## ABSTRACT

In their effort to provide quality programing for their diverse student body, the Des Moines Public Schools continually evaluate their teaching and student outcomes. This report presents results about student performance on the following tests: (1) Iowa Tests of Basic Skills (ITBS) ; (2) Lowa Tests of Educational Development (ITED) ; (3) American College Tests (ACT) ; (4) Scholastic Aptitude Test (SAT); (5) Advanced Placement Tests; (6) performance-based assessment; and (7) curriculum-aligned assessments of the school district given in grades 3 through 12 (the district's. criterion-referenced assessment). The majority of the 31,524 students in Des Moines are achieving at or above grade level, and many students are exceeding normal expectations. Growth is occurring in most areas. Teachers appear to be teaching the curriculum and students appear to be learning it. Ten tables and 11 figures (largely graphs) present test results. Six appendixes contain a list of definitions and 19 tables of summary results and statistics. (SLD)

## ASSESSMENT PROGRAM RESULTS

 1992-1993OCTOBER, 1993

## The Des Moines Public Schools District Assessment Program October, 1993

The Des Moines Public Schools continue to focus organizational energy on the academic growth and development of our diverse urban student body. The primary goal of the academic assessment program is to improve teaching and increase learning. Toward this end, three purposes of the academic assessment program have been delineated. These are: 1) to assess student leaming, 2) to diagnose instructional need, and 3) to provide information for program evaluation. Within the context of diversity, illustrated by wide variability in factors such as socioeconomic background, ethnicity, and student mobility rates, specific objectives have been developed to monitor and report the educational development of our 31,524 students. The specific objectives are:

1. To allow the teacher to monitor individual and composite student learning progress in basic skill and higher level thinking areas.
2. To provide information to students, parents, and school personnel for the purpose of making more personalized insíructional decisions.
3. To provide student achievement data for the purpose of conducting program evaluations and curriculum revisions.
4. To provide selected student achievement data as one component of student progress reporting to the public.
5. To provide requested student performance information to meet and comply with state and federal guidelines.
6. To ensure that student performance outcomes resulting from the academic programs provided by the Des Moines Public Schools compare very favorably with those of other similar districts in the nation.

Assessment results are demonstrations of student achievement regarding both knowledge and performance cutcomes, and is an indication that a district is indeed achieving its mission. Any form of assessment, used in isolation, provides only partial information about a child's academic development or a school district's overall curriculum. By obtaining results from multiple methods of assessment, decisionmaxers havs more information to refine the teaching-for-learning process.

Results available at the student, classroom, building, and district levels are used for different purposes. To personalize instructional decisions, continuous monitoring of student progress provides information for planning activities that will address the needs of each leamer. Intemally, test scores are not used to prove the superiority of one student over another. The evaluation of student achievement information at the classroom, building, or district level allows identification of strengths as well as academic areas in need of improvement. In order to maintain an appropriate breadth
of focus of the curriculum, student achievement trends in districts with similar characteristics can be monitored. In addition, disaggregating student achievement information provides an audit system to monitor equity, to make sure all students have an opportunity to grow and to achieve success.

The Des Moines Public Schools, in its efforts to provide quality programming for its diverse student body, continually evaluates the process of teaching for leaming. To identify areas for study and analysis, various methods of student outcome assessment are used. The purpose of this report is to provide information to the Eoard of Directors and to the public about the achievement of our students on the following:
-lowa Tests of Basic Sk.i.is (ITBS), a series of norm-referenced tests, given to students in third, fourth, sixth, and seventh grades.
-Iowa Tests of Educational Development (ITED), a series of norm-referenced tests, given to a sample of students in tenth grade.
-The American College Tests and the Scholastic Aptitude Test, a series of norm-referenced tests, usually given to high school juniors and seniors for the purpose of determining probable success in higher education.
-Advanced Placement Tests, a series of criterion-reforenced tests given to high school students seeking college credit prior to enrolling in college.
-Performance Based Assessment, a type of assessment in which the test is the leaming activity itself.
-Curriculum Aligned Assessments, a series of objectives-based tests, given in grades two through twelve and covering most subject matter areas in the Des Moines curriculum.

Disaggregation of assessment information is an integral component of planning for district growth. Euggested groups for disaggregating data include gender, ethnicity (minority or non-minority status), and a sosioeconomic variable. In our urban school district, disaggregation of data is primarily used to evaluate the growth and achievement of minority and non-minority students. Disaggregation of data serves as an equity indicator in attempting to determine whether all students are leaming and to what degree.

## Utility of Standardized Assessment Information

The primary use of norm-referenced (or standardized) assessment (ITBS, ITED) is to provide general information regarding how our district as a whole compares with other urban districts with similar characteristics across the state and nation. With our current mobile society, it is important that a district not be so tocused on its own curriculum objectives that it ignores what is being taught in other districts across the country. Standardized assessment helps to prevent this tunnel vision from developing by
selecting items that test a broad range of objectives from each subject area. These standardized tests are not intended to perfectly match any district's curriculum. However, keeping in mind that the ITBS is an assessment of basic skills, it is an excellent measure of student achievement in the various areas.

