to the geographic location of Lacey Township, it is estimated that initially 25% of the Lacey students attending OCC will choose to attend the southern branch. This percentage is expected to grow to 33% by 1995.

<sup>4</sup> Other new students are those residents one or more years out of high school. This group is est. to be 25% of all new students.

<sup>5</sup> Est. at 50 in 1st year and then 70% of prior year's new students.

2. Approximately 30 percent of Lacey High School graduates will attend OCC full-time the following fall with 25 percent of this group enrolling at the proposed southern branch. Over a five year period the proportion of OCC students from Lacey attending the branch will grow to 33 percent.
3. The proportion of Southern Regional High School graduates attending OCC the following fall will gradually increase from 18 percent in 1991 to 22 percent in 1998, and 80 percent of those that attend OCC will enroll at the proposed southern branch.
4. The proportion of Pinelands Regional High graduates attending OCC the following fall will gradually increase from 10 percent in 1991 to 20 percent in 1998, and 80 percent of those that attend OCC will enroll at the proposed southern branch.
5. The number of returning students who attend the southern branch is estimated at 50 in 1991 and from 1992 through 1998 will equal 70% of the preceding year's new full-time student enrollment. This 70 percent ratio of new to returning is based on OCC's historical patterns of enrollment. Returning students are those students returning the following year, stopouts/readmits, and those changing from part-time to full-time status.

Based on the above assumptions, the full-time enrollment for the proposed branch campus is expected to be approximately 175 students in the first year of operation (1991) and grow to 400 by 1998.

#### Part-time Enrollment Projections

Although the part-time students attending Ocean County College come with varied backgrounds a strong positive correlation exists between the population of Ocean County and the number of part-time students attending the college. Using five-year historical patterns of ratios between these two groups and multiplying the resulting average times estimates of future populations has been recognized as a valid method of projecting part-time student enrollment. This method has been used successfully for projecting future part-time students attending Ocean County College and, thus, has been employed to project the part-time enrollment at the proposed southern branch campus.

Projections of the part-time student enrollment for the proposed southern branch campus are made (see Table 20) using data from the Fall 1988 semester previously shown in Table 18, coupled with Ocean County population estimates provided by the Ocean County Planning Board (1988a), and the following assumptions:

1. The population for southern Ocean County will increase during the next decade as projected by the Ocean County Planning Board (1988a) and as previously shown in Table 2, p.10.

Table 20

Projected Number of Part-time Students for the Proposed  
Southern Ocean County College Branch Campus  
1991 through 1998

	210	229	232	234	237	239	242	244	247
X SB CR <sup>4</sup>	-	.25	.30	.35	.40	.45	.50	.50	.50
Sub-total		57	70	82	95	108	121	122	124
		327	367	408	450	495	540	571	603

- <sup>1</sup> Population estimates based on data provided in the Ocean County Data Book, 1988 Edition, p.11.
- <sup>2</sup> OCC capture rates were based on actual Fall 1988 data and the southern Ocean County population estimates. The capture rate for southern Ocean residents south of Lacey is estimated to increase from .0048 to .0062, whereas the capture rate for Lacey residents is estimated to remain the same as the Fall 1988 level.
- <sup>3</sup> The proportion of southern Ocean residents south of Lacey Township who attend the proposed southern branch will gradually increase from 80 to 85%.
- <sup>4</sup> The proportion of southern Ocean residents from Lacey Township who attend the proposed southern branch will increase from 25% in 1991 to 50% in 1998.

2. The creation of a southern branch campus will have a marked effect upon the propensity of southern Ocean County residents who live south of Lacey Township to enroll in college. In Fall 1988, 281 residents enrolled in OCC or .46% of the area's population. It is estimated that a larger percentage will enroll in the future, changing from .48% in 1991 when the branch is projected to open to .62% in 1998.
3. It is projected that initially 80% of the OCC part-time students who live south of Lacey Township will enroll at the proposed branch campus. This proportion will gradually increase to 85% by 1996.
4. Over the years, the college has been fairly successful in recruiting part-time students from Lacey Township. As shown in Table 20, the part-time student OCC capture rate of Lacey residents was 1.01%. This overall capture rate is not expected to change with the creation of the southern branch campus.
5. Due to the unique geographic location of Lacey Township, situated an approximate equidistance between the main Toms River campus and the proposed branch, part-time students from Lacey will choose which campus they attend based on course availability and travel time. Initially, it is projected that 25% of the part-time OCC students from Lacey will enroll at the southern branch. By 1996, it is estimated that 50% of this group of students will enroll at the southern branch.

Based on the above assumptions, the part-time enrollment for the proposed branch campus is expected to be approximately 325 students in the first year of operation (1991) and grow to 600 by 1998.

#### Full-time Equated (FTE) Enrollment Projections

For purposes of this report the full-time equated enrollment is defined to be the sum of all student credit hours in all sessions (summer, fall, spring) divided by 30. The college's FTE reporting is compiled on a fiscal year basis, i.e., July 1 through June 30.

The fall and spring semesters quite naturally are included in the same fiscal year. Although it will be possible to complete a degree program at the branch campus, it is estimated that the average full-time student will take approximately two courses at the Toms River campus before graduation due to unique scheduling problems and limited availability of upper level, highly selective courses. Based on the above assumption and the college's historical patterns of average student credit loads, the full-time students attending the branch campus will average the following course load during the fall and spring semesters.

- 10.5 classroom hours per week at the branch campus
- 3.0 laboratory hours per week at the branch campus  
(one lab. hour equals approximately 2/3 credit hour)
- 1.5 classroom hours per week at the Toms River campus
- 15.0 total contact hours per week equating to 14.0 credit hours

The part-time students attending the branch campus will average the following course load during the fall and spring semesters.

- 4.0 classroom hours per week at the branch campus
- 1.0 laboratory hours per week at the branch campus  
(one lab. hour equals approximately 2/3 credit hour)
- 5.0 total contact hours per week equating to 4.7 credit hours

In comparison, full-time students during the Fall 1988 semester averaged 14.07 credits and the part-time students averaged 5.17 credits. In Spring 1989, full-time students averaged 14.39 credits and the part-time students averaged 5.14 credits. It is expected that the students who attend the branch campus will enroll for slightly fewer credits than those who attend the main campus.

The college's current practice of offering four different summer sessions places the first session in one fiscal year and the remaining three sessions in the following fiscal year. It is assumed that the branch campus summer sessions will follow a similar pattern as that offered at the main campus in Toms River.

Summer school enrollments for the branch campus will be heavily dependent upon the marketing techniques used. The summer resort nature of southern Ocean County provides high increases in population and, therefore, the potential exists for a successful summer program. However, for planning purposes, it is projected that the southern branch will open its first summer program in 1991 with a small number of course offerings in one July/August enrollment session. From 1992 forward, two sessions will be offered, a May/June session and a July/August session. It is estimated that 100 students will enroll in each session. The summer program is projected to show modest 6 percent increases in enrollment over the enrollment projection period of FY 92 through FY 99. The average credit load per student per session for the summer is estimated to be 3.7 credits which is consistent with the average summer credit loads at the main Toms River campus.

Table 21 shows the projected full-time equated student enrollment for the planning period of FY 92 through FY 99. Not included in the FTE projections are noncredit student FTE generated through offering Community Education courses. The projections show a first year FTE of 260 and growing to 537 FTE by FY 99.

#### Estimated Impact on Main Toms River Campus

With an estimated opening of Fall 1991 for the proposed southern branch campus, it can be expected that the main Toms River campus will experience enrollment losses in that year as some southern Ocean County residents choose to attend the branch campus. As explained in more detail in the paragraphs following Table 21, approximately 150 to 200 of the 500 students estimated to attend the branch campus in Fall 1991 would have chosen to attend the main campus in Toms River had the branch campus not been in operation. However, with the establishment of the southern branch campus, the total college enrollment should increase as a result of tapping into new student markets.

Table 21

TOTAL FTE	260	318	355	394	430	471	507	537

<sup>1</sup> Estimated summer enrollment will be 100 students per session averaging 3.7 credits per student in the first year and then the number of students increasing by 6 percent per year.

<sup>2</sup> Based on the Toms River campus retention rates and the number of new spring full-time students, a fall-to-spring ratio of 1:1.87 is projected.

