ABSTRACT

Oregon-Washington Carpenters/Employers Apprenticeship and Training Trust, the United Brotherhood of Carpenters and Joiners Local 247, and Associated General Contractors cooperated with Mt. Hood Community College (Oregon) in a workplace literacy program. A drop-in learning center was operated at the Carpenter Training Center to provide support in mathematics to apprentices participating in intensive 1-week construction trade courses. Preapprentices were tested and provided with evening one-on-one tutorial assistance in math as requested. Customized mathematics instructional materials were developed for use in conjunction with job tasks requiring blueprints, calculator use, algebra, geometry, and specific measurement conversions. Student attendance at the center was voluntary and varied from 1 to 6 hours. (The four-page report is followed by supplementary project materials. Appendix I outlines objectives, methods, and evaluation criteria. It also provides information relating to the needs assessment. Appendix II contains summary data on learners. Completed post-program participant survey sheets are provided in Appendix III. Appendix IV contains instructional materials, including quizzes, worksheets, pretests/posttests, and revised instructor materials. Additional post-program participant survey sheets are presented in appendix V.) (YLB)

I Initial contact and identification of needs:

At a general interest meeting held at the Northwest Oregon Labor Council concerning Workplace Literacy, representatives of the International Brotherhood of Carpenters and Joiners and the Willamette Training Center (Carpenter Apprentice Program) identified basic mathematics as an area of intense concern. Two areas of emphasis were identified:

- a) limited mathematics skills among pre-apprentices.
- b) varied level of essential mathematics understanding of carpenters in stages of the apprentice program was substandard.

Everyone agreed the carpentry work was becoming more technical with all workers required to read specifications or blueprints.

Individual meetings with union officials and group meetings with carpentry instructors identified methods to interface Skill Builder instruction with on-going apprentice and pre-apprentice training. Labor representatives participated in the recruitment, interviewing and selection of instructors.

II. Collaboration to set up classes:

In coordination with the Carpenter's Apprenticeship program, it was recognized that the union training trust was the lead agency in determining needs and developing basic skills instruction intervention strategies. The college's ability to be flexible and adaptable enabled the development of a service that complimented existing training.

a. Entry into job site:

The Carpenters Training Trust determined which jobs to focus on, emphasizing a need for both pre-apprentices and apprentices. A review of existing carpenter training materials and interviews with current carpenter trust instructors and administrators identified initial needs (see Section III for a detailed explanation and supporting materials). During carpenter apprentice training activities, individuals were referred to the learning center as needed (i.e. math-based problem required intensive assistance). Pre-apprentices were tested during training and referred to evening tutorial if they wanted individual assistance. Participation was voluntary and appreciated. There were many returning students over the year.

b. Logistical considerations

The Carpenter Training Center offered one week intensive apprentice training required four times per year. The apprentices are involved in a six-year program leading to journeyman status. A learning center at the Carpenter Training Center was established, open two days per

week for three hours in each day. Securing a workable space for the learning center required patience and continued efforts with training center management. The learning center was a private room, small but comfortable, and accessible year round. The learning center enabled carpenters to receive tutoring on an as-needed basis. Recruitment was aided by participation of the labor liaison at the pre-apprentice training classes. Interested individuals, after taking a math test, were referred to individualized tutoring. The apprentices were best recruited by word of mouth from one to another by their personal experiences receiving tutoring and affirmation of Skill Builders services from their carpentry instructors. The projected results from initial proposal plan to serve (35), to actual participation (203), has shown a 500% increase in unduplicated headcount as of October 15, 1991, with services anticipated to be offered through March, 1992.

III. Determination of curriculum content and development of curriculum:

- Nature and sources: Visits to site, interviews with instructors.
- How objectives were identified: Needs of instructors.
- How job materials, technologies, tasks/activities were incorporated into curriculum: We redid many of the worksheets already in use. We developed new ones to cover additional needs. (See **Appendix IV Revised Instructor Materials and Worksheets, Handouts and Forms.**)
Calculators were encouraged so much of our emphasis was on correct calculator use.
- Problems in the process: The major problem initially was having materials revised and available when the students came to us. Each week students came with different needs for which we were unable initially to be prepared. Six months into the project we felt prepared for just about any need of the students.
- Solutions: Students or instructors were available to help us in tight situations.

IV. Delivery of instruction:

- Participants: See **Appendix II, Learner Data Forms**
- Factors affecting participation: It was primarily voluntary participation. Pre-Apprentice and Apprentice carpenters came in for special math review or help when they were unable to perform the required apprenticeship mathematics. They attend apprenticeship classes for a week at a time, four times a year. Six hours of that week two instructors are available for mathematics lab. Prior to joining the program, they attend a pre-apprenticeship orientation. We are also available for several hours of the orientation.

V. Assessment of Learners:

Initial assessment tools were lengthy sets of fraction problems. These were used by the Center's instructors. We found that not everyone needed fraction practice. See for the variety of pre- and post-tests that were eventually developed. Results are given on Learner Data Forms.

VI. Program Evaluation:

Formative: Feedback was given through the enthusiasm of the Center's instructors and their continued efforts to encourage their students to postpone projects to attend the math lab. There was continuous development of materials to meet the needs of each student. The primary change occurred with the development of Pre/Post-tests mentioned previously. Occasionally, we provided instruction for the entire apprentice class. It was generally on fraction-decimal conversions and right triangle formulas.

Summative: The measurement tools were based on the particular needs of each student. Generally each week there were different needs ranging from fractions to volume to right triangle calculations.

The learners repeatedly reported success in the math used in the apprenticeship classes after attending our labs or classes. We also experienced a high rate of return students for those whose math skills had been weak when they entered the apprenticeship program.

Many students reported increased confidence when they were preparing for the Journeyman's examination.

VII. Overall issues, concerns, comments:

A concern that was almost immediately resolved was in determining a room at the training center where we could offer not only instruction, but also store all of our materials. Initially we gathered wherever an available room could be found, while our materials were sometimes in a different room, often occupied by another person or class. Finally it was agreed that we could locate our instruction and materials in a seldom used lounge. This has been a perfect set-up.

The cooperation and facilities provided to us are to be commended. We have always felt welcomed by the staff through their encouragement and willingness to meet our needs.

