ABSTRACT

D 00/ (01

The Youth Risk Behavior Survey (YRBS) is a national survey developed by the Division of Adolescent and School Health, Centers for Disease Control and Prevention (CDC), in collaboration with 71 state and local departments of education and 19 federal agencies. The YRBS specifically investigates behaviors related to the leading causes of mortality, morbidity; and social problems. This YRBS report concentrates on high school and middle school students in Alaska. It examines student responses about six categories of adolescent behavior: (1) behaviors that result in unintentional and intentional injuries; (2) tobacco use; (3) alcohol and other drug use; (4) sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STDs), and unintended pregnancies; (5) dietary behaviors; and (6) physical activity. Numerous tables highlight findings throughout the text. Appendix A contains high school questions and Alaska responses, and Appendix B contains middle school questions and Alaska responses. (DR)

ERIC

Acknowledgements

The 1995 Alaska Youth Risk Behavior Survey would not have been possible without the support of many individuals working cooperatively at all phases of the project. Sincere appreciation goes to:

- school district superintendents and administrators, school boards, secondary school principals, teachers and students who cooperated with and supported the survey;
- the U.S. Centers for Disease Control and Prevention, Division of Adolescent and School Health, and Westat, Inc. for their technical assistance:
- the Alaska Area Native Health Service, Division Health Promotion/Disease Prevention for its assistance in the planning and implementation stages:
- the Alaska Parent Teacher Association, the Alaska Adolescent Health Advisory Committee, community based PATCH and Tobacco Coalitions, the Alaska Chapter of the American Cancer Society and other agencies which supported the approval and implementation of the survey; and
- the report reviewers for their suggestions. While we have tried to incorporate or respond to all suggestions and comments from our reviewers, we did not ask them to reread and endorse the final version. The authors accept full responsibility for the content of this document.

Youth Risk Behavior Survey Background

The Youth Risk Behavior Survey(YRBS) is a national survey developed by the Division of Adolescent and School Health, Centers for Disease Control and Prevention (CDC) in collaboration with 71 state and local departments of education and 19 federal agencies. The survey is a component of a larger national effort to assess priority health risk behaviors that contribute to the leading causes of mortality, morbidity and social problems among youth and adults in the United States.

Areas of Emphasis

The YRBS specifically investigates behaviors related to the leading causes of mortality, morbidity and social problems among youth in the United States. Among deaths occurring to youths aged 5-24 years, 72% are due to intentional and unintentional injuries. Additionally, 86% of all sexually transmitted diseases occur among 15-29 year olds and each year an estimated 1 million teenage girls become pregnant. One in every five persons diagnosed with AIDS in the U.S. is between 20-29 years of age. Given that the incubation period from HIV infection to AIDS averages 10 years, many of these individuals were likely infected during their teenage years.

Voluntary behaviors directly contribute to the deaths, diseases and social problems described above. Examples of risk behaviors include: carrying a weapon, physical fighting, suicide attempts, drinking or using drugs, lack of seatbelt or helmet use and unprotected sexual intercourse.

Many behaviors that contribute to preventable adult deaths are started during youth. Among adults in the U.S. over 25 years of age, 67% of deaths are caused by diseases of the heart (35%), cancer (25%) and stroke (7%). Behaviors related to these causes of death include: use of tobacco: excessive consumption of fats, calories and sodium; insufficient consumption of fiber; fruits and vegetables; and insufficient physical activity.

The YRBS survey examines six categories of adolescent behavior:

- behaviors that result in unintentional and intentional injuries:
- tobacco use:
- alcohol and other drug use:
- sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies;
- dietary behaviors; and
- physical activity.

Survey Development

The YRBS high school survey was first implemented at the national level in 1990. Since that time CDC has sponsored national and state surveys in 1991, 1993 and most recently, in 1995.

A middle/junior high school version of the YRBS was implemented for the first time in 1995. Alaska first participated in the YRBS in 1995 at both the high school and middle school levels.

Whenever possible, questions were selected for the YRBS that had been used successfully in other school-based surveys of secondary school students. Evidence from previous surveys indicates that secondary school students can understand and appropriately respond to the questions. The questions were developed by health and education experts in their respective fields with the National Health Objectives and National Education Goals in mind.

Extensive focus group and field test work was conducted during the development of both high school and middle school questionnaires. A review of student responses led to recommendations for improving the wording of some questions, setting recall periods i.e. in the past 30 days and identifying response categories. The field testing also sought to identify survey conditions that would encourage honest responses. The field testing found that the best method for collecting data was the classroom where students are accustomed to being tested using a paper and pencil format. This and other research indicates that risk behavior data may be gathered from adolescents as reliably as from adults. To obtain truthful answers, students must perceive the survey as important and believe procedures are implemented to protect their privacy and allow for anonymous and voluntary participation.

Methodology:

All public schools in Alaska with students in grades 9-12 for the high school survey and students in grades 7-8 for the middle school survey were eligible to be selected in the sample. Special education and English as a second language classes were excluded at the classroom level. Group home, correspondence and correctional schools were also excluded from the sample. A sufficient number of students were selected to give a $\pm 5\%$ margin of error for each question. Because of the large number of small schools in Alaska, more schools were sampled than many other states. The methods used resulted in a sample that is statistically representative of all schools in Alaska which met the above criteria

A two-stage sample design was used. The first stage sampling consisted of all public schools at the high school and middle school level. Schools were selected with probability proportional to school enrollment size. For the second sampling stage, classes of a required subject or a required school period were randomly selected. All students in the selected classes were eligible to participate in the survey. Students, parents, schools and school districts had the opportunity to decline participation.

Teachers were given a script to read to students which established guidelines for student privacy and anonymity and the importance of the survey. Each student was given an unmarked envelope in which to seal his or her survey before turning it in. These survey envelopes remained sealed until received at a central state collection site.

εi

1995 Alaska Youth Risk Behavior Survey

ERIC

The state survey was analyzed by the CDC and Westat. Inc. a CDC contractor. Analysis included the scanning of the surveys and performance of extensive edit checks to identify survey inconsistencies. When inconsistencies were found, responses were excluded from the analysis. For example, if a student reported in one question having never been in a physical fight, but then reported in another question being hurt in a physical fight, the data on that student was excluded for the two questions related to physical fighting.