<sup>3</sup> Based on the Toms River campus retention rates and the number of new spring part-time students, a fall-to-spring ratio of 1:1.95 is projected.

As previously discussed in the full-time and part-time enrollment projections, the college-going rates of students graduating from Southern Regional and Pinelands Regional high schools will increase as a direct result of having a college within close proximity. Also, some high school students who would normally choose to attend other southern New Jersey colleges, such as Stockton State and Glassboro State Colleges, will instead choose to pursue their college degrees at the branch campus. Finally, the presence of the southern branch campus will provide opportunities for the older part-time student whose current work and family responsibilities preclude extensive travel time to the Toms River campus.

Given the above considerations, it is estimated that of the approximate 175 full-time students projected to attend the branch campus in Fall 1991, between 100 and 125 of those would have attended the main Toms River campus. The number of part-time students who would be drawn away from the main Toms River campus is of a lesser magnitude because of the current presence of off-campus evening sites at Lacey, Southern Regional and Pinelands Regional High Schools. With the opening of the branch campus, these evening operations will be closed. It is estimated that of the approximate 325 part-time students projected to attend the branch campus, between 50 and 75 students would have attended the main Toms River campus.

In summary, approximately 150 to 200 southern Ocean County resident students will be drawn away from the Toms River campus to the branch campus when it first opens in Fall, 1991. The remaining 300 to 350 students will be drawn from current off-campus sites, from other southern New Jersey colleges (most notably Stockton State College), from increased college-going rates for southern Ocean County high schools, and from increased attendance by the part-time adult learner.

#### Academic Programs

As previously described in Chapter II, p.29, the college currently offers two Associate in Arts degree programs, six Associate in Science degree programs, and nine Associate in Applied Science degree programs. Appendix H lists the current degree programs, options, and concentrations offered by the college

Based on the survey research completed in 1985 and 1988 and as summarized in Chapter IV, the college is proposing to make the following currently approved degree programs, concentrations and certificates available at the southern branch campus.

All degree/certificate requirements will be able to be met in these programs

- Basic Skills Curriculum - nondegree
- Business Administration - AS degree
- Business Administration - AAS degree
  - Banking-Finance concentration
  - Business Administration concentration
  - Marketing concentration.

Criminal Justice - AS degree  
General Education - AA degree  
General Education - AS degree  
Liberal Arts - AA degree  
    Elementary Education concentration  
    History concentration  
    Political Science/Government concentration  
    Psychology concentration  
    Sociology concentration

Criminal Justice - certificate  
Real Estate - certificate

Most degree/certificate requirements will be able to be met in these programs

Business Administration - AAS degree  
    Accounting concentration  
Community Services Technician - AS degree  
Computer Science - AS degree  
Computer Science - AAS degree  
Liberal Arts - AA degree  
    English concentration  
    Mathematics concentration  
    Teacher of Social Studies concentration  
Nursing - AAS degree (first year only)

Accounting - certificate

As of the Fall 1988 semester approximately 85% of the college's degree-seeking or certificate students were enrolled in one of the above curricular areas. Therefore, by making these programs available at the proposed southern branch campus, very few southern Ocean County residents will have to travel to Toms River to enroll in their preferred degree program. Furthermore, the small number of students that would have to travel to Toms River for their desired major courses, e.g., Engineering (AS degree), could still take most of their general education course requirements at the southern branch campus. Appendix N includes the college's course outlines for each of the program areas listed above.

It is important to emphasize that the College has had long-term successful off-campus operations at Southern Regional and Lacey Township High Schools. In the Spring 1989 semester the College offered eleven courses at Southern Regional, four at Lacey, and two at Pinelands Regional High Schools. Appendix O, a listing of the courses, shows the diversity of the current southern Ocean County credit course offerings.

### Staffing Needs and Services

While the staffing of the branch campus will change as the campus grows over time, the initial organizational structure will follow a model currently used by the Wirths Branch Campus of Upsala College. In this model, most positions have a dual reporting responsibility. For instance, the chief administrative official who is also the

branch campus chief academic official reports to the college president for overall administrative matters and to the chief academic officer for all academic matters. A professional branch campus librarian reports to the branch campus chief administrative official for administrative matters and to the chief library officer on the main campus for professional library issues.

### Administrative

Initially, two new administrative positions will be created. One position will be the chief southern branch campus administrative official who will make day-to-day decisions on all administrative issues as well as be the branch campus chief academic official. The second administrative official will be considered second in command and will take primary responsibility for the student services function.

### Faculty

The hiring of faculty to teach at the proposed southern branch campus will be accomplished in accordance with established college personnel practices and in direct response to the proposed courses and programs. Additionally, the terms and conditions of employment will be governed by the current collective bargaining agreement with either the full-time faculty association or the adjunct faculty association, as appropriate.

It is anticipated that full-time and adjunct faculty currently teaching at the main campus in Toms River will volunteer to teach all or part of their teaching load at the branch campus once it becomes operational. In order to ascertain the availability of current faculty for teaching assignment at the branch campus, and also to demonstrate the quality of teaching faculty the branch campus would make available to students, a survey of all full-time and adjunct faculty was conducted in Winter 1989. A total of 14 full-time and 11 adjunct faculty expressed an interest in teaching at the branch campus. Additionally, one department head and one counselor expressed an interest in teaching. These professionals are highly qualified in their disciplines which span the range of degree programs and certificates proposed for the southern branch campus. The qualifications of those faculty and other professionals volunteering to teach at the branch campus have been included in Appendix P.

The assignment of teaching faculty to courses will be scheduled by department heads at the main Toms River campus. The evaluation of teaching faculty will be completed in accordance with approved college policy and the collective bargaining agreement. Ocean County College has a reputation as a quality teaching institution. The quality of instruction offered at the branch campus will be effectively the same as that offered in Toms River.

The teaching faculty will be encouraged to turn to the branch campus chief administrator for their day-to-day operational questions, concerns, and needs.

## Library

### Book Catalog and Periodical Indexes

Students attending the southern branch campus will have full bibliographic access to the entire catalogued collection of the Ocean County Library. It is planned that the on-line public access catalog, currently being evaluated by OCC library personnel, will be ready when the southern branch campus is open in Fall 1991. This catalog, integrated with an on-line circulation system, will enable the library user to ascertain what is owned, where it is located (Toms River campus or southern branch), whether it is on the shelf, and if not, when it is due back.

It is planned that a daily mail delivery will be made between the two campuses. Library materials can be requested and will be delivered by the next working day.

Periodical indexes will also be available. Subject coverage of these indexes will depend on the curricula offered at the branch campus. Minimum coverage will include the Readers Guide to Periodical Literature, the Academic Index, the Book Review Digest, the Social Science Index, the Humanities Index, and the New York Times Index. Certain of these (Academic Index and the Readers Guide) will be in electronic form (CDROM), while others will be hard copy, dependent on cost, space and format availability factors. All indexes will cover the latest ten years.

### Collection

The branch campus library collection will be comprised of books (reference and reserved reading), periodicals (both hard copies and microform), and non-print media.

The reference collection will consist of a core collection of approximately 2,000 volumes, including standard ready reference works (dictionaries, almanacs, and encyclopedias). Handbooks, directories, and titles supporting the curricula and courses planned for the branch will be available in a reserve reading room. Circulating volumes will be available on 24 hour delivery from the Toms River campus. In addition, the students will have available the state-wide interlibrary loan network, the OCLC ILL subsystem currently being installed at the Toms River campus, and access to the Stafford Township branch of the Ocean County Library.

A basic periodical collection of 100 titles will be available to support the curricula with a back-file going back five years. The back-file will most likely be on microfilm and will be accessible via two microfilm readers and one reader-printer. Students will have access to the complete periodical holdings of the college and will be able to receive photocopies of articles via telefax transmission. As with monographs, the inter-library network will be available to provide copies of articles the college does not own.

Non-print media to support courses at the branch campus will be available, and the necessary hardware will be provided: electronic

data files and the appropriate personal computers; and video cassettes and the appropriate playback equipment.

