ABSTRACT

Every 4 years, Gainesville College, in Georgia, conducts a survey of entering students to determine their demographic characteristics and reasons for enrolling. In fall 1995, 275 first-time freshmen students were surveyed, representing 55% of the total number of first-time freshmen, while the results were compared to findings from the Higher Education Research Institute's American Freshmen Survey (AFS) for fall 1995. Study findings, based on responses from 65% of the freshmen students (n=179), included the following: (1) 86% were 21 years old or under, 62% were female, and 95% were white; (2) 55% expected to live in their parents' home, while 20% expected to live in their own home; (3) almost 90% indicated they would be enrolled on a full-time basis; (4) parents or relatives was the most commonly cited source of funding, cited by 33%; (5) 49% felt that they were fair, poor, or very poor at communicating orally, another 49% felt the same about their mathematical skills, as did 39% about their ability to communicate in writing; and (6) 93% felt that they had a good chance of earning a "B" average at the college. Comparisons to findings from the fall 1995 AFS study indicated that, nationwide, students' ratings of their high school preparation have declined and that financial concerns have continued to escalate, mirroring GC students' experience. A separate report on AFS findings is attached. Data tables are included. (HAA)

Highlights

- ◆ Of the 179 entering freshmen respondents, 86 percent were 21 years old or under (as compared to 67 % in 1991), 62 percent were female, and 95 percent or 160 students were white (Black (n=3), Mexican (n=1), Oriental/Asian (n=2), Other Hispanic (n=2)).
- ◆ Fifty-five percent of the respondents expect to live in their parent's home while in college, another 20 percent expect to live in their own home. Eight percent indicated that they plan to live in a rented room or apartment while attending college, while another 6 percent indicated an interest in moving into a dormitory.
- ◆ Eighty-three percent took a college preparatory program in high school (as compared to 70% in 1991). Over 30 percent of the respondents self-reported that they ranked within the top 25 percent of their high school class. Twenty-one percent of the respondents self-reported that they graduated from high school with an 'A' average, while 37 percent carried a 'B' average.
- ◆ Fathers of 41 percent of the respondents had no college, while 60 percent of the mothers had no college. Sixteen percent of the fathers and 12 percent of the mothers did not finish high school. Remarkably, 45 percent of the respondents indicated that someone in their family took one or more academic courses at Gainesville College.
- ◆ Almost 90 percent of the first-time freshmen respondents indicated they would be enrolled on a full-time basis (12 or more credit hours) at Gainesville College.
- ◆ Seventy-three percent of the respondents indicated they would be employed while attending the College with over 37 percent of the working students holding jobs requiring 21 to 40 hours per week. Eighty-two percent of the 1995 respondents indicated they expect to receive financial aid at Gainesville College.
- ◆ Almost 90 percent of the respondents made their decision to attend Gainesville College during or after the 12th grade of high school. Almost 50 percent of the students indicated Gainesville College was their first choice, while another 35 percent indicated it was their second choice.
- ◆ Ninety-two percent of the respondents indicated they would continue their education beyond Gainesville College with almost 70 percent indicating they would combine education and work.
- ◆ The top four *major* reasons for students to continue their education through college include the requirement for a higher-level occupation (around 80% since combine responses from two dimensions), increased earning power (77%), better educated person (76%), and develop intellect (64%).
- ◆ Parents or relatives, grants and scholarships, and income from work are the major sources of college funding for entering students at Gainesville College. Entering students do not want to incur debt by taking out loans.
- ◆ The top five areas in which students felt they needed special help were: public speaking skills (66%), mathematical skills (63%), study skills and habits (57%), test-taking skills (56%), and expressing ideas in writing (47%).
- ◆ Intramural athletics (34%) ranked first among extracurricular activities in which students wish to participate. Activities of interest to more than one-fourth of the respondents are special groups (31%, e.g. sailing, dance, etc.), religious organizations (31%), student radio or T.V. (26%), campus or community service (25%), and student publications (25%).
- ◆ The top three planned majors of students entering Gainesville College are business (20%), health science (21%), and education (14%).
- ◆ Location (66%) and the cost of attending (50%) were the two top *Very Important* reasons for attending the College. If one combines percentages for *Very Important and Moderately Important* responses, approximately two-thirds of the respondents were influenced by academic factors about Gainesville College when choosing to attend: academic reputation (71%), program availability (65%), and variety of courses (62%).
- ◆ Approximately seventy percent or more of the students either strongly agreed or agreed that the cost of attending the College is reasonable (95%), academic programs are of high quality (76%), students are friendly (74%), personnel care about students (74%), and that the College provides good financial aid (69%).
- ◆ Parents or relatives (33%) are cited most often as the major source of information about the College, followed by College catalogs (32%) and brochures (23%), and friends at the College (24%).
- ◆ When asked to respond to statements about what they expect to occur at Gainesville College, two dimensions stood out: Eighty-three percent of the entering freshmen perceive that they have a very good to good chance of making at least a 'B' average at the and eighty-one percent felt that they would be satisfied at the College.
- ◆ Few students felt they would drop out of the College either temporarily (4%) or permanently (2%). Only 8 percent of entering freshmen in the survey enter the College with an undecided major, yet many students expect to change their major while at Gainesville College.
- ◆ Forty-nine percent of incoming students perceive that they are *fair, poor, or very poor* at communicating orally, 49 percent feel the same about their mathematical skills, and 39 percent have no more than this level of confidence in their ability to express themselves in writing.

