ABSTRACT
        The annotated bibliography, developed as a part of a
course in methodology for teaching English as a Second Language
(ESL), focuses on classroom techniques for developing reading
comprehension. References appear under the following five headings:
(1) background information on theory; (2) interaction; (3) current
research findings; (4) vocabulary skills; and (5) classroom
procedure. Many of the 66 items are included in more than one
category. The bibliography contains citations of books, collections
of articles and reports, and journal articles dated mostly since
1985. Each citation contains basic bibliographic information and a
brief annotation. (MSE)

## READING COMPREHENSION IN ESL:
## A SELECTED, ANNOTATED BIBLIOGRAPY

This bibliography draws on sources which can help the
ESL/EFL teacher with questions concerning reading
comprehension.  References appear under 5 headings:
1) background information on theory, 2) interaction,
3) current research findings, 4) vocabulary skills, and
5) classroom procedure.  Please note that many of the
references can be cross-indexed under several of the 5
headings.  The sources are drawn from books, collections
of articles and reports, and from journals with the
majority of material dating from 1985.

## BACKGROUND

Anderson, R. C. & Pearson, P. S. (1984). A schema-theoretic
   view of basic processes in reading comprehension. In
   P. D. Pearson (Ed.), Handbook of reading research
   (pp. 255-291). New York: Longman.

   Traces history of the notion of a schema and outlines
   basic elements of the theory, including an
   examination of the components of encoding (attention,
   instantiation, inference) and retrieval (retrieval
   plans, editing and summarizing, and reconstructive
   processes).

Bloome, D. & Grein, J. (1984). Directions in the
   sociolinguistic study of reading.  In P. D. Pearson
   (Ed.), Handbook of reading research (pp. 395-421). New
   York: Longman.

   Identifies the directions that researchers have taken
   in the study of the sociolinguistic nature of reading
   and explores (1) reading as a cognitive activity
   embedded in social and linguistic contexts and
   (2) reading as a social and linguistic process.

Meyer, B.J.F. & Rice, G.E. (1984). The structure of text.
In P.D. Pearson (Ed.), Handbook of reading research
(pp. 319-351). New York: Longman.

Defines the term "structure of text" from a
historical approach giving several points of view,
examines prominent text analysis procedures, and
evaluates past and future directions of text
structure. Meyer and Rice point out the value of
text structure analysis in determining comprehension.

Samuels, S.J. & Kamil, M.L. (1984). Models of the reading
process. In David Pearson (Ed.), Handbook of reading
research (pp. 185-224). New York: Longman.

Gives a brief history of reading models beginning in
1879 and ending in the 1980's, indicating researchers
and their contributions; gives a discussion of
problems with construction and characteristics of
reading models; presents in detail several recent
models.

Sticht, T.G. & James, H.J. (1984). Listening and reading.
In P.D. Pearson (Ed.), Handbook of reading research
(pp. 293-317). New York: Longman.

Discusses the three most prevalent theoretical
positions regarding listening and reading: code,
meaning, and psycholinguistics. The authors argue
for the interactive concept of listening and reading.
Empirical studies are reviewed to support the
interactive concept. The authors also discuss
"closing the gap" between auding and reading.

Venezky, R. L. (1984). The history of reading research. In
P.D. Pearson (Ed.), Handbook of reading research
(pp. 3-38). New York and London: Longman.

Gives account of early reading research including
areas of interest from nineteenth century to present
day research: eye movements, field of vision,
perceptual span, word recognition, comprehension,
memory organization, legibility, and oral to silent
reading. States some past as well as current
problems in research including reliability,
appropriateness of topic, lack of contact with
teacher and curriculum, failure to study enough
beginning readers as subjects, political and economic
factors.

Interaction

Carrell, P.L. (1987). A view of written text as
    communicative interaction: Implications for reading in a
    second language. In J. Devine, P.L. Carrell, and D.E.
    Eskey (Eds.), <u>Research in reading in English as a second</u>
    <u>language</u> (pp. 21-35). Washington, DC: TESOL.

