ABSTRACT
The Admissions Testing Program of the College Board consists of the Scholastic Aptitude Test (SAT), the Test of Standard Written English (TSWE), the Student Descriptive Questionnaire (SDQ), and the Achievement Tests. By registering for the tests and completing the SDQ, students provide information about themselves and their schools for their own planning and for use by high schools, colleges, and the College Board. Mean SAT scores are displayed in this report for different portions of the testing fopulation using information from the SDQ. Of particular interest is the detailed information about students' academic preparation and the numjer of years of study in various subject areas. Test score distributions are presented, which are identical in format to those provided since 1972 except for the introduction in 1990 of SAT scores at the 25 th , 50 th , and 75 th percentiles. Information on the characteristics of the students' high schools, taken from a survey of secondary schools, is provided, including type, locale, and the size of the senior class. The primary purpose of this report is to provide those who need to interpret SAT scores--students, guidance counselors, admission officers, and many others--with this broader context. The 1992 information for $1,099,639$ students is provided in tabular form. (SLD)

# The College-Bound Seniors Population 

The College Board uses the term "rollege-bound seniors" to describe those students from cach high school graduating class that participate in the Admissions Testing Program (ATP). The information contained in this report is based upon the latest test scores and background data these graduating seniors have provided. Students are counted only onee irrespective of the number of times they take the same test(s). Thrce quarters of those who took the SAT did so in their senior year. This report does not include all high school graduates nor all students who enroll in colleges and universities; therefore, the data only partially represent all 1992 high school graduates. Because of students' high response rate (approximately $94 \%$ ) to the Student Descriptive Questionnaire (SDQ) and because studies document the accuracy of self-reported student information, this report can be considered nearly a complete and arcurate description of the tested population. These test takers represent $48 \%$ of all first-year students whoenter college each year and about $93 \%$ of those entering four-year institutions. This report is useful in monitoring trends and understanding the background of the college-bound students who take the SAT, the Test of Standard Written English, and Achievement Tests.

The Admissions Testing Program includes four major components:

The SAT - The SAT is a $2^{1 / 2}$-hour, multiplechoice test that measures developed verbal and mathematical reasoning abilities related to suceressful performance in college. SAT scores are intended to be used with the secondary school reeord and other information about the student in assessing readiness for eollege-level work. Student performance on the SAT is reported on a seale of 200 to 800 , with a standard error of measurement of approximately 30 points. The varbal portion of the SAT' also yields subscores in reading comprehension and vorabulary, which are reported on a seale of 20 to 80 , with a standard error of measurement of approximately 4 points.

The Test of Standard Writen English (TSWE) This is a 30 -minute, multiple ehoice test administered with the SAT. The TSWE evaluates students"
alility to recognize standard written English, which is ihe language of most college textbooks, the language of classroom discourse, and the language students will bee expected to use in writing papers for most college courses. TSWE scores are intended to help placestudents in appropriate first-year English courses. The scores are reported on a scale of 20 to 80; however, scores above 59 are reported as $60+$ because the test is not designed to make distinctions above that level. The standard error of measurement on the TSWE is approximately 3.5 points.

The Achievement Tests - Designed to measure knowledge in specific subject areas and the ability to apply that knowledge, the Achievement Tests are independent of pariicular textbooks or methods of instruction. Although the types of questions change little from year to year, the tests do evolve to refleet general trends in high school curriculum.

Achie vement Tests are given in English Composition, Literature, American History and Social Studies, European History and World Cultures, Mathematies Level I, Mathematics Level II, Mathematies Level IlC, French, German, Modern Hebrew, Italian, Latin, Spanish, Biology, Chemistry, and Physies. All are one-hour multiple-ehoice tests, with the exception of a version of the English Composition Test that contains an essay in addition to multiple-rhoice questions. Scores of all the Achievement 'Tests are reported on a scale of 200 to 800 , with a standard error of measurement of approximately 36 points.