At the same time that Alaska implemented the YRBS, a national YRBS was conducted at the high school level. At the time of this report, the 1995 national results are still being analyzed. Therefore, the report provides the 1993 national high school results as a comparison.

A national YRBS at the middle school level has not been done. Therefore, national comparisons are not available for the middle school section.

Survey Limitations:

The statewide YRBS provides descriptive data on the *what, who, where* and *when* of the self reported behaviors in the six major categories. The questions of *why* and *how* cannot be answered by this survey. Furthermore, the data can only be generalized to the population that is defined in the sample: public school students in grades 7-8 and 9-12. Students who were enrolled in English as a second language classes, special education classes, correspondence schools, group home schools and correctional schools are not represented. Also, youth who dropped out of school are not included.

The middle school survey is not always directly comparable to the high school survey. First, the time frame asked in the survey questions is often different between the two surveys. For example, the middle school survey more commonly asked if a student had **ever** done a behavior, whereas the high school survey more commonly asked about the previous **30 days or 12 months**. Second, the middle school questions tend to be broader and more general than the high school questions. Third, the high school survey is longer, containing 84 questions compared to 54 for the middle school survey.

Participation in the State Survey:

Because of the high response rates (described below) and a comparison of the demographics of survey responders to the total sampled population. Alaska was provided "weighted data." The weighted data makes it possible to generalize the results to all Alaska middle and high school students defined by the sample.

High School

ERIC

At the high school level, 38 schools were selected. Of the 38 schools, 31 chose to participate in the survey resulting in a school response rate of 82%. Within the

		Unweighted Number	Weighted Percent

High School Results Grades 9-12

ERIC

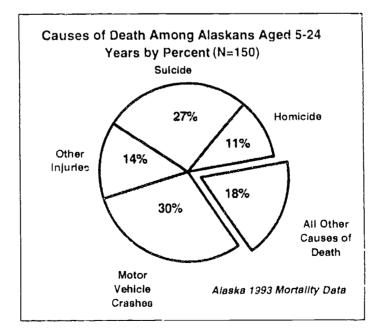

Introduction:

The report that follows presents selected findings from the high school YRBS. The results of all survey questions, number of responses and weighted percentages are included in Appendix A. Information from the 1995 Alaska YRBS and the 1993 National YRBS are included. The responses in the report represent all students surveyed unless otherwise specified.

Section 1: Injury

BACKGROUND

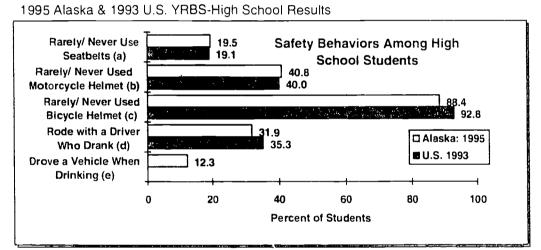

Injuries are the leading causes of death among children, adolescents and young adults. As shown in the accompanying graph, 82% of the deaths among young people in Alaska (ages 5-24 years) are attributable to injuries, including motor vehicle crashes, homicide, suicide and other unintentional injuries. In the age group 5-14 years, boys are 1.3 times as likely to die and in the age group 15-24 years, boys and young men are almost <u>3 times as likely</u> to die as girls and young women. Furthermore, Alaskans of all ages have one of the highest suicide rates in the U.S. (Aiaska: 23.6/100,000; U.S.:11.2/100,000)¹.

YRBS RESULTS

Safety Behaviors Regarding Vehicles and Bicycles

Among high school students, about 20% rarely or never use seatbelts. Among those who ride motorcycles, about 40% rarely or never wear helmets: among those who ride bicycles, 88.4% do not wear helmets. Within the 30 days prior to the survey, 31.9% rode with an automobile driver who had been drinking alcohol and 12.3% drove a vehicle when drinking alcohol. Alaska data are similar to the U.S. data for all of these measures, although U.S. data for driving while drinking are not available.

a) When riding in a vehicle driven by someone else.

b) Among students who rode motorcycles in the 12 months preceding the survey

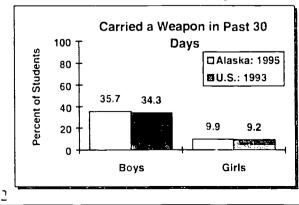

c) Among students who rode bicycles in the 12 months preceding the survey.

d) One or more times during the 30 days preceding the survey

e) One or more times during the 30 days preceding the survey; no national data

Carried a Weapon

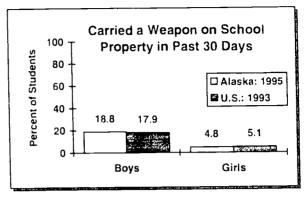

Over one-third of high school boys report having carried a weapon, such as a gun, knife, or club within the past 30 days. About 10% of girls reported carrying a weapon. The Alaska data are similar to the U.S. data.

1995 Alaska & 1993 U.S. YRBS-High School Results

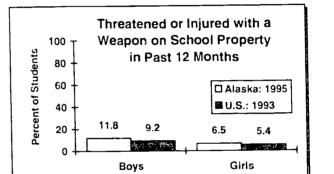

Carried a Weapon on School Property

Among Alaska high school students. 18.8% of boys and 4.8% of girls report having carried a weapon, such as a gun, knife or club, on school property in the previous 30 days. The Alaska data are similar to the U.S. data. 1995 Alaska & 1993 U.S. YRBS-High School Results

Threatened or Injured by a Weapon on School Property

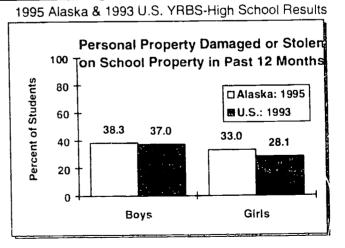

Among Alaska high school students, 11.8% of boys and 6.5% of girls report having been threatened or injured with a weapon such as a gun, knife or club on school property within the past 12 months. The Alaska data are similar to the U.S. data.

