TITLE A to Z: The Early Childhood Educator's Guide to the Internet. (Revised).

INSTITUTION ERIC Clearinghouse on Elementary and Early Childhood Education, Champaign, IL.

SPONS AGENCY Office of Educational Research and Improvement (ED), Washington, DC.

PUB DATE 1998-11-00

NOTE 340p.; This revised edition supersedes the 1996 second edition; see ED 407 179. Compiled by the Staff of the ERIC Clearinghouse on Elementary and Early Childhood Education (ERIC/EECE) with an introduction by Dianne Rothenberg.

CONTRACT RR93002007

AVAILABLE FROM Publications Office, ERIC/EECE, 51 Gerty Drive, Champaign, IL 61820-7469; Tel: 800-583-4135 (Toll Free); Tel: 217-333-1386; Fax: 217-333-3767; e-mail: ericeece@uiuc.edu (Catalog No. 214, \$10 or \$15 w/3-ring binder, plus \$1.50 shipping).

PUB TYPE Guides - Non-Classroom (055)

EDRS PRICE MF01/PC14 Plus Postage.

DESCRIPTORS Child Development; Child Health; Child Rearing; \*Computer Uses in Education; \*Early Childhood Education; Educational Technology; \*Electronic Mail; Information Sources; \*Internet; \*Listservs

IDENTIFIERS \*ERIC; ERIC Clearinghouse on Elementary Early Child Educ; File Transfer Protocol; Gopher; Telnet; Web Browsers

## ABSTRACT

This guide explains features of the Internet and compiles Internet resources useful to those interested in the education and development of young children. Chapter 1 of the guide explains what is needed to connect to the Internet. The chapter then discusses the Internet's domain name system, electronic mail, mail/discussion lists, newsgroups, Internet etiquette, File Transfer Protocol, TELNET, Gopher, the World Wide Web, various Web browsers, Uniform Resource Locators, home pages, search engines, and Web page creation. The chapter concludes with suggestions for finding information on the Internet. Chapter 2 explains several common commands used on mail lists and presents fact sheets on 30 mail lists. Each fact sheet includes a description of the mail list and its name, sponsor, electronic mail address, type of software on which the list is based, contact person, and subscription instructions. Chapter 3 provides fact sheets on 178 Internet sites. Each fact sheet includes a description of the site and the site's name, sponsor, type of sponsor, Internet and mail address, and contact person. Chapter 4 provides information on how to locate and use ERIC system resources on the Internet, and chapter 5 contains a bibliography of ERIC documents and journal articles on "The Internet and Early Childhood Educators." The guide concludes with a glossary of Internet-related terms, an index, and appendices of materials from and about the ERIC system, the National Parent Information Network, and the ERIC Clearinghouse of Elementary and Early Childhood Education. ## Acknowledgments

This publication was planned and prepared by Dianne Rothenberg, Bernard Cesarone, Emily Van Hyning, and Laurel Preece on the staff of the ERIC Clearinghouse on Elementary and Early Childhood Education, with the assistance of other staff members: Dawn Ramsburg and Debbie Reese.

## Introduction

The first information storage and transmission system was inside our own heads. What we knew (how to find a woolly mammoth, how to build a fire, which plants would kill you and which ones would not) was shared with others through gestures, examples, and eventually language, and we stored that information in our own memories. Retrieving information in those days was relatively easy, too, although failure to find information was certainly fatal more often than it is today. Back then, you either remembered what you needed to know, or asked someone else, and if the other person knew, you got an answer. In some ways, it's been downhill ever since (Janes & Rosenfield, 1992).

In a relatively short time, computers have managed to transform not only how we communicate but also to change forever how we store and retrieve information. Since the 1500s the printed page has been the most influential means of communication in Western civilization. Thinkers writing about the invention of the printing press long ago were concerned that the art of memorization would be lost with the advent of the printed page.

Now that electronic communication has become the most influential form of information transmission, we often hear concerns that the use of the printed page—or even the skill of reading—will be lost. It is unlikely that the Internet will bring about the end of printed books or printed materials at any time in the foreseeable future. It has been true in this century that every time a new communication technology has been introduced, the older ways of communicating have not ceased to exist but instead have continued to grow as highly popular but slightly more specialized services. A good example is radio, which did not disappear when television came along but remains widely used. We can expect that print will begin to occupy a slightly different position in our society but remain important to us, and that reading will continue to be the primary human skill needed to function in adult society.

### Why Is the Internet Important to Early Childhood Educators?

We at the ERIC Clearinghouse, along with many others in the field of early childhood education and care, have worked hard to make sure that early childhood education is well represented on the World Wide Web. We've done that for several reasons:

*First, to make information available to the widest possible audience of early childhood educators.* We assumed (and rightly so, in the beginning) that we would reach different audiences with our print materials and our Web site. Each year for 20 years, we printed and distributed more ERIC Digests and Resource Lists than we had the year before, and in the first two or three years that we presented Web sites, that trend continued. Last year (1997) was the first time that we saw printing and distribution figures decrease for print materials; during the same year, Web accesses to these same materials quadrupled. As Internet use becomes more widespread, we find that audiences for print and Internet-based resources are increasingly the **same** audience.

*Second, to see early childhood education and child care well represented on the Web.* This is an important goal because what I have called the “accidental tourists” of the Internet—Web surfers—can then “accidentally” encounter on the Internet high-quality, well written, well presented, and interesting information on the education, care, and development of children under eight years of age. No matter whether we call this

advocacy, or consumer education, or simply informing the general public—the Internet provides us with another means of applying *pressure* for improvement in early childhood education and the delivery of early education and care. Too often we share our most thoughtful ideas and views about early childhood education and care only with other early educators. Yet we need the informed support of the general public to bring about improvements in our field. We need parents, grandparents, business people, policymakers, and the media to be better informed about our work and the importance of what we do so that they will support our efforts for improving the care and education of young children. The Internet makes it possible to reach out to groups who are likely to be supportive if they understand the importance of our efforts to improve settings and experiences for young children.

*Third, to encourage the professionalization of the field of early childhood education and of early childhood educators.* My colleague Lilian Katz likes to talk of how important it is for early childhood educators to be not just a *pressure group* but to also be an *impressive group*, both in the practice of early childhood education and in our behavior as ethical, thoughtful professionals. The new information technologies provide us with many ways to find resources for continuous improvement in the practice of our profession. The word *empower*, which is overworked these days, is defined in my dictionary as “to give power and authority to.” In the best and truest sense of the word, the Internet can empower those of us in early childhood education by helping us learn more about our own field.

### **Uses of the Internet by Early Childhood Educators and Parents**

The most common uses of the Internet are, in approximately this order, communication, entertainment, marketing, information seeking, advocacy, and all kinds of education—including consumer education, distance education (formal and informal), and support of regular classroom education, especially in higher education.

This list of common Internet functions used to be much shorter. There was a time when I would not have included in such a list distance education or marketing as major Internet uses. Despite extensive commercialization, the Web already is and will continue to be something much more than a gigantic virtual yellow pages, as some observers have recently described it. And in fact, the interest of the commercial sector in the Internet is an important driving force in making Internet access and online services affordable.

Despite increased affordability, equity in computer and Internet access continues to be a problem in society. It is likely that concerns about equity will diminish somewhat over time, as computers and the Internet become more a part of our everyday lives. Already, many public libraries and other agencies in many states provide computer terminals for use by the general public at no fee. We encourage schools to open their computer labs to the parents and neighbors who have funded them in the first place. We can expect that communities will continue to find creative ways to increase access to the new information technologies for all of us. The University of Illinois Graduate School of Library and Information Science recently received a large federal grant to collect 1,000 outdated computers from local businesses and, with the help of teenagers from low-income families working with graduate students, upgrade or rebuild those computers; each teenager who takes part in the program gets to take a computer home, and the rest are being distributed throughout the community to low-income families and

organizations. Such efforts are significant. At the Families, Technology, and Education Conference we hosted in 1997, parents equated Internet access with power and influence in our society. One of the most often expressed hopes among the parents attending was for greater Internet access for all families in all parts of the community.

In addition to community efforts, over the next few years we are likely to see a continuing reduction in the cost of computers and Internet use to individuals, largely because business and industry see widespread use of the World Wide Web as a way to sell us products. We will also find that the integration of technologies offers new and often easier ways to make use of the Internet for those with little time, money, or energy to learn about it. Computers, cable TV, Web TV, telephone lines, satellite dishes, wireless technologies—all will be used to present the general public with new opportunities for easy access to the World Wide Web.

Our Clearinghouse has an ongoing special project called the National Parent Information Network, which is intended to create a high-quality WWW site for parents and to provide question-answering services for and about parents and parenting. Since late 1993, NPIN has been providing these services through the World Wide Web and also by toll-free telephone. What we have learned about families in the new information society is that, like early childhood educators, they sometimes feel isolated. Parents often live far from their own families; they may be fairly transient in their communities or neighborhoods, or they may lack close friends or neighbors from whom they can ask child-rearing advice. They may even be embarrassed to ask those neighbors or relatives who are close at hand about certain issues or concerns. All too often, the sources of information available to them are not of the highest quality or are not up-to-date. For these parents, the Internet provides a comfortable, anonymous way to find out that they are not the only ones struggling with troublesome behaviors or learning problems. They can use the Internet to ask an "expert" a question and to discuss their concerns with other parents in Internet discussion groups. They can find research-based parenting information through the National Parent Information Network and many of the Web sites described in this book.

### **This Edition of *A to Z***

Today we live in an era when computer advertisements ask us, "Where do you want to go today?," command us to "Think different," and assure us that "All the books in the Library of Congress can be sent coast to coast—flawlessly—in the time it takes lightning to strike!" These kinds of promises sometimes make us forget that the information society is in its infancy. We have seen huge changes in technology over the last decade, and the rate of change, according to many observers, is accelerating rather than slowing down. The new information technologies will continue to increase the expense involved in operating our organizations, but they will also allow us to provide new and improved services for more people.

This edition of *A to Z: The Early Childhood Educator's Guide to the Internet* is much expanded from previous editions. Every day we learn of new Internet sites produced by early childhood educators and by organizations working in our field, and we have included as many new sites in this guide as possible. Unfortunately, given the rapid rate of change on the Internet, much of the information in any printed guide to its vast resources is almost immediately outdated. Therefore, the 1998 edition of *A to Z* will be the last print edition of this work. Perhaps it is

fitting that from the year 2000 forward, this guide will be available only on the World Wide Web at <http://ericeece.org/azguide.html>.

For More Information .....	1-25

This chapter provides some general pointers that we think you will find useful as you begin to use the Internet to find information on early childhood education, child care, and child development. The information contained here is not exhaustive; there are many Internet guides in bookstores that provide comprehensive information (see the bibliography at the end of this chapter). Instead, the goal of this chapter is to introduce some basic concepts related to Internet use and to provide you with enough information to get started.

NOTE: Throughout this book, Internet addresses are provided in a consistent format called the "Uniform Resource Locator" (URL). Examples are the URLs of the ERIC/EECE World Wide Web site and the U.S. Department of Education World Wide Web site:

<http://ericee.org/>  
<http://www.ed.gov/>

More information about URLs is provided in a following section called "A Note about Uniform Resource Locators (URLs) and Home Pages."

This chapter begins with an introductory section that explains what you need to connect to the Internet and provides some information about the domain name system used to identify computers connected to the Internet. The chapter then discusses several Internet tools, the first of which is electronic mail (email). Next, the chapter outlines some features of electronic discussion lists, which are based on the use of email, and of Newsgroups, which are not directly related to email. Some elements of Internet etiquette are identified.

Because the remaining Internet tools discussed in the chapter are based on client-server software, this method of data exchange is briefly mentioned. Then TELNET, a second Internet tool, is explained. The bulk of the discussion of Internet tools focuses on the World Wide Web (WWW). The section on the WWW presents some general points about the WWW and provides specific information about Web browsers, Uniform Resource Locators, the use of File Transfer Protocol, accessing Gopher sites through Web browsers, the use of Web search engines, and the creation of Web pages. The final section discusses finding information and resources on the Internet. A list of resources for additional information is appended.

## Getting Started

### What You Need to Connect to the Internet

1. A computer — Either a Macintosh or a DOS machine (that is, an IBM or IBM-clone machine) works fine, provided it meets certain minimum requirements, as outlined below.

- *Memory.*

Minimum configuration: 16 megabytes (MB) of memory

Recommended configuration: 32 or more megabytes (MB) of memory

Not surprisingly, with each edition of this *A to Z Guide*, we are recommending a greater amount of memory. Using fewer than 16 megabytes of memory will not result in efficient use of the Internet. Therefore, we suggest a total of 16 MB of memory as a *minimum configuration* for using the World Wide Web (WWW), as well as for other applications, and recommend a total of 32 MB of memory. The cost of computer

memory increases and decreases cyclically, but is currently (fall 1998) at a fairly low cost. Therefore, we recommend that you purchase as much memory as you can afford.

- *Hard drive.*

Recommended configuration: 1-gigabyte (GB) or larger hard drive

Hard drives have become relatively inexpensive, and new computers are typically sold with hard drives of at least 1 gigabyte (1,000 MBs). A large hard drive is useful for a variety of other applications besides using the Internet.

- *Monitor.*

Minimum configuration: VGA monitor

Recommended configuration: for IBM and IBM-clone machines, SVGA monitor; for the Macintosh, a color monitor

A *VGA monitor* is acceptable for word processing, but if you intend to make use of the graphics on the Internet, a high-quality, high-resolution (SVGA) color monitor makes sense.

- *Sound card and speakers.*

Increasingly, many World Wide Web sites on the Internet present information in the form of sound, as well as text and graphics. While it is not necessary to be able to hear these sounds to make good use of the sites, it is often helpful, interesting, and fun. There are many sound cards and speakers on the market that allow you to hear sounds over the Internet. Check with your computer supplier.

2. A modem — Modems have become standardized and reliable. We recommend that you purchase a modem that transfers data at a rate of at least 28.8 baud. (The baud rate is a measure of the number of signals transferred per second over a communications medium; the higher the baud rate, the faster the transmission.) Today, new computers are typically sold with a modem installed. If you are buying a modem now, purchase one that also has fax capabilities.

3. A telecommunications program — Whether you have an education account with a nonprofit Internet service provider or use a commercial service, your Internet service provider will provide you with or recommend a telecommunications program.

4. An account with an Internet service provider — The options for Internet access for the general public are increasing rapidly, but this question remains a central concern for many parents and educators who want to use the Internet. At the federal level, a number of possibilities are being explored for increasing Internet access for the education community. Some of these possibilities were addressed in the telecommunications legislation passed by Congress in early 1996. Vice President Al Gore and many others advocate the connection of every classroom to the information superhighway by the year 2000. Right now, however, there are four broad categories of access.

- *Access through state or regional educational networking systems.* Many states (Texas, Florida, North Dakota, Virginia, and others) now provide or are planning to provide low cost or free access for educators. Inquiries should be directed to local school district offices, regional education service providers, or state departments of

education to find out if this option exists in your area. If your state is in the planning stages of providing access for all educators, become an advocate for including Internet access for pre-kindergarten educators and caregivers.

- *Access through community computing networks.* Local community computing networks have been established in many communities across the United States and in other countries. Many more are in the planning stages. These community computing networks provide various levels of Internet access to the citizens in their communities. One type of community computing network is called a "Free-Net," based on the name of a particular type of network software. Free-Nets were affiliated with the National Public Telecomputing Network (NPTN). The NPTN, a nonprofit organization, was a leader in the community computing network movement until its recent bankruptcy. The Organization for Community Networks (OFCN) now provides some of the information on community computing networks previously provided by the NPTN.

Besides local communities, a few states, such as Maryland, offer Internet access through a state-wide network to every citizen who requests it. (In Maryland, this network is called SAILOR. Visit the Web site <http://sailor.lib.md.us/> or send an email message to [askus@sailor.lib.md.us](mailto:askus@sailor.lib.md.us) for more information about SAILOR.)

To learn whether there is a community computing network in your community, it is a good idea to check your local public library, which is likely to have this information. Information may also be obtained from the OFCN:

Organization for Community Networks  
P.O. Box 32175  
Euclid, OH 44132  
Phone: 216-731-9801; Fax: 216-731-9802  
Web: <http://ofcn.org/>  
Email: [webmaster@ofcn.org](mailto:webmaster@ofcn.org)

The OFCN maintains a list of community computing networks at:

[http://ofcn.org/networks/By\\_State.txt.html](http://ofcn.org/networks/By_State.txt.html)

To locate a community computing network, you might also try using one of the Internet search engines (explained below), by using search terms such as "community" and "networks."

A Directory of Public Access Networks is maintained by the Council on Library and Information Resources (CLIR). This directory is another source of information on community computing resources. This Web-based directory is available at:

<http://www.clir.org/>

- *Access through special projects at universities, colleges, or other institutions.* Many universities and colleges provide Internet access for their faculty, staff, and undergraduate and graduate students. Other institutions, such as many nonprofit organizations, may provide Internet access for their staff. Universities and colleges sometimes provide Internet access to nearby schools that take part in research or

learning projects. If you are in a pre-K setting, suggest that a college in your community help with a project that experiments with ways to further professional development of caregivers and preschool teachers through use of the Internet.

- *Access through commercial services.* Dozens of commercial services, including some telephone companies, now offer connectivity to parents and educators. In addition, some professional associations offer subscriptions to online services that offer their own information and Internet access.

There are literally hundreds of commercial Internet service providers, and many of them provide local or regional service. Check with your local public library, the yellow pages of your telephone book, or advertisements in local newspapers to find out about local providers. The providers listed below are well known and offer their services to a national audience. Further information about these services is available by calling the 800 number or by accessing the Web site, the URL for which is given in the list. This is an incomplete list (based on the ones we are asked about most frequently). No attempt is made to provide cost information because such information changes frequently. Note that many providers offer a free trial of their service. Note also that mention of an Internet provider here does not represent a recommendation from ERIC/EECE.

5. An appropriate level of Internet access — Regardless of your Internet provider (a university or college, an education consortium, a state or regional education provider, or a commercial provider), there are several questions you should ask about what capabilities the provider offers and about how to use the Internet effectively once you get access. Among these questions are the following:

- How will I use electronic mail? Will I be able to belong to Internet mail lists? Are there limits to message length? Are there charges for sending or receiving electronic mail?
- Will I be able to use TELNET software? Are there any extra charges for using this software? Can I use TELNET from home and at work? (Many universities and colleges offer different capabilities for home use compared to capabilities offered on-campus.)
- Does the system offer a SLIP or PPP connection? If the service offers these types of connections, it increases the chances that you will be able to use a graphical interface to the World Wide Web. An important question to ask is, Can I use the graphical interface from work *and* at home? (Again, many universities and colleges may offer

different capabilities for home use compared to the capabilities of computers wired directly to the computer system in a university building.)

- What are the charges for accessing the Internet from the commercial service, beyond accessing the information on the commercial service itself? (This question applies to those who have access from a commercial provider.)
- Can I access my account by using a local telephone number or a toll-free telephone number?
- How do I check my electronic mail and use the Internet from my portable computer if I am away from home?
- What do I do if I need help? Whom do I call? During what hours is help available in my geographic area?

### Domain Name System (DNS)

The Domain Name System (DNS) is a method for administering the names given to the computers that are connected to the Internet. This method facilitates communications among these machines. Domain names are, in a sense, the addresses of computers. Typically, each computer's domain name has four domains, which are separated from each other by periods. For example:

ux1.cso.uiuc.edu  
ericps.crc.uiuc.edu

The domain in the right of the address is the most general or the highest level. The domain names become more specific as they move left in the address. For example, in the first address above, *edu* represents the highest level "education" domain; *uiuc* represents the University of Illinois at Urbana-Champaign; *cso* represents the University's computing services office; and *ux1* represents a particular computer or group of computers in the computing services office. In the second address, *crc* represents the computer network in the Children's Research Center, a building on the University of Illinois campus; *ericps* represents a computer located on a tabletop in ERIC/EECE's network administrator's office.

Sometimes, domain names can (or appear to) be shorter than four domains. This will often be seen in email addresses, for example:

ericece@uiuc.edu

For the four-name address above, *ux1.cso.uiuc.edu*, the University of Illinois has the authority to create any names in domains lower than its "uiuc" domain (i.e., to the left of "uiuc"). It has chosen to create "alias" computer domain names for its users. Therefore, if someone sends an email message to *ericece@uiuc.edu*, that message will automatically be forwarded by one of the University's computers to *ericece@ux1.cso.uiuc.edu*. The advantages of this practice are that people can remember shorter names, and that less address book updating is required if individual computer names change within the University.

Originally there were six "highest level" domains, representing various types of organizations, as indicated below:

Domain name	Usage
com	commercial organizations
edu	educational organizations
gov	government departments, agencies, and offices
mil	military facilities
org	other organizations
net	network resources

These domain names are still used and a few more may be added in the future. As the Internet has expanded globally, a set of two-letter domains for countries has been developed. Some common country domain suffixes are:

au	Australia	hk	Hong Kong
ca	Canada	in	India
dk	Denmark	kp	Korea
fr	France	nz	New Zealand
de	Germany	uk	United Kingdom
fi	Finland	za	South Africa

To see a complete list of country codes, view the Country Code Contact Information pages maintained by the Internet Assigned Numbers Authority (IANA) at:

<http://www.iana.org/countryA-F.html>  
<http://www.iana.org/countryG-O.html>  
<http://www.iana.org/countryP-Z.html>

The use of the computer "addresses" in this domain name system identifies unique computers and makes communications between these machines (using all the tools of the Internet discussed below) more efficient.

"Where do these domain names come from?," one may ask. Each nation has an organization that assigns domain names within that nation. In the United States, that organization is InterNIC, which is a cooperative activity of the National Science Foundation and Network Solutions, Inc. InterNIC assigns only the last two domains of a domain name. Organizations may apply for a domain name of their choice (assuming it is not already used); a fee is charged for receipt of a domain name. For example, the University of Illinois applied to InterNIC for a domain name and was assigned "uiuc.edu." The University is free to assign more specific domains to its various departments and units. For example, the University assigned the domain "crc" to its Children's Research Center (CRC); then the CRC network administrator assigned the domain "ericps" to ERIC/EECE's Web server, which rests on a tabletop in the CRC building. This resulted in the complete address "ericps.crc.uiuc.edu." If you are interested in getting more information about InterNIC, visit the Web site at:

<http://rs.internic.net/>

## Electronic Mail

The most popular feature of the Internet is electronic mail (email), which reaches areas of the world with no other type of Internet access. Email is the most common denominator of being considered "on" the Internet. Electronic mail is popular partly because, of all Internet features available, it most closely resembles activities that are already part of our daily lives. We know how to send letters and leave telephone messages for co-workers and others whose judgment we value or from whom we want information, and the use of electronic mail is an extension of those behaviors. Research indicates, in fact, that educators' most frequently used source of information is their colleagues. Electronic mail simply expands educators' immediately accessible peer group to include anyone in the world with an Internet connection.

Electronic mail is fast (most of the time) and largely reliable. Messages can be composed and sent from home or work at the sender's convenience, and received and responded to when convenient for the receiver. Most messages are received and read only by the person for whom they were intended, but email should *not* be considered either secure or private.

Electronic mail addresses vary, as do postal addresses, and carry specific pieces of information. Knowing a little about email addresses can be useful for knowing whether an address is likely to be correct. Sometimes understanding the format of the address can also help you determine someone's location or host institution. All addresses have the following format:

unique logon name	@ sign	domain names of host computer
ericeece	@	ux1.cso.uiuc.edu

Basically, this system of email addresses includes the "logon" name of the person or institution "at" the particular "host" computer. The computer is named according to the domain name system described above. The logon name is the name the person uses to "log on" to the host computer when checking his or her email (or performing other functions on that computer).

How do you find someone's email address? The best way is to *ask* the person (using an old technology like the postal service or the telephone, or an ancient human skill like face-to-face communication!) prior to attempting to send him or her electronic mail. If you know the name of a machine at the same institution and the format of someone else's address there, you can try an address that seems likely to be correct. (For example, if you have a friend whose name is Schmidt and whose email address is schmidt@abc.def.ghi.edu, and another friend at the same institution whose name is Dasgupta, you might try dasgupta@abc.def.ghi.edu.) If it is not correct, the machine will "bounce" the mail back to you.