        Argues the importance of using de Beauguarde and
        Dressler's seven standards of textuality, cohesion,
        coherence, intentionality, acceptability,
        informativity, situationality, and intertexuality in
        the study of reading in a second language.  The
        theory is based upon the need for the second language
        learner to interact with the text in order to
        comprehend successfully.

Carrell, P. L. (1988). Interactive text processing
    implications for ESL second language reading classrooms.
    In P. Carrell, J. Devine, & D. Eskey (Eds.), <u>Interactive</u>
    <u>approaches to second language reading</u> (pp. 239-259). New
    York: Cambridge University Press.

        Proposes some comprehension strategies designed to
        help L2 readers to become interactive readers (i.e.,
        using both top-down and bottom-up strategies in an
        overlapping fashion).  Carrell discusses use of
        grammatical and vocabulary skills in bottom-up
        processing and use of background knowledge via
        various recognized methods (such as LEA and SQ3R),
        text-mapping strategies, predicting, and use of
        anomalies and nonsense passages in top-down
        proessing.

Carrell, P.L. (1988). Introduction: Interactive approaches
    to second language reading. In P. Carrell, J. Devine, and
    D. Eskey (Eds.), <u>Interactive approaches to second</u>
    <u>language reading</u> (pp. 1-7). New York: Cambridge
    University Press.

        Discusses the importance of reading as a second
        language skill and briefly outlines the history of
        theories of reading in a second language including
        references to the major contributors in the field.
        Carrell argues for the  reading being an interaction
        of both top-down and bottom-up processes.

4

Carrell, P.L. (1988). Some causes of text-roundedness and schema interference in ESL reading. In P. Carrell, J. Devine, & D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 101-113). New York: Cambridge University Press.

> Explores the "bidirectionality" (Carrell's term) of text-based and knowledge-based processing of text in ESL reading comprehension. Carrell argues that over reliance on either bottom-up processing or top-down processing creates schema interference, thereby hindering the reader's comprehension. She discusses five possible causes of the lack of bidirectionality: 1) absence of relevant knowledge structures (schema) 2) failure to activate appropriate schemata 3) skill deficiencies 4) misconceptions about reading, specifically about reading in a second language and in response to typical classroom evaluation 5) individual differences in cognitive styles.

Carrell, P.L. & Eisterhold, J.C. (1988). Schema-theory and ESL reading pedagogy. In P. Carrell, J. Devine, and D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 73-92). New York: Cambridge University Press.

> Presents an overview of schema theory as based upon a psycholinguistic approach and explores the relationship of culture-specific background knowledge and EFL/ESL reading methodology. Classroom activities and procedures for a reader-centered program are given.

Clarke, M.A. (1988). The short circuit hypothesis of ESL performance. In P. Carrell, J. Devine, and D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 114-124). New York: Cambridge University Press.

> Uses the results of a research project conducted at University of Michigan to argue that language competence may have a greater role in second language reading than had previously been assumed. Instead, a balance of the two is needed plus an awareness of explanations for students' diverse reading problems. By using a system which focuses on both language and reading skills, more reading problems will be addressed.

Devine, J. (1988). The relationship between general language competence and second language reading proficiency: Implications for teaching. In P. Carrell, J. Devine, & D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 260-277). New York: Cambridge University Press.

> Reviews the relevant research on the relationship of general language competence and second language reading proficiency and draws implications for the classroom from that research. Devine supports an interactive approach which stresses the overlapping of bottom-up and top-down processing and therefore calls for holistic or integrative instruction.

Eskey, D. E. (1988). Holding in the bottom: An interactive approach to the language problems of second language readers. In P. Carrell, J. Devine, and D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 93-100). New York: Cambridge University Press.

> Argues that the new concept of interaction between top-down and bottom-up reading processes is necessary in understanding ESL reading problems. Because second language readers initially have difficulty in decoding rapidly, it is wrong to assume that by simply stressing background knowledge and "guessing" strategies, the readers' problems will be solved. Instead, an interactive model of reading should be employed.

