ABSTRACT

Four-year graduation rates by high school, district, county, and state were studied for Arizona in 1991, partly to establish a baseline from which to measure the effect of student retention programs. Members of the class of 1991 were identified as those who were first-time ninth graders in the 1987-88 school year. The median graduation rate was 72 percent, ranging from 38 percent to 98 percent (excluding 3 special programs). The state goal of an 80 percent graduation rate by 1992 has already been met or exceeded by 46 high schools, and about 40 percent of the schools have eliminated differences in the graduation rates of minority and non-minority students. The average graduation rate is up 10 percentage points, compared to 1990; and the median rate is up 4 points, although these gains may be due in part to sampling or improved recordkeeping. Eight tables in the text allow comparison of graduation rates in different categories. Appendix A contains a ranking of 143 schools by graduation rate, and Appendix B contains tables for the 15 counties. Appendix C presents tables of graduation rates by school and district (147 pages). A sample of the form used for reporting the data is in Appendix D. (SLD)

I. INTRODUCTION

Graduation rates are frequently used as a means of measuring a school's success at retaining and graduating students. Both the U. S. Department of Education and the Arizona Department of Education (ADE) are committed to improving high school graduation rates. The State has established a goal of 80% graduation rate by the 1991-92 school year ¹.

Last year ADE, in response to a legislative mandate to conduct graduation rate studies, analyzed reports from 26 public school districts for the graduating Class of 1990 ². This year, all Arizona public schools with twelfth grade students were required to complete a graduation rate report for the Class of 1991. The study will be conducted annually.

This study attempts to determine the proportion of Arizona public high school students who complete a diploma program within four years ³. The nature of a longitudinal study requires diligence in tracking students over a period of time. Some districts, during the initial years of this study, will have difficulty retrieving historic information in the format required. ADE also recognizes that the graduation rates are likely to be understated because school staff are frequently unable to locate students who were unaccounted for in prior years ⁴.

The Class of 1991 graduation rate reports are summarized herein.

¹ The Committee for Educational Excellence was established and its responsibilities were defined by A.R.S. 15-741.01 (A2); Laws 1987, Chapter 245, Section 1, as amended by Laws 1988, Chapter 55, Section 1; and Laws 1989, Chapter 16. The National Goal for graduation rates (Goal 2) was adopted by the State. It reads "By the year 2000, the high school graduation rate will increase to at least 90 percent. Objectives: The nation must dramatically reduce its dropout rate and 75% of those students who do drop out will successfully complete a high school degree or its equivalent. The gap in high school graduation rates between American students from minority backgrounds and their non-minority counterparts will be eliminated."

² The National Center for Educational Statistics (NCES) roughly calculates graduation rates for the 50 states by dividing the number of high school graduates by the number of ninth-graders four years earlier. These "Wall Chart" rates are inaccurate and frequently misunderstood. The methodology adopted for this study will provide a more accurate representation of the actual graduation rate than the Wall Chart.

³ The graduation rate report will also count fifth-year graduates to allow an adjustment of graduation rates from the prior year.

⁴ Students who can be documented as transfers to another school are subtracted from the population base for the original school of attendance. By using a smaller denominator to calculate graduation rates, the graduation rate rises accordingly for every unaccounted-for student who can be reclassified.

II. EXECUTIVE SUMMARY

The purposes of this study were to determine four-year graduation rates by high school, district, county, and state in a consistent manner and to establish a baseline from which to measure the effect of student retention programs.

Members of the Class of 1991 were identified as those students who were first time ninth-graders in the school year 1987-88. Each individual high school added students who transferred into that class and subtracted those who transferred out or died. After identifying members of the Class of 1991, the school classified each member as (1) a graduate, (2) still enrolled, or (3) dropout/unknown. Graduation rates are adversely affected by the number of students who are unaccounted for, and are therefore artificially depressed in schools with poor student recordkeeping practices.