Another way to locate an email address if you know a person's host computer is to use the finger command. To use this command you must be at a UNIX prompt on a computer connected to the Internet (see explanation in the section below, "A Note about Client-Server Software"). The format of the command is:

finger name@host

where host is the host computer and name is either the first name, last name, or logon name of the person whose address you are looking for. For example, if you are looking for your friend Dasgupta's email address type:

```
finger dasgupta@abc.def.ghi.edu
```

and the host computer will return to you information about all the Dasguptas who have accounts on that computer; one of these will be your friend. You will see information such as:

```
login name: dasgupta   In real life: Protima Dasgupta
```

Seeing this information, you now know that, to contact your friend by email, you should send a message to [dasgupta@abc.def.ghi.edu](mailto:dasgupta@abc.def.ghi.edu).

"Are there email address books for the Internet?" we are sometimes asked. In a sense, yes, there are. Just as there are search engines (see section below on "Using WWW Search Engines") on the Internet which can be used to find Web sites, so there are some search engines that search for email addresses. One such site is the "Four 11 Internet White Pages" site at:

```
http://www.four11.com/
```

At this site, you can type in a person's name and search for that person's email address. Note that this is not a complete directory of email addresses. Thus, if you're looking for a friend's email address and you don't find it here, it doesn't necessarily mean that your friend doesn't have an email address.

Another way to find your friend's email address, assuming you know the institution your friend works at, is to use an Internet phone book maintained by that institution. For instance, if your friend works at the University of Illinois, you could visit the University of Illinois's World Wide Web site at:

```
http://www.uiuc.edu/
```

From the menu on the home page, select "Phonebook-ph." Then type your friend's name in the box, click on the "Enter" button, and you will be presented with contact information, including email address, for your friend. To find an Internet phone book for an institution, it is easiest to go to a central listing of institutional phone books. Such a listing is maintained on the University of Notre Dame's Gopher. However, it may be easier to access this listing from the University of Illinois's Web interface. As before, go to the University of Illinois home page and select "Phonebook-ph," which will take you to the Phonebook Gateway for the University of Illinois at Urbana-Champaign. Since you want to check a different institution's phone book, select the menu option "Other Servers."

At this point, you can do one of two things. First, you can type (into the search box) a word from the name of the institution you're seeking. For example, if you type "berkeley" and select "Enter," you will be presented with a search interface to the University of California-Berkeley Internet phone book. Second, you can select the menu item, "all ph/qi phone book servers" (approximately 340 in summer 1998). Then, you can scroll through the list of servers (alphabetical by institution name) and select the one you want. If you select "University of California at Berkeley" you will see the same phonebook gateway mentioned above. Whether

you select the first or second of these methods, you can then type into the search box the name of your friend, select "Enter," and you will be presented with your friend's contact information. Note, however, that if your friend's institution does not maintain an Internet phone book, this method is of no use.

Dozens of mail programs exist that make it easy to use electronic mail. Pine and Elm are often available on UNIX (a kind of operating system) machines, while Eudora and NuPop are popular on PC-based systems. Each program has unique commands, screen displays, and features. Check with your local system administrator for some printed documentation of how your mail program works and keep this documentation by your computer for reference.

## Internet Mail Lists

Internet mail lists (commonly but somewhat erroneously called *listservs*, after one kind of popular mail list software [the way all tissues are called Kleenex]) build on our sense of comfort with electronic mail as a communication medium. Internet mail lists are an example of "distributed email." Whereas in typical email communication, one person sends a message to one other person, on Internet mail lists, one person sends a message to an email address at the administrative computer that operates the mail list. This computer then "distributes" the message to every person who has subscribed to the list.

This "distributing" function is performed by mail list software located on the mail list computer. "Listserv" is one popular type of such software; "Majordomo" and "Listprocessor" are two other popular types. The software usually automates subscribing and signing off from the list and may offer other features, such as "digesting" (sending you one message per day that contains all the messages posted to the mail list discussion address during one 24-hour period). Note that, when using Internet mail lists, it is important to keep in mind the distinction between the mail list's "administrative" and "discussion" addresses. When you are subscribing, unsubscribing, or requesting some other "administrative" function, send your message to the list's administrative address. When you want to communicate with the other list members, send your message to the list's discussion address.

Early childhood educators are relative newcomers to the Internet, and arguably the best evidence of our recent migration to this new medium is the rapidly growing number of electronic mail lists that address topics pertinent to the field of early childhood education. There are many thousands of mailing lists on the Internet. There are some World Wide Web sites (see section in Chapter 2, "Finding Electronic Discussion Lists," for details) on the Internet that provide lists of Internet mail lists. Some of these "lists of lists" are topical, while others strive for thoroughness. Probably none is complete or up-to-date. If you are looking for an Internet mail list on a particular topic, a good way to begin is to ask professional colleagues, either in person or by posting a question to a mail list to which you already belong. You can also find new lists by sending a command in an email message to a listserv computer or by using an Internet search engine.

Individual lists develop their own personality and conventions, and the discussion may vary on a daily basis in its quality and in its relevance to your interests. The general pattern of usage is that one person posts a message requesting information or suggesting a topic for discussion, and others who subscribe to the list respond. Mail lists do not subdivide discussions by topic, and there may be several strands of discussion taking place during the same period of time.

Note that many Internet discussion lists are archived on World Wide Web or Gopher sites. Those interested in the topic of a list are able to visit the list archive and read past messages.

Here are some guidelines for using mail lists.

- *Know the distinction between the administrative address and the discussion address.*  
The administrative address is a sort of clerical robot that responds to commands. Use the administrative address for subscribing to and signing off a list and for other administrative commands, such as "review" (a command which tells the listserv software to send you a list of all the members of the mail list) and "digest." Messages to the administrative address typically have no subject line and should not contain your signature.

Use the discussion address for communicating with other list members. Messages sent to other list members should include an appropriate subject line and your signature. *Do not* send messages to the discussion list that are meant for the administrative address. Doing so will require perhaps hundreds of list subscribers to read your administrative request.

- *Save the instructions.*

After you have sent a subscription command to the list's administrative address, you will receive a message indicating that your subscription has been accepted. You will also receive a list of instructions, including common commands to use with the mail lists. *Save these instructions* for future reference.

- *Determine whom you are responding to.*

When you read a message on the list, you will usually want to respond to the entire list. Occasionally, however, you will want to respond only to the person who posted the message. The discussion address is used *only* for messages that should go to the entire list. If you want to respond to the individual subscriber, you will need to type in that subscriber's email address in the "To:" line of the email message you are composing. It's a good idea to double-check the "To:" section of the message header before you send it. Many embarrassing episodes have resulted from inadvertently sending a message to hundreds of people that was intended for just one person!

- *Read messages before posting.*

Read messages from the list for a few days before posting your first message so that you can gauge the flavor of the conversation. After that, introduce yourself and let others know what your particular interests are.

- *Abide by the list policy on commercial postings.*

Before sending descriptions of or ordering information for commercial items to a discussion group, check with the list administrator or owner to be sure you have complied with any policies that may have been established by the list owner or by the group through earlier conversations.

- *Be considerate when disagreeing.*

When expressing an opposing point of view, do so with respect and consideration for the feelings of others. If you are angry, you might wait a day and reread a controversial

post that you've composed before you send it. Use of profanity or derogatory comments is inappropriate.

- *Use the subject line.*

Use a phrase in your subject line which concisely and accurately describes the topic of your message. This will help other list members filter out messages on topics in which they are not interested and focus on topics in which they are interested.

- *Respect copyright.*

Email messages, like letters, are copyrighted literary matter. Therefore, do not forward another person's email message to the list without that person's permission. Also, do not copy and send otherwise copyrighted material (e.g., pages from a journal article) to the list without the permission of the copyright holder.

- *Include your signature.*

It is courteous to identify yourself to other list members.

Chapter 2 of this guide profiles several Internet mail lists relevant to early childhood education. The introductory section provides a set of general instructions on using some common commands on three types of mail lists and discusses several ways of finding mail lists on particular topics. The bulk of the chapter highlights several dozen mail lists. The specific administrative and discussion address is provided for most of these mail lists.

## Newsgroups

Usenet Newsgroups are similar to listservs and other Internet mail lists and, in fact, many lists are simply redistributed on Usenet from identical Internet discussion group lists. Newsgroups are read on a "newsreader" available on many systems. Popular newsreaders include nn, rn, news, vnews, and pcnews. Most have features that allow the user to choose only those "threads" (or subjects) that the user knows in advance he or she is interested in. Newsreaders require a little practice to learn to use them properly. Their advantage over electronic mail is that, because messages are distributed from a common database, Usenet cuts down on the number of messages sent directly to your mail box.

While many people prefer Newsgroups so that their mailboxes will not be cluttered with messages, others find that they forget to check the Newsgroups they are interested in, and miss information or discussion they would have liked to know about. Messages are deleted from Usenet Newsgroups automatically on a regular schedule. Some people feel that, compared to Internet mail lists, Newsgroups tend to be more "chatty" and less scholarly or professional.

There are various categories of Newsgroups, and there are some Newsgroups that deal with educational topics. For example, "k12" Newsgroups are dedicated to various topics in which teachers and students, kindergarten through grade 12, may be interested (for example, "k12.chat.teacher," "k12.ed.music," and "k12.ed.science"). There is a group of "bit" Newsgroups that contains postings to popular BITNET Listserv mail lists (for example, "bit.listserv.edpolyan" for postings to EDPOLYAN, an educational policy analysis forum). There are other Newsgroups which may have some interest to parents and early childhood professionals, such as "rec.arts.books.childrens," a Newsgroup that discusses children's books in the "rec" (that is, recreational) Newsgroup category.

If you are unsure that Usenet Newsgroups are available to you at your site, ask your system administrator. If Newsgroups are available to you, the system administrator will provide you with information on the specific newsreader to be used.

### **Internet Etiquette (Netiquette)**

In its early days, the Internet was likened to the Wild West because it seemed to be a rapidly growing, largely undefined environment. But this situation has changed as governments, educational institutions, and corporate entities have established strong presences on the Internet, and as Internet users have become more sophisticated and more discerning in their use of Internet resources. Issues of free speech still abound on the Internet, but concerns about obscenity and copyright are growing. If you are concerned about Internet use policies and the wilder parts of this electronic frontier, there are discussions in the literature of these problems that you might find interesting (see Chapter 5).

For early childhood educators, who will not typically find themselves exposed to the wilder parts of the Internet (at least in their professional roles!), the Internet can be a very friendly place. As early childhood educators, we use information in responsible ways and will find that Internet usage is governed by the same rules that govern the rest of our behaviors. As in other parts of life, the golden rule in Internet computing manners is to treat others as you wish to be treated. For example, do not send junk, objectionable, or "flaming" electronic mail. Do not use electronic mail to advertise business services, especially on Internet mail lists. Take care not to confuse administrative and discussion addresses for Internet mail lists and learn how to use the mail list commands. If you are a college instructor who is teaching students about Internet use, do not instruct 30 students to post the same question to an Internet mail list or to send out surveys without checking with list managers first. The goal is to create a welcoming environment in which real discourse about our profession can take place.

You will find that Internet users are extremely helpful and caring when dealing with colleagues who ask for information and advice. There is a great tradition of helping each other that is apparent on Internet discussion groups. Help others if you think you can do so, but be careful not to exceed the amount of your expertise; giving incorrect or bad advice may do damage. Remember to indicate your level of knowledge if you choose to provide information or give advice. For example, in response to a curriculum question, you might say, "I've been teaching for 15 years, and my experience in this area has been ..."

### **A Note about Client-Server Software**

The next several features of the Internet that we are going to discuss (World Wide Web, FTP, TELNET, Gopher) operate using client-server software. This method of data exchange involves a *server* (i.e., a computer on which information and resources are stored) that provides (or "serves") its information and resources to a *client* (i.e., another computer that sends a request for information to the server). Both computers are connected to the Internet. The requisite software is resident on these computers. For example, suppose you are sitting in your school office and have just used your personal computer (PC) to log on to a local university computer and then you have connected to a World Wide Web site at another university. The other university's World Wide Web site is on the server; your university's computer is the client. Your PC is connected to the client.

It is not necessary to understand this in great detail. The point is that, to use the FTP, TELNET, Gopher, and WWW features described below, you do not have to acquire any software for your own PC. It is already present on the computers owned by your Internet service provider (your university or other provider). The only constraint is that, if your provider is a nonprofit institution rather than a commercial provider, you will probably also need to get a Web browser to install on your PC. The network administrator can help you with this.

At this point in previous editions of this *A to Z Guide*, we discussed File Transfer Protocol (FTP) (giving extensive examples), TELNET, and Gopher, before proceeding to the World Wide Web. However, because most early childhood professionals who are accessing the Internet do so via Web browsers; because most institutions are discontinuing the operation of Gophers in favor of World Wide Web sites; and because the use of FTP, TELNET, and Gopher is seamlessly incorporated in the function of Web browsers, in this edition of the *A to Z Guide*, we are proceeding differently. We will offer only a short discussion of the use of TELNET and then proceed straight to our discussion of the World Wide Web. Subsequently, we will briefly discuss the use of FTP and Gopher from within Web browsers.

## TELNET

TELNET, one of the earliest Internet tools, is a software program that allows you to log on to a remote computer and use its applications. We briefly mention TELNET here because some readers may use TELNET outside their Web browsers. For example, you may use TELNET to log on to a server back at your office while you're away at a conference. You might do this to check your email messages. Logging in with TELNET requires that you provide a logon name and a password accepted by the other system as you log on. Typically, you will use TELNET to log on to a computer for which you have already been given an account (from your university, for example).

However, there are cases in which you can use TELNET to log on to a computer for which you do not have an authorized account. For example, some libraries provide public TELNET access to parts of their electronic catalogs or to features for searching the ERIC database, and some Free-Nets provide public TELNET access for guests to investigate parts of their system. When you try to log on to such TELNET sites, you will be given instructions at some early point in the logon process about what logon name and password you should use.

To use TELNET, first log on to your host computer connected to the Internet. Then, if you want to connect to another computer with an Internet domain name of xxx.yyy.zzz.edu, type:

```
telnet xxx.yyy.zzz.edu
```

For example, if you're visiting a group of friends at a university, you can log on to your friends' institution's server according to their instructions. Then, at the prompt, you can TELNET to your home server to check your email.

## World Wide Web (WWW)

The World Wide Web (WWW) is based on software that adds additional capabilities for accessing information and resources on the Internet beyond the capabilities offered by earlier ways of accessing the Internet (such as Gopher). The two major differences between the WWW

and earlier methods are the availability of nontext resources and the use of hypertext links. Besides providing access to text resources, the WWW provides easy access to nontext resources, especially graphics, but also sound, film clips, software applications, and others. Through hypertext links, WWW users can move easily from document to document and site to site, rapidly gathering information and resources. Depending on which Web browser you are using, the hypertext link will be highlighted on the screen in some way (usually by a different color). The WWW also incorporates the use of other Internet tools such as FTP, TELNET, and Gopher.

To use the WWW, you need three things: access to the Web on the Internet, a Web browser (for use on your PC), and communications software (so your Web browser can connect to your service provider). The section above on "What You Need to Connect to the Internet" discussed getting access to the Internet through an account with an Internet provider. Such access will almost always include access to the Web. Check with your provider about this access.

If you have access from a commercial provider, the provider will supply you with the browser and communications software as part of the general package of software that you install. If you have an institutional provider, you will probably need to specially get the browser and communications software. The institution's computing office or network coordinator will probably have this software available, or will be able to help you acquire it. Many Web browsers are available commercially or are freely available on the Web site of the browser's developer. A brief note about Mosaic (the first Web browser that was developed at the University of Illinois) and some information about two popular Web browsers, Netscape Navigator and Microsoft Internet Explorer, are provided below. Computer and Internet magazines periodically have descriptions of and comparisons between Netscape Navigator and Microsoft Internet Explorer as well as some other browsers.

### **Mosaic**

In previous editions of the *A to Z Guide*, we discussed Mosaic, the original Web browser developed at the National Center for Supercomputing Applications (NCSA) at the University of Illinois. Now that Web browsers have become common in the marketplace, the NCSA has discontinued further development of this product. Hence, we will not include a discussion of Mosaic in this edition of the *A to Z Guide*. The final versions of Mosaic will continue to be available on NCSA's Web site. Technical support will no longer be provided. For more information, see the Software/Mosaic section of the NCSA Web site:

<http://www.ncsa.uiuc.edu/SDG/Software/Mosaic/>

### **Netscape Navigator**

One of the two most popular Web browsers is "Netscape Navigator" from the Netscape company. Netscape Navigator is available for downloading at Netscape's Web site. The URL of Netscape's home page is:

<http://home.netscape.com/>

Note that the layout of the Netscape home page and the organization of the Netscape Web site can change significantly from time to time. Therefore, it is not possible to give detailed

directions about acquiring this software. But on the Netscape home page, you should find a hyperlink called "Download" (or some related word or phrase), or you may be able to follow links to a Products page. Eventually you will find a link to download the latest version of Navigator (version 4.06 as of this writing in summer 1998) or of Communicator (a suite of products that contains Navigator) for Macintosh or Windows. Click on the link to download. The Products page should provide installation instructions.

You can also order Navigator on a CD-ROM. This product comes with additional features (such as a manual). See the Products page of the Web site. If you are unable to download Netscape Navigator from the Netscape Web site, or if you want further information, you can contact the company by phone at 415-937-3777 or by email at [info@netscape.com](mailto:info@netscape.com).

### **Microsoft Internet Explorer**

The other of the two most popular Web browsers is "Internet Explorer" from Microsoft. Internet Explorer is available for downloading at Microsoft's Web site. The URLs of the Microsoft home page and the Internet Explorer page are:

<http://microsoft.com/>  
<http://microsoft.com/ie/ie40/>

Again, as the design of this page may change from time to time, specific directions cannot be provided. However, you should find an option for something like "Products/Downloads" on the home page. Follow the links through Downloads, Web Browsers, Internet Explorer. Then choose your platform (e.g., Windows 95) and follow the download instructions. Internet Explorer can also be ordered on CD from the Microsoft Web site or by calling 800-485-2048.

### **A Note about Uniform Resource Locators (URLs) and Home Pages**

A Uniform Resource Locator (URL) (often, but erroneously, called Universal Resource Locator) is an electronic address for a site on the Internet. Using the World Wide Web (WWW), Internet sites are accessed by telling a Web browser which URL to visit, or by selecting a URL that is identified through a hypertext link. One can think of a URL as consisting of four parts:

- *the name of a transfer protocol*
- *a colon and two forward slashes ("://")*
- *the domain name of a computer*
- *a directory path and file name*

Though we haven't used the term transfer protocol yet, we have mentioned several of these in passing: FTP, TELNET, and Gopher. These protocols are simply ways files are transmitted across the Internet. The WWW has its own transfer protocol called HTTP (for "HyperText Transfer Protocol"). It is not necessary to know how these transfer protocols work, only that their names should be included in the address of a site you want to visit on the Web.

Though HTTP is the transfer protocol for Web sites, the Web is able to accommodate all the earlier types of protocols. Therefore, using the WWW, you can connect not only to Web sites,

but also to FTP, TELNET, and Gopher sites. Simply type in the URL for the site in the file location box of the Web browser. Typical URLs for each of these protocols are:

```
ftp://ftp.eff.org/  
telnet://ux1.cso.uiuc.edu/  
gopher://gopher.ed.gov/  
http://ericps.crc.uiuc.edu/n4c/n4chome.html
```

In the last example, "http" is the name of the transfer protocol, "ericps.crc.uiuc.edu" is the name of a computer, and "/n4c/n4chome.html" is a directory path and filename. This URL, by the way, is the home page for the National Coalition for Campus Children's Centers (NCCCC).

A home page is the introductory page for a Web site. It typically provides general information about the site and hypertext links to other "pages" that represent the various sections of the site. It is not necessary to "enter" a Web site at the home page (although that is convenient). If you know the URL of a particular page in the site (for example, if someone tells you or after you've visited the site a few times), you can go straight to that page. For example, if you wanted to go straight to the table of contents of the February 1998 issue of the NCCCC's newsletter, *Campus Child Care News*, you could type in the URL:

```
http://ericps.crc.uiuc.edu/n4c/newsltr/n1feb98.html
```

Note that some URLs do not have a directory path and filename (the fourth part of a URL as listed above), but only a computer address. In such cases, the computer address is typically followed by a forward slash ("/"). Note further that all these "slashes" in URLs are forward slashes ("/") rather than back slashes ("\"). So, an example of such a URL with no directory path or filename is the home page of the National Parent Information Network (NPIN):

```
http://npin.org/
```

Note that Web browsers typically do not require you to type in the first two parts of the URL (they assume "http://") in the location box unless the protocol is other than HTTP.

## Using Web Browsers

Use of Web browsers is generally simple and straightforward. Here we will highlight a few of the features of Web browsers to get you started. We are using Netscape Navigator 4.0 and Microsoft Internet Explorer 4.0 as the Web browsers upon which we base these instructions, but other Web browsers have similar or almost identical functions or feature names.

- *Connecting to a URL.* In Netscape Navigator, choose "File | Open Page" from the option bar. A file location box will appear; type in the URL you want to visit and click on the "Open" button. Or you can simply type the URL in the location box in the Location Toolbar near the top of the screen. In Microsoft Internet Explorer, choose "File | Open" and type in the box the URL you want to visit, or simply type the URL in the address box across the top of the screen. For example if you want to visit the home page of the National Child Care Information Center (the URL for which you've obtained from this Guide), you would type into the file location box or address box the URL:

<http://nccic.org/>

- *Using hypertext links.* Text that is highlighted in a different color (the default is usually blue, but this can be changed) from other text is a hypertext link to another document, either on the same or a different Web site. Graphics can also serve as hypertext links. To access such links, simply move the cursor over the text (or graphic image) and click with the left mouse button. Another sign that text (or graphics) is a link is that the cursor will change to a different icon when it passes over a link (in Navigator and Explorer, from an arrow to a pointing hand).
- *Moving backwards.* There are several ways to move backwards through hypertext links. One way is to move the cursor to the "Back" button in the Navigation Toolbar at the top of the screen and click (with the left mouse button) to go back to the previous document. When you are viewing a page, there will often be (depending on the design of the page) a series of hypertext options taking you backward (and forward, too) to other documents. Therefore, a second way is to point and click on the "backward" links as with other hypertext links. Additionally, in Navigator, you can select "Go" from the option bar at the top of the screen. A list of the documents you have recently visited will appear; scroll to the one you want to revisit and click. If you select "Window | History" from the option bar, you will also see a list of links that you've recently visited; again, scroll to the one you want to revisit and click. In Explorer, you can choose the History icon at the top of the screen; choose the site you want revisit and click.
- *Viewing a document source.* With a document on screen, choose "View | Page Source" from the option bar at the top of the Navigator screen. The source document, upon which the Web page is based, will then appear. In Explorer, choose "View | Source" for the same result. The source page that you will see has various HTML tags embedded in it. This function (of viewing a document source) is useful if you want to learn something about using HTML. (More information about HTML, or "hypertext markup language" is provided in the section on "Creating a WWW Page" below). This function is included here to help clarify the next instruction.
- *Saving a document.* If you are viewing a document that you want to save, choose "File | Save As" from the option bar across the top of the Navigator screen. Several boxes will appear. In one box, you choose the format in which you want the file to be saved. This will be either text (.TXT) or HTML (.HTML). If the reason you are saving the page is to read the straight text in a word processor (in which case you don't want the unnecessary HTML tags), choose .TXT. If the reason you are saving the page is to subsequently load the page as a local file into your Web browser without having to go out on the Internet, (for example, if you are learning HTML or are saving the file to use in an online demonstration), choose .HTML. You are also prompted to choose a file name and a location (i.e., directory or folder) on your PC in which to save the file.

In Explorer, the function is similar. Choose "File | Save As" and then provide the relevant information for "save as type" and "file name," as with Navigator, and choose the directory or folder you want to save the file in by scrolling through the directories or folders in the "Save in" box.