Eskey, D. E. & Grabe, W. (1988). Interactive models for second language reading: Perspectives on instruction. In P. Carrell, J. Devine, & D. Eskey (Eds.), <u>Interactive approaches to second language reading</u> (pp. 223-238). New York: Cambridge University Press.

> Discusses 1) ways both "bottom-up" and "top-down" reading strategies can be viewed as interative, 2) possible weaknesses of earlier reading models, 3) implications for teachers of second language reading. Specific applications of top-down and bottom-up reading skills are also discussed.

Grabe, W. (1988). Reassessing the term "interactive". In P. Carrell, J. Devine, and D. Eskey (Eds.), <u>Interactive</u> <u>approaches to second language reading</u> (pp. 56-90). New York: Cambridge University Press.

    Clarifies relationships among the uses of the term "interactive" as it occurs in ESL reading research, first language research, and research on written texts as well as the concepts "interactive process" and "interactive model" as they appear in reading research and finally the notion of "textual interaction" as being used by Biber and Grabe. Grabe also addresses problems of ESL readers in conjunction with the various interaction concepts.

Hershfield, A. (1984). Hey, look at me! I can read! <u>TESL</u> <u>Talk</u>, <u>15</u>(3), 47-55.

    Presents reading as a search for meaning and as a cognitive operation. It presents methods to help students develop skills of problem solving. Discusses the social aspect involved in learning to read.

# RESEARCH

Carrell, P. L. (1985). Facilitating ESL reading by teaching text structure. TESOL Quarterly, 19(4), 727-749.

> Reports the results of research which indicate that training on the top-level rhetorical organization on expository texts significantly increased the amount of information that ESL students could recall. Prior to this study some investigators had begun to suggest a variety of techniques for teaching various aspects of text structure, but there were no research findings whether explicitly teaching text structure facilitated ESL reading comprehension. The article first reviews previous research done to answer this question when English is a native language. The training for the ESL students showed positive results in recall of detail and quantity of information, as well as a positive reaction by the students.

Carrell, P. L. (1987) Content and formal schemata in ESL reading. TESOL Quarterly, 21(3), 461-479.

> Presents the results of a first-time study conducted to determine the effects on ESL reading comprehension of both culture-specific content and formal schemata. It was determined that each plays a significant, but different, role in the comprehension of text. Although more research is needed, the article makes ESL teachers aware of the important role of background knowledge of text content, and that they must often be facilitators of appropriate, relevant information. Since rhetorical form was more important in the comprehension of top-level episodic structure in event sequences and temporal relationships among events, teachers should help students recognize and use this skill to facilitate comprehension and recall.

Connor, U. (1987). The eclectic synergy of methods of reading research. In J. Devine, P. L. Carrell, D.E. Eshey (Eds.), Research in reading in English as a second language (pp. 9-20). Washington, DC: TESOL

> Discusses currently used methods of reading research, experimental and descriptive: miscue analysis, the think-aloud method, the Fillmore interview method, computerized on-line method, longitudinal care study, ethnographic research, and metacognitive studies.

Connor draws comparisons, evaluates the methods, and says that benefits will occur due to the wide choice of research available.

Cooper, M. (1984). Linguistic competence of practised and unpractised non-native readers of English. In J. C. Alderson & A. H. Urquhart (Eds.), <u>Reading in a foreign language</u> (pp. 122-135). New York: Longman.

Reviews a study of Malay students, half "practised" readers and half "unpractised" readers of English, that assesses attitudes and linguistic competence, draws general conclusions, and suggests implications for a reading program. Cooper's findings dictate that a reading program should give massive assistance in building lexical competence, but that great stress must be placed on training students to take advantage of the larger text so that students are drawn away from word-by-word analysis and encouraged to use their inference and prediction powers.

Devine, J. (1987). General language competence and adult second language reading. In J. Devine, P.L. Carrell, & D. E. Eskey (Eds.), <u>Research in reading in English as a second language</u> (pp. 73-86). Washington, DC: TESOL.