The Student Descriptive Questionnaire (SDQ) The SDQ contains questions about the student's background, academic record, extracurricular activities, and plans for college study. The SI) () is designed to enable individual students to present to colleges a broader picture of themeselves than is conveyed by test scores alone. Students voluntarily respond to the SD) ( as part of the registration process for the SAT or Achievement Tests. Although the SDQ was not initially designed to create a researeh data base, the SDQ information summarized in this report is useful in monitoring trends and understanding the background of the college-bound students who take the SAT and Aehievement Tests.

The Admissions Testing Program is a program of the College Board, a nonprofit membership organization that provides tests and other educational services for students. schocls, and colleges. The membership is composed of more than 2,700 colleges, schools. school systems, and education associations. Representatives of the members serve on the Buard of Trustees and advisory councils and committees that consider the programs of the College Board and participate in the determination of its policies and activities.

This booklet was prepared and produced by Educatonal Testing Service (ETS), which develops and administers the tests of the Admissions Testing Program for the College Board.

The College Board and Educational Testing Service are dedicated to the principle of equal cpportunity, and their programs, services, and employment policies are guided by that principle.

## Introduction

The Admissions Testing Program of the College Board consists of the SAT, the Test of Standard Written English (TSWE), the Student Descriptive Questionnaire (SDQ), and the Achievement Tests." By registering for the tests and completing the SDQ, students provide information about themselves and authorize the College Board to report it to their high schools and to the colleges, universities, and scholarship programs they specify. High schools use the reports to help their students plan for college. Colleges use the inforination to recruit and select students, to supplement students' academic records, and to advise enrolled students on course selection and placement. Students - and their families - use the reports they receive from the College Board as they search for a college or university that will meet their needs.

Mean SAT scores in this report are displayed for different portions of the testing population using information from the SDQ. Of particular interest is the defailed information about students' academic preparation and the number of years of study in various subject areas (pages 2 to 5). Pages 9 to 11 contz he test score distributions, which are identical in forma: co those provided since 1972 except for the introduction in 1990 of SAT scores at the 25th, 50 th, and 75th percentiles. Information on characteristics of the students' high schools - type, locale, and size of the senior class - is provided on page li.. (A survey of secondary schools provided these characteristice.)

## Using This Report

The SAT is designed to measure verlial and quantitative reasoning skills, developed over many years of education, that are related to academic performance in college. SAT scores are intended primarily to help forecast the college academic performance of individual students. As is the case with scores from most tests, however, the SAT scores of individuals are best understood in the broader context provided by information aggregated across groups of test takera. The primary purpose of this report, therefore, is to provide those who need to interpret SAT seores - students, guidance counselors, admission officers, and many others -- with this broader context.

A second purpose of this report is to document changes over time in the characteristics of students taking the SAT and Achievement Tests. Because SAT scores are statistically controlled to maintain the same meaning from year to year, and because the population of SAT takers is relatively stable from year to year, useful comparisons over time can be made among subgroups of the test-taking population, defined in a variety of ways. Year-to-year educational and demographic changes in this population, along with changes in test performance, could be of interest to the public, educators, and educational policymakers at all levels.

Two important cautions should be noted in the interpretation of aggregated test-score information. First, the relationships among measures of academic achievement, such as the SAT, and other characteristics of students are complex and interdependent. This complexity can be seen in the web of relationships betwcen test scores and a great variety of other factors - educational (c.g., years of study in particular

[^1]subjects), demographic (e.g., gender or racial/ethnic background), and socioeconomic (e.g., parental education or household income). Further, the relationships between these factors and test scores are not necessarily causal, but are merely associational in nature.

The second major caveat to bear in mind is that such aggregations should not be used to compare or evaluate teachers, schools, districts, states, or other educational units. In order for such comparisons to be justified, a common test would need to be administered to all, or a randomly equivalent subgroup, of the students being aggregrated and compared. 'This is quite obviously not the case for the SAT: the percentage of students taking the test varies widely and the test takers are self-selected. For these reasons, the College Board strongly discourages the use of the SAT for such purposes.