1995 Alaska & 1993 U.S. YRBS-High School Results

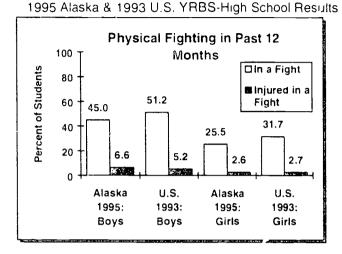

Personal Property Stolen/Deliberately Damaged on School Property

Approximately one third of Alaska high school students report having had personal property, such as a car, clothing or books, deliberately damaged or stolen on school property within the past 12 months. The Alaska data are similar to the U.S. data.

Physical Fighting in Past Twelve Months

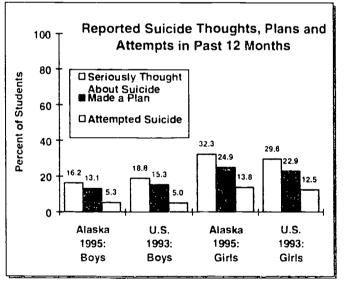

Among Alaska high school boys, 45.0% report having been in a physical fight within the past 12 months and 6.6% report having been injured (requiring treatment by a doctor or nurse) in a physical fight. Girls are less likely to report physical fighting.

Suicide

Girls are more likely to report suicide thoughts, plans and attempts within the past 12 months than are boys. Among Alaska girls, 32.3% have seriously thought about suicide, 24.9% have made a plan and 13.8% report suicide attempts. Among Alaska boys, 16.2% have seriously thought about suicide, 13.1% have made a plan and 5.3% report suicide attempts.

1995 Alaska & 1993 U.S. YRBS-High School Results

Section 2: Tobacco Use

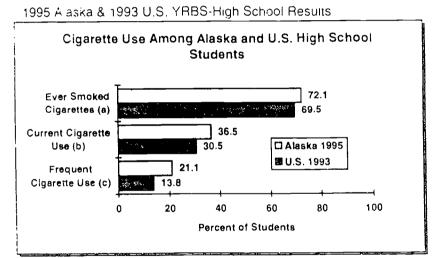

BACKGROUND

Tobacco is the leading preventable cause of premature mortality in the United States. The majority of Alaska smokers (83.7%), began smoking between the ages of 10 and 20 years². Because of the addictive properties of nicotine, smokers find it difficult to quit. Therefore, many efforts to decrease smoking in our society have been directed towards youth to decrease access to tobacco products and to discourage youth from starting to smoke³.

YRBS RESULTS

Cigarette Smoking

Alaska high school students are more likely to be current smokers and frequent smokers, than are U.S. students. Smoking rates are similar for boys and girls.

a) Ever thed cigarette smoking

b) Smoked on at least one of the 30 days prior to the survey.

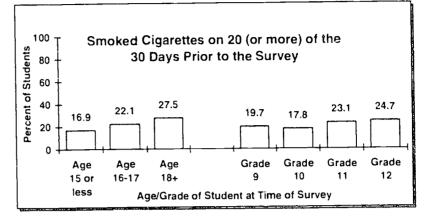

c) Smoked on at least 20 of the 30 days prior to the survey

ERIC

ň

1995 Alaska YRBS-High School Results

Alaska students who are older and in higher grades, are more likely to be frequent smokers (smoking 20 or more days of the previous 30 days). Almost 20% of ninth graders are frequent smokers.

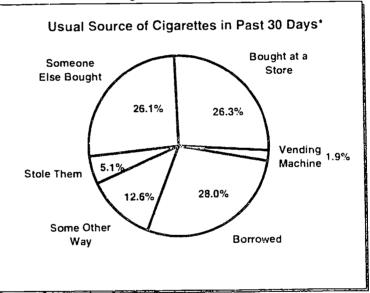

Where are Students Getting Cigarettes?

During the 30 days prior to the survey, most Alaska high school students obtained cigarettes in the following ways: borrowed from someone else, someone else bought the cigarettes, or the student purchased his/her own cigarettes. Few use vending machines.

ERIC

1995 Alaska YRBS-High School Results

Among students who smoked cigarettes in past 30 days

1995 YRBS-High School

17

Of Alaska students who smoked in the past 30 days, those aged 18 and older are far more likely to buy their own cigarettes in stores, whereas younger students are more likely to borrow cigarettes. Even so, almost 12% of students aged 15 or less bought cigarettes in a store.

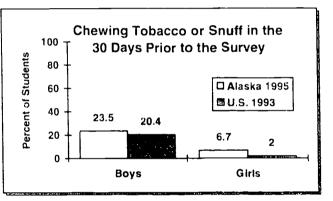

1995 Alaska YRBS-High School Results Source of Cigarettes* 100 Age 15 or less Percent of Students 80 Age 16-17 61.1 Age 18 and older 60 32.**3** 30.7 40 23.9 11 20 11.8 n Bought in a Borrowed Store

*Among students who smoked in past 30 days.

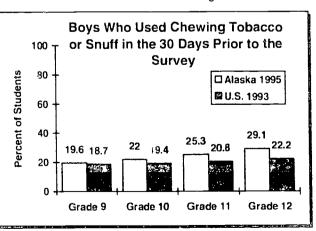

Chewing Tobacco and Snuff

Boys are more likely than girls to report having used chewing tobacco or snuff in the 30 days prior to the survey. Alaska girls are more likely to use smokeless tobacco than are U.S. girls.

Smokeless tobacco use increases with grade level, so that 29.1% of high school senior boys have used smokeless tobacco products within the past 30 days. The data suggest that Alaska boys are more likely to be current users of smokeless tobacco than are U.S. boys. 1995 Alaska & 1993 U.S. YRBS-High School Results

1995 Alaska & 1993 U.S. YRBS-High School Results

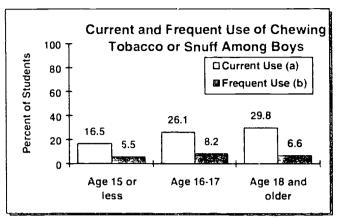

1995 Alaska YRBS-High School Results

7

Almost 30% of high school boys aged 18 and older have used chewing tobacco or snuff at least once during the past 30 days. The data suggest that frequent use (use on 20 or more of the previous 30 days) is more common among boys aged 16 and 17.