Reports results from an on-going study of ESL students that explores the relationship between language proficiency and reading strategies. Proficient language students are good readers who employ the interaction of various processes, not just top-down ones. Other findings suggest that teaching of second language reading should use the holistic approach of real-world language which avoids excessive, isolated emphasis on vocabulary and grammar drill.

Guebert, L. (1984). Learning to read in a second language. <u>TESL TALK</u>, <u>15</u> (1&2), 52-59.

Compares students involved in ESL's more successful immersion program to those involved in the minority language program (minority students in regular school programs). It suggests four main factors the school should keep in mind to effect a change and promote success: mother tongue maintenance, prior experiences with literacy, relevance of reading materials, and levels of proficiency demanded by the school.

James, M.O. (1987). ESL reading psychology: Implications of schema-theoretical research. In J. Devine, P.L. Carrell, & D.E. Eskey (Eds.), Research in reading in English as a second language (pp. 175-188). Washington, DC: TESOL.

   Reviews briefly schema-theory and draws distinctions among linguistic, content, and formal schema. James suggests classroom implications in terms of reading material, prereading activities, and postreading activities. A general theme is the admonishment to teachers to find the level of their students and supply material accordingly despite previously or currently popular theories.

Koda, R. (1987). Cognitive strategy transfer in second language reading. In J. Devine, P.L. Carrell, & D.E. Eskey (Eds.), Research in reading in English as a second language (pp. 127-144). Washington, DC: TESOL.

   Investigates in an empirical study the transfer of Japanese ESL students' reading strategies from their first language to their second language. Koda argues that Japanese students differ significantly from English-speaking students and provides evidence that the students transfer a reading strategy from their Japanese reading experience which English readers do not use: phonological recoding. Japanese ESL students do not obtain lexical sounds through phonetic analyzing as extensively as native speakers.

Parry, K.J. (1987). Reading in a second culture. In J. Devine, P.L. Carrell, & D.E. Eskey (Eds.), Research in reading in English as a second language (pp. 1-70). Washington, DC: TESOL.

   Focuses on the cultural dimensions of second language reading. Reports findings of enthnographic research done with Nigerian students. Major differences occur between literate cultures and oral cultures. Comprehension problems result from difficulties with complex interactions of lexical, syntactic, rhetorical, and schematic factors.

Perkins, K. (1987). The relationship between nonverbal schematic concept formation and story comprehension. In J. Devine, P.L. Carrell, & D.E. Eskey (Eds.), Research in reading in English as a second language (pp. 153-171). Washington, DC: TESOL.

Reports an empirical study that focuses on the
relationship between English as ESL readers'
performance on a schematic concept formation task and
their performance on a reading task. The results
suggest that an ESL student who exhibits proficiency
in a nonverbal task also has proficiency in
internalizing the construction of a simple story;
i.e., in forming hypotheses about the schema
families, finding common features, and evaluating the
fit of hypotheses against the different
characteristics of the text.

Royer, J.M. & Konold, C. E. (1984). Learning from text:
     Methods of affecting reader intent. In J. C. Alderson &
     A. H. Urquhart (Eds.), Reading in a foreign language
     (pp. 65-85). New York: Longman.

Reviews three techniques for controlling a reader's
intent while reading text: 1) "presenting readers
with learning objectives that specify what is to be
acquired from the text, 2) inserting questions into
the text, and 3) asking readers questions that
specify more than the recall of specific information
(i.e., higher order questions)" (p. 66). The
underlying premise is that reader's comprehension can
be improved if the reader's intent is directed.
Numerous empirical studies are reviewed, giving
positive support to the authors' premise; however,
it must be noted that the studies all take place in
artificial settings, not real world settings.

Sarig, G. (1986). High-level reading in the first and in the
     foreign language: Some comparative process data. In J.
     Devine, P.L. Carrell, & D.E. Eskey (Eds.), Research in
     reading in English as a second language (pp. 105-120).
     Washington, DC: TESOL.