The Des Moines Public Schools use national school ITBS and ITED norms as the standard of comparison, since our district's urban demographic characteristics are more reflective of a national standard than a composite state standard. As an illustration, the eight largest school districts in the state (Unban Education Network members) represent approximately 25 percent of lowa's student population. Urban Network districts comprise less than two percent of all school districts in lowa. With regard to individual scores, a student scnring at the 50th percentile is on grade level, and should be able to enter most schools across the nation and begin achieving success.
The ITBS and ITED are timed tests. This means that a specific amount of time is given to complete the items in a given section. As such, timed tests may penalize students who take their time and answer only a small number of items correctly. For this reason, the ITBS may not be a perfect match for evaluating the performance of students in buildings where the philosophy is to teach students to take one's time and do a good job.

## The lowa Tests of Basic Skills

The lowa Tests of Basic Skills is a norm-referenced test battery developed by the lowa Testing Programs in lowa City, lowa. It is administered at midyear in Grades 3, 4, 6, and 7 in the Des Moines Public Schools, and measures basic skills in vocabulary, reading, language, work study, and mathematics. Ficores are reported in percentiles, grade equivalents, and normal curve equivalents. The ITBS tests are designed so that approximately $1 / 3$ of the material is below grade level, approximately $1 / 3$ is on grade level and approximately $1 / 3$ is above grade level. Considering the basic design of the ITBS (or any norm-referenced test), students performing at the 50th percentile are at the expected test and grade level average. For example, fourth grade students scoring at the 50th percentile in February also have a grade equivalent of approximately 4.5.
On tests administered at the same time of year on subsequent years, a student scoring at the 50th percentile in both years has experienced a year's growth. A student scoring at the 50th percentile in 6th grade and at the 60th percentile in 7th grade might be said to have experienced accelerated achievement growth, over and above that which might be normally expected during that period of time. Since the ITBS was administered in the Des Moines Public Schools in the fall of 1991 and again in February of 1993, a student scoring at the 50th percentile in third grade (1991-92) and again in the fourth grade (1992-93) would have experienced an achievement growth of approximately one and one-half years.

## Elementary School ITBS

The Board of Directors approved a revised assessment program in June of 1991. A change was made in the grade levels assessed by the ITBS. The ITBS is currently administered in Grades 3 and 4, instead of Grades 2 and 4 as in the past years. This change allows data in this report to be used in examining student achievement and growth from Grade 2 in 1990-91 to Grade 3 in 1991-92 to Grade 4 in 1992-93.

Grade 3 (1991-92) to Grade 4 (1992-93). The Des Moines Public Schools are proud of the growth recorded by students at Grade 3 (in October 1991) and a similar group of students at Grade 4 (in February 1993). Given a fourth-grade student mobility rate ranging from 2 percent to 32 percent in the district's elementary schools and a socioeconomic variable ranging in one school where 12.5 percent of the students received free or reduced meals to 94 percent in another, the district continued to record student growth in achievement. For this group of students, assessed in the third grade in 1991 and in the fourth grade in 1993, the district's national composite score on the ITBS increased from the 55th percentile to the 66th percentile.

Of the district's 39 elementary centers, 33 ( $85 \%$ ) recorded an increase in composite scores varying from 1 to 32 percentile points. Seven of these elementary centers improved by at least 20 percentile points, and eleven others improved by at least 10 percentile points. Two elementary centers' scores remained unchanged, with buth scoring above the 50th percentile. Scores at four elementary centers ( $10 \%$ ) dropped between 3 and 18 percentile points. However, all these elementary centers remained above the 50th percentile (Appendix B). An analysis of the ITBS subtests for the 1992-93 fourth graders compared to their 1991 third grade scores indicates improvement on all five subtests (Appendix D). Gains ranged from three percentile ranks on the vocabulary subtest to 20 on the mathematics subtest.

Both the percentage of students receiving free or reduced price meals and a building's mobility rate were significant and negatively related to building scores. As either of these indices increased, scores tended to decrease. Correlations were -.43 and -.77 , respectively.

Grade 2 (1990-91) to Grade 4 (1992-93). Comparison of the achievement levels of Grade 2 students in 1990 (October) was made with the achievement levels of Grade 4 students in 1993 (February). For this similar group of students, tested in the second grade in 1990 and in the fourth grade in 1993, the district's composite score on the ITBS increased from the 47th percentile to the 66th percentile.

Of the district's 39 elementary centers, 31 (79\%) recorded an increase in composite scores varying from 9 to 80 percentile points over the two-year period. Ten of these elementary centers improved by at least 20 percentile points, and $19 \mathrm{c}^{{ }^{2}}$, ers improved by at least 10 percentile poinis. One elementary center's score remained unchanged and above the 50th percentile. Scores at seven elementary centers ( $18 \%$ ) experienced a score decrease between 2 and 14 percentile points. However, six of these elementary centers remained above the 50th percentile.