**ACT Entering Student Survey
Gainesville College
Fall 1995**

Dr. John Hamilton

Introduction

The Entering Student Survey (ESS) by ACT is a research tool that collects data on the importance of selected college characteristics to students (e.g. students' background, college image, comparative ratings of various sources of information about the college, sources of funding, reasons for attending college, needs for special help, interest in extracurricular activities). In addition, the survey allows participating colleges to append their own questions. Gainesville College included questions on the ESS dealing with the plans of students during their stay at the College and when they leave, student competency with a number of academic and personal skills, parental education, family attendance, and the quality of their high school preparation.

The ESS is an instrument that allows a college to determine the reasons students enroll at a given college. Some attributes are more important than others and in some cases several characteristics synergize to finalize a decision. College characteristics that are important in the selection process include cost, distance from home, availability of programs, rejection from first choice colleges, amount of financial aid, good academic reputation, and type of college (Dey, Astin, and Korn, 1991; Kanarek, 1993; Terkla and Wright, 1986). Recent studies by Kanarek (1993) show that for many students perceived academic quality, cost, and need-based financial aid opportunities were the most important factors in student choice. Chapman (1992) indicated that the top five drivers of college choice are programs, cost, academic reputation, access to faculty, and quality of social life.

Two-year colleges attract a more diverse set of students as compared to four-year colleges and universities. Many students are older, married, and working. Students are often economically

disadvantaged and in need of significant financial aid and must work at least part-time to pay for tuition, books and other expenses. Community colleges usually receive a disproportionate number of minority students and attract a large number of academically at-risk students who lack confidence in their intellectual skills and require developmental studies courses (Cohen and Brawer, 1989). These student characteristics help to define those most likely to matriculate to Gainesville College.

Method

The ESS is implemented at Gainesville College every four years (the last ESS was administered in the fall of 1991). A set of 275 randomly generated first-time freshmen students qualified for the Entering Student Survey of Fall 1995. All selected students held general status which excluded all of the following from the entering student cohort: transients, transfers, audits, special admission, and joint enrollees. The 275 randomly selected students represent 55% (275/501) of the total first-time freshmen. Surveys were distributed by instructors to morning, afternoon, and night classes with large numbers of these first-time freshmen. Of the 275 students selected for the survey, 179 (65%) completed and returned the survey. As a result, the ESS reached 36% (179/501) of first-time freshmen.

Percentages reported in this survey analysis are based on the number of first-time freshmen who responded to a given question and do not include blank and don't know responses. Comparisons are occasionally made with the ESS of 1991.

Results and Discussion

Demographic Information (age, race, gender, marital status, county of residence)

Of the 179 entering freshmen respondents, 86 percent were 21 years old or under (as compared to 67 % in 1991), 62 percent were female, and 95 percent were white (Black (n=3), Mexican (n=1), Oriental/Asian (n=2), Other Hispanic (n=2)). The College continues to have a relatively young entering student body for a two-year college and one that is mostly female and white. Overall, the percentage of students 21 years and under who were enrolled in the fall of 1994 was 60 percent for the College as a whole. Ten percent of the respondents were married and all but two were in-state residents. Twenty-three percent of the respondents live in Hall County, while another 45 percent commute from counties bordering Hall.