Reports an empirical study using think-aloud
protocols to investigate the similarities between
first and second language reading, showing the
processes to be highly individualized but with a high
degree of overlap in use of high-order reading
strategies, which further indicates that reading
instruction in L1 carries over into L2.

Steffensen, M. S. (1987). The effect of context and culture on children's L2 reading: A review. In J. Devine, P. L. Carrel, & D. E. Eskey (Eds.), Research in reading in English as a second language (pp. 41-54). Washington, DC: TESOL.

Presents the current state of the art research on the role of cultural background knowledge and its effects on children's reading. It advocates the use of Fillmore's (1981) interview method in assessing the effects of cultural background knowledge on children's L2 reading.

Steffensen, M.S. & Chitra, J. D. (1984). Cultural knowledge and reading. In J.C. Alderson & A.H. Urquhart (Eds.), Reading in a foreign language (pp. 48-64). New York: Longman.

Provides evidence from an empirical study that cultural knowledge plays a part in comprehension. Texts are never totally explicit and require the reader's contribution of his/her schema. Meanings are distorted according to the reader s previous world knowledge. Teachers, knowing the student's limitations, can produce appropriate interpretation by comparing the events cross culturally and can avoid texts with heavy cultural loadings.

Taglieber, L.K., Johnson, L.L., & Yarbrough, D.B. (1988). Effects of prereading activities on EFL reading by Brazilian college students. TESOL Quarterly, 22(3), 455-472.

Reports the results of an empirical study on the use of three prereading activities for EFL students: pictorial context, vocabulary preteaching, and prequestioning. The activities produced an increase in motivation as well as comprehension. Of the three activities, vocabulary study was least effective.

# VOCABULARY

Al-Kufaishi, A. (1988). A vocabulary building program is a
necessity not a luxury. English Teaching Forum, 26(2),
42-43.

> Recommends the teaching of vocabulary through study
> of component units (root and affix meaning) and
> exposure to many different contexts with an emphasis
> placed on words used most frequently.

Celce-Murcia, M. & Rosensweig, F. (1979). Teaching
vocabulary in the ESL classroom. In M. Celce-Murcia & L.
McIntosh (Eds.), Teaching English as a second or foreign
language (pp.241-257). Rowley, Massachusettes: Newbury
House Publisher.

> Presents background information on the subordinate
> role of vocabulary instrucion and criteria for
> elevating it to a more prominent position. It gives
> factors and research information to consider in
> teaching both active and passive vocabulary,
> appropriate techniques available, and the need for
> the teacher to arouse the students' interest so that
> their vocabulary growth will not be limited to just
> the classroom.

Crow, J. T. & Quigley, J. R. (1985). A semantic field
approach to passive vocabulary acquisition for reading
comprehension. TESOL Quarterly, 19(3), 497-513.

> Suggests that a semantic field approach to passive
> vocabulary acquisition is a more effective and
> efficient vocabulary builder than the traditional
> approaches which are not based on meaning. This
> study used a keyword and an association of 5 related
> words verifying previous research that long-term
> retention of information is aided by organizing that
> information into some type of cognitive categories.

Fox, L. (1987). On acquiring an adequate second language
vocabulary. In M. H. Long & J. C. Richards (Eds.),
Methodology in TESOL (pp. 307-311). New York: Newbury
House Publishers.

> Stresses the importance of 1) learning a relat vely
> small number of words correctly, 2) reading at least
> seven books a semester, and 3) combining reading and

writing activities in place of isolated grammar
drill.

Haskell, J. F. (1978). Teaching beginning reading in ESL
bilingual and adult literacy classes through language
experience. In J. H. Haskell (Ed.), Selected articles
from the TESOL newsletter 1966-1983 (pp. 190-191).
Washington, DC: TESOL.

Describes and gives rationale for use of the Language
Experience Approach (LEA) for beginning reading for
either children or adults.  LEA uses the experiences
and existing vocabulary of students to construct
their own reading materials.  The underlying
rationale is  1) what a student can/does think about,
he can talk about  2) what a student says can be
written (or dictated to the teacher)  3) what has
been written can then be read.

