ABSTRACT
          Articles related to assessment in the field of
reading are presented to provide ideas for those studying reading and
reading assessment. There are two sections to the bibliography: the
articles themselves and an index. Many of the entries describe
informal assessments and are intended mainly for classroom use. The
124 articles are listed in alphabetical order by primary author and
indexed for the convenience of users. A set of descriptors was
developed, and each paper was analyzed using the descriptors. A
listing of the descriptors prefaces the index. Articles cover
assessment at all grades for research, classroom, or large-scale
purposes. They describe a number of types of tasks, from enhanced
multiple-choice items to portfolios, and a number of kinds of
performance assessments. Scoring is also considered by some articles.

BIBLIOGRAPHY OF
ASSESSMENT ALTERNATIVES

READING

January 1995

The following articles represent some of the current holdings of the Test Center lending library. Presence on the list does not necessarily imply endorsement; rather, articles are listed solely to provide ideas to those pursuing these topics. Many of the entries are informal assessments and are intended mainly for classroom use.

There are two sections to the bibliography: the articles themselves in alphabetical order by primary author, and an index. The index helps the user find relevant references. In order to make articles easier for users to find, a set of descriptors was developed, each paper was analyzed using this set of descriptors, and an index using the descriptors is provided. A complete listing of all descriptors used (with a brief definition of the descriptor) prefaces the index.

In the states of Alaska, Idaho, Montana, Oregon and Washington, these articles may be borrowed free of charge on a three-week loan from the Test Center. Users in other states are charged a handling fee. The shelf number for each item is listed at the end of the article; for example, TC# 123.4ABCDEF. For more information, please contact Matthew Whitaker, Test Center Clerk, (503) 275-9582 or use e-mail: testcenter a nwrel org for more information.

Allen, Barbara. *Orange County LEP Assessment Task Force—Sample Packet*, February 1994. Available from: Orange County Department of Education, Instructional Services, Curriculum and Instructional Programs, 200 Kalmus Dr., Costa Mesa, CA 92626, (714) 966-4423.

This packet contains examples of assessment tasks that have been designed especially for students who are limited-English proficient (LEP).

Teachers specified four major outcomes for LEP students: develop communication skills; develop life skills in problem solving, critical thinking, decision making, and self-directed learning; improve collaboration; and understand and value cross-cultural tolerance. The packet includes assessment tasks and scoring guides for each outcome. Tasks include interviews, group work, portfolios, on-demand performance assessment, and projects.

Performance criteria are general and sometimes fairly sketchy. Self-reflection and evaluation is emphasized.

No technical information nor student work is included.

(TC# 300.3ORACOL)

Ames, Cheryl K. *Self-Reflection: Supporting Students in Evaluating Themselves as Readers*, 1992. Available from: Beaverton School District, 16550 SW Merlo Rd., Beaverton, OR 97006, (503) 591-8000, fax: (503) 591-4415.

The author discusses high school student self-reflection in reading—its importance and how to promote it in students. Samples of student self-reflection are included.

(TC# 440.6SELRES)

Anderson, Richard C., Elfrieda H. Hiebert, Judith A. Scott, et al. *Becoming a Nation of Readers: The Report of the Commission on Reading*, 1985. Available from: University of Illinois Press, PO Box 2774, Station A, Champaign, IL 61820.

This publication marked the first popularization of research on reading which provided an expansion of our view on what reading is and what good readers do. The publication summarizes the research on reading and draws implications for reading instruction.

(TC#440.5BECNAR)

Arter, Judith A. *Integrating Assessment and Instruction*, 1994. Available from: Northwest Regional Educational Laboratory, 101 SW Main, Suite 500, Portland, OR 97204, (503) 275-9582, fax (503) 503) 275-9489.

This paper discusses how, if designed properly, performance assessments can be used as tools for learning in the classroom as well as tools for monitoring student progress.

(TC# 150.6INTASI)

Arter, Judith A. *Performance Criteria: The Heart of the Matter*, 1994. Available from: Northwest Regional Educational Laboratory, 101 SW Main St., Suite 500, Portland, OR 97204, (503) 275-9582, fax (503) 275-9489.

This paper discusses an important issue that pertains to performance assessment in general— the need for clear and well thought-out scoring mechanisms. The paper discusses what

performance criteria are, the importance of good quality performance criteria, how to develop performance criteria, and keys to success.

(TC# 150.6PERCRH)

Badger, Elizabeth, and Brenda Thomas. *Open-ended questions in reading,* **December 1992. Located in: ERIC Clearinghouse on Tests, Measurement and Evaluation. Available from: American Institutes for Research, 3333 K St., NW, Suite 300, Washington, DC 20007, (202) 342-5060. Also available from: Massachusetts Department of Education, 350 Main St., Malden, MA 02148, (617) 388-3300.**

This short article covers the reasons why "open-ended" questions should not simply be multiple-choice items without options, and how new theories about reading and thinking require assessment using open-ended questions. The authors believe that in evaluating students, we can no longer simply judge whether or not the reader's conclusions are similar to the writer's; rather, the quality of the reader's argument or justification for his or her interpretation becomes most important. The authors provide some interesting thoughts on the types of things we should assess.

(TC# 440.6OPEQUR)

Barton, James, and Angelo Collins. *Portfolios in Teacher Education.* **Located in: Journal of Teacher Education 44, May-June 1993, pp. 200-210.**

The authors describe the use of portfolios for undergraduate literature and graduate science teacher-education students. The authors discuss the rationale for use of portfolios, the portfolio process, key questions, and specific application to literature and science. Among the points they make are.

1. The purposes include: (a) the need to model new instructional strategies if we expect students to subsequently use them in their classrooms when they become teachers, and (b) the need to match goals for students in higher education classes to appropriate assessment—"As a program changes, so must the ways that success in meeting the program's objectives are measured. The rapidly evolving role of reading specialists demands change in the evaluation of professional competence."

2. The key steps in developing a portfolio system which works is that the purpose for the portfolio has to be clearly established at the beginning (e.g., one goal or purpose in literacy is that "the student will integrate theory and practice so that he or she can create their own thematically based literature lessons"); evidence is then compiled to show that the student has successfully accomplished the purpose of the portfolio; and, finally, the portfolio is evaluated using the question, "Am I convinced that the student has met or made progress toward the stated goal?"

No samples of student work or technical information are included. Criteria for portfolios are discussed.

(TC# 130.4PORTEE)

Bean, Thomas. *Organizing and Retaining Information by Thinking Like an Author.*
Located in: Susan Mandel Glazer, Lyndon W. Searfoss, and Lance M. Gentile (Eds.),
Reexamining Reading Diagnosis, New Trends and Procedures, 1988, pp. 103-127.
Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139,
Newark, DE 19714, (302) 731-1600.

The author presents recent thinking about the role of text structure in reading comprehension,
and describes a process for observing, assessing, and improving students' understanding of
text structure. The author describes various types of text structures in narrative and
expository writing, and reviews the research on how people use text structure to aid
comprehension and recall.

The assessment procedure consists of having students place the paragraphs in a narrative or
expository passage in the right order, thinking aloud as they do so. The author presents
several examples which illustrate what to look for in the "think alouds" in order to determine
knowledge and use of text structure.

The author finishes by describing two techniques to teach students how to analyze and use
text structure.

(TC# 440.6ORGREI)

Bellingham Public Schools. *Primary Performance Portfolio, Grades K, 1, 2* and *Intermediate*
Performance Portfolio, Grades 3, 4, 5, 1992. Available from: Bellingham Public
Schools, Box 878, Bellingham, WA 98227, (206) 676-6400, fax (206) 676-2793.

This document is an outline of suggestions for implementing portfolios for grades 1-5.
Included are:

- A list of essential learnings in each grade level combined with suggestions for the type of
  information that could be included as evidence of progress on each goal. For example, a
  student goal in grades 3-5 is "literature competency." Portfolios could include response
  logs, performance or project scoring rubrics, or strategies checklists as evidence of
  attainment of this goal.

- Checklists and scoring guides for some of the skills. For example, fairly nice
  developmental continuums for reading, science, social studies, art, writing and mathematics
  are included. each having six levels (pre, emergent, beginner, developing, capable, and
  experienced) These are incorporated into a report card

Also included are some materials for two units: history and energy. It is not clear how this material is used nor why it is included.

No technical information nor samples of student work are included.

(TC# 000.3BELPUS)

Bembridge, Teri. *A MAP for Reading Assessment.* Located in: Educational Leadership 49, May 1992, pp. 80-82.

This article talks about a group of teachers who wanted to improve the way reading is assessed in second- and third-grade classrooms. They couldn't find published instruments that satisfied them so they built their own. The result, the *Multi-Layered Assessment Package* (MAP), has two parts: listening to the student read aloud and retelling. Three scores are generated: word accuracy, sentence comprehension, and retelling. Regular grade-appropriate narrative stories are used. The MAP is used by these teachers for accountability and planning instruction.

The procedure is used in the elementary grades. No technical information, scoring forms, or sample student responses are included in this document.

(TC# 440.3MAPREA)

Bishop, David. *On Curriculum Alignment, Anacondas, and Reading Assessment.* Located in: Kentucky English Bulletin 39, 1990, pp. 58-66.

In this paper the author reviews some of the problems with using norm-referenced, multiple-choice tests to measure student progress in reading, and then describes a possible portfolio approach for grades K-6. A very useful part of the paper is a description of what the author feels the portfolio should show about students. There are six key areas: fluency (ease with reading, volume of reading, frequency of reading), power (norm- and criterion-referenced test scores), growth (changes in skill, affect and independence), range (diversity of reading, reading in other subject areas), depth (depth of understanding of individual readings and a focal point for reading), and reflection (self-reflection and reflection on the writing of others).

(TC# 440.3ONCURA)

British Columbia Ministry of Education. *Performance Assessment: Primary, Early, Late, Intermediate, and Graduate.* Draft, August 1992. Available from: British Columbia Ministry of Education, Assessment Branch, Parliament Buildings, Victoria, BC V8V 2M4, Canada, (604) 387-4611, fax (604) 356-2504.

This Macintosh disk contains a host of performance assessments developed by the British Columbia Ministry of Education for all grade levels and subject matter areas.

(TC# 000.3BCPERA)

Brown, Carol and Susan Lytle. *Merging Assessment and Instruction: Protocols in the Classroom.* Located in: Susan Mandel Glazer, Lyndon W. Searfoss, and Lance M. Gentile (Eds.), Reexamining Reading Diagnosis, New Trends and Procedures, 1988, pp. 94-102. Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.

The authors maintain that "think aloud reading protocols" provide a means for gathering information about individual readers' ongoing thinking processes and metacognitive behavior. A think aloud reading protocol is a verbal or written record of what students think about while they read.

The authors suggest several means to use during regular instruction to elicit these types of verbalizations. (In fact, making these verbalizations conscious is a major focus of instruction for the authors.) They also describe a coding scheme for these verbalizations.

The paper does not, however, provide any guidance on either what kinds (or mix) of verbalizations students *should* be making, or what to do if the teacher notices gaps in verbalization. The goal seems to be merely to get students to verbalize, think about these verbalizations, and compare these verbalizations with others.

(TC# 440.6MERASI)

Calfee, Robert, and Elfrieda Hiebert. *The Teacher's Role in Using Assessment to Improve Learning.* Located in: Assessment in the Service of Learning, Invitational Conference Proceedings, 1988, pp. 45-61. Available from: Educational Testing Service, Rosedale Rd., Princeton, NJ 08541, (609) 734-5686.

The authors believe that the knowledgeable teacher plays a critical role in valid classroom assessment, and that effective instruction requires informed professional judgment. Although a general argument, the authors' specific examples come from the area of lite .y. They contend that literacy needs in previous times were far more simple than what will be required in the future. Thus, while the past skills-based, decoding approach might have been adequate for a previous age, in today's world literacy means people who are in total control of language and are able to think critically about what they read. Reading skill must provide the basis for pursuing all other subjects.

The authors develop this theme in more detail, contrasting past teacher education, reading instruction, and student assessment procedures to what is needed today.

