AIDS and Adolescents

A Resource Listing for Parents and Professionals

Professionals working in the health and education fields face what is, perhaps, our most profound challenge -- to inform, educate and counsel in sane, humane and effective ways about Acquired Immune Deficiency Syndrome...AIDS. Parents, too, are concerned about protecting their young people from infection by this virus, and at the same time do not wish to unduly frighten them. This booklet is a tool for any professional or parent concerned with bringing accurate, timely information about AIDS to young people. It also is designed for use by adolescents.

Young people are vulnerable to HIV infection because they engage in risky behaviors -- experimenting in sexual activities and using drugs -- often with the belief that "this one time can't hurt." In some communities this problem is more severe than in others, but as an American College Health Association survey of 19 college campuses around the country shows, one in 500 college students is currently infected, based on blood tests of the sample studied. The latency period between the time of infection and onset of symptoms can be as long as seven to 10 years. Therefore many people in their 20s who currently display AIDS symptoms were likely infected in their teens. Adolescents, parents and helping professionals must make clear what the risks are, what can be done to reduce the risks, and what resources are available to enable young people, in a sex-positive context, to protect themselves from exposure.

This booklet is meant to be a road map. It is by no means exhaustive. In fact, it is difficult to keep up with the avalanche of materials and new ideas. AIDS-oriented organizations are springing up daily - those already in action may disappear overnight, and those that remain continually generate new items. We encourage you to send us literature and information on organizations that you represent or know about, and we will include that in our collection of resources for future updates. Your efforts will help us stay informed and better serve your needs.

Some of the safer sex publications listed in this booklet are effective because they are direct, explicit and erotic. They may not be appropriate for the young people you work with, but the ideas and approaches may be adaptable to their needs. We recommend that you review all materials carefully before using them for your specific audiences.

Finally, please note that inclusion in this booklet does not constitute an endorsement by Planned Parenthood of the materials or organizations listed.

AIDS PROJECT

Illinois Alcoholism and Drug Dependence Association, 859 West Wellington, Chicago, IL 60657. Contact: Bella H. Selan, MS., Director AIDS Project, (312) 472-0731.

#1) Addicts Helping Addicts Prevent AIDS (AHAPA) trains recovering addicts in treatment to educate their friends, other persons in the community and church groups about AIDS. Each group of recovering addicts has six members. There are six treatment program locations involved and the treatment is residential. At the end of six weeks (2 hours of lectures and workshops daily) they get a graduation certificate. They also get paid a very modest sum. This program is in its first year.

#2) HIVIES (HIV Information Exchange and Support groups) for persons who are HIV antibody positive and have a history of substance abuse. The first group formed meets weekly for 2 hours and other groups are in the process of formation. The groups can choose to operate on a 12-step model adapted for HIV or they can have facilitators lead a support group.

#3) IADDA regularly conducts training using the National Institute of Drug Abuse curriculum on AIDS. These 2 1/2 day workshops are aimed at substance abuse professionals. In addition we have trained 31 persons to be trainers (Training of the Trainers) in Illinois.

#4) Gives lectures, conducts workshops, and participates in panels on an ongoing basis.

#5) IADDA also has teenage and elementary school programs. Both populations are involved in AIDS workshops age-appropriately geared to their level of understanding. A play, written by an adolescent, is performed to lead off a discussion. Funding Source: AHAPA: U.S. Conference of Mayors.