- Estimate of number of hours spent in:

<u>Hours</u>	<u>Activity</u>
44	Negotiation and planning with partner
18	Planning with other consortium members
304	Curriculum development
434	Actual instruction (available 14 hours per week)
131	Recordkeeping and write-up

Since October, 1990 there have been 14 hours/week scheduled for instruction. Some of that time was also used for curriculum development and revision, recordkeeping and write-up when student load was light.

APPENDIX I:

OVERVIEW •

OBJECTIVES • METHODS •
EVALUATION
OVERVIEW

NEEDS ASSESSMENT

STAFF REPORT OF
PARTICIPANT'S
FEEDBACK

Name: Sandy Clawson/Margie Taylor

Partnership:

Mt. Hood Community College
Oregon-Washington Carpenters/Employers Apprenticeship and Training Trust
United Brotherhood of Carpenters and Joiners of America, Local Union #247
Associated General Contractors

Techniques Used to Target/Assess Instructional Needs:

Audits and task analysis with Garry Goodwin, Tom Day, Jim Murphy, Ron Hanson, Harold Brainstetter, and clients.

Assessment and evaluation of diagnostic tools currently used in training.

Instructional Goals:

1. Improved competencies in mathematics and reading; specifically calculator use, algebra and reading blueprints.
2. Improved job performance and greater promotability.
3. Provide basic skills instruction for apprenticeship program.

Status & Timeline For Curriculum Development:

We have been in the process of selecting commercial materials, developing materials, field testing and revising curriculum since August 1, 1990. Focus has been on job-specific tasks, calculation in construction and algebra.

BUILDING TRADES LAB

OBJECTIVES

The student will:

Decode basic written vocabulary accurately

Perform multi-step geometric computations

Acquire calculator applications as needed in the workplace

Apply formulas to work-related problems

Demonstrate estimating skills

Interpret and solve functional context related computations

Follow written instructions

METHODS/ACTIVITIES

Pre-tests

One-on-one tutoring

Oral drills

Cooperative learning

Group instruction

Application of formulas

Application of calculator functions

Transfer word problems to numerical problems

EVALUATION CRITERIA

Post tests

Instructor interview

Application of skill to workplace project

Job performance

at the beginning

contractors like a tree - they disagree this

Needs Assessment: Carpenters

1. We are planning on attending the job entry training. What role, if any, do you want us to play? Are there certain parts that you want us there for do you think the entire session would benefit us? (What should we wear?)

intro to group

2. When do the applicants/apprentices take the Pre-Apprenticeship Evaluation Test?

37 camp pre math sur.

3. Do they have 1/2 an hour to do it? Or is it the Math Exam that must be done in 1/2 an hour?

Math Exam

later in training

4. Can we see the exams to diagnose where the most difficulty for the students appears to be? If so, when?

THURS

5. Did you get the math program from your friend? Len - St. Louis

6. Can we get a good copy of the skill blocks? Wayne

7. The grant mentions that our instruction should include blueprint reading, calculator use, reading contract documents and specifications, algebra in construction, and safety. Do you see these as your most basic needs?

Blue print _____ Calculator X Documents _____ Algebra _____

Safety _____

8. Which skill blocks specifically address these areas? Blueprint _____

Calculator X Documents _____ Algebra _____

Safety X

9. Or do we need to address even more basic skills such as multiplication, division, per cent, etc., reading?

10. We are feeling that any math program would be most beneficial during training, perhaps an hour before training begins in the morning, or 1/2 hour at lunchtime. How do you feel about this?

Saturday - intro as to who we are - 7:30 - 3:00

MEMO

To: Supervisors and Shop Stewards
From: The Skill Builders - a voluntary no cost program funded by the U. S. Dept. of Education.
Subject: Training Course

Purpose: The purpose of the questionnaire is to help us in determining the specific math and reading skills your workers need to improve their effectiveness on the job.

Descriptor

of Course: Calculation in construction is a weekly class for apprentices and pre-apprentices aimed to sharpen math skills. It is available for one to four hours.

revised } The Skill Builder series includes the following: 1) blueprint reading, 2) calculator use, 3) reading contract documents and specifications, 4) algebra in construction, and 5) safety.

Directions: Please describe your workers' needs as completely as you can. Most of the answers require a yes/no answer or a short phrase. Please return the survey by August 6, 1990 in the enclosed envelope.

1. Will this course meet a need or benefit your workers? Yes _____ No _____
2. How many workers would benefit from this training? _____
3. How many workers would be interested in this training? _____
4. How many workers would participate? _____
5. What areas should be emphasized?

6. Are there any special ^{needs} problems? (ESL)

Thank you for taking the time to answer the survey. We will let you know the results.

APPENDIX III

POST PROGRAM PARTICIPANT SURVEY SHEETS

CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab

POST-PROGRAM PARTICIPANT
Survey Sheet

Class Information:

1. What can you do now that you couldn't do before taking this class?

JUST ABOUT EVERYTHING

2. How many classes have you attended so far? 2 Classes

3. Has this class helped you meet or work toward any of your personal goals?

X
Yes

No

Why or why not? _____

4. Circle one number in each row across to show how you would rate each item.

How would you rate this program?

Very interesting to me 5 4 3 2 1 Boring to me

Very useful to me on the job 5 4 3 2 1 Totally useless to me on the job

Very useful to me outside work 5 4 3 2 1 Totally useless to me outside work

Exactly what I expected 5 4 3 2 1 Not at all what I expected

How would you rate the materials?

Easy to learn and simple for me 5 4 3 2 1 Hard to learn and confusing for me

5. Would you recommend this course to a co-worker or friend?

X
Yes

No

Why or why not? _____

6. If you could change anything about this program, what would it be? NOTHING

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.

**CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab**

**POST-PROGRAM PARTICIPANT
Survey Sheet**

Class Information:

1. What can you do now that you couldn't do before taking this class?

FRACTIONS

2. How many classes have you attended so far? 2 Classes

3. Has this class helped you meet or work toward any of your personal goals?

X
Yes

No

Why or why not? _____

4. Circle one number in each row across to show how you would rate each item.

How would you rate this program?