Honeyfield, J. G. (1987). Word frequency and the importance
of context in vocabulary learning. In M. H. Long & J. C.
Richards (Eds.), Methodology in TESOL (pp. 318-324). New
York: Newbury House Publishers.

Emphasizes the value of contextual exercises for
vocabulary learning.  Examples of cloze,
words-in-content, and context enrichment exercises
are given.

Konopak, Bonnie. (1988). Eighth graders' vocabulary learning
from inconsiderate and considerate text. Reading Research
and Instruction, 27(4), 1-14.

Investigates the comprehension of students using
inconsiderate and considerate text passages.  In
terms of comprehension, four text factors were
identified: structure, coherence, unity, and
elaboration.  Results suggest the students may not
realize that they frequently acquire partial or
erroneous knowledge for word meaning in inconsiderate
text and yet are satisfied with the information they
acquire.  Amount of helpfulnes; of contextual
information is to be judged by proximity, clarity,
explicitness, and completeness.

Krashen, S. D. (1981). The call for narrow r ading. In J. F.
Haskell (Ed.), Selected articles from th  TESOL

14

Newsletter 1966-1983 (pp. 189-190). Washington, DC:
TESOL.

Argues that "narrow reading and perhaps narrow input
in general is more efficient for second language
acquisition." Krashen says narrow reading provides
acquisition of both structure and vocabulary because
there are many exposures in a comprehensible text.
These texts provide built-in review coming from
reading in one area at a time, an area in which there
is already a degree of comprehension.

Kruse, A. F. (1979). Vocabulary in context. In M. H. Long &
    J. C. Richards (Eds.), Methodology in TESOL
    (pp. 312-317). New York: Newbury House Publishers.

Argues the merits of vocabulary learned in context.
Lists of contextual aids appropriate for TESOL are
given. A detailed program for developing skills
that focuses on word building and types of guessing
is outlined.

Marquez, I. (1980). The meaning of "blurp": Teaching
    dictionary use. In J. H. Haskell (Ed.), Selected articles
    from the TESOL newsletter 1966-1983 (pp. 198).
    Washington, DC: TESOL.

Gives specific ways to use dictionary work in the ESL
classroom. The use of nonsense words can effectively
show the multiple uses of a single word while
introducing humor.

Martin, A.V. (1982). Concept Relationships: Helping the
    beginning student read English. In M. Hines & W.
    Rutherford (Eds.), On TESOL '81 (pp. 97-104). Washington,
    DC: TESOL.

Describes reading problems, presents techniques
developed to address the problems, and offers a
cognitive explanation of them. Students frequently
know vocabulary items but cannot make associations
between basic concepts. Concept-relationship
experiences in categorization, analogy, and
definition are stressed so that students develop
cognitive networks to relate bits of information
according to categories and interrelationships.

Olshtain, E. (1982). English nominal compounds and the ESL/EFL Reader. In M. Hines & W. Rutherford (Eds.), On TESOL '81 (pp. 153-167). Washington, DC: TESOL.

> Focuses on strategies the ESOL reader uses to process the interpretation of nonlexicalized compounds. Discusses 6 hypothesis and their strategies for reading expository material and the use the ESOL reader makes with one or more of three types of competence (linguistic, textual, pragmatic). Helpful guidelines are given for a number of effective strategies for noun-compound interpretations.

Ramsey, J. W. (1981). Vocabulary preparation for reading in the content area. In J.C. Fisher, M. A. Clarke, & J. Schachter (Eds.), On TESOL '80 (pp. 214-225). Washington, DC: TESOL.

> Presents a procedure for selecting and presenting vocabulary in a content area to facilitate reading, to allow the use of authentic materials, and to increase comprehension. Specific vocabulary of content area is combined with the general vocabulary preparation which uses the SRA Reading Laboratory and standard reading texts.

Richards, J. C. (1985). The context of language teaching. New York: Cambridge University Press.