NOTE: Though many (probably most) files on the WWW are freely downloadable, pay attention to any copyright notices displayed on the page. Also, be aware that future copyright legislation may impact the legality of downloading files from Web sites.

- *Finding words or phrases in a document.* Once a document is viewed on screen, you can look for words in the text of that document. In Navigator, select "Edit | Find in Page" from the option bar at the top of the screen. A box appears in which you type the word you want to find. When you select ENTER, the text will jump to the next instance of the chosen word. Similarly, with Explorer, select "Edit | Find (on this page)" and type in the desired word.

- *Using bookmarks.* If you find a very useful site that you want to visit regularly, you don't need to type in the URL every time. Simply access the document once. Then, using Netscape Navigator, with the document viewed on screen, choose "Bookmarks | Add Bookmark" from the Location Toolbar. The URL will be automatically saved in a bookmark file. The next time you want to visit that site or document, choose "Bookmark" again, then select the name of the site you want to visit from the bookmark list. Microsoft Explorer functions similarly; simply choose "Favorites | Add to Favorites" to add a site to your list.

### Using FTP in Web Browsers

An easy way to understand FTP is to think of it as a way of copying files. File transfer protocol used to be the primary method of copying files stored on one computer on the Internet to another computer on the Internet. It is still very useful, but other software, such as the World Wide Web, is now more commonly used to retrieve files. To use FTP, you will need three pieces of information: (1) the address of the FTP site; (2) the directory in which the file is stored; and (3) the exact name of the file.

Many FTP servers offer anonymous FTP. This means that any users are allowed to access selected files on that server. If an FTP server is not an anonymous FTP server, you will need a logon and password to access files on that server. Typically, anonymous FTP servers require you to use the logon name "anonymous" and your email address as a password. However, when accessing an FTP site through the WWW, the logon and password step is typically bypassed.

The protocol for accessing FTP sites is incorporated into the World Wide Web. When you want to access a Web page from a Web browser, you simply type the URL of that page into the File Location box or Address box of your Web browser. For example, to visit the ERIC/EECE home page, you would type:

`http://ericece.org/`

Just so, to visit an FTP site from a Web browser, you would simply type in the URL of the FTP site. The difference is that the protocol indicated in the URL is not "http" but "ftp." For example, suppose a friend has suggested you read the *Guide to the Internet* of the Electronic Frontier Foundation (EFF). You simply type the URL for the EFF's FTP site (which your friend has given you) in the File Location box of your Web browser:

`ftp://ftp.eff.org`

Your friend has told you the directory path to and the filename of the guide (/pub/Net\_info/EFF\_Net\_Guide/netguide.eff). So you successively select the directories "pub," "Net\_info," and "EFF\_Net\_Guide." Then you select the file "netguide.eff." Because this file is a text file, it will display on your screen. You can save this file using the File-Save feature of your Web browser. If you were to select an executable file (that is, a program) for downloading by FTP, a pop-up box would appear in which you would select where you want to place the software on your computer.

### Using Gopher in Web Browsers

Gopher is software used by Internet sites to organize their electronic resources. Gopher, which is text only, has been superseded by the World Wide Web. Many organizations have discontinued their Gophers. Organizations that are now coming online are typically doing so on the WWW only, bypassing the use of Gopher. However, it is still possible to access Gophers using Web browsers. Simply type the URL of the Gopher into the File Location box of the Web browser. Again, the URL format is the same except that instead of the Web protocol "http," the URL contains a Gopher protocol. For example, to connect to the Gopher of the U.S. Department of Education, type:

`gopher://gopher.ed.gov/`

After you've connected to the gopher, scroll through the directories.

### Using WWW Search Engines

There are several sites on the Web that provide search engines, by means of which Web users can search for information on the Web. These sites have many common features and some idiosyncrasies. Generally, after you access such a site, you will see a box in which you type a keyword or keywords relevant to the topic you are searching. Then you click on a "submit search" (or similarly named) button and the search is executed. When it is finished, usually in a few seconds, you will be presented with an explanation of what the search found (e.g., "Found 175 documents with keywords...") and a list of documents on the Web that fit the criteria of your keywords. The documents are usually listed in order of relevance, that is, the search engine lists first that document which it thinks is most relevant to your search. In this list, the name of the document or its URL is usually a hypertext link; that is, you can click on the name or URL and go directly to the document.

Many World Wide Web search engines offer more than just Web searching. Many also have directories of sites by topic. Search engines also offer various services such as guides, site rating, sports information, stock information, product sales, etc.

Search engines vary in how many documents they display, how they interpret keywords, how they use Boolean searching (that is, AND, OR, and NOT search operators), whether they search for phrases as well as words, how many documents on the Web they search, how often they are updated, whether they allow searching in topical categories, and many other features. A detailed examination of these features across multiple search engines is beyond the scope of this guide. You will simply need to try various search engines. After doing so, you will probably develop a few favorites. Note that many people use Web search engines. As a result,

these sites are often very busy and may be difficult to contact. Here is a list of URLs for some popular search engines.

Alta Vista	<a href="http://www.altavista.digital.com/">http://www.altavista.digital.com/</a>
Excite	<a href="http://www.excite.com/">http://www.excite.com/</a>
InfoSeek	<a href="http://www.infoseek.com/">http://www.infoseek.com/</a>
Lycos	<a href="http://www.lycos.com/">http://www.lycos.com/</a>
800Go	<a href="http://www.800go.com/800go.html">http://www.800go.com/800go.html</a>
Suite 101	<a href="http://www.suite101.com/">http://www.suite101.com/</a>
WebCrawler	<a href="http://webcrawler.com/">http://webcrawler.com/</a>
Yahoo	<a href="http://www.yahoo.com/">http://www.yahoo.com/</a>

There also exist several meta-search engines. When you search using one of these sites, your search terms are submitted to several other search engines and then search results are combined into one list. Three such meta-search engines are:

Cyber 411	<a href="http://www.cyber411.com/">http://www.cyber411.com/</a>
Inference Find	<a href="http://www.infind.com/">http://www.infind.com/</a>
MetaCrawler	<a href="http://www.metacrawler.com/">http://www.metacrawler.com/</a>

### **Creating a WWW Page**

The various hypertext links in home pages and other pages on Web sites are created using hypertext markup language (HTML). Just as "codes" in word processing programs tell those programs how to display and print documents, so do "tags" in HTML tell Web browsers how to display documents. These tags not only provide instructions about hypertext links, but also about display features such as boldface, italics, headings, line breaks, insertion of graphics, etc.

To create a home page (or other pages) on the WWW, you need first of all to have a Web server on which to put your page once it is created. Your Internet provider may be able to provide you with space on a server. After finding server space, you need to create your page. Web pages are created using HTML. The tags that comprise HTML can be typed in manually using a text editor or word processor, or they can be inserted using an HTML editor. In either case, it helps to have some knowledge of HTML. There are several ways to learn about HTML.

- *Workshops.* Often universities, colleges, or community colleges will provide workshops in the use of HTML to staff, faculty, students, or community members.
- *Viewing web documents.* By using the "View | Page Source" feature (in Netscape Navigator) or "View | Source" feature (in Microsoft Explorer) of a Web browser (as explained above in the section on "Using Web Browsers"), it is possible to learn about HTML from the way other creators of Web pages have used HTML.
- *Print manuals.* There are many books that describe the use of HTML. Any bookstore with a computer section will have a selection of these manuals. Some popular HTML books are *HTML 3: Electronic Publishing on the World Wide Web* (Raggett, 1996), *The HTML Sourcebook* (Graham, 1997), and *HTML Publishing on the Internet* (Heslop, 1998). See the section "For More Information" at the end of this chapter for other books on HTML.

- *Online manuals.* There are a number of manuals on the Internet itself that explain the use of HTML and the creation of Web pages. Some good introductory manuals are available from the National Center for Supercomputing Applications (NCSA) at the University of Illinois. The URLs for two online manuals are:

A Beginner's Guide to HTML (from NCSA)  
<http://www.ncsa.uiuc.edu/General/Internet/WWW/HTMLPrimer.html>

The Bare Bones Guide to HTML by Kevin Werbach  
<http://werbach.com/barebones/>

Having learned about HTML, you can create HTML pages either by typing HTML tags into a document by hand, or by using an HTML editor. There are many HTML editors on the market. These editors are periodically reviewed in computer and Internet magazines, some of which are available as online reviews. For example, on the ZDNet Web site, you can find a *PC Magazine* review of 16 Web authoring tools, including HTML editors and related products:

<http://www.zdnet.com/products/content/pcmg/1702/262056.html>

(Note that this URL might change. If so, go to the ZDNet main site [[www.zdnet.com](http://www.zdnet.com)] or the *PC Magazine* home page [[www.zdnet.com/pcmag](http://www.zdnet.com/pcmag)] and follow the appropriate links through reviews or products.)

Some popular HTML editors are:

- *Dreamweaver* by Macromedia.  
800-945-9085; <http://www.macromedia.com/>
- *FrontPage* by Microsoft Corp.  
425-882-8080; <http://www.microsoft.com/>
- *Home Page* by FileMaker, Inc. (formerly Claris Corp.)  
800-986-2249; <http://www.filemaker.com/>
- *HotDog Pro* by Sausage Software  
<http://www.sausage.com/>
- *HotMetal Pro* by SoftQuad, Inc.  
416-239-4801; <http://www.sq.com/>
- *NetObjects Fusion* by NetObjects, Inc.  
650-482-3200; <http://www.netobjects.com/>
- *PageMill* by Adobe Systems, Inc.  
408-536-6000; <http://www.adobe.com/>
- *Web Designer* by Corel Corp.  
613-728-6625; <http://www.corel.com/>

Besides programs specifically designed to prepare HTML pages for the Web, many Web browsers and word processors now include an HTML editor as a feature.

## Finding What You Want on the Internet

Many new Internet users think that finding what you want on the Internet is the most difficult and frustrating part of Internet use. As more and more organizations and individuals have

developed a presence on the Internet, that task has become an increasingly challenging one. Various finding tools for the Internet make the task much easier, but the best way to get started is to ask a friend or colleague what sites are most useful.

Here are several strategies for finding what you want on the Internet.

- *Ask discussion group participants.* Customized help in finding resources on particular topics can be obtained by participating in discussion groups or listservs. For example, if you are a member of the ECENET-L electronic discussion list and you are looking for texts on the Internet that discuss developmentally appropriate practices, you might pose a question to that effect to the list.
- *Use Internet finding tools.* Many search engines are available for finding information on the World Wide Web. These search engines are discussed above in the section on "Using WWW Search Engines." Many education sites offer extensive listings of Internet resources on topics of interest to educators, such as Stanford University and the Illinois Learning MOSAIC.
- *Use Internet finding tools to find Listserv discussion lists.* Just as there are Web sites that provide search engines for searching the Web, so there are Web sites that search for electronic discussion lists. These are described in Chapter 2 of this Guide, "Electronic Discussion Lists for Early Childhood Educators."
- *Send an email message to AskERIC.* The ERIC Internet question-answering service called AskERIC can provide pointers to specific resources, such as penpal programs for children. Requests for information should be mailed to [askeric@askeric.org](mailto:askeric@askeric.org). AskERIC (and its parent-related component, PARENTS AskERIC) is a good source for information on all topics related to education and can be used by parents, educators, or anyone else interested in education. "InfoGuides" housed at the AskERIC Virtual Library offer pointers to Internet (and print) resources on such topics as children's literature, child abuse, home schooling, and the media and children. The URL of the InfoGuide section of the AskERIC Web site is:

<http://ericir.syr.edu/Virtual/InfoGuides/>

Or, obviously,

*Use this book to get started!*

## For More Information

The following books relate to various topics discussed in this chapter. Some were cited in the chapter. We have provided a sampling of books on certain Web-related topics, such as Internet directories and HTML guides. This sampling should not be interpreted as a recommendation of these books by ERIC/EECE over others. In the computer or Internet section of many book stores, you will find many other worthwhile texts on these topics. We have not included books on particular software, such as Netscape Navigator, Microsoft Internet Explorer, or Microsoft FrontPage.

For additional titles related to early childhood and the Internet, see the ERIC bibliography in Chapter 5.

Barron, Ann E., & Ivers, Karen S. (1996). *The Internet and instruction: Activities and ideas*. Englewood Cliffs, CO: Libraries Unlimited.

**Chapter 2**  
**Electronic Discussion Lists**  
**for Early Childhood Educators**

Electronic discussion lists are commonly called "Listservs," after one of the popular types of software used to run such lists. Other lists use "Majordomo" or "Listprocessor" (Listproc) software. List members do not need to attend to the details of these different types of software, except that there are a few differences among these software types in typical administrative commands used with the list. Information on the use of electronic discussion lists was provided in Chapter 1 of this guide, in the section on "Internet Mail Lists."

This chapter explains some of the administrative commands that are commonly used on electronic discussion lists, noting differences among the three main types of list software. The chapter then continues with some suggestions for finding electronic discussion lists on the Internet. The bulk of the chapter consists of a series of pages that describe electronic discussion lists on various topics related to early childhood education.

## Some Common Email Discussion List Commands

Each electronic mail discussion list has two electronic addresses associated with it: (1) a "list address," which is the address to use when you want to send a message to be read by all the list subscribers; and (2) an "administrative address," which is the address to use when you want to send commands or requests concerning your list subscription.

There are several types of email discussion lists, depending on the type of software on which the list is based. These instructions present some common commands for three types of lists: (1) LISTSERV; (2) MAJORDOMO; and (3) LISTPROC. Note that not all commands are available on all types of lists.

After you have subscribed to a mail list, you will get an email message back from the computer that operates the list. This message will notify you of your subscription, provide some information about the list to which you have subscribed, and describe some common commands to use on the list. *Save this message for future reference.*

For each of the commands listed below, send the command in an email message to the administrative address of the list. Leave the subject line of the message blank. In the body of the message, type the information as indicated. Do not include a signature with your email message.

### 1. Subscribing to a list

LISTSERV

subscribe LISTNAME YourFirstName YourLastName

MAJORDOMO

subscribe LISTNAME YourEmailAddress

LISTPROC

subscribe LISTNAME YourFirstName YourLastName

## 2. Leaving a list

LISTSERV  
signoff LISTNAME

MAJORDOMO  
unsubscribe LISTNAME YourEmailAddress

LISTPROC  
unsubscribe LISTNAME

## 3. Setting mail options for digest format (that is, all the day's messages compiled into a single message)

LISTSERV  
Set LISTNAME digest

LISTPROC  
set LISTNAME mail digest

## 4. Setting mail options for individual messages (this is the default setting when you subscribe; you might use this command if you've set your option to digests and you decide you want individual messages instead)

LISTSERV  
Set LISTNAME mail

LISTPROC  
Set LISTNAME mail ack

## 5. Temporarily suspending mail from a list (e.g., when you go on vacation)

LISTSERV  
Set LISTNAME nomail

LISTPROC  
Set LISTNAME mail postpone

## 6. Resuming mail from a suspended list

Send the commands for individual messages or for digest messages that are explained above.

## 7. Obtaining a list of commands

LISTSERV  
help  
OR  
info refcard

MAJORDOMO  
help

## Finding Electronic Discussion Lists

Given the fact that participating in a list may be useful for an education professional, the question arises, "How do I find out about a list on a topic I'm interested in?" Luckily, there are several ways to find electronic discussion lists on the Internet. These ways are described in this section.

### 1. Send a command to a Listserv computer

One way to find out about education-related Listserv lists is to send a command to any Listserv computer requesting a global list of all Listserv lists. Actually, this method *used* to be effective when the number of Listserv lists was small. Now (November 1998) the number is so great that the size of the file containing the list is unmanageably large. However, it is still possible to send a command to get a list of Listserv lists with a keyword in the list name or list description. (Note that this technique will not provide any information on lists that use Majordomo or Listprocessor software.) Send a message to any Listserv computer in the format:

```
lists global /keyword
```

Note that you should not include a subject line or a signature with an administrative message to a Listserv computer. Note also that some Listserv computers do not keep global lists of Listserv lists. If you send this message to such a computer, it will send you back a message suggesting the address of another computer. For example, to get a list of all Listserv lists with "preschool" in their name or description, you could send an email message to the Listserv computer at the University of Kentucky:

```
listserv@lsv.uky.ed
```

In the body of the message, type the command:

```
lists global /preschool
```

As with other administrative requests to a Listserv computer, do not include a subject or a signature. You will receive a response identifying relevant Listserv lists (in September 1998, two lists):

Network-wide ID	Full address and list description
----- KIDS-PRESCHOOL	----- KIDS-PR@VM3090.EGE.EDU.TR Kids - PreSchool discussion list
REGGIO-L	REGGIO-L@POSTOFFICE.CSO.UIUC.EDU Reggio Emilia Preschool Discussion Group

Note that there are more lists than these two that have relevance for preschool education. These are just those lists that use the word "preschool" somewhere in their description.

## 2. Use a World Wide Web search engine

A better way to find a topical electronic discussion list is to use an Internet search engine, as described in the section in Chapter 1 on "Using WWW Search Engines." In this case, you might use "listserv" (or "majordomo") as one keyword, and your desired topic (perhaps "early childhood" or "reggio emilia") as another. Note that, as a result of such a search, you will get back a list of Web pages on which your search terms are used. You will not necessarily get immediately to a description of the desired list.

## 3. Use a search engine that searches lists

Perhaps the best way to find a topical electronic discussion list is to use a "list of lists" on the WWW. These Web sites have already compiled lists of lists, sometimes organized into categories (such as "education"), that you can browse or search. Examples of such Web sites are:

Liszt: The Mailing List Directory  
<http://www.liszt.com/>

Note that, in the title of this site, "mailing list" means "electronic discussion list" such as a Listserv list. On this Web site, you can search through Liszt's main directory of mailing lists. As of this writing (September 1998) there are more than 90,000 entries in this directory. Entries include Listserv, Majordomo, and Listproc lists. To search for a list on a certain topic, simply type in appropriate search terms (e.g., "early childhood") in the search box and select the "go" (i.e., the search) button. You will then be presented with a list of those discussion lists that have those words in their description. You can then click on the name of a list to read more information about that list. The amount of information (e.g., list address, description) differs from list to list. Often, suggestions are made for getting more information. It is also possible to search for information on a list whose name you already know by typing that name (e.g., "ECENET-L") into the search box. A "help" feature is provided to assist users in constructing searches.

A second feature of the Liszt site is a browsable topical list of lists, divided into several categories, such as Culture, Education, and Health. Click on the category name to see a list of subcategories (e.g., under Education you will find subcategories of "Early Childhood," "Elementary," "K-12," "Technology," etc.). Click on the subcategory name to see a list of lists, with brief descriptions, in that subcategory. Note that this browsable list of lists is not nearly as large as the full searchable directory. The browsable list contains a certain number of "select" lists chosen by the Liszt site managers.

Tile.Net/Lists  
<http://tile.net/lists/>

This Web site also allows users to search for lists by name or keyword. There are also browsable alphabetical lists of lists by name, subject (e.g., "Education"), description, host country, and sponsoring organization. The first three of these listings are similar to those on Liszt. With the last two types of listing, if you happen to know there's a list you want in France or at the University of Illinois at Urbana-Champaign, for example, you can focus your search more quickly.

Tile.Net contains only Listserv discussion lists (unlike Liszt). The information provided for each list is in an easy-to-read tabular format. Less information is provided on Tile.Net than on Liszt.

CataList, The Official Catalog of Listserv Lists  
<http://www.lsoft.com/lists/listref.html>

This Web site allows users to search for public Listserv lists. The directory is based on the official global list of Listserv lists. As of September 1998, the site searches more than 20,000 public Listserv lists, out of a total of more than 120,000 Listserv lists. Users can search for a Listserv list by list name, list host name, or keywords in the list title or description, and they can limit their searches to those lists that have a Web archive available. Users can also browse through a list of Listserv lists by host site or host country, or they can browse through a list of lists that have more than 1,000 or more than 10,000 subscribers.

As a result of a search on CataList, users are typically given the list name, host name, number of subscribers, special features, and subscription instructions.

#### **4. Post a message to a list**

Another good way to find out about electronic discussion lists is to post a question to a list of which you are already a member. If you are a member of ECENET-L, for example, and you've gotten excited about the Reggio Emilia approach to preschool education, having just read the *Hundred Languages of Children*, you might post a question to the ECENET-L list asking if anyone knows of an electronic discussion list that deals with the Reggio Emilia approach. Undoubtedly, several other list members will respond to this question, suggesting that you join the REGGIO-L discussion list.

#### **5. Use print resources and authoritative or professional sources**

Suggestions on education-related lists can be found in many print publications that provide information about Internet resources and are offered by organizations that have some authority or expertise in the early childhood profession.

A publication by the Association of Research Libraries contains two substantial directories. The first is a directory of electronic journals and newsletters; the second is a directory of "scholarly and professional e-conferences," which includes electronic discussion lists in several categories, such as "Education and Library and Information Science." This is a very large reference work (well over 1,000 pages) which may not be suitable for personal purchase. However, many libraries have this work in their reference collection.

There is a Web version of the *Directory of Scholarly and Professional E-Conferences*, however, so that one need not rely on acquiring or finding the print publication. This Directory is compiled by Diane Kovacs. The URL for this directory is:

<http://www.n2h2.com/KOVACS/>

Users of this electronic directory can search for lists globally, by list name, or by keyword in list name or description. As a result of a search, users are provided with general information

about lists that match their search terms.

One can also find information on electronic discussion lists related to various topics from authoritative sources, that is, organizations whose work deals with those topics. For example, ERIC/EECE gathers and disseminates information on early childhood education. The ERIC/EECE Web site contains a list of Listserv lists related to early childhood education that the clearinghouse sponsors. You can find this list in the "Listserv" or "Electronic Discussion Group" section of the ERIC/EECE Web site:

<http://ericeece.org/>

ERIC/EECE also publishes this *A to Z Guide*. The current chapter is dedicated to providing early childhood education professionals with a list of electronic discussion lists on topics of possible interest.

Another example of a list maintained by a source within the education profession is the "Educational Mailing Lists for Teachers" maintained by the San Francisco Unified School District on its Web site:

<http://www.sfusd.k12.ca.us/index.html>  
<http://www.sfusd.k12.ca.us/resources/listserv.html>

As you can see, these specially compiled resources from authoritative or professional sources may be available in print or on the Internet. However, these days, one is most likely to find these lists on Web sites, where they are much easier to update than in print.

## **Description of Electronic Discussion Lists**

The rest of this chapter consists of pages that provide information about individual electronic discussion lists related to early childhood education. The information typically includes: (1) the name of the list; (2) the list sponsor; (3) a description of the topic or purpose of the list; (4) the URL of any related Web site; (5) the type of software (e.g., Listserv) on which the list is based; (6) the location of a list archive; (7) email addresses for the list; (8) contact persons for the list; and (9) subscription instructions.

---

## CAMPUSCARE-L

---

**Name:** CAMPUSCARE-L@postoffice.cso.uiuc.edu

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education and National Coalition of Campus Children's Centers

**Description:** CAMPUSCARE-L is an unmoderated electronic discussion list devoted to topics related to the concerns of staff, faculty, and administrators in laboratory schools or children's centers on university or college campuses, in early childhood education departments, and in family-work programs; and of others interested in campus environments for children.

**Related Web site:** National Coalition for Campus Children's Centers  
<http://ericps.crc.uiuc.edu/n4c/n4chome.html>

**Type of Resource:** Listserv mail list

**Archive:** [http://ericir.syr.edu/Virtual/Listserv\\_Archives/campuscare-l.html](http://ericir.syr.edu/Virtual/Listserv_Archives/campuscare-l.html)

**Address:** Administrative Address: [listserv@postoffice.cso.uiuc.edu](mailto:listserv@postoffice.cso.uiuc.edu)  
Discussion Address: CAMPUSCARE-L@postoffice.cso.uiuc.edu

## CSHCN-L (Children with Special Health Care Needs)

---

**Name:** CSHCN-L@lists.ufl.edu

**Sponsor:** Institute for Child Health Policy (University of Florida, Gainesville)

**Description:** The purpose of CSHCN-L is to establish an electronic network of individuals with shared interests, both professional and personal, in children with special health care needs. The CSHCN-L list provides the opportunity to exchange ideas, identify exemplary programs addressing the needs of the population of children with special health care needs and their families, and initiate a dialogue on the critical issues which need to be identified and articulated to inform debate.