## SAT and TSWE Scores

For 1992, the mean SAT verbal score is 423 and the mean mathematical score is 476 (below and on page 9). This represents a one-point increase in the verbal mean and a twopoint increase in the mathematical mean since 1991. The mean verbal score has increased for the first time since 1985 after five consecutive years of decline. The mathematical score increase brought the average to ten points above its alltime low in 1980 and 1981. Average verbal scores went up two poinis for males and one point for females. Average mathematical scores went up two points for males and three

Table A. Mean SAT scores for College-Bound Seniors 1967-1992*

|  | Verbal |  |  | Math |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Males | Females | Total | Males | Females | Total |
| 1967 | 463 | 468 | 466 | 514 | 467 | 492 |
| 1968 | 464 | 466 | 466 | 512 | 470 | 492 |
| 1969 | 459 | 466 | 463 | 513 | 470 | 493 |
| 1970 | 459 | 461 | 460 | 509 | 465 | 488 |
| 1971 | 454 | 457 | 455 | 507 | 466 | 488 |
| 1372 | 454 | 452 | 453 | 505 | 461 | 484 |
| 1973 | 446 | 443 | 445 | 502 | 460 | 481 |
| 1974 | 447 | 442 | 444 | 501 | 459 | 480 |
| 1975 | 437 | 431 | 434 | 495 | 449 | 472 |
| 1976 | 433 | 430 | 431 | 497 | 446 | 472 |
| 1977 | 431 | 427 | 429 | 497 | 445 | 470 |
| 1978 | 433 | 425 | 429 | 494 | 444 | 468 |
| 1979 | 431 | 423 | 427 | 493 | 443 | 467 |
| 1980 | 428 | 420 | 424 | 491 | 443 | 4E: |
| 1981 | 430 | 418 | 424 | 492 | 443 | $\therefore 00$ |
| 1982 | 431 | 421 | 426 | 493 | 443 | 467 |
| 1983 | 430 | 420 | 42.5 | 493 | 445 | 468 |
| 1984 | 433 | 420 | 426 | 495 | 449 | 471 |
| 1985 | 437 | 425 | 431 | 499 | 452 | 475 |
| 1986 | 437 | 426 | 431 | 501 | 451 | 475 |
| 1987 | 435 | 425 | 430 | 500 | 453 | 476 |
| 1988 | 435 | 422 | 428 | 498 | 455 | 476 |
| 1989 | 434 | 421 | 427 | 500 | 454 | 476 |
| 1990 | 429 | 419 | 424 | 499 | 455 | 476 |
| 1991 | 426 | 418 | 422 | 497 | 453 | 474 |
| 1992 | 428 | 419 | 423 | 499 | 456 | 476 |

[^2]points for females. These score changes occurred as the number of 1992 seniors taking the test - an increase of 1,400 - was virtually unchanged from last year. Estimates of the number of high school graduates in 1992 indicate a $1 \%$ decline from 1991. The number of 1992 graduates taking the SAT represents $42 \%$ of the projected total of high school graduates, compared with $41 \%$ in 1991 .
The mean reading comprehersion subscore of the verbal section increased by one-tenth of a point to 42.4 (on a $20-80$ point scale), and the vocabulary subscore increased by a like amount to 42.3. Reading comprehension mean scores are 42.7 for males and 42.0 for females, and vocabulary subscores are 42.7 and 41.9 , respectively.
The mean Test of Standard Written English score remained at 42.1 (on a 29 -60 5 scale), its lowest level since the test was introduced in 1975. The female mean is higher than the male mean: 42." to 41.2, respectively.

## The Achievement Tests

About 200,000 students took one or more of the $16^{*}$ Achievement Tests, a decline of less than $1 \%$ over 1991. Those who take Achievement Tests tend to apply to selective colleges and universities. Their average SAT verbal score is 515 and their mathematical is 586 , each about 100 points higher than the mean for all seniors. About 1 of every 5 SAT takers take these tests.

