Writing Development. ERIC Digest D159.

THIS DIGEST WAS CREATED BY ERIC, THE EDUCATIONAL RESOURCES INFORMATION CENTER. FOR MORE INFORMATION ABOUT ERIC, CONTACT ACCESS ERIC 1-800-LET-ERIC

The purpose of this digest is to review children's writing development from socio-cultural, generative, and developmental perspectives. The development of children's writing has its roots in their social interaction with other more competent members of the society through various meaningful, purposeful activities (Haneda &

Wells, 2000; Newman & Roskos, 1997). In a literate society, children are immersed in a world of print. As they grow older, children usually show an interest in writing if they have opportunities to observe other people writing and are invited to participate in literacy activities, such as making shopping lists and listening to bedtime stories (Bissex, 1980; Martens, 1996; Purcell-Gates, 1996). Gradually, children realize that both oral and written languages are purposeful and meaningful activities (Bissex, 1980; Garton & Pratt, 1998).

ORAL LANGUAGE, ART, AND CHILDREN'S EARLY WRITING

Observational studies of children's writing development reveal that their early writing is usually accompanied by talking and drawing (Bissex, 1980; Dyson, 1988a; McLane, 1990). Children usually use their drawing and talk to support their early exploration and use of print (Dyson, 1988a). Children may initially regard writing and drawing as the direct symbol systems in which meaning is embedded (Ferreiro and Teberosky, 1982). Therefore, as children write, they weave their drawing and speech into their writing to convey meanings (Dyson, 1983; Gundlach, 1982).

PLAY AND WRITING DEVELOPMENT

In addition to speech and drawing, play characterizes children's early writing development (Dyson & Freedman, 1991; Newman & Roskos, 1997). Vygotsky (1978) proposes that "make-believe play, drawing, and writing can be viewed as different moments in an essentially unified process of development of written language" (p. 116). Pretending serves as a bridge to literacy development (McLane and McNamee, 1990): (1) As a symbolic activity, pretend play allows children to develop and refine their capacities to use symbols, to represent experience, and to construct imaginary worlds, capacities they will draw on when they begin to write and read; (2) As an orientation or approach to experience, play can make the various roles and activities of people who read and write more meaningful and hence more accessible to young children. Clay (1975) points out that when children explore with written language, they usually play with basic graphic features, such as the linearity of the print. In the observation of her own son's writing, Bissex (1980) found that he mentally manipulated and played with the arrangement of word strings (i.e., "You spell book B-O-O-K. To write 'look' you just change one letter--take away the B and add an L" [p.14]) while writing a song or lying on the bed.

CHILDREN'S NAMES: SPRINGBOARD TO WRITING DEVELOPMENT

Children's earliest conventional written words are usually their own names (Bloodgood, 1999; Ferreiro & Teberosky, 1982). While children's names play an important role in

expressing self identity (Garton & Pratt, 1998), they also affect children's early writing development. Research by Dyson (1983) and Liberman (1985) suggests that young children often use their names as a basis for their further learning in writing. When children are aware of some letters within their names, they will begin to use these letters in their writing (Harste, Woodward, & Burke, 1984). In addition to their own names, children use signs, captions, and labels in early writing (McLane & McNamee, 1990; Bissex, 1980). The signs, captions, and labels serve different functions. They can be used to explain and identify children's drawings (McLane, 1990), announce, assert ownership (McLane & McNamee, 1990; Bissex, 1980), and to create an imaginary world (Dyson, 1988b).

LEARNING TO WRITE IN THE ELEMENTARY SCHOOL YEARS

As children advance in the elementary school, their writing undergoes changes. At this stage, children may just explore and experiment with different forms of writing which focus on the mastery, competency, and control of writing (Bissex, 1980). Children might repeatedly write familiar words/phrases (Clay, 1975; Edelsky, 1986), or copy whole text/stories (Dyson & Freedman, 1991). Gradually through exploration and experimentation, coupled with writing and reading experiences at home and at school, children elaborate and refine their old forms of writing, and new forms emerge (Kamberelis, 1999).

As children's forms of writing diversify, their awareness of audience develops accordingly. In their early writing, children tend to write for an immediate or specific audience, such as their parents, relatives or friends. As new forms evolve from old forms, children apply both to achieve various purposes (Bissex, 1980).

In addition to changes in form and audience awareness, children's writing becomes more coherent and internally cohesive during the school years (Dyson & Freedman, 1991). Dyson and Freedman (1991) point out, "children become less likely to make reference outside the texts themselves (e.g., to begin texts with "This is") or to use pronouns without references (e. g., to use "He is" when who "he" "is" is not clear)." Another change appears in children's global structure of their written text; their text becomes longer and more complex over time (Beach, 1996; Dyson & Freedman, 1991).

Studies on the development and the complexity in children's writing, especially their story writing, have shown that before children start school, most of them already understand the underlying features of storytelling (Applebee, 1978; Martens, 1996). King and Rental (1982) investigated the development of complexity in children's story writing during the first two years of schooling. They found that as children's oral skill develops, the complexity of their writing increased accordingly. With coherence and internal connectedness, the development of writing continues throughout children's school years and into adulthood.

CONCLUSION

Studies in children's writing development show that learning to write is a socio-cultural, generative, and developmental process. Children acquire written language as they actively explore various forms and functions. They also interact with other more competent writers in their community. Children also play with written language and weave it into activities such as drawing, speech, and play. It is through the various and rich literacy experiences that children become competent and creative members of a literate society.