## CYE-L (Children, Youth and Environments List)

---

**Name:** CYE-L@cunyvms1.gc.cuny.edu

**Sponsor:** Graduate Center of the City University of New York

**Description:** This is a multidisciplinary list open to professionals in the social sciences, environmental and design disciplines, early childhood education, child psychology and child development, and other related fields. We also welcome children and youth interested in the same issues. The goal of the list is to establish and increase communication among individuals who work with children and youth and the physical (designed and natural) environment. CYE-L was born as a result of discussions that took place at the 26th annual meeting of the Environmental Design Research Association (EDRA) in Boston, March 1994. It will operate as a part of the EDRA Children, Youth, and Environments Network, though other non-EDRA members are cordially welcome to join the list (and, if you later wish, to join the CYE Network and EDRA).

## Subscription

**Directions:** To indicate your wish to subscribe to this list, please do either of the following:

1) If using a "Request" interface, send a message to:

`CYE-L-REQUEST@cunyvms1.gc.cuny.edu`

--Leave the subject line blank.

--In the first line of the body of the message, type:

`SUBSCRIBE {your first name} {your last name}`

2) If using a "Listserv" interface, send a message to:

`LISTSERV@cunyvms1.gc.cuny.edu`

--Leave the subject line blank.

--In the first line of the body of the message, type:

`SUBSCRIBE CYE-L {your first name} {your last name}`

--DO NOT INCLUDE A SIGNATURE IN YOUR MESSAGE

If unsure which interface your computer system uses, try #2 first.

This is a closed list, meaning that Selim Itus will review subscription requests, and, more importantly, only those who are members of the list can post to the list, i.e., no unwanted solicitations. Once you are subscribed, and receive a confirmation message, you can post messages to the list by sending e-mail to:

`CYE-L@cunyvms1.gc.cuny.edu`

Further administrative requests regarding this list should be sent to:

Internet: `CYE-L-request@cunyvms1.gc.cuny.edu`

## ECPOLICY-L (Early Childhood Policy)

---

**Name:** ECPOLICY-L@postoffice.cso.uiuc.edu

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education

**Description:** ECPOLICY-L provides a forum for discussion of policy issues related to young children. Discussion centers on (1) providing information about the development, care, and education of young children for state, federal, and local policy makers; (2) raising the awareness of policy makers, educators, the media, and parents about the issues important to the future of young children; and (3) encouraging responsiveness of the early childhood community to public issues affecting children. Membership is open to anyone interested in the future of young children.

## ECPROFDEV-L (Early Childhood Professional Development)

---

**Name:** ECPROFDEV-L@postoffice.cso.uiuc.edu

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education

**Description:** ECPROFDEV-L will foster communication among those who teach pre-service and in-service early childhood educators, train Head Start or other early childhood program staff, and consult or facilitate learning with early childhood professionals in any setting. Discussions focus on varying philosophies in approaching the education and training of diverse groups in early childhood education, as well as on the nitty-gritty of figuring out syllabi, designing learning activities, meeting the challenges of training in a variety of settings, and on new resources, assessment, etc.

**Type of Resource:** Listserv mail list

## GTOT-L (Gifted)

---

**Name:** GTOT-L@eskimo.com

**Description:** GTOT-L is a mailing list for anyone interested in issues having to do with gifted children at very young ages (under 6 years of age, generally). While much research has been directed at gifted children and their needs from age 6 onwards, information about the very young seems more difficult to find. GTOT-L is open to anyone wishing to discuss these issues. It operates as a reflecting mailing list, that is, e-mail contributed to the list is "reflected" and sent as a private e-mail message to each subscriber individually.

**Type of Resource:** Smartlist mail list

**Address:** Administrative Address: user@eskimo.com  
Subscription Address: see instructions below  
Discussion Address: GTOT-L@eskimo.com

### Subscription

**Directions:** 1) To subscribe to GTOT-L and receive individual message postings, send an e-mail message to:

## MATHMAGIC-K-3-OPEN

---

**Name:** MATHMAGIC INTERNET

**Sponsor:** Math Forum

**Description:** MATHMAGIC is a K-12 telecommunications project developed in El Paso, Texas, that provides a strong motivator for students to use computer technology while increasing problem-solving strategies and communications skills. MathMagic posts challenges in each of four grade categories to trigger each registered team to pair up with another team and engage in an exchange of problem-solving dialog. MATHMAGIC-K-3 posts challenges for grades K-3 (other lists address grades 4-6, 7-9, and 10-12). Lists are for unregistered and registered members. Unregistered individuals should subscribe to an "OPEN" list, e.g., MATHMAGIC-K-3-OPEN. After subscribing, a member will be sent a registration form to subscribe to the registered list, e.g., MATHMAGIC-K-3. There is a fee for registration. Unregistered members of the OPEN lists are able to read messages but not post messages. Registered members are allowed to post messages and participate in the math team projects.

## MULTIAGE Discussion List

---

**Name:** Multiage@services.dese.state.mo.us

**Sponsor:** Ridgeway Elementary School, Columbia, Missouri

**Description:** This discussion list is devoted to the interests of multiage schooling. The goal of this list is to create a knowledge base of multiage learning and teaching via electronic networking. This list aims to provide an avenue for persons interested in multiage learning to interface through the list. Possible topics of discussion include, but are not confined to: sharing curriculum ideas; discussing social interplay in development of students in multiage learning settings; providing and requesting pertinent research; and providing a forum for related questions and answers. The list was established as part of a grant received by the school.

**Type of Resource:** Listprocessor mail list

**Name:** PARENTING-L@postoffice.cso.uiuc.edu

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education

**Description:** PARENTING-L focuses on topics related to parenting children (including child development, education, and care) from birth through adolescence. Discussion ranges from family leave and parental rights issues, to parents as partners in their children's education, to the changes we see in our children as they leave high school and begin college or get their first job. Owned and managed by the ERIC Clearinghouse on Elementary and Early Childhood Education, PARENTING-L provides an important forum for discussion and sharing information.

## PROJECTS-L

---

**Name:** PROJECTS-L@postoffice.cso.uiuc.edu

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education

**Description:** PROJECTS-L is a discussion list for anybody interested in the use of the Project Approach. For the purposes of this discussion list, the Project Approach is defined as "an in-depth study of a topic undertaken by a class, a group, or an individual child." Typically, the Project Approach refers to children's collaborative studies of "real world" topics that offer opportunities for observation and measurement of actual phenomena.

## SNE-EATALK-L (Special Needs Education, Educational Assistants)

---

**Name:** SNE-EATALK-L@schoolnet.ca

**Sponsor:** Special Needs Education Network, sponsored by the Schoolnet Project

**Description:** SNE-EATALK-L is an open, unmoderated list which provides a forum for educational assistants and teacher assistants to discuss topics of general interest in special needs education. Educational assistants from all areas of education are welcome. Children with "special needs" are defined as those who require a level of specialized services in one or more of the spheres of learning (affective/cognitive/psycho-motor). Affiliated with the Special Needs Education Network (SNE) and several other discussion lists sponsored by the SNE Network, this list is a friendly, informal atmosphere—a place to learn, ask questions, and help others in need. The primary goal of SNE-EATALK-L is to facilitate the improvement of special needs education through healthy conversations.

## SNEPARENTALK-L (Special Needs Education, Parents)

---

**Name:** SNEPARENTALK-L@schoolnet.ca

**Sponsor:** Special Needs Education Network, sponsored by the Schoolnet Project

**Description:** SNEPARENTALK-L provides a forum for discussion of children with "special needs," defined as those who require a level of specialized services in one or more of the spheres of learning (affective/cognitive/psycho-motor). Affiliated with the Special Needs Education (SNE) Network and several other discussion lists sponsored by the SNE Network, this list specifically addresses parents' concerns and needs regarding their children's special needs. Parents should find this list to be a friendly, informal atmosphere—a place to learn, ask questions, and help others in need. The primary goal of SNEPARENTALK-L is to educate parents about special needs education through healthy conversations.

## ANNIE E. CASEY FOUNDATION

---

**Name:** Annie E. Casey (AEC) Foundation

**Sponsor:** Annie E. Casey Foundation

**Description:** The Annie E. Casey Foundation is a private, charitable organization dedicated to helping build better futures for disadvantaged children in the United States. Its primary mission is to foster public policies, human service reforms, and community supports that more effectively meet the needs of today's vulnerable children and families. The site includes information on *Kids Count*, the national and state-by-state effort to track the educational, economic, social, and physical well-being of children in the United States. The full text of the 1998 *Kids Count* report is provided, as are summaries of the 1995, 1996, and 1997 reports; contact information on states' *Kids Count* efforts is also provided. Other full-text publications, descriptions of AEC initiatives, and news from AEC are also provided.

## ASKERIC

---

**Name:** AskERIC

**Sponsor:** ERIC Clearinghouse on Information and Technology, Syracuse University; U.S. Department of Education, Office of Educational Research and Improvement

**Description:** AskERIC is an Internet-based education information service located at the ERIC Clearinghouse on Information and Technology at Syracuse University. The AskERIC site is composed of three components: the AskERIC Virtual Library, AskERIC Research & Development, and AskERIC Question & Answer Service. The Virtual Library contains lesson plans for pre-K through grade 12; AskERIC "collections," including InfoGuides to Internet and other resources on a wide range of topics (child abuse, children's literature, home schooling, and many others); ERIC Digests; listserv archives; and bibliographies. The Research & Development section describes projects undertaken by the Clearinghouse. The AskERIC Internet-based question-answering service currently responds within 2 working days to approximately 900 questions per week. Questions from AskERIC are routed to the ERIC Clearinghouse best suited to respond to the request. Questions can be sent to [askeric@askeric.org](mailto:askeric@askeric.org) for an individualized response. The site also contains an interface for searching the ERIC database on the Web.

## CHILDREN, STRESS, AND NATURAL DISASTERS

---

**Name:** Children, Stress, and Natural Disasters

**Sponsor:** Cooperative Extension Service of the University of Illinois at Urbana-Champaign

**Description:** This section of a Web site on disaster preparedness and recovery contains resources for teachers and other child care or youth workers that help prepare them for working with children who have been through a disaster. The resources include: (1) "Guide for Teachers," which describes what children might experience during and after a disaster and what teachers can do to help students during the recovery period; the items under this section relate to all educational levels generally; (2) "School Activities for Teachers," which provides suggestions for activities that teachers can use in their classrooms after a disaster, curriculum guides on disaster-related topics, a bibliography of children's literature on floods and natural disasters, and a list of resource materials available from the American Red Cross for little or no cost. The activities and curriculum guides are related to specific educational levels, including preschool and early elementary grades.

## ERIC CLEARINGHOUSE ON URBAN EDUCATION

---

**Name:** Urban Education Web

**Sponsor:** ERIC Clearinghouse on Urban Education (ERIC/CUE), Columbia University;  
U.S. Department of Education, Office of Educational Research and  
Improvement

**Description:** This ERIC Clearinghouse site contains full-text manuals, brief articles, annotated bibliographies, reviews and summaries of outstanding publications, and conference announcements in urban education. The "Publications" section contains the full text of papers from the "Urban Diversity Series," "Trends and Issues Series," ERIC Digests, Information Alerts, Parent Guides, and Bibliographies and Directories. The section on "Urban and Minority Families," which is part of the National Parent Information Network, contains several full-text publications, many concerning parent involvement. The site also includes links to other urban education resources on the Web. A search of the site using "early childhood education" brings up numerous resources.

**Type of  
Sponsor:** University, Government

**Address:** <http://eric-web.tc.columbia.edu/>

## GATEWAY TO EDUCATIONAL MATERIALS

---

**Name:** Gateway to Educational Materials (GEM)

**Sponsor:** ERIC Clearinghouse on Information and Technology; U.S. Department of Education, Office of Educational Research and Improvement

**Description:** The Gateway provides one-stop access to high-quality Internet lesson plans, curriculum units, and other education resources, currently linking to over 1,200 resources on 12 Internet sites. The materials are organized into a massive virtual card catalog for online educational resources. The Gateway's search engine allows users to locate educational materials in the virtual world in the same way they would in a traditional library—by subject, keyword, or title. GEM's searching tools also expand educators' searching capability to include searching by grade levels, special needs, and more. Users are provided with detailed abstracts of the resources to help them decide whether they want the material before linking to the site.

**Type of Sponsor:** University, Government

**Address:** <http://www.thegateway.org/>

## THE KEEPING KIDS READING PAGE

---

**Name:** The Keeping Kids Reading Page

**Sponsor:** Mary Leonhardt

**Description:** This site is maintained by Mary Leonhardt, a high school teacher and author. The premise of the site is that the love of reading is a cornerstone of academic success. The site provides monthly tips on how to encourage kids to read instead of forcing them to read. In addition, the site answers common reading questions about ways to develop the love of reading at an early age. Finally, there are links to other reading resources and descriptions of various series and books to help find the "right" book that might capture a child's interest.

## NATIONAL CENTER FOR ENVIRONMENTAL HEALTH

---

**Name:** Infant and Children Page of the National Center for Environmental Health (NCEH)

**Sponsor:** Centers for Disease Control and Prevention

**Description:** The National Center for Environmental Health is committed to being a leader in environmental public health, to providing scientific data, and to providing practical and constructive service to the public. NCEH is particularly committed to programs that benefit children and people often overlooked by public health (like the elderly and people with disabilities). The "Infants and Children" page provides full-text information on lead poisoning, birth defects, developmental disabilities, and newborn screenings. Brochures, answers to popular questions, tips on prevention, and additional contact information are provided.

## PATHWAYS TO SCHOOL IMPROVEMENT

---

**Name:** Pathways to School Improvement

**Sponsor:** North Central Regional Educational Laboratory/Regional Educational Laboratory Network

**Description:** Pathways to School Improvement guides educators in addressing school improvement issues concerning students, educators, content, methods, and environment. "Critical Issues" and other full-text resources within each of these areas contain action-oriented summaries of research and practice, descriptions of schools that have already addressed the issue, and collections of materials to support change. There is a section devoted to school improvement issues in early childhood education that deals with the following issues: organizing for effective early childhood programs and practices, and assessing young children's progress appropriately (others are under development).

## PRESCHOOL TEACHER

---

**Name:** Preschool Teacher

**Sponsor:** Stormie Seevers

**Description:** This site contains curriculum and activity ideas for preschool classrooms, arranged by month. The site's creator attempts to: (1) follow guidelines for "developmentally appropriate practices" as set forth by NAEYC; (2) plan activities that reflect the ethnic and cultural backgrounds of all children in the classroom; (3) for the most part, avoid worksheets and "craft" projects, opting instead to provide open-ended activities; (4) teach letter and number recognition through games and everyday activities, not rote memorization and printing; (5) allow children to learn at their own pace through discovery learning centers; (6) include a variety of activities in math, science, language, music and movement, creative drama, and art; (7) focus on skills in the areas of thinking, physical, social/emotional, and language development; and (8) be flexible.

**Type of Sponsor:** Individual

**Address:** <http://www.bv.net/~stormie/>

## PREVLIN: PREVENTION ONLINE

---

**Name:** PREVLIN: Prevention Online

**Sponsor:** National Clearinghouse for Alcohol and Drug Information

**Description:** The PREVLIN site provides access to 10 searchable databases and various prevention materials, including the *Prevention Primer*, a reference tool for prevention practitioners. The primer incorporates the principles of a public health approach to preventing alcohol, tobacco, and other drug problems in its summaries of issues and strategies. It provides a brief history of prevention efforts and an overview of key topics, issues, principles, and approaches that have proven successful. The *Prevention Primer* can be accessed from the "Publications Catalog" section of the site under titles for "Prevention Program Planners," or directly at <http://www.health.org/pubs/primer/>. PREVLIN also has links to a section for kids that includes "Be Smart, Don't Start," "How Can I Say No?," and "Internet Safety."

## THE PROJECT APPROACH

---

**Name:** The Project Approach

**Sponsor:** Dr. Sylvia Chard, in conjunction with the University of Alberta

**Description:** This site is about the "project approach," which involves in-depth study of a topic undertaken by a class, a group, or an individual child. It includes a discussion of what projects are, an outline of how to conduct a project, and examples of several projects such as "The Cafeteria," "The Hospital," "Rocks," and "The Iditarod." Teachers are invited to submit a summary of a project they have done in their classroom for possible inclusion on the site. The site also includes information on how to join an unmoderated listserv dedicated to the project approach.

## READYWEB

---

**Name:** ReadyWeb

**Sponsor:** ERIC Clearinghouse on Elementary and Early Childhood Education

**Description:** The focus of this site is twofold: helping children get ready for school and helping schools get ready for children. An explanation of the difference between these two concepts entitled *Readiness: Children and Schools* is provided in an ERIC digest by Dr. Lilian G. Katz. The site features a full-text virtual library divided into these sections: (1) "Tips for Parents"; (2) "Research, Statistics, and Definitions"; and (3) "Getting Schools Ready for Children." The virtual library contains full-text copies of ERIC Digests, articles, and other resources on these topics. The site also provides a bibliography of additional resources and links to other publications on these topics, as well as a search engine.

## RETHINKING SCHOOLS ONLINE

---

**Name:** Rethinking Schools Online

**Sponsor:** Rethinking Schools

**Description:** Rethinking Schools began as a local effort by Milwaukee-area teachers to improve education in their own classrooms and schools and to help shape reform throughout the public school system in the United States. Since its founding in 1986, it has grown into a nationally prominent publisher of educational materials. Its Web site includes articles from its quarterly journal, information about its publications, and a selection of links to Web sites for educators and activists. A search of the site's index of articles will identify articles related to early childhood education.

## TRIED AND TRUE: TESTED IDEAS FOR TEACHING AND LEARNING

---

**Name:** Tried and True: Tested Ideas for Teaching and Learning from the Regional Educational Labs

**Sponsor:** U.S. Department of Education

**Description:** This Web site summarizes 16 tested ideas for improving teaching and learning which were developed by, and are available from, the Regional Educational Laboratories (contact information is provided for each summary). The Regional Educational Laboratory Program (the "Lab Program") is the U.S. Department of Education's largest research and development investment and is designed to help educators, policy makers, and communities improve schools and help all students attain their full potential. Administered by the Office of Educational Research and Improvement (OERI), the network of 10 Regional Labs works to ensure that those involved in educational improvement at the local, state, and regional levels have access to the best available research and knowledge from practice.

## UNICEF

---

**Name:** UNICEF

**Sponsor:** United Nations Children's Fund

**Description:** The United Nations Children's Fund is the United Nations organization devoted to the well-being of the world's children. UNICEF focuses on child survival and development, the rights of children, and human development. Several full-text UNICEF publications are available on this site, including *State of the World's Children*, *Progress of Nations*, the text of the *Convention of the Rights of the Child*, and the *World Summit for Children* papers.

## U.S. CHARTER SCHOOLS

---

**Name:** U.S. Charter Schools

**Sponsor:** WestEd; California State University Institute for Education Reform;  
U.S. Department of Education

**Description:** This site gives an overview of the charter school movement, with selected references to organizations and resources that provide helpful information to those practitioners, policy makers, and members of the public beginning to look at charter schools. Major areas of the site cover starting and running charter schools (full-text resources are available), state and school profiles, directory resources and links, and searching other charter school sites.

**U.S. DEPARTMENT OF EDUCATION**

---

**Name:** U.S. Department of Education

**Sponsor:** U.S. Department of Education

**Description:** This site provides a wide range of information of interest to early childhood educators and many links that make it a central site in finding and using education-related information on the Internet. Of special interest is the *Teacher's Guide to the U.S. Department of Education*. The site contains listings and contact information for Department personnel; press releases and speeches; and points to all regional educational laboratories, ERIC Clearinghouses, and federally funded research centers that have Web sites. The full texts of many publications for parents and for early childhood and K-3 educators are also included.

## WALDORF EDUCATION

---

**Name:** Waldorf Education

**Sponsor:** Rudolf Steiner College

**Description:** Waldorf education (kindergarten through high school) is an alternative educational philosophy that "strives to awaken the child to his or her full potential by educating the whole human being, hand and heart as well as mind. Recognizing basic laws of child development and using innovative educational practices with a rich curriculum, Waldorf teachers strive to cultivate in their students a love of learning, imagination, and compassion for others, as well as clear thinking and academic excellence." This Web page describes the Waldorf philosophy and provides information on courses and links to related sites.

## ZERO TO THREE

---

**Name:** ZERO TO THREE: National Center for Infants, Toddlers & Families

**Sponsor:** ZERO TO THREE

**Description:** ZERO TO THREE fosters a multidisciplinary network of people around the country who are concerned about the needs of infants, toddlers, and families. It also functions as an Early Head Start National Resource Center and develops and conducts training for the birth to 3 programs that are part of Head Start. The ZERO TO THREE site is divided into two major sections, "For Parents" and "For Professionals." The section for professionals describes programs, projects, and professional development services sponsored by the organization and offers information on publications that can be ordered, including the *Zero to Three Bulletin*.

**Notes:**

**Chapter 4**  
**Finding and Using ERIC**  
**on the Internet**

The ERIC database is available for searching at several locations on the Internet. By way of introduction, the first part of this chapter explains some general concepts and provides some general tips related to searching the ERIC database. These concepts and tips have always been applicable to searching ERIC on CD-ROM, and many of them also apply when searching the ERIC database at some locations on the Internet. The second part of the chapter describes some of these locations on the Internet where users can search the ERIC database to find information related to early childhood education. Then, the last part of the chapter discusses searching for information from ERIC other than the ERIC database.

## Concepts and Tips Related to Searching the ERIC Database

An effective search of the ERIC database gives consideration to:

- a term or terms that describe the topic you are interested in;
- a term or terms that describe the age or educational level you are interested in; and
- publication types or other codes that further narrow your search to the types of materials you want to retrieve.

If you are searching the ERIC database in a library on CD-ROM or on a library network, ask a librarian for assistance in constructing your search. If you need more assistance or cannot find what you are looking for, or if you are searching the ERIC database on the Internet and need help constructing your search, call us at 800-583-4135. We offer no-cost advice on constructing search strategies.

### Subject Terms

ERIC indexes documents and journal articles according to the specific concepts discussed in the text. While the software to search the ERIC database (on the Internet or on CD-ROM) is becoming easier to use every year, research supports the observation that occasional users of ERIC will be unable to find what they are looking for unless they use multiple terms to describe the topic of their search. ERIC calls terms that describe the subject of a document *descriptors* or *identifiers*.

*Descriptors* are terms assigned to documents and journal articles by the people who prepare the ERIC database records. The format of descriptors is not always intuitive (for example, descriptors are not consistently plural or singular forms of words). For that reason, you will want to look up the descriptor terms that you want to use so that you use the form of the term that ERIC uses. The advantage of using descriptors in your search is that your search results are more likely to be "on target" and will contain fewer off-topic citations. A list of descriptors is maintained in the *Thesaurus of ERIC Descriptors*.

Many systems require that you specify whether you are searching in the descriptor "field" for the term that you specify. If you do not indicate that you are searching only the descriptor field, the system *may* assume you want to look for the term in the title, abstract, descriptor, and/or other fields. Looking for the term anywhere in a record (rather than in the descriptor field) will increase the number of items that you retrieve, but some of those items will not contain much information about the topic represented by the term. On the other hand, if you are unable to

find what you want while searching by descriptor, try entering the words that describe what you are looking for and browsing through the records you retrieve. If you are able to locate even one document that is "on target," note how that document is indexed, and try the combination of descriptors and other terms that ERIC seems to have used to index that item.

In the appendix is a listing of the descriptors used most frequently by the ERIC Clearinghouse on Elementary and Early Childhood Education to index documents and journal articles. The list does not include all the descriptors we use, but it is a helpful list to have when you are designing a search and want to know the format of a specific term (singular, plural, etc.).