Planned College Residence

Fifty-five percent of the respondents expect to live in their parent's home while in college and another 20 percent expect to live in their own home. Eight percent indicated that they plan to live in a rented room or apartment while attending college, while another 6 percent indicated an interest in moving into a dormitory. Moreover, 14 percent of the respondents indicated that there was a very good to good chance that they will seek housing near the College. If one extrapolates the survey sample to the actual population of 501 entering freshmen, then about 70 entering freshmen (14% of 501) might have an interest in dormitories if they were available. Given that there are over 2000 other students enrolled at the College, that at least some of them are interested in housing, and that students attend the College for two to three years on average, it is safe to assert that the survey supports efforts to construct student housing. Eleven percent of the respondents were undecided about their planned college residence.

High School Background

Eighty-three percent took a college preparatory program in high school (as compared to 70% in 1991). The Regents' policy that mandates a college preparatory curriculum in high school for those who expect to enter college without having to take institutional credit make-up courses appears to be having an impact. Over 30 percent of the respondents self-reported that they ranked within the top 25 percent of their high school class. Twenty-one percent of the respondents self-reported that they graduated from high school with an 'A' average, while 37 percent carried a 'B' average. Their self-reported high school record is reasonably consistent with the overall high school average reported from the College database of 2.97.

Almost 50 percent of the entering students felt that their high school preparation for college work was either excellent (11%) or good (38%). Thirty-five percent of entering students in the survey judged their high school preparation to be no better than fair, while some rated it as poor (9%) or very poor (7%). The survey made no determination for who might be at fault for a fair to very poor high school preparation for 51 percent of the incoming students. It could be traceable to the course work and teachers in high school and/or reflect a variety of student variables (e.g. motivation, ability, course selection).

Despite the large numbers of students graduating from high school with good grade point average's (59% 'A' or 'B') and college preparatory courses (83%), entering students have low SAT scores (total SAT average in the fall of 1994 was 820) and place into developmental studies courses at Gainesville College.

Parental Education and Family Number With at Least One Academic Course at the College

Students who left the question blank or responded Don't Know were excluded from the percentage calculation. Fathers of 41 percent of the respondents had no college, while 60 percent of the mothers had no college. Fifty-nine percent of the fathers had at least some college experience, while 29 percent of the fathers (19% in 1991) had a baccalaureate degree or higher. Forty percent of the mothers had at least some college experience, while 22 percent of the mothers (15% in 1991) had at least a baccalaureate degree. Sixteen percent of the fathers (16% in

1991) and 12 percent of the mothers (9% in 1991) did not finish high school. The data suggest that the exposure of those in the area to college is rising.

Remarkably, forty-five percent of the respondents indicated that someone in their family took one or more academic courses at Gainesville College. This is good evidence that the College penetrates deeply into the families of those who enroll.

Enrollment Status at Gainesville College (part- or full-time)

Almost 90 percent of the first-time freshmen respondents indicated they would be enrolled on a full-time basis (12 or more credit hours) at Gainesville College (as compared to 80 % in 1991). This entering cohort of first-time students is quite young with 86 percent aged 21 years or younger, majority female, unmarried, and enrolled full-time with an interest in a transfer curriculum. The number of full-time students in this cohort is remarkable in that the College overall is 60 percent full-time (fall of 1994). Younger, unmarried students tend to enroll full-time in daytime classes.

Working and Receive Financial Aid

Seventy-three percent of the respondents indicated they would be employed while attending the College with over 37 percent of the working students holding jobs requiring 21 to 40 hours per week. Eighty-two percent of the 1995 respondents indicated they expect to receive financial aid at Gainesville College (as compared to 65% in 1991). The College is quite generous in the disbursement of student financial aid. During fiscal year 1994, over 1280 unduplicated students received \$1,866,008. Over twice as many students received financial aid during the fiscal year 1994 as compared to fiscal year 1990. The average financial assistance award (including all sources and recipients) was \$1,452 for fiscal year 1994.