Englisk Composition, the most frequently taken test, was taken by $91 \%$ of all Achievement Test takers. It is followed (in order of frequency) by Mathematics Level I ( $64 \%$ ), Maihematics Level II ( $32 \%$ ), American Fistory ( $24 \%$ ), Biology $(22 \%)$, Chemistry ( $17 \%$ ), Spanish ( $15 \%$ ), Literature ( $12 \%$ ), French ( $10 \%$ ), Physics ( $10 \%$ ), European History ( $2 \%$ ), Latin ( $1 \%$ ), German ( $1 \%$ ), and Modern Hebrew (less than 1\%).

The highest mean score on an Achievement Test was 663 for Mathematics level II. Although the number of students taking the Achievement Tests has remained stable since 1980, the number of students taking Mathematics level II has increased by $83 \%$ and the numbers taking Literature and Physics have increased by $39 \%$ and $31 \%$, respectively. Across all Achievement Tests the mean was 549, up two points from 1901 and 22 points higher than in 1973.

## Population Characteristics

The majority of the SAT takers are women ( $52 \%$ ) and are White ( $71 \%$ ), although the proportion of ethnic minority students has been rising steadily each year, from $13 \%$ in 1973 to $29 \%$ in 1992. The percentage of those describing themselves as White has declined from $87 \%$ in 1973 to $71 \%$ today. The population of minority test takers is $10 \%$ Black, 8\% Asian American, $7 \%$ Hispanic, and $1 \%$ American Indian. The proportions of Black, Hispanic, and White students who are women are higher than for the test takers as a whole. Only Asian American students are equally divided between men and women. The number of Asian Americans taking the SAT has inereased by almost five times the number in 1973, from about 16,000 to about 78,000 .

[^3]Students wore asked what language they learned to speak first: $8 \%$ reported learning to speak both English and another language and $8 \%$ reported learning a language other than English. Of the $3 \%$ who reported having a permanently disabling condition, 1 in every 3 took the SAT under nonstandard (untimed) conditions.

Generally, women in the population come from lowerincome households; they represent $59 \%$ of those reporting annual household incomes below $\$ 20,000$. Women are more likely to plan to apply for financial aid in eollege, and are more likely to be in the first generation of their family to attend college. All these characteristics are associated with lower than average SAT scores.

The majority of test takers ( $59 \%$ ) come from houscholds where the level of parental cducation is an associate degree or figher. The relationship between SAT scores and level of parental education is indicated on page 8: the higher the educational level, the higher the mean scores. Students whose parental educational level is a graduate degree had the highest average SAT scores, exceeding by a standard deviation those whose parents have no high school diploma.

Table B (page v) provides SAT averages by ethnic group. With an SAT-taking volume increase of $6 \%$, Mexican American students were the only group to experience a decrease in verbal or in mathematical mieans from 1991 to 1992. All other groups increased both their verbal and mathematical means (except for the mathematical means of Black and Puerto Rican students, which remained unchanged while their verbal means increased).

The 15-year narrowing of the gap between White and Black students' SAT total mean scores did not continue in 1992. However, of the 258 -point difference in 1976, about one quarter ( 62 points) has been eliminated. During this period, as shown in Table B, means of Black students have increased 51 points ( 20 on the verbal score and 31 on the mathematical score), while means of White students decreased 11 points ( 9 on the verbal score and 2 on the mathematical score).

## Academic Background and Preparation

The relationship between high school academic preparation and achievement and mean SAT scores is indicated on pages 2 to 5 of this report. The more years of study of academic subjects and the higher the grades and rank-inclass achieved, the higher the mean SAT score. However, one should not assume a causal relationship between the two.

On average, SAT takers studied 18.7 years of academic subjects and reported a grade-point average of 3.12 , or $B$ (see page 10). Forty-one percent of test takers studied 20 or more years of academic subjects. Their mean verbal and mathenatical SAT scores were each approximately 50 points above the national mean.

