 DESCRIPTORS Annotated Bibliographies; \*Doctoral Dissertations; \*Educational Research; Elementary Secondary Education; Higher Education; \*Mathematics Education

ABSTRACT

This annual listing of research in mathematics education contains annotated citations of research papers and monographs dated January 1997 through March 1998 and abstracted for the ERIC database. Journal articles focusing on the interpretation and implications of mathematics education research are also featured. An index of dissertations by institution and a list of journals searched are also included. (WRM)

---

ERIC/CSMEE invites individuals to submit proposals for monographs and bibliographies relating to issues in science, mathematics, and environmental education. Proposals must include:

- A succinct manuscript proposal of not more than five pages.
  - An outline of chapters and major sections.
  - A 75-word abstract for use by reviewers for initial screening and rating of proposals.
  - A rationale for development of the document, including identification of target audience and the needs served.
  - A vita and a writing sample.
- 

This publication was funded in part by the Office of Educational Research and Improvement, U. S. Department of Education under contract no. RR93002013. Opinions expressed in this publication do not necessarily reflect the positions or policies of OERI or the Department of Education.

## ERIC and ERIC/CSMEE

---

The *Educational Resources Information Center* (ERIC) is a national information system operated by the Office of Educational Research and Improvement in the U. S. Department of Education. ERIC serves the educational community by collecting and disseminating research findings and other information that can be used to improve educational practice. General information about the ERIC system can be obtained from ACCESS ERIC, 1-800-LET-ERIC.

The ERIC *Clearinghouse for Science, Mathematics, and Environmental Education* (ERIC/CSMEE) is one component in the ERIC system and has resided at The Ohio State University since 1966, the year the ERIC system was established. This and the other 15 ERIC clearinghouses process research reports, journal articles, and related documents for announcement in ERIC's index and abstract bulletins.

Reports and other documents not published in journals are announced in *Resources in Education* (RIE), available in many libraries and by subscription from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402. Most documents listed in RIE can be purchased through the ERIC Document Reproduction Service, 1-800-443-ERIC.

Journal articles are announced in *Current Index to Journals in Education* (CIJE). CIJE is also available in many libraries, and can be purchased from Oryx Press, 4041 North Central Avenue, Suite 700, Phoenix, AZ 85012-3397 (1-800-279-ORYX).

The entire ERIC database, including both RIE and CIJE, can be searched electronically online or on CD-ROM.

**World Wide Web:** <http://www.accesseric.org:81/searchdb/searchdb.html>

**Online Vendors:** Knight-Ridder Information, Inc. 1-800-334-2564  
OCLC (Online Computer Library Center) 1-800-848-5878  
Ovid Technologies 1-800-950-2035

**CD-ROM Vendors:** ERIC Processing and Reference Facility 1-800-799-3742  
Silver Platter Information, Inc. 1-800-343-0064

Researchers, practitioners, and scholars in education are invited to submit relevant documents to the ERIC system for possible inclusion in the database. If the ERIC selection criteria are met, the documents will be added to the database and announced in RIE. To submit, send two legible copies of each document and a completed Reproduction Release Form (available from the ERIC Processing and Reference Facility, 1-800-799-3742, or any ERIC Clearinghouse) to:

ERIC Processing and Reference Facility  
Acquisitions Department  
1100 West Street, Second Floor  
Laurel, MD 20707-3598

For documents focusing on science, mathematics, or environmental education, submit two copies of each document, together with a completed *Reproduction Release Form*, directly to:

ERIC/CSMEE Acquisitions

## PREFACE

The annual listing of research in mathematics education for many years was published as an issue of the *Journal for Research in Mathematics Education*, a publication of the National Council of Teachers of Mathematics. Two annual research listings for 1994 and 1995 were prepared by the ERIC Clearinghouse for Science, Mathematics, and Environmental Education (ERIC/CSMEE) with the financial support of NCTM. This is the second annual research listing prepared solely by ERIC/CSMEE.

This version is very similar to the last three versions listing the research reported in 1994, 1995 and in 1996. Each entry has been classified with *Major* and *Minor* codes and all entries are indexed by *Major* codes. Dissertation Abstracts which appeared in *Dissertation Abstracts International* during 1997 have been listed. Journal articles reporting research, as well as journal articles focusing on the interpretation and implications of research, have been included. Papers and monographs dated 1997 and abstracted for the ERIC database by the end of March 1998 are recorded. An index of dissertations by institution is provided. A list of journals cited is included.

As much as mathematics educators have valued the research listing in the past, with electronic databases becoming increasingly accessible, it is not clear in what format(s) future listings would be most useful. Though ERIC/CSMEE has the capacity to produce this listing, it is not clear the extent to which a single annotated listing of mathematics education research is still valued by the mathematics education community. We earnestly request feedback from you our reader, either in writing or by e-mail at the addresses listed below. This listing will become available through the ERIC/CSMEE World Wide Web site.

We sincerely hope you find this listing useful. *Again, we solicit your comments and recommendations.* You may contact ERIC/CSMEE by mail, ERIC Clearinghouse for Science, Mathematics and Environmental Education, 1929 Kenny Road, Columbus, OH 43210-1080; or by e-mail to [ericse@osu.edu](mailto:ericse@osu.edu).

D.T.O.  
M.K.R.

## Key to Codes

The following topic codes have been used to indicate the major and minor emphases of each dissertation, journal article, and paper in this listing. Each entry has been assigned a minimum of one and a maximum of three major codes, and any number of minor codes. The combined topic index at the end of the volume reflects only major codes, with entries listed in 18 clusters of related topics.

The grade level or educational level of each study is indicated in parentheses after the topic codes. Please note that studies related to preservice or inservice teacher education are so indicated by the appropriate topic codes (Prsv, Insv). The level designated on teacher education studies refers to the grade level(s) at which the intern or teacher participants teach. Teachers as subjects were preceded with a level code. For example elementary school teachers were coded EL,TE. Teacher education students preparing to teach at the elementary level were coded TE,EL, for example.

### Topic Codes

Code	Definition	Code	Definition	Code	Definition
Ach	Achievement	GCal	Graphing calculators	Patt	Patterns, relationships, math connections
A/S	Addition, subtraction	Grpg	Grouping for instruction, cooperative learning	RaPc	Ratio, proportion, percent
AdvM	Post-calculus mathematics	Impl	Implications of research, interpretations of research	Pers	Personality
Aff	Affect	Insv	Inservice teacher education, professional development	Phil	Philosophy, epistemology
Alg	Algebra, pre-algebra	Int	Integers	Plan	Planning, decision making
Anx	Anxiety (student's)	IC	Integrated curriculum	Prob	Probability
Arth	Arithmetic	Knw	Knowledge (student's)	PS	Problem solving, reasoning
Assm	Assessment, evaluation	Lang	Language, psycholinguistics	Prsv	Preservice teacher education
Att	Attitudes (student's)	Lrn	Learners (characteristics of)	Prf	Proof, justification
Blf	Beliefs (student's)	LD	Learning disabled	RaPc	Ratio, proportion, percent
Calc	Calculus, precalculus	Lrng	Learning, learning theories, cognitive development, constructivism	Rep	Representations, modelling
Cltr	Calculators (general)	Styl	Learning style, cognitive style	Rsch	Research issues, methods
CIIn	Classroom interaction	Manp	Manipulatives	Revw	Reviews of research
Comm	Communication	Matl	Materials (texts, other resources)	Soc	Social factors, context, parents
CAI	Computer-assisted instruction	Meas	Measurement	Stat	Statistics
Comp	Computers (general)	Mscn	Misconceptions	TAnx	Anxiety (teacher's)
CC	Cross-cultural studies	M/D	Multiplication, division	TAtt	Attitudes (teacher's)
Curr	Curriculum, programs	M/CBL	Microcomputer/calculator based laboratory	TBlf	Beliefs (teacher's)
Decm	Decimals	MMed	Multimedia	TKnw	Content knowledge (teacher's), pedagogical knowledge
D/R	Diagnosis, remedial mathematics	Mtcg	Metacognition, reflection	Tchr	Teachers (characteristics of)
DscM	Discrete mathematics	NSns	Number sense	Tchg	Teaching (role, style, methods)
Eqv	Equivalence, proportions	PlcV	Place value, numeration	Tech	Technology (general)
Est	Estimation	Oral	Oral communication, classroom discourse	Whol	Whole numbers
Eqty	Equity			Writ	Writing, journals
Ethn	Ethnic, racial, cultural				
Frac	Fractions, rational numbers				
Gend	Gender differences				
Geom	Geometry				
Gift	Gifted (students)				

## Level Codes

---

EC	Early childhood, K-4	EL	Elementary, K-8
MS	Middle grades, 5-8	SE	Secondary, 5-12
HS	High school, 9-12	K-12	All school levels
PS	Post secondary, 13+	ALL	All student levels
TE	Teacher education, teachers		

---

## Dissertation Research in Mathematics Education Reported in 1997

James D. Atkinson, Kelly M. Costner, Marlena F. Herman, & Michelle K. Reed  
*The Ohio State University*

This section lists 384 dissertations in mathematics education research that were abstracted in *Dissertation Abstracts International* during 1997. Each entry is coded (see Key to Codes) with one to three **major** topic codes (in bold type) and any number of *minor* topic codes, as well as the grade level code (in parentheses). Studies related to preservice or inservice teacher education are indicated by the appropriate topic codes (Prsv.Insv). The level designated for teacher education or teacher studies indicates the grade level(s) at which the intern or teacher participants teach, followed by the level code, "T" for teacher or "TE" for teacher education. All entries are indexed by major codes at the end of the volume (see page 85). An index of dissertations by institutions is included at the end of this section (see page 27).

Addington, Duard G. (1996). *Effects of parental involvement on mathematics achievement at eighth, tenth, and twelfth grades* (Virginia Polytechnic Institute and State University). DAI-A 57(11), p. 4677, May 1997. [AAT 9710939]

Study of the data from the 1988 National Educational Longitudinal Study and followups found parental involvement in students' academic lives was a powerful influence on student mathematics achievement at eighth-, tenth-, and twelfth grades.

**Ach, Soc** (SE)

Alexander, Allen H. (1996). *Determining the effects of remedial mathematics education in a community college* (University of Delaware). DAI-A 58(05), p. 1556, Nov 1997. [AAT 9733550]

Although this case study indicated that remedial education was ineffective and that therefore an open admission policy is unjustified, the conclusion is considered tentative. Missing, incomplete, and inaccurate data diminished the utility of the college's information system.

**D/R, Plan** (PS)

Alidou, Hassana. (1997). *Education language policy and bilingual education: The impact of French language policy in primary education in Niger* (University of Illinois at Urbana - Champaign). DAI-A 58(06), p. 2036, Dec 1997. [AAT 9737030]

Students' poor performance on achievement and proficiency tests in language and two content areas (including mathematics) suggests that there

are serious problems related to teaching and testing methods currently utilized in Nigeria.

**Lang, Ach** (EC)

Alon, Sandra. (1997). *The meaning that elementary teachers attribute to the concept of the equal sign* (Columbia University Teachers College). DAI-A 58(05), p. 1627, Nov 1997. [AAT 9734041]

A substantial majority of elementary and preservice teachers (n=94) viewed "=" as a symbol associated with an operation rather than a relational symbol between two expressions. Views of "=" as relational were unstable.

**TKnw, Prsv, Mscn** (EL, TE)

Altman, Janice Hegeman. (1997). *The relative contribution of antecedent sources to math self-efficacy* (University of Illinois at Urbana - Champaign). DAI-B 57(12), p. 5046, Jun 1997. [AAT 9732496]

Data from community college students (n=364) showed that women reported significantly weaker self-efficacy expectations than men.

**Att, Gend** (PS)

Armstrong, Kelli Jean. (1996). *Women in science and mathematics: First year perceptions of college learning experiences and the effect on persistence* (Boston College). DAI-A 57(09), p. 3838, Mar 1997. [AAT 9706656]

Questionnaires of (n=133) women about their experiences in college mathematics and science and their persistence in majoring in the subjects

found non-persisters were far more likely to choose pedagogical reasons as significant factors in their reason for leaving and were less likely to experience faculty contact outside the classroom.

**Gend, Blf (PS)**

Arnold Joy, Judith E. (1996). *A study to determine the effects of direct parental involvement on students' mathematic achievement in grades three through five* (Wayne State University). DAI-A 57(12), p. 5053, Jun 1997. [AAT 9715857]

Direct parental training in the area of at-home computational activities was compared to at-home activities without training and to a control group. Parental involvement was found to significantly affect the achievement of students in one of the three grade levels studied as was keeping a log book. Relationships were found between gender and engagement.

**Soc, Ach, Arth, Gend (EL)**

Arthurs, Edna Marie. (1996). *Mathematical problem solving: The effects of tuning students' attention to information on the key idea of a problem on their mathematical performance* (The University of Connecticut). DAI-A 57(09), p. 3860, Mar 1997. [AAT 9703685]

A group of sixth graders participating in a three-day activity of the videodisc adventure series, The Adventures of Jasper Woodbury, were separated into one group taught to tune their attention to information on key ideas of the problem and another group without such teaching. The experimental group scored significantly higher on some problems.

**PS, Comp (MS)**

Ashley, David Ira. (1996). *How different cultures impacted one teacher's beliefs in teaching mathematics* (The Florida State University). DAI-A 57(08), p. 3433, Feb 1997. [AAT 9700200]

A case study of one high school mathematics teacher found she held isolated clusters of beliefs unique to each of the two different social and mathematical cultures at her school.

**Ethn, TBIf (HS, T)**

Atkinson, Suzan. (1995). *An action research investigation into mathematics curriculum development and the role of mathematics coordinator in a primary school*. (Open University). DAI-C 58(03), p. 766, Fall 1997.

This thesis describes an action research investigation into curriculum development in mathematics and the role of the mathematics coordinator in a large inner city model primary school in the late 1980's.

**Curr, Tchr (EL, T)**

Balli, Sandra J. (1995). *The effects of differential prompts on family involvement with middle-grades homework* (University of Missouri - Columbia). DAI-A 57(09), p. 3861, Mar 1997. [AAT 9705321]

Random assignment of (n=74) sixth-grade students to groups with either prompting or no prompting to involve students' families in homework found the families in the prompting groups were significantly more involved with mathematics homework.

**Soc (MS)**

Barbera Gregori, Elena. (1995). *Assessment approach in mathematics: Procedural and strategic knowledge in written assessment programs in mathematics* (Universitat De Barcelona). DAI-C 58(02), p. 330, Sum 1997.

Interviews of primary teachers and their students from three types of schools (traditional, innovative, and reformist) regarding assessment approaches found regularities shared by most of the teachers independently belonging to one or other kind of school.

**Assm, Tchg, Writ (EL, T)**

Bass, Daniel Thornton. (1996). *Mathematical intuition and the secondary student* (Auburn University). DAI-A 57(10), p. 4297, Apr 1997. [AAT 9709121]

Questionnaires describing mathematical or physical science situations were given to (n=207) advanced mathematics secondary school students in order to analyze fallacies incurred by false intuition.

**Styl, Mscn (SE)**

Beauford, Judith Elaine Mitchell. (1996). *A case study of adult learners' metacognitive strategies in factoring polynomials over the integers* (The University of Texas at Austin). DAI-A 57(09), p. 3861, Mar 1997. [AAT 9705787]

This exploratory investigation observed the metacognitive strategies of adult learners in a developmental algebra class as they learned a new cognitive skill—factoring polynomials over the integers. A statistically significant relationship was found between their prediction of success and the accuracy of their answers.

**Mtcg, Alg (PS)**

Belongia, Cynthia Medeiros. (1996). *A cross-site analysis of the extent of implementation of the California mathematics and science frameworks* (University of Southern California). DAI-A 57(09), p. 3755, Mar 1997. [AAT 9705072]

The study found that the strongest perceived implementation of the frameworks was in content at the district level for both mathematics and science. Technology was perceived as needing further implementation in both disciplines.

**Curr, Tech (K-12)**

Benson, Christine Corrigan. (1997). *Assessment and instructional practices of secondary mathematics teachers who participated in Project Extra: A case study* (University of Missouri - Kansas City). DAI-A 58(03), p. 783, Sep 1997. [AAT 9726184]

Teachers (n=32) knowledge of assessment increased and teachers were more confident in their expertise as assessors, although their mathematics curricula lacked significant depth.

**Assm, Insv (SE, T)**

Bills, Elizabeth J. (1997). *Shifting sands: Students' understanding of the roles of variables in 'A' level mathematics* (Open University). DAI-C 58(04), p. 1155, Win 1997.

Qualitative data was drawn chiefly from a year of teaching and observing two mathematics classes in England and Wales. Among those topics

studied was the relationship of understanding of variables to problem solving.

**Alg, Curr, PS (SE)**

Bissey, Nancy R. (1996). *Probabilistic reasoning based on age of students and context of questions* (University of Missouri - Columbia). DAI-A 58(06), p. 2117, Dec 1997. [AAT 9737862]

Sixth-, ninth-, and twelfth-grade students (n=26) were interviewed using open-ended questions. Analysis of the responses indicated that the age of the students did not affect their success in formulating an appropriate strategy for solving the problems, but there were significant differences in probabilistic reasoning when examined by context (artificial vs. real-world).

**Prob, PS (SE)**

Boggs, Gordon L. (1997). *Effects of a developmental mathematics program on the academic achievement of underprepared college students* (The University of Alabama). DAI-A 58(06), p. 2118, Dec 1997. [AAT 9735679]

Community college students (n=2208) enrolled over a seven-year period were studied. No significant differences in the passing rate in credit-level mathematics between developmental and non-developmental students were found. Remediated students attended college significantly longer.

**D/R, Ach (PS)**

Bonn, Kathleen Louise. (1996). *Factors affecting women's decisions to pursue graduate degrees in mathematics: A multiple case study* (Indiana University). DAI-A 57(07), p. 2922, Jan 1997. [AAT 9640106]

Focus groups with (n=7) senior female mathematics majors regarding their decisions about whether or not to continue on to graduate mathematics study found three factors affecting their decisions: confidence in their ability to do graduate-level mathematics, perceived usefulness of a graduate mathematics degree, and enjoyment in mathematics.

**Gend, Lrn (PS)**

Bosch I Casabo, Marianna. (1994). *The ostentive dimension in mathematical activity: The example of proportionality* (Universitat Autònoma De Barcelona). DAI-C 58(02), p. 330, Sum 1997.

This work considers the analysis of mathematical activity as the first step in the study of didactic phenomena. More specifically, it refers to the Anthropological Approach of Didactics in which both mathematics and its teaching and learning are regarded as one type of human activity among many. An experiment is presented in which a group of (n=40) mathematicians and students solve elemental problems.

**RaPc, Phil, PS (PS)**

Brown, Angela Denise Humphrey. (1997). *Making the invisible visible by challenging the myth of the universal teacher: African-American women postsecondary mathematics teachers* (University of Georgia). DAI-A 58(06), p. 2023, Dec 1997. [AAT 9735473]

Seven teachers from community colleges or technical schools were studied. The race and gender of these teachers affected their teaching-learning environment. Their teaching practices focused on accessibility, equity, and the empowerment of learners.

**Ethn, Gend, Eqty (PS)**

Buerger, Jane Ruth. (1997). *A study of the effect of exploratory writing activities on student success in mathematical problem solving* (Columbia University). DAI-A 58(03), p. 783, Sep 1997. [AAT 9728160]

An experimental and control group from a liberal arts college math course participated. Students in the experimental (writing) group showed significantly higher mastery of course content and proficiency in algebraic skills, as well as improved beliefs about the nature of math as a discipline.

**Writ, PS, Blf, Knw, Att (PS)**

Burke, Joan Marilyn. (1997). *An investigation of trends in K-12 mathematics curriculum development process as perceived by chief administrators in New Jersey public schools* (Seton Hall

University). DAI-A 58(03), p. 784, Sep 1997. [AAT 9724523]

Responses to a thirteen-item questionnaire were received from 272 school districts. Ninety-four percent of the districts indicated a revision in their mathematics curriculum in the past five years.

**Curr (K-12)**

Burton, Beatrice Spencer. (1995). *The effects of computer-assisted instruction and other selected variables on the academic performance of adult students in mathematics and reading* (Grambling State University). DAI-A 57(07), p. 2798, Jan 1997. [AAT 9639904]

Scores on the mathematics and reading sections of the Test of Adult Basic Education were significantly different for (n=200) adult students using computer-assisted instruction versus those involved in traditional instruction. Ethnicity also had some influence on scores.