### Library Staff

Staffing is dependent upon the number of open hours for the library. Assuming the hours of operation are 8:00 a.m. to 10:00 p.m., the following staff will be required:

- one full-time professional librarian
- one part-time professional librarian, evening hours
- one full-time senior clerk
- one part-time evening clerk

### Counseling and Other Student Services

Student services responsibilities will be administered by the second full-time administrative official who will report to the branch campus chief administrative official for day-to-day operational concerns and to the college's Dean of Students for professional concerns regarding the Division of Student Affairs. A full-time counselor and a part-time evening counselor will be employed to service the counseling needs of students. In addition, temporary part-time academic advisors may be required to accommodate peak student advising needs during pre-registration periods. On occasion, some students will be referred to professional staff at the Toms River campus or to appropriate County agencies for additional student service assistance.

The following describes the processes students attending the branch campus will use for counseling, admissions and registration, financial aid, student life, health service, and intercollegiate & intramural athletics.

### Counseling Center

Three major counseling services (educational, career, and personal) will be provided to both full-time and part-time students who attend the southern branch campus. Transfer and placement counseling services will be available to the southern branch students; however, they must travel to the main campus in Toms River for appointments with the appropriate counseling professional staff member.

First, educational counseling and advisement will be provided at the branch campus to assist students in choosing academic degree programs and college courses and developing a specific schedule of classes during the registration process.

Second, career development assistance will also be available at the branch campus to assist students at various points with important career decision concerns. Students will have the opportunity to participate in a variety of exploratory and career counseling experiences to understand how educational goals relate ultimately to career choices and jobs. In addition, career information will be made available through a small counseling reference library as well as computer-assisted career exploration. Career testing opportunities will be available at the main campus in Toms River.

Third, linked with the educational counseling process is the need for personal counseling. This service to be provided at the branch campus will help students with personal, social and crisis emotional concerns that can often interfere with effective living and learning. Students with many academic strengths and keen abilities may find their success suffering as a result of personal issues. A trained professional will be available to assist with problems such as relationship concerns, loneliness, anxiety, depression, drug and alcohol concerns, disabilities, to name just a few areas that may impede classroom success.

### Admissions and Records

All admissions activities will still occur on the main campus although application forms and information regarding deadlines and processes will be available at the branch campus. Registration for courses at the southern campus will occur both at the main campus as well as at the branch campus itself through a unified computer network. Terminals at each site will provide current information, records and seat availability. It is anticipated that the support staff, plus administrative personnel, coupled with faculty advising and the counselor, will be capable of handling the initial registration needs for the branch campus. Registration will occur at designated times and if additional personnel are needed, such will be made available from the main campus.

Transcript evaluation and dispersal will be maintained on the main campus although students can request such services via appropriate forms at the branch site.

All permanent records of branch campus students will be maintained at the main campus. Such information, however, will be accessed through the aforementioned computer network via terminals at the branch site.

### Financial Aid

The processing of all financial aid requests will continue to occur on the main campus. However, preliminary information, as well as applications and processing forms, will be available at the branch site. The administrative staff will be trained to assist students in completing the forms with the resources of the main campus being available by telephone. There may be occasions when representatives from the Financial Aid Office will be available at the branch site.

### Student Life

A snack shop, dining, and vending area will be provided for the informal gathering of students in a relaxed format as they arrive for class or have time between classes. Additionally, as the name implies, vending food services will be available during all hours of operation. A quiet student lounge will be provided for students to study or meeting informally with other students and faculty.

A small Student Life Office will be provided where students can meet informally as they plan and develop student clubs unique to the

branch campus. Branch campus students will be encouraged to involve themselves in other clubs, student activities, and the Student Government Association available at the Toms River campus. The cultural, social, and educational events and trips scheduled at the main campus will be available to the branch campus student. A professional staff member from the main campus will meet with branch campus student groups on a regularly scheduled basis.

### Health Service

The services of a registered nurse will be available to all students and staff whenever classes are in session. First aid facilities will also be provided. Major emergency health problems will be handled by calling Stafford Township First Aid, and if necessary, transporting the patient to the nearby Southern Ocean County Hospital.

### Intercollegiate and Intramural Sports

The college is a member of the National Junior College Athletic Association, Region XIX, which includes 25 junior and community colleges throughout eastern Pennsylvania, New Jersey, and Delaware. Branch campus students may participate in any of the 14 intercollegiate sports by traveling to the main campus in Toms River.

Intramural sports could be made available to students as determined by student need. The athletic fields of Southern Regional High School will be available on a scheduled basis for southern branch campus students.

### College Bookstore and Staff

For the convenience of students and faculty, the southern branch campus will operate a college bookstore. The bookstore will be open for approximately two weeks before and two weeks after the first day of classes for the summer, fall, and spring sessions. The bookstore will only sell college textbooks, workbooks, laboratory supplies, and necessary paper, pen, and pencil supplies.

Part-time bookstore clerks and temporary security will be employed to accommodate the anticipated hours of operation.

### Support Staff

The support staff required for the branch campus (exclusive of the library) will include clerical maintenance, and security. In order to service the needs of two administrative staff members and the faculty the following support staff will be required:

- one administrative M/T supporting the two administrators
- 1.5 senior clerks supporting the faculty, counseling and community education offices
- 1.5 telephone operator/receptionists to handle all hours of operation and possibly Saturday morning hours
- one mail/delivery clerk

A general maintenance person will be required during all hours of operation. This will require one full-time and one part-time person. These individuals will perform general maintenance responsibilities as outlined by the branch campus administrator and the college's Director of Physical Plant. The facilities requirements as detailed in a later section of this Chapter recommend that the site surrounding the proposed structure be kept in the natural pine forest state. Given this concept, little grounds maintenance will be required. Maintenance of heating, ventilation, and air conditioning equipment, electrical motors and pumps will be handled by the college's physical plant maintenance staff as part of a regularly scheduled preventative maintenance schedule. Emergency maintenance problems will be handled by the on-site maintenance employee or by calling on the Toms River campus maintenance staff dependent upon the nature of the problem.

Custodial services will either be contracted to a private service, coordinated in a joint agreement with the Southern Regional Board of Education, or require the hiring of a day and an evening custodian.

Security services will also be contracted to a private service, coordinated in a joint agreement with the Southern Regional Board of Education, or require the hiring of three full-time security and three part-time weekend security officers to secure the facility 24 hours a day, seven days a week.

### Facility Requirements

It has been recommended that a new facility be constructed on a site in close proximity to the existing Southern Regional High School located in Manahawkin, N.J. The facility should be constructed to accommodate 400 full-time and 600 part-time students enrolling in programs and courses as previously listed in the Academic Program section. Classroom, laboratories, office space, library space, indoor physical education space, student activity services and lounge space, student health services space, physical plant maintenance and storage space, and audio-visual, radio and TV storage space should be provided to accommodate students and staff.

### Building Space Needs

New Jersey facility planning for public colleges and universities is guided by a facilities manual developed by the Department of Higher Education and approved by the Board of Higher Education. The name of this manual is Facilities Planning Standards and Approval Procedures for New Jersey Public Colleges and Universities (1978). This manual is currently under review for substantive changes. In early December 1988 a draft summary proposal was circulated to all public N.J. colleges and universities for comment. The southern branch campus planning has been completed using the guidelines contained in the revised draft.

### Assumptions

1. The number of credit hours taken by full-time students in the evening will equal the number of credit hours taken by part-

time students in the day.

2. The facility should be built to accommodate 400 full-time and 600 part-time students. The total FTE on a semester basis is  $((400 \times 12.5) + (600 \times 4.7))/15 =$  approximately 525.
3. Full-time students will average
  - 10.5 classroom hours per week at the branch campus
  - 3.0 laboratory hours per week at the branch campus (one lab. hour equals approximately 2/3 credit hour)
  - 1.5 classroom hours per week at the Toms River main campus
  - 15.0 total contact hours per week which equals 14 cred. hrs.
4. Part-time students will average
  - 4.0 classroom hours per week at the branch campus
  - 1.0 laboratory hours per week at the branch campus (one lab. hour equals approximately 2/3 credit hour)
  - 5.0 total contact hours per week which equals 4.7 cred. hrs.
5. Hours of operation will be from 8:00 a.m. to 10:00 p.m. Daytime hours will be 8:00 a.m. to 5:50 p.m. and evening hours will be 6:00 p.m. to 10:00 p.m. Daytime instructional scheduling would basically follow the same format of 50 minute periods on Monday, Wednesday and Friday, and 75 minute periods on Tuesday and Thursday that is used on the Toms River campus. Evening scheduling could follow the Toms River campus format of 75 minute periods on Monday and Wednesday or Tuesday and Thursday. Other alternatives are one night a week. If part-time evening enrollment grows beyond the capacity of the branch campus, off-campus sites at Lacey and Pinelands High Schools could be used. A Saturday morning program may be developed based upon research assessing the needs of students a few years after the campus has been in operation. A summer schedule similar to the main campus will also be offered.