## Middle School ITBS

Continuing the focus on basic skills improvement in the Des Moines Public Schools, the results of middle school students in Grade 6 (1991-92) and Grade 7 (1992-93) were analyzed. Against a background of seventh-grade student mobility rates ranging from 8 percent to 23 percent and a socioeconomic index measured by the percent of students eligible for free or reduced meals in one middle school of 23 percent to another extreme of 56 percent, the district recorded a minimal decline in achievement scores. For this group of students, tested in the sixth grade in October 1991 and in the seventh grade in February 1993, the district's composite score on the ITBS decreased frorn the 65th percentile to the 63rd percentile.

Of the district's ten middle schools, one (10\%) recorded an increase in composite score of 1 percentile point. The score at two middle schools remained the same, both above the 50th percentile. The scores at seven middle schools decreased between 1 and 7 percentile points. Eight of the ten middle schools' scores at the seventh grade remained at or above the 50 th percentile (Appendix C). An analysis of the subtests indicates improvement on the reading and language subtests. The average gain was two percentile ranks. Declines were recorded on the vocabulary, mathematics, and work-study subtests. It should be noted that scores on all five subtests remained above the 50th percentile (Appendix D).
Both the percentage of students receiving free or reduced price meals and mobility rate were found to be significant and negatively related to building scores at Grade 7. As either of these indices increased, scores tended to decrease. Correlations were -.68 to -.83 , respectively.

## Disaggregated ITBS Scores

Disaggregated ITBS data compared minority and non-minority growth rates by using median percentile scores. For the students in second grade in 1990-91 and in fourth grade in 1992-93, minority student achievement increased from the 31st (2nd grade) to the 41 st (4th grade) percentile, while non-minority student achievement increased from the 55 th ( 2 nd grade) to the 63rd (4th grade) percentile. The results indicate that both groups are achieving. Mure importantly, it indicates that the achievement gap between minority and non-minority students is closing and not widening in district elementary and middle schools. Table 1 shows the minority-non-minority composite differences for ail students tested on the ITBS in February of 1993 (1992-1993 school year) and in prior years.

Table 1. Disaggregated 1993 ITBS Scores for Minority and Non-Minority Students Using Median Percentile Scores

| Grade Level \& Year | Minority | Difference | Non-Minority |
| :--- | :---: | :---: | :---: |
|  |  |  |  |
| Gr. 2-1990-91 | 31 | $(24)$ | 55 |
| Gr. 3-1991-92 | 35 | $(24)$ | 59 |
| Gr. 4-1992-93 | 41 | $(22)$ | 63 |
| Net Change | +10 |  | +8 |
| Gr. 2-1988-89 | 31 | $(25)$ | 56 |
| Gr. 4-1990-91 | 41 | $(23)$ | 64 |
| Gr. 6-1992-93 | 40 | $(22)$ | 62 |
| $\quad$ Net Change | +9 |  | +6 |
|  |  |  |  |
| Gr. 4-1989-90 | 52 | $(15)$ | 67 |
| Gr. 6-1991-92 | 44 | $(22)$ | 66 |
| Gr. 7-1992-93 | 44 | $(20)$ | 64 |
| Net Change | -8 |  | -3 |

Another way to evaluate disaggregated assessment information is to examine the percent of students in a particular grade scoring at or above a specified standard. With the ITBS, differences between disaggregated groups regarding the number or percent of students scoring at or above grade level can be examined. Table 2 shows the percent of students scoring on grade level (50th percentile) or higher on the February 1993 administration of the ITBS. Overall, greater than $60 \%$ of the students scored at or above grade level on the ITBS. Gender differences in achievement are minimal. There are substantial differences between non-minority and minority students, and between students receiving subsidized meals and those not receiving subsidized meals.

Table 2. February 1993 ITBS: Percent of Students Scoring On Grade Level (50th Percentile) or Higher

| Grade | All <br> Students | Males | Females | Non- <br> minority <br> Students | Minority <br> Students |  <br> Reduced | Non Free <br>  <br> Reduced |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Grade 3 | 61.0 | 60.3 | 61.8 | 65.0 | 44.1 | 43.5 | 72.5 |
| Grade 4 | 61.0 | 60.0 | 62.1 | 65.9 | 40.4 | 43.5 | 72.0 |
| Grade 6 | 60.7 | 60.4 | 61.0 | 65.2 | 40.7 | 39.6 | 71.8 |
| Grade 7 | 61.7 | 59.5 | 63.8 | 66.3 | 42.1 | 41.6 | 70.7 |

## The lowa Tests of Educational Development

The lowa Tests of Educational Development is a norm-referenced test battery developed by the lowa Testing Programs in lowa City, lowa. This year, the ITED was administered to Grade 10 students using a inatrix sampling procedure. The purpose of using matrix sampling was to reduce the test-taking time and increase the instructional time by three to four hours per student. The sample of students taking the ITED subtests was based on the number of tenth grade students across the district. Since the matrix sampling technique creates a lack of representativeness at the building level, it is not statistically possible to determine a building composite. Composite scores of district 10th grade students who took the subtests are shown in T.ble 3.