**CAI, Ethn (PS)**

Caldwell, Jennifer Christine. (1996). *College students with a disability attempting science, engineering, or mathematics studies: Fourteen case studies* (University of Illinois at Urbana - Champaign). DAI-A 57(11), p. 4634, May 1997. [AAT 9712211]

Interviews with (n=14) college students with a vision, hearing, or motor impairment majoring in science, engineering, or mathematics programs showed two commonalities: all were mainstreamed into regular schools—although many were originally denied access, and all had been undergoing an intensive search for answers regarding disability and beyond.

**Aff, Lrnr (PS)**

Camacho, Maria Guadalupe Moreno. (1997). *The use of reflective teaching with seventh-grade language minority students in an urban classroom setting* (Texas A&M University - Kingsville). DAI-A 58(06), p. 2037, Dec 1997. [AAT 9736990]

The teacher/researcher of this study used student evaluations of lessons to adjust activities based

on the student reflection comments. Minority students seemed to have a higher percentage of approval than other students.

**Tchg, Ethn (SE, T)**

Case, Lisa Pericola. (1997). *Mathematical understandings: How students with learning difficulties progress in a constructivist classroom* (University of Maryland, College Park). DAI-A 58(06), p. 2158, Dec 1997. [AAT 9736534]

Six students and their teacher within a heterogeneous third grade classroom were the focus participants in the study. Important relationships between students' learning and their role in the classroom community, the methods of instruction, and the influence of relationships outside the classroom are discussed.

**LD, Lrng (EC)**

Chen, Guangzhou. (1996). *A comparative study of attitudes toward mathematics between selected Chinese high school students and United States high school students* (The University of Toledo). DAI-A 57(09), p. 3861, Mar 1997. [AAT 9705647]

Study of (n=129) U.S. and (n=130) Chinese high school students found that Chinese students more highly valued the topics and activities included in the school mathematics curriculum, and perceived higher expectations and more support in mathematics study from parents. U.S. students felt more confident in their mathematics ability and had less mathematics anxiety. Female students held attitudes toward mathematics as positive as the males.

**CC, Att, Gend (HS)**

Chirwa, Andrew Shemu. (1996). *Computers stimulate the generation of questions among students* (University of Illinois at Urbana - Champaign). DAI-A 57(08), p. 3464, Feb 1997. [AAT 9702478]

This study investigated the use of two algebra I classroom environments: textbook and computer. Results indicated that students in the CAI-

Algebra Environment asked more questions than students in the TXT-Algebra Environment on the four combined categories of high-level and low-level subject matter questions to teacher and to student.

**Comp, Alg (HS)**

Choi, Sang Sook. (1996). *Students' learning of geometry using computer software as a tool: Three case studies* (University of Georgia). DAI-A 58(02), p. 406, Aug 1997. [AAT 9722455]

Qualitative study of the use of a dynamic computer software tool with secondary students found four learning states which were hierarchical and played the role of a bridge between the van Hiele levels of geometric thought. There also was consistency between the van Hiele levels of geometric thought and students' problem-solving ability.

**Geom, Comp, PS (SE)**

Clark, Perry Joseph. (1997). *Predicting performance on the ninth grade math Ohio proficiency test* (Kent State University). DAI-58(03), p. 734, Sep 1997. [AAT 9728039]

Students who had initially failed the test were studied to determine variables that differentiated between those who eventually passed and those who never passed. An equation consisting of six variables was found to predict the pass/fail outcome at a rate of 92% accuracy.

**Assm, Ach, Ethn, Gend (HS)**

Conger, Karen I. (1996). *A content analysis study of Portable Assisted Study Sequence mathematics curricular materials for migrant students using the National Council of Teachers of Mathematics Standards* (Walden University). DAI-A 57(09), p. 3794, Mar 1997. [AAT 9705725]

An evaluative instrument was designed to measure the extent to which reform ideas were represented in the curricular materials. P.A.S.S. materials from 1995 were found to be measurably improved upon similar materials from 1989.

**Curr, Ethn (K-12)**

Contreras De La Fuente, Angel. (1994). *Evolution of conceptions about elementary geometrical notions in Logo programming environments* (Universidad De Granada). DAI-C 58(03), p. 767, Fall 1997.

This research studied the incidence of computer programming activities in Logo, based on the learning of elementary geometrical notions. Programming in Logo in geometry lessons produced a positive effect on the geometrical concepts of students.

**Comp, Geom (HS)**

Cooper, Judith M. (1996). *Stages of concern of mathematics teachers regarding the Curriculum and Evaluation Standards for School Mathematics* (George Mason University). DAI-A 57(10), p. 4246, Apr 1997. [AAT 9709082]

Questionnaires regarding the concerns, knowledge levels, and instruction and training needs of (n=320) K-8 mathematics teachers with reference to the implementation of the NCTM standards found that these teachers were typical nonusers of the Standards, but have a general understanding of problem solving as described in the Standards.

**Curr, TAtt (EL, T)**

Cossey, Ruth. (1997). *Mathematical communication: Issues of access and equity* (Stanford University). DAI-A 58(02), p. 406, Aug 1997. [AAT 9723342]

Relationships between seventh and eighth grade students' informal classroom conversations while in small work groups and their subsequent formal written accounts of their mathematical understandings were investigated. Regression analysis indicated that an individual's presence at high-quality conversations affects the production of written communication.

**Comm, Eqty, Grpg, Writ (MS)**

Coulombe, Wendy Noel. (1997). *First year algebra students' thinking about covariation* (North Carolina State University). DAI-A 58(06), p. 2118, Dec 1997. [AAT 9736819]

Students in grades 8 and 9 (n>100) had rather fragile and unstable ideas of covariance, but they did have an intuitive notion for multiple patterns of covariation. Three levels of student thinking are identified as students' understanding of covariation matures.

**Alg, Lrng (SE)**

Croft, William Earl. (1997). *Attitude of college-level electronics technology majors toward mathematics* (Indiana University). DAI-A 58(03), p. 784, Sep 1997. [AAT 9727923]

Students surveyed (n=148) had positive attitudes in the areas of confidence, usefulness, and anxiety. Attributions for success in electronics or mathematics varied, but students agreed that teacher explanations were important.

**Att, Tech, Aff, Anx (PS)**

Culbertson, William Loren. (1997). *Improving predictive accuracy for placement in entry level college mathematics courses using available student information* (University of Toledo). DAI-A 58(02), p. 395, Aug 1997. [AAT 9721041]

Logistic regression and chi square tests were applied to students enrolled in developmental mathematics at a community college (n=584). Results showed little predictive accuracy of achievement in current college placement practices. The analysis could be used to make "probability of passing" forecasts for students and advisors.

**Assm, D/R, Ach (PS)**

Curtis, Shirley A. (1997). *Various levels of representation: Parents assisting children with mathematics homework* (University of Cincinnati). DAI-A 58(05), p. 1627, Nov 1997. [AAT 9734591]

Ethnographic techniques of participant observation were employed to investigate a family of five for 21 months. After tutoring by the researcher, a better match was found between parents' and childrens' levels of representation, as formulated by Bruner.

**Soc, Rep, PS, Lrng (EL)**

Cyrus, Kenneth R. (1996). *Causal explanations for mathematics performance given by low socioeconomic status African-American mothers and their children* (University of Florida). DAI-A 57(09), p. 3809, Mar 1997. [AAT 9703533]

Study of attributional beliefs of low SES African American mothers and their sixth-, seventh-, and eighth- grade children showed that mothers and children generally explained the children's mathematics success as a result of effort. For mathematics failure, mothers emphasized lack of effort, whereas children emphasized lack of home training and lack of effort.

Goldsby, Dianne Simpson. (1994). *The effect of algebra tile use on the polynomial factoring ability of algebra I students* (University of New Orleans). DAI-A 57(08), p. 3434, Feb 1997. [AAT 9701573]

Instruction incorporating algebra tiles resulted in higher scores than traditional instruction (teacher explanation) alone (n=247). Higher scores were seen in terms of common factors, correct selec-

tion and placement of signs, exponents, and application to equations.

**Alg, Manp (HS)**

Good, Beverly A. (1996). *Characteristics of science and mathematics integration: Activities recommended in teachers' manuals for four elementary science textbooks series* (The Ohio State University). DAI-A 57(10), p. 4202, Apr 1997. [AAT 9710567]

Activities recommended to integrate science and mathematics were found to be optional and, relative to other optional activities, occurred infrequently. Only two process-oriented characteristics, collecting and organizing data and interpreting data, were adequately represented in the manuals.

**IC, Matl, Stat (EL)**

Grant, Pamela Stroope. (1996). *Characteristics of community college mathematics remediation programs* (Texas A&M University - Commerce). DAI-A 58(03), p. 765, Sep 1997. [AAT 9724613]

Analysis of standardized test scores showed that: (a) low passing percentages for all ethnic groups who received remediation suggest a need for additional strategies; (b) remedial students who passed the pretest did not show gains in the posttest; and (c) self-paced learning modules, writing activities, group techniques, and manipulatives were identified as potentially beneficial strategies.

**D/R, Ethn (PS)**

Gregory, Lorraine. (1997). *Why mathematics as communication is important and how it is utilized in the teaching and learning of mathematics* (Duquesne University). MAI 35(04), p. 937, Aug 1997. [AAT 1384119]

Mathematics teachers were surveyed to determine the extent to which communication activities were being used and which ones were most favored. Writing and reading activities were used less frequently and rated lower.

**Comm, Writ, TAtt (T)**

Gupta, Barbara Mackay. (1996). *Constructing connections: Children building their conception of equality into their interpretation of the equal sign* (Washington State University). DAI-A 58(04), p. 1226, Oct 1997. [AAT 9731093]

In Phase I, second grade students demonstrated that they had no connections between the equal sign and the conception of equality. In Phase II, a teaching experiment helped students to incorporate conceptions of equality into their descriptions of the equal sign, and helped them restructure their knowledge by connecting their conceptions with the symbol.

**Patt, Mscn, Lang (EC)**

Hall, Craig Richard. (1996). *Differential effects of prediction versus reading in support of learning from a computer-based conceptual model* (The Florida State University). DAI-A 57(11), p. 4647, May 1997. [AAT 9712149]

The strategy of making predictions before using a computer simulation was found not to influence achievement on statistics concepts. There was also no significant relationship between the amount of manipulation of the computer simulations and achievement (n=48).

**Comp, Stat (PS)**

Hammill, Lin Louise. (1996). *A comparative study of problem-solving behaviours of average college algebra students working alone and in dyads* (Simon Fraser University). DAI-A 58(05), p. 1628, Nov 1997. [AAT NN16907]

Although pairs of students tended not to discuss problem structure or analyze potential strategies, pairs were still more successful in solving a given set of problems than students who worked alone. Increased success of pairs was due to increased persistence, leadership by the more able partner, increased oral rehearsal, and correction of minor errors.

**PS, Grpg, Alg (PS)**

Harris, Mary Ann Stratford. (1996). *The effects of block scheduling on Alabama end of course algebra scores, attendance, and discipline* (The

University of Alabama). DAI-A 58(03), p. 666, Sep 1997. [AAT 9726107]

One high school using block scheduling and one using traditional scheduling were compared. There were no significant differences on test scores or teacher attendance, but student attendance did increase and discipline problems did decrease under the block schedule.

**Ach, Soc, Alg (HS)**

Hayden, Michael Barry. (1996). *Newton: An interactive environment for exploring mathematics* (University of Rhode Island). DAI-A 57(08), p. 3434, Feb 1997. [AAT 9702092]

The design, implementation, and evolution of a computational environment for teaching introductory mathematics (N scEWTON), an interface to a computer algebra system, is discussed.

**CAI (PS)**

Heath, Panagiota (Penney). (1995). *The effectiveness of using Daily Instructional Resource Forms to implement the NCTM Standards through writing in college mathematics* (University of New Orleans). DAI-A 57(12), p. 5089, Jun 1997. [AAT 9717078]

Quantitative data showed that forms designed to organize student note-taking improved students' test performance in a precalculus class in functions and in graphs. Qualitative data showed that the forms promote good note-taking, and encourage students to be actively involved in constructing mathematical knowledge.

**Writ, Matl (PS)**

Henderson, Betty Kell. (1996). *An evaluation of the use of UCSMP materials in a mathematics program* (Kansas State University). DAI-A 57(11), p. 4637, May 1997. [AAT 9714356]

An overall program evaluation of UCSMP materials included quantitative and qualitative data from teachers, principals, district administrators, and school board members. Central administration expressed a need for leadership from teachers on developments in mathematics education, while teachers expressed concern

about low evaluations from administrators who did not understand the new directions in mathematics education.

**Curr, TBIf (K-12, T)**

contextual problems. In general, students did not prefer procedural problems over contextual problems.

**PS, Rep (PS)**

Henriques, Barbara Delphine. (1997). *In their own voice: a study of preservice early childhood and elementary teachers reconstructing their beliefs about teaching and learning mathematics* (University of Massachusetts). DAI-A 58(02), p. 406, Aug 1997. [AAT 9721457]

Interpretive analysis of qualitative data revealed five major themes: preservice teachers' prior beliefs and experiences; increased understandings about themselves as learners of mathematics; new learning about mathematical pedagogy; new or different ways of learning mathematics; and anger about their previous mathematics experiences.

**TBIf, Prsv, Lrng (EL, TE)**

Hughes, Linda Lou Mahoney. (1996). *Describing the alignment between instructional materials and assessment: A content comparison between elementary mathematics textbooks and proficiency assessment instruments* (East Texas State University). DAI-A 57(07), p. 2924, Jan 1997. [AAT 9638436]

Results showed that fourth grade textbooks were similar to proficiency assessments, but eighth grade textbooks were significantly different from proficiency assessments, and implied a need for alignment between textbooks and assessment instruments.

**Matl, Assm (EL)**

Hooper, Jennifer Jean. (1996). *Students' concepts of rational functions as developed in a computer graphing environment* (University of Georgia). DAI-A 57(09), p. 3862, Mar 1997. [AAT 9636449]

Students (n=27) used software and guided discovery lessons to investigate rational functions for 3 days. Findings include: students did not naturally see asymptotes, they became better at symbolization than graphing, they did not develop generalized procedures, and they tended to create concept definitions according to concept images and visual reasoning.

**CAI, Alg (PS)**

Irwin, Kathryn Cressey. (1997). *Using context to enhance students' understanding of decimal fractions* (University of Auckland). DAI-A 58(05), p. 1629, Nov 1997. [AAT 9733788]

A pretest and posttest of students (n=84) aged 11 to 12 showed they gained more understanding from contextualized problems on decimal fractions than on purely numerical problems. Much of their learning seemed to result from reconsidering their views after a conflict between expectations and results.

**Decm, Rep, Lrng (MS)**

Howard, Keary James. (1997). *The effect of context in college students' solutions of mathematics word problems* (Cornell University). DAI-A 57(12), p. 5089, Jun 1997. [AAT 9716093]

Students (n=59) were found to score higher on contextual than on procedural problems when both had difficult solutions, and they scored higher on procedural than on contextual problems when both had easy solutions. They used a greater number of nonalgorithmic solutions on

Johnson, Thomas K. (1996). *Applied mathematics in selected 1993 Mississippi tech prep sites* (The University of Southern Mississippi). DAI-A 57(10), p. 4248, Apr 1997. [AAT 9708962]

Students who made less than a B in their previous mathematics course and (n=29) were taught using modules of the CORD Applied Mathematics program scored lower on a state algebra 1 test than did (n=70) students who were taught traditionally.

**Alg, Curr, Gend, Ethn (HS)**

Jong, Jyh-Tsorng. (1997). *Parents and kindergartners: Money and number, practices, concepts and skills* (Iowa State University). DAI-A 58(03), p. 730, Sep 1997. [AAT 9725420]

Kindergartners' (n=207) use of money was influenced by their number concepts and knowledge of coins' names and values. No relationship was found between parents' number practices and kindergartners' number learning, nor between parents' monetary practices and kindergartners' monetary use.

**Soc, NSns (EC)**

Kang, Henry. (1996). *Preservice teachers' beliefs and conceptions of mathematics learning and teaching* (The University of Regina). MAI 35(03), p. 645, Jun 1997. [AAT MM14570]

Field data and interviews were used to explore (n=2) preservice teachers' experiences with mathematics. Results suggest that teacher education should provide opportunity for preservice teachers to deconstruct negative beliefs, and should provide an environment in which preservice teachers can practice positive views of (and alternative methods of) teaching mathematics.

**TBif, Prsv (TE)**

Keck, Heidi Latvala. (1996). *The development of an analytic scoring scale to assess mathematical modeling projects* (University of Montana). DAI-A 57(07), p. 2925, Jan 1997. [AAT 9637055]

A rubric was developed that would assess the process of creating a model, provide formative assessment information to students as models are created, and allow a variety of teachers to assess models objectively. Student improvement within a semester showed that formative feedback was being provided, and consistent scoring proved possible with a variety of teachers.

**Assm, Rep (PS)**

Keen, Carolyn Marie. (1996). *An investigation of the achievement of 4 x 4 block-scheduled advanced placement calculus AB students* (The College of William and Mary). DAI-A 57(12), p. 5000, Jun 1997. [AAT 9717679]

Students in schools where AP Calculus AB was taught in (n=252) one semester scored significantly lower on the AP exam than (n=355) students in schools where the course was taught in two semesters.

**Calc, Ach (HS)**

Kelleher, Heather Jane. (1996). *Making sense of number: A study of children's developing competence* (The University of British Columbia). DAI-A 58(06), p. 2120, Dec 1997. [AAT NN19597]

Cues and scaffolds were provided in interviews with (n=16) children to support their construction of meaning within their 'number construction zone' and towards the outer limits of their understanding. Results highlight specific conceptual, procedural, functional, and affective characteristics that most directly affected children's capacity to make sense of number situations.

**NSns, Lrng (EC)**

Kriek, Carel Gustav. (1996). *Mathematics curriculum development for the senior phase* (University of Pretoria). DAI-A 57(10), p. 4298, Apr 1997.

This study focuses on the development and presentation of a relevant and applicable curriculum for high schools in postapartheid South Africa.

**Curr, Soc, Lrng (HS)**

Kristjanson, Cheryl Roberta. (1996). *Voices from the other side of the room: A study on changing teaching strategies to include girls in math, science and technology* (The University of Manitoba). DAI-A 58(04), p. 1192, Oct 1997. [AAT NN16182]

Teachers in this project focused on adapting their teaching strategies and classroom environment in order to establish connections with their female students and between the subject and the student's real world. The results were an improvement in young women's enrollment, achievement, and attitudes toward mathematics, science, and technology.

**Tchg, Gend (SE)**

Lambert, Monica Ann. (1996). *Teaching students with learning disabilities to solve word-problems: A comparison of a cognitive strategy and a traditional textbook method* (Florida Atlantic University). DAI-A 57(07), p. 2966, Jan 1997. [AAT 9639550]

Study of learning disabled high school students (n=76) taught word problem solving using either traditional textbook instruction or a cognitive strategy method found no significant differences.

**LD, PS (HS)**

Lauten, Alice Darien. (1996). *Profiles of reform in the teaching of calculus: A study of the implementation of materials developed by the calculus consortium based at Harvard* (University of New Hampshire). DAI-A 57(08), p. 3419, Feb 1997. [AAT 9703361]

Six clustering scales (concepts, approach, teaching, assessment, technology, and access) were developed to analyze data from surveys of site liaisons and instructors at institutions implementing calculus reform. Eight types of interpretation and implementation of reform were identified. Faculty members were found to emphasize different aspects of reform depending on the context of their situations.

Le, Xuan. (1997). *An investigation of learning approaches of nontraditional students in mathematics* (The University of Oklahoma). DAI-A 58(01), p. 114, Jul 1997. [AAT 9719649]

Nontraditional students (n=5) in college algebra were found to be serious learners who come into the course with high expectations. Those who have difficulties experience a mismatch between their expectations coming into the course and the new learning experience. They expected to be able to use the same study approaches they had in the past.

**Lrnr, Styl, Alg (PS)**

Lieberman, Joanne C. (1997). *Enabling professionalism in high school mathematics departments: The role of generative community* (Stanford University). DAI-A 58(02), p. 375, Aug 1997. [AAT 9723387]

Case studies of two high school mathematics departments found that the characteristics necessary for a department to be a professional community that enables the transition to student-centered practice include: (a) open department borders, (b) collective responsibility for the program, and (c) using guiding principles for practice and decisions.

**Tchr, Tchg, TBIf (HS, T)**

Lin, Pi-Jen. (1997). *Children's cognitive processes in solving two-step compare word problems* (University of Minnesota). DAI-A 58(03), p. 785, Sep 1997. [AAT 9724173]

Fourth graders (n=60) in Taiwan showed that the number of relational sentences with inconsistent structure increased the difficulty of two-step compare problems, and that problem structure was a major variable in deciding appropriate operations.