#### Calculations for Classroom Space (full-time students)

1. Demand for classroom space is projected for 400 full-time students taking 10.5 classroom hours per week = 4200 hrs./wk.
2. Supply of classrooms (daytime hours, 8:00 am - 5:00 pm)
  - three 26 station rooms is 78 seats x .65 (seat utilization rate) = 51 x 30 (classroom utilization, 30 hrs. of 45) = 1530 hrs./wk.
  - four 35 station rooms is 140 seats x .65 (seat utilization rate) = 91 x 30 (classroom utilization, 30 hrs. of 45) = 2730 hrs./wk.Total classroom hours available per week = 4260 hrs./wk.
3. Based on the estimated student demand of 4,200 classroom hours per week, and the state standards for classroom utilization, it is proposed that three, 26 station classrooms of 525 NSF and four 35 station classrooms of 550 NSF be constructed.

### Calculations for Classroom Space (part-time students)

1. Demand for classroom space is projected for 600 part-time students taking 4.0 classroom hours per week = 2400 hrs./wk.
2. Supply of classrooms (evening hours, 6:00 - 10:05 pm)
  - three 26 station rooms is 78 seats x .65 (seat utilization rate) = 51 x 18 (classroom utilization, 18 evening hours) = 918 hrs./wk.
  - four 35 station rooms = 140 seats x .65 (seat utilization rate) = 91 x 18 (classroom utilization, 18 evening hours) = 1638 hrs./wk.Total classroom hours available per week = 2556 hrs./wk.
3. The classroom space proposed for full-time students should accommodate the classroom space needs of the part-time evening students estimated at 2400 hours per week, provided the facility is operated a minimum of two 75 minute evening periods per day on a Monday/Wednesday and Tuesday/Thursday schedule.

### Calculations for Laboratory Space

1. Laboratory space planning is based on combining two separate criteria pertaining to station size and utilization of facilities. Laboratory utilization rates are the same for each laboratory type, i.e., 20 hours/week with 75% station utilization. Station size allowances vary, however, according to the equipment and storage requirements of different laboratory types. In most cases, an average station size allowance is specified for a field of study, e.g., 60 NSF per station for biological sciences, although specific instructional activities may require more or less space. The Board of Higher Education strongly encourages that, wherever possible, laboratories be designed with the flexibility to accommodate several instructional fields without compromising the usefulness of the facility.
2. The state standard for a computer laboratory is an average of 35 NSF/station including service space.  $35 \times 24 = 840$  NSF. One 800 NSF laboratory with a 100 NSF storage area and a 100 NSF control room are proposed.
3. The state standard for biological/physical sciences is an average of 60 NSF/station including service space.  $60 \times 24 = 1440$  NSF. One 1000 NSF biology/physics laboratory is proposed with a 300 NSF storage room for biology supplies and a 300 NSF storage room for physics supplies.
4. The state standard for health services and paramedical technologies is an average of 45 NSF per station including service space.  $20 \times 45 = 900$  NSF. One 800 NSF nursing/allied health laboratory and a 300 NSF preparation and storage room are proposed.

### Calculations for Office Space

1. 170 NSF per FTE non-student staff and faculty member requiring office space plus an additional 85 NSF for all other staff members, such as part-time, temporary or graduate student employees.
2. Approximately 20 employees requiring office space would be needed for the 1000 student campus which would be  $20 \times 170 = 3400$  NSF according to state standards.
3. A total of 2,900 NSF of office space is proposed.

### Calculations for Library Space

1. State standard of 8.25 NSF/FTE student & faculty for seating/study space
  - $400 \times 12.5 = 5000$  full-time credit hours
  - $600 \times 4.8 = 2880$  part-time credit hours
  - 7880 total credit hours per semester/15  
= 525 FTE
  - $525 \times 8.25 = 4331$  NSF of seating/study space authorized
2. State standard of .1 NSF per volume of stack space (this includes shelving and aisle circulation space)
  - The collection size is recommended at 2,000 reference volumes, 500 for a reserve reading room, plus 100 periodicals for a total collection of 2,600. This will require  $2,600 \times .1 = 260$  NSF of stack space.
3. State standard of 25% of combined seating and stack space to accommodate staff/service space
  - $(4331 + 260) \times .25 = 1148$  NSF of staff/service space is authorized.
4. Although under State DHE guidelines a total of 5,539 NSF of library space is authorized, it is proposed that the library space be configured within 1,650 NSF. This space should accommodate a small reference section of approximately 2,000 volumes, a small student reading area, circulation counter, and a reserve reading room. The reserve reading room will provide space for approximately 20 students and shelving for reserve books. The reserve books will be selected by faculty in accordance with the reading list for the courses offered at the branch campus.

### Calculations for Indoor Physical Education Facilities

1. The state standard is 16,000 NSF for the first 1,000 headcount enrolled students plus 7 NSF per each additional headcount student beyond the initial 1,000.
2. It is proposed that minimal locker room space be provided to accommodate one HPE class at a time. The locker area should be divided into showers, drying area, and locker space. Facilities should be separate for both male and female students.

3. The estimated space required is 700 NSF.

#### Calculations for Assembly and Exhibition Facilities

Facilities of this type are not proposed for the southern branch campus.

#### Administrative Data Processing and Computer Facilities

No central data processing space will be required at the branch campus. Computer terminals will be required to link the branch campus with the mainframe computer located in Toms River for registration and other administrative functions. Additionally, personal computers located in individual offices will be required for secretaries, administrators and faculty.

#### Calculations for Student Activity Services and Lounges

1. State standard of 12 NSF per enrolled student
2.  $12 \text{ NSF} \times 1000 = 12,000 \text{ NSF}$  is authorized.
3. It is proposed that a total of 1500 NSF be allocated for a small dining and vending area. Additionally, one office for student activities at 150 NSF, 400 NSF for a student quiet lounge, and 650 NSF for bookstore storage, counter area and student service area. It may be best to consider locating the quiet lounge in close proximity to the small library area.

#### Calculations for Student Health Services

1. State standard is .25 NSF per FTE student.
2.  $.25 \times 473 = 118 \text{ NSF}$  is authorized.
3. It is proposed that 250 NSF of space be allocated for a student health office and treatment area. The need to accommodate severe student/staff health problems could be met through the use of First Aid Squads from Stafford Township and nearby Southern Ocean County Hospital.

#### Calculations for Physical Plant Maintenance and Storage Facilities

1. State standard is 35 NSF/1,000 GSF of building space maintained.
2. Assuming a 26,719 GSF structure,  $26.719 \times 35 = 935 \text{ NSF}$  of physical plant maintenance space is authorized.
3. A 200 NSF area for general branch campus receiving area and a general maintenance storage area and shop of 250 NSF is proposed for a total of 450 NSF.

#### Calculations for Audio-visual, Radio, and Television Facilities

1. The state standard is 1.0 NSF per FTE student, with a basic

space of 5,000 NSF for all institutions. All colleges are authorized a minimum of 5,000 NSF with the amount of space above this level predicated on the student enrollment (FTE).

2.  $1.0 \times 525 = 525$  NSF is authorized for the branch campus.

3. A 500 NSF area for media storage is proposed. Based on the preceding calculations, the proposed recommended space for the southern branch campus facility planned to accommodate 400 full-time and 600 part-time students is summarized in Table 22.

#### Site Development Needs

There are two very important philosophical concepts that must undergird the development of the Southern Ocean County College Branch Campus. First, although physically removed from the main Toms River campus, students, faculty, and staff must be considered integral members of the Ocean County College family. Second, since the campus site will be located on land in close proximity to Southern Regional High School, it is important to convey the image that the southern branch campus is part of a college and not an extension of the local high school.

With these considerations in mind, it is proposed that a separate student/staff parking area of 500 spaces be provided and ingress and egress roads from the parking area to the proposed extension of Cedar Bridge Road. The parking area and roads must be lighted.