*Identifiers* are either proper nouns or terms that may become descriptors. These terms can also be extremely useful in your search. For example, if you are looking for information about Piaget, you can look for the term

Piaget (Jean)

in the identifier field and be assured that Piaget and his work are actually discussed in the document. A list of identifier terms is maintained by ERIC in its *Identifier Authority List*.

### **Age Level and Education Level Terms**

Age level and education level terms are found in many ERIC database records. Education level terms are assigned to most documents and journal articles. Age level terms are not required in each record, but many records about early childhood topics do include an age level term. Lists of education level and age level terms are included in the appendix.

Example 1: If you want to retrieve information on early childhood development or education and you use only the term "early childhood" in your search, you will miss whole categories of information you are probably interested in. To retrieve documents and journal articles that include all the age groups of children in the early childhood years (birth through age 8), you must use *all* of the following terms:

Young Children  
Infants  
Toddlers  
Kindergarten Children  
Elementary School Students

Of course, by using elementary school students in your search, you will retrieve a lot of documents that really deal with older children as well as younger ones but, if you do not include this term, you will miss the documents that discuss K-3 children in K-8 settings. For many purposes, using the first four terms is sufficient, but it is useful to remember the fifth term as well.

Example 2: If you are interested in a comprehensive set of documents on the education of children in the early childhood years, the following terms should be used:

Early Childhood Education  
Preschool Education

Primary Education  
Grade 1  
Grade 2  
Grade 3  
Elementary Education  
Elementary Secondary Education

The same cautions apply here as in the earlier example. For many situations, the last two terms may be unnecessary. You should experiment and see which strategy suits your information needs best.

### **Publication Types**

Publication type codes are assigned to every document and journal article and refer to the “form” of the publication. For example, if you are interested only in research on a particular topic, or only in teacher-produced materials, or only in journal articles, ERIC has features that allow you to narrow your search to materials that fit your needs. A list of publication types is included in the appendix.

### **RIE and CIJE**

Note that the ERIC database is really comprised of two parts. One part consists of documents. This part is known as *Resources in Education* (RIE). Documents are identified by an ERIC accession number beginning with the prefix “ED” (for “ERIC Document”)—for example, ED356100. The other part consists of journal articles. This part is known as *Current Index to Journals in Education* (CIJE). Articles are identified by an ERIC accession number beginning with the prefix “EJ” (for “ERIC Journal Article”)—for example EJ463006. When searching the ERIC database, the distinction between these two parts is usually transparent, though it is typically possible to limit your search to one or the other of these. On the Internet, the two parts of the database may be accessible separately (see explanations below).

### **Searching the ERIC Database on the Internet**

All of the ERIC database sites listed here offer the ERIC database to Internet users at no charge. Because of the popularity of the ERIC database sites, however, they are often busy and can be difficult to access. The degree of difficulty you encounter in connecting to a database site often depends on the time of day and the geographic location of the server; if a site is busy or denies you access, a good rule of thumb is to try connecting another time, when it is early in the day or late in the evening.

Note that collections of items from the ERIC database are not typically as thorough on the Internet as on CD-ROM. For example, a CD-ROM product may contain a two-disk set that contains the entire database back to 1967. On the Internet, only database items from a certain date, perhaps 1989, may be available; or only RIE or CIJE items may be available. Please read the instructions or notes that introduce the search feature so that you will know exactly what you are searching.

Because there are other good places to search the ERIC database, ERIC/EECE does not offer a feature on its Web site for searching the database. However, early childhood educators who

visit the ERIC/EECE Web site will find a menu item called "Search the ERIC Database." (Note: As the site is periodically redesigned, this phrase may change slightly, but the meaning should be obvious.) This menu item links to the Search page at the ERIC Clearinghouse on Assessment and Evaluation, which is described below.

**ERIC Clearinghouse on Assessment and Evaluation (ERIC/AE)**

<http://ericae.net/>

<http://ericae.net/search.htm>

This ERIC Clearinghouse maintains a list of links to a number of sites on the Internet where users can search the ERIC database. It's a good place to start when you want to locate information from the database. Some of the searching features are located right on the ERIC/AE Web site. These are explained here.

**Search Wizard.** This search feature allows users to identify descriptors from the *Thesaurus of ERIC Descriptors*. After you type a proposed descriptor (just type in a word; you don't have to know whether it's a descriptor or not) in the search box, you can "look up" the term. In a separate frame you will be shown descriptors similar to the word you typed. Then you can decide whether or not to add this descriptor term to your search strategy. You are allowed three search boxes into which to type terms. When all your terms are selected, submit the search.

The Search Wizard also allows searching by author name and by keyword in the title. Simply type the name or word in the first search box, then select "refresh" followed by "submit." Search Wizard includes a "more like this" feature. That is, when you get your list of documents, each one will have an icon next to it that means "click here if you want to see more documents like this one."

The Search Wizard searches both CIJE and RIE. It searches the database back through 1976. It is updated quarterly.

**Expert Search Strategies.** This feature allows users to run search strategies that have been devised by information service personnel at ERIC clearinghouses. Just click on the name of a search category (e.g., "Exceptional Children"). Then click on the name of one of the searches in this category (e.g., "Models for Teaching Gifted Children"), and the appropriate search strategy is loaded into the Search Wizard. You can modify the strategy if you want or submit it as is.

**Webinator.** This search feature on the ERIC/AE Web site uses Thunderstone's WebScript search engine to provide searching by keyword. It searches the database through 1976, searches both RIE and CIJE, and allows Boolean searching (i.e., you can combine words using AND, OR, and NOT). It includes a "more like this" feature.

**AskERIC Web site at the ERIC Clearinghouse on Information and Technology (ERIC/IT)**

<http://www.askeric.org/>

Select "Search ERIC Database" from the list of options beneath the graphic image.

This Web site uses the P. Web search engine to allow searching of both CIJE and RIE back through 1989. It is updated monthly. The interface permits multiple-term (up to three)

searching in several fields (author, title, ERIC number, descriptor, identifier, publication type, publication date) with Boolean operators (i.e., AND, OR, and NOT). The page provides a list of Frequently Asked Questions about searching the database and provides ERIC-specific and PLWeb-specific searching tips.

### **ERIC Document Reproduction Service (EDRS)**

*<http://www.edrs.com/>*

Choose "Search and Order."

This search feature searches the complete RIE back through 1966. It requires a login and password (for recordkeeping purposes; i.e., the user supplies login and password which the system subsequently tracks). The search engine allows searching in most resume fields (author, title, ERIC number, ERIC clearinghouse, descriptor, identifier, publication type and date, abstract). When the search is completed, you can view the record in the ERIC database for that document. Subsequently, you may order copies of the documents online from EDRS (except for those few documents for which ERIC does not have reproduction permission). There is a fee for ordering copies. The fee will be listed in the ordering information, and you will need to open an account with EDRS or use a credit card to purchase the item. In most cases, items can be delivered in paper copy, fax, or microfiche. In those cases where ERIC has permission from the document's copyright holder to reproduce the document in electronic format, the document can be delivered electronically via FTP.

### **ACCESS ERIC**

*<http://www.aspensys.com/eric/>*

*<http://www.aspensys.com/eric/searchdb.html>*

ACCESS ERIC maintains the ERIC central Web site. The "Search ERIC Database" page on this site doesn't actually contain a search engine. Rather, it offers general information on searching the ERIC database and provides a comparison of the features of four ERIC database search engines within the ERIC system (discussed above). It also provides links to these search engines so that, after reading about them, you can go right to them to do a search.

### **Other Places**

The places listed above for searching the ERIC database are all located at Web sites of ERIC clearinghouses or ERIC support components. There are also places outside the ERIC system where the ERIC database can be searched on the Internet (using WWW, TELNET, or TN3270). Some of these places are listed here.

- Auburn University
- University of Florida
- Harvard University
- University of Maine Library System
- University of Saskatchewan

We will not go into detail about using these search features. All of them, however, are listed on the "Search ERIC Database" page at the ERIC/AE Web site (discussed above). See that page for more information and for a hyperlink to the sites.

## Searching for Information from ERIC Other Than the ERIC Database

### **ERIC Digests at the ERIC Clearinghouse on Assessment and Evaluation (ERIC/AE)**

*<http://ericae.net/>*

*<http://ericae.net/search.htm>*

We have already discussed searching the ERIC database from ERIC/AE. This clearinghouse also has a feature for searching the full collection of ERIC Digests. Go to the same "Search ERIC" page mentioned above and click on "Digests" at the top of the page. This search feature uses the Webinator that was described above.

### **ERIC Digests at the U.S. Department of Education**

*<http://www.ed.gov/>*

*[http://www.ed.gov/databases/ERIC\\_Digests/index/](http://www.ed.gov/databases/ERIC_Digests/index/)*

This page allows searching of the ERIC Digest collection by keyword or concept. The page also provides lists of Digests recently added to the collection.

### **Educational Tests at the ERIC Clearinghouse on Assessment and Evaluation (ERIC/AE)**

*<http://ericae.net/>*

*<http://ericae.net/testcol.htm>*

The ERIC/AE "Test Locator" uses the Webinator search engine to search databases of educational and psychological tests prepared by the Educational Testing Service, the Buros Institute of Mental Measurements, and the Center for Equity and Excellence in Education. This search feature allows keyword searching, and in some instances, proximity searching and multiple keyword searching. The information you receive as a result of your search varies depending on the particular test database you've searched, but may include a short description, an abstract, and contact information.

### **Lesson Plans at the AskERIC Web site at the ERIC Clearinghouse on Information and Technology (ERIC/IT)**

*<http://www.askeric.org/>*

*<http://www.askeric.org/Virtual/Lessons/>*

This feature allows a keyword search of a collection of K-12 classroom lesson plans. The lesson plans are also browsable by topic.

### **AskERIC and Parents AskERIC**

If you are unable to find what you want searching the ERIC database on CD-ROM or on the Internet, or if you have a question about an education-related topic, remember that you can always send an electronic mail message containing your request for information and describing the topic you are interested in, to:

**askeric@askeric.org**

An ERIC staff member will do a search for you and return the results to you via electronic mail within two working days. The search will not be exhaustive, but it will include recent citations on the topic you request. This service is free to parents, teachers, administrators, and anyone else interested in education.

### **Toll Free Access to ERIC Services**

Similarly, if you are unable to use any of the services described above, you may call the ERIC Clearinghouse on Elementary and Early Childhood Education (ERIC/EECE) at 800-583-4135 and ask for a search of the ERIC database. Short searches are provided at no charge to all requesters.

**Chapter 5**  
**The Internet and Early Childhood Educators:**

## ERIC Documents

ED411071 PS025745

### **Technology in a Head Start Parent Center.**

Hughes, Bob; Coyne, Peggy; Waddell, Sandy  
1997

9p.; Paper presented at the Annual Training Conference of the National Head Start Association (24th., Boston, MA, May 25-31, 1997).

EDRS Price - MF01/PC01 Plus Postage.

Document Type: PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)

Geographic Source: U.S.; Massachusetts

Unless children and parents have training and access to computers and the power they offer, computers create a barrier for them as they navigate a society that depends on computers for information and occupational advancement. This paper describes a program developed by North Shore Head Start in Beverly, Massachusetts and CAST (Center for Applied Special Technology) in Peabody, Massachusetts. The Salem Family Learning Center provides computer training and access for parents and teachers, training Head Start parents and teachers along with K-3 teachers. This training and access allows parents to use computers in ways that support their children's learning while increasing their own learning, and also forges connections between parents and teachers that ease the transition to school. Along with computer training and drop-in access to computers, the Center offers a range of family support services that include STEP training and AA meetings. After describing the program's history, how it works, and who it serves, the paper discusses plans to expand such sites to form a national network of Family and Community Literacy Centers. Plans include the creation of an

accessible computer network to link sites and resources, major program goals, and how the goals will be measured. (EV)

**Teaching Your Child To Write: How Parents Can Encourage Writing Skills—for Success in School, Work, and Life.**

Fuller, Cheri

1997

224p.

ISBN: 0-425-15983-3

Available From: The Berkley Publishing Group, 200 Madison Avenue, New York, NY 10016 (\$12).

Document Not Available from EDRS.

Document Type: NON-CLASSROOM MATERIAL (055)

Geographic Source: U.S.; New York

Target Audience: Parents

This book provides a comprehensive guide for parents who want to help their children develop an important skill, writing, in a fun and creative way. The book shares with parents successful classroom and workshop teaching methods. It also provides guidelines for home schooling parents. The book helps children become less intimidated by the English language through hundreds of ideas, tips, projects, and guidelines, so that they can become better writers, thinkers, and learners. Chapters in the book are: (1) "Kids Who Write"; (2) "The Building Blocks: Foundations for Writing in the Early Years"; (3) "Providing a Writing Environment"; (4) "Growing up Writing: Ages, Stages, and Readiness to Write"; (5) "How Writers Write: Understanding the Writing Process"; (6) "Writing Letters for Fun, Friends, and Profit"; (7) "Write Away Using E-mail to Boost Your Child's Writing Skills"; (8) "Across the Miles: Writing Family Newsletters and Neighborhood Newspapers"; (9) "Help, Mom I've Got to Write a Book Report"; (10) "Creative Journal Keeping: The Best Practice for Developing Writers"; (11) "Story Writing Exercises"; (12) "Bookmaking Projects for Children"; (13) "Writing Family History Stories"; (14) "Fun with Words: Word Play for Every Age"; (15) "Poetry Writing: The Magic of the Written Word"; and (16) "Helping Young Writers Break into Print." Appendixes contain a grammar guide; guidelines for assessing children's writing; and a list of magazines that publish young authors. Also attached is a list of ABC book ideas. (NKA)

Document Type: JOURNAL ARTICLE (080); CONFERENCE PAPER (150)

Geographic Source: Australia; Queensland

This study investigated a trial use of simultaneous telephone and computer (audiographics) conferencing to teach a Master of Education unit, "Early Childhood Curriculum Design Issues," at the Queensland University of Technology in 1994. Data were collected in written form from students, lecturers, and observers concerning their experiences, focusing in particular on problems they had encountered, the impact of the technology on their learning, and suggestions and advice for the future development of the approach. Results showed that overall, students rated the sessions as being at least as effective as conventional on-campus methods. Audiographic conferencing was rated most highly in terms of keeping students' attention and in developing a class atmosphere conducive to learning; it was seen to be least effective in terms of allowing students to discuss topics with each other. Lecturers' reflections suggested that their feelings progressed from an initial state of anxiety about using the equipment to an enthusiasm for its possible benefits. Observers' comments corresponded with lecturers' observations. Findings indicated that, provided the pedagogy is clearly articulated and the technology regarded as a tool in its implementation, audiographics conferencing is a promising teaching tool. (Contains 17 references.) (EV)

Document Type: RESEARCH REPORT (143); CONFERENCE PAPER (150)

Geographic Source: U.S.; Pennsylvania

This case study describes the Internet correspondence using MOO, a multiuser, object-oriented site, that was developed between six third-grade girls and TCC, an adult with blindness. The changes from the students' original attitudes toward blindness, that blindness posed a barrier to communication and relationship-building, into their acceptance that blindness is a different way of living in the world, is described. Three stages of the students' growing understanding of blindness and ability/disability are described: (1) their first encounters with blindness in the context of having to develop new types of reading and writing skills for the

electronic mail exchange; (2) their growing awareness of social and practical differences between the lives of the blind and the sighted as they developed their technical Internet skills; and (3) their focused explorations of the experience of blindness off-line and their creative transfer of that learning to other social contexts and understanding of disability. Results indicate that: (1) the Internet can provide valuable contexts for skill and knowledge development at the elementary school level and (2) the Internet is conducive to building interpersonal relationships because it masks social differences, while at the same time it can facilitate greater understanding of social differences. (CR)

Document Type: DIRECTORY (132)

Geographic Source: U.S.; District of Columbia

This directory lists over 80 national organizations that provide information, services, and/or referrals to individuals in the disability field, including parents, special educators and general educators, early interventionists, administrators, related services personnel, persons with disabilities, and others. Addresses, telephone and fax numbers, e-mail addresses, and a short description of each organization's activities are provided to help readers identify which resources are best suited to their needs and concerns. The organizations are grouped according to their primary emphasis in the following categories: (1) general disability information; (2) organizations for families; (3) legal rights and information; (4) early intervention; (5) special education; (6) transition; (7) financial assistance and information; and (8) organizations addressing minority concerns. Because many of the organizations have more than one purpose, each section includes a list of relevant organizations that are listed in other areas of the directory. An index at the end of the directory lists the name of each organization and the page number where it is described. (CR)

Target Audience: Policymakers

This annual report of the National Council on Disability (NCD) describes major activities and accomplishments during fiscal year 1996 in its role of advising the President and Congress on issues concerning people with disabilities. The NCD conducted the first-ever National Summit on Disability Policy which gathered 300 people to develop more than 120 comprehensive recommendations for the future of people with disabilities, and released several reports covering a variety of disability policy issues, including "Cognitive Impairments and the Application of Title I of the Americans with Disabilities Act," "Improving the Implementation of the Individuals with Disabilities Education Act: Making Schools Work for All of America's Children Supplement," "Foreign Policy and Disability," "Guidance from the Graphical User Interface (GUI) Experience: What GUI Teaches about Technology Access," "Disability Perspectives and Recommendations on Proposals To Reform the Medicaid and Medicare Programs," and "Access to the Information Superhighway and Emerging Information Technologies by People with Disabilities." The research areas in which NCD worked are also described. Appendices include biographies of NCD members and staff, a listing of NCD publications, and the NCD mission statement. (CR)

Document Type: NON-CLASSROOM MATERIAL (055); AUDIOVISUAL MATERIAL (100); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Illinois

Target Audience: Administrators; Teachers; Practitioners

This collection of 21 booklets about the Western Illinois University (WIU) model for teacher education, centered on principles of instructional designs, targets five technologies: computer applications, telecommunications, distance learning, interactive multimedia, and instructional video. Teacher competencies are specified for instructional design and the five targeted technologies; they are achieved through core and content-based modules. After an extensive overview, "Breaking the Barriers, Meeting Challenges," core modules include: (1)

"Using the Computer to Enhance Teacher Productivity"; (2) "Telecommunications for the K-12 Classroom"; (3) "Distance Education in the K-12 Classroom"; (4) "Interactive Multimedia for the Classroom"; (5) "Instructional Video Production for the K-12 Classroom"; and (6) "Planning for Effective Technology Integration." The 12 content-based modules are: (1) "Technology Applications in the K-8 Science Classroom"; (2) "Teaching Social Studies with Historic Landmarks"; (3) "Electronic Resources for Teaching Secondary Social Studies"; (4) "Integrating Technology into Early Childhood Thematic Teaching"; (5) "Using Technology To Enhance Parent/Community Involvement"; (6) "Producing and Integrating Instructional Video"; (7) "Early Childhood Behavioral Assessment"; (8) "Exploring Planning Approaches for Teaching Thematically"; (9) "Your First Trip on the Internet"; (10) "Using Video To Enhance Understanding of Human Growth and Development"; (11) "Electronic Searching for Children's Literature Resources"; and (12) "Microteaching, Reflective Processing, and Video: A Metacognitive Twist." A program overview, a booklet for each module, a faculty support booklet, description and illustrations of equipment and infrastructure, and two videos are packaged in a file box. (ND)

Document Type: TEACHING GUIDE (052); SERIAL (022)

Geographic Source: Australia; Australian Capital Territory

Target Audience: Teachers; Practitioners

Research has supported the idea that the use of computers in the education of young children promotes social interaction and academic achievement. This resource booklet provides an introduction to computers in early childhood settings to enrich learning opportunities and provides guidance to teachers to find developmentally appropriate software and hardware. The first section of the booklet focuses on learning with computers and the roles of computers in early childhood programs. The second section provides information on getting started and creating a computer-active classroom. Specific guidelines on computer configurations and setting up the classroom are included. The third section provides guidance in choosing and using software and in evaluating educational software. This section advocates the use of software that builds concepts and skills, and provides classification of software as follows: (1) thinking and problem solving; (2) "Logo"; (3) educational adventure games; (4) communication; (5) painting and drawing; (6) writing and reading; (7) electronic and interactive story books; and (8) keyboard skills. Specific brand name software packages are listed in many of these classification areas. The fourth section of the booklet provides a definition of the Internet and information on its use. The final section provides resource information on educational software distributors, professional journals, monographs, and journals. (SD)

**Helping Early Childhood Teacher Education Students Learn about the Internet.**

**ERIC Digest.**

Hinchliffe, Lisa Janicke

ERIC Clearinghouse on Elementary and Early Childhood Education, Urbana, Ill.

May 1996

3p.

Report No: EDO-PS-96-5

EDRS Price - MF01/PC01 Plus Postage.