**PS, Lang (EC)**

Lobato, Joanne Elizabeth. (1996). *Transfer reconceived: How 'sameness' is produced in mathematical activity* (University of California, Berkeley). DAI-A 58(02), p. 406, Aug 1997. [AAT 9723086]

This analysis of students' understanding of the concept of slope revealed that transfer is not a decontextualized ability, independent of context. The findings also supported a breakdown of the classic distinction between surface and structure features in the traditional transfer paradigm.

**Lrng, Alg (HS)**

Manuse, Gary James. (1996). *The South Carolina Education Improvement Act: What effects has it had on a rural school district's high school mathematics curriculum?* (University of South Carolina). DAI-A 57(07), p. 2776, Jan 1997. [AAT 9637142]

Qualitative and quantitative data showed that the curriculum did change as a result of legislation. Instruction and student achievement gains were noted for the first five years, but not the last four years. Some intended aspects of reform, such as incorporation of higher order thinking skills, did not occur.

**Curr, Ach, P/S (HS)**

Martin, Tami Susan. (1997). *Calculus students' abilities to solve geometric related rate problems and their understanding of related geometric growth factors* (Boston University). DAI-A 58(02), p. 407, Aug 1997. [AAT 9723718]

Successful performance by first-year calculus students on geometric related rate problems included the following steps: implicitly differentiate, substitute and solve, and solve an auxiliary problem. Results suggested that understanding of related discrete changes may be connected to the ability to solve problems relating continuous changes.

**Calc, Geom (HS, PS)**

McCrone, Sharon Marie Soucy. (1997). *Student interactions and mathematics discourse: A study of the development of discussions in a fifth-grade classroom* (University of New Hampshire). DAI-A 58(04), p. 1227, Oct 1997. [AAT 9730833]

Classroom interactions were found to be regulated by the teacher, or the teacher with the students. Development of discourse was linked to the development of the student as learner and as a participant in the mathematics community, choice of mathematical tasks, students' social and mathematical roles, and classroom environment.

**CIIn, Oral (MS)**

McMann, Lawrence W. (1996). *The effects of using distance learning in a rural high school mathematics program* (Wayne State University). DAI-A 57(12), p. 5005, Jun 1997.

Technology, including satellite instruction, helped students increase application skills without losing ability to do routine computations. Implications are that "at-risk" students and lower achieving students could be helped by technology and satellite instruction that uses a nonconventional approach.

**Comp, MMed (HS)**

Meeks, Denise. (1997). *Mathematics anxiety and community college mathematics course completion* (Northern Arizona University). DAI-A 58(03), p. 711, Sep 1997. [AAT 9724921]

Results suggest that mathematics anxiety is negatively correlated with mathematics course grade (high anxiety decreases likelihood of high grade) and that age is positively correlated with mathematics course grade (likelihood of high grade increases with age).

**Anx, Aff (PS)**

Mesa, Vilma Maria. (1996). *The role of the graphing calculator in solving problems on functions* (University of Georgia). MAI 35(04), p. 937, Aug 1997. [AAT 1383728]

College students majoring in mathematics education were found to spend more time when the graphing calculator was available, and used it differently in each problem, with the type of problem being the greatest influence on how the graphing calculator was used.

**GCal, PS (PS)**

Meyer, Kimberly Anne. (1996). *Applied precalculus: An innovative approach to the learning and teaching of precalculus mathematics* (University of Illinois at Chicago). DAI-A 57(11), p. 4679, May 1997. [AAT 9713274]

This dissertation studied the implementation in a precalculus course of a model for the development of mathematical thinking involving the abstract-concrete cycle, the conceptual-procedural cycle, and the seminar-intense individual effort-collaborative work cycle. Results showed the experimental group outperformed counterparts.

**Calc, Lrng (PS)**

Miller, Margaret Rigby. (1996). *A comparison of the defining characteristics of college-level course work between and among English and mathematics faculty at a community college and a university* (Virginia Polytechnic Institute and State University). DAI-A 57(10), p. 4243, Apr 1997. [AAT 9710958]

The rationale behind this semi-structured interview study is equitable transfer of course credit. There were more similarities than differences in the comments among and between the groups. The analysis resulted in the identification of eight

categories of characteristics defining college-level course work.

**Plan, Curr (PS)**

Miller, Nancy Peterson. (1997). *The relationships among beliefs, behavior and achievement of high school mathematics students* (The University of Chicago). DAI-A 58(01), p. 115, Jul 1997. [AAT 9720052]

Data from two questionnaires administered to high school algebra and geometry students showed various relationships between attribution of success and failure with use of resources, ability, effort, and achievement.

Newman, Glenn Austin Robert. (1996). *The development of a study guide for adult students to learn statistics* (Columbia University Teachers College). DAI-A 57(07), p. 2926, Jan 1997. [AAT 9636007]

This research investigated the use of a study guide for statistics containing examples that adults might find in their everyday lives and employed other adult-specific strategies recommended by the literature. Over 75 percent of the (n=48) adult students found the study guide 'quite useful' in their study of statistics.

Nolan, E. Katherine. (1997). *Teachers' perceptions of the use of children's literature to create context for mathematics instruction* (The University of Alabama). DAI-A 58(06), p. 2080, Dec 1997. [AAT 9735734]

This qualitative study of three teachers and classrooms found four major themes common to the use of children's literature for mathematics

instruction: interests, curriculum choices, teacher knowledge, and constraints. Appropriate choices of literature were found to depend on teachers' content knowledge in both mathematics and literature, and curricular choices were dependent on system curriculum and textbooks.

Ong, Wendy Sen. (1997). *The effects of multi-age classrooms on reading, mathematics, and writing achievement of third-grade students* (Arizona State University). DAI-A 58(03), p. 745, Sep 1997. [AAT 9725324]

Third-grade students in multi-age classes achieved significantly higher scores in reading, mathematics, and writing on a state-level standardized test than students in single-age classes. Multi-age classes are therefore a viable alternative to single-age classes, with no detrimental effects in the multi-age classes.

Siadat, Mohammad Vali. (1997). *Building study and work skills in a college mathematics classroom* (University of Illinois at Chicago). DAI-A 58(04), p. 1227, Oct 1997.

Community college mathematics classes were used to enhance students' work and study habits and improve their concentration skills. On top of good results in mathematics, students' reading comprehension scores greatly improved, showing that mathematics can be a universal educational tool.

**Phil, Lrng (PS)**

Slaughter, Renate Elisabeth Krippels. (1996). *A comparison of four error correction procedures used in peer tutoring of multiplication facts* (Northern Illinois University). DAI-A 57(09), p. 3820, Mar 1997. [AAT 9703760]

Statistically significant differences were found among treatment conditions for probes, posttests, and length of tutoring sessions. Third grade student performance improved under all conditions, but correct responses on probes and posttests were consistently highest under the multiple immediate practice with two delayed practice trials error correction procedure.

**M/D, Grpg (EC)**

Slovin, Hannah. (1996). *A qualitative study of elementary mathematics teaching practice relative to the National Council of Teachers of Mathematics 'Professional Standards for Teaching Mathematics'* (University of Hawaii). DAI-A 57(11), p. 4654, May 1997. [AAT 9713981]

A case study of a sixth-grade teacher indicated that four factors included in the NCTM Standards (task selection and formulation, classroom discourse, classroom environment, and analysis of teaching and learning) do highlight key aspects of teaching and learning mathematics. Several recurring tensions remain: what constitutes valid and worthwhile mathematical knowledge, decisions associated with planning, and the social contract in the classroom.

**Tchg, Curr (EL, T)**

Smid, Harm Jan. (1997). *Een onbekoekte nieuwigheid? Invoering, omvang, inhoud en betekenis van het wiskundeonderwijs op de franse en latijnse scholen 1815-1863* [Title in English: *An ill-considered novelty? Introduction,*

*extent, content and significance of mathematics education on French and Latin schools, 1815-1863*] (Technische Universiteit Te Delft). DAI-C 58(03), p. 765, Fall 1997.

Detailed descriptions of the teaching of mathematics in the French and Latin schools before 1863 are used to argue that, long before the start of HBS, mathematics education in secondary schools in The Netherlands had become a matter of importance. Creation of the HBS, a Dutch version of the German Realschule, was an important step forward but not as big as usually is supposed.

**Curr (SE)**

Smith, Janna Kay Homann. (1996). *The impact of children's literature on student mathematics attitudes* (Saint Louis University). DAI-A 57(07), p. 2928, Jan 1997. [AAT 9638897]

Study of fourth graders' attitudes toward mathematics in classrooms integrating children's literature found positive changes in student attitudes toward mathematics resulting primarily from the use of children's literature in a majority of the fourth grade mathematics experience. Storybooks were found to be helpful in their problem solving efforts.

**IC, Att (EC)**

Smith, Kristi Lyn Fleming. (1997). *Types of mathematics assessments being administered in kindergarten through fifth grade classrooms in the state of Georgia* (Kansas State University). DAI-A 58(06), p. 2123, Dec 1997. [AAT 9736740]

Types of assessment practices being used by teachers were examined and found to be somewhat in harmony with NCTM standards. However, tests administered by the Georgia Department of Education did not involve extensive use of multiple modes of assessment.

**Assm, Curr, Tchg (EL, T)**

Snook, Kathleen Gerard. (1997). *An investigation of first-year calculus students' understanding of the derivative* (Boston University). DAI-A 58(02), p. 407, Aug 1997. [AAT 9722765]

The levels of understanding determined by students' written performances on a Derivative Test were comparable to the levels of understanding determined by their verbal performances in interviews within some, but not all, problem categories. Relationships depended upon the type and presentation of problems.

Van Dyke, Derek Richard. (1996). *Calculators in the mathematics classroom: A study of technology and affect* (Pacific Lutheran University). MAI 35(01), p. 40, Feb 1997. [AAT 1381000]

This study analyzed the effect of technology on the formation of emotions, attitudes, and beliefs of (n=213) seventh graders. Students observed failed to demonstrate competency in basic skills and found little enjoyment in mathematics. The

author draws implications for increased use of calculators in mathematics.

**Calc, Aff, Bif (MS)**

Van Etten, Karl. (1997). *The comparative undergraduate performance and persistence of students who do not enroll in developmental classes at Colorado state system community colleges* (University of Northern Colorado). DAI-A 58(04), p. 1187, Oct 1997. [AAT 9729081]

The academic performance of students who took developmental classes (n=91) was compared with that of students who did not (n=91) to find effects on the students' subsequent undergraduate academic performance. Findings indicate that developmental classes in the basic skills do help students overcome lack of preparedness for college-level work.

**D/R, Ach (PS)**

Vavra, Anthony Joseph. (1996). *A comparison of the performance of developmental students with regular students in a college-level mathematics course* (West Virginia University). DAI-A 57(07), p. 2843, Jan 1997. [AAT 9639454]

No significant differences were found in the performance of students identified by test scores as requiring a developmental algebra course as compared to students in the same course who were not required to take the course.

**Alg, D/R, Assm (PS)**

Vincent, James Lyle. (1996). *The effects of behavioral momentum on task initiation, math performance, and problematic behaviors of residential youth* (The University of Nebraska - Lincoln). DAI-A 57(07), p. 2862, Jan 1997. [AAT 9637082]

The current study evaluated the effects of behavioral momentum on task initiation, math performance and problematic behaviors of (n=4) residential youth ages 13 to 14. While some subjects clearly benefited from the momentum training, one subject found the addition of praise to the high-probability sequence punishing.

**Soc, Aff (SE)**

Walder, Robert Howard. (1996). *Common core computational skills used by manufacturing technicians in West Central Ohio* (the ohio state unviersity). DAI-A 57(07), p. 2914, Jan 1997. [AAT 9639370]

The 'common core' entry-level mathematical related knowledge, skills, and abilities needed by manufacturing technicians in west central Ohio were found to be: interpreting drawing specifications, applying drawing specifications, and reading drawings with rectangular coordinates.

**Soc, Arth (PS)**

Wang, Hwa-Pey. (1997). *The effects of a computer-based self-instruction training program (CBST) on the mathematics performance of children with learning disabilities* (The Johns Hopkins University). DAI-A 58(04), p. 1248, Oct 1997. [AAT 9730805]

Students (n=6) were taught to use four general-to-specific self-instructional steps that were built into a computer program to solve missing-addend problems. Following training sessions, students demonstrated competence to solve problems at a high level of accuracy, both on computer-based and on paper-and-pencil tasks.

**LD, CAI, Arth (EL)**

Ward, Robin Anne. (1997). *An investigation of scaling issues and graphing calculator-associated misconceptions among high school students* (University of Virginia). DAI-A 58(06), p. 2124, Dec 1997. [AAT 9738782]

Students (n=18) were observed to see how they interpreted and selected scales of graphs when using a graphing calculator. Strategies used to obtain appropriate viewing windows and misconceptions about the calculators are identified.

**GCal, Mscn (HS)**

Ware, Melva Lawson. (1996). *Academic performance and factors affecting college success as perceived by African-American undergraduates with majors in four areas: The sciences, engineering, mathematics, and technology* (saint louis university). DAI-A 58(01), p. 107, Jul 1997. [AAT 9718160]

This study examined perceived factors associated with college success by black students enrolled in science, engineering, mathematics, and technology undergraduate programs. The study compared perceptions of higher and lower achieving students across institutional enrollment types with regard to institutional features and personal behaviors associated with college persistence and achievement.

**Ethn, Soc (PS)**

Washington-Harvey, Carmela M. (1997). *A study of African-American students' attitudes, perceptions, and academic performance in college level mathematics courses* (The Claremont Graduate University). DAI-A 58(05), p. 1618, Nov 1997. [AAT 9730925]

Perceptions of African-American students (n=18) and factors that contribute to their experiences in classes were addressed. The findings revealed gender differences in learning preference, study orientation, faculty/student interaction, attitudes toward mathematics, and academic performance in mathematics.

**Ethn, Gend, Styl, Att (PS)**

Webb, Evelyn E. J. (1996). *The Meyers-Briggs type indicator and retention of students at the Mississippi school for mathematics and science* (The University of Southern Mississippi). DAI-A 57(07), p. 2958, Jan 1997. [AAT 9638556]

Administration of the Myers-Briggs Type indicator to (n=42) high school juniors and seniors found students' psychological types did not significantly influence their persistence to graduation. No significant relationships were found between race and persistence nor gender and persistence.

**Styl, Ethn, Gend (HS)**

Weiner, Robin K. (1997). *The efficacy of conjoint behavioral consultation with a combined homework model to increase math homework completion and accuracy in junior high students* (The University of Utah). DAI-A 58(04), p. 1201, Oct 1997. [AAT 9729401]

Conjoint behavioral consultation (CBC) was used as an intervention strategy for at-risk

students (n=6). During treatment, completion of homework rates improved for some students and accuracy rates increased but not substantially. At follow-up, some students maintained or improved gains made during treatment.

**Soc (MS)**

Whalen, John William. (1997). *The influence of semantic number representations on arithmetic fact retrieval* (The Johns Hopkins University). DAI-B 58(01), p. 443, Jul 1997. [AAT 9719048]

Two theoretical positions were tested to explore how arithmetic facts are stored and retrieved in memory. Performance of a brain-damaged patient was found to be incompatible with a phonological storage hypothesis. However, Semantic Network Retrieval Theory is supported.

**Lrng, Arth (Not given)**

Whitus, Ernest Ferrell. (1996). *The predictive effects of the mathematics portion of the Texas Assessment of Academic Skills test (TAAS) and other variables on the mathematics portion of the Texas Academic Skills Program* (Texas A&M University - Commerce). DAI-A 58(03), p. 713, Sep 1997. [AAT 9724631]

Subjects (n=962) of this study were enrolled in community colleges as first-time, full-time students. Academic achievement was employed as the criterion variable for the three hypotheses of this study as measured by student performance on the mathematics portion of the TASP.

**Ach, Assm, Ethn, Soc, Gend (PS)**

Wilder, Margaret Ramsey. (1994). *The effects of a simulation test model of the General Education Development (GED) program as compared to the effects of a drill and practice, both computer-based and workbook-based on GED. Mathematics scores, retention, and time* (Grambling State University). DAI-A 57(07), p. 2808, Jan 1997. [AAT 9639896]

This study examined the effects of a computer-based instructional (CBI) simulation-test (simulation) treatment to a CBI drill and practice (drill) treatment. The traditional drill and practice (workbook) served as a baseline for this study.

The findings support the use of computer-based instruction in adult education classes.

**Curr, Comp (PS)**

Wilhite, Paula Ann Goodman. (1996). *Effect of high school calculus background on the variation in academic achievement among students in undergraduate calculus* (Texas A&M University - Commerce). DAI-A 58(03), p. 788, Sep 1997. [AAT 9724632]

An investigation of (n=404) students' college calculus achievement found that the variables ACT mathematics scores, high school rank, age, and high school mathematics grade-point-average produced a statistically significant predictive model for academic achievement in college calculus.

**Calc, Ach (PS)**

Wilkins, Jesse Leroy Muller. (1997). *Modeling correlates of problem-solving skills: Effects of opportunity-to-learn on the attainment of higher-order thinking skills in mathematics* (University of Illinois at Urbana - Champaign). DAI-A 58(06), p. 2124, Dec 1997. [AAT 9737288]

Five measures of classroom experiences associated with the development of students' (n=1327) higher-order thinking skills (HOTS) were investigated in terms of their validity as indicators of classroom opportunity-to-learn (OTL) and found to be useful. Classroom OTL was found to have a direct additive relationship with average student proficiency of HOTS.

**Curr, PS (HS)**

Wilson, Vicki A. (1996). *Factors related to anxiety in statistics* (The University of Southern Mississippi). DAI-A 57(10), p. 4253, Apr 1997. [AAT 9708978]

Study of (n=178) business and education students in graduate statistics courses found that mathematics preparation, perception of mathematics ability, proficiency in calculator use, and gender were statistically significant predictors of statistics anxiety.

**Anx, Stat (PS)**

Wiltshire, Michael A. (1997). *Integrating mathematics and science for below average ninth grade students* (Columbia University Teachers College). DAI-A 58(05), p. 1572, Nov 1997. [AAT 9734098]

An integrated mathematics and science course was developed and its effect on students' (n=94) performance was investigated. Significant results suggest that the most effective approach to teaching mathematics and science for below average students maybe an integrated curriculum and an "experimental methodology."

**IC, Curr, PS (HS)**

Wolf, Neli Sorina. (1996). *Learning to teach mathematics for understanding: A case of a student teacher in a professional development school* (Michigan State University). DAI-A 57(09), p. 3898, Mar 1997. [AAT 9706577]

This study examined what and how a prospective elementary teacher learned about teaching mathematics for understanding during student teaching in a professional development school. The study has implications for the kind of student teaching that teachers and teacher educators need to construct for novices.

**Tchg, Prsv (EL, TE)**

Wu, Chi-Ming. (1997). *An analysis of the on-time graduation rate in the two-year program at National Taipei Institute of Technology in Taiwan* (Florida International University). DAI-A 58(04), p. 1227, Oct 1997. [AAT 9730202]

The results of two-year junior college students' (n=521) performance in calculus and on-time graduation were analyzed and correlated. It is suggested that two-year junior college curriculum standards in Taiwan be reformed to emphasize basic rudimentary courses.

**Curr, Calc, Ach (PS)**

Wyllie, Richard J. (1996). *The effects of implementing a supplemental research-based instructional unit on students' cognitive-related obstacles associated with linear equation solving in algebra* (Northern Illinois University). DAI-A 57(12), p. 5092, Jun 1997. [AAT 9716568]

A treatment group (n=53) was taught a unit of instruction beginning with a cognitive structure facilitator based on the advance organizer. Results failed to show that the instructional unit had an effect on the cognitive obstacles formed by students. However, the treatment group results did indicate an improvement in the application of unitizing.

**Alg, Tchg, Lrng (HS)**

Yang, Der-Ching. (1995). *Number sense performance and strategies possessed by sixth- and eighth-grade students in Taiwan. Performance data on the number sense ability* (University of Missouri - Columbia). DAI-A 57(09), p. 3865, Mar 1997. [AAT 9705388]

A number sense test, mental computation test, and written computation test given to (n=115) sixth-grade and (n=119) eighth-grade Taiwanese

students found that students who could correctly carry out exact computations by paper-and-pencil were not necessarily successful in applying these skills in non-computational situations.

**NSns, Arth (MS)**

Zolkower, Betina A. (1997). *Math fictions: Elementary mathematics education and the modern pedagogical paradigm* (City University of New York). DAI-A 58(01), p. 116, Jul 1997. [AAT 9720161]

A reformulation of the old-time problem of widespread failure in elementary mathematics and what may be done about it was proposed. Elements of the critical sociology of education, didactic contract theory, didactical transposition, child-centeredness, progressivism, and constructivism are discussed and critiqued.