Site development should be kept in the natural state in order to keep down maintenance costs. The natural pines will provide a beautiful college setting without the high maintenance costs of large grass areas. Lighted walkways for a short distance from the parking area to the single structure are proposed.

In order to convey the image of Ocean County College, it is proposed that a small replica of the college sign be created at the main entrance to the branch campus. Landscaping should complement the natural pinelands area and be of the low maintenance type.

Table 22

Proposed Space Recommendations for the  
Southern Branch Campus of Ocean County College

SPACE TYPE	NASF	NOTES
<b>CLASSROOM</b>		
26-stations, 3 @ 420	1,260

## Projected Costs

### Capital Construction Costs

Based on construction start date of May, 1990 with completion by April, 1991.

a. Site Acquisition		\$300,000
b. Site Development		
1. site development (10% of construction cost)	\$333,988	
2. 1,000 ft. of 30 ft. wide road	57,000	
3. road lighting	15,000	
4. parking areas for students faculty and staff 500 spaces @ 375 sf = 187,500 sf x \$2.20	412,500	
5. parking area lighting	<u>30,000</u>	\$848,488
c. Construction Cost (Building and Fixed Equipment)		
17,350 NSF x 1.54 = 26,719 GSF x \$125.00		\$3,339,875
d. Fixed or Specialty Equipment		0
e. Design Contingency		0
f. Total Construction Cost (a+b+c+d+e)		\$4,488,363
g. Total Construction Cost Per Gross Square Foot		
\$3,673,863 <sup>1</sup> /26,719 GSF	\$138	
h. Construction Contingency (8% of line f <sup>2</sup> )		\$335,069
i. Professional Consultant Fees (Architect/Engineer)		
6% of total construction cost <sup>2</sup>		\$251,302
j. Movable Equipment and Furnishings		
10% of construction cost <sup>2</sup>		\$418,836
k. Other Costs		
1. Legal, survey, interior design, testing, fine art - 1% of construction cost	\$44,884	
2. Construction Supt. 1 yr @ \$35,000 + fringes	44,800	
3. Travel, phone & misc. supplies	2,200	
4. Affirmative action costs - .5% of project cost	<u>28,068</u>	
		\$119,952
l. Project Contingency		\$0
m. Total Project Cost (a+b+c+d+e+h+i+j+k+l)		\$5,613,522
n. Total Project Cost Per Gross Square Foot		
\$5,313,522 <sup>2</sup> /26,334	\$202	
o. Estimated increases due to inflation		
- .5% per month increase from 4/1/89 - 11/1/90 (midpoint of construction period), 20 months @ .5% = 10% <sup>3</sup>		<u>531,352</u>
p. TOTAL PROJECT COST PLUS INFLATION		<u>\$6,144,874</u>
	SAY	\$6,200,000

<sup>1</sup>Exclusive of site acquisition cost and site development costs for roads and parking areas.

<sup>2</sup>Exclusive of \$300,000 site acquisition cost.

<sup>3</sup>Inflation factor excludes consideration of site acquisition cost.

### First Year Operational Costs

Two different approaches can be taken to estimate the first year operational costs for the proposed southern branch campus. The first approach would be to take the estimated cost per full-time equated (FTE) student for the entire college and then multiply this amount times the proposed FTE for the branch campus. Adjustments for inflation then must be applied. A second approach would be to build an estimated budget from the ground up by projecting personnel needs and attendant salaries, operational budgets, educational supplies, and physical plant operational expenditures. Additionally, adjustments for inflation must be applied. Both approaches have been estimated in this section.

The college's proposed educational and general budget for FY 1990 is \$17,245,749 supporting a total State fundable FTE of 3,858 students. This equates to an expenditure of \$4,470 per FTE student. Using an inflation factor of 7.5 percent per year compounded, the average cost per student in FY 1992 (the projected first year of branch campus operation) would be \$5166. Applying the \$5166 times the estimated 260 FTE yields an estimated first year operational budget of \$1,343,160.

The second approach of building a budget from the ground up plus using the same inflation factor of 7.5 percent per year compounded yields a total first year FY 92 operational budget of \$1,338,907. Table 23 shows a breakdown of estimated expenditures by major category.

Table 23

Southern Branch Campus of Ocean County College  
 Estimated First Year (FY 1992) Operational Budget

EXPENDITURE CATEGORY	FTE	BUDGET AMOUNT (FY 90 DOLLARS)
<u>Professional Staff</u>		
Administration	2.0	\$ 90,000
Counselors	1.5	33,000
Librarians	1.5	33,000
Faculty (based on 260 FTE students and a 22:1 student/faculty ratio)	12.0	264,000
Branch campus nurse	1.5	31,500
Community Education M/T	.5	10,500
<u>Support Staff</u>		
Administrative M/T	1.0	21,000
Senior Clerks (faculty, counseling, Comm. Ed.)	1.5	21,000
Senior Clerks (library)	1.5	21,000
Receptionist/telephone operators	1.5	21,000
Bookstore support staff	1.0	14,000
Custodians	2.0	28,000
Security	4.5	63,000
Maintenance (HVAC) M/T	1.5	22,500
Mailroom/delivery clerk	1.0	12,000
	Sub-total	\$ 685,500
Fringe benefits (28% of salaries)		191,940
<u>Utilities</u>		
Electric (\$.30/sq. ft. <sup>1</sup> x 12 months)		79,200
Natural gas (\$.29/sq. ft. <sup>1</sup> x 12 months)		76,560
Water service		6,000
Sewers (\$150.00 per month x 12 months)		1,800
Telephone incl. data connection to main campus (\$800/month x 12 months)		9,600
Insurance		3,000
<u>Supplies</u>		
Educational		75,000
Physical plant maintenance & custodial		20,000
Operational - administrative		10,000
	Total Budget	\$1,158,600
	Two years of 7.5% inflation compounded	180,307
	FY 92 ESTIMATED BUDGET	\$1,338,907

<sup>1</sup> Based on 22,000 NSF of assignable, custodial, mechanical, and circulation space.

- Transition ratios calculated by using the highest grade level ratio over 1983-1988. These highest grade-to-grade ratios are used because of the unique home construction possibilities for Southern Regional sending districts. Some of this information is explained in more detail in Appendix D.
- Grades K-6 include pupils from the four districts sending students to Southern. These districts are Barnegat, Long Beach Island, Ocean Township, and Stafford Township. Barnegat Township 7th & 8th not included in above data.

JAMES A. MORAN  
*Secretary of the Bd. Of Ed.*

February 6, 1989

Mr. Richard Parrish  
Director of Institutional Research  
Ocean County College  
College Drive  
Toms River, New Jersey 08753

Dear Mr. Parrish:

The following information is being used to calculate our growth:

1. It is estimated that 6,600 additional units may be built in Stafford Township alone.
2. At least 57 per cent of these will be year round and 7 per cent will be rental. Therefore, we can assume that approximately 60 per cent of any housing units will be of a family nature.
3. Historically, Stafford adds 150-250 units per year. If 60 per cent of 225 units are family units, we will experience 135 family houses per year.
4. If we make the assumption that there will be one and a half students in each of these units, we will see about 200 new students in Stafford Township each year. Estimating that our high school population is about half, we will gain about 100 pupils per year.
5. In five years then, our high school population should increase by at least 500 students, swelling our graduating class well beyond 500 students.
6. A "wild card" factor is Ocean Acres, which is about to be sewerred. If this occurs within the year, this growth would be accelerated.

7. Another "wild card" is Barnegat and its population. They, too, are experiencing growth. Currently, the size of the ninth grade which they send us is 270. If we assume modest growth in their population of thirty per class, we will see a graduating class approaching 600 students in the not too distant future. The issue of Barnegat's withdrawal appears moot at this point, but even if this were to occur, the graduating population in close proximity remains intact.

8. Both Pinelands and Lacey are in the throes of growth which would also contribute to the OCC pool of students, as Southern is the geographical hub of this area. I also think it safe to assume that the participation from Pinelands would increase dramatically, as they are the most geographically remote from the existing Toms River campus.

9. The first phase of our building program is being designed for an increase of 1,000 - 1,500 students. Based upon existing data, it would not be unrealistic to see almost a doubling of our student population (from 2,500 - 4,500) within the decade.

10. This is substantiated by the Stafford "build out" figure alone. If ultimately 6,600 more units are built, and 60 per cent of these are family, with only one student per household, we will increase by almost 2,000 students.