> Proposes 8 assumptions in his chapter "Lexical knowledge and the teaching of vocabulary" concerning word knowledge and their implications for vocabulary teaching. The syllabus should be based on what it means to know a word, and the techniques of teaching vocabulary should be a reflecton of this knowledge.

White, C. J. (1988). The role of associational patterns and semantic networks in vocabulary development. English Teaching Forum, 26(4), 9-11.

> Argues that although beginning learners operate with lexical associations that are quite different from those of native speakers, semantic organization develops over time. Therefore, classroom activities are suggested which encourage semantic networks so that the learner can have the same degree of meaningfulness from words that native speakers have.

PROCEDURE

Adamson, D. (1977). Prediction and explanation. In J. H.
    Haskell (Ed.), Selected articles from the TESOL
    newsletter 1966-1983 (pp. 194-195). Washington, DC:
    TESOL.

    Demonstrates the use of questions based on prediction
    and explanation that check reading comprehension for
    EST (English for Science and Technology) by inserting
    questions at mid-points to be used during the reading
    instead of the traditional placement, at the end of
    the reading.  Adamson suggests that this method
    teaches correct use of reading strategies.

Bransford, J. D., Stein, B. S., & Shelton, T. (1984).
    Learning from the perspective of the comprehender. In
    J. C. Alderson & A. H. Urquhart (Eds.), Reading in a
    foreign language (pp. 28-47). New York: Longman.

    Explores some of the cognitive activities that people
    must engage in to comprehend and remember
    information.  The authors illustrate how language
    comprehension depends on the activation of relevant
    knowledge such as general knowledge surrounding a
    situation.  Students need ways of asking themselves
    and others appropriate questions which aid
    comprehension, clarify concepts, and develop
    evaluation techniques.

Bryden, M. (1988). Reading but not curiously--possible
    countermeasures. English Teaching Forum, 26(3), 48-50.

    Gives advantages for using newspapers:  1) current,
    relevant, topical conversational material for the
    student  2) provides either a simple lesson or an
    advanced one  3) has great adaptability.  Bryden
    outlines in step-by-step detail a lesson plan using
    daily newspapers.

Casanabe, C. P. (1988). Comprehension monitoring in ESL reading: A neglected essential. TESOL Quarterly, 22(2), 283-302.

Presents the concept of comprehension monitoring (any behaviors that allow readers to judge whether comprehension is taking place and actions to help the reader compensate if necessary). Students can be helped to monitor themselves through summarizing, predicting, and questioning.

Christison, M. A. (1982). Using poetry in ESL. In J. H. Haskell (Ed.), Selected articles from the TESOL newsletter 1966-1983 (pp. 198-199). Washington, DC: TESOL.

Outlines some criteria for selecting poetry for ESL readers and offers suggestions for developing activities for the classroom.

Dubin, F., Eskey, D. E., & Grabe, W. (1986). Teaching second language reading for academic purposes. Reading, Massachusetts: Addison-Wesley Publishing Company.

Presents theory, research, and techniques of reading, and their implications for the second language reader. The book's 8 authors each develop one of these areas as well as assessment, CARI, and text evaluation. Although each section is complete in itself, there is a unifying theme: the need of awareness of special problems of ESL readers and the crucial role the teacher plays in aiding reader comprehension.

Duppenthaler, P. (1987). Search-a-word puzzles as language teaching tools. TESL Reporter, 20(2), 30-40.

Gives advantages and suggestions for use of a puzzle which can be used for the simplist activity (spelling, word recognition) or for more complex activity (advanced vocabulary work). Students can make them themselves, for all that is needed are paper, pen, and imagination.

Grellet, F. (1981). Developing reading skills. New York: Cambridge University Press.

Views reading as a constant process of guessing, predicting, checking--taking comprehension from what is known to what is unknown. Presents reading as a variety of skills including understanding, interpreting, identifying, distinguishing and clarifying. The author lists various techniques aiding comprehension, such as inference, understanding relations within sentences, and linking sentences and ideas.