Very interesting to me 5 4 3 2 1 Boring to me

Very useful to me on the job 5 4 3 2 1 Totally useless to me on the job

Very useful to me outside work 5 4 3 2 1 Totally useless to me outside work

Exactly what I expected 5 4 3 2 1 Not at all what I expected

How would you rate the materials?

Easy to learn and simple for me 5 4 3 2 1 Hard to learn and confusing for me

5. Would you recommend this course to a co-worker or friend?

X
Yes

No

Why or why not? _____

6. If you could change anything about this program, what would it be?

NOTHING

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.

**CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab**

**POST-PROGRAM PARTICIPANT
Survey Sheet**

Class Information:

1. What can you do now that you couldn't do before taking this class?
I HAVE A BETTER UNDERSTANDING OF SOLVING AREAS & VOLUMES

2. How many classes have you attended so far? 2 Classes

3. Has this class helped you meet or work toward any of your personal goals?
 Yes No Why or why not? I AM SOLVING PROBLEMS FOR MYSELF

4. Circle one number in each row across to show how you would rate each item.

How would you rate this program?						
Very interesting to me	5	4	3	2	1	Boring to me
Very useful to me on the job	5	4	3	2	1	Totally useless to me on the job
Very useful to me outside work	5	4	3	2	1	Totally useless to me outside work
Exactly what I expected	5	4	3	2	1	Not at all what I expected

How would you rate the materials?						
Easy to learn and simple for me	5	4	3	2	1	Hard to learn and confusing for me

5. Would you recommend this course to a co-worker or friend? Yes No
 Why or why not? IT COULD HELP THEM SOLVE PROBLEMS FOR THEMSELVES INSTEAD OF RELYING ON AN ENGINEER.

6. If you could change anything about this program, what would it be? HAVE MORE CLASSES PER WEEK.

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.

**CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab**

**POST-PROGRAM PARTICIPANT
Survey Sheet**

Class Information:

1. What can you do now that you couldn't do before taking this class?
Find areas of cylinders, octagons, and other odd shapes

2. How many classes have you attended so far? 2 Classes

3. Has this class helped you meet or work toward any of your personal goals?

X Yes _____ No Why or why not? _____

4. Circle one number in each row across to show how you would rate each item.

<u>How would you rate this program?</u>						
Very interesting to me	<u>5</u>	4	3	2	1	Boring to me
Very useful to me on the job	<u>5</u>	4	3	2	1	Totally useless to me on the job
Very useful to me outside work	5	4	<u>3</u>	2	1	Totally useless to me outside work

CARPENTRY MATH QUIZ

The following questions are designed to aid the student in a study of mathematics for carpenters. Students taking this quiz may use calculators, books, hand-out sheets and information from the instructor or other students to figure their answers. Good Luck!

1. Convert the following decimal feet to feet, inches, and the nearest 16th of an inch:

101.33' _____

16.29' _____

198.60' _____

256.77' _____

137.41' _____

112.94' _____

2. Use a calculator to convert the following dimensions to decimal feet, rounded off to the nearest 100th:

3' 7 1/4" _____

28' 6 5/8" _____

6' 8 5/16" _____

112' 1 3/8" _____

75' 3 15/16" _____

3. How many board feet are in each of the following pieces of lumber?

8' X 2" X 4" _____

16' X 2" X 8" _____

12' X 1" X 6" _____

4' X 4" X 4" _____

18' X 4" X 14" _____

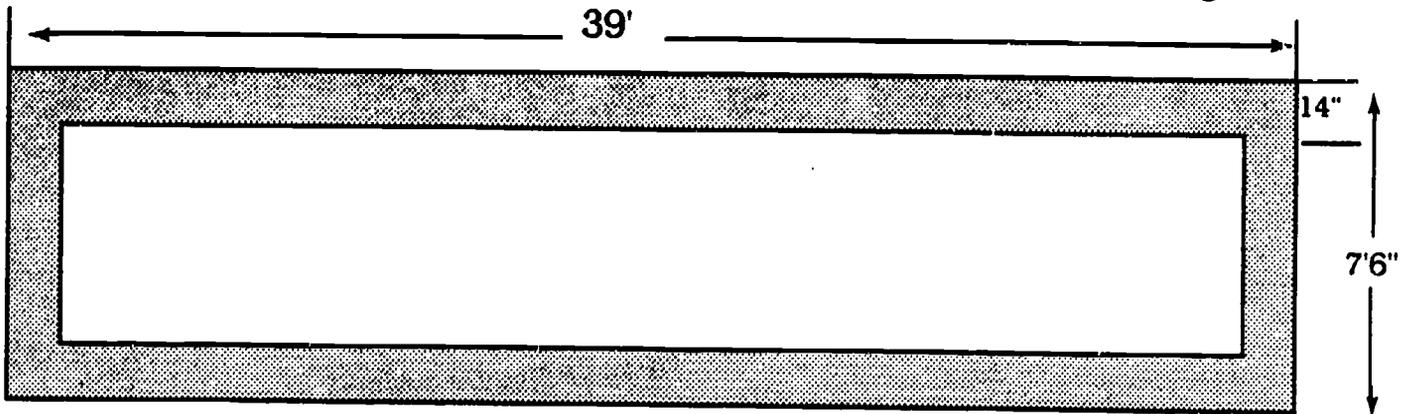

6' X 1" X 2" _____

4. A concrete wall is to be built 8" wide, 8' tall and 37' long. How many cubic yards will it take to pour it (to the nearest 100th) ? How many yards would you order?