(TC# 440.6TEAROU)

Calfee, Robert C., and Pam Perfumo. *Student Portfolios: Opportunities for a Revolution in Assessment.* Located in: Journal of Reading 36, April 1993, pp. 532-537.

The authors report on a survey of teachers to determine actual practice with respect to reading and writing portfolios. They surveyed 150 selected teachers, and held a two-day conference for 24 of them. Results showed that teachers:

1. Believe that they are more in charge of their instructional programs by using portfolios

2. Describe many benefits for students which result when they responsibility and select their own work for portfolios

3. Do not attend to technical aspects of portfolios such as reliability and validity

4. Have no systematic way of analyzing, scoring, or grading portfolios

The authors are very optimistic about the possibility of portfolios reforming education.

(TC# 440.6STUPOO)

California Assessment Program. *A Sampler of English-Language Arts Assessment—Elementary (Reading); Preliminary Edition,* 1992. Available from: California State Department of Education, Publications Sales, PO Box 271, Sacramento, CA 95812, (800) 995-4099.

California is developing a series of assessments in grades 4/5, 8, and 10 to assess reading, writing, language arts, science, math, and social studies. These are combinations of multiple-choice and constructed response. This document is a released exercise for the elementary reading test.

Tasks require students to read lengthy passages of between three and five pages. While they read they have space to write down "thoughts, feelings, and questions" about what they are reading. There is a series of questions that ask students to express their feelings about what happens in the story, select lines from the story that "make them think" and tell why those lines were selected, speculate on the feelings and motivations of characters, tell what might happen next and explain why, and write anything else they want.

Responses are scored on a six-point holistic scale that emphasizes insight, connections, risk-taking and challenging the text. Sample student responses are included. No technical information is included.

(TC# 440.3SAMENLr)

California Department of Education. *California Learning Record—Handbook for Teachers, K-6,* and *Handbook for Teachers, 6-12, Preview Edition,* **1993. Available from: UCSD Bookstore, University of California @ San Diego, 9500 Gilman Dr., La Jolla, CA 92093, (619) 534-4430.**

The *California Learning Record* (CLR) yields a portfolio of information about a student's annual language and literacy progress in K-12 classrooms. Progress is based on observation, anecdotal records, and consultations with parents and students themselves. As students mature, they take on responsibility for providing evidence of their learning. Pilot tested by California teachers since 1988, the CLR is an adaptation of the *Primary Language Record,* developed at the Centre for Language in Primary Education in London, England. A major California contribution is the extension of the record of achievement to middle and secondary schools, using the base of literacy development to support students' academic progress in all subject areas.

The *CLR Handbooks for Teachers, K-6* and *6-12* provide rationale, descriptions and examples of how the CLR works. Included with each handbook are master copies of the CLR summary and data collection forms. Not included are technical information nor criteria for judging progress.

(TC# 400.3CALLER2)

California Department of Education. *Students Standards and Success—The California Learning Assessment System—Communications Assistance Packet,* **1993. Available from: California State Department of Education, Publications Sales, PO Box 271, Sacramento, CA 95812, (800) 995-4099.**

The purpose of this document is to introduce the California Learning Assessment System (CLAS) to the public. CLAS is given at grades 4, 8, and 10 in reading, writing, and mathematics, and at grades 5, 8, and 10 in science and social studies. There are both end-of-year tests and a portfolio component. CLAS is designed to give information on individual students, is tied to state standards, and is performance based.

The document includes letters to parents, answers to frequently asked questions, sample press releases, sample meeting agendas, information on the assessments, resources, and sample items with student responses.

The math scoring guide is a four-point, holistic rubric emphasizing conceptual understanding and clear communication. The reading scoring guide is a six-point holistic scale, focusing on

constructing meaning, developing connections, taking risks, and challenging the text. The writing scoring guide is a six-point holistic scale emphasizing organization, coherence, elaboration, relevance of arguments, and awareness of style and sentence variety.

(TC# 000.6STUSTS)

Clark, Charles H. *Assessing Free Recall.* **Located in:** **The Reading Teacher 35, January 1982, pp. 434-439.**

This document describes a procedure for assessing how much of a passage a student remembers and the relative importance of what is remembered. The teacher breaks a passage into pausal units and assigns an importance number to each unit. After the student reads the passage silently, he or she retells everything he or she remembers. The teacher indicates the sequence of recall on a worksheet and analyzes the amount recalled, the sequence of recall, and the level of importance of the recalled material.

(TC# 440.3ASSFRR)

Clay, Marie M. *Concepts About Print.* **Located in:** **The Early Detection of Reading Diff. lties, 1985. Available from: Heinemann Educational Books, Inc., 361 Hanover St., Portsmouth, NH 03801, (603) 431-7894.**

Concepts About Print is a diagnostic procedure that the author presents as part of a longer book about reading in the early grades. The procedure requires the student to respond to 24 questions and tasks surrounding books, such as: "Show me the front of this book," and "Point to it while I read it." Questions and tasks cover parts of the book, how a story is organized, how words are arranged on a page, word/print correspondence, which page is read first, meaning of punctuation, capital and lower case correspondence, etc. The procedure refers to two stories which are not included in the document.

The author states that this procedure is a "sensitive indicator of one group of behaviors which support reading acquisition." *Concepts About Print* has been translated and used with Danish and Spanish-speaking children.

The author also presents another list of behaviors to observe while going through *Concepts About Print* to look at effectiveness of strategies.

There is no technical information included.

(TC# 440.3CONABP)

Clemmons, Joan, Lois Laase, DonnaLynn Cooper, et al. *Portfolios in the Classroom: A Teacher's Sourcebook*, 1993. Available from: Scholastic Professional Books, Scholastic Inc., 2931 E. McCarty St., Jefferson City, MO 65102.

This booklet describes one elementary school's portfolio system for documenting student growth in reading and writing. The system includes emphasis on student control, self evaluation, and goal setting. The authors:

- articulate well that the goal of portfolios is to allow students to take control of learning

- describe the kinds of classrooms in which portfolios are most likely to be successful

- outline a step-by-step plan for getting started and involving parents

- describe a procedure for teaching self-evaluation and goals-setting skills

- help with student-teacher portfolio conferences

- include complete portfolios for a second- and fifth-grade student

- include an appendix of reproducible letters, questionnaires, forms, and charts

(TC# 400.3PORCLT)

Coalition of Essential Schools. [*Various Articles on Exhibitions of Mastery and Setting Standards*], 1982-1992. Available from: Coalition of Essential Schools, Brown University, Box 1969, One Davol Sq., Providence, RI 02912, (401) 863-3384.

Although not strictly about reading, this series of articles discusses performance assessment topics and goals for students that are relevant. The articles are: *Rethinking Standards; Performances and Exhibitions: The Demonstration of Mastery; Exhibitions: Facing Outward, Pointing Inward; Steps in Planning Backwards; Anatomy of an Exhibition; and The Process of Planning Backwards*.

These articles touch on the following topics: good assessment tasks to give students, the need for good performance criteria, the need to have clear targets for students that are then translated into instruction *and* assessment, definition and examples of performance assessment, brief descriptions of some cross-disciplinary tasks, the value in planning performance assessments, and the notion of planning backwards (creating a vision for a high school graduate, taking stock of current efforts to fulfill this vision, and then planning backward throughout K-12 to make sure that we are getting students ready from the start).

(TC# 150.6VARARD)

13

CTB/McGraw-Hill. *Performance Assessment Task Bank, Reading and Language, Grade 3,* 1993. Available from: CTB/McGraw-Hill, PO Box 150, Monterey, CA 93942, (800) 538-9547.

The CTB reading and language task bank is a compendium of 29 tasks (containing 366 separate activities) for grades 3-9 that can be used by districts to design their own performance assessments. Local educators can select from various purposes, activity lengths, student response modes, pre-task activities, skills covered, type of materials and equipment, and task complexity. Each task has been pilot tested and comes with scoring directions. Support software is available.

The material we obtained contains a general overview of the system and one complete third-grade reading task. Students read two intact passages and answer a variety of integrative and reflective questions. The scoring guide was not included.

(TC# 400.3CTBREL)

Darling-Hammond, Linda, Lynne Einbender, Frederick Frelow, et al. *Authentic Assessment in Practice: A Collection of Portfolios, Performance Tasks, Exhibitions, and Documentation,* October 1993. Available from: National Center for Restructuring Education, Schools, and Teaching (NCREST), Box 110, Teachers College, Columbia University, New York, NY 10027.

This book contains sample performance assessments from a number of sources for grades 1-12 in science, math, social studies, writing and drama. Formats include exhibitions, projects, on-demand performance assessments, and portfolios. The authors have included reprints of papers that discuss characteristics of "authentic" assessment, performance task design, and portfolios. Not all assessment information is reproduced; usually the authors have excerpted or summarized information. Performance tasks are more thoroughly covered than performance criteria. In most cases, no technical information or sample student responses are provided.

(TC# 000.3AUTASP)

DeFabio, Roseanne. *Characteristics of Student Performance as Factors in Portfolio Assessment,* 1993. Available from: National Research Center on Literature Teaching and Learning, University at Albany, State University of New York, 1400 Washington Ave., Albany, NY 12222.

The author describes a framework for describing what students are able to do in the study of literature and what to look for in portfolios to assess student learning in literature. These could be considered criteria for assessing a literature portfolio. The factors are: range,

flexibility, connections, conventions, and independence. No grade levels are mentioned, but it appears to be most appropriate for grades four and above.

(TC# 400.3CHASTP)

Dole, Janice, Gerald Duffy, Laura Roeher, et al. *Moving From the Old to the New: Research on Reading Comprehension Instruction.* Located in: Review of Educational Research 61, Summer 1991, pp. 239-264.

Although not specifically about assessment instruments in reading, this article provides a good overview of current cognitive research on reading. The article is included here because, in order to wisely choose assessment instruments, one needs a clear idea of the target to be assessed.

The article clearly describes the view that reading comprehension is constructive: readers use their existing knowledge and a range of cues from the text and the situational context in which the reading occurs to build, or construct, a model of meaning from the text. This developing view of the reading process is contrasted with the view underlying past instructional practices. The authors then outline what a reading curriculum would look like that is based on a cognitive view of the reading process.

(TC# 440.6MOVFRO)

Eberhart, Carol, and John Hoftstrand. *Secondary Project Assessment: Building Meaningful Measures of Change,* 1993. Available from: Ilahee Junior High School, 36001 1st Ave. S, Federal Way, WA 98003, (206) 927-3073.

This document is a series of handouts used at a conference. They include information about, and examples of, the interdisciplinary project guidelines used for looking at ninth-grade student mastery of skills, knowledge, and abilities. The materials include purposes for such exhibitions of mastery, an exhibition planning guide for students, eight project specifications (including performance criteria), an exhibition worksheet for use by students, and a schedule for students to present their projects to teams of raters (including community members).

Students can develop a project in one of eight prespecified areas (community service, controversial issue, decorating a home, expressing an emotion, fir ling a job. fitness challenge, planning a city, and cultural exchange) or one proposed by the student. Projects are judged by means of "mix and match" performance criteria—depending on the project, performance will be assessed on some combination of eight dimensions of performance (corresponding to major outcomes for students): perceptive problem finders, effective and confident communicators, healthy people, collaborative workers, self-directed learners, responsible citizens, culturally aware individuals, and creative producers). The project is included on this bibliography because some of the dimensions of performance relate to analyzing and interpreting print material

No sample student work or technical information is included.

(TC# 000.3SECPRA)

Eeds, Maryann. *Holistic Assessment of Coding Ability.* Located in: Susan Mandel Glazer, Lyndon W. Searfoss, and Lance M. Gentile (Eds.), <u>Reexamining Reading Diagnosis: New Trends and Procedures</u>, 1988, pp. 48-66. Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.

The author focuses on the "coding" aspect of reading (i.e., the relationship between sounds and symbols). However, she emphasizes that mere mastery of the code will not solve all reading problems; there must be both a code and a language emphasis (syntax, semantics, and the context in which reading occurs) for successful literacy programs. After establishing this point, she goes on to outline how knowledge of the code develops, and discusses some informal diagnostic procedures to discover where children are in the process of breaking the code. She suggests three categories of procedures: careful observance of children's writing, close attention to what students say regarding their discoveries about print as they learn to write, and qualitative consideration of their miscues as they read whole text.