Table $C$ shows the proportion of students taking a certain minimum number of years of study in various subject areas and the mean years of study. Women tend to concentrate their study more on arts and music, forcign language, and English than do men, who concentrate more on natural science and mathematics. However, these differences have been narrowing a the last five years. Women tend to study "other" math courses and "other" sciences more than do

Table B. 1992 SAT Averages by Ethnic (iroup, Compared with 1976* and 1991

| Ethnic Group | 1992 | Change <br> from 1976* | Change <br> from 1991 |
| :--- | :---: | :---: | :---: |
| SAT Verbal |  |  |  |
| Arnerican Indian | 395 | +7 | +2 |
| Asian American | 413 | -1 | +2 |
| Black | 352 | +20 | +1 |
| Mexican American | 372 | +1 | -5 |
| Puerto Rican | 366 | +2 | +5 |

| Mexican American | 425 | +5 | 0 |
| Puerto Rican | 406 | NA | +2 |
| Other Hispanic | 433 | -2 | +2 |
| White | 491 | +15 | +7 |
| Other | 473 |  |  |
| All Students | 476 | +4 | +2 |
| All Men | 499 | +2 | +2 |
| All Women | 456 | +10 | +3 |

[^4]men, who concentrate more on calculus, computer math, computer programming, and physics. However, the ratios of women to men in the study of calculus (as well as trigonom ctry) and physics have been rising steadily. Since 1987, the percentage of students who are female rose 4 percentage points for the study of calculus, 2 percentage points for trigonometry, and 4 percentı ge points for physics.

Detailed information concerning the academic courses studied is found on pages 2 to 5. Mean SAT scores are provided for each course within a discipline. Table D shows the two courses within a subject with the highest nean SAT sco es. Those that appear on this list tend to be advanced courses in a sequence, such as calculus, or those taught in the senior year, such as physics and British literature.

A brief overview of academic preparation of the 1992 college-bound seniors in each of seven areas of study follows:

- Although $75 \%$ of the students have taken one or more years in arts or music, $21 \%$ reported having no course work in these areas. The most frequently mentioned experiences include music performance ( $38 \%$ ), art history or art appreciation ( $23 \%$ ), acting or play production ( $23 \%$ ), studio art and design (21\%), and music appreciation (18\%). Women were much more likely than men to participate in each of these courses or experiences. Both women and men have increased their average number of years of study in the arts and music in the last five years.

Table C. Academic Preparation In High School, 1992.

| Percentage of students <br> taking at least.... | Female | Male |
| :--- | :---: | ---: |
| 4 years English | $85 \%$ | $82 \%$ |
| 4 years Mathematics | $63 \%$ | $67 \%$ |
| 3 years Social Sciences and History | $86 \%$ | $84 \%$ |
| 2 years Foreign Language | $89 \%$ | $85 \%$ |
| 3 years Natural Sciences | $79 \%$ | $81 \%$ |
| 1 year Arts or Music | $78 \%$ | $71 \%$ |
|  |  |  |
|  | Average Years of Study |  |
| Subject | Female | Male |
| English | 4.0 | 3.9 |
| Mathematics | 3.7 | 3.8 |
| Social Sciences and History | 3.4 | 3.4 |
| Foreign Language | 2.7 | 2.5 |
| Natural Sciences | 3.2 | 3.3 |
| Arts or Music | 1.9 | 1.6 |
| Total | 18.9 | 18.5 |

Table D. Courses by Academic Subject with Highest Mean SAT Scores

| Subject | Course | Mean SAT |  |
| :---: | :---: | :---: | :---: |
|  |  | Verbal | Math |
| English | Literature: Other Country | 464 | 513 |
|  | British Literature | 462 | 509 |
| Arts and Music | Acting/Play Production | 462 | 498 |
|  | Music Appreciation | 453 | 498 |
| Social Sciences and History | European History | 453 | 504 |
|  | Ancient History | 441 | 496 |
| Foreign and Classical Languages | Modem Hebrew | 471 | 532 |
|  | Latin | 478 | 523 |
| Natural Sciences | Physics | 464 | 538 |
|  | Chemistry | 439 | 496 |
| Mathematics | Calculus | 501 | 599 |
|  | Precalculus | 478 | 559 |

