## ABSTRACT

Sixth in Piedmont Virginia Community College's (PVCC's) annual series, this student retention study was conducted to provide collegewide retention rates aggregated by a variety of institutional and student characteristics, and to ascertain major differences between returning and non-returning students. Official end-of-term data for the 1990-91 school year were examined to yield multiple retention measures. Major findings included the following: (1) over one-half of all students enrolled at PVCC during fall 1990 returned and completed spring term 1991; (2) over 80% of all full-time students returned to PVCC, as did over 45% of all part-time students; (3) overall, retention figures for 1990-91 were quite similar to figures for 1989-90 and 1988-89; (4) the retention rate for full-time female students was higher than that for full-time male students (87.8% versus 78%); (5) while in 1988-89 the retention rate for full-time black students had been 22.3% lower than that for full-time white students, in 1990-91, the retention rate for full-time black students (85.3%) surpassed that for full-time white students (82.8%) by 2.5%; (6) the retention rate for returning students was 85.5%, while the rate for new students was 79.2%; (7) retention rates for programs leading toward the Associate of Arts or Associate of Science degree were slightly lower than those for programs leading toward the Associate of Applied Science degree in 1990-91; and (8) demographically, returning and non-returning students were similar, with the exception that approximately two-thirds of the full-time, non-returning students were male. Data tables are provided. (JMC)

# PVCC Institutional Research Brief

November 1991

## STUDENT RETENTION AT PIEDMONT VIRGINIA COMMUNITY COLLEGE 1990-91

This brief highlights major findings of *Student Retention at Piedmont Virginia Community College: 1990-91* by Ronald B. Head (PVCC Institutional Research Report No. 7-91, November 1991). This study is conducted annually to provide retention rates according to a variety of institutional and student characteristics and to determine whether major differences exist between returning and non-returning students according to these characteristics.

The term *retention rate*, as used in this report, refers to the percentage of students during one term who re-enroll during the subsequent term. In other words, the 1990-91 full-time student retention rate is the percentage of full-time students enrolled during Fall Semester 1990 who returned to PVCC and completed Spring Semester 1991.

Table 1 presents 1990-91 retention rates for all students, full-time equivalent students (FTES), full-time students, part-time students, curricular students, freshmen, and sophomores.

Retention rates for 1990-91 were similar to retention rates for 1989-90 and 1988-90 and to fall-to-winter retention rates from earlier years. Slightly over one-half of all students enrolled during one term re-enroll at PVCC and complete the subsequent term. Over 80% of all full-time students enrolled during one term re-enroll at PVCC and complete the subsequent term. Approximately two of every three curricular students return from one term to the next. The retention rate for freshmen and sophomores is nearly 70%. Part-time students who return to the college from one term to the next are usually enrolled in programs leading toward degrees and study on the college's main

(Continued on reverse side)

campus. Part-time, non-returning students, on the other hand, are usually non-curricular and study off-campus during the evening.

One finding in the study is worth particular mention. In 1988-89, the retention rate for full-time black students was 22.3% lower than that for full-time white students. The rate was also 8.4% lower than the fall-to-winter rate for full-time black students in 1987-88. However, in 1989-90 the retention rate for full-time black students was only 4.9% lower than that for full-time white students. In 1990-91, the rate was 2.5% *higher* than the rate for whites. Clearly, the initiatives implemented by the college in 1989-90 with respect to minority recruitment and retention have been successful.

# **STUDENT RETENTION AT PIEDMONT VIRGINIA COMMUNITY COLLEGE 1990-91**

## **INTRODUCTION**

This is the sixth in a series of reports examining retention statistics at Piedmont Virginia Community College (PVCC) during the previous academic year.<sup>1</sup> Retention rates according to a variety of institutional and student characteristics are presented, and an effort is made to determine whether major differences exist between returning and non-returning students.

The term *retention rate*, as used in this report, refers to the percentage of students during one term who re-enroll during the subsequent term. In other words, the 1990-91 full-time student retention rate is the percentage of full-time students enrolled during Fall Semester 1990 who returned to PVCC and completed Spring Semester 1991.

Multiple retention measures are used because the retention rate for all students at a community college is misleading. At PVCC, over 80% of all students typically

---

<sup>1</sup>See Ronald B. Head, *Quarterly Student Retention at Piedmont Virginia Community College: 1985-86* (PVCC Institutional Research Report No. 4-86, November 1986); Ronald B. Head, *Quarterly Student Retention at Piedmont Virginia Community College: 1986-1987* (PVCC Institutional Research Report No. 8-87, November 1987); Ronald B. Head, *Quarterly Student Retention at Piedmont Virginia Community College: 1987-1988* (PVCC Institutional Research Report No. 10-88, November 1988); Ronald B. Head, *Student Retention at Piedmont Virginia Community College: 1988-1989* (PVCC Institutional Research Report No. 8-89, November 1989); and Ronald B. Head, *Student Retention at Piedmont Virginia Community College: 1989-1990* (PVCC Institutional Research Report No. 7-90, November 1990).

study part-time, and approximately 50% enroll as non-curricular students. Many of these students do not intend to re-enroll at the college during the subsequent term.