Specifically, the author shows how the following ideas allow one to assess students' mastery of the coding system:

1. Concepts about print assess students' knowledge of what print is and does   The author includes a summary of nine tasks for students to perform in order to assess this ability.

2. Examination of writing can give hints as to the students' understanding of directionality, letters, etc. The author describes in some detail how the examination of spelling (or invented spelling) can provide information about development, and includes a detailed developmental framework with four stages.

3. Miscues during oral reading can help determine what clues students use to create meaning—syntactic, semantic, etc.

(TC# 440.3HOLASC)

Eggleton, Jill. *Whole Language Evaluation: Reading, Writing and Spelling,* 1990. Available from: The Wright Group, 18916 N. Creek Pkwy., Bothell, WA 98011.

The author ties three stages of development in reading, writing, and spelling to instruction and provides many samples of ways to assess them in order to determine stage and skill attainment: rating scales, checklists, and anecdotal records. She also briefly discusses self-reflection.

Two books (grades K-3 and 4-6) are designed for informal classroom use. Each subject and developmental level contains sections entitled: teacher goals (instructional ideas), student

goals (things for students to accomplish), assessment/monitoring techniques, and reporting progress

The instructional activities are good but, because of a lack of complete definitions for items on checklists, the author assumes a certain amount of expertise on the part of users about reading, writing, and spelling. Samples of student work, provided to illustrate the developmental stages, are mostly only given in writing. No technical information is available.

Farr, Roger. *Putting It All Together: Solving the Reading Assessment Puzzle.* Located in: The Reading Teacher 46, September 1992, pp. 26-37.

The author discusses the following topics: (1) the reasons for a recent increase in the amount of reading assessment (accountability demands and attempts to find alternatives to traditional testing); (2) what to consider when developing an assessment plan in reading (purposes, the informational needs of various audiences); (3) current reading theory and its relationship to types of assessment; and (4) recommendations for how to put it all together.

The major thrust of the paper is that various audiences have different informational needs and no single assessment is likely to satisfy all of them. We need to be sympathetic to each other's informational needs and plan an assessment program that is varied. The author suggests that norm-referenced tests, performance assessments and portfolios are all useful components of such a system. There is a very nice summary of essential features of reading portfolios.

The author concludes by saying, "The assessment puzzle can be solved. The solution, however, is not as simple as identifying a nonexistent test that will do the whole job nor as arbitrary as eliminating most reading assessment. Rather it takes a vision that focuses on what real literacy means and the awareness that various groups have a stake in helping students to develop as literate citizens. Such a vision must not use assessment to isolate. It must respect the complex nature of literacy, it must serve students and help them to become reflective self-assessors, and it must create links that bring instruction and assessment together."

Farr, Roger, and Robert F. Carey. *Reading: What Can Be Measured?*, 1986. Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.

This book is an anthology of articles concerning issues surrounding the assessment of reading, guidelines for the improved use of reading tests, trends in assessing reading, and various ways to assess reading comprehension, word recognition, vocabulary, study skills, and reading rate.

This book is more a review of issues and procedures than detailed instruction in how to assess using a given approach.

Farr, Roger, and Beverly Farr. *Integrated Assessment System—Language Arts Performance Assessment*, 1990. Available from: The Psychological Corporation, Harcourt Brace Jovanovich, Inc., 555 Academic Ct., San Antonio, TX 78204, (800) 228-0752.

The *Integrated Assessment System* (IAS) for grades 1-8 (in reading, writing, science, and math) is one of two performance-based assessment supplements to the *Metropolitan Achievement Test* (MAT7) *and Stanford Achievement Test* (SAT8). The other is *GOALS* which requires short responses on tasks that are similar to multiple-choice tests.

The *Integrated Assessment System* requires more extended responses. The IAS consists of three reading booklets for each grade level that reflect a variety of text types and topics, and a guided writing activity that leads to a written product based on the reading. The writing activities include story endings, persuasive essays, reports, historical fiction, letters, and brochures. One primary task, for example, has students write a letter to "Turtle," the main character in one of the stories, to help him decide what to do about a new house. Writing is assessed using a three-trait system—response to reading (the amount and accuracy of information from the reading), management of content (organization and development), and command of language (word choice, sentence structure, grammar, and mechanics). The writing activities encourage process writing including collaboration.

A general scoring guide is adapted for each task to create a task-specific guide. Complete technical information, including norms, is available.

Fingeret, Hanna Arlene. *It Belongs To Me: A Guide to Portfolio Assessment in Adult Education Programs*, 1993. Available from: Literacy South, Snow Bldg., 331 W. Main St., Durham, NC 27701, (919) 682-8108.

This is a short paper on the use of portfolios in adult literacy programs, based on interviews by the author with a number of programs developing this concept. Although the paper states that it emphasizes assessment portfolios (showcase, presentation), their actual steps for

implementation also imply their use as an instructional tool. For example, the first step is "clarify your beliefs about literacy and their relationship to how you work with students." Some assistance with student self-reflection is also provided.

Not included are samples of student work, criteria, or technical information.

(TC# 440.3ITBELM)

Flood, James, and Diane Lapp. *Reporting Reading Progress: A Comparison Portfolio for Parents.* **Located in:** The Reading Teacher March 1989, pp. 508-514.

This article describes the content of a reading (and writing) portfolio in the elementary grades that can be used to show student progress to parents.

(TC# 400.3REPREP)

Fredericks, Anthony, and Timothy Rasinski. *Involving Parents in the Assessment Process.* **Located in:** The Reading Teacher 44, 1990, pp. 346-349.

The authors maintain that parents should be invited to participate in all aspects of the classroom reading program. This enables parents to understand the complexity of the reading process and reading instruction, observe growth more directly and understand what they can do to help. The authors suggest several ways to get parents involved. Examples are:

1. Early in the school year, provide a means for parents to state individual expectations for their child.

2. Develop simple question sheets for parents to use to assess reading progress. (Two such sheets are included in the article.)

3. Frequently ask parents to compose lists of things their children have learned in reading.

Gahagan, Hilary Sumner, Dewayne Smith, and Shelley King. *Project P.R.I.D.E.* **Available from: Beaverton School District, PO Box 200, Beaverton, OR 97075, (503) 591-8000, fax: (503) 591-4415.**

This document is a set of handouts from a conference presentation. They are very readable and present a good overview of Project P.R.I.D.E.—an inclusion program for special education students that utilizes language arts portfolios to document student progress and communication with parents. It also encourages students to take control of learning. The

handouts include a description of the portfolio system, a form for student self-evaluation of their portfolios, a feedback questionnaire for parents, and daily schedules.

(TC# 400.3PROPRI)

Gillet, Jean, and Charles Temple. *Understanding Reading Problems: Assessment and Instruction. Third Edition,* **1990. Available from: Harper-Collins Publishers, 1000 Keystone Industrial Park, Scranton, PA 18512, (800) 242-7737.**

This book starts by describing (1) how literacy develops and the types of things students need to know and be able to do in order to learn to be literate, and (2) the types of problems students run into that hinder their learning to be proficient. Then the authors systematically describe various assessment techniques to determine whether students have the prerequisite knowledge for learning to read or to determine the nature of the reading problems they are having. There is an especially good discussion of development, concepts about print, and miscue analysis. The strength of this book is that the authors describe what needs to be known, why it needs to be known, and how to get the information. They also provide the "so what"—instructional strategies for various kinds of problems.

The only weakness might be in the lack of a statement of the ultimate target of reading instruction—what do we ultimately want readers to be like? What is an expert reader? Because of this lack of a concrete statement, we are left to infer the target from the assessment devices and instructional methods discussed. It is more difficult to see how it all fits together, and some aspects of good reading may be under-emphasized, for example, metacognition and attitudes.

Glazer, Susan Mandel, L.W. Searfoss, and L.M. Gentile. *Reexamining Reading Diagnosis: New Trends and Procedures,* **1988. Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.**

This book is a compendium of articles covering a variety of topics. This reviewer found the following of most use: using student "think alouds" to analyze reading strategies and self-monitoring (p. 94); checklists for developmental stages in early reading and writing that can be used to analyze student progress (p. 48), informally monitoring student knowledge of text structures (p. 103); and a checklist for analyzing student retelling of stories (p. 139).

(TC# 440.6REARED)

Glazer, Susan Mandel and Carol Smullen Brown. *Portfolios and Beyond: Collaborative Assessment in Reading and Writing,* 1993. Available from: Christopher-Gordon Publishers, Inc., 480 Washington St., Norwood, MA 02062, (617) 762-5577.

The authors of this book state their purpose as being to elucidate assessment procedures that parallel and support a more holistic approach to language arts instruction. The book has some good ideas on the following topics:

1. The type of classroom environment that is necessary to support this instructional model: a student-centered environment that allows students to read and write for real reasons, develop a community of learners, be comfortable taking risks, and share control of learning.

2. A self-assessment checklist for evaluating a "literacy environment" that focuses on supplies and room arrangement. It does not include instructional approaches, although there is a section on how to manage a "student-centered" classroom.

3. Information to help students self-reflect, self-assess, and control their own learning, including self-evaluation checklists and open-ended questions.

4. The need for ways to more formally summarize and report progress. There are chapters on writing and reading. The writing chapter has progress summary forms and developmental continuums; the reading chapters cover think-alouds and retelling. There is also help with how to do them and what to look for in student responses. (This is frequently left out of whole-language books.)

5. Information to help interact with parents

6. Practical help with finding time, storing work, etc.

Lots of student work is included. Technical information is not included.

(TC# 400.6PORBEY)

Goodman, Kenneth, Lois Bridges Bird, and Yetta Goodman. *The Whole Language Catalog Supplement on Authentic Assessment,* 1992. Available from: American School Publishers, 1221 Farmers Ln., Suite C, Santa Rosa, CA 95405, (800) 882-2502.

This oversized publication is a compendium of case studies, philosophy statements, and examples of assessment ideas for use by teachers to look at student progress in reading, writing, spelling, and oral language. Although the major chapters focus on philosophy, the teacher as a professional, student self-evaluation, assessment methods, and specific assessment ideas, the organization is inductive—the many vignettes and samples are intended to provide ideas to knowledgeable teachers.

There are especially good sections on miscue analysis (what it is, how to do it, and many student samples), the philosophy of whole language, the teacher as constructor of meaning,

and ideas for student self reflection and evaluation. It also has lots of sample report cards, good ideas for evaluating a literate environment and pare.,t involvement. One strength is that it doesn't just list information collection techniques, but also outlines the sorts of things to look for in student performance or work to help gauge progress

If there are weaknesses in this publication it would be, first, that there is no overview of targets for students: what does a good reader or writer look like, and how do the various suggestions for data collection provide evidence of progress toward these targets? Lots of samples and ideas are given but without an organizing principle. (This is why I call the publication inductive. One builds the definition of targets from the samples given.) For example, one checklist has you note whether students "enjoy working at the writing table." You have to both infer why this is important, and take it on faith that this is more important to collect than some other indicator.

Secondly, although lists of things to look for in student performance and work are given, they are frequently undefined. For example, one rating form has you note student "use of prior knowledge and context to draw conclusions and make predictions." Will anything count? Will teachers be consistent in their judgments? The authors are unclear on these points.

Thus, this publication is probably most useful for inductive thinkers and already knowledgeable teachers who are looking for ideas.

(TC# 400.6WHOLAC)

Goodman, Yetta M., Dorothy J. Watson and Carolyn L. Burke. *Reading Miscue Inventory—Alternative Procedures,* **1987. Available from: Richard C. Owen Publishers, Inc., PO Box 585, Katonah, NY 10536, (800) 336-5588, fax: (914) 232-3977.**

Miscue analysis includes a number of procedures to view what readers do when they read in order to understand the reading process. It is used to evaluate reading problems, as well as to provide information about student reading comprehension, strategies, and background knowledge. A miscue is essentially an "error" or "mistake" while reading. A retelling adds information about the reader's search for meaning and supports explanations about many of the reader's miscues. Results are used to plan instruction.