Sincerely,

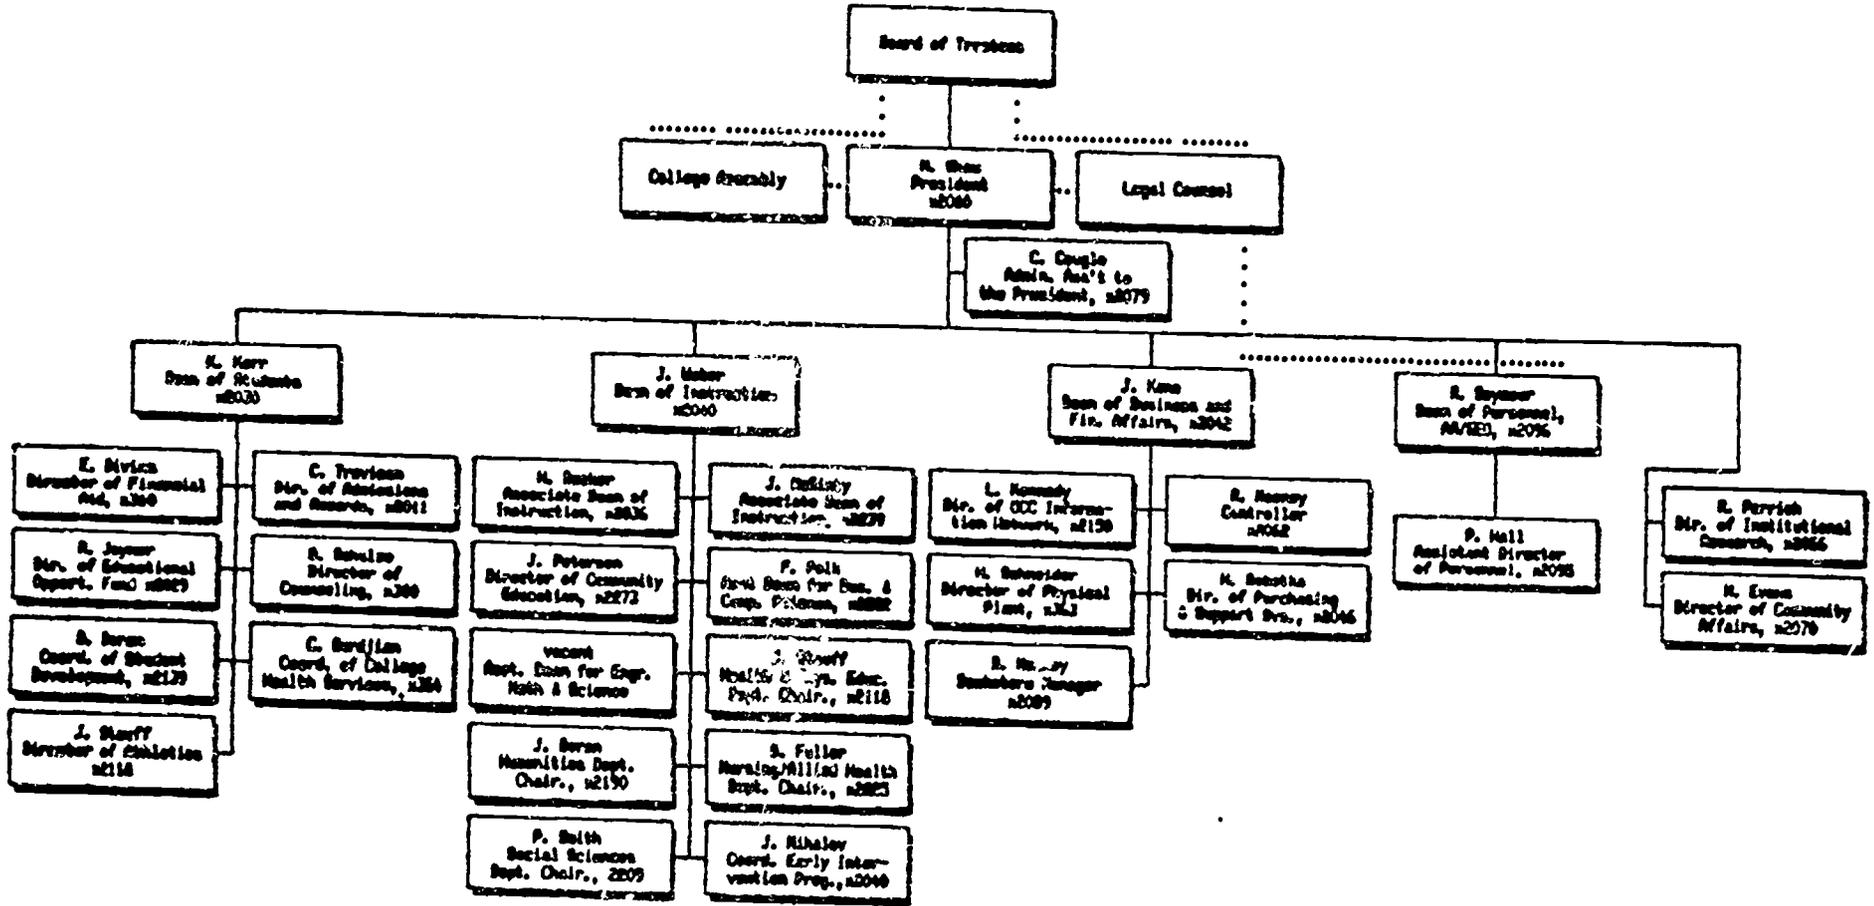

Robert J. Daria, Ph.D.  
Superintendent

TOTALS	94	148	97	126	94	141	95	155	100	161

<sup>1</sup>These data exclude dept. chairpersons, counselors and librarians

<sup>2</sup>The Business Department was joined with Computer Science from 1969 through 1974 and reunited beginning in 1982.

<sup>3</sup>The Computer Science Department began in 1968 as the Data Processing Department. In 1970, it merged with the Business. In 1975, Computer Science merged with Engineering and in 1977, both Computer Science and Engineering merged with the Math Department under the leadership of one chairperson. In 1982 the Computer Science faculty were reunited with the Business Department.

<sup>4</sup>During the first four years of the college, two separate Engineering Departments existed (civil and electrical). These departments were merged under the leadership of one chairperson in 1970. During FY 75 and 76, Computer Science was joined with Engineering & from 1977 to 1981 Engineering, Computer Science and Mathematics were merged under the leadership of one chairman. In 1986, a separate Engineering Department was created.

<sup>5</sup>The Math Department was established in 1966. From 1977 through 1981, Engineering and Computer Science faculty were joined with Math faculty as one department. From 1986 through the present, the Math Department existed with solely math faculty.

OCEAN COUNTY COLLEGE

BRANCH CAMPUS  
STUDENT INTEREST  
SURVEY

Dear Student:

Ocean County College is considering the establishment of a branch campus in the Manahawkin area of southern Ocean County. If the need is documented, the branch campus would be designed to offer a limited number of degree programs, possibly some certificate programs, a variety of credit courses and noncredit Community Education courses.

You can assist us document the potential student demand for a branch campus by taking a few minutes to complete this survey, regardless of your intentions to attend Ocean County College, attend some other college, or attend college at all.

Thank you for your cooperation,

Dr. Milton Shaw  
President

**DIRECTIONS:** Please circle the appropriate response for each question or complete as indicated.

1. Which high school are you presently attending?  
(1) Lacey Township (2) Pinelands Regional (3) Southern Regional
2. Are you a junior or senior?  
(1) Junior (2) Senior
3. Do you plan to go to college after graduating from high school?  
(1) Definitely yes (3) Probably no  
(2) Probably yes (4) Definitely no
4. Do you think you may attend Ocean County College?  
(1) Definitely yes (3) Probably no  
(2) Probably yes (4) Definitely no
5. If a branch campus of Ocean County College were established in the Manahawkin area, would you consider attending the college at this new site?  
(1) Definitely yes (3) Probably no  
(2) Probably yes (4) Definitely no

(over please)

APPENDIX I - CONTINUED

6. Regardless of how you answered the previous questions, do you feel there should be a branch campus of Ocean County College established in the Manahawkin area of southern Ocean County?
- (1) Definitely yes      (3) Probably no  
(2) Probably yes      (4) Definitely no
7. If your response to question 5 concerning enrolling in the proposed southern Ocean County College branch campus was "definitely yes" or "probably yes", please answer this question, otherwise skip to question 8.
- (a) What type of program or course would you like to see offered at the proposed branch campus?
- (b) What time of the day would you prefer to attend classes at the proposed branch campus?
- 1) Morning (8:00 a.m. to 12:00 noon)  
2) Afternoon (12:00 noon to 6:00 p.m.)  
3) Evening (6:00 p.m. to 10:00 p.m.)
8. Please offer us any comments or suggestions concerning the proposed branch campus. Also, feel free to comment about Ocean County College in general.