TABLE 3. ITED Mean Percentile Scores by Subtest

| Subtest | $91-92$ | 92.93 |
| :--- | :---: | :---: |
| Correctness of Expression | 70 | 51 |
| Quantitative Thinking | 91 | 92 |
| Social Studies | 62 | 62 |
| Natural Sciences | 52 | 40 |
| Literary Materials | 61 | 41 |
| General Vocabulary | 75 | 45 |
| Sources of Information | 82 | 83 |
| Composite | 69 | 60 |
| Reading Total | NA | 58 |

It should be noted that the scores for the Quantitative subscale may be inflated, since the sample taking this subtesi included gifted and talented students attending Central Academy. For the same reason, the scores on the other subtests may underrepresent pverage student aćnievement.

In order to provide an opportunity for students who wished to take the entire ITED battery, a special session is held on a Saturday during the year. On November 9 , 1991, fourteen students took the ITED at Lincoln High School. Interested students included five from the 9th grade, four from the 10th grade, and five from the 11th grade. Twelve of the fourteen students scored above the 50th percentile, ten of whom scored above the 80th percentile. On February 13, 1993, at 1800 Grand, five students took the ITED. Three of the five students scored above the 80th percentile.

ITED data were disaggregated to examine achievement differences between minority and non-minority students. Subtest scores are in Table 4.

Table 4. Disaggregated 1993 ITED Scores for Tenth Grade Minority \& Non-Minority Students Using Mean Percentile Scores

| Subtest | Minority | Non-Minority | Difference |
| :--- | :---: | :---: | :---: |
| Correctness of Expression | 40 | 51 | 11 |
| Quantitative Thinking | 60 | 74 | 14 |
| Social Studies | 37 | 60 | 23 |
| Natural Sciences | 27 | 49 | 22 |
| Literary Materials | 36 | 48 | 12 |
| General Vocabulary | 40 | 44 | 4 |
| Sources of Information | 48 | 67 | 19 |
| Composite | 47 | 56 | 9 |
| Reading Total | 37 | 53 | 16 |

## American College Tests (ACT)

Thia district's college-bound students maintained comparable scores in their mean performance on the ACT. Eight hundred fifleen students ( $51 \%$ ) of the Class of 1993 took the ACT. The mean score for this group was 20.8 (out of 36 ), compared to 21.1 in 1992 and 20.9 in 1991. The national mean for this class was 20.7 and the lowa mean was 21.8. Table 5 shows disaggregated ACT scores:

Table 5. ACT Composite Score Comparisons (Means) Disaggregated by Ethnic Group

|  | All <br> Students |  | AfricanAmerican |  | American bndisn |  | White |  | Hispanic |  | Asian |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | 1992 | 1993 | 1992 | 1993 | 1992 | 1993 | 1992 | 1993 | 1992 | 1993 | 1992 | 1993 |
| Number of Siudenis | 769 | 815 | 69 | 59 | 4 | 3 | 592 | 629 | 16 | 10 | 52 | 60 |
| Des Moines | 21.1 | 20.8 | 17.6 | 17.2 | 20.3 | 21.0 | 21.8 | 21.5 | 19.6 | 19.0 | 19.3 | 17.1 |
| lowa | 21.6 | 21.8 | 17.9 | 18.4 | 19.2 | 19.1 | 21.8 | 21.9 | 20.2 | 20.1 | 21.1 | 21.3 |
| National | 20.6 | 20.7 | 17.0 | 17.1 | 18.1 | 18.4 | 21.3 | 21.4 | 18.7 | 18.8 | 21.6 | 21.7 |

## Scholastic Aptitude Test (SAT)

Typically, only those Des Moines students who are seeking entry into the most prestigious universities and colleges in the country take the SAT. The district's college-bound students continued to score well above the national average in their mean periormance on the SAT. In 1991-92, the SAT was taken by 128 siudents. in 1992-93, the SAT was taken by 145 students. For all students, the SAT-Verbal mean score was 503 out of 800 , and the SAT-Math mean score was 577 out of 800 . The Verbal mean score for males was 518 and for females was 486; the Math mean score for males was 613 and for females was 537. Table 6 compares Des Moines students' scores with national averages:

Table 6. SAT Composite Scure Comparisons (Means)

|  | Des Moines |  | National |  |
| :--- | :---: | :---: | :---: | :---: |
| Year | 1992 | 1993 | 1992 | 1993 |
| SAT-Verbal |  |  |  |  |
| All students | 480 | 503 | 423 | 424 |
| Males | 489 | 518 | 428 | 428 |
| Females | 472 | 486 | 419 | 420 |
|  |  |  |  |  |
| SAT-Math |  |  |  |  |
| All students | 555 | 577 | 476 | 478 |
| Males | 587 | 613 | 499 | 502 |
| Females | 526 | 537 | 456 | 457 |

## Advanced Placement Tests

Advanced Placement (AP) tests are criterion-referenced tests given to high school students for college credit. The College Board recommends that a score of three or higher (out of five) be achieved in order to receive college credit for a specific course.