This book is a comprehensive discussion of theoretical underpinnings, procedures for miscue analysis, and use of results in instruction and student self-assessment. Although the procedures are theory and research based, the authors don't provide evidence of impact on students. Lots of sample student performances are included.

(TC# 440.3REAMII)

Grant, Audrey. *Towards a Transactive Theory of the Reading Process and Research in Evaluation.* Located in: Sue Legg and James Algina (Eds.), <u>Cognitive Assessment of Language and Math Outcomes</u>, 1990, pp. 192-240. Available from: Ablex Publishing Corp., 355 Chestnut St., Norwood, NJ 07648.

The author compares previous theories of reading (which she calls "product" theories) with current constructionist theories (which she calls "process" theories), and expands the notion of process theories to "transactive" theories, in which the meaning a reader brings to the text is personal, creative, and colored by past experiences (e.g., the whole context under which previous reading experiences occurred). After describing these various theories, the author draws some implications for instruction and assessment.

Specifically, the author recommends a holistic, ethnographic approach to assessment based on day-to-day classroom activities and settings. She also reviews common assessment techniques in light of her perspective on the reading process. These reviews include: miscue analysis, cloze, ongoing records, informal reading inventories, and individual conference logs.

(TC# 440.1TOWTRT)

Ministry of Education and Training [Victoria, Australia]. *English Profiles Handbook, Assessing and Reporting Students' Progress in English*, 1991. Available from: Touchstone Applied Science Associates, Inc., Fields Ln., PO Box 382, Brewster, NY 10509, (914) 277-4900, fax (914) 277-3548.

The *English Profiles Handbook* describes student proficiency in speaking, reading and writing in terms of developmental continua. There are nine bands that describe clusters of behaviors from the least to the most sophisticated. For example, writing band "A" denotes such student behaviors as: "uses writing implement to make marks on paper," and "comments on signs and other symbols in immediate environment." Writing band "I" denotes such behaviors as: "writes with ease in both short passages and extended writing," and "extended arguments are conveyed through writing."

The booklet also: (1) provides some guidance on how to make and record observations, including the classroom tasks within which teachers might make their observations; and (2) discusses how to promote consistency in judgments between teachers (without using technical terminology).

The authors point out the benefits of this approach—the bands direct teachers' attention to growth in literacy, they give teachers a common vocabulary for talking about such growth, and they allow students and parents to observe growth.

The handbook is designed for informal classroom use. No technical information is available.

(TC# 400.3ENGPRH)

Hansen, Jane. *Literacy Portfolios Emerge.* Located in: <u>The Reading Teacher</u> 45, April 1992, pp. 604-607.

The author describes a sixth grade teacher's experience in developing a literacy portfolio for her students: both the steps needed to build the competencies required by students to put together their own portfolios, and the classroom environment needed to encourage true student portfolio development. Some of the skills she had students practice were: discussing books, describing the reasons for the book choices they made; conducting a discussion without a teacher present; and discussing what, in their reading, still confuses them.

When students had the necessary skills, they were introduced to the concept of a "literacy portfolio" in which they show who they are as readers. This will then later build into "who the student wants to be as a reader," which requires additional skills in self-reflection and development of criteria.

(TC# 440.6LITPOE)

Hansen, Jane. *Literacy Portfolios: Helping Students Know Themselves.* Located in: <u>Educational Leadership</u> 49, 1992, pp. 66-68. Also available from: University of New Hampshire, Morrill Hall, Curham, NH 03825.

The author describes a K-12 project in which students are completely in control of what goes into their literacy portfolios, and any rationale is accepted at face value. The idea is to build self esteem and to help students get to know who they are as readers. Items from outside of school are encouraged. There is also some help in the article with how to get started and how to promote self-reflection.

There is no discussion of criteria, but there are some examples of what students placed in their portfolios and why.

(TC# 400.3LITPOH)

Hetterscheidt, Judy, Lynn Pott, Kenneth Russell, et al. *Using the Computer as a Reading Portfolio.* Located in: <u>Educational Leadership</u> 49, 1992, p. 73. Also available from: Bellerive School, 666 Rue De Fleur, Creve Coeur, MO 63141.

The authors briefly describe their use of a commercially available Macintosh HyperCard system that allows their fifth grade students to scan writing, record themselves reading, give self-evaluations, and keep track of comments and other notes. The emphasis is on recording progress and allowing for self-reflection—samples are entered at various regular times during the school year.

(TC# 400.3USICOR)

Hill, Bonnie Campbell and Cynthia A. Ruptic. *Practical Aspects of Authentic Assessment—Putting the Pieces Together*, 1994. Available from: Christopher-Gordon Publishers, Inc., 480 Washington St., Norwood, MA 02062, (617) 762-5577).

The authors discuss how to assess reading, writing, the content areas, and student attitudes using portfolios, anecdotal records, classroom observations, checklists, conference records, and developmental continuums. The book mentions involving parents, student self-reflection, reporting, and special students in the assessment process.

Checklists and developmental continuums are included for reading and writing. Some sample student work is included, but technical information is not. The information appears to be most appropriate for grades K-8.

(TC# 000.6PRAASA)

· Hug, Jo-Anne. *Balanced Assessment for Improved Classroom Instruction and Student Learning*, September 1993. Available from: Alberta Education, Box 43, 11160 Jasper Ave., Edmonton, Alberta, Canada T5K 0L2, (403) 427-0010, fax (403) 422-4200.

This document is a set of handouts from a conference presentation. It briefly describes all three of Alberta's student assessment programs—diploma examinations (high school), achievement testing (grades 3, 6, and 9), and diagnostic evaluation (elementary reading and math, secondary communication skills). All of these use combinations of multiple choice and performance assessment

Sample third grade reading and writing assessments are included: (1) a list of books for students to read; (2) the activities for students to complete as they read the book; (3) generalized scoring guides for marking student responses (predictions, story structure, retelling main events, characters, personal connections, and opinion; (4) response to reading task sheet and scoring guide (content/development, language and conventions); and (5) teacher and student experiences and opinion questionnaires.

No technical information nor sample student responses are included.

(TC# 400.3BALASi)

Illinois State Board of Education. *Illinois Goal Assessment Program—Reading Tests*, 1991. Available from: Tom Kerins (Mgr.), Illinois State Board of Education, 100 N. First St., Springfield, IL 62777, (217) 782-2221.

This document contains the 1991 versions of Illinois' grade 3, 6, 8, and 11 reading tests. As with previous tests, these attempt to incorporate current theories of reading, even though they are in multiple-choice format. Features include: students read entire selections rather than short passages; students are asked about prior knowledge of the topic; questions are based on important concepts in the text; students answer questions about reading strategies; there are

attitude questions on some forms; all questions have one to three correct answers; and students read two passages—narrative and expository.

(TC# 440.3ILLGOR2)

International Reading Association. *Portfolios Illuminate the Path for Dynamic, Interactive Readers.* Located in: <u>Journal of Reading</u>, May 1990, pp. 644-647.

This paper discusses the importance of classroom assessment in reading and how portfolios are one tool for this purpose. The authors present a general overview of what could be accomplished with students by doing portfolios, the importance of student self-reflection, and how portfolios might be used in the classroom.

(TC# 440.6PORILP)

Johnston, Peter. *Steps Toward a More Naturalistic Approach to the Assessment of the Reading Process.* Located in: **Sue Legg and James Algina (Eds.),** <u>Cognitive Assessment of Language and Math Outcomes</u>, **1990, pp. 92-143. Available from: Ablex Publishing Corp., 355 Chestnut St., Norwood, NJ 07648.**

This chapter presents a rationale and guidelines for a more naturalistic approach to reading assessment. Such assessment consists of observations of children's skills within the context in which they normally occur. The chapter discusses the nature of decision making in education, the process of assessment from a naturalistic standpoint, the aspects of reading which should be assessed, and a contrast of the naturalistic approach to more traditional assessment approaches.

In order to really be able to implement his ideas, several things must be done, including:

1. helping teachers to become sensitive observers and interpreters of children's behavior; the teacher is the assessment instrument;

2. working on clarifying the knowledge and behaviors that are the targets of assessment.

(TC# 440.6STETOM)

Kay, Gary. *A Thinking Twist on the Multiple-Choice Question.* Located in: <u>Journal of Reading</u> **36, 1992, pp. 56-57.**

The author uses a multiple-choice test with a twist—he has his community college students write down why they selected the answer they did and say why at least one of the other answers was wrong. He briefly describes the kinds of useful information that can be obtained in this way. This is an informal procedure and no technical information is available.

(TC# 440.6THITWM)

26

Kentucky Department of Education. *Kentucky Instructional Results Information System (KIRIS) Open-Response Released Items, 1991-92.* Available from: Advanced Systems in Measurement & Evaluation, Inc., PO Box 1217, 171 Watson Rd., Dover, NH 03820, (603) 749-9102. Also available from: Kentucky Department of Education, Capitol Plaza Tower, 500 Mero St., Frankfurt, KY 40601, (502) 564-4394.

This document contains the released sets of exercises and related scoring guides from Kentucky's 1991-92 grade 4, 8, and 12 open-response tests in reading, math, science, and social studies. It does not contain any support materials such as: rationale, history, technical information, etc.

There are three to five tasks/exercises at each grade level in each subject. Most are open-response (only one right answer), but some are open-ended (more than one right answer), especially in reading. Examples in reading are: "Would you like to be part of Jesse's family? Why or why not?" "The author ends the article by saying, 'in many ways, spines are fine.' Do you agree with the author?" "Based upon the information in the *Fire: A Blessing in Disguise* article and other pertinent outside information, should fires be allowed to burn uncontrolled?"

Scoring is holistic (four-point scale) and task-specific. For example, to get a "four" on the first question listed above, the "student gives relevant examples from the story showing why he or she would or would not like to be part of Jesse's family. Answer includes examples from student's personal experience AND it touches on how members of the family relate to one another."

Kentucky has given permission for educators to copy this document for their own use.

(TC# 060.3KENINR)

Kinney, Martha, and Ann Harry. *An Informal Inventory for Adolescents that Assesses the Reader, the Text, and the Task.* Located in: <u>Journal of Reading</u> 34, 1991, pp. 643-647.

The authors describe an informal procedure for assessing reading from a constructivist viewpoint. They use the procedure in grades 6-8 to look at use of prior knowledge, use of text structure, and making inferences.

The authors provide some guidelines for selecting a text, making an outline of the knowledge structure of the text (to compare to student retellings), assessing prior knowledge (brainstorming and defining related vocabulary), assessing ability to gain information from reading (recalls, identifying referents and inference questions), and using the information once gathered. The authors also illustrate each step with an example.

The method is theory based and well thought out, but no technical information is provided.

(TC# 440.6INFINA)

Kletzien, Sharon B., and Maryanne R. Bednar. *Dynamic Assessment for At-Risk Readers.* Located in: Journal of reading, April 1990, pp. 528-533.

The Dynamic Assessment Procedure (DAP), most valuably used with at-risk readers of all ages, involves the following components:

1 Initial assessment of reading ability

2. Analysis of a student's reading processes and strategies

3. Presentation of a learning mini-lesson for one area in which the student needs assistance

4. Analysis of the student's ability to benefit from the mini-lesson

(TC# 440.3DYNASF)

Knight, Janice Evans. *Coding Journal Entries.* Located in: Journal of Reading 34, 1990, pp. 42-47.

This article describes a system for coding reading journal entries to promote student self-reflection and to improve reading strategies and comprehension. The impetus for this system came from the author's observation that many reading-journal entries were only superficial summaries of what was read. The author wanted to make journal entries more meaningful. Each journal entry is coded by the student and/or teacher on level of thinking, metacognitive strategies, and confusion. Examples are:

1. Level of thinking—"R" means "recall," and "☺" means "inference, prediction, or cause and effect.

2. Metacognitive strategy—"S" means "summarize," and "SQ" means "self-questioning."

3. Confusion—"O" means that the entry does not say anything significant, and "?" means that the entry indicated student confusion.