Total cubic yards = _____

Concrete to order = _____

5. How much concrete will it take to pour the following 12" deep footing?

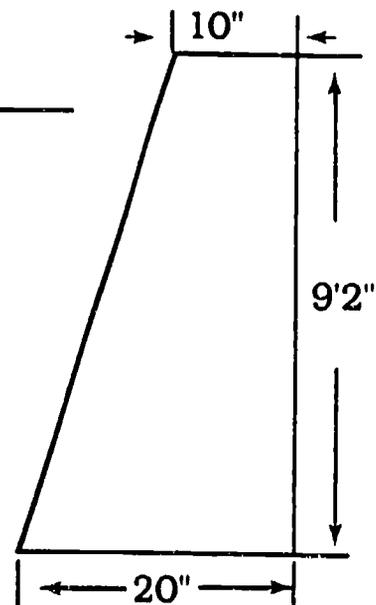

Total cubic yards (nearest 100th) = _____

Yards you would order = _____

6. How much concrete will it take for a 40' long retaining wall of the following dimensions?

Total cubic yards (nearest 100th) : _____

Yards you would order: _____

7. How much concrete will it take to pour 8 round columns, 14" in diameter and 13' 4" tall?

Total cubic yards (nearest 100th) : _____

Yards you would order: _____

5. $14' 3 \frac{9}{16}" =$ _____

CALCULATOR CONVERSIONS OF DECIMALS/FRACTIONS USING FEET AND INCHES

Changing feet, inches and fractions to feet (in decimals), *sample: 5' 6 3/4"*:

1. Change the fraction of an inch to a decimal.
 - a. Enter the numerator (top number of the fraction)
 - b. Enter "+"
 - c. Enter denominator (bottom number of the fraction)
 - d. Enter "="*Example: 3 + 4 = .75*
2. Add the whole inches:
 - a. Enter " + "
 - b. Enter the whole inch number
 - c. Enter " = "*Example: .75 " + 6" = 6.75"*
3. Divide by 12 (there are 12 inches to one foot)
 - a. Enter " + "
 - b. Enter " 12 "
 - c. Enter " = "*Example: 6.75" + 12 = .5625'*
4. Add the whole feet
 - a. Enter " + "
 - b. Enter number of feet
 - c. Enter " = "*Example: .5625' + 5' = 5.5625'*

Changing feet (in decimals) to feet, inches and fractions, *sample: 5.5625*:

1. Subtract out whole feet
 - a. Write down whole feet (everything to the left of the decimal point)
 - b. Enter " - "
 - c. Enter the number of feet
 - d. Enter " = "*Example: 5.5625' - 5' = .5625'*
2. Change decimal foot to inches
 - a. Enter " x "
 - b. Enter " 12 "
 - c. Enter " = "*Example: .5625' x 12 = 6.75*
3. Subtract out whole inches
 - a. Write down whole inches (everything to the left of the decimal point)
 - b. Enter " - "
 - c. Enter the number of inches
 - d. Enter " = "*Example: 6.75' - 6' = .75'*
4. Change the decimal inch to a fraction
 - a. Enter " x "
 - b. Enter " 16 " (for reading to the nearest 16th)
 - c. Enter " = "
 - d. Round off the answer and use it as the numerator over a denominator of 16
 - e. Reduce the fraction to 8ths, 4ths, or 2nds if possible*Example: .75' x 16 = 12; 12/16 " = 3/4"*

CONVERTING DEGREES PRE-TEST

1. Convert $72^{\circ} 41'$ to decimal degrees _____

2. Change 63.7° to degrees, minutes and seconds _____

3. $16^{\circ} 31' 12''$ is how much in decimal degrees? _____

4. Convert $35^{\circ} 30'$ to decimal degrees _____

5. 56.2° is equal to 56° _____ minutes _____ seconds

Name _____

Date _____

CONVERTING DEGREES POST-TEST

Convert these to decimal degrees.

1. $45^{\circ} 10'$ = _____

4. $22^{\circ} 15' 55''$ = _____

2. $88^{\circ} 56'$ = _____

5. $75^{\circ} 10' 30''$ = _____

3. $75^{\circ} 45'$ = _____

Convert these to degrees, minutes and seconds if needed.

1. 60.6° = _____

4. 56.02° = _____

2. 35.75° = _____

5. 21.25° = _____

3. 41.66° = _____

NAME _____

Converting Degrees, Minutes and Seconds to Decimal Degrees

When using the calculator, it is often easier to work with degrees if the minutes and seconds are changed to decimal degrees. This is easily done by first dividing the number of seconds by 60, adding the minutes to the decimal and again dividing by 60.

Note: $60'' = 1'$, $60' = 1^\circ$

Example: Change $35^\circ 30' 25''$ to decimal degrees: $25 \div 60 = .417$,
 $30.417 \div 60 = .5069$; $35^\circ 30' 25'' = 35.5069^\circ$

Note: The whole number of degrees remains the same.

Converting Decimal Degrees to Degrees, Minutes and Seconds: Conversely, to change decimal degrees to degrees, minutes and seconds, multiply the decimal by 60. The whole number is the number of minutes. Subtract out the whole number (the minutes) and multiply the decimal by 60 again. Round off to the nearest whole number and this is the number of seconds.

Example: Convert 45.2131° to degrees, minutes and seconds: $.2131 \times 60 = 12.786' - 12' = .786 \times 60 = 47.16''$; $45.2131^\circ = 45^\circ 12' 47''$ (where 47.16 has been rounded to nearest whole number)

Convert the following degrees, minutes and seconds to decimal degrees. Round off to four places.

1. $75^\circ 15' 45'' =$ _____

2. $105^\circ 35' 23'' =$ _____

3. $90^\circ 23' 59'' =$ _____

4. $320^\circ 54' 10'' =$ _____

Change the decimal degrees to degrees, minutes and seconds. Round off to nearest whole seconds.

1. $195.33^\circ =$ _____

2. $26.9089^\circ =$ _____

47

3. $45.7515^\circ =$ _____

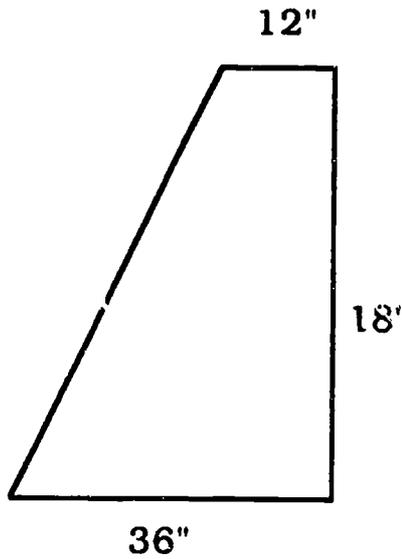

4. $57.5556^\circ =$ _____

CONCRETE WALLS AND COLUMNS

How much concrete will it take for the retaining or foundation walls below?

GAZEBO MATHEMATICS

(any number of sides)

The following is a step-by-step information sheet on the mathematics involved in figuring a gazebo of any size, number of sides and any roof slope. By practicing the mathematics involved in gazebos, students will learn principles and methods for figuring other carpentry problems such as bolt template layouts, stair slope angles, squaring building lines, and bay window mathematics.