APPENDIX J

Structured Telephone Interviewer Schedule  
Respondent Answer Sheet

Interviewer Name: \_\_\_\_\_ Date: \_\_\_\_\_ Respondent's Tel. No. \_\_\_\_\_

1. THANK YOU FOR AGREEING TO PARTICIPATE IN THIS SURVEY.

THE FIRST QUESTIONS IS:

HAVE YOU EVER HEARD OF OCEAN COUNTY COLLEGE? 1. Yes 2. No

If yes, continue with question 2.  
If no, skip to question 4.

2. HAVE YOU EVER ENROLLED IN AN OCC COURSE? 1. Yes 2. No

3. HAVE YOU EVER BEEN TO OUR FINE ARTS CENTER OR PLANETARIUM? 1. Yes 2. No

FOR THE NEXT FEW QUESTIONS, PLEASE ANSWER EITHER

- 1. Definitely yes
- 2. Probably yes
- 3. Probably no
- 4. Definitely no

4. DO YOU THINK YOU MAY ENROLL IN AN OCEAN COUNTY COLLEGE COURSE?

- 1. Definitely yes
- 2. Probably yes
- 3. Probably no
- 4. Definitely no

5. IF A BRANCH CAMPUS OF OCEAN COUNTY COLLEGE WERE ESTABLISHED IN OR NEAR THE MANAHAWKIN AREA, WOULD YOU CONSIDER ATTENDING THE COLLEGE AT THIS NEW SITE?

- 1. Definitely yes
- 2. Probably yes
- 3. Probably no
- 4. Definitely no

If the respondent answered, "definitely yes", or "probably yes", please continue with question 6, otherwise skip to question 8.

6. WHAT TYPE OF PROGRAM OR COURSE WOULD YOU LIKE TO HAVE AT THE PROPOSED BRANCH CAMPUS? Record Response: \_\_\_\_\_

7. WHAT TIME OF DAY WOULD YOU PREFER TO ATTEND CLASSES AT THE PROPOSED BRANCH CAMPUS?

- 1. Morning (8:00 a.m. - 12 noon)
- 2. Afternoon (12 noon - 6 p.m.)
- 3. Evening (6:00 p.m. - 10:00 p.m.)

APPENDIX K - CONTINUED

8. REGARDLESS OF HOW YOU ANSWERED THE PREVIOUS QUESTIONS, DO YOU FEEL THERE SHOULD BE A BRANCH CAMPUS OF OCEAN COUNTY COLLEGE ESTABLISHED IN SOUTHERN OCEAN COUNTY WITHIN THE NEXT ONE OR TWO YEARS?
- |                   |                  |
|-------------------|------------------|
| 1. Definitely yes | 3. Probably no   |
| 2. Probably yes   | 4. Definitely no |
9. IF YOU HAVE ANY QUESTIONS OR CONCERNS ABOUT OCEAN COUNTY COLLEGE, OR WOULD LIKE TO KNOW MORE ABOUT OUR PROGRAMS OR COURSES, PLEASE FEEL FREE TO CALL US. OUR TOLL FREE TELEPHONE NUMBER FOR SOUTHERN OCEAN COUNTY RESIDENTS IS (609) 693-5052.

THANK YOU FOR ANSWERING OUR QUESTIONS AND HAVE A PLEASANT EVENING.

## APPENDIX L

### SELECTED TYPICAL BUSINESS FIRM COMMENTS OR SUGGESTIONS CONCERNING THE PROPOSED BRANCH CAMPUS

1. I think a branch of Ocean County College would be very beneficial to our community, not just to train students for the job force, but for continuing education for those that desire it. Ocean County College has been an asset to the County and we in Southern Ocean County hope they will decide to have a branch in our area.
2. A southern branch of OCC would be a realistic awareness of the growth taking place in this region. This growth should be accompanied by an extension of a higher learning education center.
3. As a graduate of OCC, I feel it would be an important addition to the community. Toms River is quite a distance away, making it quite difficult for a lot of people to attend. Not to mention the added expense of gas and tolls and possibly a babysitter. I think a lot more people would take advantage of the college if it was more accessible.
4. OCC is a great institution. There should be more business related courses at night for working people at Southern Regional High School.
5. County college is 45 minutes away, local branch would be helpful.
6. I fully support the idea of a branch campus in the Manahawkin area. I believe that the campus could also offer courses to students of other schools who would take them during their summer vacation on Long Beach Island.
7. This branch campus is long overdue. I can't wait to see what happens.
8. OCC enjoys a great reputation and should be shared with those in the southern end of the county.
9. There are many people here who don't even have a car. Making a branch campus here would open a new world for them. I support it.
10. We need it yesterday.
11. In the banking field, courses are offered through the American Institute of Banking to meet a lot of our training needs. However, computer courses and management skill courses have often proved inadequate. A few employees have attended seminars on management skills which have proven beneficial. I would like to see these offered at a more convenient location, to encourage more employees in supervisory positions to attend.

APPENDIX M

SOUTHERN REGIONAL BOARD OF EDUCATION RESOLUTION SUPPORTING  
THE PROPOSED SOUTHERN BRANCH CAMPUS

## APPENDIX N

### CURRICULUM OUTLINES FOR PROPOSED DEGREE PROGRAMS AND CERTIFICATES FOR THE SOUTHERN BRANCH CAMPUS

All degree/certificate requirements will be able to be met in these programs

Basic Skills Curriculum - nondegree  
Business Administration - AS degree  
Business Administration - AAS degree  
    Banking-Finance concentration  
    Business Administration concentration  
    Marketing concentration  
Criminal Justice - AS degree  
General Education - AA degree  
General Education - AS degree  
Liberal Arts - AA degree  
    Elementary Education concentration  
    History concentration  
    Political Science/Government concentration  
    Psychology concentration  
    Sociology concentration

Criminal Justice - certificate  
Real Estate - certificate

Most degree/certificate requirements will be able to be met in these programs

Business Administration - AAS degree  
    Accounting concentration  
Community Services Technician - AS degree  
Computer Science - AS degree  
Computer Science - AAS degree  
Liberal Arts - AA degree  
    English concentration  
    Mathematics concentration  
    Teacher of Social Studies concentration  
Nursing - AAS degree (first year only)  
  
Accounting - certificate

## BASIC SKILLS CURRICULUM

The Basic Skills Curriculum is a one-semester program for entering full-time students who, based upon their NJ College Basic Skills Placement Test scores, need additional preparation before enrolling in a college degree program.

Students placed in the Basic Skills Curriculum enroll in five courses.

<u>COURSE</u>	<u>ENROLLMENT CREDITS</u>	<u>CREDITS</u>
1. ENG103 Fundamentals of Reading & Study I or ENG105 Fundamentals of Reading & Study II	2	-
2. ENGL15 English Fundamentals	3	-
3. SS105 Personal and Career Development	3	3
4. HPE110 Applied Modern Health	2	2
5. M101 Basic Mathematics or Elective (preferable Math) based on math placement scores	(3)  (3)	(-)  (3)
	13	5-8

In addition, students in the Basic Skills Curriculum receive individualized academic, career and personal counseling during the semester. Students who successfully complete the Basic Skills Curriculum enroll in College degree programs in their second semester.

Institutional and statewide data indicate that students who successfully complete a needed skills development program more than double their chances of surviving four semesters with a passing grade point average. More than sixty percent of Ocean County College's students take more than two years to complete their degree. Students enrolled in the Basic Skills Curriculum may also find it necessary to attend the College for an additional semester in order to satisfy specific program degree requirements.