ERIC

a) Used at least once in the 30 days prior to the survey. b) Used on 20 or more of the 30 days prior to the survey

1995 YRBS-High School

Section 3: Drug and Alcohol Use

BACKGROUND

Alcohol and drug abuse are major contributing factors in homicides, suicides and motor vehicle crashes. which are the leading causes of death and disability among young people in the U.S. and in Alaska. Heavy drinking and drug abuse among youth are linked to physical fights, destroyed property, job problems, school failure, delinquency, unwanted pregnancies and transmission of sexually transmitted diseases^{4,5}.

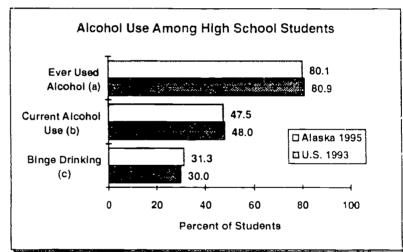

An estimated 19.2% of Alaska adults report binge drinking (having five or more drinks on an occasion, one or more time in the past month). Alaska's rate of binge drinking is among the highest in the U.S.⁶.

YRBS RESULTS

Use of Alcohol

Almost half of Alaska high school students have had at least one drink of alcohol in the past 30 days.

Additionally, 31.3% report binge drinking (five or more drinks in a row at least once in the past 30 days). Alaska students are similar to U.S. students. 1995 Alaska & 1993 U.S. YRBS-High School Results

11

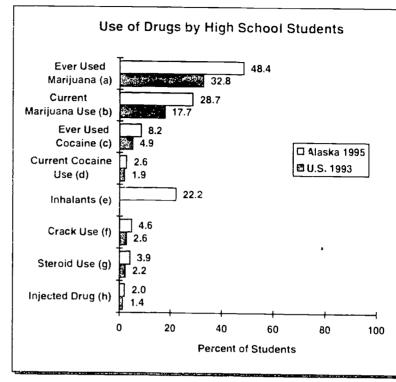

a) Ever had at least one drink

b) Had at least one drink in the 30 days prior to the survey

 c) Had five or more drinks within a coucle of hours, in the 30 days prior to the survey

Use of Drugs

The most common drugs used by high school students in Alaska are marijuana and inhalants (glues, paints and sprays). Alaska students are more likely to report use of all drugs than are U.S. students. Boys were slightly more likely than girls to report marijuana use within the past 30 days (32.1% of boys versus 24.9% of girls, data not shown); otherwise results for boys and girls are similar.

1995 Alaska & 1993 U.S. YRBS-High School Results

a) Ever used marijuana

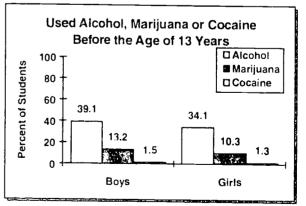

b) Used marijuana one or more times in the 30 days preceding the survey.

c) Ever tried any form of cocaine.

- d) Used cocaine on one or more days in the 30 days phor to the survey
- e) Ever sniffed glue, breathed contents of spray cans or inhaled paints or sprays to get high; no U.S. data.
- f) Ever used crack or freebase.
- g) Ever used illegal steroids.
- h) Ever used a needle to inject an illegal drug

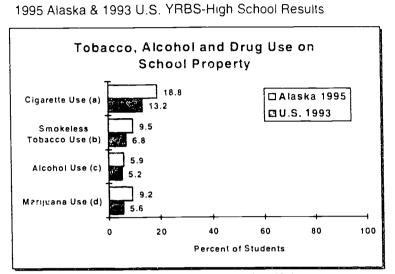

Use of Alcohol, Marijuana and Cocaine Before Age 13 Years

Almost 40% of Alaska high school boys report having had a first drink of alcohol before age 13 years. Also by age 13 years, 13.1% of boys and 10.3% of girls report having tried marijuana for the first time, accounting for about a quarter of those who have ever used marijuana. Percentages of age at first use are similar for boys and girls. 1995 Alaska YRBS-High School Results

Tobacco, Alcohol and Drug Use on School Property

Some drug use occurs on school property. Even though the overall use of marijuana is lower than alcohol, more Alaska students use marijuana than alcohol on school property. Alaska students are more likely to report use of drugs on school property than are U.S. students. The only exception is for alcohol use where results are similar.

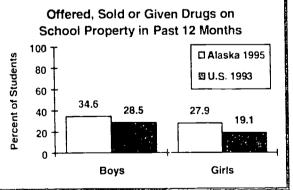

- a) Used cigarettes on school property at least one of the 30 days prior to the survey.
- b) Used chewing tobacco or shuff on school property on at least of the 30 days prior to the survey.
- c) Drank alcohol on school property on at least one of the 30 days prior to the survey.
- d) Used manuana on school property on at least one of the 30 days prior to the survey.

Students Who Where Offered, Sold or Given Drugs

Among Alaska high school students. 34.6% of boys and 27.9% of girls have been offered. sold or given an illegal drug on school property in the preceding 12 months. U.S. students are less likely to be offered, sold or given drugs on school property.

Section 4: Sexual Behaviors

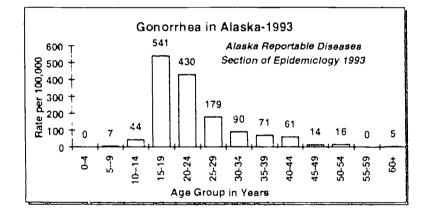

BACKGROUND

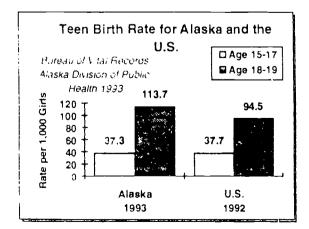

ERIC

Early sexual activity can be associated with unwanted pregnancy and sexually transmitted diseases, including HIV infection. Sexually transmitted diseases can lead to infertility, pelvic inflammatory disease and other complications. HIV infection which leads to AIDS is not curable and preventive efforts are the only means of decreasing the spread of the epidemic.

The graph below shows that the age group 15-19 years has the highest rate of gonorrhea infection.

The graph below shows the teen birth rate for Alaska and for the U.S. In 1993, 428 girls age 17 and younger gave birth in Alaska⁷.