Document Type: ERIC PRODUCT (071); ERIC DIGESTS (SELECTED) (073)

Geographic Source: U.S.; Illinois

This digest provides examples of projects which can be used in the early childhood education (ECE) and child development classrooms to introduce students to Internet resources. The first section of the digest suggests guides that teacher educators can use to design Internet training sessions and to locate resources of interest to adults working with young children. The second section lists several electronic discussion groups (EDGs), or listservs, related to early childhood education and suggests five activities involving discussion groups that students can undertake. First, students need to learn about Internet etiquette. Second, they can monitor the interactions on a single EDG. Third, they can pose questions on specific topics to an EDG. Fourth, they can respond to a question posted to an EDG by a group member after adequately researching the topic. Finally, they can summarize the activity of an EDG by reading messages posted to the EDG's archive. The third section of the digest briefly describes the World Wide Web (WWW) and Gopher resources and outlines four student projects that involve using the

WWW. Students can try the following activities: (1) create an information packet consisting of resources they have found on the WWW; (2) search for lesson plans using WWW search engines; (3) solve particular problems they have observed in early childhood settings by searching the ERIC database on the WWW and gathering other relevant resources on the WWW; and (4) be information providers by creating a Web site containing resources on a particular topic or representing a particular organization such as a local child care center. By integrating Internet use into early childhood teacher education programs through activities such as these, early childhood teacher educators enhance the educational experiences of their students and prepare them to be active participants in the early childhood community. Document Type: MACHINE-READABLE DATA FILE (102)

Geographic Source: U.S.; District of Columbia

Government: Federal

This handbook is an effort to establish current and consistent terms, definitions, and classification codes to maintain, collect, report, and exchange comparable information about staff. This effort was coordinated by the Council of Chief State School Officers under contract to the National Center for Education Statistics. It represents the best judgment of many individuals as to what data might be useful in making appropriate, cost-effective, and timely administrative, programmatic, and staffing decisions. Information is also included about designing record-keeping systems. The handbook is not a data collection system, and does not reflect any type of federal data maintenance requirements. This "infobase" version allows users to browse, search, annotate, print, and export the handbook electronically. Installation instructions are included. (SLD)

Document Type: NON-CLASSROOM MATERIAL (055); MACHINE-READABLE DATA FILE (102)

Geographic Source: U.S.; District of Columbia

Government: Federal

This handbook is a major effort to establish current and consistent terms, definitions, and classification codes to maintain, collect, report, and exchange comparable information about students. The selection of terms represents the best combined judgment of many individuals as to what data might be most useful for decision making about instruction and support services for students. The primary section of this handbook is the listing of terms and definitions. In addition, there are applications of the handbook including development of surveys and design of automated record systems. The handbook is not a data collection instrument, and does not reflect any type of federal data maintenance requirements. This "infobase" version of the handbook allows users to browse, search, annotate, print, and export information electronically. Installation instructions and a quick-look reference system for handbook use are included. (SLD)

Geographic Source: U.S.; Florida

Distance education and related technologies make possible the sharing of information and techniques between countries to improve teaching and learning for all students, including those with special needs. Distance education delivery tools include computers, phones, and, more recently, compressed video. These tools have been used in the United States and in other countries, including Costa Rica. In that country, online communications techniques and computers are utilized to develop creativity, logical thinking, and a new attitude of preschool and elementary level students towards technology. Students with special needs are especially helped by the technology. Some of the current and future applications of distance education technologies for this category of students are described. (Contains 21 references.) (Author)

Document Type: NON-CLASSROOM MATERIAL (055); ERIC PRODUCT (071); ERIC DIGESTS (SELECTED) (073)

Geographic Source: U.S.; Illinois

Target Audience: Teachers; Practitioners

This digest explores uses of the Internet for early childhood educators. The first section discusses six popular features of the Internet: (1) electronic mail, which provides educators with a worldwide group of peers with whom to share information; (2) Internet discussion groups, which provide users with the opportunity to be part of electronic communities made up of individuals who share similar interests; (3) databases and library catalogs, which can be accessed remotely using telnet software; (4) gopher and World Wide Web (WWW) sites, which

contain collections of information on many topics, including information of special interest to teachers such as lesson plans and descriptions of projects for children; (5) file transfer, by which users can get files or software from remote computers; and (6) community computing networks, which exist in many communities and provide members with information, including education-related information, and other services. The second section of the digest lists four common ways educators can access the Internet. First, in some states and regions, networking systems provide Internet access to educators and others. Second, access can be obtained through community computing networks. Special projects at universities and colleges offer a third way of accessing the Internet. Finally, commercial services provide Internet access for a fee. The final section of the digest offers suggestions for finding information on the Internet. These include reading Internet guide books, commonly available in bookstores; asking discussion group participants; using Internet finding tools such as Veronica, various tools for searching the WWW, and examining gopher and WWW sites that provide topical listings of Internet resources; and using the AskERIC electronic question-answering service. These five newsletter issues provide reports from institutions and individuals involved in the Montessori Public School Consortium (MPSC). Each issue contains feature articles, editorials, and field reports on Montessori programs in public schools. Featured topics include: (1) the Montessori Induction Program for new Montessori teachers; (2) Montessori Head Start; (3) the development of the MPSC; (4) Montessori assessment; (5) Montessori 2000, a planning document advocating 18 national Montessori projects; (6) a directory of Montessori public schools; (7) national surveys of Montessori public schools; (8) Montessori adolescent programs; (9) a Montessori Head Start program in Philadelphia, Pennsylvania; (10) Montessori instructional materials; (11) Montessori training and materials procurement; (12) the November 1993 MPSC national conference; (13) approaches to Montessori implementation; (14) the Montessori bulletin board on the America Online computer network; and (15) Montessori programs in public schools in Denver, Colorado, and Cincinnati, Ohio. Document Type: BOOK (010); INSTRUCTIONAL MATERIAL (051)

Geographic Source: U.S.; District of Columbia

Target Audience: Teachers; Parents; Practitioners

This book addresses the issues of appropriate use of computers with young children and how children and early childhood educators interact with the computer in early childhood settings. Part 1, "Young Children as Active Learners," contains chapter 1: "Listen to the Children: Observing Young Children's Discoveries with the Microcomputer" (June L. Wright); chapter 2: "Thoughts on Technology and Early Childhood Education" (Barbara T. Bowman and Elizabeth R. Beyer); and chapter 3: "The Uniqueness of the Computer as a Learning Tool: Insights from Research and Practice" (Douglas H. Clements). Part 2, "The Role of Technology in the Early Childhood Curriculum," includes chapter 4: "Learning and Teaching with Technology" (Sue Bredekamp and Teresa Rosegrant); chapter 5: "Software Evaluation for Young Children" (Susan W. Haugland and Daniel D. Shade); chapter 6: "The Potential of the Microcomputer in the Early Childhood Classroom" (Jane Davidson and June L. Wright); chapter 7: "Staff Development Practices for Integrating Technology in Early Childhood Education Programs" (Charles Hohmann); chapter 8: "Computer Applications in Early Childhood Special Education" (Michael M. Behrmann and Elizabeth A. Lahm); and chapter 9: "Family Involvement: Family Choices at Home and School" (Patricia A. Ainsa and others). Part 3, "The Challenge for Early Childhood Educators" includes chapter 10: "Moving Early Childhood Education into the 21st Century" (Gwendolyn G. Morgan and Daniel D. Shade); chapter 11: "Replicating Inequities: Are We Doing It Again?" (Suzanne Thouvenelle and others); and chapter 12: "Interactive Technology and the Young Child: A Look to the Future" (Cynthia Char and George E. Forman). The following articles are appended: (1) "Using Computers to Support Thematic Units" (Jane Davidson); (2) "Early Childhood Education and Computer Networking: Making Connections" (Bonnie Blagojevic); and (3) "Helpful Hints on Acquiring Hardware" (Daniel D. Shade). A glossary and a list of software for young children is also provided. All chapters contain references and 55 additional resources are provided. (BAC)

Document Type: RESEARCH REPORT (143); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Virginia

A study investigated the effects on second graders' writing due to their participation in an electronic mail letter exchange. Subjects were 14 second-grade students who participated in a project on Virginia's Public Education Network, where they corresponded with a person in the character of Winnie-the-Pooh. A pre-test/posttest design was used in a 5-week interval. A rating scale was used to evaluate the students' writing. The students' writing was then grouped to correspond with the domains on the scoring system used for the Virginia Literacy Passport Test. Results indicated that the subjects scored higher in the composing and style domains on the posttest than the pretest, but lower in the usage domain and sentence formation on the posttest than the pretest. Results also indicated no change on the mechanics domain scores. Surveys of the subjects revealed largely positive attitudes towards the project. With future research, projects like this could be improved and become even more effective in promoting student writing. (Contains 20 references and 4 figures of data. The rating scale for the pre-test and posttest, the rating scale categories of the Virginia Literacy Passport, and the student opinion survey are attached.) (RS)

Document Type: CONFERENCE PROCEEDINGS (021)

Geographic Source: U.S.; New York

This report summarizes four audioconferences held in the spring and summer of 1993 by the Child Care Action Coalition (CCAC) to address the implication of the Family Support Act (FSA) of 1988. The FSA was designed to reduce welfare costs by providing training, education, and child care to recipients of Aid to Families with Dependent Children (AFDC) so that they can become employed and self-sufficient. The first audioconference focused on recent FSA litigation, specifically lawsuits filed against California, Illinois, and Massachusetts to require the states to follow FSA mandates on child care provision. The second conference addressed state efforts to improve the Transitional Child Care (TCC) component of the FSA, while the third focused on current federal welfare reform initiatives under consideration by the

Clinton Administration. The fourth conference looked at two state models using FSA funding in programs that provide comprehensive services to families in job programs. The names, addresses, affiliations, and telephone numbers of the audioconference speakers and participants are included. (MDM)

Target Audience: Teachers; Practitioners

A companion to a January 1993 nationwide teleconference entitled "A Nation's Challenge: Educating Substance-Exposed Children" and organized by the Florida Department of Education, this booklet provides educators with information and research on effective strategies for working with children affected by alcohol and other drugs. It also provides guidelines for developing and implementing a school or community action plan to deal with this problem. The three main sections of the booklet provide: (1) profiles of eight innovative intervention programs at the school district and community level; (2) profiles of five state and national resource organizations that can provide financial and technical support to school or community programs; and (3) an annotated bibliography of articles, books, reports, teaching resources, newsletters, toll-free telephone numbers, clearinghouses, catalogues, videos, and other resources on strategies for working with children affected by alcohol and other drugs. Three appendixes contain listings of the Department of Education's Drug Free Schools state program representatives, members of the teleconference National Resource Group, and teleconference panel members. Document Type: POSITION PAPER (120)

Geographic Source: New Zealand

The New Zealand Correspondence School is a large, state-funded, national institution teaching at preschool and elementary-secondary school levels. Like the regular education system, it long has been tightly controlled, with a national syllabus, national grading and examinations, and national guidelines for interpretation of the syllabus. The school teaches a wide variety of students with special needs and includes student support systems such as extracurricular activities, camps, seminars, visiting teachers, and school publications. The school maintains strong links between teacher and parent through its expertise in teaching through an intermediary, such as a teacher in the local school, who mediates between the distance education institution and the student. Since it has a wide range of curriculum offerings, its varied teaching methods include audiovisual media, teleconferencing, kits, and project work. The school has evolved a quality management system that provides expert evaluation in course planning, writing, production, and management. The school has become expert at meeting a variety of student needs while serving large groups of students. Some examples of this diversity of needs include students who are enrolled because of distance, itinerancy, medical problems, psychological problems, or because they are overseas. In meeting these students' needs, the school considers provision of courses for nonliterate learners, student support, choice of appropriate course structure, consideration of tutor time management, and choice of an appropriate media mix. The school demonstrates that it is possible for a distance education institution to contribute in a positive and effective way toward meeting national education goals. (KC)

Document Type: EVALUATIVE REPORT (142)

Geographic Source: U.S.; Tennessee

This paper presents a description and formative evaluation of National (Multi-Tech) Cluster III, Nova University's third technology-intensive doctoral program in Child and Youth Studies (CYS) in which formal instruction occurs in clusters, or groups of professionals in different geographic locations who are connected via electronic communications technology. National clusters focus on understanding the basic concepts of leadership theory and research and applying these concepts to problems in a professional context. Following a brief introduction, a description of the preliminary planning for the technology delivery system used in the doctoral program is offered. Program development is discussed, an introduction to the telecommunications used in the program is presented, and the Leadership I course is described. The course uses technological aids, such as electronic classrooms, to explore: (1) societal problems and issues; (2) leadership theory and practice; and (3) organizational, personal, and professional development. The paper concludes with a discussion of a conceptual framework

for human resources development, emphasizing the advantages of multi-tech learning. Appendices include copies of instructions and memos to students in National Cluster III; materials from electronic classrooms; and examples of outstanding work by two students (Daniel R. Hayes and Deborah W. Whaley). The students' papers and other materials comprise the bulk of the document. (MM)

Document Type: BIBLIOGRAPHY (131); ERIC PRODUCT (071)

Geographic Source: U.S.; Maryland

As producer of one of the earliest, most economical, and frequently searched machine-readable databases, the Educational Resources Information Center (ERIC) has been frequently studied and has figured heavily in the growth of online searching and in evaluations of the relatively new medium of bibliographic databases on compact disk (CD-ROM). This annotated bibliography represents the results of a comprehensive search for documents and journal articles written about ERIC published from 1960 through 1992. It contains 689 citations (574 referring to items in the ERIC database and 115 to items not in the database), adding 182 new citations to those listed in previous editions. The bibliography is arranged in descending order of accession number, with the most recent material listed first. Document resumes are included for entries in "Resources in Education" one of ERIC's two monthly publications, and journal article resumes are included for entries from the other monthly publication, "Current Index to Journals in Education." Subject, author, and institution indexes are included. An addendum lists references to items not in the ERIC database. ERIC clearinghouses and other network components are listed, and an order form is included for the ERIC Document Reproduction Service. (SLD)

The task for the National Data Management Project is to share technological capabilities with the Head Start Community in order to implement improved services for children and families involved in Head Start. Many Head Start programs have incorporated technology into their programs, including word processing, database management systems, telecommunications, and the National Head Start Bulletin Board System (NHS-BBS). This manual provides information on the capabilities of these technologies to assist Head Start programs as they use computer technology to manage programs, write grants, communicate, and introduce computers to the children in their programs. The chapters in the manual are: (1) "Head Start Computer Software Guide," comparing nine Head Start-specific software packages on a matrix using Head Start requirements; (2) "High(er) Technology for Head Start"; (3) "Fund-Accounting Software Review," reviewing three fund-accounting software systems; (4) "Planning for Automation"; (5) "An Accounting Software Buyer's Guide"; (6) "The Role of the Head Start Director," describing leadership skills necessary to implement computerization; and (7) "Using Computers in Head Start Classrooms," including information on software selection. Most of the chapters contain references. (BGC)

Target Audience: Practitioners

This annotated bibliography is the sixth annual compilation of the abstracts of 228 documents added to the ERIC database during the year 1991 in the area of computer applications in elementary and secondary schools. The types of materials included are administrator guides, bibliographies, conference papers, evaluative reports, literature reviews, program descriptions, research reports, and teaching guides. The material is presented in four major sections: (1) Computer Assisted Instruction: Overview Documents—24 documents of general discussions on the topic; (2) Special Applications—78 documents divided into 14 categories: Artificial Intelligence/Expert Systems, Cognitive Processing/Thinking Skills,

Computer Literacy, Computer Networks, Computer Equity, Counseling and Guidance, Courseware and Software, Ethics, Interactive Video, Keyboarding, Logo, Management/Administration, Conference Proceedings, Research, Simulation, and Testing; (3) Subject Areas—85 documents concerned with computer applications in the areas of business, English as a Second Language and foreign languages, language arts, mathematics, music, reading, science, social studies, vocational education, and writing; (4) Special Populations—37 documents on computer applications for adult education, disabled learners, disadvantaged learners, gifted students, and early childhood education. Individual documents are presented alphabetically by author, or title when no personal author is available, within each section. Each entry includes the title and author of the document, information on price, and availability, the publication type, major ERIC descriptors, and an abstract. An alphabetical title of authors and information on ordering ERIC documents are included. (ALF)

Geographic Source: U.S.; New York

Target Audience: Practitioners; Policymakers

This collection provides an overview of literature entered into the ERIC database in 1990 on computer applications in elementary and secondary education, adult education, and special education. The first of four sections contains a list of overview documents on computer assisted instruction. Focusing on special applications, the second section lists documents on artificial intelligence, cognitive processes and thinking skills, computer literacy, computer networks (including distance education and telecommunications), computer equity, counseling and guidance, interactive video, keyboarding, the Logo programming language, management/administration, research, software, and tests and testing. References to documents for various subject area applications are listed in the third section under the headings of Business, English as a Second Language and Foreign Languages, Fine Arts, Language Arts, Mathematics, Physical Education, Programming, Reading, Science, Social Studies, Vocational Education, and Writing. The fourth section contains references to documents on special populations grouped into the following categories: adult education, disabled learners and learning disabilities, disadvantaged, gifted, and preschool education. Each entry includes the title and author of the document, information on price and availability, the publication type,

major ERIC descriptors, and an abstract. An alphabetical index of authors and information on ordering ERIC documents are included. (DB)

Document Type: TEACHING GUIDE (052)

Geographic Source: Canada; Alberta

Government: Foreign

Target Audience: Teachers; Practitioners

This manual on Early Childhood Services (E.C.S.) focuses on strategies for enhancing social skills in young children and describes 10 two-hour training sessions. The goals of the training are to help teachers understand and identify young children's social development difficulties; to offer guidelines for dealing with inappropriate behaviors; and to integrate the teaching of social skills with curriculum. The training sessions represent an approach wherein principles and strategies are presented and practiced, and classroom applications stressed. The sessions are described and written for delivery by distance education, but are adaptable for other modes of delivery as well. Following an introduction, the manual contains 10 sections dealing with: (1) social skills in the school; (2) good and poor social skills; (3) factors contributing to positive behavior; (4) prevention of negative behavior; (5) assessment of social skills development; (6) targeting good social skills; (7) tracking social skills—the integrated approach; (8) integration strategies; (9) problem solving approach to behavior management; and (10) social skills instruction and evaluation. Thirty-four handouts are included, as well as a bibliography and a reprint titled "Cognitive-Mediational Behavior Management" (H. C. Haywood and D. L. Weatherford). (LL)

Document Type: RESEARCH REPORT (143); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Michigan

The Teaching and Learning with Technology Project was funded by Oakland Schools, Oakland County (Michigan), in 1987 to bring together in an elementary school those technologies that will be key components of schools in the future with an instructional program designed to prepare students for the information age. The project had the following objectives: (1) to explore and identify classroom applications for educational technologies such as microcomputers, instructional television, videodiscs, CD-ROM, and telecommunications; (2) to design staff development programs to assist teachers in making effective use of technology to accomplish curricular objectives; and (3) to study the impact of technology on teaching and learning. The project focused on third, fourth, and fifth grade classrooms in one elementary school over a 3-year period; data was collected by classroom observation, interviews, and achievement tests. Results of comparisons between treatment and control classrooms indicated that the classrooms differed in the amount of technology available, number of technologies used, and ways in which technology was used to meet curricular objectives. The overall results of the experimental program were favorable. Appendices contain questionnaires, achievement test scores, a word checklist, a teacher survey instrument, statistical data, and 11 case studies of participating students. A separately published "Executive Summary" has been appended. (9 references) (DB)

**Monitoring the Development of At-Risk and Disabled Infants: The District of Columbia Tracking System.**

Winborne, Duvon; And Others

Sep 1990

19p.; Paper presented at the Annual Conference of the National Black Child Development Institute (20th, Washington, DC, September 22, 1990).

EDRS Price - MF01/PC01 Plus Postage.

Document Type: PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)

Geographic Source: U.S.; Ohio

Target Audience: Administrators; Practitioners

This paper describes the District of Columbia's system for tracking at-risk and disabled infants during their first 3 years of life. The project involves a computerized system for following the developmental progress of at-risk infants identified at birth or other times. The project monitors the activities of children within various service delivery agencies in the District. An introductory section addresses such infant intervention issues as risk factors, intervention strategies, program models, and home- or center-based programs. The District's Tracking System has four major components: case identification and registration; tracking;

service linkages; and system evaluation. Case identification begins in the neonatal units of District hospitals. A registered nurse is assigned to serve as case manager. A record of the infant's conditions and other descriptive information is entered into the computer to begin the tracking process. Service agencies are "networked" together for monitoring infant progress and contacted twice yearly to identify infants receiving services but not yet in the Tracking System. The Tracking System is configured as a relational database management system and makes use of a Local Area Network approach. (19 references) (DB)

Preceded by preteleconference activities, this teleconference examines the definitions, history, assumptions, and consequences of tracking as well as barriers to change, restructuring responses to literacy and learning difficulties, effective alternatives to tracking, and specific grouping strategies. The following documents are included: "Keeping Track Part 1: The Policy and Practice of Curriculum Inequality" and "Keeping Track, Part 2: Curriculum Inequality and School Reform" (Jeannie Oakes); "Access to Knowledge: Breaking Down School Barriers to Learning" (Pamela Keating and Jeannie Oakes); "Shattered Hopes" (Richard L. Allington); "Teacher Beliefs Toward Academically at Risk Students in Urban Schools" and "Do Chapter 1 Programs Promote Educational Equity?" (Linda Winfield); "Ability Grouping and Its Alternatives: Must We Track?" and "Using Team Learning" (Robert E. Slavin); and "Research Identifies Effective Programs for Students at Risk of School Failure" (Center for Research on Elementary and Secondary Schools). Post-teleconference activities follow as well as supplementary readings that include: "Revised Chapter 1 Opens Options for Schoolwide Plans" (James H. Lytle); "How Special Should the Special Education Curriculum Be?" (John O'Neil); and "Assuring School Success for Students at Risk" and "Children at Risk: Work of the States" (Council of Chief State School Officers). (CLA)

DIGESTS (SELECTED) (073)

Geographic Source: U.S.; Virginia

Target Audience: Practitioners

This digest offers basic information about resources, available to users of personal computers, in the area of professional development in special education. Two types of resources are described: those that can be purchased on computer diskettes and those made available by linking personal computers through electronic telephone networks. Resources described include: (1) portions of the ERIC (Educational Resources Information Center) database available on diskette; (2) Bibliographic Retrieval Services (BRS) and Dialog information services, which make available the Exceptional Child Education Resources database and the complete ERIC database; (3) ERIC on CD-ROM (compact disk read only memory); (4) SpecialNet, an electronic communications network designed for special educators; (5) Special Education Solutions, an online database of resources available to Apple computer users who are disabled; and (6) the IBM/Special Needs Exchange available through the CompuServe Information Service. (JDD)

Document Type: CONFERENCE PAPER (150); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Texas

The paper briefly describes TIP (Telecommunications Intervention Program), a service which delivers preliminary Individualized Education Programs (IEPs) for Head Start handicapped children based on a computerized data base of long range goals, short term objectives, and specific related learning activities. This high technology expert system was developed by experts in the areas of early childhood, psychology, speech pathology, and special education. IEPs are provided for ten handicapping conditions (blind, deaf, emotional disturbance, health impaired, hearing impaired, learning disabled, mental retardation, orthopedic impairment, speech/language deficits, and visual impairments) as well as the gifted condition. Users of the system screen the child using standard instruments and submit data

concerning chronological age, suspected handicapping condition, and developmental age/s. Data may be communicated by a telephone conference, mail, or direct computer link. Users receive a printout of goals and objectives accompanied by referenced curriculum, materials, and recommended activities. The rapid return of IEPs allows a child to receive and master several plans in a year. During the second and third years of operation over 5000 IEPs were implemented and over 800 hot line calls were made for purposes of crisis intervention, short term counseling, and other information services. The program serves Head Start Programs in the states of Louisiana, Arkansas, Texas, Oklahoma, and New Mexico. (DB)

Document Type: PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)

Geographic Source: U.S.; Utah

Target Audience: Practitioners

Provision of needed services to handicapped preschoolers in rural areas presents major challenges, primarily because of the lack of trained personnel. Federally-funded Project Hi Tech trained teaching staff of two preschools, one of them located almost 200 and the other over 300 miles from Utah State University, by using two-way audio-video telecommunications supported by more common forms of communication including telephone and electronic mail. The microwave signal transmission system utilized the existing state network with the addition of 23 gigahertz microwave radios at the two preschool sites. Other equipment included uni-directional and mobile microphones, broadcast-quality and home video cameras, standard television receivers, the Special Needs data-base, and speaker phones. Training techniques utilized coincidental and microsession teaching, the "Let's Be Social" curriculum for handicapped children, and a planning procedure for determining training content. Data indicated that interactive, televised classroom sessions did provide consultants with sufficient information to formulate individual training plans for rural teachers and that rural teachers could follow the plans. The resultant procedures were effective in helping children acquire skills. Few difficulties were incurred due to hardware malfunction; only 4 of 58 scheduled training sessions had to be cancelled due to equipment failure. (NEC)

One of two reports on the 1985 Home Information Technology Study (HITS), a national survey conducted to provide insights into the role played by educational technologies in out-of-school learning, this volume provides current national estimates of the nature and extent of non-school learning by children, adolescents, and adults, and examines the factors involved in the decision to engage in non-school learning and the processes and resources typically employed in different types of learning. The first of three major sections in this report, the introduction provides background information on the study and a description of the survey methodology. Detailed analyses of the data are presented in the second section for: (1) the nature and extent of non-school learning; (2) the most important learning activities; (3) factors related to the choice of the most important non-school learning; (4) use of resources in non-school learning, including involvement of other people and use of non-human resources; and (5) attitudes toward learning resources. The third section provides a summary of the major findings and conclusions drawn from the data analyses. Appended materials include copies of the HITS interview items for all four age groups; a summary of the HITS study design and survey methodology; and a discussion of the precision of reported estimates and generalized standard errors. (BBM)

One of two reports on the 1985 Home Information Technology Study (HITS), a national survey conducted to provide insights into the role played by educational technologies in out-of-school learning, this volume provides current estimates of the availability and accessibility of information technologies and related program materials in American households, and examines how, by whom, and to what extent these household technologies/resources are used for informal learning. The first of five major sections in this report, the introduction provides background information on the study and a description of the survey methodology. Detailed analyses of the data are then presented in separate sections for: (1) the general household availability of technological equipment and program materials to persons in the four age groups; (2) the use of technology/educational material for nonschool learning by children and adults; and (3) attitudes toward various information resources/technologies for different types of learning, and how these attitudes differ among and between users and nonusers of these materials. The fifth section provides a summary of the major findings and conclusions drawn from the data analyses. Appended materials include copies of the HITS survey questionnaire (interview) items; a summary of the HITS study design and procedures; and a brief discussion of the precision of reported estimates and generalized standard errors. **Expanding Human Services Training through Telecommunications: A Day Care-Head Start Study. Executive Summary.**

North Carolina State Dept. of Human Resources, Raleigh. Office of Day Care Services.

Jan 1985

19p.

EDRS Price - MF01/PC01 Plus Postage.