## Research Articles in Mathematics Education Published in 1997

Hea-Jin Lee & S. Asli Özgün-Koca, *The Ohio State University*

This section lists 282 articles in mathematics education research that were published in 1997. Each entry is coded (see *Key to Codes*) with one to three major topic codes (in bold type) and any number of minor topic codes, as well as the grade level code (in parentheses). Studies related to preservice or inservice teacher education are indicated by the appropriate codes (Prsv, Insv). The level designated for teacher education or teacher studies indicates the grade level(s) at which the intern or teacher participants teaches, followed by the level code, "T" for teacher or "TE" for teacher education. All entries are indexed by major codes at the end of the volume (see page 85). A list of the journals searched and the number of articles included from each is provided at the end of this section (see page 70).

Abramovich, Sergei; Nabors, Wanda. (1997).

Spreadsheets as generators of new meanings in middle school algebra. *Computers in the Schools*, 13(1-2), 13-25.

This study describes how using spreadsheets helped seventh-grade algebra students develop problem solving skills.

**PS, Comp, Alg** (MS)

Adams, Paul E.; Krockover, Gerald H. (1997, January). Concerns and perceptions of beginning secondary science and mathematics teachers. *Science Education*, 81(1), 29-50.

This study identifies concerns of beginning science and mathematics teachers about being a new teacher and their perceptions of the effectiveness of their preservice program in relation to their concerns.

**Prsv, Tchg, Aff, Curr** (T, TE)

Adams, Thomasenia Lott. (1997). Addressing students' difficulties with the concept of function: Applying graphing calculators and a model of conceptual change. *Focus on Learning Problems in Mathematics*, 19(2), 43-57.

This study explored whether a student's use of the graphing calculator during instruction effects their concept of function, how students' participation in a conceptual change assignment effects their concept of function, and how the graphing calculator and the conceptual change assignment interact with one another to influence concept formation.

**GCal, Alg, Mscn, Curr** (SE, PS)

Adams, Thomasenia Lott. (1997, July-August).

Technology makes a difference in community college mathematics teaching. *Community College Journal of Research and Practice*, 21(5), 481-491.

Describes a study that examined three areas (oral interactions, observations, and problem solving investigations) of student assessment in a college algebra classroom before and after the use of graphing calculators in class activities.

**Alg, GCal, Assm, PS** (PS)

Aksu, Meral. (1997, July-August). Student performance in dealing with fractions. *Journal of Educational Research*, 90(6), (375-380).

This study investigated differences in performance when sixth graders were presented with fractions in three contexts: understanding the meaning of fractions, computation with fractions, and solving word problems with fractions.

**Frac, Ach, Curr, Ethn, Tchg** (MS)

Allinder, Rose M.; Oats, Robert G. (1997, March-April). Effects of acceptability on teachers' implementation of curriculum based measurement and student achievement in mathematics computation. *Remedial and Special Education*, 18(2), 113-120.

This article presents a study of 12 special education teachers who had a high acceptance of curriculum-based assessment and 9 teachers who had a low acceptance. Results showed that they differed on two of five implementation measures.

**Curr, Assm, D/R, Ach, TAtt** (EL)

Anderson, Ann. (1997, July). Families and mathematics: A study of parent-child interactions. *Journal for Research in Mathematics Education*, 28(4), 484-511.

This study explores mathematics and parent-child interactions in a group of 21 parents and their four-year-old children. Findings indicate a wide range of mathematics displayed, with counting being the most prevalent activity. All parents succeeded in injecting some mathematics in most sessions.

**Soc, Tchg, Knw, Oral (EL)**

Andrews, Paul. (1997, October). Information technology in the mathematics national curriculum: Policy begets practice? *British Journal of Educational Technology*, 28(4), 245-256.

A survey of 185 secondary mathematics teachers investigated their perceptions of expertise and curricular justifications for the classroom use of databases, spreadsheets, Logo and BASIC. The study determined that teachers who used software regularly tended to have shorter lengths of service, better qualifications, and were more likely to be male.

**Comp, TKnw, Tchg (TE)**

Anku, Sitsofe E. (1997, September). Towards a theory-based multi-dimensional framework for assessment in mathematics: The "SEA" framework. *Mathematics Education Research Journal*, 9(2), 236-43.

This study proposes using the reform documents from the National Council of Teachers of Mathematics (NCTM), a theory based multi-dimensional assessment framework, to help expand the scope of assessment in mathematics.

**Assm, PS, Curr, Lrng (ALL)**

Arsac, Gilbert; Mante, Michel. (1997, June). Situations d'Initiation au raisonnement deductif [Situations of initiation to deductive reasoning]. *Educational Studies in Mathematics*, 33(1), 21-43.

This study examines classroom situations which allow for learning of rules of mathematical reasoning. Findings indicate that debate about mathematical rules can be generated amongst students aged 12 to 13 through the study of a mathematical problem.

**PS, Lrng, Mtcg (MS)**

Artz, Alice F.; Armour-Thomas, Eleanor. (1997). Mathematical problem solving in small groups: Exploring the interplay of students' metacognitive behaviors, perceptions, and ability levels. *The Journal of Mathematical Behavior*, 16(1), 63-74.

Twenty-seven seventh-grade students of varying ability were observed working in small groups. The results provided insights regarding the ways that beliefs, emotions, and attitudes of students of varying ability influenced their own and their peers' metacognitive behaviors within their respective groups.

**PS, Grpg, Mtcg, Blf, Soc (MS)**

Asiala, Mark; and others. (1997). Development of students' understanding of cosets, normality, and quotient groups. *The Journal of Mathematical Behavior*, 16(3), 241-309.

An experimental course used increased computer programming activities and other exercises designed to give students the opportunity to build experiences.

**Alg, Curr, Comp, Tchg (PS)**

Asiala, Mark; and others. (1997). The development of students' graphical understanding of the derivative. *The Journal of Mathematical Behavior*, 16(4), 399-431.

This study focused on the nature and development of college students' mathematical knowledge about derivative. A revised epistemological analysis for the graphical understanding of the derivative based on the results of the data was proposed.

**Lrng, Calc (PS)**

Aspinwall, Leslie; Shaw, Kenneth L.; Presmeg, Norma C. (1997, September). Uncontrollable mental imagery: Graphical connections between a function and its derivative. *Educational Studies in Mathematics*, 33(3), 301-17.

This study examines the possibility that at times imagery might be a disadvantage in certain tasks and describes one calculus student's images supporting high levels of mathematical functioning which occasionally became so powerful as to obscure more than to explain.

**Calc, Vis, Lrng (SE)**

Austin, Joe Dan; and others. (1997, January).

Integrated mathematics interfaced with science. *School Science and Mathematics*, 97(1), 45-49.

This study describes a Standards-based high school mathematics curriculum that involves application, technology, cooperative learning, and open-ended problem solving and compares student attitudes and achievement with a traditional class.

**IC, Att, Ach, PS, Tech, Grpg (HS)**

Ball, Deborah Loewenberg. (1997, December).

From the general to the particular: Knowing our own students as learners of mathematics. *Mathematics Teacher*, 90(9), 732-37.

This case study focused on the challenge of learning what students know. The author recommends that knowing students is a domain worthy of development which promises increased understanding and consequently new challenges.

**TAtt, TKnw (SE, TE)**

Barak, Moshe; Waks, Shlomo. (1997, June). An Israeli study of longitudinal in service training of mathematics, science, and technology teachers. *Journal of Education for Teaching*, 23(2), 179-190.

To improve science, mathematics, and technology education, Israeli high school teachers received inservice training. Surveys, reports, observations, meetings, and student achievement tests indicated that the program was useful for teachers who had acquired basic knowledge in their disciplines.

**TKnw, Insv (TE, SE)**

Batanero, Carmen; and others. (1997, February).

Effect of the implicit combinatorial model on combinatorial reasoning in secondary school pupils. *Educational Studies in Mathematics*, 32(2), 181-99.

The main goal of this research was to determine the effect of the implicit combinatorial model on pupils' combinatorial reasoning before and after instruction. This study gives an analysis of variance of the answers from 14-15 year-old students (n=720).

**PS, Prob, Rep (SE)**

Bauersfeld, Heinrich. (1997, November). Research in mathematics education: A well-documented field? *Journal for Research in Mathematics Education*, 28(5), 612-25.

Author reviews the four sections of the two-volume set, *International Handbook of Mathematics Education*, with specific comments on various chapters contained therein. Author suggests that this handbook be used as a general resource for specific topics.

**Tchg, Revw, Tchr, Matl (ALL, TE)**

Behr, Merlyn J.; and others. (1997, January).

Conceptual units analysis of preservice elementary school teachers' strategies on a rational-number-as-operator task. *Journal for Research in Mathematics Education*, 28(1), 48-69.

This is a study of preservice teachers (n=30) that provides confirming evidence that students usually use two rational number operator constructs. Authors discuss the cognitive models of the students' strategies and the notational system used as an analytical tool.

**Prsv, Frac, TKnw, Lrng (PS)**

Belfiore, Phillip J.; Lee, David L.; Vargas, Andres U. (1997, Summer). Effects of high preference single digit mathematics problems completion on multiple digit mathematics problem performance. *Journal of Applied Behavior Analysis*, 30(2), 327-330.

A study of two adolescents with behavior disorders examined the effects of a sequence of three, single digit multiplication problems on the latency to initiate multiple digit multiplication problems.

**D/R, M/D, Assm (SE)**

Bennett, Randy Elliot; and others. (1997, Sum).

Evaluating an automatically scorable, open-ended response type for measuring mathematical reasoning in computer adaptive tests. *Journal of Educational Measurement*, 34(2), 162-176.

Scoring accuracy and item functioning were studied for an open-ended response type test in which correct answers can take many different surface forms. Results with 1,864 graduate school applicants showed automated scoring to approximate the accuracy of multiple choice scoring.

**Assm, PS, Comp (PS)**

Bennett, Randy Elliot; Sebrechts, Marc M. (1997, Spring). A computer based task for measuring the representational component of quantitative proficiency. *Journal of Educational Measurement*, 34(1), 64-77.

A computer-delivered problem solving task based on cognitive research literature was developed and its validity for graduate admissions assessment was studied with 107 undergraduates. Findings supported use of the test, which asked examinees to sort word problem stems by prototypes.

**PS, Assm, Lrng (PS)**

Berenson, Sarah B. (1997). Language, diversity, and assessment in mathematics learning. *Focus on Learning Problems in Mathematics*, 19(4), 1-10.

This study examines the theoretical framework of psychologist Lev Vygotsky with regard to communication tools, cognition, and socio-cultural effects on these tools by adapting Luria's instruments for alternative assessments to study students' word meanings of division.

**Ethn, Lang, M/D, Soc, Assm, Lrng (ALL)**

Bers, Trudy. (1997, Spring). Self assessments, academic skills, and student achievement. *Journal of Applied Research in the Community College*, 4(2), 101-117.

A study of how student characteristics, self perceptions, academic skills, and course-taking patterns can predict academic achievement showed that students have unrealistic perceptions of their own academic competency and that mathematics skills are a stronger predictor of academic achievement than verbal skills.

**Ach, Att, Assm, D/R (PS)**

Bessant, Kenneth C. (October, 1997). The development and validation of scores on the mathematics information processing scale (MIPS). *Educational & Psychological Measurement*, 57(5), 841-857.

This study reports on the development and psychometric properties of a new 87-item Mathematics Information Processing Scale that explores learning strategies, metacognitive problem-solving skills, and attentional deployment.

Results with 340 college students support the use of the instrument.

**PS, Mtcg, Styl, Rsch (ALL)**

Bewick, Viv; Southern, Jane. (1997, June). Factors influencing students' choice of mathematics at A-Level. *Teaching Mathematics and Its Applications*, 16(2), 74-78.

Questionnaires (n=198) given to find reasons for students choosing A-level mathematics and the relationship between gender and A-level choices found a highly significant difference between boys and girls in why they choose mathematics.

**Gend, Att, Curr (ALL)**

Birenbaum, Menucha; and others. (1997, August). On agreement of diagnostic classifications from parallel subtests: Score reliability at the micro level. *Educational and Psychological Measurement*, 57(4), 541-558.

The agreement of diagnostic classifications from two parallel subtests assessing a mathematics skill was studied with 431 Arab Israeli 10th graders. Even when parallel form reliability was high, less agreement was apparent when performance is evaluated at the micro level.

**Ethn, Assm, Rsch (HS)**

Boaler, Jo. (1997, November). Equity, empowerment and different ways of knowing. *Mathematics Education Research Journal*, 9(3), 325-42.

This study emphasizes that a project-based approach produced equity between girls and boys whereas a textbook approach prompted many of the girls to underachieve.

**Eqty, Tchg, Gend, Matl (ALL)**

Boaler, Jo. (1997, September). Reclaiming school mathematics: The girls fight back. *Gender and Education*, 9(3), 285-305.

Case study data from two British schools for grades 9 through 11 (160 students and 109 students) shows the way in which girls link their mathematics underachievement to the type of mathematics that is commonly taught in the United Kingdom.

Borko, Hilda; and others. (1997, April). Teachers' developing ideas and practices about mathematics performance assessment: Successes, stumbling blocks, and implications for professional development. *Teaching and Teacher Education*, 13(3), 259-278.

Examined the change process experienced by 14 third-grade teachers participating in the University of Colorado Assessment Project, which helped teachers design and implement classroom-based performance assessments compatible with their mathematics and literacy instructional goals.

**Tatt, Assm, NSns, Insv (EL, TE)**

Boulton-Lewis, Gillian; and others. (1997).

Processing load and the use of concrete representations and strategies for solving linear equations. *The Journal of Mathematical Behavior*, 16(4), 379-397.

A qualitative analysis of the responses revealed that students did not use materials in solving problems. The increased processing load caused by concrete representations is hypothesized as a reason.

**Matl, Rep, Alg, PS (SE)**

Boulton-Lewis, Gillian; Wilss, Lynn; Mutch, Sue. (1997, September). Analysis of primary school children's abilities and strategies for reading and recording time from analogue and digital clocks. *Mathematics Education Research Journal*, 9(2), 136-51.

The sequence of time acquisition in the ability to read and record analogue and digital times proposed in this study was confirmed for grades 1-3 (n=67) while irregularities occurred with grades 4-6 (n=66).

**Tchg, Meas (EL)**

Brandell, Gerd; Carlsson, Svante; Eklbom, Hakan; Nord, Ann-Charlotte. (1997, November). Encouraging more women into computer science: Initiating a single-sex intervention program in Sweden. *Mathematics Education Research Journal*, 9(3), 312-24.

Success in a new program in computer science and engineering, heavily based on applied mathematics and only open to women, required considerable interest in mathematics and curiosity about

computer science among female students at the secondary level.

**Gend, Comp, Att, Ethn, Curr (ALL)**

Brenner, Mary E.; and others. (Winter, 1997).

Learning by understanding: The role of multiple representations in learning algebra. *American Educational Research Journal*, 34(4), 663-689.

Treatment students were more successful in representing and solving a function word problem and were better at problem representation tasks such as translating word problems into tables and graphs than were comparison students.

**Alg, Lrng, Rep (HS)**

Brookhart, Susan M. (1997, July-August). Effects of the classroom assessment environment on mathematics and science achievement. *Journal of Educational Research*, 90(6), 323-330.

Data were obtained from the 1987 and 1991 Longitudinal Study of American Youth. Beyond the expected effects of gender, socioeconomic status, reading ability, and prior achievement, homework effects were found for mathematics achievement.

**Ach, Soc, Assm (SE)**

Brown, Anne; DeVries, David J.; Dubinsky, Ed; Thomas, Karen. (1997). Learning binary operations, groups, and subgroups. *The Journal of Mathematical Behavior*, 16(3), 187-239.

This paper examines how abstract algebra students might come to understand binary operations, groups, and subgroups. Results suggest that the pedagogical approach of the study was reasonably effective in helping students to develop strong conceptions.

**Alg, Lrng, Tchg (PS)**

Brown, Dawn L.; Wheatley, Grayson H. (1997). Components of imagery and mathematical understanding. *Focus on Learning Problems in Mathematics*, 19(1), 45-70.

Investigation of students' use of imagery in their mathematical activities found image formation was crucial in doing mathematics.

**PS, Lrng, Vis (EL)**

Brown, Michael T.; and others. (1997, June).

Traditionality and the discriminating effect of expectations of occupational success and occupational values for women within math oriented fields. *Journal of Vocational Behavior*, 50(3), 418-431.

A study of women majoring in engineering (n=31) and mathematics education (n=43) showed the following variables distinguished between the two groups: success expectations for traditional and nontraditional occupations, self efficacy for traditional occupations, and outcome desirability.

**Gend, Att, Blf (PS)**

Brown, Susan Wightman; Jurney, Mary Ann. (1997, March). Buddy classes. *Science Scope*, 20(6), 55-57.

A partnership project, in which each fourth and fifth grade classroom of an elementary school had a "buddy class" at a neighboring middle school, increased students' mathematics and science skills and self-esteem.

**Lrng, Grpg, PS, Att (ALL)**

Bruno, Alicia; Espinel, Maria Candelaria; Martinon, Antonio. (1997). Prospective teachers solve additive problems with negative numbers. *Focus on Learning Problems in Mathematics*, 19(4), 36-55.

This study analyzes the solution of additive problems involving negative numbers by prospective primary school teachers using surveys. Students felt no need to use negative numbers in the solution of additive problems.

**A/S, TKnw, NSns (T, TE)**

Brush, Thomas A. (1997, Fall). The effects of group composition on achievement and time on task for students completing ILS activities in cooperative pairs. *Journal of Research on Computing in Education*, 30(1), 2-17.

This article discusses a computer-assisted instruction study that examined the impact of group composition on student achievement, time on task, and group interactions when completing Integrated Learning Systems mathematics activities in cooperative pairs.

**CAI, Grpg (EL)**

Brush, Thomas A. (1997). The effects on student achievement and attitudes when using Integrated Learning Systems with cooperative pairs. *Educational Technology Research and Development*, 45(1), 51-64.

Fifth-grade students using Integrated Learning Systems in cooperative groups for mathematics instruction performed better and were more positive toward mathematics.

Byrnes, James P.; Hong, Li; Xing, Shaoying. (1997, October). Gender differences on the math subtest of the Scholastic Aptitude Test may be culture-specific. *Educational Studies in Mathematics*, 34(1), 49-66.

Chinese students were given items from the mathematics subtest of the Scholastic Aptitude Test found to produce the largest gender differences in American students. Results revealed no difference in performance on the test items between Chinese males and females.

**Gend, CC, Assm (ALL)**

Cai, Jinfa. (1997, Spring). Beyond computation and correctness: Contributions of open ended tasks in examining U.S. and Chinese students' mathematical performance. *Educational Measurement: Issues and Practice*, 16(1), 5-11.

The contributions of open-ended tasks in examining students' mathematical performance were studied with 250 U.S. and 425 Chinese sixth graders. Open-ended tasks allow for analysis of student performance that cannot be assessed solely by percent correct or incorrect.

**CC, Assm, Ethn (MS)**

Callingham, Rosemary A. (1997, September). Teachers' multimodal functioning in relation to the concept of average. *Mathematics Education Research Journal*, 9(2), 205-24.

This study analyzes the responses of pre- and in-service teachers (n=136) to a series of graded questions about average by presenting information in graphical form requiring respondents to compare data sets.

**TKnw, Rep, Stat, PS (PS, T)**

Campbell, Patricia B.; Sanders, Jo. (1997, January-February). Uninformed but interested: Findings of a national survey on gender equity in preservice teacher education. *Journal of Teacher Education*, 48(1), 69-75.

This article reports a study of how instructors in methods classes in mathematics, science, and technology addressed issues of gender equity. Results indicated that the teacher educators were interested but uninformed.

**Tchg, Gend, Eqty, TAtt (TE)**

Carlson, Marilyn P. (1997). Obstacles for college algebra students in understanding functions: What do high-performing students really know? *AMATYC Review*, 19(1), 48-59.

This article reports the results of an investigation to provide insights into how high-performing college algebra students (n=30) develop an understanding of major aspects of the concept of function. High-performing students actually possessed weak understanding.

**Alg, Knw (PS)**

Carr, Martha; Jessup, Donna L. (1997, June). Gender differences in first grade mathematics strategy use: Social and metacognitive influences. *Journal of Educational Psychology*, 89(2), 318-328.

A study of social and metacognitive contributors to gender differences in 58 first-graders found girls were more likely to use overt strategies, while boys use memory retrieval, to solve addition and subtraction problems.

**Gend, Mtcg, Soc, A/S (EC)**

Carroll, William M. (1997, March). Results of third-grade students in a reform curriculum on the Illinois State Mathematics Test. *Journal for Research in Mathematics Education*, 28(2), 237-42.