Although multiple retention measures are reported, the emphasis in this study is upon full-time students. Full-time students are usually enrolled in degree programs and can be expected to re-enroll at the college each term until they graduate.

It should be noted that during 1988-89 the Virginia Community College System (VCCS) converted from a quarterly academic calendar to a semester calendar. In the quarter system, there were four terms per year (Summer Quarter, Fall Quarter, Winter Quarter, and Spring Quarter); now there are three terms (Summer Semester, Fall Semester, and Spring Semester). Under the quarter calendar, retention figures were collected twice, once between Fall Quarter and Winter Quarter, and once between Winter Quarter and Spring Quarter. Under the semester calendar, retention figures are collected only once, between fall and spring semesters, and these are the annual, as well as semester, retention figures.

## METHODOLOGY

Data in this report were collected by means of a Fortran program which used data from the STUDAGE file located on end-of-term AKT tapes. The source code for this program, as well as sample output, was included in the retention study for 1988-89.<sup>2</sup>

---

<sup>2</sup>Op.Cit., pp. 19-37.

The advantage of using official end-of-term data is that retention statistics can then be compared to other end-of-term data. The total number of returning and non-returning students by category, as reported here, is the same number as reported in the VCCS Student Enrollment Booklets and used in other PVCC institutional research reports.

As noted in previous studies, two limitations of both the program and the study should be noted. First, no effort has been made to link retention data to student objectives. Quite simply, data relating to student objectives were not conveniently available. Secondly, retention within a semester has not been measured. Students enrolling at the beginning of a semester but withdrawing before the end of the semester are not counted as enrolled students during that term. Similarly, students completing, say, the Fall Semester, re-enrolling during the Spring Semester, and then withdrawing midway through the Spring Semester are counted as non-returning students.

## RETENTION RATES

Retention rates for the 1990-91 academic year are presented in Table 1. Included in this table are the retention rates for all students (headcount), full-time equivalent students (FTES), full-time students, curricular students, freshmen, and sophomores.

Over one-half of all students enrolled at PVCC during Fall Semester 1990 returned and completed Spring Semester 1991. Approximately two of every three FTES (full-time equivalent students) re-

turned, as did curricular students, freshmen, and sophomores.<sup>3</sup> Over 80% of all full-time students returned to PVCC, as did over 45% of all part-time students.

**TABLE 1: PVCC RETENTION RATES (1990-91)**

	Fall to Spring		
	No. Re- turning	No. Not Returning	Retention (Pct.)
Headcount	2313	2024	53.3%
FTES	1251	576	68.5%
Full-Time Students	732	149	83.1%
Part-Time Students	1581	1875	45.7%
Curricular Students	1501	676	68.9%
Freshmen	1080	493	68.7%
Sophomores	421	183	69.7%

SOURCE: VCCS end-of-term AKT tapes. The retention rate refers to the percentage of students returning from one term to the next (returning students divided by both returning and non-returning students).

<sup>3</sup>One FTES is equivalent to 15 student credit hours. In this respect, the FTES retention rate is calculated as follows: (1) the number of credit hours for both returning and non-returning students are totalled; (2) The FTES figures for both returning and non-returning students are calculated (the credit hour figures are divided by 15); and (3) the retention rate is the percentage of returning FTES.

A full-time student is any student carrying a student load of 12 or more credit hours during any single term. A curricular student is any student actually enrolled in an educational program leading toward a degree, certificate, or diploma.

Retention figures for 1990-91 were quite similar to figures for 1989-90 and 1988-89, as well as to figures from earlier years between Fall Quarter and Winter Quarter. As can be seen in Table 2, figures for 1984-85 through 1990-91 were quite consistent.

SOURCE: VCCS end-of-term AKT tapes. The retention rate refers to the percentage of students returning from one term to the next (returning students divided by both returning and non-returning students).

The retention rate for women was higher than that for men. With respect to race, the retention rate for full-time black students was higher than that for full-time white students. Not only is this a reversal of the findings in last year's study, but the retention rate for full-time black students was much higher in 1990-91 than it was in 1989-90 or in 1988-89. This is one indication that the college's minority recruitment and retention efforts, first initiated in 1989-90, are having a positive effect. The mean and median ages of returning and non-returning students were the same, and retention rates were approximately the same across different age brackets. There seems to be little, if any, relationship between distance from PVCC and retention. The retention rates within the PVCC service

region ranged from 81.3% in Greene County to 96.0% in Buckingham County. The average retention rate for the service region as a whole was 83.8%.