Haskell J. L. (1979). Using cloze to select reading material. In J. H. Haskell (Ed.), Selected articles from the TESOL newsletter 1966-1983 (pp. 196-197). Washington, DC: TESOL.

Describes explicitly the procedures for making, using, and evaluating cloze tests for the purpose of selecting suitable levels of reading material.

Jacobs, G. (1988). Ideas for using cloze to teach reading. English Teaching Forum, 26(2), 46-48.

Explains and gives examples of ways in which teachers can develop and use cloze passages to teach reading skills. Fixed deletion and rational deletion are discussed with examples included.

Kalnitz, J., & Rudd, K. R. (1982). An approach to teaching ESL reading to literate adults. In J. H. Haskell (Ed.), Selected articles from the TESOL newsletter 1966-1983 (pp. 201-203). Washington, DC: TESOL.

Describes approaches to improve ESL reading stragegies in both bottom-up and top-down processing. Language skills activites include exercises that teach grammatical markers, syntactic clues, morphological analysis, and context through substitution and deletions. Text-related skills concentrate on recognition of rhetorical devices used for generalizations and examples in expository prose and practice in skimming and scanning with prereading activities that focus on cultural specific concepts.

Knapp, D. (1978). The utility of oral reading in teaching ESL. In J. H. Haskell (Ed.), Selected articles from the TESOL newsletter 1966-1983 (p. 192). Washington, DC: TESOL

Discusses the use of oral reading in ESL. Although there are times for use of oral reading (diagnostic purposes), it is a bad teaching practice when used for students to read aloud for the class. Instead, silent reading skills (skimming, reading for information, reading that requires the ability to take chunks rather than individual words) must be taught.

Larson, D. (1979). Reading up to expectations. In J. H. Haskell (Ed.), Selected articles from the TESOL newsletter 1966-1983 (pp. 195-196). Washington, DC: TESOL.

States the positive points for various uses of the cloze format. By using this approach students are pushed into guessing and using context clues. Both vocabulary and functional words can be deleted. Also suggestions for pair and group work are given as well as use of relevant topics, natural language, and listening activites.

Meyer, R. M., & Letrault, E. S. (1988). Getting started: Reading techniques that work from the very first day. Foreign Language Annals, 21(5), 423-431.

Argues that first day reading techniques should use real discourse in the target language regardless of the obstacles, e.g., non-Roman orthographics, no cognates with English, no readily discernible relationship with English. Opening day activities are given for languages that reflect the above examples.

Rauf, S. M. A. (1988). Culture and reading comprehension. English Teaching Forum, 26(2), 44-46.

States the problems between culture and reading comprehension and offers specific suggestions for the role of the teacher in overcoming the problems as well as suggesting specific classrooom activities.

Rivers, W. M. & Temperley, M. S. (1978). A practical guide
   to the teaching of English as a second or foreign
   language. New York: Oxford University Press.

   Chapters 6 & 7 take students through 6 stages of
   reading development as an integrated part of language
   study, not a specialized field; wants readers to use
   the techniques as vehicles and models, not as an end.
   Reading activities should be directed toward normal
   uses enabling the students to extract meaning from
   something of interest to themselves.  The teacher
   selects suitable passages which encourage the
   students' interest and aid their progress through the
   various stages until autonomy and independence are
   reached.

Williamson, J. (1988). Improving reading comprehension: Some
   current strategies. English Teaching Forum, 26(1), 7-8.

   Discusses several current reading comprehension
   strategies:  1) reader-generated question (e.g., use
   the first sentence of the text to elicit student
   questions),  2) write-before-you-read (students write
   on own experience on the topic before reading the
   selection)  3) Krashen's Sustained Silent Reading.

Winer, L. (1986). Beware the reading block, my son. TESL
   TALK, 16(1), 42-56.

   Describes a technique for teaching students to
   understand English passages through structural and
   contextual clues.  Lewis Carroll's poem "Jabberwocky"
   is used to unblock and improve students' previous
   reading strategies.  The method startles students
   into new ways of seeing textual analysis.  Detailed
   steps and examples are given.