Document Type: RESEARCH REPORT (143)

Geographic Source: U.S.; District of Columbia

The feasibility of incorporating teletraining into a statewide staff development program was examined in a comparison of four training approaches: traditional instruction and audio instruction enhanced with either slides, videocassettes, or slowscan. The training population consisted of directors and caregivers from Head Start and state-subsidized day care centers in North Carolina. Three urban and one rural teleconferencing centers were established in the state. Attendance at each site ranged from 7 to 18 teachers and aides and from 3 to 14 administrators. Lasting between 3 and 4 hours per subject area, training focused on the classroom environment, families, and financial management. It was found that teleconferencing can create a learning environment as desirable as the one created by traditional training, both in terms of amount of learning and attitudes toward training. Of the approaches examined, audioconferencing provided the most cost-effective alternative to traditional training. It was suggested that the other approaches can offer a number of benefits when used in a specialized manner. (RH)

Document Type: RESEARCH REPORT (143)

Geographic Source: U.S.; North Carolina

Government: State

This study compared the effectiveness of three types of telecommunications technology and a traditional face-to-face approach in training day care teachers, aides, and administrators. The technologies were audio telecommunications with (1) audiotapes and slides, (2) videotapes, and (3) slowscan television. Data were collected through observations of training implementation, knowledge pretests and posttests, an opinionnaire, and a demographic survey of trainee characteristics. Results indicated that each training approach could be presented to cover the same content and procedures in similar amounts of time. Each approach resulted in a significant increase in knowledge, and none of the approaches was more effective than others in achieving knowledge gain. Subjects viewed traditional sessions more positively than audio or slowscan television sessions and preferred sessions delivered at a single site to multi-site sessions. Trainees who initially knew the least about the content learned the most. Other trainee characteristics were not related to the amount of learning that occurred. It was concluded that telecommunications technologies can effectively be used for training day care personnel. Additional observations are discussed, and recommendations are offered regarding the implementation of telecommunications training. Specifically, these recommendations concern primary sources of problems and the quality and effectiveness of training. (RH)

This manual introduces the Interagency Research Information System (IRIS), a database dealing with federally-sponsored research and development efforts relating to children and youth, and outlines the general uses of the IRIS database. The classification for the subject description of materials covered by the database is described and the classification scheme is presented, along with the numeric codes affiliated with the classification categories that are used in searching the IRIS file online. The general categories of information provided include general project information (e.g., funding, duration, scope, and sample size), targeted research population (by age, sex, ethnicity, socioeconomic status, and location), kind of research, focus of research, areas of research, and findings. **Audio Teleconferencing: Creating a Bridge between Rural Areas and the University in Early Childhood/Special Education.**

Shaeffer, Margaret B.; Shaeffer, James M.

*Rural Special Education Quarterly*, v12 n1 p23-29 1993

Theme issue with title "Early Childhood Special Education."

Document Type: PROJECT DESCRIPTION (141); TEACHING GUIDE (052); JOURNAL ARTICLE (080)

Describes the University of Wyoming's use of audio teleconferencing to deliver coursework to rural teachers and other professionals fulfilling new state certification requirements in early childhood special education. Suggests teaching methods, teacher behaviors, and "classroom" techniques that increase effectiveness of teleconferencing courses. Summarizes student reactions to a teleconferencing course. (SV)

Descriptors: Classroom Communication; \*Classroom Techniques; \*Distance Education; Early Childhood Education; Extension Education; Higher Education; \*Inservice Teacher Education; Professional Education; \*Rural Education; Special Education; Teaching Methods; \*Teleconferencing

**Restructuring with Technology.**

Foley, Dorothy M.

*Principal*, v72 n3 p22,24-25 Jan 1993

Document Type: JOURNAL ARTICLE (080); PROJECT DESCRIPTION (141)

One Massachusetts elementary school, desegregated and rebuilt with a complete system of state-of-the-art technology and infrastructure, has shown how technology can influence school restructuring and student achievement. School's technology is integrated into the whole curriculum. Garfield School's experience shows that computers can benefit both teachers and students, that technology can be upgraded, and that networking makes a critical difference. (MLH)

**Evaluating the Benefits of a Computer Based Telecommunication Network:  
Telementoring and Teletraining for Educators in Rural Areas.**

Kendall, Robbie M.

*Journal of Research in Rural Education*, v8 n1 p41-46 Win 1992

Document Type: JOURNAL ARTICLE (080); PROJECT DESCRIPTION (141)

Describes an inservice teacher training program for educators in early childhood special education in rural South Carolina using telecommunications, telementoring, and teletraining. The program evaluation shows significant improvements in participants' self-reported competency in using computers, understanding research journals, and using research information. (KS)

Descriptors: \*Access to Information; \*College School Cooperation; Early Childhood Education; Educational Technology; \*Inservice Teacher Education; Networks; Program Evaluation; \*Rural Schools; \*Special Education; \*Telecommunications

Identifiers: Telementoring; \*Teletraining

EJ367426 E 201893

**Modifying Preschool Teaching Behavior through Telecommunications and Graphic Feedback.**

DeWulf, Michael J.; And Others

*Teacher Education and Special Education*, v10 n4 p171-79 Fall 1987

Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143)

Target Audience: Practitioners; Researchers

Three undergraduate students were observed and trained through a two-way audio-video telecommunications system to use prescribed teaching tactics with preschool-aged handicapped children. Televised graphic feedback alone was insufficient in producing desired changes in teacher behavior, but televised graphic feedback plus televised verbal explanation of desired behaviors was sufficient. (Author/JDD)

Descriptors: Audiovisual Communications; \*Behavior Modification; \*Disabilities; \*Feedback; Preschool Education; \*Preservice Teacher Education; Student Behavior; Teacher Behavior; Teaching Methods; Teaching Styles; \*Telecommunications; \*Television; Verbal Communication; Visual Aids

**An Analysis of the Use of Teleconferencing to Support a Rural Early Intervention Program.**

Shaddock, Anthony J.; Batchler, Mervyn W.

*Exceptional Child*, v33 n3 p215-19 Nov 1986

Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143)

Analysis of weekly teleconferences between a multidisciplinary resource team and rural Australian parents, teachers, and volunteers working in early intervention for students with handicaps indicated the expected high frequency of information giving by the team and an unexpected high frequency of information giving by teachers, parents, and volunteers. (Author/CB)

Descriptors: \*Disabilities; \*Distance Education; Early Childhood Education; Foreign Countries; \*Intervention; Parent Participation; \*Program Effectiveness; Resource Staff; \*Rural Areas; \*Teleconferencing

Identifiers: Australia; \*Early Intervention

EJ343870 EC190800

**A Directory of Resources Supporting Microcomputer Use in Early Childhood Special Education.**

Hurth, Joicey L.

*Journal of the Division for Early Childhood*, v10 n3 p270-82 1986

Document Type: JOURNAL ARTICLE (080); DIRECTORY (132)

Target Audience: Researchers; Practitioners

The directory lists and describes 48 resources organized by: projects using microcomputers to instruct young exceptional children, other early childhood special education microcomputer projects, technical assistance projects, software evaluation projects, publications and projects on adapted toys and educational devices, online electronic communication, and sources for publications and other print resources. (DB)

Descriptors: Computer Assisted Instruction; Demonstration Programs; \*Disabilities; \*Early Childhood Education; \*Educational Resources; Instructional Material Evaluation; \*Microcomputers; Online Systems; Program Descriptions; Technical Assistance; Toys

EJ341013 CS707211

**"Eavesdropping" on the FM Band: Children's Use of Radio.**

Christenson, Peter G.; DeBenedittis, Peter

*Journal of Communication*, v36 n2 p27-38 Spr 1986

Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143)

Describes a study of children's use of radio over the grade school years. Documents patterns of radio use and lists several categories of reasons offered by children for their use of the radio. (MS)

Descriptors: \*Audiences; \*Childhood Interests; Children; Communications; Elementary Education; Mass Media; \*Media Research; \*Radio; \*Telecommunications; \*Young Children

EJ333597 SO514975

**Computer Programs for the Mind: New Ways to Learn.**

Knauer, Gene

*Futurist*, v20 n2 p33-35 Mar-Apr 1986

Document Type: JOURNAL ARTICLE (080); POSITION PAPER (120)

Interactive computer programs that include software able to mold its communication to the individual computer user will mean new links between man and machine. The computer will become an incredibly versatile tool for learning able to serve as a private tutor gearing instruction to the individual learner. (RM)

Descriptors: \*Computers; \*Computer Software; Elementary Secondary Education; \*Futures (of Society); Higher Education; Individualized Instruction; Online Systems; Preschool Education

EJ331773 IR515032

**Children's Broadcasting Information Online.**

Andrews, Patrice K.

*American Libraries*, v17 n1 p76,78 Jan 1986

Document Type: JOURNAL ARTICLE (080); PROJECT DESCRIPTION (141)

This article describes a computerized clearinghouse for children's radio and television designed to help parents, teachers, librarians, and students gather information on programs targeted for preschool through high-school-aged children. Data on 20,000 programs for the pilot, access for special needs audience, and the book/short story connection are covered. (EJS)

Descriptors: Clearinghouses; \*Databases; Elementary Secondary Education; Information Services; \*Information Systems; \*Online Systems; Preschool Education; \*Programming (Broadcast); \*Radio; \*Television

Identifiers: Database Reviews; KIDSNET

# **An Internet Glossary**

## Glossary

<b>address</b>	A location on a disk or in memory where a piece of information is stored. Also often used to refer to one's email address, which consists of letters followed by @ (i.e., "at" sign) and two or more domain names (example: jsmith@uiuc.edu).
<b>archive</b>	Storage of files for future use. Used in this book to indicate where Internet discussion group proceedings are stored and accessible.
<b>ARPANet</b>	An early effort to connect together a U.S. Defense Department network; an experimental network intended to support military research.
<b>ASCII</b>	American Standard Code for Information Interchange.
<b>ASCII file</b>	File that contains only ASCII characters (i.e., basic alphanumeric characters) and that can be sent directly over most computer networks such as the Internet. Non-ASCII files, which contain program-specific formatting codes and special characters, may not necessarily be sent over computer networks without additional special software such as MIME (see also).
<b>baud</b>	Measure of digital communication speed that measures how many signals are transmitted per second. Do not confuse with bits per second.
<b>BITNET</b>	Because It's Time NETWORK. A network connecting primarily IBM mainframes and minicomputers in research institutions and universities around the world. A low-cost, low-speed network, BITNET was developed to provide distributed network access beyond the limits of the original ARPANet (see also) network.
<b>bits per second</b>	Measure of digital communication speed that measures how many characters are transmitted across a datalink each second. Do not confuse with baud rate.
<b>body (email message)</b>	The actual text of an email message. (See also "subject [email message].")
<b>bounced message</b>	An email message that is undeliverable for some reason, and has been returned to the original sender.
<b>CELLO</b>	A World Wide Web browser intended for use with Microsoft Windows.

<b>client</b>	A computer that requests information or files from another computer connected to the Internet (the other computer is called a "server" [see also]).
<b>community computing network</b>	A network that provides a large group of users, usually at the community or regional level, with access to the Internet and to local resources, typically at very low cost.
<b>connect time</b>	The length of time you are "logged on" to a computer system.
<b>cyberspace</b>	Term invented by William Gibson in the science fiction novel <i>Neuromancer</i> to refer to a futuristic computer network that people use by plugging their brains into it.
<b>daemon</b>	Software on a UNIX operating system that runs continuously, performing "housekeeping" chores. The term is most visible to email users who send an email message to an improper address; the mail is returned by a mail daemon. Software that runs Gopher and World Wide Web sites is "daemon" software. This software is always running; it doesn't need to be repeatedly "started up" (as you repeatedly "start up" a word processor each time you want to use it, for example).
<b>domain name system</b>	A standardized system for naming computers on the Internet. See Chapter 1.
<b>DOS</b>	Disk Operating System.
<b>download</b>	To transmit data from a remote computer to a local computer on which a user is working.
<b>electronic discussion group</b>	See "mail list."
<b>electronic discussion list</b>	See "mail list."
<b>electronic mail list</b>	See "mail list."
<b>FAQ</b>	Frequently asked question. FAQs are files containing the answers to frequently asked questions and are frequently found at Internet sites.
<b>Finger</b>	A facility used on a UNIX computer connected to the Internet that locates an individual's logon name in an email address, given the domain name of the computer the individual uses for email.

<b>FTP</b>	File Transfer Protocol. Program that allows users to transfer files from one computer to another over a network. Some knowledge of the other computer's operating system is required.
<b>Gopher</b>	An information server that contains extensive information organized by menu. Gophers can also provide access to other information servers anywhere in the world by "pointing" to them from a menu item. Gopher has generally been superseded by the World Wide Web (see also).
<b>header</b>	The part of an electronic mail message generated by the protocols that govern message transfer. Provides information about who originated a message, its pathway of travel across the Internet, and machine identifications along the way.
<b>home page</b>	See Web site.
<b>HTML</b>	HyperText Markup Language. A series of codes inserted into ASCII text documents that instruct a Web browser (see also) how to display the documents.
<b>HTTP</b>	HyperText Transfer Protocol. A type of electronic protocol used by computers on the World Wide Web for communicating with each other. The four letters "http" appear at the beginning of the URL (see also) of many World Wide Web pages.
<b>hypertext document</b>	A document that contains within it links to other documents; by choosing a link, a user is automatically connected to another document on a local computer or over the Internet.
<b>Internet</b>	An international network of networks serving educational, military, government, and commercial institutions.
<b>Internet Explorer</b>	A graphical World Wide Web browser produced by Microsoft Corp.
<b>Internet service provider</b>	An institution, organization, or commercial enterprise that provides users with access to the Internet.
<b>InterNIC</b>	An organization that assigns Internet domain names (see also) within the United States.
<b>IP address</b>	The numerical address assigned to each computer on a network so that its location and activities can be distinguished from other computers.
<b>JUGHEAD</b>	A type of software used to search an individual Gopher (see also) site.

<b>Listserv</b>	A software product that operates Internet discussion groups or mail lists (see also).
<b>Listprocessor</b>	A software product that operates Internet discussion groups or mail lists (see also).
<b>logon, login</b>	(1) A unique name you use to access or "log on" to a computer; usually appears as the first part of your email address, before the "at" sign. (2) To access a computer by providing a unique user name.
<b>mail list</b>	An umbrella term that includes all kinds of Internet discussion groups based on Listserv, Majordomo, Listprocessor, or other kinds of software. Individuals "subscribe" to a mail list. A message that a subscriber sends to the mail list is automatically distributed to every other subscriber on the mail list.
<b>Majordomo</b>	A software product that operates Internet discussion groups or mail lists (see also).
<b>MIME</b>	Multi-Purpose Internet Mail Extensions. This is a specification for sending objects other than message text (most often text files, but can also include other files such as software or graphics) in email messages.
<b>modem</b>	A device that fits into or onto your computer for the purpose of exchanging information with another computer via the telephone network.
<b>Navigator</b>	A graphical World Wide Web browser produced by Netscape Corp.
<b>netiquette</b>	Internet etiquette.
<b>password</b>	A string of alphanumeric characters used to protect a logon account on a computer by making it very difficult for unauthorized users to access that account. A password is not totally secure and may not be absolutely effective in preserving your privacy and the safety of the network you belong to, especially if you share your password with someone else.
<b>PPP</b>	Point-to-point protocol. A protocol that allows a computer to speak over the phone line to a variety of networks that use different network languages, including AppleTalk, IPX, and IP. PPP is helpful if you use the Internet extensively from home by dialing in to an institutional computer account. To use PPP, you need a high-speed modem and special PPP software. Check with your local system administrator to see if PPP is available through your type of account.

<b>search engine</b>	A program used to search a collection of electronic resources. Search engines exist on the Internet that can search for information in millions of Internet sites.
<b>server</b>	A computer on the Internet that provides (or "serves") information or files to other computers (called "clients") that send requests to the server. (See also "client.")
<b>signon</b>	Same as login.
<b>SLIP</b>	Serial Line Internet Protocol. A precursor of and similar in function to PPP (see also).
<b>subject (email message)</b>	A field in the header of an email message into which one can type a short description of the topic of the email message. (See also "body [email message].")
<b>surfing</b>	The enjoyable act of browsing for Internet information.
<b>TCP/IP</b>	Transmission Control Protocol/Internet Protocol. A set of protocols used by the Internet to support services such as TELNET, file transfer (FTP), and mail (SMTP).
<b>TELNET</b>	Internet standard protocol for remote terminal connection. Enables a user at one site to log on to a server as if his or her own computer were directly connected to the server.
<b>UNIX</b>	UNIX is an operating system used on a variety of mainframes, workstations, and personal computers. It has short commands and advanced file sharing and networking capabilities.
<b>URL</b>	Uniform Resource Locator. A format of Internet address used on the World Wide Web.
<b>USENET</b>	An informal news network linking many sites around the world.
<b>VERONICA</b>	A type of software used to search Gopher (see also) sites worldwide.
<b>Web site</b>	A collection of information or resources on the World Wide Web that usually consists of a series of files or "pages," including hyperlinks as well as graphics and other nontext files. The page which introduces the site is called the "Home Page."
<b>Web browser</b>	A program that allows users to connect to sites on the World Wide Web. Web browsers can be text-only (such as Lynx) or graphical (such as Netscape Navigator and Microsoft Internet Explorer).

**World Wide Web**

That part of the Internet that allows users to easily follow links among hypertext documents (see also) and to view files that contain both text and nontext (such as graphics, video clips, sound, etc.) material. A Web browser (see also) is a software product that allows users to access the World Wide Web.

## ***The ERIC Clearinghouse on Elementary and Early Childhood Education*** *University of Illinois at Urbana-Champaign*

---

*Providing information for educators, parents and families, and all of us interested in the development, education, and care of children from birth through early adolescence, since 1967.*

***The ERIC Clearinghouse on Elementary and Early Childhood Education*** is one of 16 ERIC clearinghouses funded by the Office of Educational Research and Improvement, U.S. Department of Education. ERIC clearinghouses identify, select, and prepare entries describing materials related to education for the ERIC database, the world's most frequently used collection of information on education.

ERIC/EECE contributes to the database in the areas of child development, the education and care of children from birth through early adolescence, the teaching of young children, and parenting and family life.

### ***Acquisitions and Database Building***

ERIC/EECE identifies and selects conference papers, research reports, curriculum materials, government documents, opinion papers, published books, videos, and multi-media kits for possible inclusion in the ERIC database. About 70% of materials submitted to ERIC/EECE are accepted. The clearinghouse also annotates and indexes articles from more than 50 journals for the ERIC database.

### ***Information Services***

The clearinghouse provides information in response to mail, telephone, and electronic requests. Responses may include a short search of the ERIC database, full-text articles, resource lists and flyers, and/or appropriate referrals. For parents, ERIC/EECE operates the PARENTS AskERIC question-answering service, which is part of the nationally acclaimed AskERIC systemwide project to provide electronic information services over the Internet ([askeric@askeric.org](mailto:askeric@askeric.org)).

### ***Publications***

In support of its dissemination and question-answering activities, the clearinghouse produces ERIC Digests (2-page articles on topics of high interest), the *ERIC/EECE Newsletter*, and *Early Childhood Research & Practice*, an electronic journal. Other ERIC/EECE publications include a major series titled *Perspectives from ERIC/EECE*, Resource Lists, *ReadySearches* (searches of the ERIC database on popular topics), information packets, and occasional papers. A complete listing of all products is available from the clearinghouse upon request.

The clearinghouse supplies no-cost camera-ready copies of newsletters, Digests, and Resource Lists for other organizations and individuals to use at conferences and meetings.

ERIC/EECE is accepting submissions to its new electronic journal *Early Childhood Research & Practice*. Author guidelines and subscription information are available on the journal's Web site:

<http://ecrp.uiuc.edu/>

### ***Internet Activities***

For educators and parents with Internet access, ERIC/EECE offers a World Wide Web site at the following address:

<http://ericeece.org/>

The clearinghouse also operates several Internet-based discussion groups — on early childhood education (ECENET-L); early childhood policy issues (ECPOLICY-L); middle level education (MIDDLE-L); parenting (PARENTING-L); the project approach in early education (PROJECTS-L); the Reggio Emilia (Italy) approach to early education (REGGIO-L); school-age care (SAC-L); campus children's centers (CAMPUSCARE-L); families, technology, and education (FTE-L); early childhood professional development (ECPROFDEV-L); leadership in early childhood education (ECLEADERS-L); and early childhood director credentialing systems (DIRCRED-L). Complete information on subscribing to the discussion groups is available on request.

### ***National Parent Information Network***

A major focus of clearinghouse activity is the National Parent Information Network (NPIN), which ERIC/EECE operates with the ERIC Clearinghouse on Urban Education. This award-winning Web site and information service for parents and parenting professionals offers full-text information on parenting, child development, family life, and parent-education partnerships. NPIN also works with a national collaborative of parenting organizations to improve parent education. NPIN can be accessed at:

<http://npin.org/>

### ***ERIC/EECE Partners Program***

ERIC/EECE also maintains a partners program, working with organizations to exchange information and to inform their constituencies about the education-related information available from ERIC. Partners receive special services and complimentary copies of ERIC/EECE publications.

### ***Workshops and Conferences***

ERIC/EECE staff offer periodic workshops and presentations on ERIC services and on Internet use at national conferences. A limited number of presentations are also made on a cost-recovery basis.

### ***For More Information...***

A complete publications list and sample copies of the *ERIC/EECE Newsletter* are available upon request. Information on submitting materials to ERIC, the ERIC system, the partners program, workshops, Internet services, and NPIN activities is also available by contacting:

# NPIN

National Parent Information Network

<http://npin.org/>

*Information on parenting and on parent involvement in education at your fingertips . . .*

## What Is NPIN?

The National Parent Information Network (NPIN) finds and shares high-quality materials related to parenting and parent involvement in education. The focus is on creating an attractive, widely available resources collection that incorporates graphics and other parent-friendly features of the Internet. NPIN:

- provides an attractive, single point of access on the World Wide Web to high-quality, noncommercial information on parenting and parent involvement in their children's education;
- continually adds new information to its already broad collection for parents and those who work with parents; and
- trains parents and parenting professionals in the skills needed to use NPIN and to participate in the emerging national information infrastructure.

*For parents . . .* NPIN offers easy access to high-quality information on raising healthy children and on becoming informed partners in their children's education.

*For organizations . . .* NPIN provides research-based information that can be incorporated with local resources on parenting and on how parents can be actively involved in their children's learning at home, at school, and in their communities.

## What Does NPIN Do?

Since 1993, NPIN has been developing one of the largest collections of high-quality, noncommercial information on the Internet on parenting, child development, and family life. The U.S. Department of Education supports the National Parent Information Network through the ERIC program. NPIN provides the following services:

**PARENT NEWS** — An award-winning Internet source of news on child rearing and education for parents, *Parent News* is updated every two months and includes feature articles; listings and descriptions of parenting-related organizations, newsletters, books, and Internet sites; and community parent-support programming ideas.

**PARENTS AskERIC** — An electronic mail question-and-answer service for parents and those who work with parents on issues related to child development, care, and education.

**PARENTING-L** — An informal Internet discussion list for parents and parenting professionals that focuses on current parenting concerns.

**RESOURCES FOR PARENTS AND PARENTING PROFESSIONALS** — A large and growing collection of articles, essays, and other materials on family life, child development, and parenting from birth through early adolescence.

**FAMILIES, TECHNOLOGY, AND EDUCATION CONFERENCE** — Held in October 1997, this unique conference examined the role of technology in linking families and schools and the effect of media on children's and families' lives and learning.

### How Can You Participate?

- Visit NPIN's Web site at <http://npin.org/>
- Use PARENTS AskERIC by emailing parenting questions to [askeric@askeric.org](mailto:askeric@askeric.org)
- Work with NPIN to share your high-quality parenting materials. The list of organizations contributing information to NPIN continues to expand. It includes the Center for Schools, Families and Community Partnerships, the National Association for the Education of Young Children, the National Urban League, National Fathers Network, and many other organizations.
- Provide feedback and suggest new materials to be acquired, and topics or issues that you or the families you work with would like to see included on the National Parent Information Network.
- Contact NPIN to discuss a training workshop for your local family center, library, Head Start program, school, or parenting organization.

## Helping Early Childhood Teacher Education Students Learn about the Internet

Lisa Janicke Hinchliffe

Teacher educators in the early childhood education (ECE) and child development fields can use the technological capacities of the Internet to expand the boundaries of the classroom and enrich the learning experiences of their students. The Internet is a vast system of computer networks that exchange electronic data, thereby facilitating communication and access to information. Many teacher educators are aware of the potential of the Internet but are not certain how to integrate the Internet into early childhood teacher education. This digest provides examples of projects which could be used in a child development classroom to introduce students to Internet resources. The URLs ("uniform resource locators," or Internet addresses, of Web sites or Gophers) cited in boldface numbered items are listed in the Electronic References section at the end of the digest.