The promise of this system is that the coding system is integrated with instruction so that students learn what good reading strategies are, and then assess them in their own journal entries.

(TC# 440.3CODJOE)

Larter, Sylvia. *Benchmarks: The Development of a New Approach to Student Evaluation,* 1991. Available from: Toronto Board of Education, 155 College St., Toronto, ON, M5T 1P6, Canada, (416) 598-4931.

Benchmarks are student performance assessment tasks tied to Provincial Educational goals. Each Benchmark lists the goals that are addressed, the task, and the task-specific holistic scale

used to judge performance. Students are also rated on perseverance, confidence, willingness, and prior knowledge, depending on the Benchmark. There are 129 Benchmarks developed in language and mathematics for grades 3, 6, and 8.

The percent of students in the sample tested at each score point (e.g., 1-5) are given for comparison purposes, as are other statistics (such as norms), when appropriate. Anchor performances (e.g., what a "3" performance looks like) are available either on video or in hard copy.

This report describes the philosophy behind the Benchmarks and how they were developed. Some sample Benchmarks (without anchor performances) are provided in the appendices.

(TC# 100.6BENCHM)

Lidz, Carol. *Practitioner's Guide to Dynamic Assessment*, 1991. Available from: Guilford Press, 72 Spring St., New York, NY 10012, (800) 365-7006.

Dynamic assessment involves the following features.

1. The assessor actively works to facilitate learning and induce active participation in the learner.

2. The assessment focuses on processes rather than products.

3. The assessment produces information about learner modifiability and the means by which change is best accomplished.

The procedure is employed when you want to know the responsiveness of the learner to intervention, the repertory of problem-solving processes or strategies employed by the student, and the means by which the change is best effected. The author describes some major applications of this approach—examination of general problem-solving abilities, a substitute for intelligence testing, and application to academic content (beginning reading and math).

However, the majority of the book is devoted to the presentation of two assessment devices developed by the author: The *Mediated Learning Experience Rating Scale* and the *Preschool Learning Assessment Device*. The former is designed to assess the types of instructional strategies used by teachers. The latter is designed to assess the status and modifiability of preschool student problem-solving abilities. Although the approach is general problem solving, there is some discussion of applying it to specific content areas.

Lock, Leonard K., Leann R. Miller, and James R. Masters. *A Preliminary Evaluation of Pennsylvania's 1990 Wholistic Model Reading Tests*, April 1991. Available from: Pennsylvania Department of Education, Division of Educational Testing and Evaluation (12th Floor), 333 Market St., PO Box 911, Harrisburg, PA 17126, (717) 783-6788.

Pennsylvania has modified its statewide reading assessment of students in grades 3, 5, and 8 to include complete passages, comprehension questions based on the passages (43-48 questions), prior knowledge of the topics covered in the passages (7-8 questions), reading strategies (5-10 questions), and habits/attitudes (3-4 questions). This is very similar to the procedure used in Michigan and Illinois. This entry describes the results of the first year of this assessment. Results included the findings that:

1. Scores increased as prior knowledge of the students increased, and as knowledge of strategies increased.

2. Students seemed to answer the attitude questions honestly based on several lines of evidence.

The term "wholistic" in the title appears to refer to the attempt to measure all aspects of good reading using a more realistic approach, rather than to how student performances were scored. (Indeed, multiple-choice questions were used.)

Massachusetts Educational Assessment Program. *On Their Own: Students' Response to Open-Ended Tests in Reading*, 1991. Available from: Massachusetts Department of Education, 350 Main St., Malden, MA 02148, (617) 388-3300.

The document we received contained assessment materials for grades 4, 8, and 12 covering a period of three years (1988-1990) in four subject areas (reading, social studies, science and math). This entry describes only the 1990 assessment in reading. The open-ended reading

assessment is based on the notion that students do not simply acquire knowledge from text, but rather construct meaning, relate information and themes to their own lives, and critically analyze materials. Reading is also a powerful context for critical thought.

Students were asked to read various passages including poems, stories, information, and materials from daily life (e.g., advertisements). They responded to questions about metaphor, themes, predicting actions or reactions of characters, identifying the most important information, reading strategies, use of context to interpret meaning, and writers' stance. This entry contains sample items and student responses, plus an introduction to the thinking behind the approach.

McCormick, Sandra, Robert Cooter, and John McEneaney. *Assessment of Disabled Readers: A Survey of Current Teacher Beliefs and Practices.* Located in: Journal of Reading 35, 1992, pp. 597-599.

This paper reports on an International Reading Association survey of membership to find out current teacher beliefs and practices concerning assessment. The results are very interesting. For example, in response to the question, "What specific questions would you like to have answered about the assessment of disabled readers?" the five most common responses were:

1 How can assessment information be translated into instructional practice?

2. What do research and practice suggest is the best approach to assessment?

3. How are portfolios and writing assessment being used to assess disabled readers?

4. What are whole language assessment techniques and how do they compare to traditional diagnostic methods?

5. What is the role of attitude, home environment, and parental involvement in diagnosis and remediation?

This might be useful for planning professional development events.

(TC# 440.6ASSDIR)

McDonald, Joseph P., Sidney Smith, Dorothy Turner, et al. *Graduation by Exhibition— Assessing Genuine Achievement,* 1993. Available from: Association for Supervision and Curriculum Development, 1250 N. Pitt St., Alexandria, VA 22314, (703) 549-9110, fax (703) 549-3891.

This book discusses a strategy for school reform called "planning backwards from exhibitions" in which schools postpone consideration of change in order to first consider what the school's aim is for students and how they will know if their aim succeeds. Schools define a vision of

what they want for graduates by proposing a vision of what tasks they want them to do well.
Having imagined the tasks, they compare the vision against reality. Then they plan backwards
what students would need to know and be able to do at various grades or ages in order to
achieve the goal by grade 12.

This booklet describes this process using three case studies, emphasizing different tasks
(called "platforms)—writing position papers, inquiring and presentating, and participating in
discussion seminars.

McKenna, Michael, and Dennis Kear. *Measuring Attitude Toward Reading: A New Tool
for Teachers.* Located in: The Reading Teacher 43, May 1990, pp. 626-639.

This paper reports on the development of the *Elementary Reading Attitude Survey* for use in
grades 1-6. There are 20 items, 10 on academic reading and 10 on recreational reading.
Students read each question (such as "How do you feel about spending free time reading?")
and then indicate their response by circling one of four Garfield cartoon characters drawn to
show different levels of excitement or boredom.

The complete instrument, along with administration instructions and norms (based on 18,000
students) are included. Some reliability and validity information is also given. As with other
measures of this type, estimating validity is problematic because it involves identifying other
measures of attitude with which to compare self-ratings. In this case, the authors compared
self-ratings to whether or not the student had a library card, the number of books currently
checked out, amount of television watched, and holistic teacher ratings of student ability.
Because of the inherent conceptual problems here, the instrument is best used informally.

McTighe, Jay. *Maryland School Performance Assessment Program—Reading, Writing,
Language Arts,* 1991. Available from: Maryland State Department of Education,
200 W. Baltimore St., 5th Floor, Baltimore, MD 21201, (410) 333-2000.

This document contains: Maryland's philosophy for developing performance assessments;
statements of targets in reading, language arts and math; a description of the *Dimensions of
Thinking* framework (published by ASCD and adopted by Maryland to develop assessments
of student thinking); and a description of Maryland's thematic reading tests.

The reading targets include reading for different purposes; constructing meaning from the text
using reading skills, strategies, and background knowledge; and interacting in different ways
with various types of texts. The "thematic" reading format involves using the same passage
and answering a series of short answer questions, and then writing an essay.

Meltzer, Lynn J. *Surveys of Problem-Solving & Educational Skills,* 1987. Available from: Educator's Publishing Service, Inc., 75 Moulton St., Cambridge, MA 02138, (617) 547-6706, (800) 225-5750.

Although this is a test published primarily for diagnosing learning disabilities for students aged 9-14, it has some interesting ideas that could be applied more generally. There are two parts to the test—a more-or-less standard, individualized aptitude test, and a series of achievement subtests. In addition to decoding skills, vocabulary knowledge, and the ability to separate words in a paragraph that has no word spacing, the reading subtest also requires an oral retelling of a story and oral responses to comprehension questions. The oral retelling is scored on order of recall, amount of recall, and the recall of important ideas in the passage.

The most interesting part of this test, however, is that after each subtest is administered, the teacher is guided through an analysis of the student's strategies in completing the task—efficiency of approaching tasks, flexibility in applying strategies, style of approaching tasks, attention to the task, and responsiveness during assessment. In the aptitude portion of the test, the teacher also assesses the student's ability to explain his/her own strategies.

A review of this instrument in *The Reading Teacher,* November 1989, concluded that, since there is little evidence of validity presented by the author, the test should be used informally for classroom assessment. The reviewer also states: "The SPES, rather than attempting to measure underlying cognitive abilities, instead appears to emphasize underlying strategy awareness and use. This orientation appears to reflect the important recent developments in educational thinking, emphasizing the child as a problem solver who uses intentionally selected strategies to improve understanding and learning." (p. 176)

Meyers, Joel, Susan Lytle, Donna Palladino, et al. *Think-Aloud Protocol Analysis: An Investigation of Reading Comprehension Strategies in Fourth- and Fifth-Grade Students.* Located in: <u>Journal of Psychoeducational Assessment</u> 8, 1990, pp. 112-127.

The authors used "think alouds" to assess 4th and 5th grade students' use of such reading strategies as reasoning, elaboration, signaling understanding, analysis, judging, and monitoring doubts while they were reading three fictional passages. Use of strategies was stable across passages for the students. Reasoning and signaling understanding was significantly related to reading comprehension. The list of strategies is provided, but there are no samples of student speech to illustrate them.

Mossenson, Leila, Peter Hill, and Geofferey Masters. *(TORCH) Tests of Reading Comprehension*, 1988. Available from: Australian Council for Educational Research, Ltd., (ACER), Private Bag 55, Camberwell, Victoria 3124, Australia, (03) 277-5555, fax: (03) 277-5500.

TORCH is a set of 14 graded passages (200-900 words) for use with students in grades 3-10 to assess the extent to which readers are able to obtain meaning from text. Students are presented with the original text and with a retelling of the text which leaves out certain details from the original. Students complete the retelling by filling in the gaps. Responses are short—at most 10 words. The test is designed so that, in order to fill in the gaps, the student must use 1 of 11 reading skills. (Examples are: complete simple rewordings, connect ideas separated in the text, and infer emotion.)

This is administered as a group test and student responses are scored "acceptable" or "not acceptable" by comparison to models provided in the scoring guide. Results are interpreted by noting which reading skills the student can perform (e.g., finding facts), and which he or she is unlikely to perform (e.g., providing a detail in the presence of distracting ideas).

Oregon Department of Education. *Oregon Open-ended Reading Assessment,* 1993.
Available from: Oregon Department of Education, 255 Capital St., NE, Public Service
Bldg., Salem, OR 97310, (503) 378-8004.

Oregon is experimenting with assessing student reading ability in grades 4, 7, and 10 using a
procedure in which students read a complete passage (6 pages or so) and answer a series of
open-ended questions. Examples of questions are: "What is your first response to this
story?" "Explain how your own experiences helped you understand the story," and "Brian has
always had good feelings about the outdoors. Do you think his opinion has changed? Explain
your reasons." Passages are narrative, expository and persuasive. Some tasks require both
individual and group work. Tasks extend over several days.

Student reponses are scored on 4 traits: constructing meaning, making connections within
text, making connections beyond text, and risk taking. Student responses to the complete set
of questions are scored together. Two readers score each response.

This document includes one complete fourth grade reading task, 3 complete student
performances on this task (rated high, medium and low), miscellaneous student reponses from
parts of other fourth grade tasks, the 4-trait scoring guide, the rationale and procedures for
the assessment, survey results of student response to the task, specifications for designing
reading performance tasks, and score distributions from the 1993 pilot test.

(TC# 440.3OREOPE)

Paratore, Jeanne R., and Roselmina Indrisano. *Intervention Assessment of Reading
Comprehension.* Located in: The Reading Teacher, April 1987, pp. 778-783.

