ABSTRACT

The 73 tests included in this bibliography are aptitude tests for specific occupations that require some level of manual dexterity for successful performance. Many of the tests measure manual and finger dexterity, abstract, verbal, and numeric reasoning, and motor coordination. Some of these tests are work samples requiring manipulation of actual materials used on the job or the manipulation of objects. Many of these tests can only be purchased by trained counselors or personnel departments. This document is one in a series of topical bibliographies from the Test Collection (TC) at the Educational Testing Service (ETS) containing descriptions of more than 18,000 tests and other measurement devices prepared by commercial publishers, teachers, educational institutions, professional associations, departments of education, counselors, etc. Each description contains the following basic information: TC Accession Number (a six-digit identification number assigned by the Test Collection); the title of the instrument; personal or institutional author; year of publication or copyright; availability source; grade level for which test is suitable; age level for which test is suitable; and abstract. Other information, which is provided when known, includes subtests, number of test items, and time required to complete the test. Information on accessing the Test Collection via Internet concludes the document.

INTRODUCTION

Scope of Bibliography

Included in this bibliography are aptitude tests for specific occupations that require some level of manual dexterity for successful performance. Some of these tests are work samples requiring manipulation of actual materials used on the job or the manipulation of objects. Many of these tests can only be purchased by trained counselors or personnel departments. Please consult each publisher before ordering.

Availability

Copies of the tests described on the following pages must be obtained directly from the publisher, as stated in the AV AVAILABILITY section of each test citation. Generally, the Test Collection does not have distribution rights for its holdings. However, in special instances, the Test Collection has been granted permission from individual authors to distribute their tests, which are primarily research instruments. The AV AVAILABILITY information for these instruments will be Tests in microfiche, Test Collection, Educational Testing Service, Princeton, NJ 08541.

Guide to Citation Elements

The following is a guide to the various elements which may be present in a test citation:

AN - Six-digit identification number assigned by the Test Collection

TI - Name of the instrument

DT - Components within the overall test which assess particular skills or factors

AU - Personal or institutional author

YR - Year test was published or copyrighted

AV - Test publisher or distributor; the organization which sells or distributes the instrument

Copyright (c) 1992 by Educational Testing Service. All rights reserved.
GL - List of grades for which test is suitable
TG - List of ages for which test is suitable
AB - A description of the test and its purpose

AN ACCESSION NUMBER: TC016629 ETS 9004.
TI TITLE: Vocational Aptitude Battery (VAB).
DT SUBTESTS: General Learning Ability or Intelligence; Verbal Aptitude; Numerical Aptitude; Spatial Aptitude; Form Perception; Clerical Perception; Motor Coordination; Finger Dexterity; Manual Dexterity; Eye Hand Foot Coordination; Color Discrimination.
YR YEAR: 88.
TG TARGET AUDIENCE: AGE 13-17, Adults.
NT NOTES:
TIME: 70.
ITEMS: 725.
AB ABSTRACT: The VAB was designed for use in high schools, vocational rehabilitation programs, and job training programs to assess aptitudes identified by the U.S. Department of Labor (D.O.L.). The VAB is made up of separate tests for each aptitude so the entire battery need not be administered when only a few subtests are needed for job placement. All are given when vocational guidance testing is needed. The VAB is for use by guidance, employment, and training counselors in all fields. All tests are paper-and-pencil except spatial relations and the coordination and dexterity subtests which require manipulative responses. The clerical subtests require both. Uses grade 4 vocabulary. Tests are timed (3 to 5 minutes). Norms and validity information are available on various disadvantaged populations.

TG TARGET AUDIENCE: AGE 13-17, Adults.
NT NOTES:
AB ABSTRACT: Designed for use in vocational guidance and employment selection of literate individuals. This version is for people who are deaf. Twelve tests measure nine vocational aptitudes: general learning ability; verbal aptitude; numerical aptitude; spatial aptitude; form perception; clerical perception; motor coordination; finger dexterity; manual dexterity. Validated to predict performance in over 400 professional, skilled, semi- and unskilled occupations.

AB ABSTRACT: This test of manual dexterity requires both fine-motor and visual-motor skills. May be administered to subjects who have vision that is adequate for newspaper reading. Requires the subject to push a pin through open holes in a cardboard and then through a paper sheet. May be used in clinical settings. Not suitable as a neuropsychological screening test. May be used as a supplement to other neuropsychological testing. Used in both dominant and nondominant hand. Can define handedness and dexterity changes. The test is brief and portable requiring only pin and paper. Norms are available for adults. May be administered by non-professionals. Scored by professionals.