The median graduation rate (the middle point of the 145 schools' graduation rates when ordered by rank) was 72%. Excluding three special programs, the rates ranged from 38% (Yuma High School) to 98% (University High School in Tucson and Fredonia High School).

The State's goal of an 80% graduation rate by the year 1992 has already been met or exceeded by 46 of the high schools in this year's study. One objective of the State's goal is to eliminate differences in the graduation rates of minority groups and their non-minority (white) counterpart. About 40% of the schools have achieved this objective. The median graduation rates by ethnicity are: White - 75%, Black - 71%, Hispanic - 72%, American Indian - 64%, and Asian - 83%. In all five ethnic groups, mean graduation rates were higher for females than for males. Overall, the average male rate was 63%, compared to a female rate of 71%.

Graduation rates were lowest for Yuma County (51%) and highest for Graham County (82%). The median graduation rates of schools in rural areas was slightly higher (74%) than those in urban areas (71%). Mean graduation rates decreased as class size increased, with the most noticeable increase in classes of 500 or more students. This phenomenon may be attributable to different recordkeeping practices in some schools of larger populations.

Approximately six percent of the Class of 1991 are still enrolled and could graduate in their fifth year. Males, particularly Hispanic and Indian males, were more likely to be enrolled than female students. Fifth year graduation rates are highest for Indian students, which helps to close the ethnic gap in graduation rates.

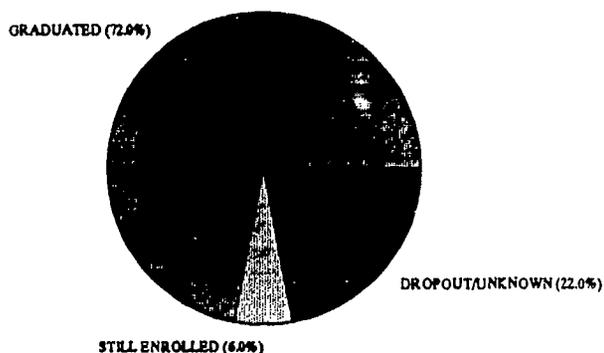

When compared to reports in the Class of 1990 Graduation Rate Study, this year's average graduation rate is up ten percentage points, from 57% to 67%, and the median rate is up four percentage points, from 68% to 72%. The mean and median graduation rates for every ethnic and gender subgroup improved from the Class of 1990 study. The proportion of students who are still enrolled did not change.

While this may appear to be remarkable improvement in graduation rates, the increases may also be attributable to sampling (only 30 school districts were involved in the Class of 1990 study) or improved recordkeeping, which improves graduation rates by decreasing the number of students whose status is unknown.

The ranking of schools by total graduation rate is provided in Appendix A. Appendix B shows the graduation rates by county. Appendix C presents each high school's graduation rate report.

The chart below shows graphically the proportions of the Class of 1991 which graduated, are still enrolled, or were unaccounted for.

Chart 1
Status of the Class of 1991

III. METHODOLOGY AND DEFINITIONS

In April 1991, forms and instructions for the Graduation Rate Study were mailed to all Arizona public high schools. Training workshops were held in ten locations throughout the state in September 1991 and detailed instruction manuals were distributed to school staff involved in data collection or reporting for the study. Reports were due October 1, 1991.

The report data were entered into a database and the accuracy of the input was verified. Apparent errors in form completion (e.g. mathematical errors) or reporting were discussed with the respective school's contact person and adjusted appropriately.

The Class of 1991 (also called "the population base") was defined as:

- o Students who were **first time ninth-graders** in the school year 1987-88; **plus**
- o Students transferring into that class from any other educational program at any time before the end of the study; **minus**
- o Students transferring out of that class at any time during the study; **minus**
- o Students who died before the end of the study.

Transfers out were considered to be:

- o Students for whom there is verifiable evidence (e.g. a transcript request, notification by a responsible adult) of transfer to another educational program, whether public or private, in or out of the state.