Three "givens" will have to be established to start this exercise: (1) the number of sides of the gazebo; (2) the roof slope and (3) the diameter.

Fill in all answers as soon as they are figured. Fill in "givens" first.

Given: Number of sides: _____

Given: Roof slope: _____

Given: Diameter: _____

A. Radius (hip run): _____

B. 1. Interior angle: _____

2. $1/2$ Interior angle: _____

C. 1. Span: _____

2. Run: _____

D. Chord length: _____

E. Length of common rafter
per foot of run: _____

F. Theoretical length of
common rafter: _____

G. Height of roof: _____

H. Theoretical length of
hip rafter: _____

I. Hip rafter cut: _____

To figure radius:

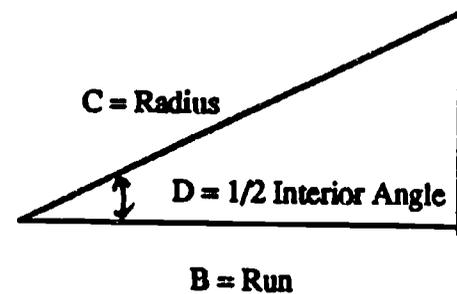

Radius = $1/2$ diameter

To figure interior angle:

- $360^\circ \div \text{number of sides} = \text{interior angle}$
- $\text{Interior angle} \div 2 = 1/2 \text{ interior angle}$

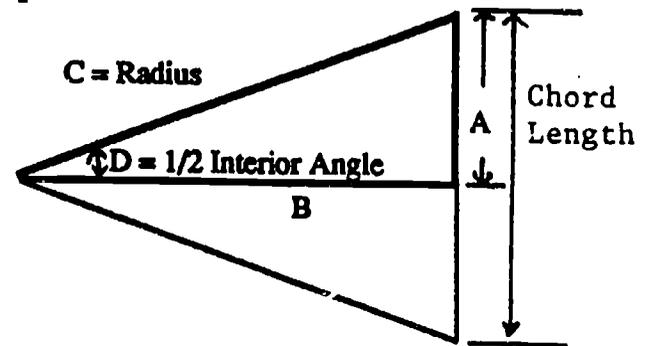

To figure span and run:

- Hip run = radius ($1/2$ diameter)
- Run (of common rafter) = B
 $1/2 \text{ interior angle} = D$
Radius = C
 $B = \cos D \times C$ ($\therefore D : \cos : x : C :: =$)
- Span = $2 \times \text{run}$

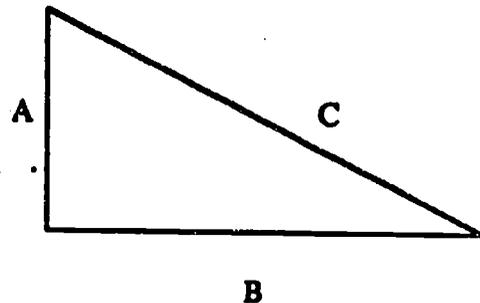

To figure chord length (length long point to long point of exterior wall plates).

- Run = B
 $1/2 \text{ interior angle} = D$
- $A = \sin D \times C$ ($\therefore D : \sin : x : C :: =$)
- $A \times 2 = \text{chord length}$
- The angle to cut the plates is the same as " $1/2$ interior angle".

To figure length of common rafter per foot of run:

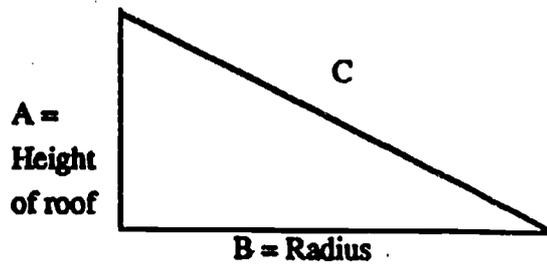

- Length per foot of run can be found on the framing square
OR
- $A = \text{rise per foot (from roof slope given)}$
 $B = 12'' \text{ (from roof slope given)}$
 $C = \sqrt{A^2 + B^2}$ ($\therefore A : X^2 : + : 12 : X^2 : = : \sqrt{X}$)

- F. To figure theoretical length of common rafter :
- run x length per foot of run (+ 12 to read answer in feet)

- G. To figure height of roof:
- A = total theoretical height of roof
(common run x rise per foot from slope given)

- H. To figure theoretical length of hip rafter:
- B = radius (hip run)
- C = theoretical length of hip rafter
- $$C = \sqrt{A^2 + B^2}$$
- (: A : X² : + : B : X² : = : \sqrt{X})

- I. To figure hip rafter cut:
- The "rise" will be the same as the "rise" per foot of run for a common rafter.
 - The unit of hip run can be solved by:

$$\text{Unit hip run (inches)} = \frac{\text{Radius (in inches)} \times \text{unit rise (given in inches)}}{\text{Height of roof (in inches)}}$$