AB ABSTRACT: This performance measure uses paper and pencil tests and apparatus to examine basic perceptual skills as they relate to occupational and training requirements in handicapped and nonhandicapped youth, nonhandicapped adults and dislocated workers. The system contains cognitive, perceptual, dexterity and attitude tests and measures for use in vocational evaluation. Covers hearing ability, auditory localization and memory, visual and color acuity, manual dexterity, reaction time, abstract reasoning, non-verbal learning, response to stress, persistence, literacy skills, arithmetic, reading, interest, social competency, supervisory potential, and personality attributes.

AB ABSTRACT: Assesses individual’s job-related knowledge, skills, and aptitudes for use in career exploration and job or training placement. It is a comprehensive, computerized screening instrument which gathers large quantities of information in short periods of time. Although it is meant to interface with other assessment programs, it can also stand alone. The subject’s performance is measured against the Worker Qualifications Profile of the Dictionary of Occupational Titles. During the computer exercises, a large number of factors are measured in approximately 30 minutes. These factors include shape discrimination, problem solving, and academics. Subjects begin with a brief vision screening test and a hand-eye coordination component. Other components include a hardware exercise which assesses tool use, assembly skills, dexterity, manipulation, and ability to follow instructions; independent perceptual screening to measure tactile sensitivity and spatial aptitude; talking/persuasive screening related to language development; physical capacity and mobility to provide non-medical screening before training or job placement; and vocational interests and awareness used to analyze vocational interests and to assess
subject's basic understanding of the world of work; and an access
type which allows comparison of evaluatee's performance to specific
requirements for success in a job, training, or classroom setting.
Available for use on IBM PC or XT or Apple IIe.

AB ABSTRACT: Evaluates the suitability of candidates of all levels of
experience for secretarial positions. Measures the following job
criteria: attention to detail, alphabetizing and filing, grammar and
punctuation, spelling and vocabulary, people contact desired, manual
dexterity, emotional stability, logical and problem solving ability,
and numerical skills. Can be scored either by client or Wolfe.

AB ABSTRACT: Developed to be used for predicting the successful training of an applicant in the field of cosmetology. It is not to be used as a device to reject applicants. Used to assess certain components of aptitude for the practice of cosmetology. Parts I, II, and III are written tests and consist of an interest inventory, word analogy items, and a comprehension and reasoning test. Part IV is a performance measure that assesses hand, finger, and fingertip dexterity.

AB ABSTRACT: APTICOM, developed by the Vocational Research Institute, is a computerized, desktop console designed specifically for assessing aptitudes and job interests. It is intended for use in the vocational guidance and counseling process and in employment and training selection and placement. The tests were designed to measure aptitude constructs which have been related to occupational success using the Department of Labor’s defined aptitudes. They are: Intelligence; General Learning Ability, Verbal Aptitude, Numerical Aptitude, Spatial Aptitude, Form Perception, Clerical Perception, Motor Coordination, Finger Dexterity, Manual Dexterity, and Eye-Hand-Foot Coordination. APTICOM is computerized and is self-scoring and self-timing, portable, and can be administered individually or up to 12 people at one time. The APTICOM Occupational Interest Inventory provides schools, rehabilitation, industry, and job training programs with an interest measure that simulates examinees’ enthusiasm, minimizes time requirements, and is computerized. When both the aptitude and interest inventory are administered, the results are a means of initiating occupational exploration with information refined to the level of the Department of Labor Work Groups. The APTICOM Report gives aptitude scores and Occupational Aptitude Patterns (OAPs) based on these scores. It also gives interest scores and the interest areas related to these scores. The Occupational Interest Inventory Report reveals the degree of interest indicated by the test taker and an individual profile is generated showing the interest in various work tasks as compared to the normative sample. The final portion of the report lists those areas of employment in which the applicant has shown both the required aptitude and high interest.

AB ABSTRACT: Timed battery of tests which measure arm, hand and finger
dexterity. Designed as an aid in the selection of personnel for job
requiring manual dexterity such as assembly line tasks that require
the manipulation or sorting of parts. Usually only two tests are
given with several timed trials recorded for each test; time to
administer is about 10 minutes per test. May be administered either
to a group or to an individual. The Displacing and the Turning
tests have been modified for use with the blind. Requires the use
of a test board and special blocks. Has also been used with
students in elementary through university levels and with physically
handicapped persons. Available in French under title, Test de
Dexterite Manuelle de l'Universite du Minnesota (TC840013).