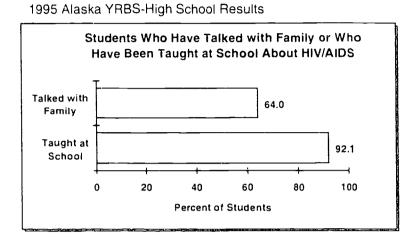

YRBS RESULTS

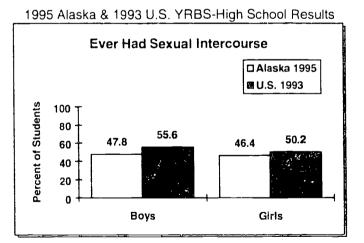

How are Alaska High School Students Learning about HIV/AIDS?

Over 90% of high school students have been taught about HIV/AIDS in school. Almost two-thirds report that they have talked about HIV/AIDS infection with their parents or other adults in the family.

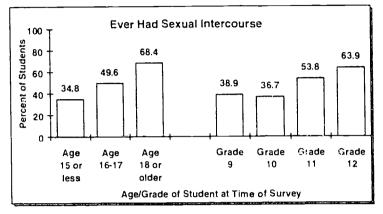

Sexual Activity

Almost half of high school students report that they have had sexual intercourse at least once. Rates are similar for boys and girls. The data suggest that Alaska rates are slightly less than the U.S. rates.

The percent of Alaska students who report ever having sexual intercourse increases from 34.8% among those aged 15 or less to 68.4% among those aged 18 and older. Similarly, the percent increases with grade: 63.9% of high school seniors have had sexual intercourse at least once.

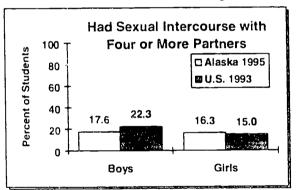

1995 Alaska YRBS-High School Results

Number of Partners

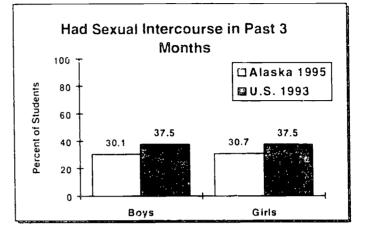

FRĬ

Among Alaska high school boys, 17.6% have had sexual intercourse with four or more partners. Of Alaska girls, 16.3% report having had four or more partners. The data suggest that Alaska rates for boys are less than U.S. rates. 1995 Alaska & 1993 U.S. YRBS-High School Results

Current Sexual Activity

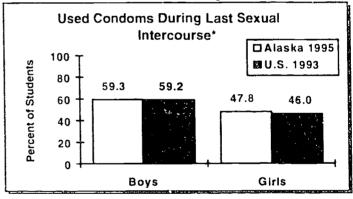

Among high school students, over 30% have had sexual intercourse within the past 3 months. The U.S. rates are higher than the Alaska rates.

1995 Alaska & 1993 U.S. YRBS-High School Results

Condom Use

Almost 60% of high school boys and over 45% of girls who have had sexual intercourse used a condom during last intercourse. Rates for Alaska and U.S. are similar. 1995 Alaska & 1993 U.S. YRBS-High School Results

*Among students who have ever had sexual intercourse

1995 YRBS-High School

FI

Section 5: Weight and Dietary Behaviors

BACKGROUND

National data show that obesity is increasing among adolescents. Obesity acquired during childhood often persists into adulthood, increasing the later risk for diabetes, high blood pressure and heart disease⁸. In addition, obesity can cause social and psychological stress to children and adolescents⁹. Adolescent girls may develop eating disorders. An overemphasis on thinness

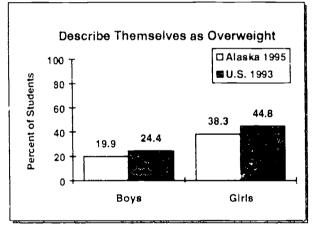

may also be unhealthy.

To avoid problems of obesity and eating disorders, healthy eating habits should be encouraged among adolescents. Current dietary guidelines include increasing consumption of breads, grains and cereals: eating at least five servings of fruits and vegetables per day and maintaining a healthy weight¹⁰.

YRBS RESULTS

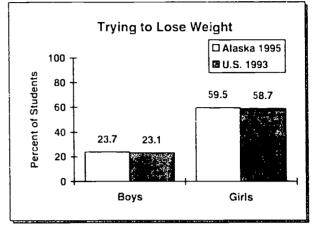

Perception of Weight

More than one third of high school girls describe themselves as overweight. Girls are more likely to describe themselves as overweight than are boys. Alaska students are somewhat less likely to describe themselves as overweight than are U.S. students. 1995 Alaska & 1993 U.S. YRBS-High School Results

Trying to Lose Weight

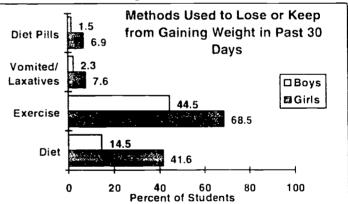

Although 38.3% of girls describe themselves as overweight, 59.5% are trying to lose weight--almost twice as many. The percent of boys who are trying to lose weight is similar to the percent who perceive themselves as being overweight.

1995 Alaska & 1993 U.S. YRBS-High School Results

Methods To Lose or Keep from Gaining Weight

Exercise and diet are the most common method used by high school students to lose or keep from gaining weight. About 8% of high school girls have vomited or used laxatives for weight loss and 6.9% have used diet pills within the past 30 days. Equivalent data for the U.S. are not available. 1995 Alaska YRBS-High School Results

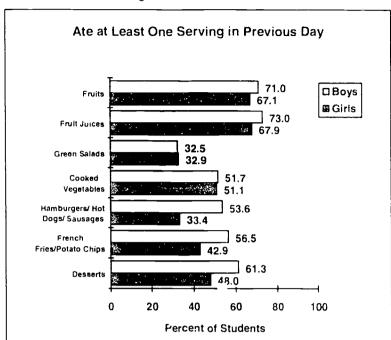

1995 YRBS-High School

Nutrition Behaviors

Alaska boys are more likely than Alaska girls to report eating hamburgers. french fries and desserts (cakes, cookies, doughnuts, pie). Over 70% of boys and 67% of girls reported eating fruit and drinking fruit juice in the previous day.