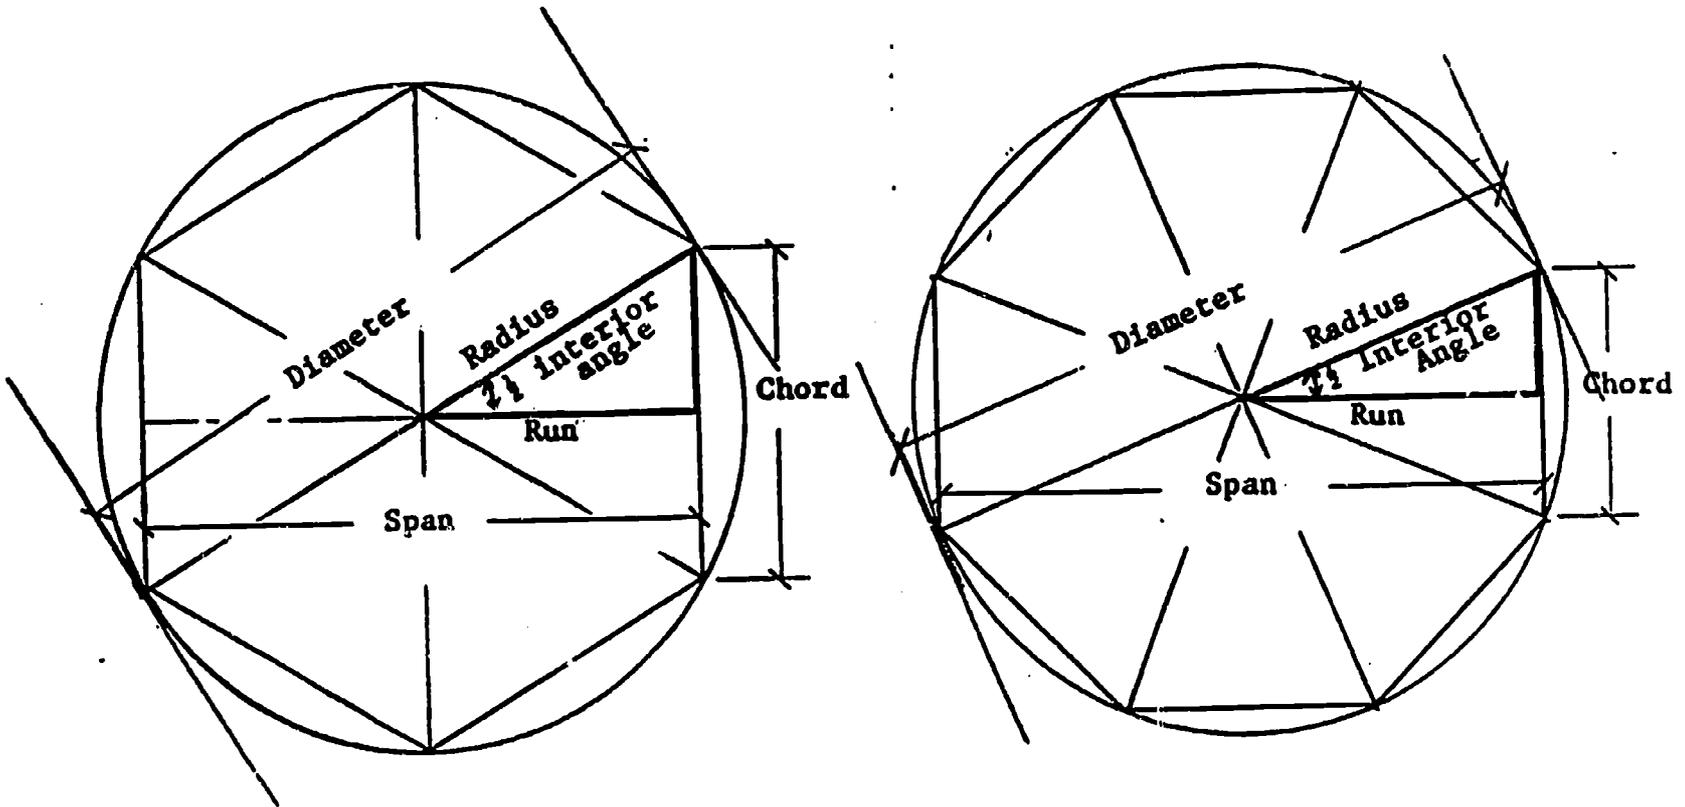

Note: The rafter lengths are theoretical. When laying-out rafters, subtract the ridge and add the overhang.

NAME _____

DATE _____

HEXAGON AND OCTAGON GAZEBO MATHEMATICS

Two "givens" will have to be established to start this exercise: (1) the roof slope and (2) the span (distance across from side to side).

HEXAGON

OCTAGON

Fill in all answers as soon as they are figured. Fill in "givens" first.

Given: Number of sides:

6

8

Given: Roof slope (cut of common rafter):

Given: Span:

A. Run:

B.

1. Interior angle:

2. 1/2 Interior angle:

C.

1. Radius (hip run):

2. Diameter:

D. Chord length (same as radius for hexagon only):

E. Length of common rafter per foot of run:

F. Theoretical length of common rafter:

G. Height of roof:

H. Theoretical length of hip rafter:

I. Hip rafter cut:

59

A. To figure the run:

$$\text{Run} = 1/2 \text{ span}$$

B. To figure interior angle:

1. $360^\circ + \text{number of sides} = \text{interior angle}$
2. $\text{Interior angle} + 2 = 1/2 \text{ interior angle}$

C. To figure radius/diameter:

$$1. \quad C = \frac{B}{\cos D}$$

(: B : + : D : cos : =) (: = Enter)

2. $\text{Radius} \times 2 = \text{Diameter}$

D. To figure chord length for octagon (length long point to long point of exterior wall plates).

1. $\text{Run} = B$
 $1/2 \text{ interior angle} = D$

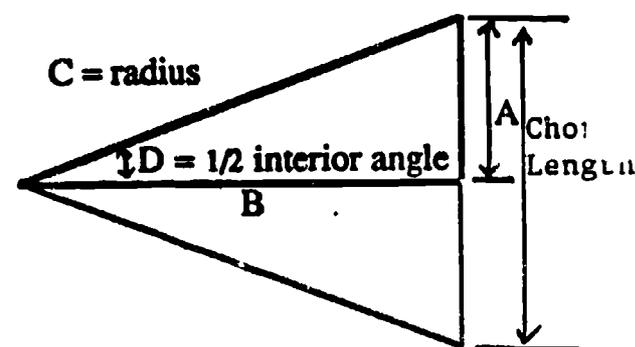

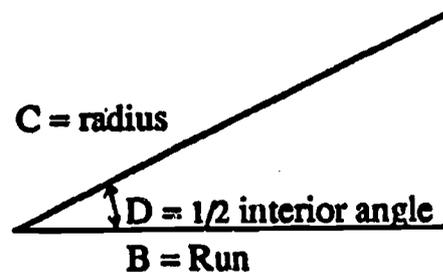

2. a) $A = \sin D \times C$ (when radius is known)
(: D : sin : x : C : =)

OR

- b) $A = B \times \tan D$ (when run is known)
(: B : x : D : tan : =)