This article describes an assessment procedure designed to both assess a student's present
performance and to discover the facility with which that student can be taught. The procedure

examines the student's ability to employ reading strategies (such as using background knowledge to predict passage content and using knowledge of passage structure to aid comprehension) both independently, and with modeling, if needed.

Peers, Michele G. *A Teacher/Researcher's Experience with Performance-Based Assessment as a Diagnostic Tool."* Located in: Journal of Reading 36, April 1993, pp. 544-548. Also available from: International Reading Association, PO Box 8139, Newark, DE 19714.

This paper describes one teacher's attempt to gain information about college students' skills in reading, research, forming and supporting a position, and writing (rhetorical and mechanical skills) by adapting performance assessment materials developed by the Center for Reading and Language Studies at Indiana University. The author used a task that required students to learn about a water shortage problem, and devise a solution. The article is a nice non-technical presentation of her rationale, procedures, scoring guide and discoveries, both about her students and about the assessment itself. The scoring guide is a seven-point scale that assesses three dimensions of reading and writing—control of reading, control of content, and control of language.

(TC# 400.6TEAREE)

Peterson, Anita A. *Developing One Type of Performance Assessment: A Criterion-Referenced Reading Assessment*, 1993. Available from: Kamehameha Schools, 1887 Makuakane St., Honolulu, HI 96819, (808) 842-8832.

The author describes a reading assessment currently under development for students in grade 3. Actual reading texts are not included; however, specifications for selecting text materials and writing open and multiple-choice questions are provided in detail. In fact, this is an excellent example of clear test specifications. Some scoring guidelines are also provided, as are some statistics from the May 1992 administration.

(TC# 440.3DEVONT)

Phillips, Linda. *Developing and Validating Assessments of Inference Ability in Reading Comprehension, Technical Report No. 452*, 1989. Available from: Center for the Study of Reading, University of Illinois at Urbana-Champaign, 174 Children's Research Center, 51 Gerty Dr., Champaign, IL 61820.

The *Test of Inference Ability* was designed to measure one component of reading comprehension—making inferences. It was designed for grades 6-8, to be given in one class period, and uses full-length passages of three types: expository, narrative and descriptive. There are parallel multiple choice and open-ended response versions.

The author begins by critiquing current standardized tests of reading comprehension. The arguments are somewhat different from others: standardized tests seem to test general knowledge more than reading comprehension, and they do not articulate a clear definition of reading comprehension so that validation is possible.

The authors validated the multiple-choice test by comparing performance to the ability to infer as judged directly using a set of performance criteria provided in the text. The criteria basically hinge on completeness and consistency. See other entries by Phillips for a published version of the instrument (manual, multiple-choice version, and constructed response version).

(TC# 440.3DEVVAA)

Phillips, Linda. *Test of Inference Ability in Reading Comprehension*, 1989. **Available from: Institute for Educational Research and Development, Memorial University of Newfoundland, St. John's, NF A1B 3X8, Canada, (709) 737-2345.**

The *Test of Inference Ability* was designed to measure one component of reading comprehension—inferencing ability. It was designed for grades 6-8, to be given in one class period, and uses full-length passages of three types: expository, narrative and descriptive. There are parallel multiple choice and open-ended response versions. There are 12 questions per passage. The questions for the multiple-choice version and the constructed-response versions are the same.

In the multiple-choice version the students can earn from 0 to 3 points depending on his or her choice. Three points are awarded when the choice is both consistent and complete, two for a partially correct answer, 1 for a text-based answer and 0 for a wrong answer. The constructed-response version also assigns 0-3 points for each response; the multiple-choice options are given as models for assigning points in the constructed-response version.

Although scoring is task-specific, the authors provide a generalized holistic 0-3 scale for judging completeness and consistency (the criteria the authors use to judge student ability to infer) and provide the reasoning behind assigning some of the responses to different point values. This provides some of the help needed to apply the concepts of consistency and completeness to reading tasks other than those on the test.

All in all this appears to be a fairly well thought out and researched instrument.

(TC# 440.3TESINA)

Pikulski, John. *The Assessment of Reading: A Time for Change?* **Located in: The Reading Teacher, October 1989, pp. 80-81.**

The author presents a listing of ways that assessment in reading needs to change. His suggestions are based on standardized, nationally normed tests and include such comments as: "Assessment of reading must shift from being test-centered to being teacher- and pupil-

centered," and "The form of reading assessment must reflect the goals of instruction and the dynamic, constructionist nature of the reading process." The author then goes on to describe how *The Reading Teacher* intends to modify the content of its *Assessment* column to reflect these new directions

(TC# 440.6ASSREA)

Pikulski, John. *Informal Reading Inventories (2nd Ed.).* Located in: The Reading Teacher, March 1990, pp. 514-516.

This article describes the latest editions of four popular informal reading inventories: Analytic Reading Inventory (ARI—1989), Basic Reading Inventory (BRI—1988), Classroom Reading Inventory (CRI—1989), and Informal Reading Inventory (IRI-BR—1989). The author feels that the IRI-BR and the ARI have the greatest breadth of assessment materials; that the ARI would be the inventory of choice for an examiner who wants to assess science and social studies; the CRI would be good for disabled readers; and the IRI-BR is best for assessing reading beyond grade nine difficulty.

(TC# 440.1INFREI2)

Polakowski, Cheryl. *Literacy Portfolios in the Early Childhood Classroom.* Located in: Laura Grosvenor, et al., Student Portfolios, 1993, pp. 47-65. Available from: National Education Association (NEA) Professional Library, PO Box 509, West Haven, CT 06516, (800) 229-4200.

This paper is one of several in a book written by teachers participating in projects to take control of assessment and align assessment to their whole-language instruction. The author describes a portfolio system that collects the following information for kindergarten students: self-portrait (art), an interview with the child, an interview with the parent, concepts about print, word awareness (spelling), sight word list, reading sample, writing sample, attendance, story retelling, and other information teachers would like to include. Teachers assemble the information for students.

The author includes a discussion of the steps the teachers pursued in developing their portfolio system, help with what worked best and interacting with parents, hints on time management, a nice developmental continuum for reading and writing (with six stages), interview questions, word awareness activity, sample sight word list, instructions for the reading sample, miscue analysis and retelling, and record keeping forms.

No samples of student work or technical information is provided.

(TC# 440.3LITPOC)

Portland Pubic Schools. *Reading Assessment: Recording Student Progress,* 1989. **Available from: Portland Public Schools, PO Box 3107, Portland, OR 97208, (503) 249-2000.**

Portland Public Schools has assembled a package of informal classroom assessment tools in reading for students in grades K-2 to provide ideas to teachers on how to assess reading process skills. Additionally, the package advocates the use of portfolios since many samples of student work need to be collected over time in order to provide a complete picture of student progress.

Specific instruments in the package include a developmental spelling test; a checklist covering reading attitudes, behaviors, concepts about print, and reading strategies; an inventory concerning reading habits; suggestions for reading journals; a procedure for analyzing comprehension using retelling; and a series of checklists that covers such things as concepts about books, sense of story, and understanding of print. The rationale for each instrument is provided; no technical information is provided.

(TC# 440.3REAASR)

Province of British Columbia. *Supporting Learning—Understanding and Assessing the Progress of Children in the Primary Program—A Resource for Parents and Teachers,* 1991. **Available from: Ministry of Education, Province of British Columbia, Parliament Buildings, Victoria, BC V8V 2M4, Canada (604) 387-4611, fax (604) 356-2504.**

This document was produced to clarify what is known about the development and learning processes of students aged 3-13 and to explain changes in assessment. There are very nice summaries of the research on how children learn (p. 7); how and why instruction and assessment have changed (p. 10); the idea of tracking student progress using developmental continuums; and gathering information using collections of student work, discussions with students, and observation.

The document includes developmental continuums for aesthetics, social responsibility, formal reasoning, physical ability, reading, writing, and mathematics.

(TC# 070.3SUPLEU)

Psychological Corporation, The. *GOALS: A Performance-Based Measure of Achievement—Reading,* 1993. **Available from: The Psychological Corporation, Order Service Center, PO Box 839954, San Antonio, TX 78283, (800) 228-0752.**

GOALS was designed as an intermediate format between multiple-choice and performance assessment. Students read short passages and write short answers to fairly standard comprehension questions such as: thinking about characters, events, situations, facts and settings; suggesting appropriate reading strategies; and using thinking skills to determine fact vs. opinion, to identify supporting evidence, and to predict what will happen next. This has

the flavor of a multiple-choice test; the difference is that students write short answers instead of choosing answers from a list. Both narrative and informational passages are used for all levels except Level 1. Scoring is done on a four-point scale (0-3) in which "3" is "The student response is correct/logical (or very nearly so) and is clearly based on relevant and explicit information in the passage. All parts of the question are fully answered." This generalized rubric is used for all responses. Sample student answers for each score point on each exercise are provided.

The documents we have contain little rationale for the questions or passages and no technical information. Presumably this is available from the publisher upon request.

(TC# 440.3GOALSr)

Rea, Dean W. and David K. Thompson. *Designing Transformative Tests for Secondary Literature Students.* Located in: Journal of Reading 34, 1990, pp. 6-11.

The authors maintain that current tests of reading comprehension do not correspond to current theories concerning how meaning is constructed from text. They propose designing open-ended questions for students that are based on entire reading selections rather than on excerpts. These open-ended questions represent three levels of comprehension: literal, interpretive and applied. Examples of such questions are provided for three reading selections. Some criteria for evaluating the responses of students are also included. For example, students' responses to a persuasive question could be evaluated for plausibility, relevance, clarity, organization, and detail of the supporting material. Criteria are, however, not defined in detail.

(TC# 440.6DESTRF)

Rhodes, Lynn K., Ed. *Literacy Assessment—A Handbook of Instruments*, 1993. Available from: Heinemann, A Division of Reed Publishing Inc., 361 Hanover St., Portsmouth, NH 03801, (603) 431-7894.

This document includes a series of information-gathering instruments in the following areas: reading attitudes, comprehension strategies, miscues, writing attitudes, spelling, and student self-assessment. It also includes a form for observing whole language teaching.

Most examples are teacher developed. Some are more complete than others (e.g., they include the instrument and help with scoring/analysis). There is no context setting in the sense of describing current thinking about goals for students and how the instruments fit in. Therefore, it requires knowledgeable teachers who already have a sense of what information they want to collect and why, and how to use it. The document looks like something appropriate for beginners but, in actuality, it requires knowledgeable users to use it well. There is a good bibliography of developmental continuums.

(TC# 400.3LITASH)

Riverside Publishing Company. *Performance Assessments for ITBS, TAP and ITED,* 1993. Available from: The Riverside Publishing Company, 8420 Bryn Mawr Ave., Chicago, IL 60631, (800) 323-9540, fax (312) 693-0325.

Riverside is publishing a series of open-response items in the areas of social studies, science, mathematics, and language arts. They supplement achievement test batteries available from the publisher: ITBS, TAP, and ITED. Nire levels are available for grades 1-12. Each level uses a scenario to generate a series of related questions, some of which have only one right answer, and others of which are more open-ended and generative.

No information about scoring, no sample student performances, and no technical information was included in the materials we received. However, the publishers catalog indicates that scoring materials are available and that the tests are normed.

(TC#060.3PERAST)—IN-HOUSE USE ONLY

Roswell, Florence G., and Jeanne S. Chall. *Creating Successful Readers—A Practical Guide to Testing and Teaching at All Levels,* 1994. Available from: The Riverside Publishing Company, 8420 Bryn Mawr Ave., Chicago, IL 60631, (800) 323-9540.

This book is definitely written for teachers with responsibility for designing educational programs for students with reading difficulties. The authors have the following philosophy: "...the most effective approach to improving the reading achievement of individuals who have fallen behind is through a direct assessment of their status and pattern of strengths and weaknesses in reading and related areas, followed by instruction that is based on this information."

The authors also produced the *DARTTS,* published by Riverside. The book provides a longer discussion of the philosophy behind, and use of, strategies similar to those in the *DARTTS.* Specifically it discusses both diagnostic batteries to pinpoint reading problems and "trial lessons" to identify effective teaching strategies. A nice developmental continuum and 20 case studies for reading are included.