- Eighty-seven percent have taken two or more years of a foreign language in high school, primarily Spanish ( $59 \%$ ) and French ( $29 \%$ ). Latin has been taken by $9 \%$ and German by $7 \%$. "Other languages" were studied by $4 \%$. Study of Spanish and "other languages" increased in the last five years; study of French, German, and Latin decreased. The average number of years of study of foreign languages increased slightly.
- Eighty-three percent of students have taken four or more years of English in high school, down from a high of $87 \%$ in 1990. The most frequently taken courses are American literature ( $88 \%$ ), grammar ( $85 \%$ ), compcsition ( $81 \%$ ), and literature from different historical periods ( $59 \%$ ).
- While $94 \%$ of the students reported taking three or more years of mathematics in high school, only $65 \%$ reported taking four or more years. Algebra ( $96 \%$ ) and geometry ( $93 \%$ ) were studied by most scudents. Women were represented among the students studying these two courses or "other math courses" in a higher proportion than in the population tested at large, but they were less likely than
men to take computer mathematics, calculus, precalculus, or trigonometry. Overall, only $55 \%$ of all students reported studying trigonometry in high school. About an eighth ( $13 \%$ ) of the students took course work in computer mathematics, whose popularity has been deelining since 1987 when $25 \%$ took such a course.
- Eighty percent of the students have studied natural seiences for three or more years in high school, up 8 percentage points from 1987. Most have taken biology ( $97 \%$ ), followed by chemisiry ( $82 \%$ ), geology or related earth or space science ( $45 \%$ ), and physics ( $45 \%$ ). The percentages studying chemistry and physics have increased by 5 and 3 percentage points, respectively, since 1987, primarily because more females have been studying these subjects.
- Eighty-five percent of the students have taken threc or more years of social sciences or history while in high school. The majority have studied U.S. history ( $96 \%$ ), world history or cultures ( $77 \%$ ), U.S. government or civics ( $72 \%$ ), or economies ( $51 \%$ ). The numbers of students studying world history/cultures and geography have been increasing by at least 1 percentage point per year since 1987. The number studying economics declined by 1 percentage point after a large increase from 1987 to 1989 and no change from 1989 to 1991.
- Computer coursework and experience have been increasing in the areas reported since 1987 except for computer mathematics, where study has declined from $25 \%$ to $13 \%$ (as noted above), and computer programming from $44 \%$ to $34 \%$. The number of atudents using computers for word processing increased by 23 percentage points to $59 \%$, the number in English courses by 18 percentage points to $30 \%$, and the number for data processing by 5 percentage points to $24 \%$. Those reporting no computer experience declined by 9 percentage points to $17 \%$.
- The pursuit of honors or accelerated courses has increased since 1987 in every area of study but art and music. The largest increase is observed in social sciences ( 5 percentage points) followed by English and natural sciences (4 percentage points each) and foreign language and mathematies (2 percentage points each). The majority of honors students are female. In 1987 they were in the majority in all areas except mathematics ( $49 \%$ female) and natural sciences ( $50 \%$ female). By 1991, they had gained the majority in all areas. Foï 1992, the proportion of honor students who are female ranged from $51 \%$ in mathematics to $59 \%$ in English and foreign language.

Each year from 1988 to 1992 , the high school grade-point average of SAT takers rose (from 3.07 in 1988 to 3.12 in 1992) and the percentage of students with an $A_{( }\left(\Lambda_{+}, A_{1}, \Lambda_{-}\right)$ average increased (from $28 \%$ in 1988 to $31 \%$ in 1992). Dering this period, the mean SAT mathematical score did not change and the mean SAT verbal score declined five points. This suggests a possible raturn to grade inflation, which had appeared in the 1970 s but was not evident in the 1980s.

## College Plans

As students and parents pian for college, they start to decide on college majors, careers. and college degree goals.

Although high achool students tend to change their minds often, their answers to these questions in the agaregate can provide a good picture of what this cohort of students will study in college and how they compare with their predecessors.

