ABSTRACT

As part of a review of its Psychology department, William Rainey Harper College in Illinois conducted a study of 400 students who had taken at least 3 courses in the department from fall 1989 to fall 1993. Questionnaires were sent to the students in spring 1995, requesting information on their perceptions of the effectiveness of courses in the department and benefits received from completing them. Study findings, based on responses from 156 former students, included the following: (1) 24% of the students had earned a bachelor's degree and 58% had transferred to another college; (2) of those who had transferred, 28% transferred as psychology majors and 44% as one of the social science majors; (3) 8 of 12 psychology courses included on the survey were rated as higher than beneficial, while the three highest rated courses were Human Development, Human Adjustment and Abnormal Behavior, and Child Psychology; (4) 30% of the former students had participated in volunteer work with a community service agency as part of a psychology course, and close to three-fourths indicated that volunteering helped them learn to appreciate some of the real problems faced by society; and (5) students judged the use of lectures and classroom discussions as the most effective instructional methods, while they judged the use of media as less effective. The survey instrument is appended. (BCY)

FOLLOW-UP STUDY OF FORMER HARPER STUDENTS WHO ENROLLED IN AT LEAST THREE PSYCHOLOGY COURSES

M. Ostrowski, Chairman
Psychology Department

J.A. Lucas, Director
Office of Planning and Research

960 508

ABSTRACT

The purpose of this study was to gather student follow-up and evaluation information from former students, providing valuable information for the Program Review process of the Department of Psychology.

More than 1,100 former students were identified as having taken three or more courses offered by the Department of Psychology from the fall of 1989 to the fall of 1993. A random sample of 400 students was drawn from this population.

A survey instrument was developed jointly by the Office of Planning and Research and the faculty in the Psychology Department. After two mailings and a telephone prompting, 156 completed surveys were returned for a 39 percent response rate.

The study showed that a surprising number of students perceived lectures by the instructor as one of the two most effective teaching methods used in their psychology classes. Equally effective was class discussion, while use of media was perceived as less effective. Even less effective were the more highly touted teaching methods. Also surprising was that multiple choice tests were judged to be almost as effective as essay exams and short answer tests. Only assigned papers were perceived as being significantly more effective. Other assessment methods were judged to be significantly less effective.

Close to 90 percent of the former students indicated that psychology courses helped them in the selection of a career path and provided insight into the behavior of others. More than half of these students stated that these Psychology courses helped them appreciate individual differences, gave them insight into their own behavior, helped them develop critical thinking skills and provided handy references.

Purpose

The purpose of this study was to gather student follow-up and evaluation information from former students, providing valuable information for the Program Review process for the Department of Psychology. The study was made at the request of the faculty of that department.

Methodology and Population Surveyed

One of the goals of the survey was to identify students who had taken three or more courses offered by the Psychology Department between the fall of 1989 and the fall of 1993. To do this, students were identified who had taken two or more of the following courses: PSY 145, PSY 150, PSY 210, PSY 216, PSY 217, PSY 218, PSY 220, PSY 225, PSY 228, PSY 230, or PSY 235. It was assumed that each of these students identified would also have taken PSY 101 which would mean they had taken three or more courses offered by the Psychology Department. There were 1,168 students who met this criteria. A random sample of 400 was drawn from this population.

The survey instrument, shown in the Appendix, was developed jointly by the Office of Planning and Research and the faculty in the Psychology Department. After two mailings, 120 completed survey instruments were returned for a 30 percent response rate.

Major Conclusions

A surprising number of students perceived lectures by the instructor as one of the two most effective teaching methods used in their Psychology classes. Equally effective was class discussion, while use of media was perceived as less effective. Even less effective were the more highly touted teaching methods. Also surprising was that multiple choice tests were judged to be almost as effective as essay exams and short answer tests. Only assigned papers were perceived as being significantly more effective. Other assessment methods were judged to be significantly less effective.

Close to 90 percent of the former students indicated that psychology courses helped them in the selection of a career path and provided insight into the behavior of others. More than half of these students stated that these psychology courses helped them appreciate individual differences, gave them insight into their own behavior, helped them develop critical thinking skills and provided handy references.

Discussion of Results

Among the respondents, 24 percent have already earned a bachelors degree. A total of 58 percent have to date transferred to another college and another 24 percent are planning to transfer soon. Of those who have transferred, 47 percent are attending Illinois public universities, 36 percent are attending Illinois private colleges and universities, while 17 percent are attending out-of-state facilities. Some 28 percent have transferred as psychology majors, with 44 percent having transferred as majors in one of the social sciences. Another 15 percent are majoring in health related areas and 13 percent in education.

The three psychology courses rated as most beneficial were Human Development, Human Adjustment and Abnormal Behavior, and Child Psychology. These were rated between beneficial and very beneficial. In fact, eight of the 12 psychology courses were rated higher than beneficial. Only four low attendance psychology courses were rated less than beneficial.

These psychology courses provided the greatest help for close to 90 percent of these former students by helping them in the selection of a career path - 28 percent were preparing for psychology - and in providing an insight into the behavior of other people. Over half of the respondents indicated these psychology courses helped them appreciate individual differences, gave them insight into their own behavior, helped them develop critical thinking skills and provided handy references.

Discussion of Results (continued)

Among these former students, 30 percent participated in volunteering with a community service agency as part of a Psychology course. The largest impact of this volunteer program was that close to three-fourths of the students learned to appreciate some of the real problems faced by society. Nearly half of the volunteers learned to appreciate the difficulties faced by these agencies and 39 percent have since volunteered on their own.

About 65 percent of the respondents were clear about the differences between sub-fields of psychology as a result of taking these courses. Moreover, as a result of taking these psychology courses, close to three-fourths were clear on the differences between psychology and the other behavioral sciences.