A graduate is defined as a student who:

- o Completed graduation requirements for a regular honors or high school diploma; **or**
- o Received a Certificate of Completion, Certificate of Attendance, or other non-traditional diploma recognized by the Arizona Department of Education as meeting graduation requirements.

A student who earned a G.E.D. is not considered a graduate.

The Graduation Rate is:

- o The total number of students in the Class of 1991 who had graduated before the end of the study, divided by the population base, expressed as a percentage.

The Still Enrolled Rate is:

- o The number of students in the Class of 1991 who had not graduated by the end of the four years and were still enrolled in school, divided by the population base, expressed as a percentage.

The Dropout/Unknown Rate is:

- o The number of students in the Class of 1991 who had not graduated by the end of the study and were not still enrolled in school, divided by the population base, expressed as a percentage.

With few exceptions, schools reported a number of students in all three categories (Graduates, Still Enrolled, Dropout/Unknown).

IV. LIMITATIONS

The validity of the findings of the Graduation Rate Study is adversely affected by a number of factors, itemized below.

Sampling

- o Participation in the study was mandatory. However, one school⁵ submitted a report with apparent errors and did not report corrections before the analysis began in December 1991. Another large school district⁶ was unable to report for its five high schools before the analysis began because of problems in converting computer systems. These six high schools were not included in the analysis.
- o Private high schools in Arizona were not included in the study.
- o Home taught students were not included in the study.

Data Collection

- o As with any new study, respondents were unfamiliar with the methodology. In spite of written and oral instructions, respondents could have misinterpreted directions and definitions of codes, calculations, and data elements.
- o One school⁷ could not report data by ethnicity and gender. Its data were included in the analysis whenever possible.
- o Not all schools have automated student information systems; the manual collection of data from four years of manual recordkeeping increased the possibility of errors.

Analysis

- o Within each district, the size of a subsample (e.g. Asian female) may have been very small, preventing a meaningful comparison of data by percentages.

⁵ Ganado High School

⁶ Mesa Unified School District

⁷ Prescott High School

- o Because one school with a large class can strongly weight the means⁸, some of the measurements are relevant on an averaged basis and others are not. For example, the low graduation rates reported by one large high school district⁹ lowered the state's graduation rate by four percentage points. The reader must therefore interpret means cautiously. Medians¹⁰ and ranges¹¹ are also cited in the analysis for comparative purposes.

Uncontrolled Variables

- o One of the more obvious uncontrolled variables is the variance in student recordkeeping systems. Efficient processing of information decreases the number of students who are unaccounted for, thereby decreasing the dropout/unknown rate and increasing the graduation rate. The reports vary in accuracy, depending on the school's willingness and ability to conduct the study diligently and the sophistication of the recordkeeping system.
- o When graduates and still enrolled students are subtracted from the cohort, the remaining students are counted as dropouts/unaccounted for. This number could be artificially high for a number of reasons, including the following:
 - o A student who transfers to another school district may neglect to request that his/her records be sent to the new district. If the receiving school does not request a transcript, the original school may not be able to track the student.
 - o The original school may have neglected to document a transfer of records.
 - o Some schools are more aggressive than others in pursuing students who were registered for the fall semester but then did not enroll.

Without documentation as transfers out, all of these students remain in the population base and are counted as dropouts/unknown. Better monitoring of student movement would improve the graduation rate, even if the number of graduates in the cohort does not change. It is reasonable to assume that the true graduation rate is higher than reported, but the degree to which that is true will not be known until recordkeeping systems become much more sophisticated.

⁸ The mean, also known as the average, is the total of all reported numbers divided by the number of schools reporting.

⁹ Phoenix Union High School District

¹⁰ The median defines the point where half of the schools reported higher and half reported lower.

¹¹ The range shows the highest and lowest number reported.