In 1992, 53 Des Moines high school students were recognized by The College Board as Advanced Placement Scholars. This number represents $37 \%$ of the 144 lowa students recognized. Twenty-one of 29 lowa students receiving the highest level of this award were district students, and 28 of 33 underclass winners were district students (1993 results are not yet available).
-A.P. Scholars, with a minimum of three AP courses with test scores of 3 or higher, included 13 underclass students and nine graduated seniors.
-A.P. Scholars with Honor, with a minimum of four AP courses with test scores of 3 or higher and a 3.25 average, included seven underclass students and three graduated seniors.
-A.P. Scholars with Distinction, with a minimum of five AP courses with test scores of 3 or higher and an average of 3.50 , included eight underclass students and 13 graduated seniors.

During 1991-92, iこ6 students took 325 examinations. Of the gifted and talented students attending Central Academy, 118 students took 297 examinations, with $78 \%$ of the examinations receiving a score of three or higher. During 1992-93, 153 Central Academy students took 353 examinations, with $80 \%$ of the examinations receiving a score of three or higher. Table 7 is a list of examinations taken by students enrolled in Des Moines' high schools (provided by Gifted \& Talented Program):

Table 7. Advanced Placement Examinations
Taken by District Students

|  | Number of Exams |  |
| :--- | :---: | :---: |
| Year | $1992^{*}$ | $1993^{*}$ |
| English Literature \& Composition | 48 | 45 |
| English Language \& Composition | 38 | 43 |
| U. S. History | 24 | 29 |
| European History | 25 | 33 |
| U. S. Govemment \& Politics | 16 | 17 |
| Comparative Govemment \& Politics | 16 | 22 |
| Economics | 53 | 43 |
| Calculus (AB) | 26 | 32 |
| Calculus (BC) | 15 | 10 |
| Biology | 26 | 33 |
| Chemistry | 13 | 38 |
| Physics | 23 | 8 |
| Computer Science | 2 | 0 |

- Includes students in home high schools as well as Central Academy
* Central Academy, as of May 1993

During the past four years, the Des Moines Public Schools has shown a dramatic increase in the number of students taking AP examinations. In 1989, Des Moines students took 69 examinations, representing $6.1 \%$ of the number taken by lowa students. In 1991, Des Moines students took 281 examinations, representing $13.9 \%$ of the lowa total. In 1993, Des Moines students took 353 examinations §lowa totals are not yet available).

## Performance-Based Assessment

Performance-based assessments provide information regarding what a student can do, given a specific task. The district's performance-based assessment is a composition assessment. Students in Grades 3,5,8, and 11 select one of three topics and then compose an essay on the selected topic. Essays are read by trained readers and scored holistically and on a number of dimensions that have been determined to be important components of writing skill. Since the assessment is aligned with the district's objectives for language arts, the student compositions are evaluated agairist established standards for each objective area. As such, the composition assessment might be viewed as objectives-based.

Conversely, scores on this assessment might be considered to be more normative, such that a purely average paper (on a percent scale) should receive a raw score equivalent to a $50 \%$, similar to a 50 th percentile ranking on a standardized assessment. Since the process of judging and scoring compositions is fine-tuned (or re-calibrated) each year through ongoing training of readers, scores from year to year are not expected to significantly change. Table 8 shows the fall composite score mean percentages for all grades:

Table 8. District Composition Assessment Composite Score Mean Percentages

| Grade Level | Comp. Score \% <br> Fall, 1989 | Comp. Score \% <br> Fall, 1990 | Comp. Score \% <br> Fall, 1991 | Comp. Score \% <br> Fall, 1992 |
| :---: | :---: | :---: | :---: | :---: |
| 3 | 60.7 | 61.9 | 62.3 | 60.3 |
| 5 | 69.6 | 69.1 | 68.9 | 67.3 |
| 8 | 64.5 | 64.2 | 65.1 | 66.2 |
| 11 | 68.3 | 68.8 | 69.0 | 70.4 |

The scoring process for the composition assessment in grades 3,5, and 8 are calibrated such that a $50 \%$ score is an average paper. Therefore, a $50 \%$ level was used as a benchmark for judging average ability in writing. The composition assessment for grade 11 is calibrated in the same manner; however, district language arts professionals have determined that a raw score of 80 (out of 138 possible points) is an acceptable level of writing proficiency in 11th grade. This figure translates to an equivalent percent score of 58 . Table 9 shows the percent of all students and of the disaggregated groups achieving the competency standard.

Table 9. District Composition Assessment: Percent of Students Writing an Average Paper or Better

| Test Name | All <br> Students | Females | Males | Non- <br> minority <br> Students | Minority <br> Students |  <br> Reduced | Non Free <br>  <br> Reduced |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

* Percent of students achieving the competency standard
** Number of students in the assessment group
For grades 3,5 , and 8 , the percentages of students achieving the $50 \%$ average standard are significantly high. Differences between the disaggregated groups are generally slight. There is some discrepancy at grade 3, where a greater percentage of non-minority students than minority students are achieving the standard, and a greater percentage of students not participating in the subsidized meal program than participants in the subsidized meal program are achieving the standard. This gap narrows at grades 5 and 8 . Based on these results, district staff are currently developing higher standards for different levels of writing proficiency.