Table 4 presents 1990-91 retention rates of PVCC full-time students by selected enrollment characteristics. As might be expected, the retention rate for returning students was higher than that for new students. As might also be expected, the retention rate for curricular students was higher than that for non-curricular (unclassified) students.

Retention rates according to demographic and enrollment characteristics were similar to rates reported last year, as well as to fall-to-winter rates reported for earlier years.

Full-time student retention rates by academic program for 1990-91 are

presented in Table 5. Retention rates for programs leading toward the A.A. (Associate of Arts) or A.S. (Associate of Science) degrees were on the whole slightly lower than those for programs leading toward the A.A.S. (Associate of Applied Science) degree. Only two-thirds of all students enrolled in programs leading toward certificates during Fall Semester 1990 returned to PVCC and completed Spring Semester 1991. The retention rate for all certificate programs was 66.7%, as compared to 50% in 1989-90 and 100% in 1988-89. However, the actual numbers of returning and non-returning

students within programs leading toward certificates or diplomas were so small that meaningful conclusions cannot be safely drawn.

Full-time student retention rates by academic program for the seven-year period 1984-85 through 1990-91 are presented in Table 6. As can be seen, 1990-91 rates were similar to 1989-90 and 1988-89 rates and to fall-to-winter rates for 1984-85 through 1987-88. In the few instances where the figures have not been consistent, the inconsistencies have been largely due to small numbers of students in individual, academic programs.

SOURCE: VCCS end-of-term AKT tapes. The retention rate refers to the percentage of students returning from one term to the next (returning students divided by both returning and non-returning students).

Retention rates by academic program for 1990-91 are shown for curricular students in Table 7, for freshmen in Table 8, and for sophomores in Table 9. As can be seen, the retention rates for curricular students enrolled in programs leading toward the A.A. or A.S. degree were slightly higher than the rates for students enrolled in programs leading toward the A.A.S. degree and much higher than the rates for those enrolled in

certificate programs. The same was true with respect to sophomore retention rates, but A.A.S. retention rates for freshmen were nearly the same as A.A./A.S. rates. It

should be noted that retention rates for certificate programs may be misleading due to the small numbers or returning and non-returning students involved.

SOURCE: VCCS end-of-term AKT tapes.

Demographically, with the exception of the sex of full-time students, returning and non-returning students, whether full-time or part-time, were quite similar. A slightly higher percentage of non-returning students were white, and a slightly lower percentage were from within the PVCC service region. In terms of sex, a much higher percentage of full-time, non-returning students were male than female. Approximately two-thirds of all full-time, non-returning students were males, while less than one-half of all full-time, returning students were males.

With respect to enrollment characteristics, returning and non-returning students differed most significantly according to new/returning status. As can be seen in Table 11, the proportion of new to returning students was much higher among non-returning

students than among returning students. This is hardly surprising, however, as it has already been shown that retention rates for new students were lower than those for returning students (see Table 4).

Part-time returning and non-returning students differed more than did full-time and curricular to non-curricular returning and non-returning students. While the proportions of day to evening, on-campus to off-campus, were approximately the same for full-time returning and non-returning students, part-time non-returning students were more likely to study off-campus during the evening. This should not be too surprising, though, since a number of courses offered during the evening off-campus are designed for personal satisfaction as opposed to fulfilling curricular requirements.

## **CONCLUSIONS**

Retention rates for 1990-91 were similar retention rates for 1989-90 and 1988-90 and to fall-to-winter retention rates from earlier years. Slightly over one-half of all students enrolled during one term re-enroll at PVCC and complete the subsequent term. Over 80% of all full-time students enrolled during one term re-enroll at PVCC and complete the subsequent term. Approximately two of every three curricular students return from one term to the next. The retention rate for freshmen and sophomores is nearly 70%. Part-time students who return to the college from one term to the next are usually enrolled in programs leading toward degrees and study on the

college's main campus. Part-time, non-returning students, on the other hand, are usually non-curricular and study off-campus during the evening.

One finding in the study is worth particular mention. In 1988-89, the retention rate for full-time black students was 22.3% lower than that for full-time white students. The rate was also 8.4% lower than the fall-to-winter rate for full-time black students in 1987-88. However, in 1989-90 the retention rate for full-time black students was only 4.9% lower than that for full-time white students. In 1990-91, the rate was 2.5% *higher* than the rate for whites. Clearly, the initiatives implemented by the college in 1989-90 with respect to minority recruitment and retention have been successful.