Only 2% third-grade Illinois students using the University of Chicago School Mathematics Project's elementary curriculum, Everyday Mathematics, failed to meet state goals.

**Curr, Ach, NSns (EL)**

Carroll, William M.; Porter, Denise. (1997, March). Invented strategies can develop meaningful mathematical procedures. *Teaching Children Mathematics*, 3(7), 370-74.

Classroom observation of primary students encouraged to develop computational procedures that are meaningful to them revealed most students capable of developing their own accurate solution procedures.

**PS, Lrng, Tchg (EL)**

Casey, M. Beth; and others. (1997, July). Mediators of gender differences in mathematics college entrance test scores: A comparison of spatial skills with internalized beliefs and anxieties. *Developmental Psychology*, 33(4), 669-680.

This study used path analysis to examine effects of spatial skill, mathematics anxiety, and mathematics self confidence as mediators of gender differences in mathematics Scholastic Aptitude Test (SAT M) in upper third of college-bound adolescents.

**Vis, Anx, Gend (HS)**

Cawley, John F.; Shepard, Teri; Smith, Maureen; Parmar, Rene S. (1997, Spring). Item mass and complexity and the arithmetic computation of students with learning disabilities. *Learning Disabilities: A Multidisciplinary Journal*, 8(2), 97-107.

The performance of 76 students with learning disabilities (aged 10 to 15) on four tasks of addition, subtraction, multiplication, and division computation was examined. Tasks varied in difficulty level and number of strokes needed to complete all items.

**Arth, D/R (K-12)**

Chandler, Sue. (1997, March). A comparison of public expectation of achievement in mathematics in England and Wales and Bavaria—A personal view. *Teaching Mathematics and Its Applications*, 16(1), 5-12.

This study compares the public expectation of achievement in mathematics in England, Wales, and Bavaria.

**CC, Ach, Assm, Matl (SE)**

Chapman, Anne. (1997, September). Towards a model of language shifts in mathematics learning. *Mathematics Education Research Journal*, 9(2), 152-73.

This article reports a study of the relationship between language and learning in school mathematics. This study proposes a model where mathematical meanings are constructed within the shift towards increasingly mathematical language.

**Lang, Lrng (ALL)**

Chapman, Olive. (1997, March). Metaphors in the teaching of mathematical problem solving. *Educational Studies in Mathematics*, 32(3), 201-28.

This study focused on three teachers and their ways of teaching problem solving. Findings indicate that the participants unconsciously constructed personal metaphors that became the basis of their conceptualization of problems.

**PS, TKnw, Tchg (T)**

Choi, Jeong Im; Hannafin, Michael. (1997). The effects of instructional context and reasoning complexity on mathematics problem solving. *Educational Technology Research and Development*, 45(3), 43-55.

Results suggest that rich mathematical instructional contexts best support mathematics problem solving, but simple, decontextualized instruction yields the most favorable attitudes of fifth-grade students.

**Tchg, PS, Att (MS)**

Christiansen, Iben Maj. (1997, October). When negotiation of meaning is also negotiation of task: Analysis of the communication in an applied mathematics high school course. *Educational Studies in Mathematics*, 34(1), 1-25.

The negotiation of meaning presupposes a taken-to-be-shared understanding of a situation. The article illustrates how negotiation of meaning and task may be linked in ways inappropriate to the learning of modeling and critical reflections.

**Comm, CIIn, Tchg, Rep (HS)**

Clark, Julie; and others. (1997). Constructing a schema: The case of the chain rule? *The Journal of Mathematical Behavior*, 16(4), 345-364.

This study focuses on the nature and development of college students' mathematical knowledge about the chain rule. Proposed revised epistemological analysis of the chain rule based on the results of the data is presented.

**Lrng, Calc (PS)**

Clarke, Doug M. (1997, May). The changing role of the mathematics teacher. *Journal for Research in Mathematics Education*, 28(3), 278-308.

Author investigates changing teacher roles associated with two sixth-grade teachers' use of innovative mathematics materials. One teacher demonstrated increasing comfort in posing non-routine problems to students.

**Matl, TAtt, Tchr, PS (T, MS)**

Clements, Douglas H.; and others. (1997, January). Students' development of length concepts in a Logo-based unit on geometric paths. *Journal for Research in Mathematics Education*, 28(1), 70-95.

This study of third grade students (n=38) investigated the development of linear measurement concepts. Students who connected numeric and spatial representations proved to be the better problem solvers.

**PS, CAI, Meas, Rep (EL)**

Clements, Douglas H.; Battista, Michael T.; Sarama, Julie; Swaminathan, Sudha. (1997, November). Development of students' spatial thinking in a unit on geometric motions and area. *Elementary School Journal*, 98(2), 171-186.

This study found strong positive effects on the transformation of internalized images and initial gender differences in spatial thinking, but both boys and girls made substantial gains during instruction.

**Vis, Gend, Geom (EL)**

Cobb, Paul; and others. (1997, May). Reflective discourse and collective reflection. *Journal for Research in Mathematics Education*, 28(3), 258-77.

This study explores the relationship between classroom discourse and mathematical development in a first-grade classroom. It contrasts the analysis of reflective discourse with

Vygotskian accounts of learning that also stress the importance of social interaction and semiotic mediation.

**Oral, Tchg, ClIn, Lrng, Mtcg (EL)**

Conrad, Joseph F. (1997). A classroom experiment using small-group projects. *The Journal of Mathematical Behavior*, 16(2), 167-180.

This article reports findings from a study which applied the group project method to a college algebra class. The results showed that the experiment did not produce success for the group-projects approach.

**Grpg, Alg, Tchg (PS)**

Cooley, Laurel A. (1997, December). Evaluating student understanding in a calculus course enhanced by a computer algebra system. *PRIMUS*, 7(4), 308-16.

This article describes an experimental study in which two sections of calculus were taught using the same materials, with one section was enhanced with the computer algebra system Mathematica. Students in the technology group had advantages to understanding certain key topics in calculus such as limits, derivatives, and curve sketching.

**Calc, Comp, Tchg, Curr (PS)**

Croucher, Richard; Houssart, Jenny. (1997, June). Who's Counting? *Adults Learning (England)*, 8(10), 270-272.

The mathematical performance of (n=30) 18-20 year olds and (n=37) adult students studying elementary education was compared. Older students did slightly better; adults without a mathematics background or who had previous negative mathematics experiences did very well.

**Ach, Anx, Lmr, Prsv (PS)**

Crowe, David; Zand, Hossein. (1997, January). Novices entering Mathematics-I. The impact of new technology. *Computers & Education*, 28(1), 43-54.

Reports the results of a case study at the Open University (Great Britain) which shows that the learning environment for distance education students of mathematics can be substantially improved by the use of electronic communication.

**Comp, Comm (PS)**

Cunningham, Richard. (1997). With a little help. *Lamp*, 79(2), 2-3.

This article describes a volunteer tutoring program coordinated by associates of the Exxon Corporation to help middle and high school students with mathematics and science homework. The author enumerates the successes of the tutoring program.

**Soc, Tchg, Tech, Ach (SE)**

d'Ailly, Hsiao H.; Simpson, Jacque; MacKinnon, G. E. (1997, September). Where should "You" go in a math compare problem? *Journal of Educational Psychology*, 89(3), 562-567.

The cognitive effects of self referencing in mathematical word problems were studied in (n=100) third-, fourth-, and fifth graders solving compare unknown and referent unknown problems. In general, self referencing (referring to "you") facilitated encoding processes in solving these problems.

**PS, Lrng, Comm (EL)**

Dahlberg, Randall P.; Housman, David L. (1997, September). Facilitating learning events through example generation. *Educational Studies in Mathematics*, 33(3), 283-99.

This study concluded that students who used an example generation learning strategy were more effective in attaining an initial understanding of a new concept than those using other strategies.

**Lrng, Ach, Tchg (SE)**

Davis, Brent. (1997, May). Listening for differences: An evolving conception of mathematics teaching. *Journal for Research in Mathematics Education*, 28(3), 355-76.

This study highlights the manner in which the teacher listens as a metaphoric lens through which to reinterpret practice, both as a practical basis for teaching action, and as a means of addressing critics' concerns.

**Tchg, Tchr, ClIn (T)**

Deblois, Lucie. (1997, October). Trois élèves en difficulté devant des situations de réunion et de complément d'Ensembles [Three students facing difficulty in problems involving combination and complementation]. *Educational Studies in Mathematics*, 34(1), 67-96.

This study analyzed three children's initial mental representations, procedures, and reflections when presented with four different situations. The article discusses ways to improve children's understanding of problems involving combination and complementation.

**Styl, NSns, Rep (El)**

DeFranco, Thomas C.; Curcio, Frances R. (1997). A division problem with a remainder embedded across two contexts: Children's solutions in restrictive vs. real-world settings. *Focus on Learning Problems in Mathematics*, 19(2), 58-72.

This article discusses an exploratory study that examined students' interpretation of remainders in division as applied to word problems in a restrictive school setting and in a real-world, out-of-school setting. This study concluded that students lack the ability to map computational results to the real-world context.

**M/D, PS, Soc, Assm, Styl (EL)**

Dembo, Yoram; and others. (1997, January). A comparison of the geometric reasoning of students attending Israeli ultraorthodox and mainstream schools. *Developmental Psychology*, 33(1), 92-103.

Results suggested that mainstream students did better on the misconception task, but the advantage of the mainstream students was limited to mathematics. Factors of both mainstream and orthodox schooling may have contributed to these findings.

**Geom, PS, Ethn (K-12)**

Demby, Agnieszka. (1997, June). Algebraic procedures used by 13-to-15-year-olds. *Educational Studies in Mathematics*, 33(1), 45-70.

This study investigated different types of procedures used by students (n=108) to simplify certain algebraic expressions. Findings indicated seven types of procedures including automatization, formulas, guessing-substituting, preparatory modification, concretization, rules, and quasi-rules.

**Styl, Alg, Ethn (HS)**

Di Pillo, Mary Lou; and others. (1997, March-April). Exploring middle graders' mathematical thinking through journals. *Mathematics Teaching in the Middle School*, 2(5), 308-14.

In a project involving student journal writing designed to examine middle graders' mathematical thinking and disposition, teachers gained insight into students' conceptual and procedural knowledge and attitudes toward mathematics.

**Writ, Att, Ach, Lrng, Curr (MS)**

DiCintio, Matthew J.; Stevens, Robert J. (1997, Spring). Student motivation and the cognitive complexity of mathematics instruction in six middle grades classrooms. *Research in Middle Level Education Quarterly*, 20(3), 27-42.

This study examined the relationship between cognitive demands of instruction and student motivation in fifth-, sixth-, and seventh-grade mathematics classrooms and found through observation and survey data that sixth- and seventh-grade mathematics lessons were characterized by significantly fewer elements of higher-order thinking than fifth-grade mathematics lessons.

**Att, Tchg (MS)**

Didion, Catherine Jay. (1997, November). A report card on gender equity on the twenty-fifth anniversary of Title IX. *Journal of College Science Teaching*, 27(2), 97-98.

The Association for Women in Science, in conjunction with the National Coalition for Women and Girls in Education, published a report card on how women have fared over the past 25 years since the passage of Title IX. The report card gave mathematics and science a C+.

**Eqty, Gend (ALL)**

Dowker, Ann. (1997). Young children's addition estimates. *Mathematical Cognition*, 3(2), 141-154.

This study assessed the competence of children (n=215) between the ages of five and nine at addition by asking them to estimate answers to addition sums. Children at higher levels tended to produce more reasonable estimates than children at lower levels.

**Est, A/S (EC)**

Driessen, Geert W. J. M. (1997, July). Pre-reading and pre-arithmetic instruction in infant education in the Netherlands: A multilevel analysis approach. *Early Child Development and Care*, 134, 1-21.

This study examined whether students' prereading and prearithmetic test results varied as a result of the teaching strategy used. Subjects were (n=446) teachers and (n=5,490) children, 4-6 years old, from Dutch infant classes 1 and 2 of primary education. Socioethnic background was found to be more significant in explaining test results than teaching method.

**Soc, Tchg (EC)**

Dubinsky, Ed. (1997). On learning quantification. *Journal of Computers in Mathematics and Science Teaching*, 16(2-3), 335-62.

This study of students learning concepts of universal and existential quantification in undergraduate mathematics courses in which the instruction was based on previous research into what it means to understand this concept found that students tended to make more effective mathematical constructions in their minds.

**Comp, Lrng, Tchg (PS)**

Duffy, Jim; Gunther, Georg; Walters, Lloyd. (1997, October). Gender and mathematical problem solving. *Sex Roles: A Journal of Research*, 37(7-8), 477-494.

This article studied the relationship between gender and mathematical problem solving in (n=83) male and (n=76) female high-achieving Canadian 12-year-olds. Gender differences were found on the Canadian Test of Basic Skills but not on the GAUSS assessment.

**PS, Gend (MS)**

Elliott, Alison; Hall, Neil. (1997). The impact of self regulatory teaching strategies on "at risk" preschoolers' mathematical learning in a computer mediated environment. *Journal of Computing in Childhood Education*, 8(2-3), 187-198.

This study examined effects of a self-regulatory teaching approach in a computer context on mathematics learning of at-risk preschoolers. Researchers found that computer-based contexts

provided at-risk children with an effective context for learning mathematics.

**Comp, Tchg, Ethn, PS, Soc (EC)**

Elmore, Richard F. (1997). The politics of education reform. *Issues in Science and Technology*, 14(1), 41-49.

Author makes recommendations based on the Third International Mathematics and Science Study (TIMSS), focusing on insights that educators in the United States should glean from an examination of the study.

**Assm, Ach, CC, Tchg, Curr, Revw (K-12)**

Engelbrecht, J.C. (1997). Academic support in mathematics in a third world environment. *Journal of Computers in Mathematics and Science Teaching*, 16(2-3), 323-33.

This article presents a computerized bridging course in mathematics developed as part of an academic support program. The author discusses the didactical approach of the system—criterion-referenced or mastery learning—in which student progress depends strictly on proven mastery of the concepts.

**CAI, Curr, Soc (PS)**

English, Lyn D. (1997, December). The development of fifth-grade children's problem-posing abilities. *Educational Studies in Mathematics*, 34(3), 183-217.

This study investigated the extent to which children's number sense and novel problem-solving skills govern their problem-posing abilities in routine and nonroutine situations. Children who participated in the program appeared to show substantial developments in each of the program components in contrast to those who did not participate.

**PS, NSns, Mtcg (MS)**

Evensky, Jerry; Kao, Duke; Yang, Qing; Fadele, Remi; Fenner, Richard. (1997, September-October). Addressing prerequisite mathematics needs—A case study in introductory economics. *International Journal of Mathematical Education in Science and Technology*, 28(5), 629-39.

This article describes a model for addressing prerequisite mathematics needs. A small set of prerequisite skills for the content course is identified, assessed, and students needing extra help are assisted. Targeted students include those with only marginal deficits rather than those needing full course remediation.

**Ach, Knw, Lrng, Assm (PS)**

combinatorial reasoning. *Educational Studies in Mathematics*, 34(1), 27-47.

This study analyzed the hypothesis that intuitions are always based on certain structural schemata. Authors conclude that intuitions, even when expressed as instantaneous guesses, are in fact manipulated behind the scenes by schemata.

**Lrng, Prob (ALL)**

Falk, Ruma; Konold, Clifford. (1997, April).

Making sense of randomness: Implicit encoding as a basis for judgment. *Psychological Review*, 104(2), 301-318.

Results of three studies, involving (n=606) high school and college students, showed that the perceived randomness of a sequence is better predicted by its encoding difficulty than its objective randomness. Results imply that judging the extent of randomness of a sequence is based on the attempt to encode it.

**PS (HS, PS)**

Fischbein, Efraim; Schnarch, Ditza. (1997, January).

The evolution with age of probabilistic, intuitively based misconceptions. *Journal for Research in Mathematics Education*, 28(1), 96-105.

This is a study that investigated probabilistic intuitions held by students (n=98) from grade 7 through college through the use of a questionnaire. Of the misconceptions that were investigated, availability was the only one that was stable across age groups.

**Prob, Mscn, Knw (HS, PS)**

Fast, Gerald R. (1997). Using analogies to overcome student teachers' probability misconceptions. *The Journal of Mathematical Behavior*, 16(4), 325-344.

Surveys of (n=24) secondary mathematics student teachers and follow-up interviews with (n=15) volunteers indicated that anchoring situations could be effectively utilized in overcoming probability misconceptions when the participants were engaged in a process of analogical reasoning.

**Prob, Mscn, Stat, Prsv (SE, T)**

FitzSimons, Gail E. (1997, November). Gender issues in adult and vocational mathematics education. *Mathematics Education Research Journal*, 9(3), 292-311.

This article provides a critical analysis of some of the social and political contexts of mathematics education in the adult and vocational education and training sectors with particular reference to gender issues.

**Soc, Gend, Revw (PS)**

Fauvel, John; van Maanen, Jan. (1997, May). The role of the history of mathematics in the teaching and learning of mathematics. *Mathematics in School*, 26(3), 10-11.

The authors discuss the research questions addressed in a study set by the International Commission on Mathematics Instruction focusing on the role of the history of mathematics in improving the teaching and learning of mathematics.

**Curr, Revw, CC (ALL)**

Fleener, M. Jayne; Dupree, Gloria Nan; Craven, Lary D. (1997, September). Exploring and changing visions of mathematics teaching and learning: What do students think? *Mathematics Teaching in the Middle School*, 3(1), 40-43.

Students in mathematics classrooms were asked to select cartoons that best depicted their visions of typical and ideal mathematics classrooms. Many students picked the model of teacher as sage-on-the-stage as ideal.

**Soc, Att (SE)**

Fischbein, Efraim; Grossman, Aline. (1997, October). Schemata and intuitions in

Fouad, Nadya A.; Smith, Philip L.; Enochs, Larry. (1997, April). Reliability and validity evidence for the middle school elf efficacy scale. *Measurement and Evaluation in Counseling and Development*, 30(1), 17-31.

This article provides validity evidence for a new instrument that assesses career-related self efficacy intervention for Hispanic and Latino students and focuses on the broad area of career decision making and on mathematics and science tasks. Results indicated adequate validity of the instrument, particularly for women and minority students.

**Blf, Soc, Rsch (MS)**

Fouche, Katheryn K. (1997, February). Algebra for everyone: Start early. *Mathematics Teaching in the Middle School*, 2(4), 226-29.

This article describes an action research project conducted in eighth-grade algebra and pre-algebra classes. The author suggests ways in which students can use their creativity to progress from a simple solution method to a method that produces a generalization and a formula.

**Lrng, Alg, Manp (SE)**

Franke, Megan Loef; Carey, Deborah A. (1997, January). Young children's perceptions of mathematics in problem-solving environments. *Journal for Research in Mathematics Education*, 28(1), 8-25.

This study explored the perceptions that children (n=36) have about what it means to engage in mathematics. The study took place in reform-minded classrooms and found that children have a variety of perceptions and most do not feel that success is determined by speed and accuracy.

**Blf, PS, Tchg (EL)**

Fuchs, Lynn S.; and others. (1997, January). Enhancing students' helping behavior during peer mediated instruction with conceptual mathematical explanations. *Elementary School Journal*, 97(3), 223-249.

This study explored methods for helping students generate conceptual mathematical explanations during peer-mediated learning activities and found that students with training in giving conceptual explanations had highest achievement levels.

Haeck, Wim; and others. (1997, June). A developmental approach to mathematics testing for university admissions and course placement.

*Educational Studies in Mathematics*, 33(1), 71-91.

This study focuses on reasons for the development of a mathematics test for admission of African students from grossly under-resourced schools as well as for placing students into a diversified first-year curriculum. This report highlights the process by which the test questions were developed and piloted.

**Assm, Ach, Ethn, Rsch (PS)**

Harris, Jacqueline. (1997, September). Problem solving with Franklin the turtle. *Teaching Children Mathematics*, 4(1), 24-27.

This article describes a literature-based approach to helping primary students become more proficient problem solvers in mathematics. Literature-based activities were chosen to develop a sense of community in the classroom. This enabled students to develop the self-confidence to share thoughts and feelings while problem solving in small-group and class discussion.

**Soc, PS, IC, Grpg, Tchg (EC)**

Hasegawa, Junichi. (1997, February). Concept formation of triangles and quadrilaterals in the second grade. *Educational Studies in Mathematics*, 32(2), 157-79.

The author observed that some second graders, when presented with the concept of an n-gon, gave persuading arguments containing a critical idea and the concept formation corresponding to a structure-preserved transformation in the diagram.

**Geom, Lrng (EL)**

Henningsen, Marjorie; Stein, Mary Kay. (1997, November). Mathematical tasks and student cognition: Classroom-based factors that support and inhibit high-level mathematical thinking and reasoning. *Journal for Research in Mathematics Education*, 28(5), 524-49.