For Grade 11, the percentage of students achieving the standard is significantly high. Gender differences are minimal for 1991-92, but the achievement gap widens for 1992-93. The minority/non-minority difference on this assessment is noticeable. A greater percentage of non-minority students than minority students are achieving at the proficiency standard. The difference in mastery percentages based on participation in the subsidized meal program is also noticeable. A greater percentage of students not on free or reduced price meals than students receiving free or reduced price meals are achieving the proficiency standard.

## Curriculum-Aligned Objectives-based Assessments

The objectives-based (criterion-referenced) assessment program of the Des Moines Public Schools covers a wide array of subject matter across curriculum areas and grade levels. The primary intent of these instruments is to determine the extent to which the curriculum being taught is leamed. District objectives-based tests are not timed, thereby allowing students reasonable time to complete all items. Each test contains a specified number of strands (groups of items measuring the same concept), and is designed to evaluate student mastery of the objectives of a given subject matter. They are also designed to diagnose student leaming or identify deficiencies in a student's reasoning process. Because the objectives-based tests are aligned with the adopted district curriculum, scores are more reflective of a student's achievements in a specific curricular area. Therefore, the district's objectives-based tests provide a more accurate picture of what is taught and learned than norm-referenced (standardized) tests.

The primary purposes of the objectives-based assessment program are to evaluate the curriculum and to assist in instructional planning. At the elementary school level, data from these assessments are also used to: 1) supplement the student achievement data gathered through the use of the computerized Instructional Management System (IMSplus), and 2) monitor student achievement in curriculum areas not utilizing the instructional management system. At the middle and high school level, data are also used for individual student evaluation (as a part of assigning course grades to students).
In the past, objectives-based assessment results were reported as district average scores, to reflect how well an average student periformed on a specific test (i.e., how well the average student mastered critical objectives or concepts in a subject). The superintendent, in the 1992 State of the Schools Report, indicated an interest in establishing a standard of 70 percent as baseline criteria to judge mastery of subject matter. This mastery metric ( 70 percent standard) is intended to provide evidence of the number of students achieving a success rate of $70 \%$ or better in the subject matter in a given curriculum area. Thus, the 1991-92 objectives-based assessment data were used as a baseline for evaluating future growth. Combined with the disaggregation of data, the district can address three issues: 1) the extent to which all students are learning, 2) the extent to which disaggregated groups are achieving at the same rate, and 3) the extent to which disaggregated groups are achieving at the same rate across subjects.

The disaggregated mastery data can be evaluated in two ways. First, data can be analyzed to see how similar groups of students perfiorm on a test of the same curriculum area in subsequent years (i.e., evaluating cohort data). For example, results of student assessment in Grade 3 mathematics in one year can be generally compared to results of student assessment in Grade 4 mathematics the next year, Grade 5 mathematics the next year, etc. Second, data on a particular test can be evaluated over a period of time, to examine if gaps (detected by disaggregation) on one administratiun of a test tend to close with future administrations of the same test. For example, results of student assessment on a Grade 10 English test can be compared and evaluated for achievement trends for students over a three year period.

The results of this iype of analysis (i.e., evaluating historical data) should be interpreted with caution, since the groups of students taking the same test each year are different.

Cohort analysis is used to examine the growth of similar groups of students over time. Figures 1 through 11 are examples of the results of cohort growth analyses for selected subject areas, using the 1991-92 data as the baseline year. The data are analyzed for all students assessed and are disaggregated by gender, ethnicity, and a socioeconomic indicator. The table accompanying each figure shows the percent of students in a particular group scoring at or above the $70 \%$ standard, as well as the number of students assessed in each group.

Cohort data are most available at the elementary level, since groups of students tend to matriculate through the grades together. This type of data is less representative of all students at the middle school level (i.e., Grade 8, when students begin to specialize in certain areas such as mathematics), and is not available at the high school level, since there is little continuity among discrete courses. Because of this, the examination of historical data for long-term trends in student achievement can provide information for program evaluation.

Since the examination of cohort or group data is more meaningful for evaluacing growth, only a summary of the historical data are presented in Table 10. Appendix F contains the results of the historical data analyses for all objectives-based tests administered during 1992-93.