### Getting Started

A connection to the Internet and a willingness to learn are the foundation for integrating the Internet into an ECE classroom; however, a few other resources will help. Students must receive training in how to use the Internet. Texts by Kovacs (1995) and Jaffe (1994) can help teacher educators design appropriate training sessions. A guide published by ERIC/EECE (1995) provides specific information about using the Internet and describes Internet resources of interest to adults working with young children. Teacher educators can also use materials made available via the Internet by other Internet trainers, such as can be found in the searchable index at **Yahoo!**, titled **Computers and Internet (11)**.

### Using Electronic Discussion Groups

Electronic discussion groups, or mailing lists, provide opportunities for people to have conversations about topics of mutual interest via electronic mail (email). **Liszt (8)** is a searchable directory of discussion groups which includes directions for subscribing. Examples of discussion groups related to ECE are ECENET-L and ECEOL-L (on ECE in general), SAC-L (on school-age child care), REGGIO-L (on the preschool approach used in Reggio Emilia, Italy), and CYE-L (on appropriate environments for young children).

There are no membership charges for subscribing to a discussion group; however, in order to participate in them, students need email accounts. Email accounts are available from many teaching institutions, community computing networks (such as Free-Nets), or commercial Internet providers. It is important for instructors to

provide training in email use rather than assume students will learn to use email on their own. The technical details of using email vary from system to system; the local network administrator can usually provide assistance. Once students have access to email and discussion groups, they can undertake the following activities.

*Learn about email etiquette.* Students will need to understand Internet etiquette, or "netiquette." For example, explain that students should "lurk"—read the discussions and observe the tone of the group—before posting. Discuss netiquette in class, and develop a list of guidelines that will be used in their interactions with discussion groups. Additional netiquette tips are offered by **Rinaldi (10)**.

*Focus on a single discussion group.* The number of messages posted to and topics discussed on a single discussion group can be overwhelming. Students new to discussion groups are likely to become frustrated if they try to keep up with all messages on several lists. Divide the students into groups and assign each student group a particular discussion group to monitor. Every month have each student group summarize the major or most useful interactions on its discussion group for others in the class. These summaries can be presented orally during class time or distributed by email. By sharing summaries, students can learn how professionals share information with one another and at the same time determine which discussion groups are most relevant to their own personal interests.

*Ask the experts.* Many people who belong to ECE discussion groups are practitioners working with young children who are often willing to provide information on good practice. Their expertise is a valuable resource for students. Select a discussion group related to the topic of the course research paper and have students join the group. In addition to using published resources, students can solicit input from practitioners in ECE about their topic. Explain to students that specific questions which show previous research and careful thought are more likely to generate useful responses from discussion group members. For example, rather than asking "How do you mainstream children?" students might construct a specific request for information: "I am trying to identify techniques to use in mainstreaming a six-year-old boy with Downs Syndrome into a session of science experiments with water. I have considered working with students in small groups rather than as a whole class. What would you recommend doing so that he can participate fully without disrupting the experiments?" Preview students' questions before they send them

to the discussion group. If possible, confirm with the owner of the discussion group that the requests will not be disruptive. Avoid having several students ask the same question of the same group.

*Be the expert.* Many requests for information are posted daily to discussion groups. Assign students to select a question that interests them and then research and write a response. Preview responses before students send them. Responses should include references to the information resources that were consulted as well as an explanation that the response is part of a course requirement, so that the original requester will not expect such researched responses to every question.

*Summarize the conversation.* A copy of each message sent to various education-related discussion groups is archived in the **AskERIC Virtual Library Education Listserv Archives (2)**. Each discussion group has its own chronologically arranged archive. Students might browse discussion group archives for topics which generated more than ten messages and can write a summary of the discussion and points of consensus that emerged. For example, students could summarize the **January 1995 ECENET-L (3)** discussion about Power Rangers. These summaries can be distributed to class members or reviewed by the teacher educator.

### Using World Wide Web and Gopher Resources

The World Wide Web and Gophers are depositories of publicly accessible information that can be used to supplement course textbooks or readings. The Web is a hypermedia environment consisting of text, graphics, audio, and video. Gophers are menu-based resources of text files. Web and Gopher sites, such as **ERIC/EECE's Web site (5)**, can be accessed using Web browser software that is graphical (such as Netscape) or text-based (such as Lynx); Gophers can also be accessed using Gopher software. The local network administrator can provide information about the availability and use of this software. Using the World Wide Web and Gophers, students can try the following activities.

*Create an information packet.* Parents and guardians are important partners in educating young children and often request information from early childhood educators. Have students create a parent information packet on topics of their choosing using full-text resources from, for example, **ERIC/EECE's Web site (5)**, the **National Parent Information Network (NPIN) (9)**, and other **ERIC system Web sites (6)**. Possible topics include kindergarten readiness, children and the mass media, sibling interactions, and discipline.

*Search for lesson plans.* Students developing lesson plans on particular topics can search the Web for examples. Two possible "search engines" to use are **infoseek (7)** and **Alta Vista (1)**; a more complete list is available in the searchable index in **Yahoo!**, titled **Computers and Internet...Searching the Web (12)**. No search engine available can do a comprehensive search of all Web sites. Most search engines allow keyword searching, but the level of search sophistication varies from one search engine to another. In general, using the phrase "lesson plans" and a keyword describing the topic area will retrieve good search results. For example, to look for lesson plans for a science unit on flowers, use the keywords "lesson plans" and "flowers."

*Solve a problem.* Many ECE programs require students to observe children and staff interacting in an ECE setting such as a preschool. Instruct students to keep a record of the problems that they see when they are observing. When the students return from observing, divide them into groups and have each group search the **ERIC database (4)** and use **ERIC/EECE** and other Internet

resources to research possible solutions to one of the problems observed. As a group, the students could discuss the possible solutions, select their preferred solution, and present the problem and solution to the entire class. If appropriate, the proposed solution could also be presented to the staff working in the ECE setting.

*Be an information provider.* In addition to using the information posted by other people, students can be involved in projects to provide information via the Web. To create a Web site, students will need access to a Web server (available in many postsecondary settings) and knowledge of HTML (hypertext markup language, the formatting language for creating Web pages). A class of students could create a Web site for their class or work with a local or campus child care center to create a Web site for the center.

### Conclusion

The Internet is a vast community of people and resources. By integrating Internet use into early childhood teacher education programs, early childhood teacher educators enhance the educational experiences of their students and prepare them to be active participants in the global ECE community.

# ERIC/EECE Internet Services

## AskERIC and PARENTS AskERIC

AskERIC and PARENTS AskERIC are Internet question-answering services of the ERIC system coordinated by the ERIC Clearinghouse on Information and Technology (ERIC/IT) and ERIC/EECE. Email your questions about the development, education, and care of children to: [askeric@askeric.org](mailto:askeric@askeric.org)

## World Wide Web Sites

### ERIC/EECE

<http://ericeece.org/>

The hub of the ERIC/EECE World Wide Web server, this site provides links to all other ERIC/EECE sites. The site includes ERIC/EECE publications, links to all other ERIC system sites, links to places where the ERIC database can be searched, and information on ERIC/EECE listservs.

### National Parent Information Network (NPIN)

<http://npin.org/>

NPIN is an extensive collection of materials for parents and those who work with them. The full texts of brochures, pamphlets, and longer publications for parents and family support personnel are included. Links to other parenting sites are also included. The site contains information about the Families, Technology, and Education Initiative (<http://npin.org/fte.html>).

### Early Childhood Research & Practice (ECRP)

<http://ecrp.uiuc.edu/>

*ECRP* is a peer-reviewed electronic journal that covers topics related to the growth, learning, development, care, and education of children from birth to approximately age 8. *ECRP* emphasizes articles reporting on practice-related research and development, and on issues related to practice, parent participation, and policy.

### ReadyWeb

<http://readyweb.crc.uiuc.edu/>

This site presents information and resources pertaining to school readiness, including ERIC bibliographies, a virtual library of full-text materials, and links to other Web resources.

### National Child Care Information Center (NCCIC)

<http://nccic.org/>

NCCIC, funded by the U.S. Department of Health and Human Services, is the Adjunct ERIC Clearinghouse for Child Care. This site contains topical newsletters and publications about child care, a resource guide to organizations related to child care, and links to many other child care sites on the Internet.

### CLAS Early Childhood Research Institute

<http://clas.uiuc.edu/>

The Culturally and Linguistically Appropriate Services (CLAS) Early Childhood Research Institute is a collaborative organization that evaluates early intervention and preschool practices that are effective for culturally and linguistically diverse families. The Web site has information on submitting materials to and reviewing materials for CLAS.

### Center for Career Development in Early Care and Education

<http://ericps.crc.uiuc.edu/ccdece/ccdece.html>

Located at Wheelock College, the Center for Career Development in Early Care and Education provides information about professional development for child care and early education professionals.

### National Coalition for Campus Children's Centers

<http://ericps.crc.uiuc.edu/n4c/n4c/home.html>

The National Coalition for Campus Children's Centers offers information relevant to campus child care centers and other two-year or four-year campus settings for young children.

### California Child Care Health Project (CCHP)

<http://ericps.crc.uiuc.edu/cchp/cchp/home.html>

The CCHP Web site features information on health and safety in child care settings, particularly family child care.

### U.S. National Committee of the World Organization for Early Childhood Education

(Organization Mondiale pour l'Éducation Pré-scolaire [OMEP])

<http://omep-us.crc.uiuc.edu/>

This Web site describes the work of OMEP and OMEP's U.S. National Committee, provides information about membership in the U.S. National Committee, presents an international OMEP Directory and news items related to OMEP and early childhood topics, and lists upcoming events.

### National Association of Early Childhood Specialists in

State Departments of Education (NAECS/SDE)

<http://ericps.crc.uiuc.edu/naecs/>

This Web site provides information about the work of NAECS/SDE and copies of position papers and other short publications from NAECS/SDE.

## Electronic Discussion Groups

ERIC/EECE currently sponsors 12 electronic *discussion groups* (or *lists*) on the Internet. These groups operate on Listserv software on the University of Illinois's "postoffice" computer.

**REGGIO-L:** Provides a forum for discussing the Reggio Emilia approach to early education; co-sponsored by ERIC/EECE and the Merrill Palmer Institute at Wayne State University.

**ECENET-L:** Serves as a forum for discussions of the development, education, and care of children from birth through age 8; sponsored by ERIC/EECE.

**MIDDLE-L:** Intended for middle level educators, teacher educators, and others interested in children ages 10-14 and education at the middle level.

**ECPROFDEV-L:** Meant for those involved in the preservice or inservice education and training of early childhood personnel.

**PROJECTS-L:** Discusses ways to implement the project approach as an instructional strategy; co-owned by Sylvia Chard at the University of Alberta and ERIC/EECE.

**SAC-L:** Intended for those interested in school-age care; co-owned by ERIC/EECE and the National Institute on Out-of-School Time (NIOST) at the Center for Research on Women at Wesley College.

**PARENTING-L:** Provides a forum for parents concerned about family life in the 1990s. Topics discussed include child-raising and parent involvement in education.

**CAMPUSCARE-L:** Concentrates on issues related to campus child care or lab school environments for young children; operated by ERIC/EECE and the National Coalition for Campus Children's Centers.

**ECPOLICY-L:** Centers on policy issues pertaining to children and families, child care, and preschool education; co-sponsored by the National Association for the Education of Young Children and ERIC/EECE.

**FTE-L:** Focuses on issues related to families, technology, and education, such as the use of technology to support families in educating their children and the impact of the Internet on family life.

**ECLEADERS-L:** Focuses on leadership in the early childhood and school-age field; co-sponsored by ERIC/EECE and the Center for Career Development in Early Care and Education at Wheelock College.

**DIRCRED-L:** Focuses on the work being done to develop early childhood and school-age director credentials; co-sponsored by ERIC/EECE and the Center for Career Development in Early Care and Education at Wheelock College.

To subscribe to any of these discussion groups, send an email message to: [listserv@postoffice.cso.uiuc.edu](mailto:listserv@postoffice.cso.uiuc.edu)

Leave the subject line blank. Do not include a signature with the message. In the body of the message, type *only* the following: *subscribe listservname your-first-name your-last-name*

For example, if you are Jane Doe who wants to subscribe to ECENET-L, simply type: *subscribe ECENET-L Jane Doe*

You will automatically be subscribed to the discussion list and will receive back (via email) a notice of subscription and information about the list. This information includes instructions on sending commands to the list, such as the command for signing off the list. *Please save these instructions for future reference.* Note that there are two email addresses associated with each list—an administrative address and a discussion list address. The *administrative address* ([listserv@postoffice.cso.uiuc.edu](mailto:listserv@postoffice.cso.uiuc.edu)), which is the same for all 12 lists, is used for sending subscription requests and other administrative messages. *Do not send messages intended for the list administration to the discussion list address.* To post a message to the list for all list members, send the message to the *discussion list address*. The discussion list addresses for the lists are:

REGGIO-L@postoffice.cso.uiuc.edu  
ECENET-L@postoffice.cso.uiuc.edu

## AFFILIATE CLEARINGHOUSE

National Clearinghouse for Educational Facilities  
ERIC Program Office  
555 New Jersey Avenue, NW  
Washington, DC 20208-5721  
Telephone: (202) 219-1655, (888) 552-0624  
Fax: (202) 219-1817  
E-mail: nceffinfo@edfacilities.org  
URL: <http://www.edfacilities.org>

## SUPPORT COMPONENTS

*ERIC support components produce, publish, and disseminate ERIC products and services.*

### **ACCESS ERIC**

2277 Research Boulevard, 7A  
Rockville, MD 20850  
Toll Free: (800) LET-ERIC, (800-538-3742)  
Telephone: (301) 519-5789  
Fax: (301) 519-6760  
E-mail: accesseric@aspensys.com  
URL: <http://www.aspensys.com/eric>

### **ERIC Document Reproduction Service**

DynEDRS, Inc.  
7420 Fullerton Road, Suite 110  
Springfield, VA 22153-2852  
Toll Free: (800) 443-ERIC (3742)  
Telephone: (703) 440-1400  
Fax: (703) 440-1408  
E-mail: service@edrs.com  
URL: <http://edrs.com>

### **ERIC Processing and Reference Facility**

Computer Sciences Corporation  
1100 West Street, 2nd Floor  
Laurel, MD 20707-3598  
Toll Free: (800) 799-ERIC (3742)  
Telephone: (301) 497-4080  
Fax: (301) 953-0263  
E-mail: ericfac@inet.ed.gov  
URL: <http://ericfac.piccard.csc.com>

### **Oryx Press**

4041 North Central Avenue at Indian School Road  
Suite 700  
Phoenix, AZ 85012-3397  
Toll Free: (800) 279-6799  
Telephone: (602) 265-2651  
Fax: (602) 265-6250  
E-mail: info@oryxpress.com  
URL: <http://www.oryxpress.com>

### **U.S. Government Printing Office**

Superintendent of Documents  
P.O. Box 371954  
Pittsburgh, PA 15250-7954  
Telephone: (202) 512-1800  
Fax: (202) 512-2250

**ERIC MANDATORY "EDUCATIONAL LEVEL" DESCRIPTORS**  
(Procedure implemented February 1975)

- **EARLY CHILDHOOD EDUCATION**  
Scope Note: Activities and/or experiences that are intended to effect developmental changes in children, from birth through the primary units of elementary school (grades K-3).
- **PRESCHOOL EDUCATION**  
Scope Note: Activities and/or experiences that are intended to effect developmental changes in children, from birth to entrance in kindergarten (or grade 1 when kindergarten is not attended).
- **PRIMARY EDUCATION**  
Scope Note: Education provided in kindergarten through grade 3.
- **ELEMENTARY SECONDARY EDUCATION**  
Scope Note: Formal education provided in kindergarten or grade 1 through grade 12.
- **ELEMENTARY EDUCATION**  
Scope Note: Education provided in kindergarten or grade 1 through grade 6, 7, or 8.
- **ADULT BASIC EDUCATION**  
Scope Note: Education provided for adults at the elementary level (through grade 8), usually with emphasis on communicative, computational, and social skills.
- **PRIMARY EDUCATION**  
Scope Note: (See above.)
- **INTERMEDIATE GRADES**  
Scope Note: Includes the middle and/or upper elementary grades, but usually 4, 5, and 6.
- **SECONDARY EDUCATION**  
Scope Note: Education provided in grade 7, 8, or 9 through grade 12.
- **JUNIOR HIGH SCHOOLS**  
Scope Note: Providing formal education in grades 7, 8, and 9 – less commonly 7 and 8, or 8 and 9.
- **HIGH SCHOOLS** (*Changed from "Senior High Schools" in March 1980.*)  
Scope Note: Providing formal education in grades 9 or 10 through 12.
- **HIGH SCHOOL EQUIVALENCY PROGRAMS**  
Scope Note: Adult educational activities concerned with the preparation for and the taking of tests which lead to a high school equivalency certificate, e.g., General Educational Development program.
- **POSTSECONDARY EDUCATION**  
Scope Note: All education beyond the secondary level – includes learning activities and experiences beyond the compulsory school attendance age, with the exception of adult basic education and high school equivalency programs. (Before APR75, restricted to "education beyond grade 12 and less than the baccalaureate level.")
- **HIGHER EDUCATION**  
Scope Note: All education beyond the secondary level leading to a formal degree.
- **TWO YEAR COLLEGES** (*Changed from "Junior Colleges" in March 1980.*)  
Scope Note: Public or private postsecondary institutions providing at least 2, but less than 4, years of academic and/or occupational education.

**ERIC OPTIONAL 'AGE LEVEL' DESCRIPTORS****NEONATES**

Scope Note: Aged birth to approximately 1 month.

**INFANTS**

Scope Note: Aged birth to approximately 24 months.

**YOUNG CHILDREN**

Scope Note: Aged birth through approximately 8 years.

**CHILDREN**

Scope Note: Aged birth through approximately 12 years.

**TODDLERS**

Scope Note: Approximately 1-3 years of age.

**PRESCHOOL CHILDREN**

Scope Note: Approximately 2-5 years of age.

**PREADOLESCENTS**

Scope Note: Approximately 9-12 years of age.

**ADOLESCENTS**

Scope Note: Approximately 13-17 years of age.

**YOUNG ADULTS**

Scope Note: Approximately 18-30 years of age.

**ADULTS**

Scope Note: Approximately 18+ years of age.

**ADULTS (30 TO 45)**

Scope Note: Age group between "young adults" and "middle aged adults" --approximately 30-45.

**MIDDLE AGED ADULTS**

Scope Note: Approximately 45-64 years of age.

**YOUNG OLD ADULTS**

Scope Note: Approximately 65-75 years of age.

**OLDER ADULTS**

Scope Note: Approximately 65+ years of age.

**OLD OLD ADULTS**

Scope Note: Approximately 75+ years of age.

CODE*	PUBLICATION/DOCUMENT TYPES
010	BOOKS COLLECTED WORKS
020	—General
021	—Conference Proceedings
022	—Serials
030	CREATIVE WORKS (Literature, Drama, Fine Arts) DISSERTATIONS/THESES
040	—Undetermined
041	—Doctoral Dissertations
042	—Masters Theses
043	—Practicum Papers
	GUIDES
050	—General (use more specific code, if possible) —Classroom Use
051	—Instructional Materials (For Learner)
052	—Teaching Guides (For Teacher)
055	—Non-Classroom Use (For Administrative and Support Staff, and for Teachers, Parents, Clergy, Researchers, Counselors, etc., in Non-Classroom Situations)
060	HISTORICAL MATERIALS
070	INFORMATION ANALYSES (State-of-the-Art Papers, Research Summaries, Reviews of Literature on a Topic)
071	—ERIC Information Analysis Products (IAPs)
072	—Book/Product Reviews
073	—ERIC Digests (Selected) in Full Text

143	—Research/Technical
150	SPEECHES, CONFERENCE PAPERS
160	TESTS, EVALUATION INSTRUMENTS
170	TRANSLATIONS
171	—Multilingual/Bilingual Materials

\*Up to 3 codes for RIE, or 2 for CIJE, can be assigned to each document.

# DOCUMENT DELIVERY

## How To Get DOCUMENTS Announced By ERIC

Two monthly abstract/index journals announce education-related Journal Articles and Documents collected by ERIC

### *Current Index to Journals in Education (CIJE)*

Announces journal articles

### *Resources in Education (RIE)*

Announces documents (reports, papers, guides, books)

These two publications are available in paper form and all the citations they announce are also contained in the ERIC database, which can be accessed online or through CD-ROM. Once you identify an item you want reproduced, your options depend on whether it is a journal article or a document. Journal articles (CIJE) are identified by an EJ number. Documents (RIE) are identified by an ED number.

### Documents (EDs) — Cited in RIE

There are three principal ways to obtain documents cited in ERIC's database:

- by ordering them from the ERIC Document Reproduction Service (EDRS);
- by finding the microfiche for the document in one of the many ERIC standing order microfiche collections located at major libraries around the country and the world;
- by ordering the document from its original source or other non-ERIC supplier noted in the ERIC citation.

#### EDRS

Most documents announced in RIE can be ordered inexpensively from EDRS in either microfiche (\$1.38 per title) or reproduced paper copy (\$4.08 per 25 pages), plus postage. If you want to receive all documents on microfiche in regular monthly shipments, you can subscribe for about \$2,000 per year. Clearly identified orders are processed within 5 days. Orders can be placed via mail, telephone, FAX, or online vendor system. An EDRS order form can be found at the back of RIE. The EDRS address is: EDRS, 7420 Fullerton Road, Suite 110, Springfield, Virginia 22153-2852 • Tel.: 703-440-1400 • Toll Free: 800-443-3742 • FAX: 703-440-1408 • e-mail: [service@edrs.com](mailto:service@edrs.com) • WWW: <http://edrs.com>

#### Standing Order Microfiche

Nearly 1000 organizations, including most major universities, subscribe to ERIC's complete microfiche collection and are listed in the *Directory of ERIC Resource Collections* (available from ACCESS ERIC (800-LET-ERIC)), also via the Internet at: <http://www.ed.gov:8888/states/direct/ef>. Using the *Directory*, locate the ERIC microfiche collection geographically closest or most convenient to you. At most locations, you will be able to copy selected pages; at some locations you will be able to obtain a duplicate microfiche. This is probably the quickest way to view an ERIC document and has the advantage of permitting you to review a document before buying it.

#### Original (Non-ERIC) Source

Some document preparers sell their product directly and, therefore, may not let ERIC reproduce it. About 20% of ERIC documents are available from their original sources (in addition to or in lieu of being available from EDRS). Full address and price information (when given) specifying such external availability is always in the ERIC citation.

## Journal Articles (EJs) — Cited in CIJE

There are two principal ways to obtain journal articles cited in ERIC's database:

1. Find the specific journal at the closest university or research library. Major public libraries may also have them.
2. Call or write a journal article reprint service. Three such services are:

**The UnCover Company**  
3801 E. Florida, Suite 200  
Denver, CO 80210  
Telephone: 303-758-3030  
Toll Free: 800-787-7979  
FAX: 303-758-5946  
E-Mail: [uncover@carl.org](mailto:uncover@carl.org)  
WWW: <http://funcweb.carl.org/>

**University Microfilms International (UMI)**  
Article Clearinghouse/The Information Store  
500 Sansome St., Suite 400  
San Francisco, CA 94111-3219  
Telephone: 415-433-5500  
Toll Free: 800-248-0360  
FAX: 415-433-0100  
E-Mail: [orders@infostore.com](mailto:orders@infostore.com)  
WWW: <http://www.umi.com/infostore>

**Institute for Scientific Information (ISI)**  
The Genuine Article  
P.O. Box 7649  
Philadelphia, PA 19104-3389  
Telephone: 215-386-4399  
Toll Free: 800-336-4474  
FAX: 215-222-0840; 215-386-4343