**A. S. DEGREE  
BUSINESS ADMINISTRATION**

THIS ASSOCIATE IN SCIENCE CURRICULUM IS DESIGNED FOR THE STUDENT WHO WISHES TO TRANSFER TO A FOUR-YEAR COLLEGE OR UNIVERSITY IN BUSINESS. MANY TRANSFER COLLEGES PREFER TWO-YEAR GRADUATES WITH PRE-CALCULUS BACKGROUND.

<u>COURSE</u>	<u>FIRST SEMESTER</u>	<u>CREDITS</u>
ENG151	Introduction to Prose Writing	3

(REVISED 10/88)

Elementary Education (continued)

STUDENTS PLANNING TO SEEK NEW JERSEY ELEMENTARY SCHOOL CERTIFICATION FOR GRADES KINDERGARTEN THROUGH EIGHT SHOULD PURSUE AN A.A. DEGREE IN LIBERAL ARTS, COMPLETING THE REQUIRED 45 S.H. GENERAL EDUCATION CORE AND CHOOSING FROM AMONG THE SUGGESTED COURSES TO EARN A MINIMUM OF 64 S.H.

TWO OTHER SOURCES SHOULD BE CONSULTED:

1. New Jersey Department of Education  
Regulations and Standards for Certification  
(available in the Department of Social Science)
2. Catalogs of four-year colleges to which transfer is contemplated.

Regulation of the New Jersey Department of Education limit the number of transfer credits in professional education courses to 6 S.H. (Normally H177 History of American Education and SS275 Educational Psychology, both of which partially fulfill certification requirements). SS178 Introduction to Education of the Handicapped is not considered to be a professional education course and will usually transfer as an elective. (It is not required for New Jersey Certification).

Students should earn 12 S.H. in the Humanities or Social Sciences toward the 30 S.H. major which will be required for the Bachelor's Degree.

TOTAL 64 CREDITS

Revised 6/84

Students who plan to transfer to a four-year college should complete the 45 s.h. General Education core as outlined herein and also the suggested courses, earning a minimum of 64 s.h. for the A.A. Degree. It is highly recommended that catalogs of four-year colleges to which transfer is planned be consulted to ensure that major requirements will be met. These can normally be fulfilled within the General Education, suggested courses and electives.

## REAL ESTATE CERTIFICATE

This is a program of specialized courses in real estate designed primarily for the practitioner. Successful completion of study will entitle the student to a certificate in real estate. The organization of the program will allow the student to apply the courses toward a degree program. (See A.A.S. Marketing). It is open to those meeting general college admission requirements.

Real Estate Principles (BU276)	5 S.H.
Principles of Real Estate Financing (BU280)	3 S.H.
Principles of Real Estate Appraisal (BU269)	3 S.H.
Real Estate Law (BU267)	3 S.H.
Real Estate Salesmanship (BU285) or Salesmanship (BU279)	3 S.H.
Commercial & Investment Real Estate (BU284) or Real Estate for Brokers (BU277)	3-6 S.H.
English 121 and English 155 OR	6 S.H.
English 151 & 152 or English 155	
M 147 or Math Elective	3 S.H.
Business Elective	3 S.H.
	32-35 S.H.

Either BU276 or Real Estate Sales Licensure is required for certification. If licensure is submitted, substitute 5 S.H. of free electives. Credit by Examination may be substituted if appropriate. (College Policy #5140).

NOTE: Real Estate courses available only in the evening

\*Consult College catalog for English requirements

The Community Services Technician Program offers students the opportunity to seek immediate agency employment upon graduation or to continue their education transferring to baccalaureate programs in the human services/social work field.

The two year Associate in Science degree offers four "core" courses, SS 191, an introductory human service course; SS 291, a methods of social work course; SS 194, a communication skills course; and SS 292, a field experience practicum and a liberal arts base as well as generalized studies which equip the student for paraprofessional practice and/or offer the basics for further undergraduate study.

- Pre- or Co-requisites
- #According to Basic Skills Testing

REVISED 10/88

## NURSING CURRICULUM

Students not accepted officially as Nursing Majors will not be allowed to enroll in Nursing (NU) courses.

If a student needs Basic Skills courses in both English and Math, they must wait to enter the Nursing Program. They may take the Nursing Program with either Math or English.

\*The Nursing Program is so prescribed to require a specific sequence of courses. Any general education courses, however, may be taken prior to acceptance for those preparing to enter the Nursing Program, but who have not yet been accepted.

Specific courses include:

SS172 - General Psychology

Mathematics requirement at the M151 or above to meet graduation degree requirements.

ENG151 or ENG 152 or ENG155 - English Writing

ENG121 and ENG155 - English Writing

HPE110 or HPE120 or PE139 - Health and/or Physical Education

Humanities Elective

Science Requirements SC130, SC131, SC232 (optional)

NOTE: Evening Nursing Students

Those students are directed to complete all general education courses listed above prior to enrolling in the Nursing (NU) sequences. Although one course in general education may be taken.

NOTE: Permission may be granted for Nutrition (NU184) to be taken prior to acceptance into the Nursing Program. A memo is obtained in the Nursing Office when permission of the Nursing Department Chairperson has been given.

Refer to current catalog for other information concerning requirements for admission and also requirements for accepted nursing students.

REVISED 10/88

The Certificate in Accounting is designed for those students who are interested in furthering their development as professional accountants. More particularly, the Certificate will assist holders of non-business baccalaureate degrees in meeting the New Jersey requirements for licensure as Certified Public Accountants (CPA). Students should consult the State of New Jersey requirements for licensure to be sure they meet the total requirements. The State requires a minimum of 24 semester hours in accounting and additional business courses as prescribed in the regulation.

ENG 121 or 151	3 semester hours
Math 149 or higher	3 semester hours
General Accounting I & II (BU 161-162)	6 semester hours
Intermediate Accounting I & II (BU 261-262)	6 semester hours
Federal Income Tax Accounting (BU 266)	3 semester hours
Cost Accounting *(BU 263)	3 semester hours
Advanced Accounting *(BU 264)	3 semester hours
*Auditing (BU 265)	3 semester hours
<b>TOTAL</b>	<b>30 semester hours</b>

\* These courses are available only in the evening division.

The student is reminded that the certificate program alone does not qualify one for the licensure examination. It is strongly recommended that students have adequate tools with which to approach the study of accounting courses, mathematical comprehension becomes significant.

## APPENDIX P

### QUALIFICATIONS OF FACULTY EXPRESSING AN INTEREST IN TEACHING AT THE SOUTHERN BRANCH CAMPUS

#### Current OCC Full-time Faculty

Barrett, Joan M., Instructor, Nursing, B.S.N., M.S. Rutgers University.

Bosley, Karen L., Associate Professor, Journalish/English, A.B., University of Indianapolis; M.A., Northwestern University; M.A., Ball State University.

Bosley, Norman K., Associate Professor, English/Speech, A.B., Duke University; M.A. Northwestern University.

Icklan, Thomas, Assistant Professor, Mathematics, B.A., Kean State College; M.Ed., Temple University.

M. Karl Kleiner, Instructor, Business Administration, B.A., Rutgers University; M.B.A., Fairleigh Dickinson University.

Longo, Judith W., Challenge Grant Project Director; Professor, English/Reading, B.S., Monmouth College; M.A., Seton Hall University; M.A., Newark State College; Ph.D., Indiana University of Pennsylvania.

McCormick, Kathleen M., Professor, Psychology, A.B. Trinity College; M.A., University of Texas; Ph.D., Rutgers University.

Meyer, Angela, Associate Professor, Nursing, B.S.N., Seton Hall University; M.S., University of Pennsylvania.

Mozeleski, Wayne J., Assistant Professor, Mathematics, B.A., Rider College; M.A., Trenton State College.

Nixon, Carolyn F., Assistant Professor, Social Work, B.A., Talladega College; M.S.W., Virginia Commonwealth University.

Polonitza, Nancy, Assistant Professor, Counseling, B.A., Kean College; M.A., University of Delaware.

Purgavie, Charles S., Assistant Professor, Criminal Justice, A.S., Ocean County College; B.A., Stockton State College; M.Sc., University of London (The London School of Economic and Political Science).

Schwartz, Henry D., Instructor, Business, B.A., Rutgers University; M.B.A., Monmouth College.

Smith, Peter H., Professor, Education/Sociology, A.B., Yale University; M.A., Professional Diploma, Ed.D., Teachers College, Columbia University.