AB ABSTRACT: The Morrisby Differential Test Battery is a comprehensive battery of tests which objectively assesses a person's intellectual structure and basic personality characteristics. The DTB is supplied only to "Registered Approved Users." Registration as an approved user can be obtained by successfully completing a five-day training course specifically on the DTB. Speed Tests 1-4 measure leadership qualities, confidence, flexibility, resistance to change, speed of awareness, personal commitment, tenacity, and initiative. Simple tasks, rather than a questionnaire approach is used. Speed Tests 5 and 6 give a measure of manual dexterity, speed and skill, important in many occupations. Administration time for total DTB is three hours and fifteen minutes.
ETS TEST COLLECTION VIA INTERNET

The ERIC Clearinghouse on Assessment and Evaluation has mounted on its gopher site a database to help locate tests. This database can be used by accessing the gopher at the address: GOPHER.CUA.EDU The ERIC/ETS Test Collection is located under: Special Resources/ERIC Clearinghouse on Assessment and Evaluation/Test Locator/

To search the database, enter keywords from the title or descriptors. For example, if you would like to search for tests on oral language proficiency, you could type in all three words, or oral and proficiency. You may get slightly different results, but you will have information on a lot of tests to look at. If you know the title of the test, the best way to search is to use the main words in the title, not necessarily all of the words in the title. If you are looking for the Wechsler Intelligence Scale for Children-Revised, the most efficient way to search is with the words Wechsler, intelligence, and children.

INTRODUCTION TO THE ETS TEST COLLECTION

The Educational Testing Service (ETS) Test Collection database contains records on over 9,500 tests and research instruments. These records describe the instruments and provide availability information. The Test Collection encompasses virtually all fields from vocational interest inventories for adults to instruments that measure shyness or predict recidivism in released criminal offenders, to assessment of managerial style, as well as education-related achievement and aptitude tests. The test descriptions are indexed with ERIC Thesaurus terms for subject accessibility.

This is a joint project of ETS and ERIC_AE. ETS Library and Reference Services Division prepares the descriptions. ERIC_AE maintains the database and hosts the Search System. ERIC_AE has also begun to put ETS prepared test descriptions into the ERIC Resources in Education database. About 15 descriptions are added each month.

WHAT KIND OF TEST ARE DESCRIBED?

The Test Collection database collects a variety of instruments: achievement tests, aptitude tests, personality measures, attitude measures, career/vocational interest measures, occupational tests such as nursing or sales skills inventories. Many research instruments are collected as well as tests from commercial publishers.

WHAT INFORMATION IS AVAILABLE ABOUT THE TESTS?

The title, author, publication date and source appear in the record. An abstract describing the instrument, intended population, and uses accompanies the record. Subject terms give the age and grade level information as well as ERIC Thesaurus terms that describe the test.

DOES THE TEST COLLECTION DATABASE REVIEW THE TESTS?

No, other reference guides such as Mental Measurements Yearbooks,
Tests: A Comprehensive Reference for Assessments in Psychology, Education, and Business, and Test Critiques distributed by Pro-Ed fill that role. You can search the tables of contents for the MMY and Test Critiques through the ERIC_AE Gopher Site.

ARE ALL THE TESTS IN THE DATABASE CURRENTLY IN PRINT?

No, some of the items are out of print. We suggest contacting the publisher for permission to use out-of-print materials. Phone numbers can be located using another menu option on the ERIC_AE Gopher Site.

WHERE CAN I SEE THE ACTUAL TEST INSTRUMENTS?

Availability information is provided in the records. Many colleges and universities have test collections in their libraries. Talk to your local librarian for more information.

WHAT IS TESTS IN MICROFICHE?

Tests in Microfiche is a subcollection of unpublished research instruments that are available for purchase in microfiche from the ETS Test Collection. The collection includes instruments appropriate for diverse populations (infants, learning disabled, adults, etc.) Each set spans a wide range of topics such as job satisfaction and attitudes towards school. More than 800 tests are available.

DOES THE TEST COLLECTION PROVIDE REFERENCE SERVICES?

No, the descriptive information in the database should help answer most questions people may have. And the publisher of the particular test is the most competent source of information. You can, however, route general inquiries to ERIC_AE@CUA.EDU.