Nearly one-sixth ( $17 \%$ ) of the 1992 seniors plan to major in Business \& Commerce, of percentage points lower than the high point of 1987 and 1988 . Health \& Allicd Services ( $16 \%$ in 1992, up from $11 \%$ in 1988) was second in popularity followed by Social Sciences and History ( $12 \%$ ), Engineering ( $11 \%$ ), and Education ( $8 \%$ ). Table E lists the five most popular majors for each sex and for the total group. Although men and women tend to differ in their choices, both groups chose Business \& Commerce as their second choice; of those who chose it, half are men and half are wornen. In contrast, of those who chose Engineering, $81 \%$ are men, and of those who chose Education, $78 \%$ are women.

Only 4\% plan to obtain a degree below the bachelor's level, about half the rate of 10 years ago. Even if the $20 \%$ undecided are counted as nonbaccalaurcate, about three quarters expert to earn a bachelor's degree or higher and half ( $50 \%$ ) expect to earn a graduate or professional degree. Female plans for graduate study increased from $30 \%$ in 1973, when the male rate was $42 \%$, to $51 \%$ in 1992 , now exceeding the znale rate of $48 \%$. Indeed. in 1973 female plans for a doctoral or related degree were half as frequent as male plans ( $11 \%$ versus $23 \%$ ), but in 1992 female plans exceed male plans ( $23 \%$ versus $20 \%$ ). Excluding those who are undecided about their degree goals, $64 \%$ of females plan graduate study ( $28 \%$ doctoral or related), to $60 \%$ for males ( $25 \%$ doctoral or related).

The percentage of students planning to apply for financial aid increased for the third year in a row, from $67 \%$ in 1989 to $72 \%$ in 1992 . More females ( $74 \%$ ) than males ( $69 \%$ ) plan to apply for financial aid. This is consistent with lower a verage family income of females.

## Table E. Most Frequently Planned Areas of Study

| Total | Female | Male |
| :---: | :---: | :---: |
| Business \& (17\%) | Health \& Ailied <br> Services (20\%) | Engineering (13\%) |
| Commerce (17\%) | Business \& |  |
| Health \& Allied |  |  |
| Services (16\%) | Commerce (16\%) <br> Commerce (18\%) |  |
|  <br> History (12\%) |  <br> History (15\%) | Health \& Allied <br> Services (11\%) |
| Engineering (11\%) | Education (12\%) |  <br> History (9\%) |
| Education (8\%) | Visual \& Performing <br> Arts (6\%) |  |

## Secondary School Characteristics

The information about the high schools that SAT takers attend is supplied by the schools thenselves. The most frequent characteristics of the schools attended by those taking the test are public school ( $82 \%$ ), suburban ( $33 \%$ ), with $\varepsilon$ senior class of $250-499$ ( $41 \%$ ). Of the $18 \%$ who attend nonpublic schools, most attend religiously affiliated high schools ( $71 \%$ ). The proportion of public to nonpublic high school students has remained relatively stable since 1975 , when type of high school was first reported.

[^0]:    
    \% Reproductions supplied by EDRS are the best that can be made *

    * from the original document. *
    

[^1]:    'More information about the content of these tests can be found in Taking the SAT and Taking the Achievement Tests. available free by writing to College Board ATP, P.O. Box 6200, Princeton, NJ 08541-6200.

[^2]:    *The averages for 1967 through 1971 are estimates. College-Bound Seniors reports were not prepared in those years.

[^3]:    * The Italian Achievement Test was first administered in June i990, and the Mathematics IIC Achievement Test was first administered in 1991. The numbers of 1992 college-bound seniors taking these testswere 749 and 1,713, respectively. Score data for these two tests are not given in this report.

[^4]:    - The first year for which SAT scores by ethnic group are available is 1976. They are not available for 1986 due to changes in the Student Descriptive Questionnaire (SDQ), which students complete when they register for the tests. The SiDO question on ethnic background was changed in 1987 to include the "Other Hispanic" category.