(TC# 440.6CRESUR)

Roswell, Florence G., and Jeanne S. Chall. *DARTTS: Diagnostic Assessments of Reading and Trial Teaching Strategies,* 1992. Available from: Riverside Publishing Company, 8420 Bryn Mawr Ave., Chicago, IL 60631, (800) 323-9540, fax (312) 693-0325.

The *DARTTS* is an assessment/instructional package that combines fairly traditional, individualized reading testing with sample lessons designed to find suitable methods for teaching students to read. Since there was no discussion of the theoretical underpinnings for the tests, it was difficult to evaluate their comprehensiveness; however, they appeared to be fairly traditional: word recognition, vocabulary, spelling, oral miscue analysis and silent reading comprehension (based on simple multiple-choice questions). The interesting part is

the attempt to link results with instruction. However, there was also no rationale given for the instructional strategies provided, so it is up to the reader to judge appropriateness and correspondence to current theories of reading.

(TC# 440.3DARTTS)

Rowell, C. Glennon. *An Attitude Scale for Reading.* Located in: Reading Teacher 25, February 1972, pp. 442-447.

This article describes the *Scale of Reading Attitude Based on Behavior.* In this scale, another person observes a child in various reading situations and rates 16 behaviors, such as: "The student exhibits a strong desire to come to the reading circle or to have reading instruction take place," and "The student asks permission or raises his hand to read orally." Each behavior is rated on a five-point scale from "always occurs" to "never occurs."

The paper presents the entire scale and the results of pilot-testing, which show that ratings between observers can be very consistent. As with all measures of this type, validity is an issue because of the need to identify a second way to estimate attitude with which to compare the ratings in the instrument. In this case, the authors chose holistic ratings by the same teachers in the reliability study. Because of these concerns, it is best that the instrument be used informally.

(TC# 440.3ATTSCR)

Royer, James. *The Sentence Verification Technique: A New Direction in the Assessment of Reading Comprehension.* Located in: Sue Legg and James Algina (Eds.), Cognitive Assessment of Language and Math Outcomes, 1990, pp. 144-181. Available from: Ablex Publishing Corp., 355 Chestnut St., Norwood, NJ 07648.

In this paper, the author reviews the theory and research that underlies a new technique for measuring reading comprehension. It includes a good, readable summary of current theories of reading comprehension and how current measures of reading comprehension (multiple-choice tests and cloze techniques) relate to these theories.

The author also considers the similarities between current theories as the underpinning for his *Sentence Verification Technique,* which he calls a measure of reading achievement, as opposed to a measure of reading ability. This procedure entails developing four variations of sentences in a passage:

1. The original sentence

2. A paraphrase of the original sentence that does not change its meaning

3. A change in one or two words in the sentence so that the meaning is changed

4. A sentence with the same syntactic structure as the original sentence, but which is unrelated in meaning to any sentence that appeared in the passage

Students identify which sentences are "old" (types 1 and 2), and "new" (types 3 and 4).

The author also describes a number of studies done on this technique to establish its validity

(TC# 440.6SENVET)

Salinger, Terry. *Classroom-Based and Portfolio Assessment for Elementary Grades.* Located in: Carolyn Hedley, Dorothy Feldman, and Patricia Antonacci (Eds.), Literacy Across the Curriculum, 1992, pp. 133-155. Available from: Ablex Publishing Corporation, 355 Chestnut St., Norwood, NJ 07648.

This paper discusses the current state of assessment and makes two suggestions for its improvement: taking advantage of the assessment opportunities within classroom instruction interactions, and using portfolios to assess literacy growth. Of special interest:

- A list of 14 questions that must be addressed when planning alternative assessments

- Examples of classroom opportunities for observing students

- A discussion of the necessity for clear criteria for success and for clearly communicating criteria to students

- A rubric for assessing literacy portfolios. Included are writing, reading and content area knowledge (six levels of achievement are specified)

- Other ways to assess portfolios in addition to using rubrics—more open-ended examinations and posing individual questions

- Ideas for grading using portfolios

(TC# 400.6CLABAP)

Sammons, Rebecca Bell, and Beth Davey. *Assessing Students' Skills in Using Textbooks: The Textbook Awareness and Performance Profile (TAPP).* Located in: Journal of Reading 37, December 1993-January 1994, pp. 280-286. Also available from: The University of Maryland, 1117 Benjamin Bldg., College of Education, College Park, MD 20742.

The authors describe an interview procedure that teachers can use to gain information about student (grade four and above) proficiency in the use of textbooks. The *TAPP* has three sections:

1   a metacognitive interview to investigate the student's perceptions of how the textbook is used both in and out of the classroom;

2. a series of tasks to assess the student's ability to interact with the textbook; and

3. a summary sheet to record observed strengths and needs.

The assessment takes about 45-60 minutes. It can be used with textbooks in any subject area. The student can choose the textbook(s) to use. The paper includes detailed information and forms for administration. A couple of examples of use with students are provided. The procedure has been pilot-tested but technical information is not included in the article.

The paper provides enough information to decide on whether to use it; additional information would have to be obtained from the authors in order to actually use it with students.

Serrano, Claudia. *A Look at Portfolio Assessment in San Diego High School's Sophomore House,* **1991. Available from: San Diego City Schools, 4100 Normal St., Room 3133, San Diego, CA 92103, (619) 298-8120.**

This paper describes an interdisciplinary (physics, math, and English) portfolio system for tenth graders that supports block scheduling in an inner city magnet school. Students keep a notebook of all work in each class. Class portfolios are developed from selected work in the notebook. Class portfolios are used as the basis for the culminating "House Portfolio" in which students select work to demonstrate that they have attained specified learning goals. The "House Portfolio" also includes written reflection and a final exhibition of mastery.

The document includes student instructions for assembling the portfolio, an entire student portfolio, instructions for a formative oral presentation of their portfolio, checklists and evaluation forms, and assistance with reflective writings and exit exhibitions.

No technical information is included

Shannon, Albert. *Using the Microcomputer Environment for Reading Diagnosis*. Located
in: Susan Mandel Glazer, Lyndon W. Searfoss, and Lance M. Gentile (Eds.),
Reexamining Reading Diagnosis: New Trends and Procedures, 1988, pp. 150-168.
Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139,
Newark, DE 19714, (302) 731-1600.

The author maintains that "the reading- and language-related microcomputer environment
allows students to engage in four language-generating activities: drill and practice, tutorial,
adventure/simulation and problem solving, and composing/writing. Each of these
environments provides opportunities to diagnose students' language fluency, composing
abilities, expression of self-concept, view of the world, and story sense."

The author describes how microcomputers are currently used for each of the language-
generating activities, outlines the types of information that can be obtained from watching
students interact with the computer in each area, and presents a checklist to use when
observing students using each type of program. Checklist items include things such as
confidence when using the program, apparent motivation, ability to predict and control
software, metacognitive strategies, ability to understand instructions, and writing features.

Snider, Mary Ann, Susan Skawinski Lima, and Pasquale J. DeVito. *Rhode Island's
Literacy Portfolio Assessment Project*, 1994. Located in: Sheila W. Valencia, Elfrieda
H. Hiebert, and Peter P. Afflerbach (Eds.), Authentic Reading Assessment: Practices
and Possibilities, 1994, pp. 71-88

Rhode Island's literacy portfolio project, begun in 1989, is not mandated. Rather, it has been
a voluntary exploration of better ways to link assessment with classroom literacy practices.
The authors note three stages in the development of their portfolio system:

1. Focus on mechanics—who has access, what activities could be put in and when, and what
   does a portfolio look like

2 Focus on student outcomes, criteria for evaluation progress, and sharing criteria with students

3 Focus on self-reflection and student control.

This document describes the development process, lessons learned, and effect on teachers, classrooms, and students. The actual portfolio model is not described

Stayter, Francine, and Peter Johnston. *Evaluating the Teaching and Learning of Literacy.* Located in: Timothy Shanahan (Ed.), <u>Reading and Writing Together: New Perspectives for the Classroom</u>, 1990. Available from: Christopher-Gordon Publishers, Inc., 480 Washington St., Norwood, MA 02062, (617) 762-5577.

This paper is about integrating assessment and instruction—the use of assessment as a reflective process in which both teachers and students learn about and develop their skills. The entire thrust of the paper is that assessment should be an instructional tool, not one used simply for outside monitoring.

The authors argue that teachers construct meaning about their students just as students construct meaning from text. The meanings teachers construct can be different, just as students' constructions of meaning can be different. Each such "reading of student ability" has consequences, both in what we learn about students, but also in terms of the messages we send to students. "What we choose to evaluate and how we choose to evaluate delivers powerful messages to students about those things we value," the author stated. "Students view their learning and their sense of worth through the lens we help them construct unless they cannot bear to look through it." They give some examples of these messages, such as focusing on errors rather than on strengths, and focusing on conventions rather than on meaning. "When writers find that they are being heard, they begin to find their voice." The authors describe some ways to alter these messages by changing how we assess.

They also discuss the power of self-reflection. "Without reflectiveness our students will develop a dependent and powerless literacy. Students must self-evaluate to be

independent in their learning. To do this, teachers cannot project the image that they have all the knowledge and ownership of the correct responses." The authors describe some ways to help the reflective process such as making predictions, conferring with each other, sharing effective strategies, setting one's own goals, performance criteria, and portfolios.

Taylor, Denny. *Teaching Without Testing: Assessing the Complexity of Children's Literacy Learning.* Located in: English Education 22, 1990, pp. 4-74.

The author describes the *Biographic Literacy Profiles Project*, in its second year when the article was written. The project has endeavored to base understanding of the development of literacy in individual students on the careful observation and analysis of daily observable literacy behaviors and products. The article describes what they have learned in the following areas: learning how to observe children's literacy behaviors, learning to develop note-taking procedures to record observations of children reading and writing, learning to write descriptive biographic literacy profiles, and learning to increase awareness of the multiple layers of interpretation that we are incorporating into children's biographic literacy profiles. The process requires a great deal of practice and self-reflection on the part of teachers and principals.

The final part of the article describes reports from teachers and principals on how their approach to instruction is changing based on participation in this project. The paper has many samples of teacher and student thinking and work related to each topic.

(TC# 440.3TEAWIT)

Teale, William H. *Developmentally Appropriate Assessment of Reading and Writing in the Early Childhood Classroom.* Located in: The Elementary School Journal 89, 1988, pp. 173-183.

This article discusses two topics: what should early childhood literacy assessments measure, and what is the best format for measuring them? The author contends that informal observations and structured performance sample assessments are more appropriate than standardized tests for measuring early childhood literacy learning. The author also contends that emergent literacy research suggests that we gather information on young children's concepts of the functions and conventions of written language, text comprehension, ability to read print commonly found in the home or community, emergent reading of storybooks, metalinguistic awareness, emergent writing strategies, and knowledge of letters, letter sounds, and the relations between them. The paper provides some examples of how to assess knowledge of the functions of written language, emergent reading of storybooks, writing strategies, and knowledge of letter-sound correspondences.

The author discusses mostly informal classroom assessment. No technical information is provided. No samples of student work are included.

(TC# 070.6DEVAPA)

Thistlethwaite, Linda L. *Critical Reading for At-Risk Students [Critical Reading Checklists]*. Located in: Journal of Reading, May 1990, pp. 586-593.

This article is primarily about strategies for teaching critical reading skills to at-risk students. (The same procedures could be used for any population.) It is included here because it presents several checklists of criteria for assessing the believability of information. These could also be used for self-reflection or for feedback to peers.

(TC# 440.3CRIREA)

Tierney, Robert J., Mark A. Carter, and Laura E. Desai. *Portfolio Assessment in the Reading-Writing Classroom*, 1991. Available from: Christopher Gordon Publishers, Inc., 480 Washington St., Norwood, MA 02062. (617) 762-5577.

This book was designed for classroom teachers, and the information is presented in a very user-friendly style and format. The authors discuss issues surrounding assessment and portfolios, provide many examples of portfolio systems, explore the ways that portfolios can be used instructionally, and show examples of criteria for assessing portfolio entries, portfolios as a whole, and metacognitive letters.