V. ANALYSIS

Profile

One hundred forty-five Arizona public high schools or high school programs submitted reports. Of these, one report did not report data by ethnic group or gender, and several schools submitted reports which were incomplete (e.g. failing to report the number of students still enrolled). Six high schools had not completed or corrected their reports before the analysis began.

The study represented a total of 38,461 members in the Class of 1991 and 25,659 graduates. Approximately 96% of the graduates finished in May 1991; approximately 2% of the class finished early and the other 2% finished after summer session (1991). The table below shows the ethnic and gender composition of the Class of 1991.

Table 1
Ethnic and Gender Composition of the Class of 1991

White male	32%
White female	30%
Black male	2%
Black female	2%
Hispanic male	12%
Hispanic female	12%
Indian male	4%
Indian female	4%
Asian male	1%
Asian female	1%
Total male	51%
Total female	49%

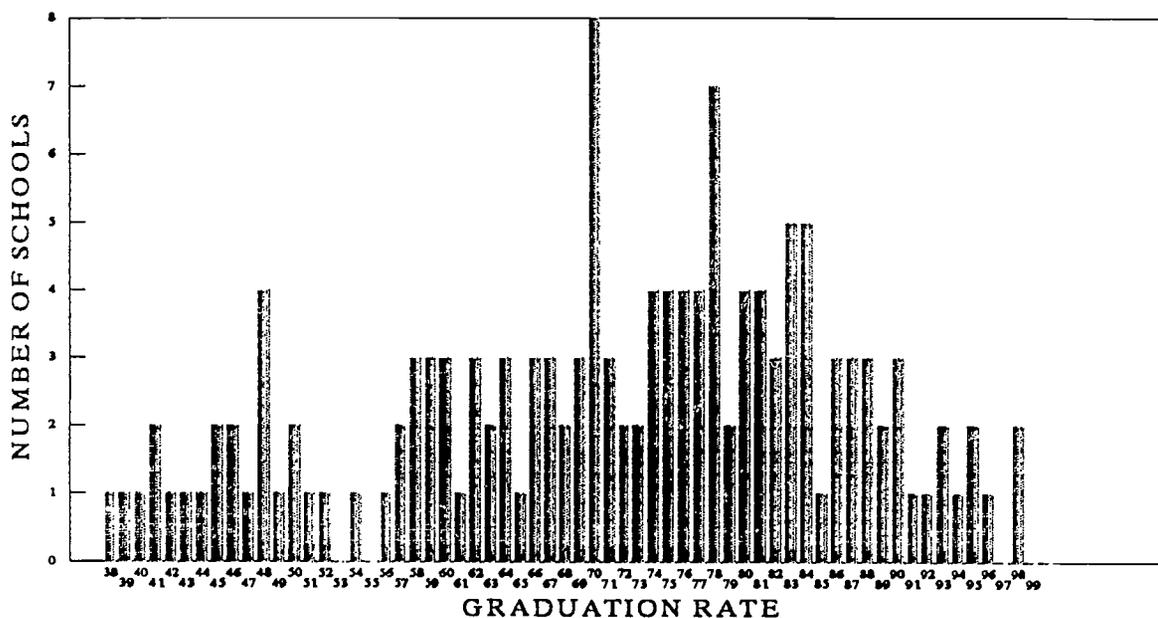

Graduation Rates

The median graduation rate (the middle point of the schools' graduation rates when ordered by rank) was 72%. The mean graduation rate for the state was 67%. As explained earlier, mean measurements can be deceptive: just one large school district with a low graduation rate lowered the state's mean graduation rate by four percentage points. If that district's low graduation rate is accurate, the state average is relevant. However, if the district's low rate is attributable to inefficient recordkeeping, the state's mean graduation rate is not a reliable representation and the reader should refer to median rates instead.

Excluding three of Tucson's special programs¹² which had graduation rates of 0%, the schools' graduation rates ranged from 38% (Yuma High School) to 98% (University High School in Tucson and Fredonia High School). Clearly, much of the discrepancy can be attributed to recordkeeping practices, but some of the variance can be attributed to the varying proportions of ethnic groups and other characteristics of the sample population.

