## ABSTRACT

This instructional guide, one of a series developed by the Technical Education Advancement Modules (TEAM) project, is a 20-hour introduction to industrial physics that explains and demonstrates to industrial maintenance mechanics the direct relationship of physics to machinery. Project TEAM is intended to upgrade basic technical competencies of unemployed, underemployed, and existing industrial employees. The materials in this module serve as a student outline and an instructor guide. The manual identifies 12 units: (1) pretest (not included); (2) measurement and trigonometry; (3) motion and forces in one direction; (4) concurrent forces, work and energy; (5) simple machines; (6) rotation motion; (7) rotational motion and ronconcurrent forces; (8) matter; (9) fluids; (10) temperature and heat; (11) gas laws; and (12) posttest (not included). Page references to the text used in teaching this course are given for each session. (NLA)

## Introduction:

The purpose of this manual is to serve as an instructional guide for the TEAM Grant module Introduction to Industrial Physics.

Introduction to Industrial Physics is a twenty hour overview course intended to explain and demonstrate to industrial maintenance mechanics the direct relationship of physics to machinery.

## Overview of Project TEAM:

Project TEAM (Technical Education Advancement Modules) is a program targeted toward the unemployed, underemployed, and existing industrial employees who are in need of upgrading basic technical competencies. The program seeks to give adequate preparatory educational opportunities in generic technical skill areas and to create a public awareness of the need for these basic skills. Curriculum content was determined by an assessment team of local industrial employers. Their evaluation resulted in the development of 15 instructional modules; some of which may be industry specific, but most of which are applicable in and necessary to a majority of industrial settings. The modules may be used collectively or as a separate curriculum for a specific course or courses. The material contained in each manual will serve as a student outline and as an instructor guide which may be used selectively or in its entirety.