When Decide to Attend Gainesville College and Rating of College at Time of Admission

Almost 90 percent of the respondents made their decision to attend Gainesville College during or after the 12th grade of high school. Almost 50 percent of the students indicated Gainesville College was their first choice, while another 35 percent indicated it was their second

choice. Gainesville College was the first choice of about 60 percent and second choice for another quarter of the students in previous entering student surveys.

Purpose at Gainesville College and Plans When Leave

Fifty percent of the students indicated an interest in transferring to another college or university without earning an associate degree, while 32 percent intend to earn the degree. Responses to other survey questions indicate that the majority of those who enter the College with the intent of receiving an associate degree plan to transfer to a baccalaureate-granting institution. Less than 9 percent enter without a goal and only a handful of first-time students enter the College for job courses (n=2) or self-improvement (n=2).

Ninety-two percent of the respondents indicated they would continue their education beyond Gainesville College with almost 70 percent indicating they would combine education and work. Only 3 students (2%) indicated that they did not expect to continue their education after Gainesville College, underscoring an overwhelming interest in the institution's transfer programs.

The data strongly suggest that students enter Gainesville College with high aspirations with regard to pursuing a college degree and that most students work while attending college.

Preference for Type and Format of Class

Seventy-two percent of the respondents prefer classes in the morning, another 15 percent prefer the afternoon, while 10 percent prefer the evening. None of the entering students preferred weekend classes (same reported in 1991). Interestingly, only 23 percent of the respondents preferred a lecture format, while 36 percent preferred small groups. The survey did not include a reference to multimedia-based electronic classrooms. Over 25 percent of the respondents had no preference as to class format.

Major Reasons to Continue College (percentages indicate Major Reason responses)

The top four *major* reasons for students to continue their education through college include the requirement for a higher-level occupation (around 80% since combine responses from two

dimensions), increased earning power (77%), better educated person (76%), and develop intellect (64%). Previous surveys show a focus of students on occupation and earning power. Students clearly understand the relationship between a college degree and greater opportunities in life. Several reasons for continuing one's education that were important for about a third of the respondents include develop maturity (33%), study new and different subjects (30%), independence from parents (26%), and become more cultured (22%).

Reasons for continuing one's education into college that *did not* carry much weight relative to the other reasons include parents or relatives (14%), participation in college social life (9%), high school teachers and counselors (7%), and be with friends (5%).

Sources of College Funding (unless otherwise stated, percentages indicate Major Source responses)

The top three *major* sources of entering student funding are educational grants (54%), parents or relatives (38%), and scholarships (38%). The heavy reliance on parents is a likely outgrowth of the student population in the survey: most students were young, unmarried, and living at home. Other sources include employment while in college (30%), summer employment (26%), and personal savings (17%). With results similar to 1991, 73 percent of the students expect parents or relatives to be a *major or minor source* of college funding (80% in 1991) and one-half or more expect to contribute to college-going in a *major or minor way* through employment while in college (69%), summer employment (54%), and personal savings (50%).

The percentages indicate the *Not Source* responses, thus the students that *do not expect* the following to be a source of funding while enrolled at Gainesville College: student loans (80%), bank loans (90%), and spouse's income (92%).

Parents or relatives, grants and scholarships, and income from work are the major sources of college funding for entering students at Gainesville College. Entering students do not want to incur debt by taking out loans.

Areas You Feel You Will Need Special Help

As in past entering student surveys, the top five areas in which students felt they needed special help were: public speaking skills (66%), mathematical skills (63%), study skills and

habits (57%), test-taking skills (56%), and expressing ideas in writing (47%). About a third of the respondents felt a need for special help in identifying a major area of study (35%), improving reading comprehension (37%), and selecting an appropriate career (34%). The data suggest that at least some of the high school students entering the College with 'A' or 'B' high school averages, a full slate of college preparatory high school courses, and good high school class rankings perceive themselves to have academic weaknesses.

Extracurricular Participation (percentages indicate Would Participate responses)

As in previous surveys, intramural athletics (34%) ranked first among extracurricular activities in which students wish to participate. Activities of interest to more than one-fourth of the respondents are special groups (31%, e.g. sailing, dance, etc.), religious organizations (31%), student radio or T.V. (26%), campus or community service (25%), and student publications (25%). Other interests include instrumental music (14%), vocal music (19%), and debate (10%).