The distribution of the schools' total graduation rates is shown in the chart below.

**Chart 2
Distribution of Graduation Rates**

The State's goal of an 80% graduation rate by the year 1992 has already been met or exceeded by 46 of the high schools in this year's study. Another 21 schools are within five percentage points of the goal.

¹² Special programs have been established in several of the larger school districts to accommodate small groups of students who have special needs (e.g. remedial education, alternative hours, teen parenting programs).

Graduation Rates by Ethnicity

One objective of the State's goal is to eliminate differences in the graduation rates of minority groups and their non-minority (white) counterpart. Comparing each school's collective minority graduation rate¹³ to its white rate, 25% of the schools have minority rates that are higher than the white rates; 35% have minority rates that are lower but within ten percentage points of the white graduation rate; and 40% have a spread of more than ten percentage points. In some schools, the difference in graduation rates for white students and the minority population spans forty percentage points.

The table below shows the mean and median graduation rates by ethnicity. The mean rates are lower in every ethnic group because of the schools with large populations and low graduation rates, which depressed the state means. In every ethnic group, the range of rates was 0% to 100%.

Table 2
Mean and Median Graduation Rates by Ethnicity

<u>Ethnic Group</u>	<u>Mean Grad. Rate</u>	<u>Median Grad. Rate</u>
White	72%	75%
Black	58%	71%
Hispanic	58%	72%
Amer. Indian	54%	64%
Asian	72%	83%

¹³ Black, Hispanic, and Indian students only.

Graduation Rates by Gender

In all five ethnic groups, graduation rates were higher for females than for males by approximately seven percentage points. The greatest difference between the genders was in the Hispanic population, where there was an eleven point spread between the male and female students. Shown by ethnic group and gender, the graduation rates are compared in the table below.

Table 3
Mean and Median Graduation Rates by Ethnic Group and Gender

<u>Ethnic Group</u>	<u>Mean Rate</u>	<u>Median Rate</u>
White male	69%	73%
White female	76%	79%
Black male	55%	67%
Black female	61%	76%
Hispanic male	52%	65%
Hispanic female	63%	73%
Amer.Indian male	51%	50%
Amer.Indian female	58%	67%
Asian male	69%	80%
Asian female	76%	100%
Total male	63%	71%
Total female	71%	75%

Graduation Rates by County

Mean graduation rates by county ranged from 51% (Yuma County) to 82% (Graham County). The table below shows by county the number of high schools reporting, the number of students in the population base, and the mean graduation rate.

Table 4
Graduation Rates by County

<u>County</u>	<u>Schools</u>	<u>Students</u>	<u>Grad. Rate</u>
Apache	6	974	59%
Cochise	10	1,323	78%
Coconino	7	1,418	73%
Gila	5	532	70%
Graham	4	380	82%
Greenlee	3	155	74%
La Paz	2	203	62%
Maricopa	46	19,814	65%
Mohave	4	1,328	53%
Navajo	9	1,217	71%
Pima	27	6,579	75%
Pinal	9	1,480	62%
Santa Cruz	2	465	73%
Yavapai	8	1,151	70%
Yuma	3	1,442	51%

Appendix B shows the county graduation rates and location of the counties.

There was no significant difference between the mean graduation rates of schools in rural areas and those in urban areas¹⁴, but the median rates were slightly lower for urban schools (71%) than for rural schools (74%). In the urban school category, the low graduation rates of Phoenix Union High School District (43%) and Yuma Unified School District (51%) high schools were offset by districts of similarly large populations and higher graduation rates - - Tucson Unified School District (80%) and Flagstaff Unified School District (84%).

¹⁴ Urban school districts included Phoenix, Tempe, Glendale, Scottsdale, Peoria, Deer Valley, Chandler, Paradise Valley, Gilbert, Tucson, Amphitheater, Flowing Wells, Sunnyside, Flagstaff, and Yuma.