(TC# 400.6PORASC)

Touchstone Applied Science Associates, Inc. *Degrees of Reading Power*, 1995. Available from: Touchstone Applied Science Associates, Inc., Fields Lane, PO Box 382, Brewster, NY 10509, (914) 277-4900, fax (914) 277-3548.

The *Degrees of Reading Power* has reading passages of increasing difficulty in which several words have been deleted. Students must select the word that best completes the meaning of each incomplete sentence. The rationale is that students must understand the extended context of the passage in order to select the correct words. This is not a vocabulary test. The test identifies the hardest prose that pupils can read with different levels of comprehension. Nine levels are available for grades 1-12. Complete norms are available.

(TC# 440.3DEGOFR)

Valencia, Sheila. *A Portfolio Approach to Classroom Reading Assessment: The Whys, Whats and Hows.* Located in: The Reading Teacher, January 1990, pp. 338-340.

In addition to discussing the rationale for using portfolios to assess reading, this article also suggests content for reading portfolios, how to select material for a portfolio and how the portfolio should be organized.

Portfolio content might include samples of the student's work, the teacher's observational notes, the student's own periodic self-evaluation, and progress notes contributed by the student and teacher collaboratively. Specific items to be included would depend on the purpose for the portfolio but might include such things as written responses to reading, reading logs, selected daily work, classroom tests, checklists, unit projects, etc. The idea is to have a variety of indicators.

The real value of portfolios, according to the author, lies not in any single approach, but rather in the mind set that: 1) sound assessment is anchored in authenticity; 2) assessment must be a continuous process; 3) valid reading assessment must be multi-dimensional; and 4) assessment must provide for active collaborative reflection by both teacher and student.

(TC# 440.6APORAP)

Valencia, Sheila W., Elfrieda H. Hiegert, and Peter P. Afflerbach (Eds.). *Authentic Reading Assessment: Practices and Possibilities,* 1994. Available from: International Reading Association, Inc., 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.

This book describes nine projects attempting to implement "authentic" assessment in reading. For the editors, "authenticity in an assessment resides *not* in its response format, but in its content, the underlying constructs it taps, and the correspondence among the assessment, the instruction from which it samples, and the purposes for which the assessment will be used." The editors also point out that even the most promising projects are still "works in progress"—evolving and full of promise, but not yet having substantive documentation of effects on children's cognitive or affective development. The book contains no solutions; it describes the current state of the art.

The book includes: an overview of "authentic assessment" in reading including definitions and rationale for alternatives, three examples of classroom assessments, three examples of assessments based in the classroom and used to report to other audiences, three sample large-scale assessments, and a summary of the state of the art.

(TC# 440.6AUTREA)

Valencia, Sheila W., Elfrieda H. Hiegert, and Peter P. Afflerbach. *Realizing the Possibilities of Authentic Assessment: Current Trends and Future Issues*, 1994. Located in: Sheila W. Valencia, Elfrieda H. Hiebert, and Peter P. Afflerbach (Eds.), <u>Authentic Reading Assessment: Practices and Possibilities</u>, 1994, pp. 286-300.

This article summarizes and draws conclusions based on nine assessment case studies provided as previous chapters in the book. The authors note the following trends in assessing reading:

1. Assessment tasks require students to read longer, more naturally occuring, texts; questions are more open and complex.

2. Assessment activities usually occur over a longer period and often include collaboration.

3. Assessments are designed to tap specific student outcomes.

4. There is more emphasis on affecting teaching and learning—students and teachers have more of a role in developing and scoring, which encourages active participation in activities.

5. There is an attempt to integrate assessment at all levels and base large-scale assessment more on information collected in classrooms.

The authors note the following issues:

1. Longer passages are not necessarily better passages, and open-ended questions do not ensure that the right student performances are being tapped.

2. What goals do we have for students and should these be the same across classrooms?

3. Can we draw conclusions about individual students based on performance on only one or two tasks?

4. Changes in assessment sometimes do not parallel changes in instruction and both require professional development.

5. Performance assessment is not necessarily equitable assessment.

Valencia, Sheila, William McGinley, and P. David Pearson. *Assessing Reading and Writing: Building A More Complete Picture.* Located in: G. Duffey (Ed.), Reading in the Middle School, 1989. Available from: International Reading Association, 800 Barksdale Rd., PO Box 8139, Newark, DE 19714, (302) 731-1600.

This paper emphasizes the importance of collecting a large number of student performance samples which represent a wide range of contexts. It describes the dimensions along which tasks differ, so that the teacher can be sure to obtain a good sampling of performance.

(TC# 400.3ASSREA)

Valencia, Sheila, David Pearson, Charles Peters, et al. *Theory and Practice in Statewide Reading Assessment: Closing the Gap.* Located in: Educational Leadership, April 1989, pp. 57-63.

The authors report on two state assessments in reading that they feel are more reflective of current research on reading than the assessment approaches of most current standardized achievement tests. They report that the current view of reading suggests that:

- Prior knowledge is an important determinant of reading comprehension.

- Naturally occurring texts have topical and structural integrity

- Inferential and critical reading are essential for constructing meaning.

- Reading requires the orchestration of many reading skills.

- Skilled readers apply metacognitive strategies to monitor and comprehend a variety of texts for a variety of purposes.

- Positive habits and attitudes affect reading achievement and are important goals of reading instruction.

- Skilled readers are fluent.

The authors feel that current standardized achievement tests do not reflect this body of knowledge while the two state assessments make an attempt to address these issues. Each has four parts: a full-length selection that measures constructing meaning; a section to assess topic familiarity; questions about metacognition and strategies; and a section on reading attitudes, habits, and self-perceptions. A taxonomy of skills/dispositions in these areas is presented. However, the tests are still in structured format: multiple-choice, etc.

(TC# 440.6THEANP)

Wade, Suzanne E. *Reading Comprehension Assessment Using Think Alouds.* Located in: The Reading Teacher, March 1990, pp. 442-451.

This article describes an informal assessment process for assessing comprehension. It covers how to prepare the text, how to administer the think-aloud procedure, and what to look for in student responses.

(TC# 440.3REACOA)

Wagner, C. Lyn, Dana R. Brock, and Ann T. Agnew. *Developing Literacy Portfolios in Teacher Education Courses.* Located in: Journal of Reading 37, May 1994, pp. 668-674.

The authors implemented portfolios in their language arts methods course to develop familiarity with forms of performance assessment student teachers might use in their own classes. The authors use portfolios as one way to develop "empowered professionals"— teachers who engage in reflective thinking, learn from social interactions with professional peers, are informed decisionmakers, and set personal learning goals.

Student teachers developed "literacy portfolios"—understanding oneself as a language user. Criteria for portfolios included such things as breadth of readings, writing samples, evidence of reflective thinking, and use of the writing process. The rating form is included.

Not included are samples of student work nor technical information.

Walker, Barbara J. *Diagnostic Teaching of Reading: Techniques for Instruction and Assessment,* Second Edition, 1992. Available from: Macmillan Publishing Company, 866 Third Ave., New York, NY 10022.

This book describes the process of diagnostic teaching—making sophisticated diagnostic decisions and identifying appropriate instructional techniques.

"The process of diagnostic teaching uses instruction to understand how the problem reader approaches the reading event. The goal of diagnostic teaching is to identify instructional alternatives that create improved reading performance for the problem reader. Instruction is viewed as mediating learning, where the teacher focuses on how the learner solves the reading problem by gathering data as she teaches. Furthermore, she views reading as an interactive process where the reader uses what he knows to interpret what the text says. Therefore, the diagnostic teacher uses the student's strengths (knowledge and strategies) to lead the student to integrate new information as well as new strategies into his reading repertoire. She then assesses reading growth due to her instruction. She bases her decisions regarding the next steps in a student's instruction on this assessment as well as on reflection on the success she has achieved by the adjustments she has made. These decisions become increasingly more

NWREL, January 1995
Test Center. (503) 275-9582

Reading Resources

refined as the diagnostic teacher considers the reading event, evaluates the strategies of the problem reader, and matches those with appropriate techniques."

Diagnostic techniques include miscue analysis, informal reading inventories, retelling, and think alouds. These are analyzed for the source of the problem, e.g., print processing, hearing processing, or reading strategies.

Weiss, Barbara. *California's New English—Language Arts Assessment*, 1994. Located in: Sheila W. Valencia, Elfrieda H. Hiebert, and Peter P. Afflerbach (Eds.), <u>Authentic Reading Assessment: Practices and Possibilities</u>, 1994, pp. 197-217.

This paper adds detail to other entries regarding California's reading assessment procedure in grades 4, 8, and 10. In addition to the first part of the assessment, in which students read an extended text and respond to several open-ended questions, there are two other parts: group work and extended writing. The group work extends students' experience of the text and initiates prewriting activities for the subsequent writing assessment. Writing is assessed on two traits—conventions and rhetorical effectiveness. Group work is not scored.

(TC# 440.3CALNEE)

White, Jane. *Taxonomy of Reading Behaviors*. Located in: W.T. Fagan, J.M. Jensen, and C.R. Cooper (Eds.), <u>Measures for Research and Evaluation in the English Language Arts</u> 2, 1985, pp. 120-124. Available from: National Council of Teachers of English (NCTE), 1111 Kenyon Rd., Urbana IL 61801, (217) 328-3870.

The author presents a classification system (originally published in 1980) for analyzing the verbal responses of students after reading a short passage. The classifications include paraphrasing, statements of trouble understanding what was read, statements that indicate what reading strategies the student was using, off-task statements, etc.

(TC# 440.3TAXOFR)

White, Sheida, and Barbara Kapinus. *1994 NAEP Assessment in Reading.* Located in: <u>Focus on NAEP</u> 1, January 1994, pp. 1-5. Available from: National Center for Education Statistics (NCES), Education Assessment Division, 555 New Jersey Ave NW, Washington, DC 20208, (301) 763-1968.

This document provides a good, quick overview of the 1994 NAEP reading assessment. The assessment includes longer, intact passages of three types—stories, information, and instructions. Students can also select one additional passage. It includes a mixture of multiple choice, short constructed response, and extended response questions that focus on student ability to understand what was written, develop an interpretation, develop a personal

response. and critically analyze the text   The document includes definitions of the various types of reading and student responses, and outlines the time devoted to each type of question.

(TC# 440.3NAEASR)

Winograd, Peter. *Developing Alternative Assessments: Six Problems Worth Solving.* Located in: The Reading Teacher 47, February 1994, pp. 420-423.

The author discusses six issues in alternative assessments that, if solved, would enable us to truly assess student reading.

- Clarifying the goals of assessment—what do we want to measure?

- Clarifying the audiences to be addressed—students, teachers, parents, administrators, legislators.... The author proposes that assessment should first serve teachers and students.

- Selecting and developing assessment techniques

- Setting standards of student performance

- Establishing methods of management.

- Integrating assessment and instruction—aligning assessment with what is taught, embedding assessment in instruction, gathering "evidence" from daily instructional activities, and using this information to guide future instruction.

(TC# 440.6DEVALA)

Winograd, Peter, Scott Paris, and Connie Bridge. *Improving the Assessment of Literacy.* Located in: The Reading Teacher 45, 1991, pp. 108-116.

The authors present reasons why multiple-choice tests of comprehension based on short passages do not adequately reflect what we know about reading: they take reading out of its inherent meaning context. test skills in isolation, ignore prior knowledge, and don't look at strategies. Thus, instruction is focused on the wrong targets.

To improve assessment, the authors propose that we need to: clarify the goals of instruction. clarify the purposes of assessment, select multiple measures, and use the results to improve instruction. The authors then apply these steps to reading assessment. They first present three goals in reading: skills that enable students to understand (decoding, interpreting), motivation to be active learners, and independence (selecting and using strategies appropriate for different contexts). Then they discuss the assessment needs of five audiences and discuss multiple measures that could be used to satisfy these needs. For example, students need information so that they can become adept at monitoring their comprehension. Information

collection devices could include. audiotapes or oral reading, running records, interviews on progress, and lists of books read