Planned College Major

The top three planned majors of students entering Gainesville College are business/management/office (20%), health science (21%), and education (14%). Other self-reported majors that draw students include science (5%), social science (5%), community service (5%), arts/performance (4%), pre-engineering (4%), computer science (4%), communications (4%), and agriculture (4%). Eight percent of entering students are undecided with respect to planned college major. This data is similar to that of the 1991 ESS survey. During the fall of 1994, students were assigned to the following department/divisions for advisement: Business (20%), Developmental Studies (11%), Humanities (22%, includes art/performance), Math/Science (29%, many of these are now assigned to the newly created Science Division which houses agriculture and the health science professions), Physical Education (1%), and Social Sciences (17%, includes education).

Importance to Decision to Attend Gainesville College (percentages are for Very Important responses)

As in previous surveys, the location (66%) and the cost of attending (50%) were the two top *Very Important* reasons for attending the College. Other leading *Very Important* reasons include

the availability of financial aid or scholarship money (49%), program availability (37%), size of the campus (34%), variety of courses (29%), academic reputation (29%), and entrance requirements (28%). Advice from parents or relatives (17%) or from someone who attended the College (10%) is more important than that from high school counselors (5%) or College representatives (6%).

If one combines percentages for *Very Important and Moderately Important* responses, it is refreshing to note that approximately two-thirds of the respondents were influenced by academic factors about Gainesville College when choosing to attend: academic reputation (71%), program availability (65%), and variety of courses (62%).

Agreement with Statement About GC (percentages combines Strongly Agree and Agree responses)

Approximately seventy percent or more of the students either strongly agreed or agreed that the cost of attending the College is reasonable (95%), academic programs are of high quality (76%), students are friendly (74%), personnel care about students (74%), and that the College provides good financial aid (69%). Other statements about the College that students strongly agreed or agreed with are the presence of many activities and organizations (63%) and high quality classrooms and laboratories (63%).

Fewer than half of the respondents strongly agreed or agreed with the statement that races and ethnic groups get along well at Gainesville College (49%). Nevertheless, the percent of students that support the statement has increased since 1991 (41%). Dimensions that received relatively low strongly agree or agree response rates include many students at the College use drugs and/or alcohol (17%), difficult to earn good grades at the College (13%), and students at Gainesville College are above average (7%). Eighty-three percent of the respondents felt that their chances of earning a 'B' average at the College were very good or good. This is not consistent with the overall average College GPA of 2.60 in the fall of 1994.

In general, entering student perceptions about the College are very favorable. These results are similar to previous surveys. Perceptions of alumni are also favorable. More than 97 percent of Gainesville College alumni (surveyed in 1992) indicated that the quality of instruction generally met their expectations and the same percentage have recommended or would recommend the

College to others. The College is well perceived by both incoming and outgoing students. Nevertheless, it is a bit disconcerting that Gainesville College students, on the whole, are not perceived to be academically strong and that the College is considered by entering students to be one at which good grades are relatively easy to earn. The College might consider additional ways in which it can advertise that many outstanding students are attracted to its excellent academic and performing arts programs.

Of interest and germane to how much trust one invests in student interpretations of survey items were the 14 percent of the respondents who agreed or strongly agreed that the College had a strong *intercollegiate* athletic program and the 18 percent who felt the same about the comfortableness of the *residence halls*.

Information Sources About College (percentages are for Major Source responses)

Parents or relatives (33%) are cited most often as the major source of information about the College, followed by College catalogs (32%) and brochures (23%), friends at the College (24%), high school classmates (20%), visits to the campus (20%), high school counselors (17%), and high school teachers (13%).

Sources that do not appear important for most students include College representative visits to high schools (6%), alumni (6%), high school administrators (6%), and mass media (0%, e.g. radio, newspapers, magazines). Survey responses may have been influenced by the likelihood that many of the incoming freshmen in the survey attended an orientation session at Gainesville College several weeks prior to taking the survey. This might have changed their response rate pattern as compared to what one might expect if they were asked in the spring or early summer.