Graduation Rates by Class Size

Mean graduation rates decreased as class size increased, with the most noticeable difference in classes of 500 or more students. The table below shows by class size, the number of schools in the study, the total number of students represented, and the graduation rate for that group.

Table 5
Graduation Rates by Class Size

<u>Class Size</u>	<u>Schools</u>	<u>Students</u>	<u>Grad. Rate</u>
Under 100	47	2,120	72%
100 - 199	25	3,425	74%
200 - 299	15	3,720	73%
300 - 399	11	3,785	70%
400 - 499	22	9,690	74%
500 - 599	10	5,503	57%
600 - 699	9	5,739	59%
700 - 799	6	4,472	54%

Students Who Are Still Enrolled

By definition, the graduation rate reports the percentage of students in the class who finished on time, i.e. within four years of beginning high school. At first glance, many readers assume the inverse of the graduation rate is the four year dropout rate, an assumption which does not consider that many students simply require more time to finish graduation requirements.

This year, 2,301 students or approximately 6% of the Class of 1991 were still enrolled and could graduate in their fifth year. Males, particularly Hispanic and Indian males, were more likely to be still enrolled than female students. The table below shows the proportion of each ethnic and gender subgroup of the Class of 1991 which was still enrolled.

Table 6
Proportion of Class of 1991 Still Enrolled by Ethnicity and Gender

White male	5%
White female	3%
Black male	7%
Black female	6%
Hispanic male	12%
Hispanic female	7%
Indian male	11%
Indian female	7%
Asian male	5%
Asian female	3%
Total male	7%
Total female	5%

The school reporting the highest proportion of students who were still enrolled was Baboquivari High School, with 37%. Five percent was the median rate of students still enrolled.

The likelihood that these students will graduate in their fifth year varies again by ethnicity and gender. In the pilot project (Class of 1990), approximately 5% of the class was still enrolled and almost half (47%) of them were reported to have graduated in their fifth year. Fifth year graduation rates were highest for Indian students (67%) and lowest for Hispanic students (34%). Slightly more than half (53%) of White students who were enrolled for the fifth year graduated. The populations of Black and Asian students still enrolled were too small to draw valid conclusions about a fifth-year graduation rate. The higher proportion of Indian students who are enrolled for a fifth year and their higher fifth-year graduation rate helps to close the gap between their graduation rates and other minorities.

If the Class of 1990 sample is fairly representative of Arizona students, it could be reasoned that the five-year median graduation rate for the state's Class of 1991 will be about 75%. By ethnic group, the median five-year graduation rates may approximate those shown in the table below.

Table 7
Four Year and Projected Five Year Median Graduation Rates
by Ethnicity and Gender

	<u>4 Yr.</u>	<u>5 Yr.</u>
White	75 %	77 %
Black	71 %	74 %
Hispanic	72 %	75 %
Indian	64 %	70 %
Asian	83 %	87 %
Male	71 %	74 %
Female	75 %	77 %

Dropout/Unaccounted For Members of the Class of 1991

The definitions and methodology used in the study allowed for only three outcomes. Members of the Class of 1991, at the end of four years, were either:

- o Graduates;
- o Still Enrolled; or
- o Dropouts/Unaccounted For

As noted in previous sections, the mean graduation rate was 67% and the mean proportion of students still enrolled was 6%. This suggests that approximately one-fourth of the Class of 1991 either dropped out or were unaccounted for. There are reasons to believe that many students in this category were unaccounted for because of inefficient recordkeeping (rather than dropouts), and if they could be tracked, would be reclassified as transfer students:

- o School staff did not know four years ago that they would be required to collect data for a longitudinal study on graduation rates. Those with automated recordkeeping systems may not have had the file structure to accurately categorize transfers or deceased students. The time and manpower required to manually search the student records of four years for transfer information may have been prohibitive in schools or districts with large populations.
- o Although schools generally make diligent efforts to locate students who stop attending classes during the school year, the same effort might not have been applied to fall no-shows¹⁵, if it was assumed that they had transferred to another

¹⁵ Students who were registered or expected to attend in the fall but did not appear

school district and a transcript request would be forthcoming.