FRIC

1995 Alaska YRBS-High School Results

29

Section 6: Physical Activity

BACKGROUND

Regular physical activity can increase life expectancy¹¹. Physical activity can also enhance mental health and self-esteem, of particular benefit to adolescents¹² As with nutrition, development of good exercise habits in childhood and adolescence which are maintained into adulthood can prevent or delay many chronic diseases.

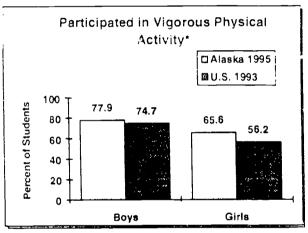

YRBS RESULTS

Vigorous Physical Activity

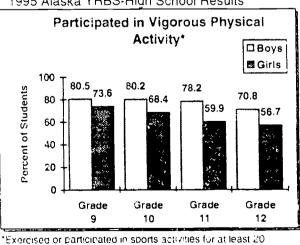

Among Alaska high school students. 77.9% of boys and 65.6% of girls participated in vigorous physical activity on 3 or more of the 7 days prior to the survey. Alaska students, especially girls, are more likely to report vigorous physical activity than are U.S. students.

Among both boys and girls in Alaska, the proportion reporting vigoreus exercise decreases with increasing grade level. The decrease is most apparent among girls.

1995 Alaska & 1993 U.S. YRBS-High School Results

*Exercised or participated in sports activities for at least 20 minutes that caused sweating and neavy breatning, on 3 cr more of the past 7 days.

ninutes that caused sweating and the LW breathing, on 3 cr

1995 Alaska YRBS-High School Results

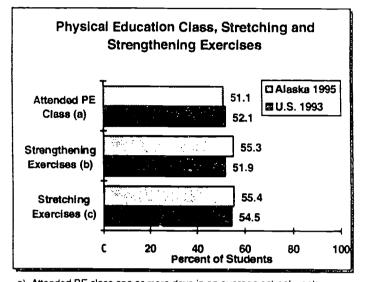

1995 YRBS-High School

more or the past 7 days.

Other Participation in Physical Activity

Approximately 50% of Alaska high school students participate in physical education classes. Participation decreases with increasing grade; 65.9% of ninth graders attend PE classes, whereas 42.0% of 12th graders attend PE classes (data not shown). Boys more commonly report muscle strengthening exercises than girls (61.6% of boys and 48.5% of girls). Similar percentages of boys and girls report stretching exercises. Alaska and U.S. students are similar for participation in these exercises.

Among Alaska high school students, 42.8% walked or bicycled (at least 30 minutes on 3 of the past 7 days); the percentage of students walking and bicycling also decreases with increasing grade level. About half of all high school students report participating on at least one school sponsored sports team in the past 12 months.

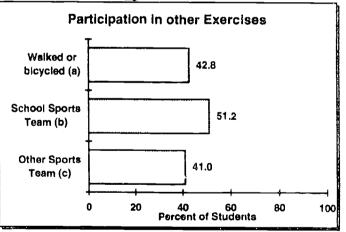

1995 Alaska & 1993 U.S. YRBS-High School Results

a) Attended PE class one or more days in an average school week.

b) Exercises to strengthen or tone muscles on 3 of the past 7 days.

c) Stretching exercises on 3 of the past 7 days.

1995 Alaska YRBS-High School Results

a) Walked or bicycled for at least 30 minutes on 3 of the past 7 days.

b) Played on 1 or more sports teams sponsored by the school in the past 12 months.

c) Played on one or more sports teams run by organizations outside the school ir, the past 12 months

Middle School Results Grades 7-8

1995 YRBS-Middle School

52

ERIC

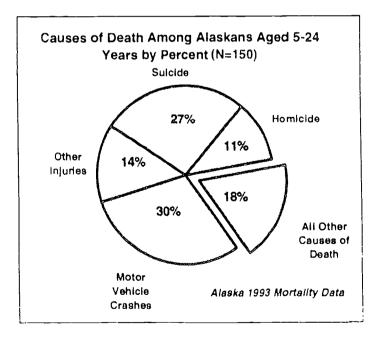

Introduction:

The report that follows presents selected findings from the 1995 middle school YRBS. The results of survey questions, number of responses and weighted percentages are included in Appendix B. The middle school survey is not always comparable to the high school survey as noted under Survey Limitations (page iii). Comparable U.S. middle school data are also not available. The responses in the report represent all students surveyed unless otherwise specified.

Section 1: Injury

BACKGROUND

Injuries are the leading causes of death among children, adolescents and young adults. As shown in the accompanying graph, 82% of the deaths among young people in Alaska (ages 5-24 years) are attributable to injuries, including motor vehicle crashes, homicide, suicide and other unintentional injuries. In the age group 5-14 years, boys are 1.3 times as likely to die and in the age group 15-24 years, boys and young men are almost 3 times as likely to die as girls and young women. Furthermore, Alaskans of all ages have one of the highest suicide rates in the U.S. (Alaska: 23.6/100,000; U.S.:11.2/100,000)¹.

YRBS RESULTS

Seatbelt Use

Among middle school students. 23.6% of boys and 20.0% of girls report never or rarely using seatbelts when riding in a car. About 56% report using seatbelts all or most of the time.

Never or Rarely Use Seatbelts

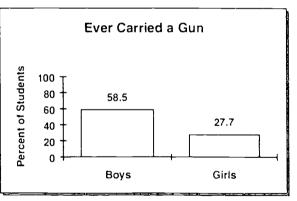

1995 Alaska YRBS-Middle School Results

Carried a Gun

•1

Almost 60% of middle school boys and almost 30% of girls report having ever carried a gun. The survey did not inquire about the reasons for carrying a gun: some students may be involved in hunting and other sports activities.

1995 Alaska YRBS -Middle School Results

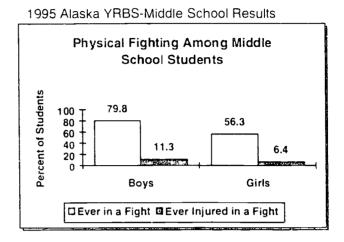

1995 YRBS-Middle School

3.1

Physical Fighting

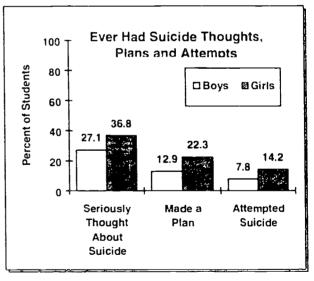

Most middle school boys and over half of the girls have been involved in a physical fight at least once in their lifetime. Almost 10% of boys and girls report having received an injury in a physical fight severe enough to have required treatment by a doctor or nurse.