This study examined how classroom-based factors can shape students' engagement with mathematical tasks that encourage high-level mathematical thinking and reasoning. Among the factors found to influence students were classroom norms, task conditions, teachers' instructional dispositions, and students' learning dispositions.

**Soc, Att, TAtt, Lrng (ALL)**

Hoffer, Thomas B. (1997, Summer). High school graduation requirements: Effects on dropping out and student achievement. *Teachers College Record*, 98(4), 584-607.

Data from a national survey of high school students were examined to determine the effects of increased mathematics requirements on the kinds of mathematics students studied, dropout rates, achievement test score gains, and the association of socioeconomic status with test scores and dropping out.

**Ach, Soc, Ethn (HS)**

Hoyles, Celia. (1997, February). The curricular shaping of students' approaches to proof. *For the Learning of Mathematics*, 17(1), 7-16.

This study presents the view that deductive mathematical proof offers the purest form of how to distinguish right from wrong. The author investigates students' understanding of proof and the proving process in mathematics.

**Prf, Curr, Geom, Lrng (SE)**

Hunt, Barbara. (1996-1997, Winter). The effect on mathematics achievement and attitude of homogeneous and heterogeneous grouping of gifted sixth grade students. *Journal of Secondary Gifted Education*, 8(2), 65-73.

Comparison of gifted, average ability, and low ability sixth-grade students (n=208), in either homogeneous or heterogeneous instructional settings found a positive effect for achievement in mathematics for the gifted students in the homogeneous grouping.

**Gift, Grpg, Att (MS)**

Jacobs, J. K.; and others. (1997). Japanese and American teachers' evaluation of mathematics lessons: A new technique for exploring beliefs. *The Journal of Mathematical Behavior*, 16(1), 7-24.

- For the teachers in this study, beliefs were linked to practices which may help to tie teachers to their culturally preferred method of mathematics instruction.
- TBlf, Tchg, CC, Ethn (EL, T)**
- Jardine, Richard. (1997, June). Active learning mathematics history. *Primus*, 7(2), 115-22.
- This study describes student historical research and student classroom presentation of the results of that research. Feedback from the student surveys verified that active learning mathematics history can motivate students to learn mathematics.
- Lrng, Matl, Curr (ALL)**
- Jetty, Michelle; Luczak, Vanessa. (1997, Spring). Mathematics laboratory: Evaluating student satisfaction levels. *Research and Teaching in Developmental Education*, 13(2), 90-94.
- This study examined whether mathematics laboratory tutors at New York's Onondaga Community College have been able to adapt to the influx of developmental students over the past decade and indicates that, based on surveys of laboratory students, tutors have been able to provide quality assistance.
- D/R, Curr (PS)**
- Jitendra, Asha K.; and others. (1997, Winter). Aligning the basal curriculum and assessment in elementary mathematics: The exploratory development of curriculum valid tests. *Diagnostique*, 22(2), 101-127.
- A pilot test of 700 students in grades three, four, and five, investigated the reliability of curriculum-valid mathematics survey tests.
- Curr, Assm (EL)**
- Jones, Graham A.; and others. (1997, February). A framework for assessing and nurturing young children's thinking in probability. *Educational Studies in Mathematics*, 32(2), 101-25.
- This study presents a framework for assessing probabilistic thinking based on validated data obtained from (n=8) third-grade children who served as case studies. Levels of thinking appear to agree with the levels of cognitive functioning
- postulated by Neo-Piagetian theorists and provide a theoretical foundation for curriculum designers.
- Prob, Curr, Assm (EL)**
- Kamii, Constance; Dominick, Ann. (1997). To teach or not to teach algorithms. *The Journal of Mathematical Behavior*, 16(1), 51-61.
- Second-, third-, and fourth graders in 12 classes were individually interviewed to investigate the effects of teaching computational algorithms or encouraging to invent their own procedures. It was found that those who had not been taught any algorithms produced significantly more correct answers.
- Arth, Tchg, Lrng (EL)**
- Kaminski, Eugene. (1997, September). Teacher education students' number sense: Initial explorations. *Mathematics Education Research Journal*, 9(2), 225-35.
- Authors investigated number sense development of six primary teachers' pre-service teacher education students at the commencement of a semester unit in mathematics education. Students had at least a limited development of number sense.
- NSns, Prsv, Tchg (EL, TE)**
- Kendall Tackett, Kathleen. (1997, September). Timing of academic difficulties for neglected and normal treated males and females. *Child Abuse & Neglect: The International Journal*, 21(9), 885-889.
- Neglected or abused/neglected children (n=420) were compared with matched, normal-treated children on measures of school performance. Differences between the sexes in timing of academic difficulties was found for both mathematics and English.
- Ach, D/R, Gend (K-12)**
- Kiefer, Markus; Dehaene, Stanislas. (1997). The time course of parietal activation in single-digit multiplication: Evidence from event-related potentials. *Mathematical Cognition*, 3(1), 1-30.
- The results of this study suggested that simple multiplication problems may involve a short-lived activation in the left inferior parietal cortex, whereas complex problems may require longer

processing which also involves the homologous right area.

Leron, Uri; Hazzan, Orit. (1997, March). The world according to Johnny: A coping perspective in mathematics education. *Educational Studies in Mathematics*, 32(3), 265-92.

This study analyzes students' productions, taking affective and social factors into account. This study uses the technique of virtual monologue to reproduce the student's voice in order to describe as vividly as possible what might be going on in the student's mind during such situations.

**Aff, Soc, LrnR (SE)**

Lesh, Richard; Kelly, Anthony E. (1997, July).

Teachers' evolving conceptions of one-to-one tutoring: A three-tiered teaching experiment. *Journal for Research in Mathematics Education*, 28(4), 398-430.

This report describes a three-tiered teaching experiment in which teachers were studied over a protracted period of time as they attempted to understand and improve their approaches to one-to-one tutoring. It documents the initial and revised strategies of the teachers.

**Tchg, Tchr, Grpg, TKnw (TE)**

Leung, Martin; and others. (1997, January).

Learning from equations or words. *Instructional Science*, 25(1), 37-70.

This article discusses four experiments with high school students designed to study the cognitive load consequences of learning from equations and words.

**Lrng, Alg, PS (HS)**

Leung, Shukkwon S.; Silver, Edward A. (1997,

May). The role of task format, mathematics knowledge, and creative thinking on the arithmetic problem posing of prospective elementary school teachers. *Mathematics Education Research Journal*, 9(1), 5-24.

This article describes an examination of arithmetical problem posing designed to examine the behaviors of (n=63) prospective elementary school teachers. Findings indicate the test effectively evaluates arithmetic problem posing.

**Arth, PS, TKnw (T, EL)**

Litchfield, Daniel C.; Goldenheim, David A. (1997, January). Euclid, Fibonacci, Sketchpad. *Mathematics Teacher*, 90(1), 8-12.

This study describes the solution to a geometric problem by two ninth-grade mathematicians using The Geometer's Sketchpad computer software program. The solution yielded two constructions, one a GLaD construction and the other using the Fibonacci sequence.

**CAI, Geom, PS (HS)**

Lopez, Frederick G.; and others. (1997, January). Role of social cognitive expectations in high school students' mathematics related interest and performance. *Journal of Counseling Psychology*, 44(1), 44-52.

This study tested path models of academic interest and performance that were derived from social cognitive theory. Results supported a model in which ability helps determine self efficacy.

**Att, Soc, Aff, Lrng (HS)**

Lord, Thomas; Holland, Melinda. (1997, February). Preservice secondary education majors and visual-spatial perception: An important cognitive aptitude in the teaching of science and mathematics. *Journal of Science Teacher Education*, 8(1), 43-53.

This study investigated the hypothesis that preservice teachers specializing in science and mathematics will score significantly higher on spatial-ability tests than other preservice teachers. Also it investigated gender-related differences in spatial ability.

**Gend, Vis, Prsv (SE, T)**

Lucangeli, Daniela; Cornoldi, Cesare. (1997). Mathematics and metacognition: What is the nature of the relationship? *Mathematical Cognition*, 3(2), 121-139.

Authors examined the success level in standardized mathematical testing and awareness regarding control processes during the test execution of third-grade (n=397) and fourth-grade (n=394) children and concluded that numerical and geometrical problem-solving abilities are most strongly related to metacognitive capabilities.

**Mtcg, PS, Styl, Geom (EL)**

Lynch, Diane. (1997, March-April). Creativity: A key to understanding. *Mathematics Teaching in the Middle School*, 2(5), 350-51.

This article describes the results of a classroom trial activity to encourage communication in mathematics. The activity revealed creativity and allowed the teacher to determine how well students understood the concept.

**Comm, Assm (SE)**

Ma, Xin. (1997, March-April). Reciprocal relationships between attitude toward mathematics and achievement in mathematics. *Journal of Educational Research*, 90(4), 221-229.

This study examined reciprocal relationships between attitude toward mathematics and mathematics achievement. Results indicated that reciprocal relationships existed, suggesting that the reciprocal nature between attitude and achievement can substantially modify their causal relationship.

**Ach, Att, Ethn (SE)**

Ma, Xin; Kishor, Nand. (1997, January). Assessing the relationship between attitude toward mathematics and achievement in mathematics: A meta-analysis. *Journal for Research in Mathematics Education*, 28(1), 26-47.

This study was designed to assess the magnitude of the relationship between attitude toward mathematics and achievement in mathematics. The study employed meta-analysis to integrate and summarize the findings from 113 primary studies.

**Revw, Att, Ach (SE)**

Maccini, Paula; Hughes, Charles A. (1997, Summer). Mathematics interventions for adolescents with learning disabilities. *Learning Disabilities Research and Practice*, 12(3), 168-176.

Based on a systematic search of literature published from 1988 to 1995, 20 mathematics interventions for secondary students with learning disabilities were identified and analyzed. Effective methods include teacher-directed instruction, instructional design curriculum variables, three-term contingency trials, strategy instruction, self-monitoring strategies, contextualized word problems, and cooperative homework teams.

**LD, Tchg, Revw, Grpg (SE)**

MacGregor, Mollie; Stacey, Kaye. (1997, June). Students' understanding of algebraic notation: 11-15. *Educational Studies in Mathematics*, 33(1), 1-19.

This study investigated the cognitive and linguistic demands of learning algebra and explored students' understanding of algebraic notation. Findings indicate specific origins of misinterpretation such as intuitive assumptions and pragmatic reasoning about a new notation, interference from new learning in mathematics, and the effects of misleading teaching materials.

**Alg, Lrng, Mscn (SE)**

Maher, Carolyn A.; Speiser, Robert. (1997). How far can you go with block towers? *The Journal of Mathematical Behavior*, 16(2), 125-132.

This study focused on the development of combinatorial reasoning of a 14-year-old child, who investigated binomial coefficients and combinations in relationship to the binomial expansion and the mapping of the binomial expansion to Pascal's triangle.

**Matl, Alg, Lrng, Patt (MS)**

Mandeville, Garrett K.; Liu, Qiduan. (1997, May).

The effect of teacher certification and task level on mathematics achievement. *Teaching and Teacher Education*, 13(4), 397-407.

This study examined the interaction effect of teachers' mathematics preparation and the thinking level of mathematics problems on student performance. Results indicated that students performed better on higher-level thinking tasks when teachers had advanced certification in the subject.

**TKnw, Ach, Prsv, Tchg (SE)**

Mariotti, Maria Alessandra; Fischbein, Efraim. (1997, December). Defining in classroom activities. *Educational Studies in Mathematics*, 34(3), 219-48.

This study involved aspects of the defining process in a geometrical context using the theory of 'figural concepts'.

**Geom, PS (MS)**

Mathews, Susann M. (1997, September). The effect of using two variables when there are two unknowns in solving algebraic word problems. *Mathematics Education Research Journal*, 9(2), 122-35.

This experiment, in which Algebra I students (n=181) learned to translate word problems with two unknowns, found that students who had learned to solve equations with the new method scored higher than those students using the traditional method.

**Alg, PS, Curr, Lrng (SE)**

Mevarech, Zemira R. Kramarski, Bracha. (1997, Sum). IMPROVE: A multidimensional method for teaching mathematics in heterogeneous classrooms. *American Educational Research Journal*, 34(2), 365-394.

IMPROVE, a method for teaching mathematics using metacognitive activities, peer interaction, and feedback-corrective enrichment, was developed and tested in studies involving (n=247) and (n=265) seventh graders. Results of both studies showed that IMPROVE students significantly outperformed nontreatment controls.

**Curr, Ach (MS)**

Mevarech, Zemira R.; Kramarsky, Bracha. (1997, March). From verbal descriptions to graphic representations: Stability and change in students' alternative conceptions. *Educational Studies in Mathematics*, 32(3), 229-63.

This study investigates students' conceptions and misconceptions relating to the construction of graphs. Qualitative analysis of students' responses identified three main alternative conceptions.

**Mscn, Rep, Lrng (SE)**

Meyer, Debra K.; and others. (1997, May). Challenge in a mathematics classroom: Students' motivation and strategies in project based learning. *Elementary School Journal*, 97(5), 501-521.

Analyses of fifth- and sixth graders' challenge seeking during project-based mathematics instruction indicated two patterns: "challenge seekers," who self reported a tolerance for failure,

and learning goal orientation; and "challenge avoiders," who self reported a higher negative affect after failure, a more performance-focused goal orientation, and lower self-efficacy in math.

**Att, Lrn, PS (EL)**

This study compared effects of two models of mathematical vocabulary instruction, an integrated graphic organizer/discussion model and a definition-only model, on the mathematical vocabulary-use of fourth-grade students.

**Tchg, Lang (EL)**

Mittelberg, David; Ari, Lilach Lev. (1997, November). Gender differences in mathematics among Jewish and Arab youth in Israel. *Mathematics Education Research Journal*, 9(3), 347-51.

This article discusses gender differences in mathematics among Jewish and Arab youth in Israel by presenting research done in four Jewish and two Israeli Arab coeducational schools. The factors influencing the degree to which high school students in the Jewish and Arab sectors anticipate a mathematically-based profession in the future were examined.

**Gend, CC, Soc (HS)**

Morgan Fleming, Barbara; Doyle, Walter. (1997, July). Children's interpretations of curriculum events. *Teaching and Teacher Education*, 13(5), 499-511.

This study examined how urban fourth graders interpreted curriculum events, especially those involving mathematics, investigating everyday representations of mathematical concepts, subject matter learning, knowledge production processes, and event structured knowledge.

**Blf, Ethn (EL)**

Moloney, Kevin; Stacey, Kaye. (1997, May). Changes with age in students' conceptions of decimal notation. *Mathematics Education Research Journal*, 9(1), 25-38.

This study examined Australian students' conceptions of ordering decimals. Secondary students (n=50), studied over a 12-month period, showed little change in their misconceptions. Whole number misconceptions are important in earlier years but disappear with time. The fraction misconception persists however, being displayed by approximately 20% students.

Schmidt, William H.; and others. (1997). A splintered vision: An investigation of U.S. science and mathematics education. Executive summary. *Wisconsin Teacher of Mathematics*, 48(2), 4-9.

This study attempted to document and characterize the state of U.S. mathematics and science curricula, textbooks, and teaching practices and place them in a cross-national context.

**Curr, CC, Assm, Tchg (ALL)**

Schuck, Sandra. (1997, July). Using a research simulation to challenge prospective teachers' beliefs about mathematics. *Teaching and Teacher Education*, 13(5), 529-539.

This study used a research simulation that had prospective elementary teachers role play as researchers and respondents. The simulation encouraged beliefs to become explicit and promoted opportunity for reflection about the implication of those beliefs for prospective teachers.

**TBlf, Prsv (TE, EL)**

Shaffer, David Williamson. (1997). Learning mathematics through design: The anatomy of Escher's world. *The Journal of Mathematical Behavior*, 16(2), 95-112.

This study explored one example of open learning environment created by combining mathematics and design activities in a "mathematics studio." Results show that expressive activities are a powerful context for learning and students are able to think about mathematical ideas in an expressive way.

**Vis, IC, Blf (SE)**

Shalev, R.S.; Manor, O.; Gross Tsur, V. (1997). Neuropsychological aspects of developmental dyscalculia. *Mathematical Cognition*, 3(2), 105-120.

Classification of arithmetic disorders is predicated on neuropsychological features and associated learning disabilities. Authors assess the compatibility of these classifications on a non-referred, population based cohort of children (n=139) with developmental dyscalculia.

**D/R, Arth (K-12)**

Shaw, Nomiki; Jean, Brian; Peck, Roger. (1997). A statistical analysis on the effectiveness of using a computer algebra system in a developmental algebra course. *The Journal of Mathematical Behavior*, 16(2), 175-180.

This study indicates that a computer algebra system is a very effective teaching tool for the developmental mathematics program and that students who took the traditional Intermediate Algebra course did not do as well in subsequent courses as students who took the technology-based course.

**Comp, Alg (PS)**

Shermis, Mark D. Chang, Shu-Hui. (June, 1997).

The use of Item Response Theory (IRT) to investigate the hierarchical nature of a college mathematics curriculum. *Educational & Psychological Measurement*, 57(3), 450-458.

The degree to which an undergraduate mathematics curriculum matched the item difficulty levels of representative mathematics problems based on that sequence was studied with 62 items and (n=423) undergraduates and (n=937) high school seniors. Results suggest congruence between curriculum sequence and item difficulty levels.

**Curr, Rsch, Assm (HS, PS)**

Shute, Rosalyn; Miksad, John. (1997). Computer assisted instruction and cognitive development in preschoolers. *Child Study Journal*, 27(3), 237-253.

This study compared the use of microcomputers, providing either substantial or minimal scaffolding, to traditional resources on preschoolers' cognitive development over eight weeks. The researchers found that computer assisted instruction software increased verbal and language skills, but not mathematics skills, and only as a function of substantial scaffolding.

**Comp, Curr (EC)**

Sierpinska, Anna. (1997, June). Formats of interaction and model readers. *For the Learning of Mathematics*, 17(2), 3-12.

This article provides details of a study of mathematics learning that applies Bruner's concept of format of interaction which is employed in language acquisition theory and in understanding mathematical augmentation.

**Lrng, ClIn, Alg, Curr (PS)**

Signer, Barbara; Beasley, T. Mark; Bauer, Elizabeth. (1997). Interaction of ethnicity, mathematics achievement level, socioeconomic status, and gender among high school students' mathematics self concepts. *Journal of Education for Students Placed at Risk*, 2(4), 377-393.

This study examined the influence of ethnic background, socioeconomic status, and gender on mathematical ability and confidence in urban high school students. Interviews with 100 students

revealed African-American youth do have academic self confidence, males sought more mathematics education than females, and that minority youth are not easily discouraged by low achievement.

**Ethn, Gend, Att, Ach, Soc (HS)**

Simmt, Elaine. (1997). Graphing calculators in high school mathematics. *Journal of Computers in Mathematics and Science Teaching*, 16(2-3), 269-89.

This study examined how some teachers used graphing calculators in their instruction of mathematics, and how their views of mathematics were manifested in the ways in which they chose to use this technology.

**GCal, TAtt, Tech, Tchr (T)**

Simonsen, Linda M.; Dick, Thomas P. (1997). Teachers' perceptions of the impact of graphing calculators in the mathematics classroom. *Journal of Computers in Mathematics and Science Teaching*, 16(2-3), 239-68.

This study compiled teachers' impressions of the barriers and/or incentives associated with the use of graphing calculators on classroom dynamics, curriculum and evaluation, training, support, and overall attitude. Teachers' perceptions of the advantages appeared to be instructionally related whereas perceptions of the disadvantages appeared to be primarily logistical in nature.

Skrobarcek, Sharon A.; and others. (1997, May). Collaboration for instructional improvement: Analyzing the academic impact of a block scheduling plan. *NASSP Bulletin*, 81(589), 104-111.

While the two-hour Algebra I block had a higher failure rate than the traditional 50-minute algebra class, the block classes were comprised of students who have traditionally struggled in mathematics.

**Curr (HS)**

Slate, John R. (1997). Achievement test score differences for students with specific learning disabilities: A replication. *B.C. Journal of Special Education*, 21(1), 16-30.

Differences between and interrelationships among reading and mathematics achievement test scores for 269 students with learning disabilities were investigated to determine whether previous findings were replicable.

**Ach, LD, Rsch (K-12)**

Sleeter, Christine E. (1997, December). Mathematics, multicultural education, and professional development. *Journal for Research in Mathematics Education*, 28(6), 680-96.

This review of literature connects multicultural education with mathematics and analyzes how teachers view multicultural education and the impact of multicultural education staff development on mathematics teaching.