Chances You Will do Following (percentages combine Very Good and Good responses)

When asked to respond to statements about what they expect to occur at Gainesville College, two dimensions stood out: Eighty-three percent of the entering freshmen perceive that they have a very good to good chance of making at least a 'B' average at the College (the average College GPA in Fall 1994 was 2.60) and eighty-one percent felt that they would be satisfied at the College. Dimensions that centered around earning degrees rated favorably: associate degree

(59%), a baccalaureate degree (49%), and a graduate degree (34%). Thirty-five percent of the entering freshmen expect to transfer before earning an associate degree at Gainesville College. Interestingly, 51% of the survey respondents intend to enroll in summer school at Gainesville College.

Considering the ambitious degree-seeking aspirations of incoming freshmen it is not surprising that relatively few felt they would drop out of the College either temporarily (4%) or permanently (2%). Only 8 percent of entering freshmen in the survey enter the College with an undecided major, yet 35 percent expect to change their major while at Gainesville College. If one combines fair responses with good and very good, then the percentage who expect to change their major climbs to 60 percent. The ambiguity towards a major course of study among one-third of the entering freshmen helps explain why 34 percent of survey respondents expect to seek career or personal counseling. It also emphasizes the importance of the advisement process in helping a relatively young group of students with one of the most important decisions of their life.

Almost one out of two students (47%) expects to work to *pay* for college, although a larger percentage of students (73%) indicated that they expect to work part- or full-time. Presumably, many incoming students use income from their jobs for expenses other than college (e.g. car payments, clothes, records). Fourteen percent of respondents indicate an interest in seeking housing near the College.

Rate Competency of Your Current Skills

Despite anecdotal comments to the contrary by College faculty and relatively low SAT verbal scores, 74 percent of the entering students perceive that they are *very good to good* at reading comprehension. Entering freshmen also rate themselves as *very good to good* in the use of computers (64%) and the library (70%). Almost 70 percent of incoming students perceive they possess a *very good to good* competency at thinking analytically and logically. Seventy-eight percent of students feel *very good to good* that they are competent with interpersonal relationships and 65 percent perceive the same about their leadership capabilities.

Forty-nine percent of incoming students perceive that they are *fair, poor, or very poor* at communicating orally, 49 percent feel the same about their mathematical skills, and 39 percent have no more than this level of confidence in their ability to express themselves in writing. Clearly, the College can partly address these perceptions through courses in speech, mathematics, and rhetoric and composition. Moreover, all of these job-enhancing and difficult skills can be broadly integrated throughout the curriculum.

ACT Entering Student Survey 1995

Comparisons with Selected Items from The American Freshman Survey

Dr. Hamilton, OPIR, January 1996

Introduction

Enclosed are selected findings from **The American Freshman Survey (AFS)** of Fall 1995 administered by the Higher Education Research Institute. They provide comparisons with Gainesville College's Fall 1995 administration of ACT's **Entering Student Survey (ESS)**. The 1995 AFS survey involved questionnaires from 240,082 first-time, full-time freshmen at a national sample of 473 two- and four-year colleges and universities.

Technical Note: Percentages for the ESS used in this analysis were taken from the multi-year summary table (1986 to 1995) which included blank and no opinion responses in the percentage calculations. The percentages in the multi-year summary are somewhat lower than those reported from the OPIR analysis in the paper entitled 'ACT Entering Student Survey, Gainesville College, Fall 1995' which more accurately used percentages based on those responses where students had an opinion (i.e. excluded blank and no opinion responses from the percentage calculations).

Race Relations

AFS: Despite widespread attacks on affirmative action, a large majority of college freshmen support the use of race in college admissions. Seventy percent of students believe that race should be given at least "some special consideration" by college admissions officers.

ESS: Almost 50 percent of respondents agreed that various racial and ethnic groups get along at Gainesville College. Twelve percent of entering freshmen felt that the racial/ethnic makeup of the College (94% white, 3.5% black, 2.5% other) was very to moderately important relative to their decision to attend the College. Five percent of respondents expressed an interest in joining racial or ethnic organizations while at Gainesville College.