Suicide

A number of middle school students have thought about suicide, made plans or attempted suicide in their lifetimes. Girls are more likely to report suicide thoughts, plans and attempts than are boys.

Section 2: Tobacco Use

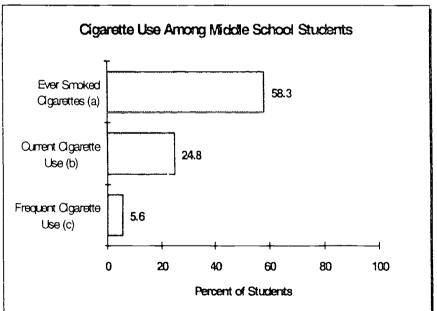

BACKGROUND

Tobacco is the leading preventable cause of premature mortality in the United States. The majority of Alaska smokers (83.7%), began smoking between the ages of 10 and 20 years². Because of the addictive properties of nicotine, smokers find it difficult to quit. Therefore, many efforts to decrease smoking in our society have been directed towards youth to decrease access to tobacco products and to discourage youth from starting to smoke³.

YRBS RESULTS

Cigarette Smoking

Over half of middle school students have tried smoking at least once; about one-fourth smoked at least one day in the past 30 days and 5.6% smoked on 20 or more of the past 30 days. 1995 Alaska YRBS-Middle School Results

a) Ever tried cigarette smoking

b) Smoked on at least one of the 30 days prior to the survey

c) Smoked on at least 20 of the 30 days prior to the survey

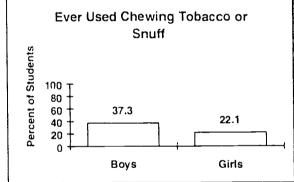

Where are Students Getting Cigarettes?

The most common way middle school students obtain cigarettes is by borrowing them from someone else (37.2% of smokers); very few middle school smokers purchased cigarettes themselves at a store or vending machine in the 30 days prior to the survey.

Usual Source of Cigarettes in Past 30 Days Stole Them Someone Else Bought 18.6% 13.8% Bought at a Store 2.8% Vending Machine 2.0% *Among students who smoked in past 30 days Borrowed

Chewing Tobacco and Snuff

Boys are more likely to report ever having used chewing tobacco or snuff (37.3%) and over 20% of girls have also used smokeless tobacco products.

1995 Alaska YRBS-Middle School Results

1995 YRBS-Middle School

26

1995 Alaska YRBS-Middle School Results

Section 3: Drug and Alcohol Use

BACKGROUND

Alcohol and drug abuse are major contributing factors in homicides, suicides and motor vehicle crashes, which are the leading causes of death and disability among young people in the U.S. and in Alaska. Heavy drinking and drug abuse among youth are linked to physical fights, destroyed property, job problems, school failure, delinquency, unwanted pregnancies and transmission of sexually transmitted diseases^{4,5}.

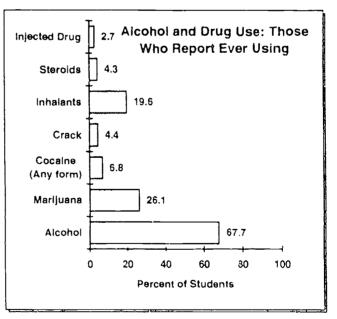

An estimated 19.2% of Alaska adults report binge drinking (having five or more drinks on an occasion, one or more time in the past month). Alaska's rate of binge drinking is among the highest in the U.S.⁶.

27

YRBS RESULTS

Use of Drugs and Alcohol

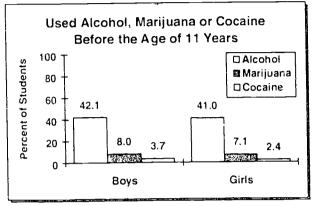

Over two thirds of middle school students report ever having had a drink of alcohol. The alcohol question excluded drinking wine for religious reasons. The next most common drugs are marijuana and inhalants (glue, paints and sprays). Nearly 20% of students report ever having used inhalants and 26.1% report ever having used marijuana. 1995 Alaska YRBS-Middle School Results

Use of Alcohol, Marijuana and Cocaine Before Age Eleven Years

Over 40% of middle school students report having had a first drink of alcohol before age 11 years. Over 7% report having tried marijuana for the first time before age 11 years, accounting for about 30% of those who ever used marijuana.

1995 Alaska YRBS-Middle School Results

1995 YRBS-Middle School

ERIC

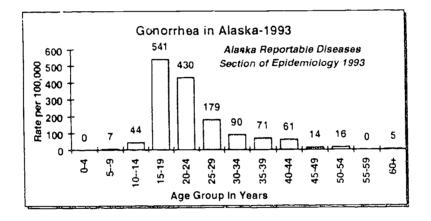

Section 4: Sexual Behaviors

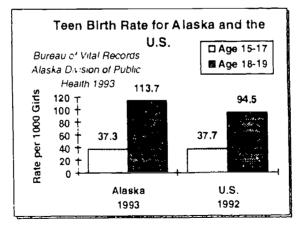

BACKGROUND

Early sexual activity can be associated with unwanted pregnancy and sexually transmitted diseases, including HIV infection. Sexually transmitted diseases can lead to infertility, pelvic inflammatory disease and other complications. HIV infection which leads to AIDS is not curable and preventive efforts are the only means of decreasing the spread of the epidemic.

The graph below shows that the age group 15-19 years has the highest rate of gonorrhea infection.

The graph below shows the teen birth rate for Alaska and for the U.S. In 1993, 428 girls age 17 and younger gave birth in Alaska⁷.

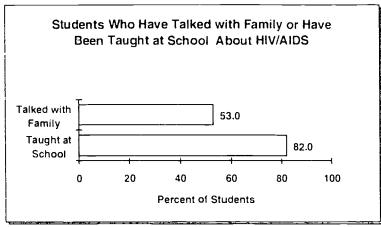

How are Alaska Middle School Students Learning about HIV/AIDS?

