This document contains a brief bibliography of peer-reviewed literature, with abstracts, on humor in later life. It is one of 12 bibliographies on aging prepared by the National Agricultural Library for its "Pathfinders" series of publications. Topics covered by the other 11 bibliographies include aging parents, adult children, dementia and Alzheimer's disease in the elderly (written for educators), dementia and Alzheimer's disease in the elderly (written for consumers), family caregiving, family support networks, grandparenting, intergenerational relationships, living arrangements in later life, pets and the elderly, and sibling relationships in adulthood. This bibliography on humor in later life contains citations for 18 books and articles for researchers and educators and consumers. It concludes with a list of organizations that readers may contact for further assistance. (NB)
HUMOR IN LATER LIFE

MARCH 1990

PREPARED BY BILLIE H. FRAZIER, Ph.D., CFLE**

This PATHFINDER has been prepared to provide educators and consumers with an understanding of some special aspects of humor related to aging and later life.

EDUCATOR/CONSUMER

This article describes a study which extends the psychological investigation of humor to the elderly. Subjects between age 50 and 70 are tested on their appreciation and comprehension of 12 conservation and 12 nonconservation jokes. Results indicate that appreciation increases with age and comprehension decreases with age for both kinds of jokes. The older subjects tend to understand the jokes less well, but think they are funnier. The appreciation of a joke depends on a match between an individual's ability level and the cognitive demand of the joke.

In this article, contemporary attitudes toward the aged are inferred from an analysis of birthday greeting cards which are divided into six thematic categories. Overall, the attitudes appear to be negative, supporting previous studies that analyzed attitudes toward the aged found in joke anthologies. The question raised is whether this kind of humor is being used defensively to counteract age anxiety by exaggerating age-related deficits to create a psychological distance, or whether, in fact, it reflects a healthy adaptation to a difficult truth.

This PATHFINDER lists significant resources that are judged to be accurate, readable and available. Opinions expressed in the publication do not reflect views of the United States Department of Agriculture.

This study of attitudes toward aging, old age, and death reveals negative attitudes to specific subjects in general and toward women in particular. This article discusses concepts of humor and the need for intervention at the personal and organizational levels to eradicate negative stereotype of aging. It is essential to stress positive aspects of humor about aging and old age.

This paper examines humor therapy as a nursing modality for patients experiencing helplessness. The author believes that while humor is unconsciously used widely in nursing, it is important to focus attention to the conscious therapeutic use of humor. This will inject some levity into illness and hospitalization, which is often overwhelmingly serious with inescapable drama for both patients and staff.

One hundred jokes about the aged were compared with 160 jokes about children. Data indicate that jokes convey a negative attitude toward the elderly and the next generation. Old age is presented in an ambivalent manner. In contrast, jokes present a positive attitude toward children.

This book presents a comprehensive study of humor and aging. An underlying idea is that humor is important in facing life and coping with aging. The authors divide the book into the following sections: theory, perspectives, death and dying, and brief empirical studies of humor across the life span.
Persons suffering from Alzheimer's disease still have some capacity to appreciate and respond to humor. This article shows that humor can have positive behavioral conditioning effects as a by-product, and that an understanding of normal cognitive development across the life span is useful in selecting humor that will be effective with impaired clients. The author observed various uses of humor by the staff of an adult day care center and offers suggestions for caregivers based on these observations.

The author discusses the theoretical base of humor, humor and physiological effects, humor and psychological effects, humor in communication, and implications for caregivers. The author suggests that humor is beneficial to healing, and that professionals need to use its attributes in a therapeutic way. Caregivers and patients can benefit from a continuing exploration of definitions, theories, interventions, and the evaluation of humor as a therapeutic tool for healing in a humanistic way.

The authors provide three key points. Since institutionalized elders both exhibit and benefit from humor, healthcare professionals can facilitate humor experiences for the elderly. Annotated observations of humor initiated and experienced by the elderly provide structure for analyzing and facilitating humor interventions. Observations are categorized according to Raskin's humor themes: cognitive-perceptual, social-behavioral, and psychoanalytical. Using humor as a planned nursing intervention requires the nurse to develop a personal sense of humor as well as recognize the appropriate strategies for facilitating humor in others.

This correlational descriptive study examines the relationship between the uses of humor and health outcomes as measured by perceived health, life satisfaction, and morale in older adults. The findings reveal significant positive relationships between situational humor and perceived health, and situational humor and morale. Furthermore, there was a significant negative relationship between coping humor and perceived health. These findings suggest that humor may be one phenomenon which influences the older person's perception of perceived health, life satisfaction and morale. It may assist in successful aging. These preliminary findings support the need for further research with a larger sample.

This paper describes a research project which assesses humor and suggests strategies for adding humor to work, home, and interpersonal relationships. It addresses the value involved for clinicians and their clients.

This is a compilation of ideas and guidelines that was developed by volunteers in a demonstration project, "Life Enrichment Through Humor In Long Term Care Facilities". The booklet was developed for persons who work with older adults who can no longer maintain their independence. Despite limitations, promoting or rediscovering a sense of humor can generate a renewed enjoyment of the later years.

The main purpose of this practical book is to share bits and larger pieces of wit and wisdom of elders on what "old" means; on intelligence, health, doctors, nurses, families, friends, and neighbors; on where to live, how to work and retire; on sexuality, religion, dying, death—and mainly, life. The ideas, the humorous stories, practical suggestions, occasional verses, and gemlike bits will amuse and enlighten anyone of any age. To the younger generation, it will provide some boons, a few warnings, and some advice, tactful and not so tactful.

This study examines the relationship between responses to cartoons and attitudes toward aging among college-aged students. Four categories of cartoons on aging are identified: disparagement, ineffectuality, obsolescence, and isolation. No significant relationships are found between attitudes and humor appreciation.

This study explores the daily humorous interaction of the elderly and staff in adult day care. The comic aspects of humorous interaction, functions served, intent of participants, and significance to the participants are analyzed. Humor seems to enhance the personal and interpersonal interactions.

The author identifies nine forms of gerontological humor in literature from classical times to the present. Each form involves some type of incongruity: the foibles of age, expressions of what it means to grow old, relativity of age, physical and mental decline, social relationships, youth and age, black humor, and the shattering of old age stereotypes. The ability to laugh at foibles and limitations enables one to survive and prevail.

The article discusses humor in the older adult and methods for incorporating humor into nursing practice with older adults. It suggests that humor is an appropriate strategy to promote with older adults in both community and long-term settings and that nurses need to consider humor as a communication tool to reduce tension and break barriers. Humor and laughter are also valuable in physical health, specifically in relation to the prevention of heart disease and other stress-related conditions.

Authors analyze 195 age-related, humorous birthday card messages and find that aging is portrayed more negatively than positively. Substantive analyses reveal that most of the cards focus upon themes having to do with physical and mental characteristics, age concealment, age boundaries, and aging as a process sui generis.

This PATHFINDER resulted from the author's research at the National Agricultural Library while on sabbatical leave from the University of Maryland during the summer and fall of 1989. Using database searches of AGRICOLA, Psycinfo, Social SciSearch, ERIC, Family Resources, Dissertation Abstracts International, and Ageline, relevant references were reviewed and annotated. It is authored by:

** Billie H. Frazier, Ph.D., Certified Family Life Educator, Associate Professor, Human Development Specialist, The University of Maryland Cooperative Extension Service, College Park, Maryland

Reviewer: Edward F Ansello, Director, Virginia Center on Aging, Richmond, Virginia