3. $A \times 2 = \text{chord length}$

4. The angle to cut the plates is the same as "1/2 interior angle".

E. To figure length of common rafter per foot of run:

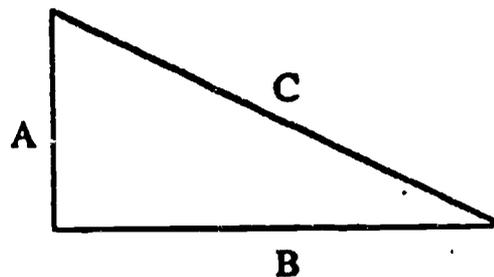

1. Length per foot of run can be found on the framing square.

OR

2. $A = \text{rise per foot (from roof slope given)}$
 $B = 12'' \text{ (from roof slope given)}$

$$C = \sqrt{A^2 + B^2} \quad (: A : X^2 : + : 12 : X^2 : = : \sqrt{X})$$

$C = \text{Length per foot of run}$

To figure theoretical length of common rafter:

- run x length per foot of run (+ 12 to read answer in feet)

G. To figure height of roof:

- A = total theoretical height of roof (common run x rise per foot from slope given)

H. To figure theoretical length of hip rafter:

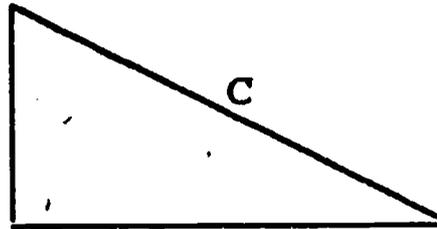

B = radius (hip run)

C = theoretical length of hip rafter

$$C = \sqrt{A^2 + B^2}$$

$$(: A : X^2 : + : B : X^2 : = : + = \sqrt{X})$$

A = height
of roof

B = radius

I. To figure hip rafter cut:

- The "rise" will be the same as the "rise" per foot of run for a common rafter.
- The unit of hip run can be solved by:

$$\text{Unit hip run (inches)} = \frac{\text{Radius (in inches)}}{\text{Height of roof (in inches)}} \times \text{unit rise (given in inches)}$$

Note: The rafter lengths are theoretical. When laying-out rafters, subtract the ridge and add the overhang.

CARPENTRY MATH QUIZ

The following questions are designed to aid the student in a study of mathematics for carpenters. Students taking this quiz may use calculators, books, hand-out sheets and information from the instructor or other students to figure their answers. Good Luck!

1. Convert the following decimal feet to feet, inches, and the nearest 16th of an inch:

101.33' _____

16.29' _____

198.60' _____

256.77' _____

137.41' _____

112.94' _____

2. Use a calculator to convert the following dimensions to decimal feet, rounded off to the nearest 100th:

3' 7 1/4" _____

28' 6 5/8" _____

6' 8 5/16" _____

112' 1 3/8" _____

75' 3 15/16" _____

3. How many board feet are in each of the following pieces of lumber?

8' X 2" X 4" _____

16' X 2" X 8" _____

12' X 1" X 6" _____

4' X 4" X 4" _____

18' X 4" X 14" _____

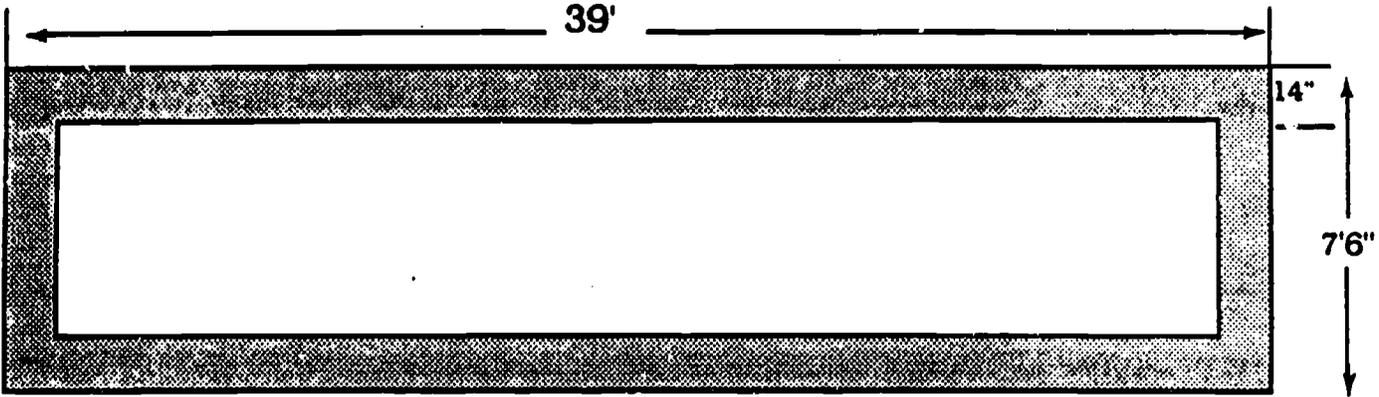

6' X 1" X 2" _____

4. A concrete wall is to be built 8" wide, 8' tall and 37' long. How many cubic yards will it take to pour it (to the nearest 100th) ? How many yards would you order?

Total cubic yards = _____

Concrete to order = _____

5. How much concrete will it take to pour the following 12" deep footing?

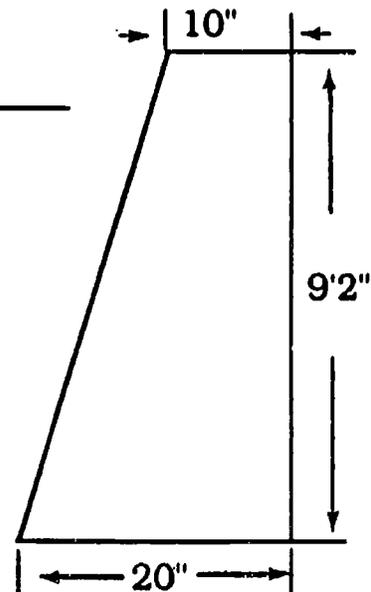

Total cubic yards (nearest 100th) = _____

Yards you would order = _____

6. How much concrete will it take for a 40' long retaining wall of the following dimensions?

Total cubic yards (nearest 100th) : _____

Yards you would order: _____

7. How much concrete will it take to pour 8 round columns, 14" in diameter and 13' 4" tall?

Total cubic yards (nearest 100th) : _____

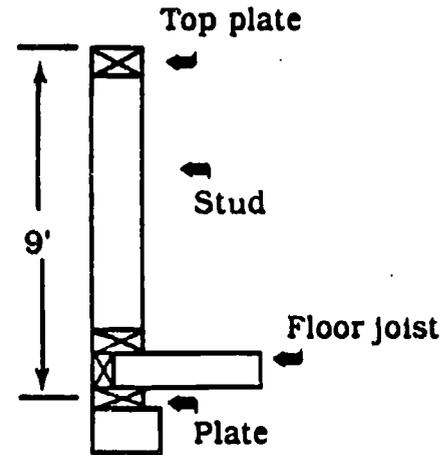

Yards you would order: _____

8. How many sheets of 4' X 8' plywood would you order to cover a floor area 38' wide by 42' long?

Number of sheets: _____

9. How many sheets of 4' X 8' plywood would you order for the exterior walls of a house 38' wide by 42' long with a sectional view as follows:

Number of sheets: _____

10. Figure the theoretical length for a common rafter on a 5:12 slope for a 34' wide house with a gable roof:

Decimal theoretical length to nearest 100th: _____

Theoretical length in feet, inches and nearest 16th: _____

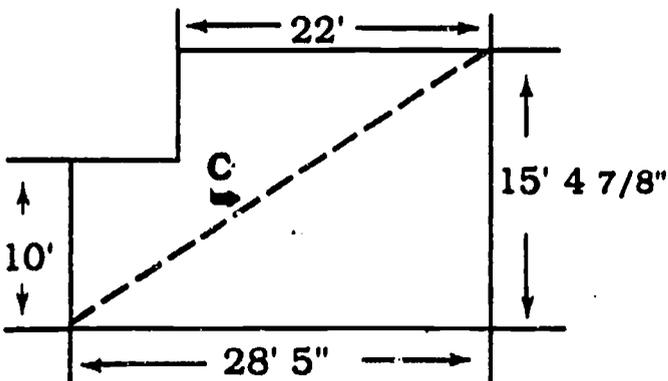

Decimal theoretical total length with a 2' overhang: _____

Theoretical total length with a 2' overhang in feet and inches: _____

11. What is the diagonal measurement ("C") in the following drawing:

Decimal to nearest 100th: _____

Feet, inches and nearest 16th: _____

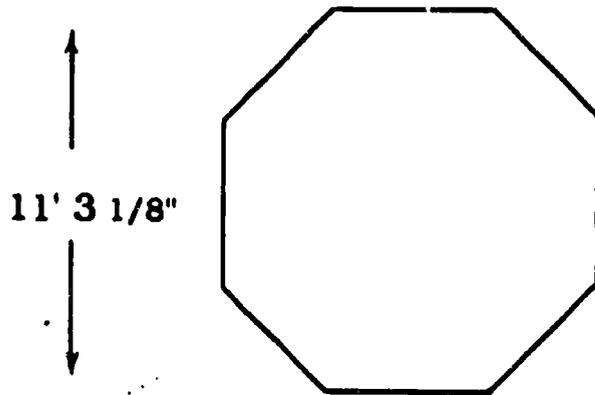

12. What angle would a set of stairs be if each riser was $7 \frac{5}{16}$ " and each tread was $10 \frac{11}{16}$ "?

Angle = _____ degrees _____ minutes _____ seconds

13. How long is each side of the octagon below?

Decimal to nearest 100th: _____

Feet, inches and nearest 16th: _____

14. How long is each side of a hexagon (6 sides) that has a diameter of 12' ?

Length = _____

Yes

No

Why or why not? _____

6. If you could change anything about this program, what would it be? more time

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.

**CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab**

**POST-PROGRAM PARTICIPANT
Survey Sheet**

Class Information:

1. What can you do now that you couldn't do before taking this class?
I can subtract fractions properly, convert Degrees, Minutes, Seconds to Decimals & Decimals to Degrees, Minutes & Seconds, Adding & subtracting Degrees, Minutes & Seconds, converting fractions to Dec. eq. w/ & Dec. to fractions

2. How many classes have you attended so far? 1 Classes

3. Has this class helped you meet or work toward any of your personal goals?
 Yes No Why or why not? Get a basic understanding in math for practical use

4. Circle one number in each row across to show how you would rate each item.

How would you rate this program?

Very interesting to me	5	4	(3)	2	1	Boring to me
Very useful to me on the job	5	(4)	(3)	2	1	Totally useless to me on the job
Very useful to me outside work	5	4	(3)	2	1	Totally useless to me outside work
Exactly what I expected	5	4	(3)	2	1	Not at all what I expected

How would you rate the materials?

Easy to learn and simple for me	5	4	(3)	2	1	Hard to learn and confusing for me
---------------------------------	---	---	-----	---	---	------------------------------------

5. Would you recommend this course to a co-worker or friend? Yes No
 Why or why not? To brush up on practical math skills

6. If you could change anything about this program, what would it be? Nothing.

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.

**CARPENTER TRAINING CENTER
Monday-Wednesday Math Lab**

**POST-PROGRAM PARTICIPANT
Survey Sheet**

Class Information:

1. What can you do now that you couldn't do before taking this class?
Improved Basic math skills really enjoyed practicing, asking questions, and good attitude of teachers
2. How many classes have you attended so far? 2 Classes
3. Has this class helped you meet or work toward any of your personal goals?
 Yes No Why or why not? Carpenter always uses math
4. Circle one number in each row across to show how you would rate each item.

<u>How would you rate this program?</u>						
Very interesting to me	<u>5</u>	4	3	2	1	Boring to me
Very useful to me on the job	<u>5</u>	4	3	2	1	Totally useless to me on the job
Very useful to me outside work	<u>5</u>	4	3	2	1	Totally useless to me outside work
Exactly what I expected	<u>5</u>	4	3	2	1	Not at all what I expected
<u>How would you rate the materials?</u>						
Easy to learn and simple for me	<u>5</u>	4	3	2	1	Hard to learn and confusing for me

5. Would you recommend this course to a co-worker or friend? Yes No
 Why or why not? According to each individual what they want out of it - Its great
6. If you could change anything about this program, what would it be? No smoking in the Building.

Thank you for taking time to help evaluate this course. Your answers will be very useful in trying to make it better.
