ABSTRACT

This paper presents results of the first Capital Improvement Planning process at Nova Southeastern University (Florida) encompassing the years 2000 to 2005. The University established a committee to guide the development of the Capital Improvement Plan, and personnel from the University's Office of Research and Planning worked with the various academic centers to prepare and collect data from the capital improvement worksheets. A comprehensive set of tables was then developed to provide the plan for the whole University. Overall, it is projected that the University will experience substantial increases in capital infrastructure from 2000 to 2005. It is expected that enrollment will increase by 18% during this period, and that number of full-time faculty members will increase by 17%. Part-time faculty numbers are projected to increase by 21%, and a 21% increase is also projected for full-time staff. Space (1,000 square feet) is projected to increase by 40%, and the estimated cost of this increased space is approximately \$114 million. To support this growth in a sustained and prudent manner, the University must remain mindful of these projections, especially as costs for 3 new buildings have already reached \$79 million. (Contains 16 tables.) (SLD)

EXECUTIVE SUMMARY

Nova Southeastern University first received regional accreditation from the Southern Association of Colleges and Schools in 1971 and reaffirmation of accreditation has since been awarded in 1975, 1985, and 1998. Systematic planning is inherent to the regional accreditation process and the University now has more than a 25-year culture of attention to the planning process.

Building on this history and attention to planning, the purpose of this study was to present results of the University's first Capital Improvement Planning process: 2000 to 2005. It was expected that the University's first Capital Improvement Plan, developed during a period of sustained growth and fiscal stability, would complement other planning processes and serve as an additional tool for guided decision-making.

The process used to develop the University's Capital Improvement Plan was initiated in Spring 1999 and eventually all academic centers and administrative service units participated in the process. Overall, it is projected that the University will experience substantial increases in capital infrastructure from 2000 to 2005:

CIP Projection	Change 2000 to 2005	
	<u>N</u>	<u>%</u>
Fall Term Enrollment	4,309	18
Faculty: Full-Time	175	17
Faculty: Part-Time	201	21
Staff: Full-Time	336	21
Staff: Part-Time	9	8
Space (1,000 Ft ²)	859.9	40
Estimated Cost of Increased Space (\$1,000,000)	\$114.78	

To support this growth in a sustained and prudent manner, it will be useful for appropriate personnel to review the outcomes of this Capital Improvement Plan during the University's

budgetary review and other planning processes. Fortunately for the University, there are multiple planning processes in place, these processes are widely-participatory, and it is expected that the personnel and space needs projected by the various units within the University will be carefully examined before long-range plans for the allocation of scarce resources are put into final form.

The Capital Improvement Plan projects approximately \$114 million needed to accommodate increased physical space needs for the next five years, including costs for the library, business school, and family center. Funds for these three buildings totaling \$79 million have already been collected. If expansion proceeds as planned, this leaves approximately \$35 million in new dollars needed during the next five years.

INTRODUCTION

Background

Nova Southeastern University was originally chartered (as Nova University) in 1964. The University first received regional accreditation from the Southern Association of Colleges and Schools in 1971 and reaffirmation of accreditation has since been awarded in 1975, 1985, and 1998 (*Nova Southeastern University Fact Book*, 2000).

As required by the Southern Association of Colleges and Schools (*Criteria for Accreditation*; 1998, pp. 19-22), systematic planning is inherent to the regional accreditation process and as such, a University-wide planning document was first attempted prior to the 1975 affirmation of accreditation. The University's first prescribed strategic planning document was prepared in 1984-85, in advance of the 1985 reaffirmation of accreditation by the Southern Association of Colleges and Schools. The University has since engaged in a widely-participatory planning process, with all relevant academic centers and administrative units involved in the planning process at an appropriate level.

Purpose of This Study

Building on this more than 25-year culture of attention to the planning process, the purpose of this study was to present results of the University's first Capital Improvement Planning process: 2000 to 2005. By planning for the future, the University should improve its ability to react to changes in its current and future human and infrastructure resources, including attention to the following:

- Fall Term Enrollment
- Faculty
 - Full-time faculty
 - Part-time faculty
- Staff
 - Full-time staff
 - Part-time staff
- Building space

- Area
- Cost

Unlike many other post-secondary institutions, where this type of activity is often attempted only during periods of real or anticipated financial exigency, the University chose to establish an initial Capital Improvement Plan during a period of positive growth. As previously reported by Research and Planning:

At the national level, enrollment in higher education will increase by approximately 1.3 percent per year from the mid-1990s to the mid-2000s. In contrast, from 1995 to 1999, Nova Southeastern University has experienced a 7.0 annual increase in enrollment (*Fiscal and Enrollment Changes at Nova Southeastern University: 1995 to 1999*; 2000, p. ii).

The University's first Capital Improvement Plan should serve as an additional tool for guided decision-making during this period of increased enrollment and build-up in faculty numbers, staffing, and brick-and-mortar infrastructure.

METHODOLOGY

In Spring 1999, the University established a committee to guide the development of a Capital Improvement Plan. The committee is chaired by the Executive Vice President for Administration and, as charged:

This committee was established to coordinate and combine the collective capital projects of the various colleges and schools of the university that are to be funded and constructed during the planning horizon of the next five years (*Nova Southeastern University Fact Book*; 2000, p. 18).

By June 1999 the committee prepared an initial data request, with distribution to all academic centers and administrative units.