## Conclusions

The majority of Des Mioines' 31,524 students are achieving at or above grade level. Evidence for this statement comes from the variety of tests administered and resulting test scores. Based on standardized assessment information (one measure of student growth and achievement), many students are exceeding normal expectations. Most of our elementary school students are scoring at a higher percentile rank on the ITBS when compared to the results of the ITBS given to similar groups in prior years. Most students at the middle school level are maintaining appropriate growth in achievement. The number of students achieving AP recognition reflects the extent to which the district's efforts to individualize instruction and to challenge a student's potential are being achieved.
Based on objectives-based assessments, there are certainly issues of opportunity and equity that need to be addressed. However, one must consider that these tests assess only a sample of a subject area's objectives, those that are conducive to multiplechoice, paper-and-pencil-type tests. There are certainly many curricular objectives that address a student's ability to perform complex tasks invoiving higher-order, complex reasoning skills.
The indication from an overall view of our assessment instruments is that Des Moines students are achieving academically in basic and higher level skill development. Growth is occurring in schools where student mobility rates and socioeconomic factors could have a significant negative effect on test results. Overall, teachers are teaching the curriculum and students are leaming. Test information provided to the subjectarea supervisors and to the building staffs is useful for planning for improved student performance and achievement.
District staff and students continue to pursue educational excellence and equity issues in the teaching for leaming processes that take place each day in our schools. Through our cooperative effors, we will continue to achieve student growth in achievement for all Des Moines students.

## Table 10. District Objectives-based Assessment: Comparisons of Disaggregated Groups

| 1991-199\% | 1992-1993 |
| :---: | :---: |

## Special Illustration: Elementary Reading Cohort Growth

The Silver-Burdett-Ginn developmental reading curriculum was adopted by the district for the elementary and middle school reading prograim. It consists of three levels of basal texts at Grade 1, two levels at Grades 2 and 3, and one level each for Grades 4 through 8. Because students in each grade tend to progress at very different rates, they may be reading at a developmental level that is beluw their actual grade level text. Because of the potential inclusion of upper grade students in off-level reading groups, the analysis of both historical and cohort data becomes more difficult.

In order to appropriately evaluate student growth, two issues must be addressed. First, the number of students who are reading (and are thus assessed) at the appropriate end-of-level text for their grade must be examined. Second, the percent of students mastering the end-of-level assessment for their grade must be examined.

Figure 10 shows the number and percent of students at each elementary grade who were assessed with the appropriate end-of-level test for that grade. Examining the data historically (i.e., comparing Grade 1 in 1992 with Grade 1 in 1993, etc.), both the number and percent of students in a grade taking the appropriate end-of-level test increased for all grades. Examining cohorts of students (i.e., Comparing Grade 1 in 1992 with Grade 2 in 1993, etc.), both the numbers and percentages of students taking the appropriate end-of-level test increased for all cohorts (Grade 1 to 2, Grade 2 to 3, Grade 3 to 4, Grade 4 to 5). Thus more students are reading (and completing, since they are being assessed) at their appropriate end-of-level text in 1993 than in 1992.

Figure 11 shows the percent of students at each elementary grade who achieved the $70 \%$ mastery standard on the appropriate end-of-level test for that grade. Examining the data historically (i.e., comparing Grade 1 in 1992 with Grade 1 in 1993, etc.), the percent of students in a grade demonstrating mastery of the appropriate end-of-level test increased for all grades. Examining cohorts of students (i.e., Comparing Grade 1 in 1992 with Grade 2 in 1993, etc.), both the percentages of students demonstrating mastery of the appropriate end-of-level test increased for all cohorts (Grade 1 to 2, Grade 2 to 3, Grade 3 to 4, Grad: 4 to 5).
The arrows in Figure 11 represent $c c^{\prime}$ ort growth. Evidence for effectiveness of the developmental reading program at the elementary level is reflected in: 1) the increasing number and percent of students completing their appropriate end-of-level text, and 2) the increasing percent of students mastering their appropriate end-of-level test.

## DEFINITIONS

Criterion-Referenced Test - an objectives-based test that has been assigned a criterion score or percent that is in the definition of mastery or success.

Grade Equiyalent - the grade level for which a score is the real or estimated average. For example, 4.2 represents the fourth year, second month.

Lowa Tests of Basic Skills (ITBS) - a nom-referenced test published by the lowa Testing Programs in Iowa City, lowa. It is administered in Grades 3, 4, 6, and 7 in the Des Moines Public Schools. The test consists of the following parts:

Grades $3,4,6, \& 7$ : Vocabulary, reading spelling, capitalization, punctuation, usage, visual material, references, math concepts, math problems, and math computation.

ITBS scores are reported in percentiles, grade equivalents, and normal curve equivalents.
Iowa Tests of Educational Development (ITED) - a norm-referenced test published by the lowa Testing Programs in Iowa City, lowa. It is administered in Grade 10 in the Des Moines Public Schools. The test consists of the following parts:

Correctness of Expression, Quantitative Expression, Social Studies, Natural Sciences, Literary Materials, Vocabulary, and Sources of Information.

ITED scores are reported in percentiles.
Mastery Metric - a pre-specified standard that students must achieve in order to demonstrate competence of the subject matter. This mastery standard does not compare students with each other, but with an extemal standard defined by the objectives of a course and the requirements for demonstrating competence. Thus, all students have an opportunity to demonstrate mastery of subjoct matter.