1995 Alaska YRBS-Middle School Results

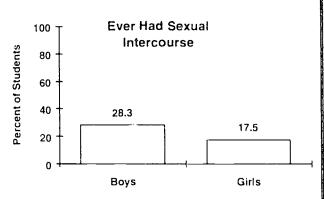

A large majority, 82.0%, of middle school students have received education about HIV/AIDS at school. About 50% report that they have talked about HIV/AIDS infection with their parents or other adults in the family. There is little difference between boys and girls at this level.

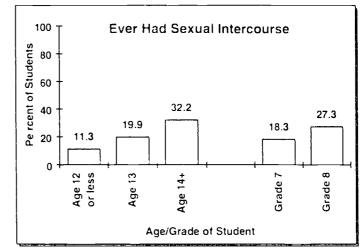

<u>Sexual Activity</u>

Boys are more likely to have had intercourse than are girls. Of middle school boys 28.3% report that they have had sexual intercourse at least once, compared to 17.5% of girls.

The probability of having sexual intercourse increases with the age of the student. More than 10% of 12-year-olds report having had sexual intercourse and over 30% of 14-year-olds report having had sexual intercourse at least once. Eighth graders are more likely to report having sexual intercourse than seventh graders.

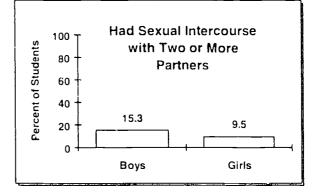

1995 Alaska YRBS-Middle School Results

Number of Partners

About 10% of girls and 15% of boys report having had sexual intercourse with more than one partner.

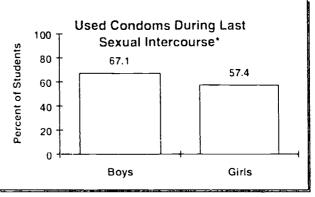

Condom Use

FRI

About two-thirds of students who have had sexual intercourse used a condom during last intercourse; boys are more likely to report condom use than are girls.

1995 Alaska YRBS-Middle School Results

Among students who reported having had servar intercease.

42

1995 YRBS-Middle School

Section 5: Weight and Dietary Behaviors

BACKGROUND

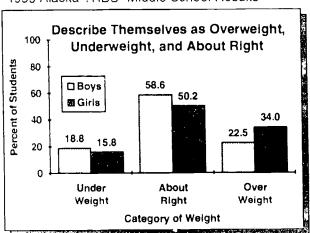

National data show that obesity is increasing among adolescents. Obesity acquired during childhood often persists into adulthood, increasing the later risk for diabetes, high blood pressure and heart disease⁸. In addition, obesity can cause social and psychological stress to children and adolescents⁹. Adolescent girls may develop eating disorders. An overemphasis on thinness may also be unhealthy.

To avoid problems of obesity and eating disorders, healthy eating habits should be encouraged among adolescents. Current dietary guidelines include increasing consumption of breads, grains and cereals: eating at least five servings of fruits and vegetables per day and maintaining a healthy weight¹⁰.

YRBS RESULTS

Description of Weight

About one-third of middle school girls describe themselves as overweight. Girls are slightly more likely than boys to describe themselves as overweight and boys are more likely to describe themselves as underweight or of normal weight.

1995 Alaska YRBS- Middle School Results

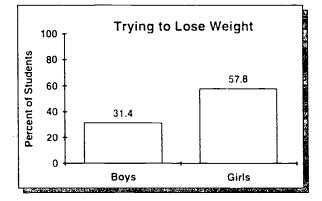

ERIC

Trying to Lose Weight

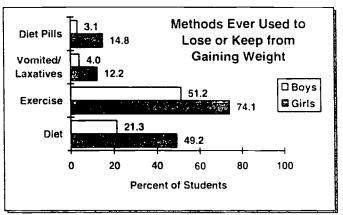

Although 34.0% of girls describe themselves as overweight, 57.8% are trying to lose weight. The difference between perception of being overweight (22.5%) and trying to lose weight (31.4%) is not as dramatic among the boys.

<u>Methods To Lose or Keep from</u> <u>Gaining Weight</u>

The most common methods ever used by middle school students to lose or keep from gaining weight are exercise and dieting. About 12% of middle school girls have vomited or used laxatives for weight loss and about 15% have used diet pills. 1995 Alaska YRBS-Middle School Results

1995 Alaska YRBS-Middle School Results

Nutrition Behaviors

Ate at Least One Serving in Previous Day 74.1 Fruits 77.1 76.4 Fruit Juices 70.1 31.1 Green Salads 31.6 Boys 48.5 **Cooked Vegetables** 🗃 Girls 48.8 50.2 Hamburgers/ Hot 37.4 Dogs/ Sausages 58.0 French Fries/Potato 46.3 Chips 58.0 Desserts 50.1 0 20 40 60 80 100 Percent of Students

1995 Alaska YRBS-Middle School Results

Seventy-five percent of students report eating at least one serving of fruit and fruit juice on the previous day. About half report eating cooked vegetables on the previous day. Boys are more likely than girls to report eating hamburgers, hot dogs, french fries and desserts (cakes, cookies, doughnuts, pie).

FRĬ

Section 6: Physical Activity

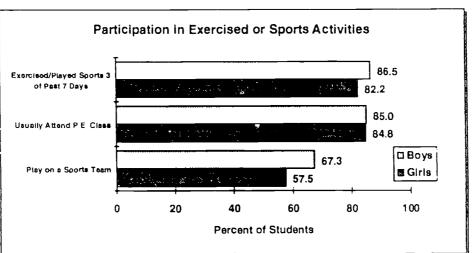

BACKGROUND

Regular physical activity can increase life expectancy¹¹. Physical activity can also enhance mental health and self-esteem, of particular benefit to adolescents¹². As with nutrition, development of good exercise habits in childhood and adolescence which are maintained into adulthood can prevent or delay many chronic diseases.

YRBS RESULTS

FRĬ(

Over 80% of middle school boys and girls report that they have exercised or played sports 3 of the past 7 days. Both boys and girls report similar exercise frequencies, although boys are slightly more likely than girls to play on a sports team.