Although the initial set of data was useful for guidance purposes, there was a concern that the University's administrative units were unable to project their future capital needs without first viewing a more comprehensive set of Capital Improvement Plan data from the academic centers. In view of this concern:

- Personnel assigned to Research and Planning worked with academic center contacts from Fall 1999 to Winter 2000 to prepare and collect data from a set of common Capital Improvement Plan worksheets.
- Capital Improvement Plan worksheets from the University's academic centers were then shared with administrative unit contacts and by Spring 2000, after a

series of one-on-one and large group meetings, the University's administrative units completed their Capital Improvement Plan worksheets.

Research and Planning, with guidance from targeted committee members, was then able to summarize the data from these many worksheets into a comprehensive set of tables highlighting data from the University's 2000 to 2005 Capital Improvement Plan. When reviewing these tables, it may be useful to note that:

- Academic center deans and administrative unit directors were the source of Capital Improvement Plan data. Research and Planning questioned selected personnel when necessary, but original data were only changed when directed by appropriate personnel.
- As suggested by Facilities Management, the *Estimated Cost of Increased Space* is assigned \$125 per Ft² for 1999/2000 and all years after. This statistic includes design costs and excludes any inflation in 2000 to 2005 building costs.

RESULTS

After the academic centers prepared their Capital Improvement Plan worksheets, Research and Planning compared Fall Term 1999 enrollment projections to actual Fall Term 1999 end-of-term enrollment statistics as well as projected enrollments for Fall Term 2005 (Table 1.A):

- The projected Fall Term 1999 enrollment was 18,117 students and the actual Fall Term 1999 enrollment by end-of-term was 18,232 students.
- Collectively, the University's academic centers projected that enrollment will reach 23,437 students by Fall Term 2005, resulting in a projected enrollment increase of 18 percent from Fall Term 2000 to Fall Term 2005.

In an attempt to further examine the accuracy of prior projections, Research and Planning compared enrollment projections from the current set of Capital Improvement Plan worksheets to the University's most current *Strategic Plan* (1999). As presented in Table 1.B, there was an 11 percent discrepancy in summative enrollment projections between these two sources of data. In the Capital Improvement Plan worksheets, which were prepared during Fall 1999, Fall Term 2003 enrollment was projected at 22,627 students. In contrast, the Fall Term 2003 enrollment projections prepared in 1998 for the 1999 *Strategic Plan* indicated a smaller Fall Term 2003 enrollment of 20,406 students.

A full set of comprehensive Capital Improvement Plan projections is presented in Tables 2 to 4. These tables provide Capital Improvement Plan statistics from a variety of perspectives:

- Table 2 University-wide summaries for all Capital Improvement Plan statistics
- Tables 3.A to 3.L Collapsed summaries for all academic centers and breakout summaries for each separate academic center
- Table 4 Collapsed summaries for all administrative units

Overall, it is projected that the University will experience substantial increases in capital infrastructure from 2000 to 2005:

CIP Projection	Change 2000 to 2005	
	N	%
Fall Term Enrollment	4,309	18
Faculty: Full-Time	175	17
Faculty: Part-Time	201	21
Staff: Full-Time	336	21
Staff: Part-Time	9	8
Space (1,000 Ft ²)	859.9	40
Estimated Cost of Increased Space (\$1,000,000)	\$114.78	

SUMMARY

Reischauer (2000) discussed the process of how long-term projections are developed and then offered a review of how the outcomes from this process can be used to set broad policies. If long-range planning is the norm in large industries and by governments, it should also be standard practice in higher education, especially in view of the size of higher education in the United States:

- Collectively, higher education has more employees (2.5 million people) "than the auto, steel and textile industries combined" (Will; 1997, p. A8).
- For the first time in United States history, college enrollment is projected to exceeded 15 million students in 2000 and it will increase by an additional half-million students by 2005 (*Projections of College Enrollment, Degrees Conferred, and High-School Graduates, 1998 to 2009*; 1999, p. 25).

Although higher education in the United States is perhaps a larger industry than many would imagine, Bourne, Gates, and Cofer (2000, p. 12) offered a history of planning in contemporary higher education and observed how:

[Prior planning approaches have] led to utter confusion and frustration for many senior administrators who are being challenged to transform their institutions into viable and vibrant 21st century organizations--organizations that are flexible, fluid, and adaptable to changing environmental dynamics.

In contrast to these disjointed efforts, the University's current Capital Improvement Plan was first attempted during a period of growth and it should serve as a proactive tool that supports vision and stability. Accordingly, it will be useful for appropriate personnel to review the outcomes of this Capital Improvement Plan during the University's budgetary review and other planning processes.

In view of the concerns about planning and how planning is used to support future directions in higher education, it is only prudent to ask if the estimates presented in this Capital Improvement Plan reflect the correct balance for the University's future. Fortunately for the University, there are sufficient planning processes in place that are widely-participatory and it is expected that relevant questions will be examined before long-range plans for the allocation of scarce resources are put into final form.

The Capital Improvement Plan projects approximately \$114 million needed to accommodate increased physical space needs for the next five years, including costs for the library, business school, and family center. Funds for these three buildings totaling \$79 million have already been collected. If expansion proceeds as planned, this leaves approximately \$35 million in new dollars needed during the next five years.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: Results of the Capital Improvement Planning Process at Nova Southeastern University: 2000 to 2005	
Author(s): Dr. Thomas W. MacFarland	
Corporate Source: Nova Southeastern University	Publication Date: August 2000

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

The sample sticker shown below will be affixed to all Level 2A documents

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

2A

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY

_____ Sample _____

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2B

Level 1

Level 2A

Level 2B

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