The number of unaccounted-for students can dramatically affect the reported graduation rate, even if the number of graduates does not change. As an example, assume that Arizona High School identified 100 students belonging to the Class of 1991 and that of those, 69 graduated, 13 were still enrolled, six had dropped out, and 12 were unaccounted for. The graduation rate is 69% (69 graduates divided by 100 members of the class). Clerical staff at the school then made an effort to determine the current status of the 12 unaccounted-for members of the class. They found that 11 had transferred to other schools and one had dropped out. By reducing the number of students in the population base, the graduation rate improved to 78% (69 graduates divided by 89 members of the class).

Many schools, in order to comply with requirements of this study and the dropout study, have improved their student recordkeeping systems to better monitor student movement. The improvements in data collection and reporting are expected to have a noticeable (positive) effect on reported graduation rates over the next few years. In time, the unaccounted-for segment will be reduced to a minimum, providing a more accurate representation of the true graduation rate.

Comparison of Graduation Rates to Class of 1990

Last year, approximately 30 school districts voluntarily participated in the pilot project to test reporting methodology and to establish a baseline graduation rate for the state¹⁶. The median graduation rate increased four percentage points, from 68% to 72% and the mean graduation rate improved ten percentage points, from 57% to 67%. The rates for every ethnic and gender group improved.

As shown in the table below, 14 schools' or districts' graduation rates improved; 14 schools or districts had lower graduation rates this year; and one district's rates remained the same. A substantial change in the rates from one year to the next probably indicates variances in data collection and reporting, rather than an actual change in the graduation rates.

¹⁶ The Class of 1990 reports were compiled by district, not by individual high schools.

Table 8
Comparison of 1990 and 1991 Graduation Rates for Participating Districts

Class of 1991 4 year Graduation Rate 45%

Class of 1990 4 year Graduation Rate
for Phoenix Union High School District 40%

Class of 1990 5 year Graduation Rate
for Phoenix Union High School District 44%

There is an error in the Class of 1990 report. Last year, there were 35 students reported to be still enrolled. This year, 291 members of that class were reported to have graduated in their fifth year, district-wide.

The Class of 1990 study did not report graduation rates by individual high schools.

Class of 1991 4 year Graduation Rate 46%
 Class of 1990 4 year Graduation Rate
 for Phoenix Union High School District 40%
 Class of 1990 5 year Graduation Rate
 for Phoenix Union High School District 44%

There is an error in the Class of 1990 report. Last year, 35 members of that class were reported to be still enrolled, district-wide. This year, 291 students were reported to have graduated in their fifth year. The Class of 1990 study reported graduation rates by district, not by individual high schools.

Class of 1991 4 year Graduation Rate 43%

Class of 1990 4 year Graduation Rate
for Phoenix Union High School District 40%

Class of 1990 5 year Graduation Rate
for Phoenix Union High School District 44%

There is an error in the Class of 1990 report. Last year, 35 members of that class were reported to be still enrolled, district-wide. This year, 291 students were reported to have graduated in their fifth year. The Class of 1990 study reported graduation rates by district, not by individual high schools.

Class of 1991 4 year Graduation Rate 46%
 Class of 1990 4 year Graduation Rate
 for Phoenix Union High School District 40%

Class of 1990 5 year Graduation Rate
 for Phoenix Union High School District 44%

There is an error in the Class of 1990 report. Last year, 35 members of that class were reported to be still enrolled, district-wide. This year, 291 students were reported to have graduated in their fifth year. The Class of 1990 study reported graduation rates by district, not by individual high schools.