As lecture section size goes beyond 75, there is a big jump in the percentage of students perceiving the class as too large (28 - 68%) and a large decline in the percentage of students judging the section size as effective (52 - 15%). The most frequently cited reasons given for a lecture section size of 151 to 240 being too large was: 1) too difficult to ask questions (79%), 2) too difficult to have private discussions with the instructor (64%), and 3) too difficult to have a dialogue between students in class (56%).

In sharp contrast to current education theory, lectures given by the instructor were perceived as one of the two most effective teaching methods used in psychology courses. Equally effective was class discussions while use of media was judged as less effective. Even less effective were the more highly touted teaching methods such as group work, case studies, lab exercises, guest lecturers, volunteer projects and field trips.

Also surprising was that multiple choice tests were perceived to be almost as effective as essay exams and short answer tests. Only assigned papers were judged as being significantly more effective. Other assessment methods such as classroom participation evaluation, research evaluation, take-home projects and oral presentation were rated as significantly less effective.

In terms of frequency of different teaching methods, lectures by the instructor occurred very often. The only other teaching methods used more than occasionally were class discussions and use of media. In examining the frequency of use of different assessment methods, multiple choice tests were used very often. The only other assessment methods used more often than occasionally were assigned papers and short answer tests.

Twenty-two students offered some general comments.

EFFECTIVENESS OF TEACHING METHODS

Prepared by the Planning and Research Staff

EFFECTIVENESS OF ASSESSMENT METHODS

M- General Comments

- Had bachelor's degree but not in psychology - went for master's in psychology at Roosevelt.
- PSY 106 - Practical Psychology -- was beneficial. PSY 107-- very beneficial, PSY 108 -- very beneficial. Love to try field trips and volunteer projects, institutions, and guest lecturers, more often. I would love to try take home projects and do short answer tests and assigned papers more.
- I feel some PSY classes can have 151 and more but most should be minimal.
- Dr. Ostrowski was the only PSY professor I had success with. He is wonderful After I failed 101, I took from him and did so much better. I took two more classes taught by him.
- Took PSY 107 which I enjoyed and it helped me greatly.
- Have achieved a master's degree - Roosevelt University - Major: Counseling
- Teaching methods frequency encountered - Group projects "228 - Occasionally"; Use of media - video/slides, etc. "230 - Very often, 235 - Occasionally, 228 - Never". Short answer tests "228 and 235 -- often; essay exams - 228 - occasionally; Assigned papers 228 - often, 235 - occasionally"; Take home projects - 228 - occasionally"; Lecture by Instructor - "228 - very effective, 230 and 235 - somewhat effective"; Use of Media - "230 very effective, 235 - not effective".
- I only wish more than one teacher was teaching Abnormal Psych.
- PSY 106 was extremely beneficial.
- Humanistic Psychology 107 - was very beneficial.
- I thought PSY 225 could have been much more interesting by looking into what drives personality behaviors. Instead it was more of personality behaviors or individuals within the field of psychology.
- Since Harper I have transferred to Eastern Illinois University. I have completed one Psychology course and am currently enrolled in one now. These classes cannot be compared to Harper's courses. The instructor I had at Harper made a lasting impression and because of this I have excelled at EIU. I found Harper's classes to be better taught and the instructors were more knowledgeable and approachable. I was very happy and impressed with Harper's Psychology Department.
- From an enclosed letter -- I have worked part time and full time at Marketing Research and Telemarketing. The pay is good but I want to take a few required courses in the summer. I will plan to transfer to SIU for my Master's degree. You have my survey and this letter. This letter is going out to the Psychology Department and I want to double major it with Marketing. I plan to take math and science in the summer and finish with creative writing. Please send a copy to the Marketing Department, Attention: Gordon C. Braner II. Enclosed is a survey and this letter. I want to pursue a career in Psychology and Marketing. Survey No. 262.
- Telecourse 101 Intro was very difficult.

General Comments (cont'd)

- Use of Media - Encountered often and effectiveness was not effective. Adult Psychology course used an excess of movies I had already seen such as "Dad" and "My Left Foot". It was a waste of time.
- Harper did not explain sub-fields and different majors in Psychology. Until I looked at UIC's catalog did I realize all the sub-fields. You need to make that more clear in future PSY classes or to PSY majors.
- Group study is very effective. It gives students a chance to express their opinions and exchange views with others.
- Multiple choice and short answer tests do not adequately test what you have learned. Rather they test how well one memorizes information. Involvement in research projects would help facilitate learning.
- Many of these answers depend on which Psychology you are enrolled in.
- Did not gain the knowledge at Harper, or cannot remember.
- Re PSY 216 - a telecourse. I already knew the material and did not watch the video.
- Re PSY 218 - Adult - it was a disappointment
- Only took two Psychology courses

William Rainey Harper College

1200 West Algonquin Road
Palatine, Illinois 60067-7398
708-397-3000

Spring 1995

Dear Psychology Student:

Our Department is surveying students who have taken at least three Psychology courses at Harper College to help the Psychology Department evaluate their program. The department wants to know how you evaluate the Psychology courses you were enrolled in and how these courses have impacted your educational life pattern.

Please take a few minutes out of your busy schedule to answer these questions and return the completed instrument in the stamped self-addressed envelope which we have provided for your convenience.

Because you are part of a random sample, it is important that everyone respond so the answers received are representative of all students who have taken Psychology courses at Harper. The number on the survey allows us to remove your name when your completed survey is received so you will not be bothered with a second mailing of the survey or a follow-up telephone call.

On behalf of Harper College we thank you for your cooperation.

Very truly yours,

John A. Lucas, Director
Office of Planning and Research