Political Interest and Engagement

AFS: Students' commitment to "keeping up to date with political affairs" as an important life goal dropped for the third straight year to an all-time low of 28.5 percent, compared with 42.4 percent in 1990 and 57.8 percent in 1966. The percent who discuss politics also reached an all-

time low of 14.8 percent. Freshmen since 1992 have become less interested in "influencing social values (38% have an interest)," "cleaning up the environment (23%)," "influencing the political structure (17%)," "promoting racial understanding (33%)," and participating in a community action program (23%)." The number of entering students who believe that "an individual can do little to change society" reached a ten-year high at 33.6 percent. For the second straight year, students are increasingly labeling their political views as "middle of the road" (54%).

ESS: Over eight percent of the respondents indicated an interest in joining a political organization on campus. Only 10 percent of respondents felt that students at the College held extreme political views. Almost one out of four expressed an interest in campus or community service (All these percentages were similar to previous ESS surveys at the College).

High School Experience

AFS: The fall of 1995 survey indicates that students are increasingly disengaged from the academic experience. During their senior year in high school, the first-time full-time entering students in the survey spent less time studying or doing homework (percent reporting 6 or more hours per week dropped from 44% in 1987 to 35% in 1995), less time talking to teachers outside of class (47% report one or more hours per week as compared with 62% in 1989), and less time in student clubs or groups (29% reporting three or more hours per week as compared to 34% in 1989).

ESS: Ninety three percent of entering students believe they have a fair to very good chance of earning a 'B' average at Gainesville College. Eighty-two percent completed the high school college preparatory curriculum in high school (up from 59% in 1986). One out of five or more entering students expressed an interest in participating in some sort of extracurricular activity at Gainesville College (athletics, religious, community service, drama, student government, etc.). Many entering students *do not* feel that their skills in writing, reading comprehension, mathematics, thinking analytically and logically, and communicating orally are good to excellent. Fifteen percent of entering students rate their high school preparation for college work as poor to very poor.

Religious Interest at an All-Time Low

AFS: More students than ever say they have "no religious preference" (15% compared with 7.6% in 1978). Finally, more students than ever say they never attended religious services during the past year: 19% compared with 9 percent in 1968.

ESS: Almost 30 percent of respondents indicated an interest in participating in a campus religious organization. Similar percentages, although slightly lower, were given in previous years.

Financial Concerns Continue to Escalate

AFS: As the percentage of first-time full-time students at colleges and universities around the country receiving financial assistance from their parents and families declines, students are increasingly depending on multiple sources of support for college. Reliance on loans has continued to rise, with the percentage of students receiving Stafford loans, Perkins loans, and loans from all other sources increasing slightly from last year's all-time highs, and the percentage of students receiving loans from their college jumping markedly from 7.5 to an all-time high of 10 percent. Support from part-time work both on and off-campus has also increased from last year. Further, more students than ever are reporting the use of savings from summer work to pay for \$1,500 or more of their first year expenses (8% compared to 3% in 1978).

ESS: Although parents and relatives remain one of the three major sources of funding for Gainesville College students, the percent reliance on this source as a major or minor contributor has dropped from 80 percent in 1991 to around 70 percent in 1995. In addition to parental support, entering students at the College as indicated on the 1995 survey, expect to fund their education in a major or minor way through part- and full-time employment while attending the College (64%), summer employment (51%), and personal savings (48%). Reliance of the majority of entering freshmen on student loans has never been a significant source of funding at the College (e.g. almost 75% indicate that it is not a major or minor source). Entering students, who are most often young and living at home, can afford the relatively low tuition costs of the College and do not want or even need to incur debt to finance the early stages of their education.

ACT Entering Student Survey: Fall of 1986, 1989, 1991, and 1995
 Gainesville College, OPIR, Dr. Hamilton, January 1996

Septembers 1986 (N = 512), 1989 (random sample = 315), 1991 (random sample = 342),
 1995 (random sample = 179)

Note: Percentages are derived from the raw data supplied by ACT and include all responses to
 include blank and undecided.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: ACT Entering Student Survey: Fall 1986, 1989, 1991, 1995.	
Author(s): DR. John Hamilton	
Corporate Source: Gainesville College	Publication Date: Fall, 95

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

Check here

For Level 1 Release:

Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 1

The sample sticker shown below will be affixed to all Level 2 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN OTHER THAN PAPER COPY HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2

Check here

For Level 2 Release:

Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical), but *not* in paper copy.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries."

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