**Soc, TBIf, Revw, Insv, Tchg (TE)**

Smith, D. N. (1997, September). Independent mathematical modeling. *Teaching Mathematics and Its Applications*, 16(3), 101-06.

Author argues that a major difficulty in learning how to do mathematical modeling is in the first independent run through the modeling cycle. This case study of mathematical modeling presents conclusions in three sections: the choice of task, the presentation of the task, and tutor intervention and support.

Sophian, Catherine; Chang, Chuan; Garyantes, Danielle. (September, 1997). When three is less than two: Early developments in children's understanding of fractional quantities. *Developmental Psychology*, 33(5), 731-744.

Four experiments examined young children's understanding of the inverse relation between the number of parts into which a quantity is to be divided and the size of each part.

**Frac, Lrng, Revw (EL)**

Sophian, Catherine; Wood, Amy—double. (June, 1997). Proportional reasoning in young children: The parts and the whole of it. *Journal of Educational Psychology*, 89, 309-317.

This research found developmental changes in children's preferences for part-part versus part-whole relations. However, there was no evidence to suggest that part-part reasoning preceded part-whole reasoning developmentally. Instead, seven-year-olds reliably identified part-whole but not part-part matches, and younger children did not perform above chance on either type of match.

**Frac, Lrng (EC)**

Sowell, Evelyn; Zambo, Ron. (1997, Summer). Alignment between standards and practices in mathematics education: Experiences in Arizona. *Journal of Curriculum and Supervision*, 12(4), 344-345.

A recent survey questioned whether mathematics teachers in Arizona view mathematics content as dynamic or process oriented. Less than half used state curriculum guidelines, and few reported knowledge of NCTM emphases on mathematical processes related to problem solving or reasoning.

**TBif, TKnw, Tchg (TE)**

Stacey, Kaye; MacGregor, Mollie. (1997, February). Ideas about symbolism that students bring to algebra. *Mathematics Teacher*, 90(2), 110-113.

Authors discuss the implications of a research study of more than 2000 11- to 15-year-old students that explored why students interpret algebra in particular ways. They recommend strategies that can help teachers deal with prior knowledge that students may bring to their study of algebra.

**Alg, Soc, Mscn (SE)**

Steiner, Gerhard F.; Stoecklin, Markus. (1997, September). Fraction calculation a didactic approach to constructing mathematical networks. *Learning and Instruction*, 7(3), 211-233.

Thirty-eight sixth graders were trained in fraction calculation through progressive transformation dialectics (PT) whereas a control group of 38 was taught through a traditional mathematics education framework. The PT group, encouraged to form

network type knowledge representations, performed better on problems that required more than mere algorithmic calculations.

Streitmatter, Janice. (1997, September). An exploratory study of risk taking and attitudes in a girls only middle school math class. *Elementary School Journal*, 98(1), 15-26.

This study of girls' attitudes, toward themselves and their classmates, and girls' behavior in a girls-only mathematics classroom found girls were more likely to ask and answer questions in the mathematics classroom than in coeducational classes, and that the girls-only setting enhanced their ability to learn. The girls-only environment was overwhelmingly preferred.

Twale, Darla J.; Shannon, David M.; Moore, Matthew S. (1997, Fall). NGTA and IGTA training and experience: Comparisons between self ratings and undergraduate student evaluations. *Innovative Higher Education*, 22(1), 61-77.

A study compared self ratings and undergraduate student ratings of graduate teaching assistants (GTAs) on nine factors of teaching effectiveness, examining how mathematics and science GTAs who speak English as their native language differ from their international counterparts. Overall, self ratings were consistently higher than student ratings.

**Lang, Ethn, Tchr (PS, T)**

Ubuz, Behiye; Ersoy, Yasar. (1997). The effect of problem-solving method with handout material on achievement in solving max-min word problems. *The Journal of Mathematical Behavior*, 16(1), 75-85.

The results of the statistical analysis in this study show that a problem-solving method using handout material can significantly help students understand and learn word problems.

**PS, Matl (PS)**

Valverde, Gilbert A.; Schmidt, William H. (1997-1998). Refocusing U.S. math and science education. *Issues in Science and Technology*, 14(2), 60-66.

The Third International Mathematics and Science Study (TIMSS) compared mathematics and science scores across 41 countries. American students performed well in science and mathematics in the fourth grade but fell behind their international peers by the eighth grade.

**Curr, CC, Ach, Rsch, Matl, Revw (ALL)**

VanLeuvan, Patricia; Wang, Margaret C. (1997, January-February). An analysis of students' self monitoring in first- and second-grade classrooms. *Journal of Educational Research*, 90(3), 132-143.

This study examined (n=56) elementary students' verbalizations to identify instances of self instruction and self monitoring during reading and mathematics. Results indicated that half of the verbalizations were self instructive, and one quarter of those involved self monitoring.

**Mtcg, Lrng (EL)**

Varelas, Maria; Becker, Joe. (1997). Children's developing understanding of place value: Semiotic aspects. *Cognition and Instruction*, 15(2), 265-286.

This study explored whether a system between written place value system and base-ten manipulatives helped children understand place value and found evidence that the intermediate system helped children differentiate between face values and complete values of digits in multidigit place value number representations.

**NSns, Manp, PlcV, Rep (EL)**

Verschaffel, L.; De Corte, E.; Borghart, I. (1997, December). Pre-service teachers' conceptions and beliefs about the role of real world knowledge in mathematical modeling of school word problems. *Learning and Instruction*, 7(4), 339-359.

Fourteen word problems were administered to 332 Belgian preservice elementary school teachers who also saw answers given by four students. Results revealed a strong tendency to exclude real-world knowledge from spontaneous solutions and appreciations of student supplied answers.

**TKnw, PS, Prsv, Ethn (EL, T)**

Verschaffel, Lieven; De Corte, Erik. (1997, November). Teaching realistic mathematical modeling in the elementary school: A teaching experiment with fifth graders. *Journal for Research in Mathematics Education*, 28(5), 577-601.

A teaching experiment was carried out to test the hypothesis that it is feasible to develop a disposition toward more realistic mathematical modeling in pupils. The learning and transfer effects of an experimental class of 10- and 11-year-old students compared to the results of two control groups support this hypothesis.

Vye, Nancy J.; Goldman, Susan R.; Voss, James F.; Hmelo, Cindy; Williams, Susan; Cognition and Technology Group at Vanderbilt University. (1997). Complex mathematical problem solving by individuals and dyads. *Cognition and Instruction*, 15(4), 435-484.

This paper describes two studies of mathematical problem solving using an episode from "The Adventures of Jasper Woodbury," a set of curriculum materials that afford complex problem solving opportunities.

**Grpg, PS, Styl, Matl (ALL)**

Waxman, Hersholt C.; and others. (1997, May). Motivation and learning environment differences between resilient and nonresilient Latino middle school students. *Hispanic Journal of Behavioral Sciences*, 19(2), 137-155.

Resilient students had greater involvement and satisfaction in their mathematics class, academic self concept, and achievement motivation than nonresilient students, and were less likely to have repeated a grade level.

**Ach, Att, Ethn (MS)**

Waxman, Hersholt C.; Huang, Shwu Yong L. (1997). Differences by level of technology use on students' motivation, anxiety, and classroom learning environment in mathematics. *Journal of Educational Technology Systems*, 25(1), 67-77.

This study examined whether sixth- and eighth-grade students' motivation, anxiety, and classroom learning environment in mathematics differed significantly according to the degree of implementation of technology in the mathematics classroom.

**Tech, Anx, Soc, Att (MS)**

Weber, William B., Jr.; House, Jess E. (1997). Have you heard of the standards? A middle grades survey. *Ohio Journal of School Mathematics*, 36, 12-18.

Authors studied the status of the mathematics reform effort in Ohio, specifically measuring the dissemination of the NCTM Standards and teachers' opinions of Ohio's Competency-Based Mathematics Model.

**TBlf, TKnw, Curr (T, MS)**

Weiss, Iris R. (1997, Summer). The status of science and mathematics teaching in the United States: Comparing teacher views and classroom practice to national standards. *ERS Spectrum*, 15(3), 34-39.

The 1993 Survey of Science and Mathematics Education, involving a national sample of 1,250 U.S. schools and 6,000 teachers, probed the status of science and mathematics education as they relate to NCTM and NRC standards. Although teachers reported instructional objectives consistent with reform goals, class activities were not well aligned with recommendations.

**Tchg, Curr (T, K-12)**

White, Paul A.; and others. (1997, February). Upgrading high school mathematics: A look at three transition courses. *NASSP Bulletin*, 81(586), 72-83.

This article describes three transitional mathematics courses designed to upgrade high school mathematics courses and lure more low-achieving students into college preparatory mathematics courses. Transcript data from 4,800 students showed that students took more

challenging and useful mathematics, learned more, and improved self esteem.

**Curr, Eqty (HS)**

Wigfield, Allan; Eccles, Jacquelynne S.; Yoon, Kwang Suk; Harold, Rena D.; Arbretton, Amy J. A.; Freedman Doan, Carol; Blumenfeld, Phyllis C. (1997, September). Change in children's competence beliefs and subjective task values across the elementary school years: A 3-year study. *Journal of Educational Psychology*, 89(3), 451-469.

Change over three years in the competence beliefs and subjective task values in the domains of reading, mathematics, instrumental music, and sports was studied with approximately 615 predominantly white, middle-class elementary school children. There was moderate to strong stability in their beliefs. Exceptions and gender differences are discussed.

**Att, Blf, Soc (EL)**

Wilensky, Uri. (1997, July). What is normal anyway? Therapy for epistemological anxiety. *Educational Studies in Mathematics*, 33(2), 171-202.

This article presents two case studies of learners attempting to understand the concept of normal distribution. Conclusions are drawn about a Connected Mathematics learning environment that enables confrontation with epistemological anxiety and the features of modeling languages that enable learners to successfully investigate probability.

**Stat, Anx, Prob, Lmg, Rep (SE)**

Wilson, Margaret A.; Robinson, Gregory L. (1997, September). The use of sequenced count-by and constant time delay methods of teaching basic multiplication facts using parent volunteer tutors. *Mathematics Education Research Journal*, 9(2), 174-90.

This article presents a study exploring the effectiveness and efficiency of Constant Time Delay and Sequenced Count-By procedures in the teaching of multiplication facts using children (n=43) from grades 3-6 having parents as tutors. Both procedures were effective.

Wood, Bonnie S.; Brown, Lorrie A. (1997). Participation in an all-female Algebra I class: Effects on high school math and science course selection. *Journal of Women and Minorities in Science and Engineering*, 3(4), 265-77.

This article details a study in which Grade 9 females were assigned to either an all-female or coeducational algebra class. Findings indicate that the all-female intervention group demonstrated a greater gain in mathematics scores between grades 8-11 than the nonintervention group.

**Curr, Gend, Plan, Ach, Assm, Alg (HS)**

Wood, Terry; Sellers, Patricia. (1997, March). Deepening the analysis: Longitudinal assessment of a problem-centered mathematics program. *Journal for Research in Mathematics Education*, 28(2), 163-86.

This article presents longitudinal analyses of the mathematical achievement and beliefs of three groups of elementary pupils. Results indicate that the students with two years in problem-centered mathematics classes had significantly higher achievement.

**Ach, PS, Tchg (EL)**

Woodward, John; Baxter, Juliet. (1997, Spring). The effects of an innovative approach to mathematics on academically low achieving students in inclusive settings. *Exceptional Children*, 63(3), 373-388.

A year-long study of an innovative approach to mathematics, which emphasized in-depth problem solving and achievement of automaticity through mathematical games, found such methods to be viable for students with average and above average academic abilities, but students with learning disabilities or at risk students needed much greater assistance.

**PS, LD, Tchg (K-12)**

Wronkovich, Michael; Hess, Caryl A.; Robinson, James E. (1997, December). An objective look at math outcomes based on new research into block scheduling. *NASSP Bulletin*, 81(593), 32-41.

A study examining performance differences on the Ohio Colleges Early Math Placement Test of

students receiving algebra and geometry instruction in a traditional, year-long structure versus students in an intensified block structure found the traditional structure more effective.

**Curr, Tchg (HS)**

Wulff, Mary Beth; Steitz, Jean A. (1997, Spring). Curricular track, career choice, and androgyny among adolescent females. *Adolescence*, 32(125), 43-49.

This study investigated psychological androgyny among (n=40) high school girls enrolled in either an upper-level mathematics class or a vocational-track cosmetology class. Results indicated that career choices are linked to sex role stereotypes.

**Gend, Att (HS)**

Wyndhamn, Jan; Saljo, Roger. (1997, December). Word problems and mathematical reasoning: A study of children's mastery of reference and meaning in textual realities. *Learning and Instruction*, 7(4), 361-382.

An experiment involving 14 small groups of 10-12 year-old Swedish students (usually three per group) showed that these students acting in groups and creating shared contextualizations were able to solve mathematics word problems calling for real-world knowledge. Research has shown students acting alone to have difficulty with the same types of problems.

**PS, Grpg, Soc (EL)**

Yelland, Nicola J.; Masters, Jennifer E. (1997, May). Learning mathematics with technology: Young children's understanding of paths and measurement. *Mathematics Education Research Journal*, 9(1), 83-99.

This article reports the performance and strategies of children working in one of three gender pairs (girls, boys, or boy/girl) on Geo-Logo tasks. The case studies presented reveal that the children showed a high level of engagement and learning in the Geo-Logo environment.

**Comp, Meas, Tchg, Geom (EL)**

Yerushalmy, Michal. (1997, July). Designing representations: Reasoning about functions of two variables. *Journal for Research in Mathematics*

*Education*, 28(4), 431-66.

This report describes generalization activity as an opportunity to learn about seventh graders' understanding of functions. Findings indicate that the modeling efforts of students allowed them to analyze their understanding of representations of quantities, relationships among quantities, and relationships among the representations of quantities in both single- and multivariable functions.

**Knw, Manp, Rep (MS)**

Yerushalmy, Michal. (1997). Mathematizing verbal descriptions of situations: A language to support modeling. *Cognition and Instruction*, 15(2), 207-264.

This study used a software environment to examine algebra students' attempts to reformulate narratives using verbal and iconic lexical sets.

**Rep, Alg, Comp (EL)**

Yoshida, Hajime; Verschaffel, Lieven; De Corte, Erik. (1997, December). Realistic considerations in solving problematic word problems: Do Japanese and Belgian children have the same difficulties? *Learning and Instruction*, 7(4), 329-338.

The activation of real world knowledge displayed by 91 Japanese fifth graders in solving school mathematics problems was compared to that of 75 previously-studied Belgian students. Children in both cultures had a similar tendency to neglect common sense knowledge and realistic considerations.

**PS, CC, Knw, Ethn (EL)**

Zaslavsky, Orit. (1997). Conceptual obstacles in the learning of quadratic functions. *Focus on Learning Problems in Mathematics*, 19(1), 20-44.

This study attempted to reveal students' (n=800) misconceptions regarding quadratic functions and identified conceptual obstacles that may impede students' understanding. Findings indicate that the conceptual obstacles identified were fairly pervasive.

**Mscn, Tchg, Alg (SE)**

Zazkis, Rina; Gunn, Chris. (1997). Sets, subsets,

and the empty set: Students' constructions and mathematical conventions. *Journal of Computers in Mathematics and Science Teaching*, 16(1), 133-69.

The authors investigated students' understanding of the basic concepts of introductory set theory: set, set element, cardinality, subset, and the empty set.

## Research Papers and Monographs in Mathematics Education Produced in 1997

Beth D. Greene & Gayle M. Millsaps, *The Ohio State University*

This section lists 91 papers and monographs in mathematics education research that were produced in 1997 and included in the ERIC database by the end of September, 1998. Each entry is coded (see *Key to Codes*) with one to three major topic codes (in bold type) and any number of minor topic codes, as well as the grade level code (in parentheses). Studies related to preservice or inservice teacher education are indicated by the appropriate codes (Prsv, Insv). The level designated for teacher education or teacher studies indicates the grade level(s) at which the intern or teacher participants teaches, followed by the level code, "T" for teacher or "TE" for teacher education. All entries are indexed by major codes at the end of the volume (see page 85).

*A Shared Vision for Mathematics and Science Education in North Carolina.* (1997). Chapel Hill, NC: UNC Mathematics and Science Education Network. [SE059992]

This publication documents the North Carolina Mathematics and Science Coalition's initial goals as a forum to stimulate and promote efforts to implement systemic reforms in mathematics and science education in North Carolina.

**Insv, Plan, Soc** (K-12, TE)

*Alaska Challenger Learning Center feasibility report.* (1997). Juneau, AK: Alaska State Library, Government Publications. [SE060291]

This document is a feasibility report for establishing a Challenger Learning Center for Space Science Education to raise students' expectations of success, foster long-term interest, and motivate pursuit of studies in mathematics, science, and technology in the city of Kenai, Alaska.

**Plan, Att, IC, Curr, Tech** (K-12)

*Achievements of primary 4 and primary 5 pupils in mathematics and science. Third International Mathematics and Science Study.* (1997). Third International Mathematics and Science Study. Edinburgh, Scotland: Scottish Office Education and Industry Department. [SE060553]

This document reports the performance of Scottish primary students in mathematics and science on TIMSS with sections addressing performance in mathematics and science, examples of mathematics and science test items, Scottish features, and international comparisons in mathematics and science.

**CC, Assm, Ach, Impl** (EL)

Allen, Nancy L., Jenkins, Frank, Kulick, Edward, & Zelenak, Christine A. (1997). *NAEP 1996 state assessment program in mathematics. Technical report.* Washington, DC: National Library of Education, Office of Educational Research and Improvement. [SE060933]

This report documents the National Assessment of Educational Progress design, administration, and data analysis procedures for the State Assessment.

**Assm, Impl, Curr, Revw** (K-12)

*Achieving world class standards in math and science.* (1997). Washington, DC: National Alliance of Business. [SE060779]

Using the fourth- and eighth-grade results of the Third International Math and Science Study, this publication examines the perspectives on some of the factors that are important in influencing students' mathematics and science achievement.

**Ach, Impl, CC, Curr** (EL, MS)

Arney, David C., (Ed. ). (1997). *Interdisciplinary lively application projects (ILAPs).* Washington, DC: Mathematical Association of America. [SE059900]

This teachers' guide explains and gives examples of Interdisciplinary Lively Application Projects (ILAPs). ILAPs are intended to integrate mathematics and other disciplines, to promote curricular reorganization by focusing on student growth in problem solving, and to promote faculty growth through ILAP development processes.

**PS, IC, Tchg, Curr, Insv** (K-12, T)

*Astro Algebra: Builds confidence for math success.* (1997). Redmond, WA: Edmark. [SE060630]

Astro Algebra software and teachers' guide of Edmark's Mighty Math Series, a comprehensive line of math software for kindergarten through ninth grade, is designed to help students make the connection between concrete and abstract mathematics as it introduces and reinforces algebra and pre-algebra concepts.

**Matl, Alg, Comp, Tech, Curr (MS)**

*Attaining excellence: A TIMSS resource kit.* (1997). Washington, DC: National Center for Education Statistics, U.S. Dept. of Education. [SE060930]

This kit provides communities with material needed to compare their local school with schools in other countries. Results from TIMSS are presented in a way to help improve educational programs.

**Impl, CC, Curr, Plan, Soc (T)**

Ayers, Jerry B., & Olberding, April H. (1997). *Ideas and activities for recycling education for grades K-12.* Cookeville, TN: Tennessee Technological University. [SE060980]

This is a collection of activities designed by science teachers attending a mini-course on current trends and issues surrounding recycling. Activities are coded for grade level and discipline and can be integrated with other school subjects.

**IC, Insv, Comm, Curr, PS (TE)**

Bae, Yupin. (1997). *Findings from the condition of education 1997 no. 11: Women in mathematics and science.* Washington, DC: National Center for Education Statistics (ED). [SE060785]

The essay reviews the most current data on women's progress in mathematics and science achievement, attitudes, course selection patterns, and college majors. Research suggests that the gender gap appears later in the United States, grade ten versus grade eight internationally, substantial gender differences exist in mathematical-sciences fields.

*Introduction to TIMSS: The third international mathematics and science study*. (1997). Washington, DC: Office of Educational Research and Improvement (ED). [SE060938]

This overview helps educators and others in states, communities, and schools to use TIMSS as a starting point. The overview, key findings section, and supporting materials help communities and states use TIMSS to examine their own practices from an international perspective.

**CC, Impl, Curr, Assm, IC, Insv (K-12)**

Jarrett, Denise. (1997). *Inquiry strategies for science and mathematics learning: It's just good teaching*. Portland, OR: Northwest Regional Educational Lab. [SE060765]

This publication is intended to furnish K-12 teachers with both research-based rationale and recommendations for effective techniques to be applied in classrooms. Information was gathered on available resources, organizations, on-line offerings, and supplies.