Normal Curve Equivalent - an interval scale equivalent of the bell-shaped curve. The conversion process to arrive at an NCE distribution transforms the shape of the bell-shaped curve into a rectangular shape, such that the scores are distributed equally across each point in the distribution.

Norm-Referenced Test - a test that interprets individual performance by comparing a student's score to a previously established norm group, not to a performance criterion. The test is designed for one-half of the students to be above the 50th percentile and one-half below.

Objectives-Based Test - a test designed to measure one or more instructional objectives, usually the critical skills being taught by an educational program.

Percent - the proportion of a total. In testing, it is the number of questions answered correctly divided by the total number of items on the test.

Percentile - a point in the distribution below which a certain percent of the scores fall. For example, the 80th percentile is the point below which 80 percent of the scores lie. The shape of the distribution of percentiles is a bell-shaped curve.

Significance - an association between two variables or among a group of variables is said to be statistically significant when (in terms of quantitative measurement theory and practice) the association fuffills specific predetermined criteria. While statistical significance is largely a function of sample size, it must be weighed against a "meaningfulness" criterion. In addition to or in the absence of statistical significance, results judged as having educational or practical meaning may play an important role in the evaluation of outcomes, and in some cases, may be more valid than statistical significance.

## Note on Mobility Rate and Free/Reduced price meals:

Data on student mobility and qualification for free or reduced price meals (used for analysis of ITBS data) were taken from the student data files at Mid-lowa Computer Center as of Friday, January 29, 1993 (the Friday before testing began). Since this information is available for each student, these indices were computed for each grade level within each building.

Mobility rate for each grade within each building was determined by the following formula:

## (Number of entries + Number of exits) $\times 100$ <br> Average daily membership

Average daily membership was computed by taking the official student enrollment "as of" the official count date (the third Friday in September), adding all of the entries after the official count date, and subtracting all of the exits after the official count date. Number of entries and exits were counted after the official count date.

Percent of students on free or reduced price meals was determined by combining the number of students on free and on reduced, and dividing by the average daily membership for that grade.

NOTES: N refers to the number of students who took the entire test. \% refers to the percent of the students enrolled in that grade/building who took the entire test. Enrollment counts for comparison were taken from the average daily membership. Low percentages may result from building totais (from enroliment counts) that include special oducation and ESL students who should not and do not take the TBSATED unless requested by parents.

## DISTRICT OBJECTIVES-BASED TESTS HISTORICAL DISAGGREGATED DATA

The attached tables indicate:

1) The percent of students in a category that scored at or above the district criterion of $70 \%$ on the end-of-course test, and
2) The total number of students in a category that took the test.

Example: Elementary Mathematics: Math 2 Total:

| Test Name | All <br> Students | Females | Males | Non- <br> minority <br> Students | Minority <br> Students |  <br> Reduced | Non Free <br>  <br> Reduced |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Math 2 Total | 83.8 | 83.5 | 84.2 | 87.1 | 69.5 | 73.4 | 90.9 |
| $1991-1992$ | 2377 | 1179 | 1198 | 1941 | 436 | 954 | 1422 |

$83.8 \%$ of all 2 nd grade students tested achieved a $70 \%$ or better on this test (sum of the
Core items and the Problem Solving items)
$83.5 \%$ of the 2nd grade females achieved a $70 \%$ or better on this test.
$84.2 \%$ of the 2nd grade males achieved a $70 \%$ or better on this test.
$87.1 \%$ of the 2nd grade non-minority students achieved a $70 \%$ or better on this test.
$69.5 \%$ of the 2nd grade minority students achieved a $70 \%$ or better on this test
$73.4 \%$ of the 2nd grade students receiving free or reduced price luncnes achieved a $70 \%$ or better on this test.
$90.9 \%$ of the 2 nd grade students not receiving free or reduced price lunches achieved a $70 \%$ or better on this test.

The following tests were given at the end of each semester.

## All Home Economics tests

World History (S1 and S2; different tests)
Economies ( S 1 and S 2 ; different forms)
Science 3, 4, and 5 (same test for S1 and S2; administered at the end of the semester in which the course was completed)
English 10 ( S 1 and $\mathbf{S 2}$; results were combined for annual analysis, since this test is the same test given at the end of each semester.)
Ali reading tests for elementary students were given at the time that a student completed a particular book in the series. Results represent a each student's final end-of-book test for the year (unduplicated count). All reading tests for middle school were administered at the end of the school year. If students progress at an appropriate pace, they should be able to complete Levels 3, 4, and 5 during Grade 1, Levels 6 and 7 during Grade 2, Levels 8 and 9 during Grade 3, and Levels 10 through fourteen in Grades 4 through 8 (one level each year).
The composition assessment was administered in the fall of 1991.
The remaining tests were administered at the end of the school year.
Middle School \& High School Science
All Mathematics (elementary and middle school mathematics tests consist of two parts: a section on Core Concepts and Computation, and a section on Problem Solving. The Math Total score is computed by adding the scores of both sections.
Middle School Reading
Middle School Social Science (Grade 6 \& 8)
All Language Arts (except Grade 10)
All French \& Spanish