**Curr, Matl, Impl, Lrng, PS (K-12)**

Jenkins, Robert H. (1997). *61 cooperative learning activities in Algebra I*. Portland, ME: J. Weston Walch, Publisher. [SE060375]

This teachers' guide provides cooperative learning activities to complement an Algebra I program that are designed so that they can be augmented to suit the population of the class, the style of the teacher, and the locality of the school.

**Grpg, Alg, Matl, Tchg (HS)**

Johnson, Virginia M. (1997). *Investigating the relationship between procedural and mathematical writing responses*. [SE059964]

This study examined the relationship between procedural writing and mathematical writing of third- and fourth-grade students. The results were examined in terms of the implications for the use of student mathematical-writing products as a reflection of mathematical conceptual understanding.

**Writ, Assm, Lang, Tchg, Impl (EL)**

Kenney, Patricia Ann, & Silver, Edward A. (1997). *Results from the Sixth Mathematics Assessment of the National Assessment of Educational Progress*. Reston, VA: National Council of Teachers of Mathematics. [SE060319]

This book contains interpretive reports based on results from the mathematics assessments of the National Assessment of Educational Progress. The results are summarized for different grade levels and subgroups of students by gender and race/ethnicity.

**Impl, Ethn, Ach, Blf, Att, Gend (K-12)**

Kestner, Michael (Ed.), and others. (1997). *Geometry strategies, Grades 6-8*. Raleigh, NC: North Carolina State Dept. of Public Instruction. [SE059919]

This teachers' guide of informal geometry contains activities intended to provide students with opportunities to investigate the environment from a geometric perspective, to construct connections between related mathematics and other content areas, and to solve problems in a geometric context.

**Geom, PS, IC, Meas, Rep, Matl (MS)**

Kestner, Michael (Ed.), and others. (1997). *Resources for algebra*. Raleigh, NC: North Carolina State Dept. of Public Instruction. [SE059920]

In addition to providing weekly planning resources and classroom activities, this teachers' guide for teaching algebra includes algebra writing prompts that require students to identify real world situa-

tions or problems where algebra is an important tool in their investigation and explanation.

**Alg, Writ, IC, Matl (K-12)**

Kopp, Jaime, & Hosoume, Kimi. (1997). *Treasure boxes. Teacher's guide*. Berkeley, CA: GEMS, University of California-Berkeley, Lawrence Hall of Science. [SE060841]

This series of mathematical activities utilizing a collection of small objects are designed to allow students to observe, analyze, organize, communicate, record, and draw conclusions in many mathematical areas including geometry, patterns, number sense, measurement, discrete mathematics, and statistics.

**Manp, Matl, Rep, Comm, Stat, Nsns (EC)**

Krantz, Steven G., and others. (1997). *Techniques of problem solving*. Providence, RI: American Mathematical Society. [SE060589]

This textbook on the basic principles of problem solving addresses the topics of learning to translate verbal discussion into analytical data, learning problem solving methods for attacking collections of analytical questions or data, and building a personal arsenal of solved problems and internalized problem-solving techniques.

**PS, Tech, Lrng, Curr (ALL)**

Lee, Patrick. (1997). *A first year evaluation study of integrated math and integrated science curricular programs in an inner city high school*. [SE060953]

The findings presented in this report focus on a program to promote scientific literacy, critical thinking, and communication through the integration of mathematics and scientific study.

**Curr, IC, Revw, Att, Comm, PS (HS)**

*Local systemic change project directory*. (1997). Arlington, VA: National Science Foundation, Directorate for Education and Human Resources. [SE060749]

This is a directory of Teacher Enhancement Programs that provide K-12 school systems with the tools to reform science, mathematics, and technology education. Summaries of 47 projects in 23 states are included.

**IC, Insv, TKnw, Curr, Tchg (K-12, TE)**

Malmstrom, Jay A. (1997). *The return of Dangerous Dan: Further adventures in recreational mathematics*. [SE060871]

This paper includes a collection of six activities for mathematics classrooms that strengthen arithmetic, modular arithmetic, limit cycles, graph theory, pairings, combinations, cyclic groups, induction, and sequences.

**AdvM, Matl, Arth, Patt (HS, PS)**

*Mastering challenging mathematics by the end of eighth grade*. (1997). Washington, DC: Department of Education (ED). [SE060979]

This pamphlet examines results from the TIMSS report which show that United States students need to progress to more advanced mathematics in grades four to eight. Other findings and example tasks are included to support the need for higher mathematics literacy.

**CC, Curr, Impl, Alg, Geom, PS (K-12)**

*Mathematics and science content standards and curriculum frameworks: States progress on development and implementation, 1997*. (1997). Washington, DC: National Science Foundation. [SE060846]

From a study examining the content and quality of state frameworks and standards, this report focuses on current and emerging policy issues pertaining to the implementation of standards-based reform.

**Tchg, Curr, Impl (K-12)**

McNeely, Margaret E. (Ed.), Blank, Rolf, Earle, Janice, Nohara, David, Roseman, Jo Ellen, & Schmidt, William. (1997). *Guidebook to examine school curricula*. Washington, DC: Office of Educational Research and Improvement (ED). [SE060943]

These five methods of analyzing school curricula were designed for educators, but can be used by community members. The methods were selected because each reflect a unique framework and/or set of standards and focus on how instructional materials address all students' needs.

**Assm, Curr, Impl, Lrn, Matl (K-12)**

Miller-Whitehead, Marie. (1997). *An analysis of science scale scores for grades 2-8 in Tennessee for 1990-1994*. [SE060722]

This research examined student science scores from mandated annual testing of all students in grades 2 through 8 in Tennessee to find evidence for meeting the stated goals of the Tennessee Education Improvement Act (EIA) of 1991 to engender equity and achievement for all students.

**Assm, Eqty, Ach (EL)**

*Moderator's guide to eighth-grade mathematics lessons: United States, Japan, and Germany.* (1997). Washington, DC: Office of Educational Research and Improvement (ED). [SE060940]

This kit can be used to guide and plan inservice programs in order to examine and discuss the TIMSS results. Included is a videotape of sample lessons from various countries, frequently asked questions, background information, and other materials.

**Insv, CC, Impl, Alg, Geom, Tchg (TE, MS)**

Monroe, Eula Ewing, & Pendergrass, Michelle R. (1997). *Effects of mathematical vocabulary instruction on fourth grade students.* [SE060902]

This study compared two types of vocabulary instruction, one of which was an integrated model combining a modified Concept of Definition organizer with the Frayer discussion model. This approach proved to be an effective method for teaching mathematics. The second was a definition-only model.

**Lang, Oral, Styl, IC, Meas (EL)**

Moon, Jean. (1997). *Developing judgment: Assessing children's work in mathematics.* Portsmouth, NJ: Heinemann. [SE060271]

This book provides a framework for organizing study groups to help teachers build their expertise in judging children's mathematical work based on the findings of a project study group of elementary teachers and principals on alternative mathematical assessment in the elementary school.

**Insv, Assm, Grpg, Tchg (TE, EL)**

Moseley, Bryan, & Brenner, Mary E. (1997). *Using multiple representations for conceptual change in pre-algebra: A comparison of variable usage with graphic and text based problem.* Washington, DC: Office of Educational Research and Improvement (ED). [SE060760]

This study examined how the type of instruction affected the ability of middle school students (n=27) to work with algebraic variables and their notations. The results indicate that the group receiving the experimental curriculum were more likely to demonstrate algebraic reasoning.

**Alg, Curr, Tchg, Rep (MS)**

*MSEN long-range goals. University of North Carolina Mathematics and Science Education Network 1996-2000.* (1997). Chapel Hill, NC: UNC Mathematics and Science Education Network. [SE059984]

This publication documents The University of North Carolina (UNC) Mathematics and Science Education Network (MSEN) vision, mission statement, and long-range goals toward applying the resources of UNC to strengthen mathematics and science education in K-16 schools throughout the state.

**Insv, Plan, Rsch (T, ALL)**

Mullis, Ina V.S. (1997). *Benchmarking to international achievement.* Washington, DC: Office of Educational Research and Improvement (ED). [SE060939]

This booklet illustrates how the different types of information found in the international reports can provide a springboard for in-depth reflection about the strengths and weaknesses of the education efforts in the United States at the national, state, and local levels.

**Ach, Assm, CC, Curr, Impl, Revw (K-12, T)**

Myers, Robert E. (1997). *Mind sparklers. Book 1 for grades K-3.* Waco, TX: Prufrock Press. [SE060892]

The 40 activities in this book were designed to persuade students to think critically and creatively using E. Paul Torrance's creative thinking abilities.

**Comm, IC, Styl, Curr, Lrng, PS (EC)**

Myers, Robert E. (1997). *Mind sparklers. Book 2 for grades 4-8.* Waco, TX: Prufrock Press. [SE060893]

The activities in this book were designed to encourage students to perceive what is going on around them, to be both receptive to and critical of the ideas of others, to analyze problems, to elaborate

upon ideas, to explore possibilities, and to see relationships.

**Comm, IC, PS, Curr, Plan (MS)**

*National education goals report: Building a nation of learners 1997.* (1997). Washington, DC: National Education Goals Panel. [SE060986]

Findings of the NAEP panel's seventh report showed a need to set tougher standards comparable to the best in the world, align education system with the standards, and strengthen teacher knowledge and skills.

**Curr, TKnw, Impl, Assm, Lrng, Styl (K-12)**

*National education goals report summary 1997: Mathematics and science achievement for the 21st century.* (1997). Washington, DC: National Education Goals Panel. [SE060945]

This report is the seventh in a series designed to measure the amount of progress made by the nation and the states toward the eight National Education Goals. The report showed that American students continue to improve, but a problem area exists with eighth-grade mathematics.

**Ach, Assm, CC, Impl (K-12)**

*National Network of Eisenhower Regional Consortia and National Clearinghouses Mathematics and Science Education: 1997 report.* (1997). Columbus, OH: Eisenhower National Clearinghouse. [SE059667]

This report describes the methods the National Network of Eisenhower Regional Consortia and National Clearinghouses use to attain their objectives. Topics include: collaboration and communication, programs and curricula, professional development, curriculum frameworks, technology, equity, informal education entities, community outreach, and access information.

**Insv, IC, Tech, Curr, Eqty (TE, K-12)**

Nolan, Deborah (Ed.). (1997). *Women in mathematics: Scaling the heights.* Washington, DC: Mathematical Association of America. [SE060932]

Mills College Summer Mathematics Institute sponsors a conference and program designed to encourage and prepare undergraduate women to attend graduate school in the mathematical sciences. This

book is a collection of speeches from the conference, examples of courses, descriptions of summer programs, and a survey of mathematics majors.

**Att, Blf, Gend, AdvM, Gift (PS)**

O'Connell, Susan R. (1997). *Glyphs! Data communication for primary mathematicians.* Parsippany, NJ: Good Apple. [SE059203]

This teachers' guide contains activities that allow elementary students to collect, display, and interpret data using glyphs (pictorial representations of data). The activities are designed to build data analysis and communication skills, and to stimulate students' mathematical reasoning as they compare, contrast, and draw conclusions.

**Stat, Matl, Vis, Patt, Rep (EL)**

*Observation matrix for on-going assessment and end of the year evaluation. Mathematics grades 1-8.* (1997). Raleigh, NC: Public Schools of North Carolina. [SE060286]

This kit contains observation matrices for on-going assessment and year-end evaluation for grades 1 through 8 divided into the areas of numeration, geometry, patterns, measurement, problem solving, data, and computation, and employing four levels of performance proficiency indicators.

**D/R, Matl, Assm (EL)**

Pfenning, Nancy. (1997). *Chances are...making probability and statistics fun to learn and easy to teach.* Waco, TX: Prufrock Press. [SE060891]

An introduction to probability and statistics suitable for students of various ages and abilities, these activities cover areas including: counting, probabilities, probability distribution, proportion histograms and normal distribution, beginning statistics, standard deviation, sampling, and handling data in different forms.

**Prob, RaPc, Stat, Patt, Rep, Gift (ALL)**

Pickwick, Alan. (1997). *Earth and beyond.* Hatfield, United Kingdom: Association for Science Education. [SE060715]

This teachers' guide of astronomy projects and activities, fulfilling the requirements of the National Curriculum in England and Wales and the 5-14 Guidelines in Scotland, includes discussion ques-

tions and cross-curricular themes linking geography (time-zones, continents and poles), mathematics (distances and scales), and art and drama.

**IC, Curr, Matl (EL)**

*Primary mathematics.* (1997). Norman, OK: Saxon Publishers. [SE060105]

This primary mathematics series emphasizes manipulative and mental mathematics via an incremental, integrated, multisensory approach to teaching mathematics. New objectives are introduced through group activities. Concepts are practiced in each succeeding lesson. A scripted teachers' manual provides activities, questioning strategies, and grade-level appropriate language.

**Matl, Manp, Curr, Tchg (EC)**

*Pursuing excellence: Eighth-grade findings from the Third International Math and Science Study. A video presentation.* (1997). Washington, DC: Office of Educational Research and Improvement. [SE060446]

This videotape summarizes TIMMS's key findings at the eighth-grade level with respect to curriculum and learning expectations, teaching, teachers' lives, and students' lives.

**Soc, Ach, CC, Curr, Tchg (K-12, T)**

*Question of reform: Report on Project Kaleidoscope 1996-1997.* (1997). Washington, DC: Project Kaleidoscope. [SE060537]

This report overviews the reform of undergraduate science education at colleges and universities that are involved in Project Kaleidoscope (PKAL) from 1996 - 1997. The report is a distillation of questions that institutions successful in conceiving, implementing, and sustaining reform have addressed.

**Curr, Plan, Impl (PS)**

Richardson, Kathy. (1997). *Math time: The learning environment.* Norman, OK: Educational Enrichment, Inc. [SE060882]

The purpose of this book is to help primary teachers establish a classroom that is supportive of an active, meaning-based approach to teaching and learning mathematics. It proposes that all class-

rooms should acknowledge and value the child's effort to grow and to learn.

**CIIn, Curr, Tchg, Styl, TAtt (EC)**

Rochowicz, John A., Jr. (1997). *A technological view of modular congruences.* [SE060323]

This paper describes various ways to compute modular congruences on a spreadsheet. Macros are discussed that provide the user with automatic computation of congruence. A drill for the practice of calculating congruences is also included.

**AdvM, Comp, Matl, Tech (PS)**

Ryan, Walter F. (1997). *River Falls Mall math trails: Connecting elementary mathematics to the world.* Indiana University Southeast Improvement of Learning Committee. [SE060292]

This collection of ungraded activities on topics in geometry, concept of number, algebra, measurement, graphing, statistics, and probability demonstrates how the study of elementary mathematics can be extended beyond the school and how it can involve teachers and students in investigative, problem-based experiences.

**PS, IC, Tchg, Matl (EL)**

Schiro, Michael. (1997). *Integrating children's literature and mathematics in the classroom: Children as meaning makers, problem solvers, and literary critics.* New York: Teachers College Press. [SE059604]

This book explores relationships between mathematics, children's literature, and literary criticism, and focuses on ways of using trade books to provide children and educators with instructional experiences that integrate the study of mathematics with children's literature.

**IC, Tchg, Matl, Lang (EL)**

Schoenfeld, Alan, (Ed.). (1997). *Student assessment in calculus. A report of the NSF Working Group on Assessment in Calculus.* Washington, DC: Mathematical Association of America. [SE060044]

The purpose of this report is to outline the state of the art of calculus assessment and to indicate directions for explorations in assessment that will enable educators to gain a deeper understanding of student

learning and to improve student learning in calculus instruction.

**Calc, Assm, Lrng, AdvM (HS)**

Schramm, Susan. (1997). *Related webs of meaning between the disciplines: Perceptions of secondary students who experienced an integrated curriculum*. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE060193]

This paper describes a study of the perceptions of certain secondary students who experienced an integrated curriculum that combined the subjects of geometry and visual art in ways that reflected real world applications of mathematics and art in industry.

**IC, Impl, Lrng, PS, Soc (SE)**

Shockey, Brenda P. (1997). *The effects of varying retention intervals within a block schedule on knowledge retention in mathematics*. [SE060954]

This study examined the affects of time between courses in schools with block schedules. Results showed large differences in Algebra II skills and concepts retained at the beginning of the pre-calculus course that followed, but no significant difference were measured at the end of the second course.

**Ach, Assm, Alg, Lmr, Plan (HS)**

Spadano, Joseph W., Zeidler, Dana L., & Chappell, Michael F. (1997). *Advancing ownership of understanding and responsibility through homework in mathematics education*. [SE060935]

Differences between teacher-centered and learner-centered educational orientations and their implications in regards to ownership of understanding and responsibilities are examined. Also presented is a rationale policy of homework which may be able to bring about goals consistent with current reform initiatives, without radically altering curriculum or pedagogy.

**Curr, Styl, Tchr, Lrng, Soc, Tchg (K-12)**

Stepanek, Jennifer. (1997). *Science and mathematics standards in the classroom: It's just good teaching*. Portland, OR: Northwest Regional Educational Lab. [SE060766]

This publication summarizes the vision and rationale presented in the national standards documents and current literature. Strategies and resources for implementing a standards-based teaching approach are the main focus of this report.

**Curr, Styl, Tchg, Impl, Lrng, Revw (K-12, T)**

Stepanek, Jennifer, & Jarrett, Denise. (1997). *Assessment strategies to inform science and mathematics instruction: It's just good teaching*. Portland, OR: Northwest Regional Educational Laboratory. [SE061102]

This publication contends that using assessment for informing and improving instruction is key to effective teaching and learning while serving as a fundamental building block for other evaluation activities. This document includes research, strategies, and lists of organizations and resources.

**Ach, Assm, Tchg, Curr, Revw, Writ (K-12)**

Stockard, James W., Jr., & Snyder, Vaughn. (1997). *Activities for elementary school mathematics*. Prospect Heights: Waveland Press. [SE060235]

This teachers' guide contains activities designed to help teachers enrich the mathematical experiences of all elementary school children toward fulfillment of the NCTM Standards. The appendix contains an annotated bibliography of children's books which integrate mathematical concepts with their storyline.

**Matl, NSns, IC, PS, Geom (EL)**

Taylor, Pamela A. (1997). *Using writing journals in the mathematics class*. [SE061103]

In this article, writing is shown to stimulate and enhance learning. Journals help students learn to communicate mathematically, give a medium for use of mathematical terminology, add clarification, and act as an instructional tool for teachers.

**Comm, Patt, Writ, Lang, Mtcg, Tchg (K-12)**

Thorson, Annette (Ed.). (1997). *The guidebook of federal resources for K-12 mathematics and science 1997-98*. Columbus, OH: Eisenhower National Clearinghouse. [SE060948]

This comprehensive national directory of federal offices, programs, and facilities supporting K-12 mathematics and science education informs educa-

tors and the public while increasing access to programs.

**Matl, Soc, Rsch (K-12)**

Trentacosta, Janet, & Kenney, Margaret J., (Eds.). (1997). *Multicultural and gender equity in the mathematics classroom: The gift of diversity. 1997 Yearbook*. Reston, VA: National Council of Teachers of Mathematics. [SE060322]

This 1997 NCTM yearbook presents a vision of how research and classroom practices related to multicultural diversity and gender equity can reinforce each other to ensure a powerful mathematics program for all students regardless of their gender, race, ethnicity, or socioeconomic situation.

**Eqty, Tchg, Impl, Soc, Assm, Curr (TE, K-12)**

*Uncovering math with your family: Fun activities in the world around you.* (1997). Dallas, TX: Texas Instruments. [SE060112]

This family mathematics activity guide—organized into four themes: Math in Your Home, Math in Your Neighborhood, Math On the Go, and Math in the Store—is designed to help parents nurture children's natural curiosity as they uncover mathematics in the world around them.

**Soc, Matl, IC, PS (EC)**

*University of Chicago School Mathematics Project 1997-98.* (1997). Chicago, IL: University of Chicago School Mathematics Project. [SE061035]

The University of Chicago School Mathematics Project has devoted itself to examining curriculum and teacher training in order to promote changes which lead to improved achievement. Included in this document is information on the project, available materials, and contact persons.

**Curr, Insv, Matl, PS, Revw, Tech (K-12)**

White, Jacci Wozniak, & Norwich, Vicki Howard. (1997). *Computer activities for college algebra and precalculus.* [SE060676]

This paper presents conceptual calculus exercises using different mathematics education software which include instructions on the use of software to highlight a specific mathematical concepts and reviews ISETL, Derive, Geometer's Sketchpad, TI-82, TI-83, TI-85, TI-86, TI-92, and CBL as mathematics education tools.
